Pearls are found here in great abundance, but the Indians vaue our beads more. On the whole coaft of this province, for 200 leagues, there are valt beds of oyfters : and, in frefh water rivers and lakes, there is a fort of fhell between a mufcle and a pearl-oyter, wherein are found abundance of pearls, and many larger than common. Here are two forts of cocheneal, one that grows wild, which is far inferior to what is cultivated: and the plant of which indico is made, is very common in moft of the fouth parts of this province. Ambergreafe is often found upon the coaft from Cape Florida to Mexico, the beft of which is worth it's weight in gold; and on the fame coaft, both to the eaft and weft of the Miffiffippi, is to be found alfo, after high fouth winds, efpecially, a fort of ftone pitch, which the Spaniards, who call it copea, moiften with greafe, and ufe it for their veffels in the nature of pitch ; than which, they fay, it is much better in hot countries, it not being apt to melt with the heat of the fun.
On both fides the Miffiffippi river, there are many fprings and lakes producing excellent falt. The plants which produce hemp and flax are very common in this country, and that fort of filk grafs, of which are made thofe herba-ftuffs that come from the Eaft-Indies. Here are amethyfts, turquoifes, and the lapis lazuli; copper in abundance, and fo fine, that 'tis affirmed, fome of their ore yields above 40 per cent. and here is lead whofe ore yields 60 per cent. In many places there are mines of pit-coal, and iron ore is frequently found near the furface of the earth, from which a metal is extracted little inferior to fteel. Here are alfo mines of quickfilver, or rather of it's mineral, of which the natives make no other ufe than to paint their faces and bodies, in' a time of wap, or in high feftivals. In divers parts of this province, there are great quantities of orpiment and fandarach.
Mr Cox fays, that about 12 miles above the mouth of the river Miffifippi, a branch runs out of it on the eaft fide, which, after a courfe of 160 miles, falls into the north-ealt end of the great bay of Spirito Santo. About 60 leagues higher up on the eaft fide, is the river of Yafoua, which comes into the Miffiffippi, 2 or 300 miles out of the country, and is inhabited by the nations of the Yafoues, Tounicas, Kowrouas', \&ec. 60 leagues higher is the river and nation of Chouque, with fome others to the eaft of them. The river Ouefpere, which, about 30 leagues to the north-eaft of the lake, divides into two bränches, whereof the moft fouthern is called the Black River. The heads of this river are in that vaft ridge of mountains that run on the back of Carolina, Virginia, and Maryland ; through which mountains thẹre is a fhort paffage to the fources of the great river Polomack, on the eaft fide of them by the Indians, who are well acquainted therewith, and may poffibly, one time or other, in conjunction with the French on the Miffiffippi, infult and harrafs our colonies.
The river Oyo, or Hohio, more to the north, is a valt river, which comes from the back of New York, Maryland, and Virginia. Several nations dwelt formerly on this river, as the Chawanoes, a great people, who, with many other nations, were extirpated by the Iroquois Indians. Twenty-five leagues above the Hohio, is the great ifland of the Tomaroas, with a nation over-againft it, that goes by it's name. Thirty leagues higher is the river of the Illinouecks, corruptly called by the French the river of the Illinois, which nation lived about this siver, and confifted of 20,000 fighting men, before they were deftroyed by the Iroquois, and driven to the weft of the Miffiffippi.
There are divers other confiderable rivers and Indian nations, too numerous for this place. We fhall only obferve, that, near the mouth of the great river Coza, the French have erected a fettlement called Fort Louis (2oleagues north-eaft of the mouth of the Miffiffppi) which is the ufual refidence of the chief governor of Louifiana, who is.neverthelefs fubordinate to
him of Canada. From this garrifon the French fend detacinments to fecure their feveral fations among the Indians in the inland parts.
The Ulibalys, Chicazas, and Chattas, who are the moft confiderable nations upon and between the river Coza and the Miffiffippi, kindly entertained the Englifh, who refided aniong them feveral years, and carried on a fafe and peaceable trade with them, 'till about the year 1715', when, by the intrigues of the FRENCH, they were either MÚRDERED, OR OBLIGED TO MAKE ROOM FOR these new Invaders; who have fince unjufly poffeffed and fortified the fame ftations; in order to curb the natives, and to cut off the communication with the Englifh traders; whereby the French have ingroffed a profitable trade for above 500 miles, of which the Britisif Subjects weie a few years ago the fole mafters.
A fine river enters the bay of Mexico, on the eaft fide of the harbour of Penfacola, which is the beft upon all this coall of the gulph of Mexico, which comes about 100 miles out of the country. The land here produces pine-trees, fit for fhipmafts, of which many are cut down, and carried to Vera Cruz, by a fhip which belongs to the Spanish Flota that brings provifions, and returns with timber. There is a communication from hence by land with Apalachy, which is inhabited with Spaniards.
The peninfula of Florida lies between the gulph of Mexico on the weft, the Atlantic Ocean on the eaft, and the Streights of Bahama on the fouth. It is about 100 leagues in length, but not above 30 where broadeft. The only towns which the Spaniards are poffeffed of are St Auguftine and St Mattheo.
StAug ustine, on the eaftern coaft of the peninfula, is about 70 leagues from the mouth of the gulph of Florida, or channel of Bahama, 30 fouth of the river Alatamacha, or May, as the French call it, and 47 from the town and river Savannah. The port is formed by an ifland, and a long point of land, divided from the continent by a river, which falls into the fea two miles above the fort.
This place was attacked by Sir Francis Drake, in 1586, by captain Davis, in. 1665, by colonel Moor, in 1702, and laftly by general Oglethorpe, in 1740, who was obliged, for want of competent force, to raife the fiege; and thus were the high expectations blafted which had been raifed about this important enterprize; which, if it had fucceeded, would have been attended with confiderable advantages to the Englifh, whofe fouthern fettlements on the continent of America would have been hereby fecured againft any attempts of the Spaniards by land; befides the great fervice this place would have been to our trade, not only by depriving the Spaniards of a port, from whence they might annoy us on that fide, but alfo by enabling us to annoy them upon accafion, by cruizing on their homeward bound fhips coming from the gulph of Florida and the ftreights of Bahama.
According to the charter of king Charles II. in I665, which fixes the limits of South Carolina at latitude 29, this town is, as well as Georgia, within the Englifh dominions, and, confequently, belongs to us as a forfeiture. The Spaniards fay, indeed, that grant is an invafion of their right, they pretending a right of poffeffion to all the coalt as high as Virginia. But, if the firft difcovery gives a title, which is generally the foundation of the Spaniards pretenfions to their dominions in America, we fhall find that it belongs to us: for Sebaftian Cabot difcovered it about the year 1497.
The fea upon this coaft, and off as far as the Bahama Iflands, which lie oppofite to it, is called the channel or gulph of Florida. And here that mighty current, which upon all the fouth part of the gulph of Mexico, fets conftantly in with a ftrong ftream to the weft, driving fo all the way, to the very coaft of Vera Cruz, turns again to the eaft, between the ille of Cuba and the fouth coaft of north America; and, finding no vent'till it paffes by Cape Florida, it then turns from fouth to north, and runs through this gulph into the great Atlantic ocean. For this reafon it is, that moft thips from Jamaica, bound for England, come through this gulph to have the benefit of this current, though it is otherwife a hazardous paffage, where many fhips have been loft; nor is it very long ago, that a whole fleet of Spanifh galeons, with a great treafure, juft failed from the Havannah, which had not entered the gulph above three days, were all drove aflore, and loft, by a violent florm at north-eaft.
Thefe dangers oblige the navigators to make an allowance of about 5 points in the compafs for the current, and to keep as near as poffible to the Bahama fide; it is by miftaking this allowance, that fhips are infenfibly drove towards the coaft of Florida. On the other hand, it is obfervable that (hips, by keeping near the Babama fide of this gulph, run fome hazard from the Spaniards, who are mafters of all thefe inlands, except that of Providence. But as precarious as this paffage is, for fhips bound to Europe from Jamaica, there remains no other courfe for them to take, except that of the windward paflage; and, in a courfe of above róo leagues from Cape Morent, the eaft point of Jamaica, to the north fide of Crooked-Illand, which is what is called the windward paffage, the Englifh traders are in continual danger of being taken,
by the Spanifh guarda coftas, befides encountering the perils of the feas.
Before I leave this point, it will not be unfeafonable to obferve, that as the colony of Grorgia may be rendered a powerful barrier, againft both the French and Spaniards in Florida ; it becomes the wifdom of the nation, that it fhould not be abandoned. [See the article British America, and French America.]
Lord Bacon fays, ' It is a most heinously wicked © thing to forsake and abandon a PLANTA< THON once in forwardness: for, besides the 4 dishonour, it is mere treachery, and being ' guilty of the blood of many miserable men.' And, in the fame noble author's letter to king James, concerning the planting of Ireland, he fays,' It feems God has - referved to your majefty's times two works, which, among - the works of kings, have the fupreme pre-eminence, viz: the < uniting and planting of kingdoms. For though it be - great fortune for a king to deliver his kingdom from long - calamities; yet, in the judgment of thofe, who have dif-

- tinguifhed the degrees of fovereign honour, to be a founder c of fates excels all the reff. For, as in arts and fciences, to - be the firf inventor is more than to illuftrate and am-- plify; as, in the works of nature, the birth and nativity is - more than the continuance: $f o$, in kingdoms, the firft - foundation, or plantation, is of nobler dignity and merit, ' than all that follows.'
Now, as the colony of Georgia bears the name of our prefent moft gracious and beloved fovereign, can any thing be a greater infult upon fo auguft a prince, as any way to neglect, much more to give up and abandon a colony, which is dedicated to his royal name ; and which may be rendered a Grand Barrier to all our colonies on that fide of the continent of America?

## REMARKs.

Since what is faid above, Florida has been annexed to the crown of Great-Britain, by the Definitive Treaty of 1763 ; whereby we have obtained an additional bartuer to our colonies on the continent of America; a barrier that has at the fame time, furnifhed us with a maritime one, by intitling us to the ports of St Augustine in the Gulph of Florida, and Pensacola and Mobille, in the Gulph of Mexico ; which together with the freedom of navigation on the river Mississippi, will enable us to defend our colonies on this fide, while our maritime power fhall be duly maintained for that purpofe. See Bahama Islands.
FLOTA, in Spain. The Spaniards call fimply the feet, or flota, a certain number of veffels belonging partly to the king, and partly to merchants, fent every year to Vera Cruz, a port in New Spain. It confifts of the captains, admiral, and patach, or pinnace, which go on the king's account; and about 16 hips , from 400 to 1000 tons, belonging to particular perfons. They fet out from Cadiz about the month of Auguit, and make it 18 or 20 months before they return. r. Armada, in former times, fignified a fmall number of fighting fhips, and flota a great many, as appears by a law in the book called Las Partidas; but of late it is more properly decided, that Armada is a navy compofed of fighting fhips, and lota of merchants. Now, as to the particular bufinefs in hand, there is a royal armada, or navy, to fecure the navigation to the Weft-Indies (commonly known by the name of the galeons) ; there is that they call armada, belonging to the New Spain fleet, which confifts only of the admiral and vice-admiral hips, fitted and manned for fervice, to convoy the merchants ; there are flotas, or merchant fleets for New Spain, and the Firm-Land. There ufed to be armadas, or convoys to the fleet, for the Firm-Land, which there is not now.
2. In the year 1521, on account of the pirates that infefted the coaft of Andalufia and Algarve, lying in wait for the fhips homeward-bound from the Spanilh Indies, it was ordered, that an armada, or convoy, confifting of four or five fhips, fhould be fitted out; the charge to be defrayed out of the gold, filver, and merchandize, brought to the ports of Andalufia, from the Indies and Canary inands; whether belonging to the king or private perfons, at the rate of a thilling per pound, which was accordingly put in execution. The following year 1522 , the feas being ftill infefted with pirates, it was refolved, another fquadron thould be fitted out, to be defrayed as the former, and to cruize, not only on the coaft, but as far as the iflands Acores, commonly called Terceras. This was the original, not only of the armada, appointed to fecure the navigation of the Weft-Indies, but of the Haberia, or duty of convoys, and other things relating to it: the firft impofition towards defraying this charge, was one in the hundred ; but, that not anfwering, it came to five in the hundred.
3. One of the principal duties of the committee of war, formed out of the council of the Indies, is, to give the neceffary orders for fitting out of armadas and flotas; and, as the dangers increafe, fo to make the morceffectual provifions againft them. The laws of trade, in Spain, direct, that, provided there be no fpecial order to the contrary, two flotas be fent
Vol. I.
out, one for the Firm-Land, the other for New Spain, and the armada to convoy them ; but this name of armada was meant of the admiral and vice-admiral only, which were fighting fhips; and, at firf, there was one man of war to convoy the reft; her burthen 300 ton, and carrying eight brafs, and four iron guns ; and, 'till that time, the merchant thips carried 100 ton lefs than their burthen, and 30 foldiers each, becaufe they had no convoy of men of war.
The time appointed for thefe flotas to fail, was, that of New. Spain in May, and that of the Firm-Land in Auguft, both of them to go off with the firft fpring-tides : the galeons were appointed to be out in January, that they may coaft along the Firm-Land, and come, about the middle of April, to Porto Bello; where, the fair being over, they might take aboard the plate, and be at Havannah with it, about the middle of June, where the New Spain fleet would foon join them, and they might come together fafer to Spain: to which effect, the viceroy of Peru was to take care the plate fhould be at Panama by the middle of March : the plate is 15 days carrying from Potofi to Arica; eight days generally from thence, by fea, to Callao, and 20 from Callao to Panama, taking in, by the way, the plate at Paita and Truxillo. To prevent the fleet being detained by contrary winds, as has happened, it was propofed, to fit the galeons in the river of Seville, in Augult and September, and then fend away to Cadiz, where they might go out with any wind, and need not expect fpring-tides; and that, to fecure the ports, two forts thould be built upon the points of Puntel and Matagorda. The reafons why it was judged abfolutely neceffary, that the Hota for the Firm-Land fhould fail in September, were becaufe that was a fafe feafon to fhip off the goods ; they came to Porto Bello at a bealthy feafon of the year ; the merchans dizes were conveyed over to Panama at a cheaper rate, and with lefs danger of receiving damage; the merchants had leifure to fell their goods; the buyers had a fit feafon to travel to Peru wirh fafety; and the armadas and flotas to return to Carthagena and Havannab, to get clear of the channel of Bahama, and to return to Spain in the beft month for the fea. In fine, it is found by experience, that the month of September is the fitteft for the fleets to fail, and, though feveral accidents retard them 'till Octaber or November, yet that feafon is fitter than March.
4. As to the number of thips, whereof the armada is compofed, it is not fixed. In the year 1568, there were 20, which were built galley fafhion, and carried oars, being about 200 ton burthen. Ever fince that time, there are fome frigates that can make ufe of oars, whence the name of galeons is derived; for as D. Sebaftian de Covarrubias, in his treafure of the Spanifh tongue, obferves, galeaffe and galeon take their names from a galley, though they are ftronger veffels, and not fo fwift, but better to endure the fea, becaufe of their high deck: afterwards, the charge increafing, it was found neceffary to leffen the number, fo that in the ordinances of Haberia, or duty for convoys in Spain, it was eftablifhed, there thould be 12 men of war, and five tenders fitted out every year ; that is, for the armada of galeons, eight fhips of 600 ton burthen each, and three tenders, one of 100 ton, for the ifland Margarita, and two of 80 each, to follow the armada. For the New Spain fleet, two fhips of 600 ton each, and two tenders of 80 each; and, for the Honduras fleet, two fhips of 500 ton each; and, in cafe no flota happened to fail any year, three galeons and a tender fhould be fent to New Spain for the plate. This was the regular method, but, upon occafion of wars, it has been altered; and fo, in the year 1630 , it was ordered, there fhould be 20 galeons; in 1634, there were 16 , and, in 1638 , they were fixed at 15 . As the number has increafed, in time of war, fo has it been diminifhed in peace; and, accordingly, in 1653 , there were but four galeons, and two tenders.
5. Although the time, after what manner, and in what place, the galeons are to be fitted and cleared, is fettled: as alfo what ports they are to make in their return ; yet feveral accidents, and fometimes his majefty's orders, have caufed them to put into other harbours, as Lifbon, Corunna, Malaga, Gibraltar, and others; whence, for the moft part, the plate has been conveyed to Seville by land. It has been much controverted, whether the galeons ought to be permitted to carry lading, entered at the India-houfe, or be abfolutely forbid it. In the year 1613, it was ordered, that five galeons, of 600 ton each, fhould be fitted to fail with the flect for the FirmLand, and each of them to carry 200 ton lading ; two more for New Spain, and two for Honduras, with each 350 ton lading, which proved fo beneficial, that the whole charge of them all, befides the money made by freight, amounted but to 26,500 ducats: yet this order was recalled, upon application made by the corporation of failors, who petitioned his majefty againft it. Many reafons have been offered to the council, both for the loading of galeons, and againft it; but it has prevailed, that they fhould not be admitted to take in any lading. Neverthelefs, experience teaches, that, whatfoever endeavours have been ufed to the contrary, they are always fu'l fowed, and, what is worfe, all their lading is cuftom free, being put in by ftealth, and never entered ; whence follows another mifchief, which is, that thofe perfons who have

10 K
their
their goods aboard the galeons, do, in the Indies, under-fell thofe that have entered theirs in Spain.
6. Though it has been ordered, in the general, that the galeons, flotas, and all hhips whatfoever, bound for the WeftIndies, are to fet out from S. Lucar, and return to that port; yet we will here, more at large, fet down the words of his majefty's order, of the year 1664, to that effect ; which are as follow :-That the galeons, flotas, and any other fhips whatfoever, for the time to come, fet out for the WeftIndies, from the port of Bonança, of S. Lucar de Barrameda, and return to it upon pain of 6000 ducats plate, to be paid by the admiral, captain, or owner of the fhip, that thall do the contrary. The which fum is to be levied immediately upon their arrival, before they are admitted to fhew the reafons that obliged them to it : moreover, they are declared incapable of going that voyage again, and the chips of being employed in that trade; and that, befides all this, they be conftrained to go to S. Lucar, without unloading, referring it to further examination, to impofe any heavier punifhment on them, according to the malice that hall appear to have been in their putting by their ports. Yet, though this inhibition is fo fevere, and ought to be obferved; it is to be confidered, that fometimes hips may be forced into the bay of Cadiz, by ftrefs of weather, there being no other means left to fave themfelves. Becaufe of many misfortunes that happened in getting over the bar of S. Lucar, it has been eftablifhed, by particular order of his majefty, in the year 1665 , that no fhips be admitted to fail to the Weft-Indies, that exceed 18 cubits in breadth, and eight and a balf in depth, which, alJowing balf a yard to a cubit, makes, of our meafure, 27 feet in breadth, and 12 feet nine inches in depth. Another ordinance, of the year 1621 , expreffes, that they be not above 550 ton burthen.
7. Thefe ordinances are now out of date, for it is long fince the galeons and flotas have been appointed to fail from Cadiz, by reafon of the great burthen of the fhips: for, in the year 1588, the duke of Medina Sidonia reprefented to king Philip II. that it was requifite the admiral and vice-admiral of the flota hould fail in ballaft, from S. Lucar to Cadiz, to take their lading there, becaufe they would be in danger to get over the bar loaden; and, in the year 1596, the prefident Peter Gutierrez Flores was taken by the Englifh at Cadiz, being there difpatching the galeons and flota, and fo upon feveral other occafions. There has been more ftrictnefs obferved, as to the returns of the fleets, becaufe the concern was greater, as the preventing the running of filver and gold, and defrauding the Haberia, or duty of convoys, and the king's other duties ; and, therefore, as well as for the fecurity of the port, in time of war, thips that have put into Cadiz, have always been obliged to refort to S. Lucar without unloading. Before we quit this point, it is to be obferved, that, as Cadiz is a place of accefs, fo it is of no fecurity, being an open bay expofed to the winds, and no lefs to enemies; but that called Bonança, at $S$. Lucar, is a fure harbour, being inclofed on all fides, and fubject to no danger, but juft in the entrance. 8. By the laws and ordinances appointed for the well governing the armadas and galeons, it is forbid to make any cabbins or hen-coops on the quarter-deck, or over the round-houfe, or keep any fwine or theep there. The cook-room is to be in the fore-caftle. The expence of making hips preffed fit for fight, is not to be charged upon the owners. By order of the year 1616, it is prohibited to load wood, at the Havannah, on board the galeons: and though, in 1622, leave was given to bring fome pieces of coava, to make carriages for guns, it was afterwards prohibited again, and fo continues, upon pain of forfeiture of the wood fo brought, and further punibment to the captains, that fhould connive at it ; the fame istibition is as to the loading any merchandize, or product of the country at the Havannah.
If a fhip hired be caft away, the king is not obliged to allow the owner any fatisfaction, unlefs it be fo flipulated in the contract. Formerly the mafters of the fhips were tied to compleat their loading in 20 days after the fecond fearch, upon pain of being excluded the voyage: and the merchant who in that time did not enter the goods he had to fhip, was not to load at all; and, in 1602, it was decreed, that no licences to load chould be given after the 6th of May for New Spain; but this was in time of great trade, when there was abundance of lading, infomuch that the fotas carrying then 8 or 9000 ton in May; yet, in the year 1608, an extraordinary fleet was fent out in January, whereas now it is a great matter if a fleet, carrying 3000 ton, can be fent out once in two years.
9. Formerly the New Spain fleet, and that for the FirmLand, ufed to fail together and part at Dominica, the latter under the command of the admiral, and the other of the vice-admiral, and they fet out twice a year, in January and April; but, in the year 1564, it was ordered, that they fhould go out fingle ; that for New Spain in April, and that for the Firm-Land in Auguft. Care has been always taken, that the fleet thould not be greater than might be convenient to make the liding turn to a good account; and, therefore, in the year 1620, news being brought that commodities had been fold under-rate, at the time when a flota was fitting out
for New Spain, two fhips already appointed for the voyage were laid afide, and fatisfaction made the owners for the lofs, by thofe that were to make the voyage; and in 1627, there being more fleet than lading, the biggeft fhip was laid afide.
In $163 \overline{3}$, there being no fore of cloathing in Seville, be-
caufe it came late from the north and Levant, and the fearon caufe it came late from the north and Levant, and the feafon being far advanced, leave was granted, for that time, to load in the bay, paying the duty there, without bringing the goods up to Seville, as was always ufed. It is worth obferving, that, when it is found requifite to reinforce a fleet, it ought to be by adding fome men of war to it; not by putting men on board the merchants; for experience has taught, that reinforcing the merchant fhips is only an additional charge without any benefit ; and this the king and council have been made fenfible of, which has moved them upon feveral occafions, when the counfelfhip, or corporation of traders to the Weft-Indies, have thought thofe parts overftocked with goods, and they have petitioned his majefty, that no fleets may be fent thither, which has fometimes been granted, other times refufed; and, upon other occafions, fome few galeons only have been ordered to be fitted out, to carry the quickfilver for the plate works, and bring home the plate of that year, yet with permiffion to take in a third part of their burthen in goods.
10. When the commanders of galeons, whether they belong to the king or private perfons, undertake for the fitting of them out, they article to this effect: the commander obliges himfelf to do all the carpenters and caulkers work, either mentioned in the contract, or that fhall appear to be requifite afterwards; to maft the veffel, and furnifh all other forts of rigging, cables, and fails, putting the galeon into a failing pofture. He is to make as many port-holes as are requifite; to furnifh them with port-hooks, fledges, pullies, port-ropes; to feparate the gun-room, bread-room, powder-room, and find ftowage for hot, quick- filver, and fcaled paper. If it be requifite, in the Indies, he fhall new caulk the feams, and beftow all other repairs, proper for the fafe return of the fhip. It is left to him to chufe the mafter, mate, and handicrafts-men. It belongs to him to ballaft the galeon. All fores belonging to the fhip are to be duty free, and to be fhipped in time. As foon as the thip is fitted, the commander is to have men allowed bim to Chip and fow provifions, but he is to bring down the veffel, from the dock into the port, at his own expence, and to return it when he comes home. The pay affigned is 3000 ducats for a thip of 100 ton, 5000 for one of 200,7000 for one of 300 , and after the rate of 2500 ducats for every hundred ton more, for a common voyage to the Firm-Land. This is in cafe the commander be owner of the veffel; but, if it be another man's, 4000 ducats are allowed for the owner, that is to fay, if the thip be above 400 ton, and 2000 for thofe that are under. The payment to be made in the fame place where the contract paft, and this allowance mentioned to be for a common voyage of eight months; for, if they are to winter abroad, the method varies; but, though fome have been two or three months above their time, no allowance has been made them.
II. The commander is allowed 3000 royals plate, for the charge of lading, for which fum be is to pay, and give allowance to all the men employed on that account, 'till the men appointed for the voyage come on board; and he has bills for thefe 3000 royals, together with the charge of fitting, to be paid in the Indies by the king's officers at Panama; and, if they refufe to pay it, any mafter of plate may do it, and the plate be brought without being entered. But, before the bills are given him, the captain and mafters of the workmen at the hip-yards, are to certify, that he has done all things compleatly, that are requifite about the fhip. It is to be obferved, that, in the bills fo drawn, 4000 pieces of eight are to be payable to one of the mafters of plate, by way of depofitum, that is, not to be delivered to the commander they belong to, 'till the admiral and pay-mafters have infpected his fhip, to fee whether it have all things neceflary to return to Spain.
12. If the fleet happens, upon an extraordinary accident, to winter abroad, fo as to make up the whole time allowed for wintering, which was twelve months, the commander articles to receive 4000 ducats plate, in that province; which is the fame that was allowed when the Chips wintered in the Indies, fo as to require altogether new careening. Whatfoever accident the galeon is loft by, after it is fitted out, whether it be by fire, enemies, or hazards of the fea, it is declared the king, and revenue for convoys, run the hazard but of two thirds of the charge of fitting out, and of the wages; the other third, and all other loffes, lie upon the owner and commander of the galeon, in whofe charge it is before, after, and during the whole voyage.
It is alfo articled, that the mafter carpenters, and caulkers, who have the fitting of the galeons in Spain, fhall go aboard the fame, and not any others. It is declared alfo, that the owner and commander fhall be purctually paid their contract, which they have performed on their part, and pafled all the offices, that nothing may be miffing. The fame contrat is made for admirals and vice-admirals of fotas, with only this
difference,

## F L O

difference, that it being known they are to winter at Vera Cruz, they have bills for 60,000 royals plate, over and above the coft in Spain, to careen compleatly in the Indies. The prefident of the India-houfe is charged to take care, that all thips of war, efpecially admirals and vice-admirals, be ftrong, well rigged, manned and armed, that every one be diftinguifhed by it's proper mark, the admiral carrying the flag at the main-top-maft-head, the vice-admiral at the fore-topmaft, and the rear-admiral at the mizzen, that the other thips may know, and pay refpect to their commanders. The vice-admiral of any flota, or armada, may overfee the fitting or repairing of any men of war, but fince there are mafters of the workmen, this is not much practifed.
In the year $7720_{s}$ the king of Spain iffued an ordinance, in order to improve the commerce of his fubjects in general between Old Spain and New, and to promote the fabrics of filk and wool, and other neceflary manufactures, re-eftablinhed in the inland parts of Spain--For the encouragement of which, it is declared in the faid ordinance, that nothing can fo much conduce thereto, as that the galeons from the Terra Firma, and flota from New Spain, and regiter and advice flips for both kingdoms, fhould more:frequently fail and return: to which end he ordess, that there fhall be always in readinefs a fufficient number of men of war, under fuch proper regulations, as to afcertain the difpatch of frequent Hotas and galeons, advice and other regifter ihips, deftined for the Indies, that the fleets of both kingdoms and the regifters may fail in due time.
The fubttance of the regulations, made on this occafion, may be reduced to the following particulars, viz.

1. The quality of the fhips, both men of war and merchantmen that are to fail to the Indies. 2. The choice of the fupercargoes of the flotas and galeons. 3. The tariff of the duties to the king. 4. The paffengers.
On the 201h of April 1720, his catholic majefty iffued another regulation for the encouragement of this commerce, both from the reduction of fome, and the annihilation of other duties, and preventing difputes and law-fuits, by fixing the admeafurement and other points therein.
May the 23d, 1720 , a letter was iffued from the fecretary of ftate's office to the intendants of the provinces of Spain, agreeable to the inftructions of the royal ordinance, in order ta inforce the due execution of the fame.
June 23, 1720, his majefty iflued another ordinance, the inconveniencies of the high duties, and great abufes that raifed to an exceffive price the goods and fruits manufactured and produced in Old Spain, to be fold in New, to the end that other nations might be obftructed in this trade, to make way for that of the Spaniards themfelves.

## REMARKs.

Thefe regulations in Spain, at this time of day, manifefting the dawning of that firit of commerse which now begins glaringly to fhew itfelf; it may deferve the attention of Britons to obferve, by what gradations that kingdom have arofe to that commercial fyftem, which they have now fo fanguinely adopted, to the furprize of other nations; who have been lulled afleep by fcandalous and dilatory negociations, while that nation has been laying the foundation of ah active and extenfive commerce, fo long fince as the year 1720. This will, in a great meafure, account for the conduct of that court towards fome of it's neighbouring nations, which otherwife would appear very ftrange and unaccountable.

* His Catholic majefty fays (in his letter abovementioned) * out of his great zeal for the improvement of trade and - navigation, whence fo many vaft advantages arife to his - fubjects, and efpecially from that which is carried on, and - is capable of being enlarged, between Spain and the In-- dies, has refolved and given proper inftructions, that there - fail this fummer, from Cadiz, a flota from 5 to 6000 - tons for New Spain; and October following, the galeons - for the Terra Firma, befides regifter fhips, that fhall, at " the fame time, fail for the other provinces, under a reform - of the duties and other circumftances provided for in the - fchedule annexed; and his majefty reflecting, that neither ' this, nor any other branch of trade, will confiderably'enrich his vaffals, and improve his revenue, unlefs it be car-- ried on, at leaft in general, with the goods and fruits of - thefe kingdoms ; for the confequence of doing it with fo-- reign manufactures is, that bullion to the value of them ' will naturally feek for the p-oprietor of the merchandize, 6 and pafs to thofe foreign parts whence the fupply comes; - he orders me to tell your lordfhips, that for thefe reafons - you are, by a proper application to the manufucturers and - traders of this kingdom, to encourage and difpofe them to - fend to Cadiz as large a quantity of fruits, woven goods, - and other Spanish Commodities, as can poffibly be - procured, and to fhip them for the Indies, either by their own Factors, or by conlignments to thofe employed in the commerce of the Indies, or to difpofe of them to the - merchants of Andalufia, giving them at the fame time to underftand, that the duties upon filks exported, under the ' meafure of a cubic palm, are fo moderate, that they fcarce

## F L O

6 amount to one per cent. of their value ; that in the duty upon fruits, there has been alfo made a very confiderable - reduction ; and that in Chipping them, and every other oc' currence, fhall be given all manner of protection and affift= - ance, by the intendant Don Francifco Varas y. Valdas, who © is charged with the difpofition of the cargo, and the dif-- patches of the flota, galeons, and regifter fhips for the In-- dies, and particularly directed to give the utmoft affiftance - to all, that hall go from the other provinces of Spain to

- Cadiz with merchandize, to enable them to fucceed in this ' traffic. With the fame intent his majefty wills, that your 6 lordhips alfo give all thre affiftance in your power, and fend - letters with all fuch as fhall carry thefe goods to Cadiz, to
- the faid minifter, who, by knowing whence they come, and
- the recommendations they bring, may be enabled to fup-- port and ferve them in the manner it has been enjoined him, 6 is convenient; and your lordhhips thall advife, in confea ${ }^{6}$ quence of this charge which his majelty lays upon you, ' not doubting but your lordilhips will exert your utmoft vigilance to effect what his majefty defires, and is fo much for the intereft of the kingdom, as has beeri"already fhewn ; and if, for the eafier and fpeedier accomplifhment of this great purpofe, of inducing the manufacturer and merchant ' to export Spanish Goods to America, your lordfhips
- hoould think of any prudent meafure, that may promote - and render it effectual, his majefty wills, that your lord© hips make a report of it. God preferve, \&c." Madrid, May 23, 1720.

Don Miguel Fernandez Duràn.
A copy of this circular letter was fent to the faid Don Francifco Varas, along with the king's order, in the form fol lowing :

- His majefty, in confequence of what he was pleafed'to pub-
- lifh in the late difpatch, an ordinance for the galeons and
- flotas, in refpect to a revival and improvements of filks,
- cloths, and other manufactures in the inland parts of Spain,
' in order to lay a foundation for this great defign, has com-
- manded the ordinance, of which a copy is annexed, to be ' difpatched to all the intendants of the provinces of Spain;
- and as it has been already done, his majefty directs your
- lordhip fully and punctually to difeharge every thing, that
- Shall concern and is- required of you in the above ordi-
' nance, by affording fuch affiftance to the manufacturers - and traders, who fhall from thence remit to that city any - goods whatfoever of the fabrics of Spain to be fhipped - for America, that they may be fenfible how defirous his - majefty is to promote their intereft, giving the preference to ' our own Goods above any other, whether belonging to
- foreigners or natives, who are not traders or manufacturers s in the provinces of this kingdom, and granting them all - the indulgences practicable; and that your lordfhip act in - this affair with the neceffary prudence and management, in c order that the tendernefs and concern which the Manu6 facturers merit, in the difpatch and embarkation of
6 their goods to the Indies, and the profits they may gain in
- return, be an encouragement to them, to continue and ex-
' tend the commerce of their own goods to the Indies, as his
- majefty defires : and he alfo orders your lordmip to continue 6 an account of the fabrics of Spain, that, in confequence of ' the faid ordinance, arrive from each province in that city, 6 to be Chipped for the Indies; your lordfhip being allo ad\& vertifed, that, whenever the traders of that city, Seville, - San Lucar, and el Puerto, thall pleafe to fhip Spanifh goods, 6 they are to be preferred before any foreign ones whato-- ever. This I communicate to your lordfhip, by his royal 6 order, for your infgrmation and obfervance. God pre-- ferve, \&c.'

Madrid, May 3I, 1720.
Don Miguel Fernandez Duràn. Sennor Don Francifo de Varas;
See the article Gailoons.

## Further Remarks.

Since by the Definitive Treaty of 1763 , Great Britain has obtained Florida, and the Ports of St Augustine in the Gulph thereof; and allo the Ports of Pensacola and Mobille, in the Gulph of Mexico, as likewife the freedom of navigation on the Mississippi; the Spanilh navigation of the Flota from La Vera Cruz is rendered far more precarious in times of war, than ever the fame before was: for now it is far more liable to interception by the Englih, from the advantages reaped by their fituation, derived from the Definitive Treaty before intimated.
FLOTSAM, JETSAM, and LAGAN, are in general, goods on or in the fea, and belong to the king, who by charter bath granted them to the lord admiral. In particular, flotfam is, when a fhip is funk, or otherwife caft away, and the goods float upon the fea. Jetfam is, where the fhip is in danger of finking, and, for lightening the hip, the goods are thrown into
the fea, but notwithftanding the hip perifheth. Lagan is, when heavy goods that fink are caft into the fea before the perifhing of the fhip; and the mafter and mariners, that they may find and have them again, falten a buoy-cork, or other fea-mark to them, whereby they may be the more eafily directed to the place where they lie, if they thall be in a condition to retake them
A man may have flotfam and jetfam by the king's grant, and lagan within the high and low water-mark by prefcription, as it appears in the weft-country; where the lords of manors prefcribe to have wreck in the fea, fo far as they can fee a Humber-barrel. And, by the grant of a wreck, will pafs flotfam, jetfam, and lagan, when they are caft upon land; for then they are a wreck, and belong to the lord intitled to the fame : but if they be not caft on the land, the admiral hath jurifdiction, and fhall have them, and they cannot be faid to be a wreck. 5 Rep. 106.
The king, or admiral, hall have flotfam, jetfam, and lagan, when the fhip perifheth, and when the owners of the goods are not known ; but if the fhip doth not perifh, it is otherwife; and it is held, that where the proprietors of the goods may be known, they have a year and a day to claim flotfam. Fitz. N. B. II 2. I Keb. Rep. 657. See the article $W_{\text {reck. }}$
FLUX, in metallurgy, is a certain matter added to an ore, or metalline fubftance, in order to make it melt, or fufe the eafier, and yield a greater quantity, or a purer, more tough, and malleable metal, either in the art of affaying in fmall quantities, or fmelting in large ones. See the articles Assay, Smelting, and Refining. Here follow fome examples of certain fluxes.
We took four ounces of red-lead, an cunce of white fand in powder, and two ounces of dry decrepitated falt, and mixed them all together in a mortar; then putting the mixture in a clean Heffian crucible, fitted with a cover, we fufed the matter in a wind-furnace for a quarter of an hour; when taking it out, and letting it cool, we afterwards broke the crucible, and found the falt at top, and a pure glafs of lead at the bottom: this glafs we carefully feparated, and kept apart, as a powerful flux.
The falt is of no other ufe in this operation, than to ferve as a flux to the fand, and make it more readily unite with the red-lead, fo as to form a glafs without any great violence of fire, or the neceffity of being long detained therein: fo that, by this means, a glafs of lead may be readily prepared for the purpofe of artificial gems, or other ufes. See Gems.
This glafs of lead is an extremely ufeful flux in the bufinefs of affaying; and when kept long in fufion, paffes through the pores of any common crucible, almoft like water through a fieve; fo as, upon the teft, readily to vitrify, or carry off, all forts of metalline and mineral matter, except gold and filver: on which property, therefore, the art of cupelling depends.
Fluxes feem reducible to two general kinds, viz. the vitreous and the faline. By the vitreods we underfand all thofe which have, either of themfelves, or readily affume, a glaffy form in the fire; among the principal whereof we reckon the glafs of lead, the glafs of antimony, and borax.
By the faline kind of fluxes we underftand all thore that are compored of falts, whether tartar, nitre, fixed alkali, or the like; and among the principal of this kind, we reckon the black flux ; which we formerly thewed how to prepare ; fandiver, kelp, \&c. See Assay.
The vitreous kind feem more immediately deffined to act upon the fony, or vitrefcible matter, wherewith ftubborn ores are frequently, mixed ; and the faline kind, to act more immediately upon the ore itfelf, for the due exclufion, or feparation, of the metal.
The more kindly ores require no flux to make them run thin, or to afford all the metal they contain; and fometimes ores are fo kindly, as to contain their own fluxes within themfelves. Thus we have met with copper ores, which being barely ground to powder, and melted, without any addition, in a common wind-furnace, have yielded as much, or even more pure metal, at the firft operation, than we could obtain from them by means of the ufual fluxes. Whence we fee that artificial fluxes are not always neceffary, or that the principal ufe of them is for the ftubborn or lefs tractable ores. And thefe are fometimes fo exceedingly hard to fufe, and reduce to a metalline form, that it requires the utmoft part of art to treat them advantageoufly in the larger way of bufinefs, where no confiderable expence can ufually be allowed for fluxes. And on this account it is that many mines remain unwrought, as being intractable, without great charges: whence the improvement of the bufinefs of fluxes, fo as to render them cheap and effectual, might greatly contribute to the improvement of metallurgy.
We would therefore recommend to farther enquiry what matter it is, in the more fafe and tractable ores, which renders them fo fufible, and eafy to part from their metal. Certain experiments we have made with this view, feem to fhew, that, in copper ores, it is a kind of bituminous fubftance, capable of melting, by a frong heat, into a foft and black kind of glafs.

Some of the moft powerful and cheap fimple fluxes, hitherto known, are dried wine-lees, dried cow-dung and horfe-dung, dried river mud, fuller's earth, iron filings, common falt, glafs, kelp, or pot-afh, fandiver, \&c. which may be ufed in the larger works; as nitre, tartar, borax, fal ammoniac, mercury fublimate, \&c. may in the fmaller, or for the making of affays.
As for compound fluxes, they are numerous, almoft every operator having his favourite flux ; and certainly fome fluxes ate better adapted than others to certain ores? But, perhaps, a few general ones might be fixed upon, which fhould ferve inftead of all thofe hitherto commonly known and ufed. We will here recommend three, which are powerful, almoft general, and not expenfive.

1. Take of nitre, prepared by long boiling it in lime-water, of fea-falt, melted in the fire, fandiver, and dry wine-lees, each one part ; glafs of lead three parts, and powdered glafs eight parts : mix them all well together. This flux, added in an equal weight, will fufe a very ftubborn ore.
2. For a ftill ftronger, take equal parts of white tartar, common falt and nitre, prepared aś above; calcine them to a white powder, and mix therewith it's own weight of glag and lead ; and of this flux add two parts to one of the flubborneft ore.
3. For a powerful faline flux, take of the ftrongeft coapboiler's lees four pounds, white tartar and common falt, melted in the fire, each one pound ; boil them together, each with five gallons of human urine, to a dry falt. This flux is particularly proper where fulphur and cobalt abound, and render the ore very refractory.
But the great fecret, in making and adapting of fluxes, is not only to feparate the metal already tipened in the ore, but even to mature and ripen the crude or immature part of the ore in the fire. Something of this kind, we apprebend, may be effected; as having reafon to believe, that certain fluxes will obtain a larger yield of metal from certain ores, than other fluxes in common ufe, though efteemed of the beft, and though they are, perhaps, of the deareft kind. Thus clean iron filings will often do more than borax; but as the ficales and crocus, or ruft of iron, have been commonly ufed, inftead of pure and perfect iron itfelf, for a flux, few operators appear acquainted with the excellency of perfect iron employed for this purpofe: and many advantages are now commonly reaped by a prudent mixture of one ore with another of the fame denomination, and with the flags, or recrements, of metals, in the way of a flux.
FORESTALLERS, REGRATERS, and ENGROS SERS.
By ftat. 5 and 6 Edw . VI. cap. 14. a foreftaller is one who buys, or caufeth to be bought, any corn, or other victuals, coming to fair, market, \&c. or perfons diffuading the owners from bringing them to market, or, when there, perfuading to advance the price, or thall make any bargain, \&c. for having the fame, or any part, before it be in the faid market, \&c. ready to be fold.
An engroffer is one who buys ftanding corn (otherwife than by demife or grant) or any butter, cheefe, or other victuals, to fell again for unreafonable profit.
A regrator is one who, in open fair or market, buys up corn, \&c. to fell again in fome other fair or market, within four miles.
All victuals are within thefe acts.
Offenders herein are punifhed at the quarter-feffions: and, for the firit offence, forfeit the goods, or their value, and two months imprifonment : for the fecond, double value and fix months imprifonment; and, for the third, lofeth al! his goods, is pillored, and muft be imprifoned during the king's pleafure.
The profecution to be within two years of the offence; one moiety of the forfeiture goes to the king, and the other to the profecutor.
Perfons buying barley or oats, for malt or oatmeal, purveyors of any city or town corporate, \&c, fifhmongers, innholders, \&c. or people living within a mile of the fea, retailing fifh, badgers, carriers, \&c. excepted.
Perfons tranfporting corn or cattle, and licenfed drovers, and things imported from beyond fea, are excepted.
Corn bought and fold in meal, contrary to law, is within the ftatute, becaufe making meal of it is not an alteration of the corn ; but meal bought, and made into ftarch, has been held not within the ftatute, being altered by a trade. C. Rep. 134, 135.

Apples, plums, and hops, are not within the fatute.
The indiatment fhould fet forth, that the things bought were fold again in the fame market dearer.
And it muft be certain, alledging how many loads of hay and ftraw, and bufhels of wheat, \&c. were ingrofled.
By ftat. 13 Eliz. cap. 25. the aforefaid act is made perpetual; and, by ftat. 22 and 23 Car. II. cap. 19. butchers in London and Weftminfter, or within 10 miles, are prohibited to buy fat cattle, and fell again to any other, dead or alive; and alfo all perfons from buying fat cattle in Smithfield, and felling the fame again there; but, by 7 Ann. cap. 6 . butchers may fell to one another calves, theep, or lambs.

## F OR

## FO U

By 13 Eliz. cap. 25. the ftatute of 5 and 6 Edw. VI. Thall not extend to foreign victuals brought from beyond fea, fifh and falt only expected.
By ftat. 21 Jac. I. cap. 22. it fhall not extend to freemen of London buying butter and cheefe, unlefs it be declared by juftices they fhall forbear to buy, \&c.
By i Jac. I. cap. 22, no perfon thall regrate or ingrofs oak-bark, to fell again, on pain of forfeiture ; and none fhall foreftal hides but in market, or buy any but of him that kills the beaft to fpend in his houfe, on forfeiture of 6 s .8 d . fur every hide.
Salt is a victual, and fo within the ftatutes 5 and 6 Ed. VI. cap. 14: apples are not.
Davis was indicted and convicted for ingroffing and relling falmons; for, though filhmongers may buy to carry on therr trade, they muft not fell at unreafonable prices.
Information for ingrofling butter and cheefe, fets forth the quantity and value, and prays the double value, and good: for firft, it is fufficient to demand the value in general; fecondly, the informer demanded his moiety, faying nothing of the king's, and well enough, for the informer is to have his firf.
Whereas, by the laws and ftatutes of this realm, all foreftalling, \&c. of corn is prohibited, and it is, by 5 and 6 Ed . VI. particularly enacted, That, when it is above the prices in that act mentioned, all perfons offending againft the faid act thall be imprifoned for two months for the firft offence, half a year for the fecond, and for the third the pillory, and forfeiture of all goods and chattels, and be imprifoned during the king's pleafure. And whereas their exceliencies the lords juftices have been informed, that, though the prices of corn are ralfed far beyond thofe in the faid act mentioned, divers ill-difpofed perfons, for lucre, ingrofs great quantities, to export beyond fea, contrary to the faid laws, and to the great oppreffion of the poor: their excellencies have thought fit to order, that all the laws relating hereunto be ftrictly and effectually executed. And, for difcovery of all offenders, do order the officers of the cuftoms at the feveral ports, to take care, when any corn, \&cc. is entered for exportation, to inform themfelves of the names and abode of the perfons bringing or entering it, and of the places from whence it is brought, and who is the owner, and if really the growth of the exporter's land, or bought of any ocher, immediately acquainting two ur more juftices therewith, where fuch entry is made, that fuch perions may be proceeded againft according to law, if they appear not to be within fome of the excepted cafes of the act ; and that commiffioners do forthwith fend their orders to the officers of the feveral ports of this kingdom for thefe purpoles, and requiring to ufe their utmoft endeavours in putting this order in execution. And the lords commiffioners of the Treafury order, That the keepers of the rolls of the feveral counties in England and Wales, do ftrongly recommend it to the juftices of the peace in their refpective counties and divifions, to caufe the faid act, and all other the laws againft the foreftalling, \&c. of corn and grain, to be fpeedily and effectually carried into execution, and to take care that no licence be granted to any badger, lader, kidder, carrier, or buyer of corn or grain, but according to the directions of the faid act, and orher acts relating thereto, and that all offenders be effectually profecuted according to law.
W. Cary.

## Remarks.

The public debts of this nation being now near trebled to what they were at the latter end of queen Anne's reign, and our tax-incumbrances augmented proportionally, whereby the prices of the neceflaries of life, and confequently the price of labour in general is advanced; and thereby unavoldably the prices of our product and manufactures are increafed; does it not more become the wifdom of the nation, even than ever it before did, to put a flop to all forettallers, regraters and engroflers in this kingdom, of provifions of all kind, that they may not be enhanced a fingle farthing beyond what the taxincumbrances of the nation have rendered inevitable? It moft certainly does. If we do not, it will always be in the power of foreftallers to raife the prices of the neceffaries of hfe by their arbitrary and oppreffive taxations on the people, as may have a tendency to the uttor ruin and deftruction of our whole trade. See our articles Labour, Duties, Ireland.
FORFARSHIRE, in Scotland. This fhire is alfo called Angus; but, in the parliament rolls, it is always named the fhire of Forfar. It is bounded on the north by the Binchinnin Mountains; has the Firth of Tay, and the Britifh Ocean, on the fouth; the water of Tarf, and a line drawn from thence to the water of North-Efk, feparate it from Merns on the eaft; and has PerthGhire on the weft and north-wefl.
It produces wheat, and all other forts of grain ; is diverfified with large bills, lakes, forefts, and caftles; has feveral quarries of free-ftone and flate, in which the inhabitants drive a confiderable trade. There are mines of lead near the caftle of Inner-markie, and plenty of iron ore near the wood of Dalboge; and their falmon-fihery turns to a very good account.
Vol.!

DUndee, on the river Tay, has a good harbour, and is rec koned the beft town in the fhire for flrength, fituation, and trade. It's harbour will contain 100 fail of fhips, but not of grear burden. Though it is one of the beft ports for trade in all Scotland, and particularly the foreign trade, it bas allo a confiderable inland bufinefs, efpecially for corn and linen cloth, which makes the country round both rich and populous, being maintained by the quantities of goods the merchants of Dundee buy up for exportation; it flips off particularly large quantities of corn, fur London and Amfterdam. As the town is full of trade, fo the port is full of hips, of which here are almoftas many as at Leith; and there are the more here generally, becaufe the merchants hips of St Johnftoun, or Perth, often ride here, waiting for a wind, or to load or unload, as well as for other occafions.
Montrose, at the mouth of the river Southerk, is well fituated for trade, and has a harbour for thips of confiderable burden, with a good foreign commerce, efpecially to Norway. There are fome merchants here who trade confiderably abroad.
Aberbrothock, or Arbroth, on the fame coaft, is a market-town and royal burgh, and has a barbour conveniently fituated for trade, near the promontory called Red-head, which is to be feen at a great diftance.
FOSSILS, are natural bodies, found either in the bowels, or on the furface of the earth, of fo fimple a ffructure, that the clofeft infpection, even by the beft microfopes, has not.always been able to difcover any diverfity between the veffels and their contents; but each part appears perfectly fimilar to the whole, though, in many of them, there is certainly a compofition of folid and fluid parts.
This character holds of foffils, and of them alone: thus gold, filver, and other metals, antimony, falts, fulphurs, atones, and other minerals, really grow fixed to the earth; and, if they be divided into the minuteft parts, they will appear the fame fimilar folid matter. without any thew of veffels and juices. And thus, fhould it be urged, that fpirit of wine muft, on this footing, be a foffil, becaufe bomogeneous in all it's parts, and exhibiting no diftinction of veffels and juices the anfwer is obvious: fince firit of wine, as fuch, is not generated of, or under the eart'l; neither is it a vegetable, that denomination including the whole compages, or ftructure, out of which fpirit of wine is prepared. Or if it' be faid, That antimony thould then be no foffil, fince it contains an'homogeneous fulphur: it may be anfwered, That, as to our fenfes, it is, in all refpects, a foffil ; fince, whatever portion you take thereof, it is the fame indiftinguifhable matter, and has all the characters of antimony.
Foffils are either fimple or compound : fimple, are fuch whofe parts, whofoever divided, are of all the fame nature, that is, of the fame gravity, magnitude, figure, hardnefs, and mobility: as quickfilver, though divided to infinity, is found every where the fame in all thefe refpects. Compound foffils are thofe which may be refolved into different, or diffimilar parts; or, whofe parts are unlike in magnitude, figure, hardnefs, and mobility: as antimony, which may be refoived by fire into fulphur and a metallic part.
The fimple foffil's are, (1.) Metals. (2.) Salts. (3.) Stones, both vulgar and precious, and, (4.) Earths.
The compound foffils are, (I.) All fulphurs. (2.) Semimetals, or properly minerals. (3.) Bodies combined of the preceding foffils, either fimple or compound.

REMARKs.
The foffil kingdom affording a great variety of materials for commerce, both in their frmple, compounded, and applicable nature to divers arts and trades, we refer thofe who would excel in this branch of knowledge to the perulal of the works of the learned Drs. Lifter, Woodward, and Hill, who have profeffedly wrote upon this, delicate fubject. With refpect, however, to many particulars that make pretty capital articles of trade, we have reprefented their quality and ufes, fo far as we have judged confiftent with the general defign of this work.
FOUNDER, an artift who melts or cafts metals into various forms, for divers purpofes, as bells, guns, bombs, printingtypes, and other forts of works, as candlefticks, buckles, \& c From the different forts of works they are differently denominated, as bell founders, gun-founders, lecter-founders, \&c. See Foundery.
FOUNDERY, the art of cafting all forts of metals into divers forms. It likewife fignifies the workhoufe, or fmeltinghut, wherein thefe operations are performed.

The methods of cafting in fand all forts of fmall works in brafs.
The fand ufed for caft-work of this kind is, at firft, of a pretty fofr, yellowifh, and clammy nature; but, it being neceflary to ftrew charcoal-dult in the moulds, it, at length, becomes of a quite black colour. This fand is worked over and over on a board, with a roller and a fort of knife, and placed over a trough, to receive it, after it is thus fufficiently prepared.
After this they take a wooden board, of a length and breadth fuitable to what is to be caft, and put a ledge round it, and

## FO U

fill it with the fand, a little moiftened, to make it duly cohere. Then they take either wood or metal models of what they intend to caft, and make their impreffion on the fand mould. Along the middle of the mould they lay half a frmall brafs cylinder, as a chief canal for the metal to run through, when melted, into the models or patterns; and from this chief canal are placed feveral others, which extend to each model, or patteri, placed in the fame frame. After this frame is finifhed, they take out the patterns, by very gently loofening them, that the fand may not give way. After this, they proceed to work the other half of the mould with the fame patterns, in a fuch-like frame, with pins, which, enterng into holes correfponding with the other, make the two cavities of the model coincide.
The frame, thus prepared, is carried to the melter, who, after extending the chief canal of the counterpart, and adding the crofs canals to the divers models in both, and ftrewing mill-duft over them, dries them in a kind of oven for that purpofe.
Both parts of the mould being dry, they are joined together by means of the pins, and, to prevent their giving way, by reafon of the melted metal paffing through the chief cylindrical canal, they are fcrewed, or wedged up, like a kind of prefs.
While the moulds are thus preparing, the metal is fufing, in a crucible of a fize proportionate to the quantity of metal intended to be calt. Some of thofe fmall work-founder's furnaces are like a finith's forge, others ftand a few feet underground, for the more eafily and fafely taking out a weighty pot of metal, with circular tongs, which grafp round the top of the crucible. When the metal is melted, the workman pours it through the chief canal of each mould, which conveys it to every diftinct pattern.
When the moulds are coolifh, the frames are unferewed, or unwedged, and the caft-work taken out of the fand, which $f$ ind is worked over and over for other caltings.

## Of the cafting of ftatues.

The cafting hereof depends on the due preparation of the pit, the core, the wax, the outer mould, the inferior, furnace, to melt off the wax, and the tpper to fufe the metal. The pit is a bole, dug in a dry place, fomething deeper than the intended figure, and made according to the prominence of certain parts thereof. The infide of the pit is commonly lined with ftone or brick; or, when the figure is very large, they fometimes work on the ground, and raife a proper fence to refift the impulfion of the melted metal.
The inner mould, or core, is a rude mafs, to which is given the intended attitude and contours. It is raifed on an iron grate, ftrong enough to fuftain it, and is ftrengthened within fide by feveral bars of iron. It is generally made either of potter's clay, mixed with hair and horfe-dung, or of plaifter of Paris, mixed with fine brick-duft. The ufe of the core is, to fupport the wax, the fhell, and leffen the weight. of metal. The iron bars and the core are taken out of the brafs figure through an aperture left in the figure, which is foldered up afterwards. It is neceffary to leave fome of the iron bars of the core that contribute to the fleadinefs of the projecting parts, within the brafs figure.
The wax is a reprefentation of the intended fatue. If it be a piece of fculpture, the wax fhould be all of the fculptor's own hand, who ufually forms it on the core; though it may be wrought feparately, in cavities moulded on a model, and afterwards arranged on the ribs of iron, over the grate, filling the vacant face in the middle with liquid plaifter and brick-duft, whereby the inner core is proportioned as the culptor carries on the wax
When the wax, which is the intended thicknefs of the metal, is finifhed, they fix fmall waxen tubes perpendicularly to it, from top to bottom, to ferve both as canals for the conveyance of the metal to all parts of the work, and as vent-holes, to give paffage to the air, which would otherwife occafion great diforder, when the hot metal came to incompafs it.
The work, brought thus far, muft be covered with it's. fhell, which is a kind of cruft laid over the wax, and which, being of a foft matter, eafily receives the impreffion of every part, which is afterwards communicated to the metal, upon it's taking the place of the wax between the fhell and the mould.
The matter of this outer mould is varied according as different layers are applied. The firft is generally a compofition of clay and old white crucibles, well grounded and fifted, and mixed up with water, to the confiftence of a colour fit for painting ; accordingly they apply it with a pencil, laying it feven or eight times over, letting it dry between whiles. For the fecond impreffion they add horfe-dung, and naturally earth, to the former compofition. The third impreffion is only horfe-dung and earth. Laftly, the thell is finifhed, by laying on feveral more impreffions of this laft matter, made very hick with the hand.
The thell thus finifhed, is fecured by feveral iron girts, bound round it, at about half a foot's diftance from each other, and faftened bottom to the grate under the fatue, and at fop to a circle of iron, where they all terminate.

## FOU

If the fatue be fo big that it would not bee eafy to move the moulds with fafety, they muft be wrought on the fpot, where it is to be caft. This is performed two ways: in the firft, a fquare hole is dug under ground, much bigger than the mould to be made therein, and it's infide lived with walls of free ftone, or brick. At the bottom is made a hole, of the fame materials, with a kind of furnace, having it's aperture out wards. In this is a fire to be lighted, to dry the mould, and afterwards melt the wax. Over this furnace is placed the grate, and on this the mould, \&c. framed as above. Lafly at one of the edges of the fquare pit is made another larg furnace, to melt the metal. In the other way, it is fuf ficient towork the mould above ground, but with the like precaution of a furnace, and grate underneath. When finifhed, four walls are to be run up around it, and, by the fide thereof, a maffive made for a melting-furnace. For the reft, the method is the fame in both.
The mould being finithed and inclofed; as defcribed, whether under ground or above it, a moderate fire is. lighted in the furnace under it, and the whole covered with planks, that the wax may melt gently down, and run out at pipes contrived for that purpore, at the foot of the mould, which are afterwards exactly clofed with earth, fo foon as the wax is carried off. This done, the hole is filled up with bricks, thrown in at random, and the fire in the furnace augmented, till fuch time as both the bricks and mould become red hot After this, the fire being extinguifled, and every thing cold again, they take out the bricks, and fill up their place with earth, moiftened, and a little beaten, to the top of the mould, in order to make it the more firm and feady.
Thefe preparatory meafures being duly taken, there remains nothing, but to melt the metal and rue it into the mould.This is the office of the furnace above defcribed, which is commonly made in the form of an oven, with three apertures ; one to put in the wood, another for a vent and a third to run the metal out at. From this laft aperture, which is kept very clofe while the metal is in fufion, a fmall tube is laid, whereby the melted metal is conveyed into a large earthen bafon over the mould, into the bottom of which all he big brauches of the jets, or cafts, which are to convey the metalinto all the parts of the mould are inferted.
There calts, or jets, are all terminated with a kind of plugs, whicb are kept clofe, that, upon opening the farnace, the brafs, which guthes out with violence, may not enter any of them, 'till the bafon be full enough of matter to run into them all at once-Upon which occalion they pull out the plags, which are long iron rods, with a head at one end capable of filling the whole diameter of each tube. The whole of the furnace is opened with a long piece of iron, fitted at the end of each pole, and the mould filled in an inftant. - This completes the work with relation to the cafting part, the reft being the feulpor's or carver's bufinets ; who, taking the figure out of the mould and earth wherewith it is encompaffed, faws off the jets with which it appears covered over, and repairs it with his chiffels, gravers, puncheond, \&c.

Of bell foundery.
Before we enter upon this branch, the reader is defired to confult what has been faid under the article Bells. What has been thewn with refpect to the cafting of ftatues, holds, in proportion, with regasd to the cafting of bells: what is particular in the latter follows.

1. The metal, it muft be obferyed, is different for bells to what it is for flatues; there being no tin in the ftatue-metal, but a fifth part, and fometimes more, in the bell-metal. 2. The dimenfions of the core and the wax for bells, if a ring of bells efpecially, are not left to chance; buft mult be meafured on a fcale, or diapafon ${ }^{*}$, which gives the heightr, aperture; and thicknefs, neceffary for the feveral tanes required.

* Diapafon, among mufical infrument-makers, is a kind of rule or fcale, whereby they adjuft the pipes of their organs, and cut the holes of their flutes, haut-bois, \&c. in due proportion, for performing the tones, femi-tones, and concords, juftly.-A fquare being divided into eight equal parallellograms, the points wherein a diagonal interfects all there parallellograms, exprefs all the ufual intervals in mufte: and, on this principal it is, that the diapaion founded.-So the bell founders have likewise a diapalon, or fcale, ferving to regulate the fize, thicknefs, weight, \&t. of their bells.

It is on the wax that the feveral mouldings and other orna ments are formed, to be reprefented in rehevo on the outfide of the bell.
The clapper, or tongue, is not properly a part of the bell, but is fupplied from other hands. In Europe, it is ufually of non, with a large knob at the end, and is fufpended in the middle of the bell. In China it is only a huge wooden mallet, ftruck by force of arm againft the bell: whence they can have but little of that comfonancy fo much admired in fomic of our fetts of befls. The Chinefe have an extiandinal way of increafing the found of their bells, by leaving a hole

## FOU

under the cannon, which our bell-founders would reckon a defect.
The proportions of our bells differ very much from thofe of the Chinefe. In ours, the modern proportions are to make the diameter fifteen times the thicknefs of the brim, and twelve times the height.
The bufinefs of bell-foundery is reducible to three particulars: 1. The proportion of a bell. 2. The forming of the mould. And 3. The melting of the metal.
There are two kinds of proportions, viz. the fimple and the relative: the former are thofe proportions only that are be$t$ ween the feveral parts of a bell to render it fonorous. The relative proportions eftablifh a requifite harmony between feveral bells.
The parts of a bell are the founding-bow, terminated by an inferior circle, which grows thinner and thinner. 2. The brim, or that part of the bell whereon the clapper ftrikes, and which is thicker than the reft. 3. The outward finking of the middle of the bell, or the point under which it grows wider to the brim. 4. The waift or furniture, or the part that grows wider and thicker quite to the brim. 5. The upper vafe, or that part which is above the waift. 6. The paller or crown, which fupports the faple of the clapper within. 7. The bent and hallowed branches of metal uniteing with the cannons, to receive the iron keys, whereby the bell is hung up to the beam which is it's fupport and counterpoife, when rung out.
The particulars neceffary for making the mould of a bell are, I. The earth; the molt cohefive is the beft, which fhould be ground and well fffed, to take away whatever might occafion chinks. 2. Brick-ftone, which is ufed for the mine, mould, or core, and for the furnace. 3. Horfe dung, hair, and hemp, mixed with the earth, to prevent crevices, and render the cement more binding. "4. The wax for inferiptions, coats of arms, \& \&c. 5. The tallow equally mixed with the wax, in order to put a fight lay of it upon the outer mould, before any letters are applied to it. 6. The coals to dry the mould.
For making the mould, they have a fcaffold confifting of four boards, ranged upon treflels. Upon this they carry the earth grolly diluted, to mix it with horfe dung, beating the whole with a large fpatula.
The compafles of conftruction is the chief inftrument for making the mould; which confifts of two different legs, joined by a third piece. And laft of all the founder's helves, on which are the engravings of the letters, cartridges, coats of arms.
They firt dig a hole of a fufficient depth to contain the mould of the bell, together with the cafe or cannon under ground, and about fix inches lower than the terreplain where the work is performed. The hole mult be wide enough for a free paffage between the mould and walls of the bole, or between one mould and another, when feveral bells are to be calt.
At the center of the hole is a ftake erected, that is ftrongly fafteried in the folid ground. This fupports an iron peg, on which the pivot of the fecond branch of the compaffes turns. The ftake is encompafied with a folid brick work perfectly round, about half a foot high, and of the propofed bell's diameter. This they call a mill-ftone.
The parts of this mould are the core, the model of the bell, and the fhell. When the fufface of the core is formed, they raife the core; which is made of bricks, that are laid in courfes of equal height, upon a lay of plain earth. At the laying each brick, they bring near it the branch of the compafies on which the curve of the core is fhaped, fo as that there may remain between it and the curve the diftance of a line, to be afterwards filled up with layers of cement. The work is continued to the top, only leaving an opening for the coals to bake the core. This work is covered with a layer of cement made of earth and horfe dung, on which they move the compafles of conftruation, to make it of an even fmoothnefs every-where.
The firit layer being finithed, they put the fire to the core, by filling it half with coals, through an opening that is kept Thut during the baking with a cake of earth that has been feparately baked. The firft fire confumes the ftake, and is left in the core frequently an whole day. The firft layer being thoroughly dry, they cover it with a fecond, third, and fourth, each being fmoothed by the board of the compaffes, and thoroughly dried before they proceed to another. The cose is judged to be well prepared, when the profile carries the frefh cement off, without leaving any upon the laft dry layer. They likewife put tempered athes, fmoothing them over the whole, by the circular motion of the compaftes, in order to fill up the minuteft chafms, that no metal may run therein during the cafting.
The core being compleated, they take the compalles to pieces, with intent to cut off the thicknefs of the model, and the compafles are immediately put in their place to begin a fecond piece of the mould. -It confifts of a mixture of earth and hair, applied with the hand on the core in feveral cakes that clofe together. This work is finifhed by feveral layers of a thinner cement of the fame matter, fmoothed by the

## FO U

compaffes and thoroughly dried, before another is laid on The laft layer of the model, is a mixture of wax and g eafe fpread over the whole. After which'are applied the inferiptions, coats of arms, \&c. befmeared with a pencil dipped in a veffel of wax on a chafing dith; this is done for every letter. Before the thell is begun, the compaltes are taken to pieces, to cut off all the wood that fills up the place of the thicknefs to be given the fhell.
The firft layer is of the fame earth with the reft, fifted very fine. Whilf it is tempering in water, it is mixed with cow's-hair to make it the better cohere. The whole, being a thin cullis, is gently poured upon the whole model, that fills exactly all the finuofities of the figures, \&c. This is repeated 'till the whole is two lines thick over the model. When this layer is thoroughly dried, they cover it with a fecond of the fame matter, but fomething thicker. When this fecond layer becomes of fome confiftence, they apply the compafles again, and light a fire in the core, fo as to melt off the wax of the infcriptions, \&c.
After this, they go on with the other layers of the Chell, by means of the compaffes. Here they add to the cow'-bair a quantity of hemp fpread upon the layers, and afterwards frnoothed by the board of the compaffes.
The thicknefs of the fhell comes four or five inches lowier than the mill-ftone, before obferved, and furrounds it quite clofe, which prevents the extravafation of the metal. The wax fhould be taken out before the melting of the metal.
The ear of the bell requires a feparate work, which is done during the drying of the feveral incruftations of the cement. It has feven rings ; the feventh is called the bridge, and unites the others, being a perpendicular fupport to frengthen the curves : it has an aperture at the top, to admit a large ironpeg bent at the bottom; and this is introduced into a couple of holes in the beam, faftened with two firong iron keys.
There are models made of the rings with maffes of beaten earth, that are dried in the fire, in order to have the hollow of them. Thefe rings are gently preffed upon a layer of earth and cow's-hair one half of it's depth, and then taken out, without breaking the mould. This operation is repeated 12 times for 12 half moulds, that 2 and 2 united may make the hollows of the fix rings. The fame they do for the hollow of the bridge, and bake them all to unite them together.
Upon the open place left for the coals to be put in, are placed the rings that conftitute the ear. They firt put in this open place the iron-ring to fupport the clapper of the bell; then they make a round cake of clay, to fill up the diameter of the thicknefs of the core. This cake, after baking, is clapped upon the opening, and foldered with a thin mortar fpread over it, which binds the cover clofe to the core.
The hollow of the model is filled with an earth fufficiently moift to mix on the place, which is ftrewed at feveral times upon the cover of the core; and they bear it gently with a peftile to a proper height, and a workman fmooths the eath at top with a wooden trowel dipped in water.
Upon this cover, to be taken off afterwards, they affemble the hollows of the rings. When every thing is in it's proper place, they ftrengthen the outfides of the bollows with mortar, in order to bind them with the bridge, and keep them fteady at bottom, by means of a cake of the fame mortar, which fills up the whole aperture of the fhell. This they let dry, that it may be remioved without breaking.
To make room for the metal, they pull off the hollowis of the rings, through which the metal is to pafs, before it enters into the vacuity of the mould. The fhell being unloaded of it's ear, they range under the mill-flone five oi fix pieces of wood about two feet long, and thick cnough to reach almoft the lower part of the fhell. Between thefe and the mould they drive in wooden wedges with a mallet, to fhake the thell off the model whereon it refts, fo as to be pulied up and got out of the pit.
When this and the wax are removed, they break the model and the layer of earth, through which the metal muft run from the hollow of the rings between the fhell and the core. They fmoke the infide of the fhell by burning firaw under it, that helps to fmooth the furface of the bell. Then they put the fhell in it's place, fo as to leave the fame interval between that and the cere, before' the hollows of the rings or cap are put on again. They add two vents, that are united to the rings and to each other, by a mafs of baked cement. After which they put on this mafs of the cap, the rings and vents over the fhell, and folder it with thin cenment, which is dried gradually, by covering it with burning coals. Then they fill up the pit with earth, beating it ftrongly all the time round the mould.
The furnace has a place for the fire and another for the metal. The fire-place has a large chimney with a facious ah-hole.-The furnace which contains the metal is vaulted, whofe bottom is made of earth rammed down, the reft is built with brick. It has four apertures; the firf through which the flame reverberates, the fecond is clofed with a ftopple that is opened for the metal to run, the others ate to feparate the drofs or fcoria of the metal by wooden rake: Through thefe laft apertures paffes the thick imoke.-The ground of the furnace is built floping, for the metal to rundown.

## FOU

Of the foundery of great guns and-mortar-piece's of brals.
The method of calfing thefe pieces of brafs ordnance, is little different from that of bells; they are run mally and without any core, being determined by the hollow of the fhell, and they are bored with a fteel trepan that is worked either by horfes or a water-mill.
As to the metal, it is fomewhat different from that of ftatues as well as bells; it having at the rate of ten pounds of tin to an hundred weight of copper. A cannon is always fhaped a little conical, being thickeft of metal at the breech, where the greateft force of the gunpowder lies, and diminifhing thence to the muzzle; fo that, if the mouth be two inches thick of metal, the breech is fix. - With refpect to the length, that is meafured in calibers, that is, in diameters of the muzzle. Six inches at the muzzle require twenty calibers, or ten feet in length; about one fixth of an inch is allowed play for the ball.
The parts and proportions of a cannon about eleven feet long are, it's barrel, nine feet; its fulcrum fourteen, and it's axis feven; the bore, or diameter of the mouth, fix inches ${ }_{9}$ and two lines the play of the ball: the diameter of the ball therefore fix inches, and it's weight 33 pounds $\frac{\mathrm{r}}{3}$. The metal thick about the mouth 2 inches, and at the breech 6 . It weighs about 5600 pounds; it's charge is from 18 to 20 pounds. It carries point blank 600 paces, and loads 10 times in an hour, fometimes more. Larry makes brafs carinen the invention of J. Owen ; and fays, the frift, known in England, were in 1535 . He owns however, that cannon were known before; and obferves, that at the battle of Creffin in 1346 , there were five pieces of cannon in the'Englifh army, which were the firf that had been feen in France: Mezeray fays, that king Edward ftruck terror into the French army, by five or lix pieces of cannon, it being the firlt time they bad feen fuch thundering machines. Cannon are made cylindrical, that the motion of the ball might not be retarded in it's paflage; and that the powder, when on - fire, might not lip between the ball and the furface of the cannon, which would hinder it's effet.
Wolfus would have the cannon always decreafe towards the mouth or orifice: in regard, the force of the powder always decreafes, in proportion to the fpace through which it is expanded. The Spanifh cannon have a cavity or chamber at the bottom of the barrel, which helps their effect. This fort of cannon is found to recoil two or three paces after explofion; which fome áccount for from the air's rufhing violently into the cavity, as foon as it is difcharged of the ball: but the real caufe is, the powder's acting, equally on the breech of the cannon and the ball.-For battering-pieces, the proportion of their length to their diameter, depends rather on experience, than any reafoning à priori; and has been accordingly various, in various times and places: the rule is, that the gun be of fuch a length, as that the whole charge of powder Ge on fre, e're the ball quit the plece. If it be made too long, the quantity of air, to be driven out before the ball, will give too much refiftance to the impulfe; and, that impulfe ceafing the friction of the ball againt the furface of the piece will take off fome of it's motion. Formerly, cannon were made much larger than at prefent; till fome by chance two feet and a half thorter than ordinary, taught them, that the ball moves with a greater impetus through lefs face than a large.
The method of cafting iron-cannon differs very little from that of brafs. That the iron ore may melt the more eafily, thóre founders generally mixed it with a fulphureous ftone, that vitrifies a great deal of the grofs earth adhering to the native iron ore; but this very often occalions the cannon not to ftand proof; which might be eafily prevented.
FRANCE, is feparated on the north from England by the Britilh channel; on the north-eaft it is contiguous to the Spanifh Netherlands; on the eaft it borders on Germany, Switzerland, Savoy, and Piedmont, from the laft of which it is feparated by the Alps; on the fouth it is bounded by the Mediterranean fea, and by the Pyrenean mountains, which divide it from Spain ; and on the weft it is furrounded by the ocean.
The air is very temperate and wholfome, and not fubject to the great cold of Germany, Sweden, and Mufcovy, noro the exceffive heats of Spain and Italy; but it is more or lefs hot or cold, according to the different fituation of the feveral provinces.
The productions of Faance, as they are the fubjects of trade, are,
I. Wines $\left\{\begin{array}{l}\text { Champaigne, } \\ \text { Burgundy, } \\ \text { Bourdeaux, } \\ \text { Rochelle, } \\ \left.\begin{array}{l}\text { Nantz, and o- } \\ \text { ther places on } \\ \text { the Loire. }\end{array}\right\} \text { II. The } \begin{array}{l}\text { produce of } \\ \text { the wines, }\end{array}\left\{\begin{array}{l}\text { Brandy of Bour- } \\ \text { deaux, Nants, and } \\ \text { Rochelle, }\end{array}\right. \\ \begin{array}{l}\text { Vinegar, } \\ \text { Lees of wine, \&c. }\end{array}\end{array}\right.$
III. Fruit, fuch as prunes and prunelloes, dried grapes, pears and apples in Normandy, oranges and olives in Languedoc and Provence.
IV. Corn, falt, i.e. bay-falt, hemp, flax, filk, rofin, oil, cork. V. Kid $\mathbb{I k}$ ins in abundance, perfumes, extracted olls, drugs,
and chemical preparations, which are a produce rather than a manufacture, the growth being of their own.
VI. They have allo minerals and metals of divers kinds, and are daily difcovering others; and they are become great artifts in the fmelting and refining them, and perform thufe operations to as great perfection as any other country.
The manufactures of France are,
I. Silks, as $\left\{\begin{array}{l}\text { Luteffrings, } \\ \text { Alamodes, } \\ \text { Sarcenets, } \\ \text { Broad flowered and brocaded filks, } \\ \text { V.elvets. }\end{array}\right.$
II. Woollen manufactures, in imitation of thofe of England, which are chiefly carried on in Normandy, Poictou, Languedoc, Provence, Guienne; \&xc.
III. Linen, fuch as Normandy canvas, fail-cloth, at Vitry and other places; doulaffes at Morlaix, and fine litens and lace in the inland provinces.
IV. Paper of all forts.
V. 'Tapeftry, which they make very rich and fine in Picardy and near Paris.
VI. Soap, which they chiefly make in Provence, and which is fo confiderable an article, that when their crop of oils fail, they fetch a prodigious quantity from the Levant, to fupply the foap-makers*.

* The French have fome years fince obtained the fecret from Spain of making Caftille foap, as it is called; and have fet up very large manufactures thereof both at Marfeilles and Toulon, and have thereby beat the Spaniards out of that valuable branch of trade. Nor is this the only benefit which France receives by this manufacture; for, as one of the chief ingredients of making this foap, is Levantine olive oil, together with the ingredients of fofa and barilla, their large vent for their foap gives them the advantage of conftant back freights from the Levant, with thefe oily; which it feems, has proved one great, if not the only means of the French advancing their Turky trade upon the ruins of French advancing their Turky trade upon the ruins of
our's; for, we' having no fuch manufaeture of Caftile foap, that will confome fuch quantities of Levant oil as the French we can neither trade with the Turks fo much to their ad vantage as the French do, nor fo much to our owni, as if our Turky traders had the like benefit by conftant back freights.

France being extenfive in territory in Europe, and exceeding populous, they muft neceffarily drive a very great inland trade among themfelves: and, as they have many large navigable rivers, their home trade is carried on with great eafe, and much lefs expence than is done in England.
Five rivers empty themfelves into the Seine, and this fo near to Paris, that goods are brought thither from fome of the remoteft parts by thefe rivers. Thefe are the rivers Marn, Aifne, Loign, Oyfe, Yonne: Befides the canals of Orleans, and Briere, and by them from the Loire. Alfo up the Sein by Roan from the fea.
So that, by means of thefe rivers, the traders of Paris can receive heavy goods from moft of the northerly parts of France, alfo from Lorrain, Borgogne, Picardy, Normandy, and Bretagne, at very eafy rates.
The Loire, without comparifon, the largeft river in France, and the fartheft navigable; and on which ftand the largeft and moft capital cities of the kingdom, Paris excepted; conveys their wines down from all the wine-making provinces to Nantes, and, in return, furnifhes thofe countries with all neceflary goods for the merchants and traders of thofeparts.
The Rhone, an inland river of a long courfe, takes in the Soan and the Douz from Burgundy, and the Durance from Dauphiné; and fupplies all the province of Languedoc, as well as Burgundy, and the Swifs cantons, with merchandize from all parts of the world, as we fhall fee prefently.
The Garonne does the fame in Guienne, Gafoigne, Poictou, and French Navarre.
The home trade of France, which well deferves our regard, is their coafting trade by fea, in order to bring the product of the fouth parts of France to thofe of, the north, for the fupply of the great city of Paris, and of all the northern provinces: and this, indeed, is a very confiderable, as well as material part of their trade ; and, next to the coal trade of England, is, perhapsw the greateft article of its kind in Europe; at and employs more fhips and more people.
The principal ports for this commerce, are the cities of Bourdeaux aud Roan; but there are many other places which fhare in the trade by the way, both in the out-loading, and in the returns.
The firft fhips are loaded at Bourdeaux with wines and fruits of all forts, as prunes, prunelloes, figs, and all the product of the fouthern prowinces; and there fetting out in a fleet, and under convoy, in time of war, ftop at St Martins, and the ifle-of' Rhee. Here they are joined by the fhips from Rochelle, laden alfo with wines and fruits of all kinds, as well as with corn, which the adjacent country fupplies. Hence they: proceed to the coaft of Bretagne, and anchoring at Belle-ifle, ale joined by another fleet from Nantes, Sherrant, and St Malo, laden with white wines, brandy, and corn; though generally the fhips from Nantes, \&c, take care to be ready for the convoy, and to be at Bell-ine, before them.

## FRA

Their fleet thus gathered, and fometimes, even during a war, they make up from 150 to 200 fatl , and they proceed to the mouth of the Seine ; the fhips defigned for the trade of Paris put in at Havie, and taking the opportunity of winds and tides, make the beft of their way up to Roan, while the reft feparate for their refpective ports, as Caen, Dieppe, St Valery, Bologne, Calais, Dunkirk, \&c.
There are the chief ports where they unload. The grofs of their loading is delivered in this manner; and from there places, the wines are difperfed over all the northern provinces of France and the Netherlands; for, Dunkirk being a free port, all the merchandizes deftined for Flanders, on board thefe coafting veffels, are difperfed from Dunkirk by the canals and rivers, with which that country abounds.
Nor is this coafting trade only thus confiderable in one fleet, but is paffing and repafing all the year, efpecially in the autumn after the vintage.
Befides this trade, which is thus carried on by fea, the city of Paris receives, by the navigation of the canals of Orleans, and of Briarie, and by the navigation of the Upper Seine, a very extraordinary and conftant fupply of the wines and brandies produced in all the countries upon the river Loire, which are remarkable for lighter bodied wines, than thofe of Bourdeaux; and which are very pleafant, and in high efteem at Paris.
By the fame river the wines of Burgundy are brought to Paris, and all the great rivers which flow into the Seine, bring down the growth of their feveral provinces to that great city, and return with what other goods they may have occafion for.
And as there is a great number of cities bordering on thofe rivers, and many of them exceeding large, rich, and populous; fo the communication of trade by thefe conveyances, and the returns made from Paris to thefe cities, muft be very confiderable.
It would be endlefs to enumerate the cities and towns, which fupply Paris with their manufactures; (for which fee the particular provinces, under their re(pective names) fuch as fine linen from lome provinces, coarle from others; bone-lace from one province, fine druggets, \&c. from another: thefe again circulating from Paris to the towns, cities, and provinces, where, other goods being made, the reft are wanting. Though the commerce of the royal city of Paris is mighty confiderable, yet this capital city being no fea-port, it is not the center of the trade of the whole country, as is the cafe of London, Amfterdam, \&c. nor is it poffible to be fo, the extent of the country being fo exceeding great.
Yet Paris being the moft populous city in France, there being, as computed, near a million of people, and near half as many more in the adjacent towns, for 10 or 12 miles round it: this great confluence of people muft neceffarily caufe a proportionable accumulation of provifions and merchandizes, brought as well by the Seine, as by other rivers, from the remotent countries in France.
In confequence of fuch multitudes of people, it is farce to be imagined, what numbers of boats and carriages, men, horfes, and other cattle, are employed in the fingle article of bringing wood for firing to the city of Paris. This occafions a vaft conflux of trade, and a prodigious carriage by water from diftant inland countries ; and this, as weil as their coafting trade, is no inconfiderable nurfery to ufe people to live on the water, and foon fit them for failors. And as it is by their wines, brandies, and fewel, fo it is by the innumerable throng of boats and barges, which come down or up continually to Paris, laden with corn for the fupply of that great city.
And though there is no trade of malt in France, which makes fo great an article in the corn trade in England, the French drinking little malt liquor throughout the kingdom; yet, as the French ufually eat more than double, if not treble the quantity of bread, in their ordinary way of diet, than the Englifh do, fo the quantity of wheat and barley * may rife fomething in proportion, and, perhaps, near equal to that of both wheat and matt in England, confidering the number of people in both countries.

* Wheat and barley are mentioned here promifcuoully, the French making great part of their bread with a mixture of both, as in fome parts of England they alfo do.
France being exceeding populous, as well as a far extended country, and the people univerfally eating much bread with all their food, the quantity of corn produced in France, in a plentiful year, muft be extremely great, and then they fupply Germany, Switzerland, Geneva, and feveral other parts with corn.
Yet, if either an extraordinary hot or wet fummer happens, their crop is injured, and a fcarcity enfues; and they are lefs able to fupport the want of corn than other countries, and much more oppreffed on fuch occafions than the Englifi would be, who, having to plentiful a fupply of fleth, roots, and malt liquor, are able to live with the lealt bread of any nation in Europe. In thefe times of fearcity in France, the greateft quantity of corn brought to Paris comes up the Seine, being imported at Roan, and other ports not far from that river,
Vol. I.

## FR A

from England or Holland; or elfe at Nantes, and brought up the Loire by the canals before-mentioned.
As France is certainly the moft populous and largeft kingdom in Europe, fo it's inland traffic is proportionate, and, in many particulars, far beyond any country in Europe. The great cities, which hold any confiderable inland correfpondence with Paris, are fuch as thefe:

All thefe cities, and many more, have an immediate communication, by water, with the city of Paris, and many of them with the fea.

The inland navigation of France, thus centering at Paris, for fo great a part of France, neceffarily caufes a conflux, as, well of people as of trade, in the capital city. Whether it was fo contrived by the firft founders of the city, or not; we can't fay ; but, if not, the chance of it is fomething extraordinary ; no city in the world being fo happily fituated for the ivel commerce of the whole; and that in fo extended a. kingdom. For, what by fea , and what by thefe rivers, the remoteft part of France bas a conveyance for their product to the capital city, upon eafy terms : and there is farce any fuch thing as fettled weekly or daily carriers for merchandizes by land, as is the cale in England *, at a prodigious expence.

* Query. - Whether it would not be morefor the benefit of trade, rather to promote navigable rivers throughout the kingdom, as' much as poffible, for the cheap carriage of merchandizes, than to turn our thoughts wholly, as it were, to turnpike road bills, for that purpole ?

Two ports in particular ferve for the reception of all fuch goods, whether produced or made in the remoteft parts of France, as may be brought to Paris by rea, viz. Nantes, and Rouen. Hirher the fhips come from Bourdeaux, Rochelle, St Mato, and all the ports and iflands of France, as well in the bay of Bifcay, as on the coaft of Bretagne; as alfo from the ports of France in the Mediterraneati (for we are now fpeaking of the home trade of France only) and from all the navigating world.
By thefe water conveyances, Paris is made; as itwere, à feaport; and there are many merchants, even in Paris, who carry on the forejgn, as well as inland trade of that kingdom. But there is alfo another center of inland commerce in France, which has not an immediate communication with Paris by water, except by a very long circuit ; and that is in the $S$ and S. E. parts of France: and the center bf this trade may be placed at Lyons, For,
Lyons is feated, in fome refpects, in regard to commerce, like Paris : it is at near the fame difance from the fea, and upon as great, or rather greater fiver, though not fo happily navigable as that part next the fea, by reafon of the violence of the corrent, and the weaknefs of the tides. As the navi gation, however, refpects inland commerce chiefly, it is happily fupplied by the canal of Martigues, fo that there is no want of larger fhipping ; and, for goods of fortigi importation, they are conveyed by the ports of Marfeilles in Provence, and that of Cette in Languedoc, fufficient for that part of the trade.
The confluence of the Soan aud the Rhofne, which meet at Lyons, gives an advantage of inland navigation to that city, from a very great extent of the country rounid. The firf receiving the river Doux from Burgundy, and even from the frontiers of Alfatia, commands all the trade of that part of France, till they' come fo near the Loire and the Seine, that a fmall voiture by land makes a communication that why : and the manufactures of this part of France are conveyed; by either of thefe rivers, into the north parts of France, and to Paris itfelf. Nor on the weft fide is it above eight leagues, till meeting with the waters of the Lot, a navighble fream in the Gevandan, which runs into the Garonne, their edods are likewife conveyed to Bourdeaux by water, and from thence by fea, not only to Paris, but to England, (when that trade was opent alfo to Holland, and moft other parts of the world.
Next to the Soan and the Doux, which particularly maintain a trade with that part of Burgundy called the French-Comte, the navigation of the Rhoine itfelf (which, às is defcribed already, rifes in the mountains of St Goddart, in the fartheft port of Switzerland, joining to the Grifons) brings to Lyons all the commerce of the city and lake of Geneva, and of all the adjacent cantons of the Swifs; from whence there is a great and conftant return of trade, efpecially frofm the city of Geneva; who particularly manage the reft of the trade from all the Swifs cantons, and bring to Lyons abundance of manufactures, as well from Switzerland as from the Rhine, by the navigation of the Aar, and other rivers, by which they have a communication with the upper Alface, Suabia, and other parts of Germany.
Alfo, by the Durance, a large river, and though very rapid, yet made ufeful for part of it's channel; the trade is fupplied into Dauphine and Provence, even to the mountains of Pignerol, and thence to the Po , and by that river into Pledmont and Italy.
It may be here obferved, in regard to Lyons, that the diftances from the river Soan and Rhone to the Loire, the Seine, and the Garonne, by which the communication is maintained with Bourdeaux, Nantes, Paris, and other parts of the kingdom of France, the trade of that city is not fo difecult as it would otherwife be: and fo again; Lyons receiving the Turky raw filk, and Italian thrown filk, \&c. is likewife eafy from Marfeilles to Avignon, where it is embarked on the Rhofne, or from Marfeilles to Martigues.
This commodioufnefs for inland commerce is exceeding beneficial to Lyons, and renders it a city of very great confequence to the kingdom : for, as Paris is to the north of France, fo is Lyons to all the fouthern provinces, as Dauphine,

Provence, all the Upper Languedoc, Burgundy, or the French Comte, Newfchatel, and alfo Geneva, Savoy, and the Swifs cantons as above.
By the fame inland navigation, the city of Lyons drives a very confiderable trade in the woollen manufactures, made in Languetoc, about Nifmes, Beaucaire, and other places; in which are brought up the Rhofne, at the proper feafons, and Sold at the fait at Lyono. . In like manner the wines of Bur gundy, and of Champaigne alfo, are brought down the Soan and the Doux to Lyons, and fent from thence to all the principal cities of Languedoc and Guienne.
We thall next cenfider; how the kingdoth of France is fituated fot foreign trade; and how extenfively he carries the fame on in Europe, Affa; Africa, and America.

Of the coaft of France in the Mediterranean fea
The French coaft begins oppolite to Perpignan, which is the firft city on that fide, under the French government ; and the firft port in France, on this fide, though of no confequence, is port Vendre.
Perpignang, is a frontier of Roviffillon by land, and of importance, in cafe of a war, againft Spain : on which account the French have made it very ftrong.
The fea on the coatt of Rouffillon, and on ward to Montpellier, is called the gulph of Narborine. The city of Narbonne is particularly famous for the finifing that great work of a navigation between the two feas, that is, the joining the Cantabrian and the Mediterranean feas together, by a canal This great work was fet on foot by the late Lewis XIV, a prince born for great undertakings. This work was 15 years in compleating, viz. from 1666 to 1681 , and colt an immenfe fum. As they had the purfe of a prince to'fupply them, who pared no expence to finith whateven he undertook, all difficulties were furmounted; vallies were filled $4 \dot{p}$ mountains and hills levelled, and the' boats continua to pafa and repals with great eafe, for the benefit of commerce.
Between the river Aude and the mouth of the Rhofne, there lies, parallel with the rea, a lake 30 miles long and from 3 to 5 broad, extending from the river Eraut, and the city of Agde weft, almoft to the mouth of the Rhofne eall. Agde is a fmall city on the river Eraut. The port is fmall ; yet they have fome fhips, and they export wine and gil ; and, within thefe 20 years, their trade has increafed.
In the middle of this lake, there is an opening into the fea, which makes a very good port, called Cette. Here hips of burthen may come in : and, the royal canal being carried on from Narbonne to Agde, the merchandize, which is brought from Italy to be fent by the canal to Bourdeauxs is generally landed at Cette; and thence catried, by the faid Jake, to Agde, and put on board the barges for the canal,
Between Cette and Marfejlies, the great river Rhofne empties itfelf into the fea ; of which we Gall give a defcription, atter having vifited the port and city of Marserimess: which is the next port of confequence to Narbonne, ealt, about 50 leagues diftance. The fame of thia city for commerce is well known all over the world. It is, indeed, the only trading
 and good, and receives the largeft hips, though fumetimes the biggeft are obliged to lighten their loading a little before they come in. It is a fine, large, populous, and rich city, and is rendered fo particularly by its commerce, the whole Italian and Turky trade of France being cartied on here.
Lewis. XIV, as he well knew the importance of this city, fo he took it into his particular favour, and gave fuch directions for beautifying, it, and for encouragingmen pf trade and buffnefs to refort thither, that Marfeilles hecaque quite a new city to what it had been. The key is faid to be one of the finet in the world, except that of Sevillein Spain. The fortifications are fo prodigioully frong, thas no others fcarce equal them :- by fea nothing can burt the city, and by land it would require 100,000 men to attack it in ffrm. But, , after it was vifited with a plague, 1723 , this city fuffered a great eclipfe, and it's commerce decayed, for near a twelvemonth, unfpeakably, not a thip being fuffered to pars or repals, nor would any nation admit them to come into their poits; fo that the poot were left to fatrve, and the fralbits perithed miferabty at féa: but it has furprizingly recovered ittelf, and daily advances in commerce.
The French trade to Turky and 压gypt, as alfo to the coat of Africa, and to all the illands of the arches, centert at Marfeilles. They have affo a confiderable fade to Veníce, to Genoa, to Leghorn, to Naples, and Sicily and they have confuls at almoft all the ithands and ports in the Meditetranean "[See the article Consuls] Marteillés being the only city of France for trading in thofe feas, but above all for the Tarky trade in generat, wherein they, at prefent, exceed atl Turky trade in gencral, wherein they, atyphter the Englith therein.
Touion, a port town of Provence, fituatea on a bay of the Mediterrancan fea, 25 miles S. E. of Marteilles. It has the moft fecure and capacious barbour of any port inf Fritice ; bere the largeft thips of the royal navy of France are btilt, and ftationed, and here valt magazines of ofl manner of daval ftores 'and timber for thipping are repolited. Here likevife are the fineft docks and yards, for the fitting out and fur-
nifhing thips of war, in the whole world perhaps. In Toulon there are academies for the marine guards, where they are taught navigation; and there is a royal foundery for cannon and mortars, with all manner of utenfils for cannoneers and bombardeers. They had in the harbour of Toulon, when the confederates, laid fiege to it, in 1707,16 firft rate men of war, 8 fecond rates, 24 third rates, and 6 fourth rates; all which the Englifh had very probably taken, if the Germans had not detached 1500 men to Naples, which were intended to confitute part of the army to form that fiege.
From hence to the coaft of NicE, and the frontiers of the dominions of the duke of Savoy, France affords nothing confiderable.
The intes of Hieres lie off of the coaft, under the weft part of which there is a good toad for the largeft hips; and where the Englifh fleet lay many months, anno 1744, and blocked up the French and Spanifh Fleets in the harbour of Toulon; and, on their quitting that harbour, the combined fleets were engaged by admiral Matthers, before whom they fled to the coaft of Spain, and would hive been deftroyed, if he had not been deferted by one of the Englifh admirals, and feveral of his captains: but, on the flore, no towns of note, or perts of trade, are found, 'till we come to the Antibes, on the eaft fide of which lies the city of Antibes, the lait in France: It lies at the bottom of a fmall gulph, but the harbour is not very good, nor is the trade confiderable.
The river Rhosne here feems to require our notice. It has it's fountain in the mountains of Switzerland, and in the very center of the Alps, in the higheft parts, in the canton of Ufi, and on the weft fide of the great mountain of St Goddart, the largeft in all the country, being a ftage of mountains.
The Rhofne begins to be navigable, for fmall veffels and barges, a little below Sion, and, 20 miles farther, enters the great lake near Chillon: It is the greateft inland fea, or lake, In this part of Europe,
Geneva is the firf city of note upon it. There is a great inland commerce here; for as it lies in the middle, between the cantons and the country of Piedmont, it is the center of trade between all thofe countries and France.
There is no confiderable town on the Rhofne, from Geneva to Lyons. There are fome forts on the frontiers, as at Pont Greffin, and fort St Katherine. But as we are only defcribing the courfe, commerce, and navigation of rivers, the other is not our bufinefs. Many rivers fall into the Rhofne in this fpace; but the only navigable ftream is the Dain, which rifes in the Upper Burgogne, or French Comte, and brings fome commerce with it, being able to carry boats up to Pont Dain, in the county of Breffe, and falls into the Rhofne at Gourdan.
Lyons, fands at the confluence of the Suane and the Rhofne, in the point of land between them: and therefore, to bring the Rhofne into it's perfect ftate, we muft confider the Soan alfo, which is a very large river, and of a long courfe: it rifes on the frontiers of Champaigne and Burgundy; and, as the Rhofne rifes in mount Goddart, among the fources of fo many other rivers, fo the Soan rifes in the fame country, and at a very little diftance from, though not juft in the fame country, and, at a very little diftance from, though not juft on the fame hills with the Seine, the Marne, the Meufe, and the Mofeile; and when joined with the Rhofne, rums not a great way from the Loire alfo.
The Soan, in it's courfe, paffes through fome of the moft confiderable cities of the eaft parts of France, as particularly, Pont fur Soan, Gray, Aufone, St Jean de Loifte, where it receives the Ouche from Dijon in Burgundy; Verdun, where it takes in the Doux from Dole and Benençon; Cballons, Mefcon, Balle Ville, Ville Franche, Eyons.
At Lyons, there are three large ftone bridges over the Soan, and one ftately bridge over the Rhofne, after the other is joined. This city is efteemed the fecond in France. It has innumerable advantages, by its fituation, for people and commerce.

1. As it is on the great pafs, or high Road from France into Switzerland, into Lombardy, and into Italy. 2. As; by to many navigable rivers, it brings, as to a center, all che commerce of Burgundy, French Comte, Geneva, and the Swifs cantons. 3. As, by the River Rhofne, it maintains a communication with the fea, by which it receives it's fupply of filk, and exports again it's proper thanufactures to -all parts of the world. 4. As it has a very populous country round it, and at leaft 200,000 people in it. 5. As, by this means, it carries on the greateft, and once the moft flourithing manufadure in France; and is the center of the like manufacture, in all the adjacent country, viz. Dauphine, Languedoc, Rovergne, Breffe, Lyonnois, and Savoy.
In the city of Lyons, there are fome things peculiar to it's commerce, and by which it is not a little aided, and which no other city in France poffefes equal to this. As, 1. A bank. 2. A courfe of exchange. 3. A court-merchant.

Queen Anne's wars being extremely injurious to the commerce of France, it muft neceffarily affect the public credit of that nation, in the like degree; for public credit and commerce will not naturally profper under tyrannical and arbi-
trary government, efpecially when the tyrant is at war with his neighbours: at fuch times every one, but efpecially foreigners, will deaw all their property out of banks.
The courfe of exchange, eftablifhed here, is as univerfal as that of Amfterdam, and affords extraordinary eafe and convenience, with regard to the negociation of money, by bills, throughout Europe ; which is of the laft confequence to the general commerce of this nation.
With regard to the Court-Merchant, it fill remains, and is an eftablifhment extremely wanted in many other parts of the world, to decide, amicably and fummarily, all controverfies among traders, in refpect to their traffic ; which, with out great injury to thofe concerned, admit neither of delay or expence of tedious law-fuits, and the formalities of the ordinary courts of juftice: this court is very pertinently chriftened The Tribunal of Commerce. See the article Merchant, i. e. [Court-Merchant.]
From Lyons; the Rhofne paffes to Vienne, the capital of Provence, part of Dauphiné. It ftands at the influx of the frnall river Gere. Here are tome manufactures of paper, iron, and fleel.
Vaience, is the next city on the Rhofne, which bas notrade of fignificancy. From hence the Rhofne pafles clofe by the territory, and in view of the city of Orange, formerly the patrimony of the houfe of Naflau, but unjufly and violently taken away by the French, under Lewis XIV.-From hence the Rhofne paffes on to Avignon, which is a very popus lous city, and enjoys a confiderable trade, by the manufacture of filk; wherein the people are very profitably employed.
A little below this city, the Rbofne is augmented by the river Durance, which brings. with it all the waters of Dauphiné, and the north part of Provence.- The Durance running weff, as the Po does eaft, and taking in another, called Durance alfo, they meet at Guilleftre, and go together to Embrun, which is not a town of trade, but a mere frontier.
In paffing towards the Rhofne, the Durance almoft fees Aix, the capital of Provence, which, as it has no great commerce, I pafs on to the Rhofne, that haftens to the fea, paffing by between two oppofite fmall cities, called Terrefoon and Beaucaire; the firft on the Languedoc fide of the river, and the other on the fide of Provence.
At BEAUCAIRE, on the Languedoc fide, there is an extraordinary fair or mart held every year, about Michaelmas, which lafts eight days, being the greatef in all the fouth parts of France, and particularly for the valt quantity of filk fold here, as well raw, which is the product of the country, within thefe 30 years, as alfo for thrown filk from Italy; and likewife for great quantities of woollen manufachures, made in the adjacent countries, and fome foreign brought hither to be fold.

Of the coait of France, from Dunkirk to St Malo's, and from thence to St. Sebaltian.
Dunkirk, was once the moft formidable place for ftrength, and terrible to all Europe; but it's fortifications were de-- Atroyed by the treaty of Utrecht. Nothing fupports this town at prefent, but it's being a free port, and the neighbouthood of the city of Lifle; which latt beng a rich and great city, and, for it's wealth and number of people, called Little Paris, has no other port but that of Dunkirk to carry on their trade at. [See the articles Austrian Netherlands and Fifanders.]
As the treaty of Utrecht, made between England and France, obliged the latter to ruit this famous port, fo the vigorous adhering to the conditions of the faid treaty obliged the French to difcontinue their attempt, and even confiderable progrefs, in forming a new port at Mardyke, between Dunkirk and Calais; and which, having a communication with Dunkirk, might have made them fome amends for the lofs of the old pier-heats, which were deftroyed ; and Mardyke xemains only a fmall creek, with a large fluice to carry off the waters of the flat country behind, being part of the proviace of Artois and the diatrict of St Omer's, and is not navigable for veflels of burthen.
Calais is the eaftermole town of the antient kingdom of France. This was once a very confiderable place, being long contended, for between the two crowns of England and France; but the port, not being capable of receiving thips of burthen, has very little trade, unlefs in the fmuggling way by finall crafr.
Bo Y IOGNE is a large town, and flands on the fea-fhore; but as the fiver is fmall, it is no port of any confequence. It lies in a large bay bearing it's own name. The channel is here 30 miles over, reckoning from about Romney in Kent to the bottom of the bay of Euulogne.
There are fome merchants here, and it is particularly eminent for the manufacturing trade, but highly injurious to Great-Britain for one article of it, the bringing of Englifh wool over from Romney-marfh in Kent; a trade, which the French find fo much their account in, that they have long experienced it to be their intereft to give great encouragement to the Englifh fmugglers; and all the vigitance of the :government, which has been remarkably fevere upsn this ocea-

## FRA

fon during the prefent adminiftration, has not been able to put a ftop to it, though it is certainly very greatly checked within thefe few years.
As Romney-marfh is the place where it is ordinarily Chipped off, fo this town of Boulogne, and the coalt all along the bay, from Boulogne to the mouth of the Soam, is the ufual place where it is brought on fhore.
The river Soam is the principal river of the province of $\mathrm{P}_{\mathrm{I}}$ CARDY; and running through feveral confiderable cities and towns on the frontiers of this province, fuch as Amiens, Monftrevil, and Abbeville, empties itelf in the Britilh channel at St Vallery.
The fmuggling wool trade from England hither, being carried on at the mouth of the Soam, and from thence to Dieppe, has occafioned feveral confiderable manufactories of Wool to be erected in Picardy and Normandy, particularly at Amiens in the former, and at Rouen for the latter, in imitation of the Englifh manufactures: nor have they the advantage of the Englifh wool only, but it is obfervable that they have conflantly many Englith workmen among them; efpecially fuch as we call in England mafter-manufacturers; and thefe being brought over from England by the influence of extraordinary rewards and encouragements, and having the Englifh wool to work on, have brought the French to a proficiency in the woollen manufactory, that may in time prove the ruin of the like trade of this kingdom.
Dieppe, is a fine town, 'tis the beft for trade next to Dunkirk on this part of the French coaft: they have in particular a confiderable trade to Newfoundland, and to the French fettlements in North America. Their hips often unlade at Havre in the Seine, for the convenience of fending their cargoes up the river to Rouen and Paris. However, when they are unladen, they come with more eafe into the haven of Dieppe to lay up, where they have water enough when they are in, and are laid fafe. The feamen of Dieppe are accounted the beft railors in France.
It is ${ }_{7} 7$ leagues from Dieppe to the mouth of the head of the river Seine, which is a noble river, and of the longeft courfe of any in France, except the Loire, and is navigable farther, paffing through many, and the richeft provinces in France: it rifes in the remoteft part of Burgogne or Burgundy, and receives feveral very large and navigable rivers into it, as the Main, the Oyfe, the Eure, the Yonne, the Aubo, the Loyng, and divers others.
This river rifes in the mountains of Burgogne, near the city of Chanceaux ; the river Tille rifing at South Seine, on the other fide of the fame ridge of bills, and running fouth into the Soam, and thence into the Rhofne. So that the rivers on one fide this ridge of mountains run into the narrow feas, or Englifh channel, and thofe on the other fide into the Mediterranean. Hence the Seine, taking its courfe north, paffes through Chaftillon fur Seine, called fo to diftinguinh it from two other cities of the fame name; one fur Main, and one fur Loyng. From thence to Bar fur Seine, as alfo diftinguined from Bar fur Aube, a large town upon the Aube, about 12 miles eaft from it, and thence to Troyes.
Troyes, is a large and populous city. All this part of the country is remarkable for the beft wines in France, namely, Champaigne and Burgundy. But the city of Troyes is parcicularly inriched by the Linen Manufacture.
The Seine is navigable here for barges of a middling fize. About 20 miles north from Troyes, the Seine receives the river Aube; after which it's courfe turns to the weft and north-weft.-Hence the Seine, continuing it's courfe welt, paffes to Montereau faut Yonne.-This country is very populous, and they are employed in making of fine Linen, Lace, and divers other manufagures.
From hence it runs to Moretr, where it receives the Loyng from the fouth-weft, which brings in the navigation of the canal de Briare, and the canal of Orleans, and joins the water of the Loire with thofe of the Seine.-Hence the Seine runs to Melun, paffing by the foreft of Fontainbleau.-Here is a large trade by water to Paris for provifions and all forts of other merchandize, which the merchants bring from Nantes, and import thefe by the fea commerce.-Whence the Seine goes to Corbeil, a fmall city, yet the Seine makes it a place of fome trade; and being fo near to Paris, it fupplies it with fire-wood, corn, and poultry in abundance.
Here the Seine, enriched with thefe additions of water, paffes through Paris itfelf, the glory of France, and capital of the whole kingdom ; the greateft city in Europe, London and Conftantinople fcarce excepted.-From Paris the Seine makes five fuch long windings fo near to each other, that no river in the world can fhew the like.-In the laft of thefe windings, the Seine takes in the united ftreams of Aifne and the Oyfe. -The latter of which is likewife a river of a long courfe, and which brings with it all the rivers of the north parts of France between the Maes and the Seine, and is at Point Oyfe near as great a river as the Seine.
Below Paris the Seine paffes by St Cloud, St Germains en Lay, and Mariy, all three royal palaces, and very magnificent. Meluan, Mante, Vernon, and Pont de l'Arch, are all populous towns upon the Seine. But the city of Rouen is the principal of them all, and is the fea port of Paris.

The navigation of the Seine is joined with that of the Loire, by two large canals made by art at a great expence, the one called the canal of Orleans, the other that of Briare; by which a communication is made with all the chief cities upon the Loire, and with the metropolis, Paris, to the great benefit of the commerce of Paris in particular, as well as that of the whole country in general. By this navigation the wines of Bretagne and Burgundy, the brandies of Anjou and Poictou, the imports of Nantes and Rochelle, with all the manufaCures of Saumur, Angers, Tours, Blois, Oileans, and other great towns and provinces on that fide the country, are conveyed to Paris by water-carriages at an easy Expence. Befides the city of Paris, to which the navigation is eafy, by reafon of the tide runsing fo great a part of the way, the famous city of Rouen lies on the northern bank of this river.
Rouen, being the fea-port to Paris, becomes of courfe great, rich, and flourifhing city. The trade of Rouen is extraordinary, as it lies midway between Paris and the fea. It's trade confifts of divers branches, in refpect both to it's foreign as well as home parts, efpecially in the linen and woollen manufactures, and in the latter more eminently; which are here carried on with great induftry and fipirit, in imitation of the English, and by the means of English Wool, which they obtain too eafily from Dieppe and Havre, by the way of Romney-marfh, as before obferved.
Rouen has alfo a great trade with Ireland, particularly for leather, butter, tallow, and other products of that country : they carry on befides a great coafting trade with Rochelle, Bourdeaux, and Nantes, for the wines and brandies of that part of France, wherewith they fupply the city of Paris, 25 allo with olives, oil, prunes, raifins, oranges, and lemons, which they bring from the fouth parts of France, and they from Languedoc and from Spain.-Thus circumftanced, this city is become very opulent by it's traffic only.
Havre de Grace, ftands at the mouth of the Seine; it is faid to be the port of the city of Rouen, as Rouen is to the city of Paris, the merchants here laying up their fhips, which are too large to go up fo far in the river. There are a number of confiderable merchants here, and efpecially for the Newfoundland trade; and there is a conftant communication and connection of commercial interefts between Rouen and Paris.
Havre has alfo the moft confiderable fhare in the Fishing Trade, of any port in France; principally to the North Seas, and for the Herring Fishery, not only in the channel, but on the back of the fands off Yarmouth; and fince the French king laid high duties on the Yarmouth filh, they have wonderfully improved in curing them, in the Yarmourh way, to our no little detriment.
CaEn, is the firit port beyond the mouth of the Seine weft: it is a fmall port, but a pretty large city, and, having'a communication with the Englifh channel, does not want commerce, though not to the advantage of England.-The navigation of this coaft, 'till you come to the illand of Alderney, is fafe and eafy, afterwards there is need of good pilots. Alderney and Sark, Guernfey and Jerfey, being part of the dominions of Great-Britain, we fhall not take notice of their trade under this article.
St Malo, is a city of commerce, and inferior to none that France has in the ocean. The road for fhipping, and the barbour, is lafe and convenient, which, with the commodious fituation, open to the Britilh channel, make it a place of the beft trade to France on this whole coalt.
The merchants here; were, particularly in the wars of queen Anne, fome of the richeft in all France, they being deeply embarked in the South Sea trade at that time.- They bad then fome fhips that returned with fuch prodigious cargoes of bullion, that the like has not been known belonging to private merchants.-At this point of time, it has been faid, that fome merchants there, were not worth lefs than a million fterling.-They made abundance of prizes in the laft war with England, which drew on our sefentment to little purpofe; and this place will always prove a great grievance to us, on thefe unhappy occafions.- It is at prefent a flourthing place of trade, efpecially for the Newfoundiand Fishery to Martinico, tu Quebeck, and, indeed, to meft of the French colonies in America.
St Malo is fituated at the bottom of a large bay, extending from Cape La Hogue to the Seven Ines, after which the land falls away to Cape Ufhant. - Between thefe hes the town of Morlaix, at the mouth of a river of the fame name.-It is a large beautiful town, full of people and trade: the port is good, the channel deep, and hips of above 100 tons come up to the key. There are abundance of mercantile people bere, who are the grand fpring of crade. There are feveral confiderable manufactures here, which enrich the place, efpecially thofe of hinen and paper.-Of the firft dowlas and buckrum are made in great quantities, as alfo canvas and fail-cloth, and they are largely exported. The beft printing paper in France is faid to be made here, efpecially the demy and crown ; as alfo writing poft-paper, fine as the Genoa, yet not fo thin, and finer than the Dutch, though not fo thick. - This is no contemptible article in the French commerce to other nations, In fine, the increare of commerce bere bas greatly increafed the wealth, the fplendor, and hap-
pinefs of the place, which are ever the invariable effects of it. Nothing remarkable to our purpofe appears on this coaft, from Norlaix till we come to Breft, except St Paul de Leon, a fmall city on the coaft, between Treguier and Breft; it has a good port, and fome home trade.
Brest, is a place of confequence upon this coaft, being the largeft and moft capacious road and harbour that France is poffeffed of on the ocean.- When fhips are here, it is the beft defended, and fafeft harbour in France. Here the French fleets are oftentimes laid up, though the greateft of their men of war generaliy go to Toulon.-Here are warehoules and magazines to lay up naval ftores for 100 fail of thips of war of the line, and fome of 80 and 90 guns have been built here. France, in the year 1690 , had here a royal navy, equal, if not fuperior, to all the naval power of England and Holland united, and which offered battle to them all, but they declined it: and may not France fee thofe days again?-The inlet of the fea, which forms the harbour of Breft, is very large, the waters every way deep, and the anchorage good; fo that nature feems to have provided them againt the time when the like powerful fleets may occupy them.
The next place of confequence on this coaft is the mouth of the river Loire, the greateft in France for the length of it's courfe, the number, of great cities it vifits by the way, and for the extent of it's commerce and navigation, as' we have before briefly thewn. The Loire is navigable from the Lyonnois, and that fide of Burgundy, to Nevers, and dowri to Briare, by large flat-bottom barges.-By this canal the glafsware, tin-ware, and fine earthen-ware, for which manufactures the city of Nevers, and all the country about it, are fo famous, are cdrried down to Paris, to the great advantage of the country.-By this canal the merchandizes of foreign countries imported at Nantes are alfo carried to París by water, to the great encouragement of the foreign trade, and inriching of the merchants at Nantes.-Alfo the wines and brandies of the country below Orleans, on the bainks of the Loire, are carried to Paris the fame way; and, indeed, the principal fupply of that great city, as to wines and provilions, comes from thofe rich and fertile proyinces on the banks of the Loire.
Towns of note on or near the Loire, below the canal of Orleans, and before it comes to Nantes, are Orleans, Blois, Amboife, Tours, Saumur, and Angers, all of them large cities: no country, except the Netherlands, can thew feven fuch cities, on the bank of one river, under one fovereign, and in fo fmall a compafs of territory.-All this country produces what we call French white-wines, and the beft of the kind; and, indeed, the beft wines of all the weft parts of France are in the country about Angers.
Rochelle is the next city of confequence in France, upon the coalt of the ocean, a confiderable port of trade, though unfortified, for reafons too well known,-This city was once the ftrongeft in the whole kingdom, and on account of it's opulence and folendor, for years the bulwark of the Haguenots. It fupported their intereft in the civil wars in France, during five kings reigns, and at length defended itfelf with almolt incredible bravery and refolution, againt the whole power of France, the French king, Lewis XIII. befieging them in perfon: nor had they been reduced at laft, if we may credit hiftory, had not the Dutch, though Proteftants, and fome Englith Chips too, to the ignominy of our own country, been bired by the French to mafter the Rochellers fleet, and deprived them of affiftance by fea; whereas the Rochellors before were mafters of the fea, and all the naval power of France was not able to match them.
But their fleet being beat, and the promifed fuccours of the Englith failing, cardinal Richlieu contrived a fea-wall to be made, by an mvincible induftry, to block up their harbour whereby being deprived of all relief, they were obliged to fubmit, by the extremity of famine, 30,000 people having perifhed here, in the year 1628, for want of bread.-Upon which occafion Rochelle not only loft all it's privileges, and the Proteftant religion was banifhed the place, but it's fortifications demolifhed, and the city erected into a Popilh bifhopric.
Notwithftanding which, it continues to be a place of confiderable trade, full of wealthy merchants, whofe commerce extends to moit parts of the world, but efpecially to the WeitIndies, Martinico, St Domingo, and Quebec: from hence alfo is a very great part of the Newfoundland trade carried on, and likewife that of their Miffiffippi, - The French Eaft India company too make ufe of Rochelle as a port, though not always, for the return of their fhips from India, and for difpofing of their cargoes.
Port-Lewis is a barbour deferving our notice, and, if it had ftood on the north part of France, in Normandy or Picardy, would have been worth a kingdom itfelf; but, as it flands on the coaft of Bretagne, to the South of Cape Uhant, where France has many good harbours and lafe roads for thipping, as well for war as commerce; . fuch as the harbours of Breft, Rochelle, Nantes, Bourdeaux, \&ic. and the roads of Conqueft, Bellife, St Martin, and others; this makes Porr-Lewis the lefs regarded: it is however, populous and
Vol. I.
rich, and has many wealthy merchants, efpecially fuch two trade pretty largely to the Weft-Indies.-This, being a good harbour, is likewife a ftation for part of the royal navy, and for the fhips of the French Eaft-India company.
Nantes, lying on the river Loire, requires mention. It ftands 30 miles within the land, upon the north bank of the Loire, which is here a very fpacious and noble river, has a deep and fafe channel, and makes a fine harbour: it has a flourifhing trade, both domeftic and foreign, few towns in France outdoing it.-The trade of this city has greatly increafed within thefe 30 years, as well from their manufac tures as from the flux of all forts of merchandizes from the remoteft inland provinces of France, and by means of the extraordinary induftry of the inhabitants, and the navigation of the river Loire:-The great benefit of water-carriage be tween Nantes and Paris alfo, by means of the canal of Or leans joining the Loire and the Seine, as before intimated, is very fenfibly experienced here; and all kinds of foreign merchandize imported here are carried at an ealy expence to Paris, where the chief confumption of the kingdom lies, to the unfpeakable profit of the merchants of this place.
But the great expertation of wines and brandies from hence are the capital conftant articles upon which Nantes chiefly depends.-It is fcarce credible to conceive how confiderable this trade is, both of brandies and wines together; infomuch that it has been ordinary to fee 2 or 300 fail of flips in the Loire at a time, taking in wines and brandies *.

* The name of the city of Nantes is well known over the whole Chriftian world, for the famous editt of pacification, made by Henry IV. of France, for his Proteftant fubjects, anno 1599, by which their religious liberties were con firmed to them in the molt folemn manner, the ediet being figned by the king, regittered in all the parliaments of France, and declared in the ftrongeft and moft exprefs words that could be invented, to be irrevocable, and was confirmed and folemnly fworn to be oblerved by the fon and fucceffor, Lewis XIII.-But, in contempt of God and man, and to the eternal infamy of Popery, and the very name and memory of the French grand monarch, Lewis XIV. it was difowned, and revoked, by the command of that prince, in 1685, and the Proteltants thereupon treated with fuch cruelty and inhumanity, as is not in the power of language to express, -Such, in particular, as the ravihing children and women, in the prefence of their parents and hufbands, befides innumerable other barbarities, as if ftudied by the molt refined undeftandings, to pierce even the very fouls of the fufferers.-Is not this fufficient to fhew Proteftants what they have to truft to, if once Popery flould ever gain the afcendant over thefe the happieft of kingdoms, if we could but be truly fenfible of our condition !

There is no port of any confequence between Rochelle and the river Garonne, nor upon the Garonne, except Bourdeaux, which is 40 miles up that river. - This is an exceeding large and populous city, and is fo fpread by vineyards, as to be accounted not lefs than 20 miles long.-The tide flows quite up to the city of Bourdeaux, and brings thips of good burden to the very key. It flands on the fouth of the river Garonne. The trade here is chiefly for wine, and that in fuch prodigious quantities, that, when our trade with France was open, it has been ordinary to fee 4 or 500 fhips in the river at a time, loading wines for England only, and for other nations many more. Hence come the clarets and ftrong whitewines of France, as that of Pontac, Graves, Frontiniac, Caveac, \&cc. being the names of the vineyards, or of the towns where the vineyards are, the wines taking their names from the towns, or from the perfons who own them.
Another branch of trade bere is in prunes, which they export in great quantities.-They have a confiderable traffic here to the Wett-Indies, as particularly to the French fugarcolonies in America, and they have many fugar-bakers here to refine them, which has brought them a great trade for refined fugars, both at home and abroad.- But they have fill a much greater trade than all this, the wine and brandy excepted : this confilts in goods brought from the Mediterranean Sea, by the royal canal from Narbonne to Touloufe, and from thence down the Garonne in barges to Bourdeaux; by which, as the waters of the royal canal join the two feas, the ocean and the Mediterrancan, fo the commerce of both feas is carried on here, which makes Bourdeaux not only rich, but populous, and all the country round it. The key is noble and fpacious, and hips of ordinary burden may come clofe to it, the tide flowing a great beight, up to the very wharfs. They have an exchange here for the merchants, fome of whom almoft from all the nations in Chriftendom refide here. They have alfo a great trading fair bere, which is as confiderable, and as much reforted to by foreigners as any other in France. See the article Farrs.
Bayonne is the laft confiderable town in the Frençh dominions. It is an antient, ipacious, opulent, and populous city, has a great trade both in France and with Spain, and with many other parts of Europe. It has a very fine harbour in the mouth of the river Adour: the harbour reaches into the very heart of the city, and is fo deep and fafe, that the largelt thips come up to the very merchants doors; and 10 N
the entrance into it is fecured by a ftrong cafte, regularly fortified, Bayonne being a frontier both by Jand and fea; for it is within 15 miles of the frontiers of Spain. There is a large trade driven here, and abundance of wealthy merchants refide in this place. A great quantity of wine is exported here, and they have a trade as well into the whole province as into Navarre.
France, by fituation, has the advantage of commerce of all the nations on this fide the globe, Britain excepted. The great extent of their coaft, we have feen, qualifies them for it; they are extended upon the ocean from Biyonne, in the bottom' of the Bay of Bifcay to Dunkirk, a port that, leaving the Britifh Channel behind it, looks intathe German Ocean, and claims acquaintance with the northern commerce, as well as with the Wefer and the Elbe, the chief rivers of trade in the German Sea, and to the Baltic and the coaft of Norway on one fide, and North Britain on the other; and, lafty, to the Herring Fisferey in the Caledonian Ocean, and the Whale Fishery in the feas of Spitbergen and Greeniand. The coaft of France is above 400 miles in length, and there are in it, as we have feen, fome as good harbours as any in Europe.
Add to this the Mediterranean Sea, lying full 60 leagues in length upon the fhores of Rouffillon, Languedoc, and Provence, which open to Erance the commerce of Barbary, Italy, and the Levant.
No lefs is France adyantageouny fituated towards the land for an inland navigation and commerce with her neighbours of Swifferland, Upper and Lower Germany, Holland, and Fhanders. The Rhine opens a trade for her on the fide of Alface, into Suabia and Franconia, and into the beart of the empire, by the additional navigation of the Neckar and the Maine, two rivers which convey her merchandize within a few miles of Ulm upon the Danubẹ. By the laft they trade into Bavaria, the Upper Palatinate, and even to Vienna; on the other hand, the Rhofne on the right, and the Upper Rhine on the left, give a communication of trade from Languedoc and the Frenchi Comte, into every part of Swifferland, as has been thewn.
On the north fide of France, and through the country of Lorrain, France has the two great rivers of the Mofelle and the Maes, which give them a free commerce to the Lower Rhine, and into the United Provinces; as likewife the Sambre, the Scarpe, and the Schelde do into the Auftrian Ne-therlands,-Add to all thefe, the extent of the kingdom of France, that it is the largeft and the moft populous of any country in the known world; except China.
To the prodigious number of their people muft be joined the temper and genius of the nation: they are vigorous, active, induftrious, and even (in trade as well as war) an enterprizing people.
So greatly have they increafed their trade fince the treaty of Utrecht, that they now carry their wines and their brandies into the Baltic, where formerly the Dutch fent them in Holland bottoms; and the French bring their naval ftores from Livonia, Pruffia, and Peteriburg, in French Chips, where, before that treaty, no French ships had fcarce ever been feen. The Hanfe-Towns have little or no thare now in furnifhing France with iron and copper, with timber, with pitch, or tar.
The French alfo now trade with Sweden, as other nations do, and to Dantzic, and have greatly increafed their commerce in Mufcovy, as well as their neighbours.
With all thefe advantages of fituation, extent of land, and numbers of people, France has laboured, from the beginning of it's commerce, under two difficulties, which rendered it next to impoffible to produce any confiderable ftaple manufactures, unlefs thefe dificulties could be effeetually furmounted. - Thefe were the want of a competency of wool, and of filk, the two fundamental articles in the general manufactures of Europe, and fuch too, which the French, from the activity and induftry of their people, were well difpofed to fall into; but, wanting thefe fundamental natural productions in ample quantities, fuffered the difcouragement many years, with no little affiction; for they fell into the filk manufacture to a very great degree, encouraged by the Italians, when the French were mafters of the Milanefe, in the reign of Francis I. and though they bought their filk in Italy and Turky, as they do ftill in fome quantities; yet all the fouthern parts of France, efpecially the Upper Languedoc, the Lyonnois, and part of Dauphiné, were employed in the manufacture of filk, and greatly improved in it, fpreading it into Champaigne, and even to Paris itfelf. This was from about the year 520 .
But, at length, the French conquered this difficulty. By the means of fome Piedmontefe, who became fubjects to France after the feizing of Pignerol, in the reign of Lewis XIII. they firft began to plant the white mulberries in Languedoc, and part of Provence: and, nourihing the filkworms with unfpeakable induftry, and greatly encouraged by the court in the reign of the late Lewis XIV. they, after many years feent in the firt experiments, at length breught the fame to perfection, and produced the filk itfelf in good quantities, which is now become a natural produce of France,
as it was before of Piedmont, and other parrs o. Italy, wio originally borrowed it from the Afiatics of Arnicia a a d Georgia, as the French did from them, and as the biginh moft certainly might foom them buth, and eff Eiually ellablifh the fame in our colonies on the contineut of A meerica. But it hath not proved the fame in France witn regard co the produce of wool, with refpect both to the quantity and quality, being equal to thofe of England and Ireland in general. The French, a vigilant and improving people, being deficient in the article of wool, have obtained theep from England and Ireland, as they have wool, in order to try the poffiblity of raifing wool, by the means of our hheep, as good in quality, and as large in quantity in general, as our wool is ; but hitherto they have been difappointed, though it is faid that there is, at prefent, another grand attempt to accomplifh this defign ; and, if it is poffible in nature, the French are determined to have as good wool, and as much of their own production, as ever England or Ireland have had : and no one can fay what art and induftry, fuppgrted by the royal purfe, cannot effect.
We are apt to flatter ourfelves with the impofibility hereof; yet we may one day find ourfelves miftaken. The examples brought from our bull-dogs, hounds, and maftiffs, all which are faid to alter their nature upon change of climate, fuppoing thefe things to be matter of fact, do not, perhaps, afford any thing conclufive with refpect to the article of fheep. We Shall not, however, enter into the philofophy of this matter ; nor would it become Britons to be inftrumental to let fuch rivals into a fecret of that kind, was it in their power. Certain it is, that France frill labours under the want of this effential production, to the degree that we have it. They have wool, indeed of their own growth in great quantities, fince the fuccefs of their wollen manufactories; and in fame places, as with us, it is better than in others, as in the $U_{p}$. per Languedoc, Poictou, Guienne, and thofe provinces lying towards Burgundy ; but the bett has been faid not to be qualified for near fo eftimable a manufacture as ours is in general, neither will it mix or work with the foreign wools fo well, the ftaple being too hort, and the wool itfelf weak, and not fufficiently ftrong to bear the feveral nẹedful operations of combing, carding, (pinning, and weaving, to that perfection which ours does:- To that the manufactures, when made of the beft of it, are thin, fight, and not of that fubftance, duration, and beauty, as thofe made of the Englifh and Irifh wool are.
Yet this difadvantage by nature hath not difcouraged this nation from attempting the woollen manufactures in every branch; for, fince they have not wool fo good in general as ours, they have been long determined to have our Englifh and Irifh wool, and which, being properly mixed with their own, or properly worked by itfelf, they have had art enough to impofe their woollen manufactures upon feveral other parts of Eutope, even for Englifh fabrication, as we fhall fee prefently.This fupplying France with Englifh and Irifh wool was firt brought about by the indefatigable endeavours and profound policy of their great minifter Colbert, to whom we owe that pernicious trade of owling, as it is called, or the running of pernicious trade of owling, as it is called, or the running of minifter had found out the means of fupplying France with Britilh wool, he was not long before he eftablifhed woollen manufactories of divers kinds in France, facon d'Angleterre, or of the Englifh method of fabrication. -He firf fet the poor to work all over France, in combing, fpinning, weaving, dyeing of wool, and woollen goods. And what was foon the confequence of this? The French king faw all his fubjects cloathed, however indifferently, with the manufactures of their own country, who, but a few years before, bought their cloaths from England, or, which was worfe; at fecond-hand from Flanders and the Dutch. This was carried on with fuch a prodigy of fucceff, that it would take up more room than we can fpare to duly reprefent it.-This commercial minifter decoyed, by rewards and encouragements, Englifh artufts into every part of France, where it was mof eligible to eftablifh thefe manufactures, where they taught the people fo well all the feveral parts of the manufacture, and the French were fo apt to learn, and fo dexterous and chearful in teaching each other, that, in a few years, they could do without Englifh inftructors, even in the facon d'Angleterre.
The French being thus able to furnih their own people, to cloath the nobility and gentry, nay, even the king himfelf (for he would wear nothing that was not the Manufacture of his own Subjects) they not only, in a few years, excluded the Englifh woollen manufactures from their country by a law, but began to turn their cyes abroad, and prepare to rival the Englifh in all the foreign markets of Europe, as in Spain, Portugal, and Italy, as alfo in Afia and Africa, but efpecially in Turky, and Barbary. To effectuate which,
The great Colbert took thefe meafures: he firlt informed himfelf of the feveral forts of the Britifh manufactures fold in every foreign market, whereof he had pieces and patterns brought him; and he erected particular works for the making thofe very goods; and, what was another mafter-flroke in politics, he wifely encouraged the merchants to export them,
by caung credit to be given them out of the public flock, that is, by the king, even 'till the Return for these Goods came home. This was particularly done with the Turky merchants at Marfeilles, who had credit out of the Royal Treasury 'till the return of their thips from Smyrna and Scanderoon: by which politic encouragement the Marfeillans firlt fupplanted the Englifh in the Levant trade, wherein, we are too fenfible, they have furprizingly increafed ever fince *.

It is not unlikely that the French might take this maxim from the wife prince, Ferdinand I. great duke of Tufcany, who raifed the trade of his fubjects to an incredible height by the like policy. That prince, not content with having his royal coffers foll for his private ufe only, was ambitious that his treafure fhould be fubfervient to fill thofe of his fubjects alfo. Mr Mun (a) a very Rilful and eminent Englifh merchant, tells ns , he himfelf experienced the duke's liberality, who lent him no lefs than forty thourand crowns gratis, although he knew he fhould fend the whole away, and that in fpecie too, to Turky, to purchafe merchandize; and that in feecie toin, to well afured, faid he, that, in the courfe of duade, that the fame would return again, according to the Italian proverb, with 2 duck in the mouth. The judicious old gentleman further tells us, that, by this policy, the duke encouraged trade to fuch a degree, that, of his own knowlege, Leghorn, which was a poor little town, became, even in his time, a fair and frong city, being one of the moft famous places of trade in all Chrifendom. How it has improved fince, from that foundation, need not be faid.
(a) Vide England's Benefit and Advantage by Foreigh Trade, by Mr
Mun.

The fame was likewife done at the famous manufaiory near Nifmes in Languedoc, where the cloths by means of the inftructions of our Englifh woollen manufacturers and our Englifh wool, are made fo admirably well, that fome have thought they have equalled, if not outdone the Englifh: but the contrary of this the beft judges allow.-Certain it is, they make very good cloths there, and dye and drefs them to perfection; but many fay that they fail of the fubftance, the firmnefs, and weight of the Englifh.
They have likewife imitated the Britifh ferges, fays, bays, long ells, perpetuana's, their druggets and ftuffis and they have extremely leffened the demand for thefe goods from us in Italy, Spain, and Portugal.
It is not much above 80 years ago fince Lewis XIV, the French king, encouraged the making of cloth in large quantities in his dominions.-The firftplace he began at was Languedoc, where they made cloths of about 9 or 10 s . ftetling per Englifh yard; lince which, they have made them here from Io s. to 14 s . per Englifh yard; and that prince raifed a confiderable fund for the carrying on this trade here with vigour. This fort of cloth is about feven quarters wide, like our Gloucefterhire cloths: fince which they have fet up feveral more woollen manufactories here, where they make divers forts of ftuffs and ftockings.
Before, as well as fince the French king begun thofe fabrics in his dominions, we fent large quantities of woollen goods to France; but, fince the clandeftine exportation of our wool hath been carried on fo vigoroufly to that country, the French king has prohibited the importation of all forts of our woollen manufactures.-So extraordinarily are their woollen fabrics increafed, that it is indubitably true, that they many years have, and daily do, greatly fupplant us in the woollen manufactures at Spain, Portugal, Italy, and Turky, and feveral other places, and underfel us in moft, if not all places, wherever they come with their waollen goods.--This they have begun and accomplifhed, all within about 80 years; and, if they continue to have our wool, and other foreign wools, fo cheap as they have, in exchange for their brandies and wines, \&c: and to go on with the like rapidity in thofe manufactures, the fate of this, the moft lucrative branch of commerce belonging to the crown of Great- Britain, muft certainly be deplorable; efpecially if we add to this melancholy confideration, that the woollen manufactories of many other countries, are fo improved and increafed, by the means of foreign wools, and which manufactures are faid to be impofed on foreign nations for Englifh woollen goods. This is the reafon why our real Englifh woollen goods go off fo flowly in Holland, $\& * c$. If this is become the cafe, within thefe few years, what mult we expect to be the confequence a few years hence? Will not other places, that continue to take off our woollen fabrics, be fupplied from other nations? For the French play thefe tricks with regard to their woollen manufactures; they counterfeit the marks and feals of the Englifh woollen manufacturers, and actually impofe them upon foreigners for our make.
That we may bave a more particular idea of the woollen manufactures of France, it may be more acceptable to enter a little more into particulars, for foeaking in general cannot carry that weight.
At Abbeville, a large town in Picardy, about 90 miles north of Paris, and 15 eaft of the Britifh Channel, is a manufacuure of fine broad cloths, which Lewis XIV. fift eftablifhed; and
which he did by advancing 40,000 livres to Mynheer $V$ an Robais, a Dutchman.-The king alfo erected him a fpacious and commodious place wherein to carry on this manufactory, and a fine heufe to live in, and granted him a patent for the fole making of fuperfine broad cloths in that part of France. And, as Mynheer was a Proteftant, the French king granted him a further patent, renewable every 20 years, for the free exercife of the Proteftant religion, for himelf and family, and to all the people that did then, or fhould hereafter, work in any branch of the woollen fabrics at this town, \&cc.-Alfo, that if any woman, who was a Roman Catholic, Ahould marry a Proteftant that belonged to this manufactory, fhe Chould have it in her option to turn Proteftant or not.-And, in order at once effectually to eftablifh this manufactory, the king himfelf wore fome of the firft cloth that was made, and ordered all his court to do the fame.-All thefe privileges are maintained to this day inviolably, and the factory is now carried on by three partners, that are nephews to old Van Robais, who firt eftablifhed it, and are of the fame name.
There is made bere, at Van Robais's manufactory, nothing but fuperfine broad cloths, wherein, it is afferted, that they ufe ufe no wool but Spanifh.- The place where they carry on this fabric is very fpacious and convenient, is walled in, and lies clofe by a navigable river, not far from St Valery, a fmall fea-port town.-They here carry on every branch of this fuperfine manufacture, except the fulling of the cloth, and the finning of the wool.
There are 108 broad looms, and about 600 men, women, and children, employed upon the fpot, in picking of wool, winding, warping, weaving, thearing, rowing, dyeing, burling, fcribbling, fine-drawing, prefling, packing, \&c.-All employed are governed with extreme decorum and regularity. They all come to work, and leave it, at the beat of a drum. If any workmam gets fuddled, or commits any offence, he is fufpended his work by the foreman of the branch to which he belongs, during pleafure, but not exceeding a month's time; for every branch of the bufinefs, it muft be obferved, is under the conduct of a diftinct foreman, who fo difiplines the workmen as to make them excel in every branch of the whole; which is management worthy of notice.
One Cole, that went rrom London, was the firft man that taught them to dye proper colours, to make mixtures of wool, as we do in England, to make into cloth.-This manufacture hath fo inriched the Van Robais's family, that, upon public days, they appear in their coach and fix horfes, with half a dozen fplendid valets to attend them, as grandly as any of the peers in France.
Though there is no Englifh wool ured in this fuperfine manufacture, if I am rightly informed, yet there is a large quantity ufed in the town of Abbeville; for this fabric, being crowned with fuch great fuccefs, induced other people to fall into the way of making other different forts of fuff, as paragons, ferge royal, druggets, fhalloons, cloth-ferge, \&c. which are chiefly made of Englith and Irifh wool alone. There are not lefs than 1000 looms going in this town on paragons, befides a great many more that are employed in the making of druggets, ferge, cloth-ferge, \&c.-Thofe goods are chiefly fent to Spain, Portugal, and Italy, and most of them are absolutely soldfor English Woollen Manufactures, they being facon d'Angleterre. 'I 6 have been told (fays an eminent Englifh woollen - manufacturer, who took a tour to France to fee the - progrefs of the woollen fabrics in that kingdom) BY A - Manufacturer of the Town of abBeville, - that he hath known an EnGLiSH Ship lie 6 in St VALERY Road (the port before-mentioned) - while they haye senta Boat up to ABBE-- VILLE, which is near four Leagues, to fetch - down Bales of Wodilen Manufactories, and ' have shipped them on board the ENGLISH - VESSEL, and carried them to foreign Mar6 kets for EN GLISH GOODS, the Bales being - marked and numbered, as if they weremark-- ed in ENGLAN'D, and are sold amonget our - ENGLISH GOODS *.'

* See a quarto pamphlet, intitled, Obfervations on the Britifh Wool, and the manufacturing it in this kingdom; with remarks on the wool and woollen manfuctories of France,
Flanders, and Holland, $\& \mathrm{c}$. Printed by H. Kent, and fold by Simon Virtue in Swithin's-Alley, near the Royal Exchange, $173^{8}$. By a manufacturer of Northamptonhise.

And it is very much to be feared, that this to common a cafe, and has been an artifice of many years ftanding, to impore thefe French woollen manufactures, made FAcon d'Angleterre, upon foreign nations for Englifh : and thofe too which have not been fo good in quality may have been complained of by foreigners, and highly prejudiced the reputation of our manufactures in that refpect alfo. - Nor could a more fuperlative trick be contrived than this, let it be taken in any light whatever, for the abfolute ruin of our woollen manufactures, and the eftablifment of the French; and fuch Englifhmen or Britons who are either merchants or mafters of Chips, that will be thus concerned in
a confpiracy of fuch deftructive confequence to the whole woollen manufactory of this kingdom, deferve the gallows more meritorioully than any criminal, perhaps, that was ever exalted to it. And if this, upon due inquiry, thould be found to be a very common practice, it may deferve the confideration of the great reprefentative of the nation.

- But if I had the favour to know one of thefe gentlemen, - continues the honeft manufacturer before quoted, and fhould 6 afk why he thus buys French goods, and fhips them with - our goods to be carried to foreign markets, I know it will - be given for anfwer, That they can buy paragons, drug-- gets, \&cc. cheaper at Abbeville than in England, which I - know to be true. And the reafon that goods are to be * bought cheaper in France than in England is, becaufe the - labour is above one third cheaper there than in England, - where the fame forts of goods are made; for there the poor - people work hard, and fare hard, as to their food and - cloathing. There is another pretty large manufactory car-- ried on in this town, by four partners, two Dutch and two - Frenchmen; the Dutchmen's names are Schalone, whore - father was Van Robas's firft foreman, when he fet up this - fine fabric that I have given fome account of, which was - done in Lewis the XIVth's time; the old genteman was © alive in 1732, when I had a great deal of difcourfe with
- him ; and I remember one day, as I was talking with him, * the Paris Gazette was brought in and read to the old man, - and there was a paragraph in it, that the manufacturers of
- Great Britain had applied to parliament, to get an act to
* flop the running of wool to France, \&c. Upon the old - man's hearing that read, he faid that he had remembered - that there had been petitions of that kind for more than fifty © years; and faid, let them petition, and make what laws 6 they will in England, if we can find French gold, I am - fure we Chall have Englifh and Irifh wool enough.
- And it is my opinion, that thofe merchants that buy thefe - goods at Abbeville, and fend them to the foreign markets * with our woollen goods, would not fop at fending them - our wool, if it lay in their power, if they do not do it at - this time: however, that I muft leave to themfelves. This 6 fabric of the Schalonees is carried on with good fuccefs; 6 the fort of goods that they make are ferge royals, druggets, 6 and fome few fhalloons and cloth ferge; thefe goods are - made moftly with Irifh and Englifh wool: they have feve* ral workfhops in the town; they carried me to one of the ' comb-hops, where there were fever or eight men at work - upon English and Irish wool; I combed a combful of - it myfelf: they alfo fhewed me their fock of wool, yarn, * worfted, and goods wrought up, which was very large ; I - believe there was at leaft 10,000 . ftock ${ }^{\prime}$ ' wrought and un6 wrought; I brought feveral of their patterns away with - me, fome ferge and fome druggets; the ferge is the fineft I - ever faw : I hewed them to fome of the beft judges of - ferge in England, who declared that they had never feen - any like them, for finenefs and beauty, made in England. - I told you before, that Van Robais had a patent for the fole - making of fuperfine broad cloth, with other advantages - befides; one of which-was, that no perfon in that place - Chall ufe, or occupy, any fulling-mill, that goeth either by * wind or water. So that when this factory was fet up by the - Scialonees, they were obliged to have a mill to go with - horfes, which they call a gigg-mill, and is one of the beft - contrivances that ever I faw for that purpofe, for it fulls * the goods to perfection.
- When I was at Abbeville laft, which was a little above fix - months ago, I found that thefe four partners had advanced 6 their trade; and Mr Daniel Schalone told me, that they had - good then in Italy and Meffina, but was obliged to take - off the town mark before they fent them abroad, and fo - hip them on board fome Englifh veffel; this he faid they * did, becaufe there was a large duty on French woollen - goods in thofe parts; but that they had applied to the car-- dinal de Fleury to get that taken off, which he promifed * that he would; and in a fhort time procure them the di* berty of fending the French woollen goods to Italy, \&cc. - duty free; for that there is now a large duty on the French 6 woollen manufactory, even almoft to a prohibition; and - that they could not fend any goods thither, but under the ' notion of English Manufactories: but the Eng-- lifh, being kind neighbours, do the French that piece of - fervice, to carry their goods for them to other markets, 4 where the French cannot go themfelves: thefe are true Bri-- tons, to befure, and have a great value for their native - country !.'

Such is the feeming honefty and fimplicity of this our woollen manufacturer's account, that I judge it moft acceptable to continue his narrative in his own words:

- At the fame time, continues he, I was at another mer-- chant's houfe, where they were all hands at work, in pack-- ing woollen manufactories to be hipped on board an Eng-- lifh hip that they expected every day to come into St Va-- lery road; this the mafter told me, and I faw the goods - they were a packing: there were a great many bales, and - were marked with Englith marks and numbers. I alfo faw
' fome Irifh worfted at Mr Schalone's, that they had got to 6 make thalloons with; I brought two keins of it away along with me. The price of Englifh and Irifh combing (wool, was about iod. Englifh money a pound; and fome - that was deep and a long fine ftaple, was rod. - pound. Of late years they have got the way of making - good hofe at this town in frames, which they chiefly con-- fume amongtt themfelves: I do not doubt but, in a fhort - time, this branch of the manufactory will find the way to - foreign markets, along with the other goods, if they con-- tinue to have our wool : as to the method they have in ' mixing and managing of our wool with their own wool, it ' is as follows: in the fineft ferge druggets, \&c. they put none of their own country wool; but, in the fecond fort of - goods, they mix one third of theirs, with two thirds of - ours; and fo in proportion, as they would have their goods - coarfer or finer; for in fome goods they mix two thirds of - their own, with a third of our wool ; for with their own wool alone, they can only make coarfe cloth, cloth ferge, " hats, hofe, \&c. for the poor people of their own country.
- I was told by a manufacturer of this town, that he had re-- ceived advice, that there was forty or fifty thoufand weight ' of my country wool landed at Nantes, and that he was to
' have part of it. And as near as I could learn, there are - about 300 wool-combers in this town, and a great deal of
' the wool, combed here, is fent to Amiens, to be fpun into fmall yarn or worfted, it being the beft place in this country for good fpinning.
- Ampens is in Picardy, and, is a large city, about ten leagues " from Abbeville; at this place are made a great many forts of - filk and worfted fuffs, in imitation of Norwich crapes, - bombazines, Spaniih popplines; and feveral forts of flowered, - fpotted, Atriped and plain ftuffs, mixed with filk and wor-- fted, \&c: which are the principal forts of goods that are - made in this city; thofe goods are generally mixed with our - wool, and their own wool together: but the fineft fort is - made of all either Englih or Irin wool, mixed with filk, ' mohair, \&c. They alfo comb our wool alone in this city, 6 and have it foun into worfted yarn, sic, and fend it to - Tournay, Bruffels, and other places, with which is made ' the fineft of tapeftries and filk ftuffs. They have in this - town fome thoufands of looms employed in making the fe-- veral forts of filk and worfted ftuffs; and, when dreffed and - finifhed, they are all fent over to France, Flanders, and
- Holland; and fome of them are fent to Spain, Portugal, \& \&rc. As to labour, it is above one third cheaper in this - town, than it is in Norwich, London, 8cc. where the fame - fortment of goods is made; they make their goods full - breadths, let them be half yard, half ell, three quarters, or yard wide: and alfo make them thicker than we do in England, which makes them in greater efteem in the Low - Countries, than the Englifh goods, which makes this manufactory daily increafe.
- At Mondidire in Picardy, about eight leagues from Ami* ens, within thefe two years, there is a factory fet up by - Monf. Chavilian, the intendant of Picardy. In this factory - they make fhalloons and cloth ferge: this being a new fa-- bric, I fhall not enlarge upon it ; only obferve, that, as the - trade of the woollen manufactory increafeth at one place, ' they extend it to another, by giving encouragenent to ' thofe that will engage in' it. I know an Englifmman that - was offered 40,000 livres, as a ftock to carry on the trade at this place, by the perfon that had the management of - thofe affairs, befides all the privileges that the woollen ma-- nufacturers enjoy at Abbeville. By this you may fee how - zealous the French are to promote and fupport the carry6 ing on thefe new woollen fabrics in their own country, 6 when at the fame time they cannot carry on thofe old ones, © if they were not furnifhed with Irifh and Englifh wool:
6 for the wool of this part of France is fit only to make coarfe cloth, cloth ferge, druggets, hofe, hats, \&c. which - will ferve for the poor peafants: but now they have our ' wool, they make goods fit for a prince's palace. Abbe-- ville, Amiens, and Mondidire, being the principal towns - in France, where the woollen manufactory for ftuffs, Itock-- ings, \&ce. are carried on.
- I will now proceed in my journey through Flanders, \&c. - I thall begin at St Omer. St Omer is a large town, 20 - miles from Dunkirk, and about the fame diftance from Ca-- lais, and is in the province of Artois. At this place there is - a manufactory of cloth, druggets, duroys, fagathies, thal-- loons, and fockings; the cloth factory is carried on by the - town ftock, and is increafed, within feven years, double to - what it was before. The mafter of this factory's name is - Mr Robiare, who lately bought a large parcel of Irih wool ' of one Mr Obrien, an Irifhman, that was landed at Dun-- kirk; one of his weavers, an Irifhman, whofe name is - Richark Dally, gave me an account of the fame. There - are in this town 350 looms employed in the making feveral - forts of thefe goods, befides a great many flocking-frames; - they make their hofe very good, fome are made of all our - wool, and fome are mixed with about half their own wool - and half our wool; they fell thofe by the name of Englif.
- hofe.
- hofe. In the year 17354 I was at Newport in Flanders, - and an Eriglifh gentleman, wantihd a pair of hofe, got me - to,go along with him to a thop to buy them; and, when we < came into the thop, they perceived that we were Englifh-- men, and fo fhewed us fome Englifh hofe, as they called 4them. I knowing by the make of them that they were not made in England, caufed me afk, Where thofe hofe
- were made ? To which the fhopkeeper replied, That they
- were made at St Omers, and that he would allure me, that
- they were made of all Eriglin wool; they were good hofe, - but were made heavier than we generally make them in
- England; but the clocks not quite fo curioas as fome of
- Our's are
- At St Omers in the making of their duroys, fagathies,
- druggets, and ferges, they mix about one third of our ' wool, and two thirds of their own wool, and make their
- goods much ftronger and heavier, than we do our goods of
- the fame kind in England, कhich makes them much
* effeemed in that country.:
C. In making their broad cloths, they make them fine, mid-
- dling and coarfe, the fine cloth is made all of Spanifh
- wool; the fecond is about half Englith and half their own
- country wool; and the coarfe is made of all their own
- wool, which laft fort is wore by the poor of the neighbour-
- hood. Provifion is very cheap at this town, and labour
- cheap in 'proportion. Wages is much the fame price here,

6 as at Abbeville; if any thing, it is a little cheaper in the

- fpinning: they take the fame methods to keep labour low,
- \&c. as they do at Lille. I was in the factory which is
- carried on by the town-ftock: it is in a large houfe, built
- for that purpofe; there I faw Richard Dally, an Irimman,
a weaying of broad cloth, and had a boy that was appren-
- tice to bim, that worked with him in the fame loom this
* the magiftrates do allow to the journeymen, to encourage
- and promote the increafe of the manufacturers.
- The next places to St Omer, where the woollen manu-
- factory is carried on, is at. St Paul and Fruge, which are *about 20 miles from St Omer, in the province of Artois.
- thote two towns lie near one another, and are about feven
- oreight miles on the right-band, as we pafs from St Omer
- to Aire, Bethume, \&e. and to to Lifle. But, as thofe peo-:
- ple of Fruge and St Paul are principally employed by the
- merchants of Lille, in combing, fpinning, doubling, and
- twifting of worfted, and in making it fit for the weaver,
- and the ftocking-maker, I fhall fay no more about them
- here, but proceed touLifla.
- Life is a lage well fortified town in French Flanders, and
this at this time in the bands of the French king. At this
stown they make fome broad and narrow cloth, and a few
- druggets : bit the principal affortments of goods that are
- made here, are divers forts of thuffs and fockings, of which
- They make large quantities. There are near a thoufand
- Jooms employed in making of camblets, fome Englifh ell
- wide, and fume three quarters of a gard wide, all made of
- Englifh or Irifh wool; and a much greater number with mixed wool, thaking the fame forts of goods. Befides,
- there are a great many hundred looms at work in the mak-
- ing of callimancoes, figured, fteiped, and plain, and feve-
( ral forts of worfted ftuffs, as cambletees, fattenets, prunel-
- loes, plain, friped, and fpotted ftuff, \&c. with fome ftuffs
that are mixed with filk and mobair, \&c. There are alfo a
- great many fockings and caps made here, both knit and
weaved. This branch is much increafed within a few
years; for, about twelve years ago, there were not above
6 ten or twelve frames in this town ; and now there are near
- 200 at work, and one half of thofe frames are employed In making hofe, and caps, of all Englinh and Irith wool, and are fold in all the chops for fuch. The other frames are
employed in the making hofe and caps, with about half their own wool, and half our wool. The firft man that put them in the way to make fine hofe, was one Abraham Thomas, that went from Bifhopigate-Areet, to learn them - this art. There are no Englifhmen at work in this town - now, and but one Irifhman, whofe rame is Stockin, and is a focking-maker : they comb a great deal of wool in this - town, but fend more to St Paul and Fruge, \&c. which is * near forty miles diftance from Lifle; they fend this wool - in the rough, fo have it combed, fpua, doubled, and twifted, and made fit for the weaver and focking-maker. I have
- leen, at thofe places, great quantities of worfted made fit
- and ready for the merchants of Lille: thofe merchants at
- Tourcoin alfo have a great deal of worted fpun, \&c.

Tourcoin is about twelve miles from Lifle, and is a yery large town for combing and finning: I have feen a per-- fon of Tourcoin bring a a faple of combed wool, and offered it to fale to a ftocking maker of Lille, by the name - of Englith wool; I had the top of the wool in my hand: and, at che fame time, one Madam Dillobbes, that is a - great manufacturer at Lifle, told me, That, in all the calli-- mancoes and camblets they make, fhe ufed mere or lefs - Englifh wool, and could not do without our wool; in fome - half, and in fome two thirds of our wool. I faw feveral - pieces, fome fcarlet, blue, and fome white, which were for the Spaninh and Portugal trade.
Vok. I.

6The reafon that the Lifle merchants fend their wool to \&t - Paul, Fruge, Tourcoin, \&c, to be combed, fpun, doubled, * and twitted, is, becaufe labour is cheaper at thofe places - than at Lifle's and, upon the whole, labour is cheaper here - by 30 per cent. at leaft, than it istin any part of England, where the lame forts of goods are made: as London and - Norwich for camblets, callimancoes, crapes, and filk and - worted , ftuffs, 8xc. and London, Leicefter, Derby and - Nottingham\{hire, for hofe.
-The poor people live hard at thofe places, their chief diet - is bread, fruit, herbs, and roots, with a little dried fifh : as - for fleth, they eat very litcle. The magiftrates take care, - that the farmers and foreftallers of markets fhall not fell the - corn at market to make bread dear, in order to pinch the ' poor manufacturers. In order to prevent this evil, the c magifrates have built a fore-houfe in a convenient part of ' the town, ten ftories high, in the uppere fooms of it they - lay wheat, fye, and barley; and in the cellars they lay * wine, oil, and brandy": thofe goods are bought up when
(they are cheap, and fo foon as the markets are fhort, and ' goods begin to rife in the price, then the florehoule is - opened for the poor, that they may buy what they have - occafion for, at the old matket price. This fore-houfe - was built fince the woollen manufactory hath fo increafed - in this town, in order to fupport that fabric, which is a great encouragement to the manufacturers, and a means to - keep labour low; all other things that are needfal for the ( poor are alfo cheap in propertion, as candles, foap, oil, 8 cc.

- They have all the proper methods imaginable, to help 'their facturers; they allowr their poor journeymen that ' work in their own houfes, to take apprentices; and none - are taken above two or three years at mof, and then the - boys may work for others, if they pleafe; and, if a boy - has learned bis trade well, his mafter that he worked - for, will give him eighteen pence or two fhillings a week; - according to his merit he is paid; for that is the method at this place, to agree with them for weekly wages. I knew an Irifh ftocking-maker of this town took an apprentice of - near 20 years old, who, before he had been fix months at - the trade, fet up to make goodst for himfelf; by this me' thod, giving liberty to thofe boys to have a right to the - trade for one, two, or three years fervice, they have al-- ways hands enough at their command to fupply their fac-- tories; and this makes them that have a good place of - work, take all the care imaginable to pleafe their mifters, Cthat they may keep in work: For it is at this towny as at - Abbeville; no man will employ another man's fervant, - without a good recommendation from his former mafter. - There are a great many camblets, callimancoes, ftuffs, flock© ings, \&c. that are made within a few miles of this town, which are brought and fuld to the merchants, which are a dyed, dreffed, preffed, and packed here ; and then fent to - Spain, Poftugal, and Italy : nay, in every town in France, - Flanders, Holland, and in the German dominions, you - will find Lifle fuffs, \&c. they make all their goods full - breadth, whether half-yard, three quarters yard, or yard 6 and quarter wide, and fill them well with hoot and warp, - which are heavier and thicker in proportion, than we make - our goods of the fame quality, which makes the foreigners - efteem thembetter than ours; there is hardly a day in the - year, but you may fee carriages bringing of wool or wool-
- len goods, to and from this famous trading town of Lifle. - The magiftrates of this town, as a further encouragement to the woollen -manufacturers, obtained a grant from the © king of France, to prohibit the wear of India callicoes, or - linens, cottons, \&cc. that were printed, painted, ftained, - or dyed : and a proclamation was iffued out accordingly, - to prevent the wearing or felling any of the above goods, c or in any part of French Flanders. This proclamation ' was iffued out May the 6 th, 1736 , and gave but three * weeks time to the merchants and flbopkeepers to vend their - goods; and now there is none of thofe goods to be feen in - any of thofe towns in all French Flanders, \&c.. This law - was in France before, but did not extend to. French Flan-- ders: and now is punctually kept and obferved throughout 6 the French king's dominions. I could wifh, for the fake c of the woollen manufactory of this kingdom, that we had c a law made, to prohibit the wear of thofe forts of goods in - Great-Britain and Ireland, and that as juftly obferved and - kept : notwithftanding this law in France that prohibits the - Wear of thofe printed callicoes, \&c. the king of France - hathran India company in bis country, but all that he looks c over, to fupport the woollen manufaciory of his own ter-- ritories. I brought with me feveral patterns of, their calli' mancoes, camblets, fuffs, and flockings, which I bave - now by me.

A few years ago, a merchant that lived in Goodman's-- fields, perfuaded one George Gwin to go to Lifle, to - teach the French to caft and cut the brafs-rolls, and - make the other parts of an engine; to water harrateens and - cheneys withal. And, when I heard of it, I went to Lifle - to perfuade him to return to England, and not to teach the - French that art; at firft he feemed to comply, and told me

* he would return in a hort time: but, when I left him, they - fill perfuaded him to ftay ; and fometime after I applied "to the board of trade, to have fome iron that was calt at - the bank-fide, Southwark, fopped from going abroad to - Mr Gwin ; and, although I attended a great many times at - the board of trade and the cuftom-houfe, I could not pre-- vent thofe pieces of iron being fent abroad. This iron was - to help to make another engine, that was to be fent to - Toulon. I having had a great deal of trouble to get Gwin - to England, and to ftop, if poffible, this caft iron from 6 going abroad, but all was unfuccersful. Then I applied - to a certain honourable gentleman to have him recalled, - who was pleafed to comply with my requeft, and wrote - over to my lord Waldegrave, which is the king of Great-- Britain's ambalfador at Paris; who immediately fent an - order to Mr. George Gwin at Lifle, by the hands of Mr. - W-s, the meffenger, and the purport of this order was, - that Gwin fhould return immediately to Great-Britain, - his native country, or he fhould be declared an alien, \&c. 6 as the law in that cafe directs. Upon Gwin's receiving of 6 this letter, he immediately returned to London, his old - place of abode; fo that the rolls that were defigned for - Toulon were never finifhed, neither had the French learned - how to caft them, and cut the fgures on the rolls, \&c. But, - fince the Lifle merchants have had thofe roils, \&xc. finifhed, " they have made, dyed, and watered a great many cheyneys - and harrateens, both to ferve themfelves, and other coun-- tries that we had ufed to ferve. But I do humbly hope, * when this engine is worn out, no man from Great-Britain - will go over to make them another.
- Tourcoin is a large country market-town, about three 6 leagues from Lille, and is in the hands of the French - king, and fo is called French Flanders. This town is " well fored with the woollen manufactory, there being © many thoufand hands employed in the combing, fin-- ning, \&cc. and the greater part of the wool that is wrought - up here is either Irifh or Englifh ; and great part of it is - brought to this place by the way of Holland. I was at this - town in October 1736, when I bought a fample of worfted, ${ }^{3}$ which is fome of the beft finning I ever faw in my life: - I bought it by the name of Englifh worfted, it being made - of all our wool. The reafon that whatfoever goods are fold - in thofe parts for Englifh goods, though made on the fpot, * is, becaufe the Englifh manufacturers formerly had the cha' racter of making the beft of goods ; and, would we keep ' our wool at home, we ftill fhould bear the bell away; for - this wortted that is made and fold here by the name of - Englifh worfted, bears a better price, by 40 French pence ' a pound, than any wortted they do or can make of their own country wool: 40 French pence is about 20 pence 'Englifh. They fend this fine Englifh worted, as they call 6 it, to Paris, Lifle, Holland, Flanders, \&c. I have been s at this town, when the roads were very bad from this place - to Courtray, where the waggons come from Ghent to meet * the waggons from this place; but the roads were fo bad * that the carriages could not pafs crofs the country, to carry 6 the yarn that was fpun here to Courtray, and bring from - thence wool, as their cuftom is conftantly every week: the - people of this town were fo careful of their mafters trade, 6 becaufe the waggons from Courtray fhould not go away ' empty, hired men, and put the yarn upon large wheel-bar${ }^{6}$ rows, and had them drawn along a foot caufeway, that is - paved from Tourcoin to Minnin, which is about five or fix - miles diftant, and is about as far diftant from Courtray - as Tourcoin ; but, when they come to Minnin, it is the - high road from Lille to Courtray, and is always very good. - I only mention this to dhew, how very careful thofe people a are of our wool when they have got it, and how carelefs we - are at home, or they never would have it from us.
- All the worfted that is carried this way belongs to the Hol-- landers, as I fhall fhew in it's proper place. I was told by - the riding-general of the cuftoms of this town, that there 6 are 14 perfons in the town that make wool-combs; though - I fuppofe they do not wholly depend upon that particular - branch of bufinefs; if they did, there mult be a vaft num6 ber of wool-combers in that neighbourhood, for there are but ' two wool-comb makers in this great city of London. The ' common neceffaries of life are very plentiful and cheap at - this town, viz. foap, oil, candles, and charcoal ; four very - ufeful things in the woollen manufactory. Both combing s and fpinning is cheaper here than at Lifle, which is the - reafon that the Lifle merciants have fu much of their ' fine work done here. A gentleman of this town told me, - that the fine fpinning is, by the Dutch, fent to Spain, Italy, - \&c. The next town in this neighbourhood that is of note - is Roubaix.

6 Roubaix is about four or five miles from Tourcoin-; at this - place they employ many hundreds of hands in the making of - fine callimancoes, camlets, and other fine fuffs; the fineft - of thofe goods is made all with either Englifh or Irifh wool; - but they do make a greater number of goods with our wool - and their own country wool mixed together; thefe goods 6 that are made here are chiefly made for the Lifle merchants,
' labour being lower here than at Lille, and about the fame - price as at Tourcoin; provilions, and other neceflaries, - are about the fame price. The next town is Lannoy, which ' is another manufacturing town for woollen goods.

- Lannoy is about four miles from Roubaix; at this place - they make great numbers of callimancoes, camlets, filks, ' and worfted ftuffs mixed, \&c. The provifions, and other - ufeful neceflaries for trade, are about the fame price bere - as at Tourcoin; fo is the labour. I have named only chree - towns in this neighbourhood, that are famous for the woollen - manufactories ; but, if I would go to fmall places, I might - name a hundred villages round the country that have the - woollen manufaetory in them, for combers, fpinners, weavers
- \&cc. and are as plenty here as at any part of the Weft of Eng-
- land. But, before I leave this country; I muft juft obferve,
- that,notwithftanding labour is folow in thofe parts, the poorer
* people all round the country are well cloathed, and atl their
- families (I wifh I could fay fo by the great manufacturing
' towns in England) but, fhould I be fo happy as to fee the
' day that the owling of wool from Great-Britain and Ireland
- to foreign parts was ftopped, then we fhould have our hands
- full of work, and our poor artificers once more be weil fed - and cloathed; then we fhould fee our poor once more have * chearful looks; and pray for thofe that put their hands to - this great and good work, which I hope will fpeedily be - accomplifhed. As to the governing and managing their 6 work-folks, they at this place take the fame method as at
- Lifle.'-Thus much the honeft Northamptonfhire manufacturer.

## Remarks on this manufacturer's foregoing narrative.

Although what this zealous manufacturer has related may not be abfolutely true in every circumftance of his narrative, yet we apprehend that no one can make any doubt but ( I .) That the French do import into that kingdom large quantities of Englifh and Irifh wool. (2.) That they work this wool up into manufactures for home-confumption, as well as for foreign markets. (3:) That the French have, from time to time, allured over many of our moft ingenious workmen, who have excelled in divers branches of the manufacture. (4.) That, if the French have our native wool, and our workmen, they may certainly make as good woollen fabricks of every kind as we are able to do. (5.) That as the reputation of our woollen fabrics of every kind has been much longer eftablifhed than that of the French, it is no way improbable but the French have imitated the Englifh manufactures as near as poffible in every circumftance: and, therefore, there does not appear an improbability but the French have alfo made ufe of the expedient of counterfeiting the Englifh marks, feals, \&c. as well as the façon d'Angleterre, or Englifh manner, make, or fathion, in fabricating of our various feecies of woollen goods.-And, therefore, (6.) It is very natural to believe, that, in order to introduce their woolle'n fabrics of every fort into thofe foreign countries where the Englifh bad been long eftablifhed before them, they made ufe of the expedient of impofing their woollen fabrics, made in France after the Englifh manner, upon foreign countries for Englifh foreign goods, and continue this practice to this day, by counterfeiting our feals and marks, the lengths and breadths of our goods, and the fame method of package, \&x. with every other circumftance that may be the more effectually deceiving.-And (7.) to the end that this may remain undifcovered, can any thing be a more natural difguife than to fend French woollen goods to foreign markets with fome Englifh woollen goods, made and packed after the fame manner; and, at the fame time, to export them in Englifh bottorns, and, by the confederacy of Englifh captains of Chips with Englifh merchants, and configned alfo to factors abroad, who are in the fecret?
All this is fo very plaufible, and fuch meafures are fo likely for the French to fall into, in order to fupplant the Englifh in the woollen manufacture in foreign countries, that we may, without any difficulty oi ftrain of belief, credit the fame as matter of FACT: and efpecially fo, when this Northamptonfhire manufacturer afferts the fame to be true, with fuch circumftances of truth and credibility.
And, if this matter fhould ever come to be thoroughly frutinized into by authority, and proper meafures are taken to get to the truth, we are inclinable to believe it will be found to have been the conftant practice of the French for many years, and one of their grand strokes of commerCIAL POLICX, to worm us out of the woollen manufactures of the whole world, if poffible: and, if they can have Englifh and Irih wool very cheap in exchange for therr brandies and wines, 8 cc . which our wool-fmugglers run into our country; and, if their labour is confiderably cheaper than ours, what hinders but France may inevitably ruin all our woollen manufactures?
This being an affair that fo nearly and importantiy concerns the kingdom, I am willing to flatter nylelf my readers, my truly Britifh readers, will excufe it, if I dwell fomething longer upon the fubject of the woollen manufactures of France.

## FR A

We are told, and there is too much reafon to believe it true, that France practifes the fame arts with refpect to other of our manufactures, efpecially that of our filk; which is likely to turn all our Spitalfields weavers a grazing, if fome wife and effectual meafures are not foon taken by the legiflature to prevent fo great an evil. It would prove, perhaps, the eafieft method to difcharge the practice of wearing French filks in this nation, if they were firft rendered unfalhionable at court; and yet I have been informed that there is fome difficulty made to difcover French from Englifh filks; for that fome of our own people, who ought to be, and doubtlefs are the beft judges, have been fufpected, upon good grounds, if I am not mifinformed, to determine French Silks to have been made at Spitalfields, on purpofe to cover them, and prevent their feizure. Should this prove true, are not thefe people to be fufpected to be inftrumental, to be the chief private encouragers of a practice that they pretend loudly to complain of? Ought not every polfible meafure to be taken to detect a practice fo highly detrimental to the marufactures of this kingdom?

## The manufactures eftablifhed in Paris, and other parts of

 France.The woollen manufactures of France are, cloth, ferges, ratines, baracans, camlets, callimancoes, tammies, crapes, bays, perpetuana's, flannels, \&c. frizes, anacoftes, druggets, \&c. all of wool, or of wool and thread mixed.
It is to Monf. Colbert, fuperintendant-general of arts and manufactures, that this kingdom is indebted for the firft eftablifhment of thefe manufactures, which are now, fays Monf. Savary, become the moft fourifhing in Europe.
There have been many good regulations made concerning them, viz. in Auguft 1669, Auguft 1700, March and May 1701, \&c. A royal manufactory is one eftablifhed by letters patents from the king.
Several have been famous for the eftablifhing of manufactures in France, particularly fince Henry IV. Two efpecially have diftinguilhed themfelves in this way: 1. Nicholas Cadeau, who founded and brought to perfection the manufactory at Sedan. 2. Jofeph Van Robais, who eftablifhed that of Abbeville; which has been long in high reputation. The former obtained, for himfelf and company, by letters patents, the fole making, for 20 years, of black and coloured cloths, like thofe of Holland.-Thefe patenters, and their children, born, and to be born, were ennobled and honoured with all titles, \&c. of the nobles of France. The French king gave not only each of the three partners a penfion of 500 livres yearly, during their lives, but alfo affifted them with a ftock of 8000 livres a year, during the term of their patent. The fuccefs of this new manufactory exceeded all expectation. The cloths of Sedan, and thofe of Abbeville, are efteemed the fineft of their kind in France.
Sieur Cadeau's exclufive privilege was near expiring, when Mynheer Van Robais, a Dutch merchant, deffred to erect new manufactory of fine cloths, after the fafhion of Spain and Holland, which he propofed to do at Abbeville in Picardy. His patent commenced OEtober 1669, the principal claufes of which were: for 30 looms; for a requifite number of fulling-mills, and 50 workmen to be brought from Holland, with paffports for the fame; exemption from all taxes, \&c. for their looms, cloth, wool, \&c. In fhort, to facilitate the eftablifhment, the king gave him, as a free gift, 12,000 livres, and lent him 2000 livers for every loom he fhould fet up, during the three firft years, without intereft.
Van Robais baving fulfilled his engagement, had his patent renewed to him and his eldeft fon, in 1681, for 15 years more, on condition that he fhould fet up 50 looms, inftead of 30. In confideration whereof, the king remitted to him 20,000 livres, of the 80,000 that had been lent to him, with the three firft years of his furmer grant.
In the year 1698 a third patent was granted to Ifaac and Jof. Van Robais, two brothers, fons of the firf undertaker, who bad now fet up 80 looms; which number, in 1708, was increafed to above 100: when the faid Jof. Van Robais, in partnerfhip with his brother Iface's widow, being defirous to erect ftill more buildings, in order to extend this flourifhing eftablifhment, the like whereof, perhaps, was not to be found, obtained that fame year a fourth grant, with further privileges, for 15 years to come. One of which privileges was, a permiffion to all noblemen to enter into partnerlhip, without derogation to their titles and honour.

Of the feveral forts of woollen fabrics eftablifhed in France.
Cloths are made of different qualities, fome fine, fome midling, fome coarfe; tome dyed in wool, of different colours, hat is, the wool of which has been dyed and mixed, before it was fpun and worked in the loom. Others are made white, to be dyed fearlet, ble, or black, \&c- Their breadths and lengths are different.
The fine cloths are of three qualities; the firft is made of the fine wool of Segovia in Spain, without any mixcure; the fecond of Segovia wool, with that of Albarazin, fecond Sego-
via, and wool of Soris; the third, of other middle forts of Spanifh wool.
Many manufactories of this kingdom, particularly thofe of Languedoc, Dauphiné, and Provence, afford quantities for the Levant, from Marfeilles. Thefe cloths, whofe names qualities, lengths, breadths, 8 c . are different from thofe in the kingdom, haye been the fubject of many excellent laws to aphold their reputation.
The cloth called Londrins premieres, ate to be made of wool, prime Segovia, boch warp and woof. Londrins feconds, muft have for the warp wool Soria, or wool of equal quality; for the woof, fecond Segovia. Londres larges muft be made of the beft wool of Languedoc, Lower Dauphiné, Gandié, Roufillon, grand Albarazin, and others of like quality. Londres muft be made of le fleuret de laine de Languedoc, low Dauphiné, Gandié, petit Albarazin, or others of like quality. Draps feizans, of wool of Languedoc, low Dauphiné, or Spanifh wool, of like quality.
They thall not employ in the manufaetory of Romantin other than the wools of Berry, Sologne, and wools of Spain, prime Segovia, prime Soria, and prime Segovian only, without employing other Spanifh wools of an inferior quality, or the wools of Navarre or Barbary, or any other wool.
Auguft 21, 1718. Rules are laid down for the making of cloth in the provinces of Burgogne, Breffie, Bugey, Valromey, and Gex, viz. of whites and of different colours, at Dijon, Selonges, Sommieres, Auxois, Auxerre, Montbard Avalon, Saulien, Chatillon upon the Seine, Montcenis Louans, Les Chante de Macon, Cluny, and Pafay le Monial. Alfo for common cloths, called fardis, that are made at Bourge en Brefle, Pondeveaux, Montluel, and other places.
Befides full cloths, there is a manufacture of ftuffs of wool, which are commonly ufed for linings, viz. ferges of Aumale, of Beauvais, and others; frizes, frizons, feltins, \&c. Druggets are ftuffs of wool, or of wool and thread, fometimes broad, but moftly narrow. They are often called pinchina's, though not like what comes from Toulon, and Chalons in Champagne, of that name. Druggets are made at Le Lude, Amboife, Partenay, Niort, Rheims, Rouen, Darnatal, Verneuil in Perche, Troyes, Chaumont in Baffigny, Langres, and Chalons in Champagne. There are alfo very fine druggets made, of a particular fort, at Badrieux in Languedoc, and many adjacent villages, which are fold in Germany.
The druggets of Lude are of wool intirely, both warp and woof. At Amboife are made of two forts, of wool intirely, the one called croifes, the other not croifes. Thofe of Partenay are made fome of wool only ; others, the warp of thread, the woof of wool. Niort affords druggets, all of wool, fome croifes, others not, half-ell wide. The croifes are the moft efteemed, being clofe wrought and ftrong. The druggets of Rheims are not croifes, half-ell wide, commonly made of nothing but woo!, prime Segovia, fpun very fine, which gives them a fuperiority to all the other druggets manufactured in France, which are generally made of the wod of the country, coarfe fpun.
At Roan are made three forts of druggets, not croifes: the one made of wool only, half-ell wide, \& \&c. another called barluche, or breluche, the woof wool, the warp thread. The fecond fort of druggets comes very near in quality and price to thofe of Verneuil in Perche. The laft, commonly called efpagnolettes, are intirely of wool, hairy on one fide, and fometimes on both, which makes them very warm. There druggets efpagnolettes are made of different qualities; one very fine, of Spanifh wool only; others lefs fine, of Spanifh wool mixed with the wool of the country; others of the wool of the country only, which are the coarfer, and of lefs value. They are made white, and dyed, after that, of different colours.
The druggets of Darnetel are like to thofe of Roan in goodnefs, length and breadth.
Verneuil in Perche affords druggets balf-ell wide, from 42 to 65 ells long, the warp thread, the woof wool of the country, very coarfe, and about 13 or 14 fols the ell. They are generally confumed at Beauffe, the Orleanois, and country adjacent to Paris, for cloathing the peafants. The druggets of Troyes are croifes on one fide, and not on the other; the woof is of wool, the warp of thread: they are much better than thofe of Verneuil. At Chaumont in Baffigny, and at Langres, are druggets like thofe of Troyes.
At Chalons in Champagne are made druggets, all of wool. They are called efpagnolettes, and their quality is very good. There are few, excepr druggets efpagnolettes of Roan and Darnetal, and fome druggets with thread, that are dyed in the piece; the others are djed in the wool, i. e. the wool of which they are made is dyed of feveral colours, before carded, fpun, and weaved.
Serge is a fuff of wool, manufafured after a certain manner. They bave different names, given by the merchants, and other makers, to diftinguifh and render them more efteemed. Their price is different, according to the different forts and qualities, and places where made, viz. ferge de feigneur, ferge à la reigne, ferge imperial, \&cc. ferge raze, ferge à poil, ferge drapée, or cloth ferge, both fides alike, and ferge de

## F R A

F R A
Berry, de Beauvais, de Mercy, de St Lo, d'Aumale, de Crevecoeur, de Blicour, de Chartres, \&c. façon de Londres, d'Arfcot, de Rome, de Segovie. All of thefe, which are made in France, are fubject to certain regulations, by divers arrets, according to the places where they are made.
France owes the manufacture of ferge after the fafhion of London to Lewis Bezuet and Nicholas de la Coudre, partners. Thefe two able manufacturers began the fabric at Aumale, a little city in Normandy, in confequence of an exclufive patent, for 15 years, of the 12 th of September, 1665 , granted upon the report of Monf. Colbert. It has fince been tranfferred to Siegnelay, Gournay, Auxerre, Sedan, Abheville, Beauvais, Boufflers, \&c.-That of Siegnelay has always preferved the preference, either becaufe they make ufe of better wool, or are better workmen, or becaufe the earth and water are more proper.
As to the manner of making ferges façon de Londres: the beft wool for that purpofe is that of England, viz. the longeft for the warp, and the fhorteft for the woof.. But as it is not ealy to procure thofe forts of wool, becaufe they are prohibited, they have recourfe for the warp to the longeft and fineft wool of Berry; and, for the woof, to the prime and fecond of Spain and Portugal.
Perpetuana's, a ftuff like the ferges of Sommiere, and are commonly made at Colchefter and Exeter in England, and other places thereabouts. Thefe are chiefly deftined to Spain and Italy, but moft to Spain, where there is a great demand for them. Of late years they make fome alfo at Montpelier, Nifmes, Caftres, and other cities of Lower Languedoc, in Imitation of the English Perpetuana's. Some are alfo made at Beauvais, which are much efteemed at Cadiz, where the French merchants fend them,' dyed of different colours. The merchants of Janguedoc alfo fend a quantity of them into Italy, under the name of imperial ferge, that are a little finer than thofe defigned for Spain. The perpetuana's defigned for the Spanifh Weft-Indies are commonly fent in affortments of 40 pieces, viz. 15 green paroquet, 15 pieces blue, 5 mufe-colour, 5 black. There is one fpecies of perpetuana's, Less Fine, which is moftly made in England, whence it is fent into Spain, chiefly for the Indies, commonly to the value of 200,000 livres a year. Here let the reader obferve, how the Frenchman depreciates the Englifh perpetuana's, without caufe, in order to recommend thofe of his country to the Spaniards!
Say is a kind of ferge, very light, all of wool, fomething like the ferge of Caen. Some of the religious ufe them for fhirts, other for linings, and hangings for furniture. They make abundance of them at Hanfoote, Ypres, and Turcoing, in Flanders. Thofe of Hanfcotte and Ypres are about ell wide. Thofe of Turcoing, which are very fine, and all of wool, only of Segovia or England, are $\frac{7}{8}$ wide. There are alfo fome made in Artois, with the wool of the country.
Bays, a woollen ftuff, not croifsee, very loofe made, with the hair on one fide, a kind of flannel, very coarfe. A quantity of there are made in England. They make a coniderable number of them in Flanders, efpecially at Tournay and Lifle, and Neuf Eglifes. Of late years, the French have manufactured fome with fuccels, efpecially at Beauvais, de Caftres, Montpelier, and Nifmes. The demand for them is very great in Spain and Portugal, and Italy.
The French begin to fend abundance of them, white, black, and of all other colours, as did the English and Flemings heretofore.-A kind off fuff of the fame name, but cheaper, is alfo made at Alba, and thereabouts.
Reveches, flannel. Formerly, almost all those that were seen in FRANCE came from England; but, since they have been imitated at Beauvais and Amiens, the ENGLISH haye sent few or none.
Crape, made only with two marches, all of wool. There are crapes made in different places, as well in France as elfewhere. Their length and breadth are different, according to the places where they are made. Sieur Paignon, a woollen draper of Paris, firft fet up this manufacture about the year 1687. His fon Nicholas has fince been more fuccefsful in his undertakings: to him we owe the fine black cloths of Sedan, that are as much efteemed, IF NOT MORE, THAN those of LEYDEN in HOLLAND. At Amiens are made white crapes, with a mixture of thread. In Languedoc, particularly at Caftres, certain flight crapes. In Flanders, and above all, at Turcoing and Liffe, a quantity of light crapes are made, and of different colours, for the Spanifh trade. There are crapes which they call d'Angleterre, or English Crapes, made of filk and wool, chiefly at Alençon, Angers, and Amiens.
Blankets of wool are made in the fuburbs of St Martin, Paris. There is at Ferte Gautier a fmall manufactory of ferge.
Compeigne furnithes a quantity of fockings, \&c. The cloths, camlets, and plufhes, that are made at Margny, a viliage in that diftrict, are efteemed. Thefe manufactories are not very antient, but are well conducted. The cloths of Senlis furmerly were in great repute; but the workmen haviog made them flighter, the bufinefs is lof, and the inhabi-
tants are reduced to wafh and prepare the wool for the workmen at Beauvais.
Picardy produces wool. They have manufactories of wool, \&c. Befides 5 or 600 milliers of wool, produced there, the confumption there is almof as great of other wool, from Germany, Holland, England, Spain, and other provinces of France. In the city of Amiens only, are made 129,800 pieces of woollen ftuff. The camlet-makers ufe about 80 milliers, half thereof wool of the country, half foreign wool. Befides thefe, there are fealed there 50,000 pieces brought from neighbouring parts, which, for that reafon, are called etoffes foreignes. The cities of Picardy, which have the greateft trade for woollen manufacture, next to Amiens, are Beauvais and Abbeville.
In the ferge manufactories at Amiens they make ferges after the fafhion of Arcot, Crevecceur, ferge Cordeliers, of many forts; ferges after the fathion of Chalons, white and mixed; ferges de feigneur, quinquettes, or light camlets ; camlets after the faftion of Lifle and Arras; barracans and tammies, of wool only, others of wool and filk, \&c.
The woollen ftuffs made at Beauvais are ratines of different forts, as wide, ftrong, fine, and common; tammies; ferge, both fides alike, or after the fafhion of England, or Arcot, or thofe that go under the name of common ferge; bays, others, ofter the fafhion of England.
The manufactures of Abbeville, not to mention the fine clothsimade after the faftion of Spain, England, and Holland, whereof mention has been made elfewhere, and ferge de LonDres, razes de St Lo, ratines of Holland, ferge de Mouy, bouracanes, after the fafhion of Valenciennes, druggets, thread and wool, tiretaines, belingues, pinchina's, \&cc.
The other places in Picardy where woollen fuffs are made, are Tilley, Fienville, Naours, Beauchamps, Gravilliers, Feuquiers, Aumale, Anvoille, Glatigny, and Seules. In all thefe places are made only ferges and tiretaines. Mouy gives it's name to a ferge that is well efteemed; and Crevecreour, to others that are not lefs efteemed; Tricot, and eleven villages dependent upon it, give alfo it's name to a very ftong ferge. The beft fpun wool of Picardy is at Abbeville, where vaft numbers are employed in fpinning, and a great quantity of the fineft wool is confumed, as well of the growth of the country, as Spanifh wool. Thefe laft are chiefly ufed for making the fineft caps; the others, in the manufacture of cloth and other goods, of the make of Paris, Elbeuf, and Rouen. The Dutch, in the time of peace, take off a great quantity of it.
We muft remark, that at Amiens they employ only wool of their country, England, Holland, and Germany, but efpecially that of the country and England. It is computed that the woollen manufacture of Amiens amounts to near r,600,000 liveres yearly. The principal manufactory of Abbeville is that of Monfieur Van Robais, as obferved befote. In general, the ftuffs made at Beauvais are wide ratines of five quarters, fine ditto ell wide, Atrong ratines alfo ell wide; the warp, wool of France; the woof, of the middle fort of Spanifh wool. Common ratines, eftamet de bures, ferge both fides alike, of wool of France; ferge a poll, ell wide, the warp, French, the woof, Spanifh wool. Fine ferge, of Englifh wool $\frac{2}{3}$ wide; after the fafhion of Fricor, of the beft wool of France $\frac{2}{3}$ wide; efpagnolets $\frac{2}{3}$ wide; the warp, fine French, the woof, Spanifh wool; fommieres, half eil, and half ell half quarter, of fine French wool ; reveches after the fafhion of England, ${ }^{3}$ wide, of French wool ; flanels after the fafhion of England, ell $\frac{3}{4}$ wide; others half the breadth, all of Frefich wool ; common ferge, half ell half quarter, of the wool of the country. In fine, common reveches, of different breadths, of the fame wool as before. The mafters that make the fineft ftuffs, and are therefore filed the great company, are about feventy. Thofe of the leffer company, i. e. who work but common fluffs, are above a hundred. About 500 looms are employed in both together. It is computed that the great company employs in their fabric 115,000 pounds of Spanilh wool, 2000 pounds of Englifh wool, 160,000 pounds of French wool ; the leffer company confumes 185,000 pounds of the common wool of France, the product of which is a third part lefs than of the others. In the whole department of Beauvais, are employed to the amount of 745,000 pounds of French wool, and 115,000 pounds of Spanifh wool, of which they make 68,000 pieces of ftuff. They have about 40 fulling mills. Wool grown in the province of Picardy, viz. at Amiens and thereabouts, 80 milliers; at Abbeville 2, St Quintin 100, Peronne 40, Nefte 40, neighbouring villages 2, Ham 40 , La Ferte Guife 30 , Vervine 60 , Laon $3^{\circ}$, Vely pres de Laon 40, Chauny 20, Noyon 20. Total 524 milliers.

Of the generality of Champaigne and Soissons.
The pafturage is admirable, maintaining 16 or 17,000 fheep, which afford three or four millions of pounds of wool. It is almoft incredible how much of the woolien manufacture there is in thefe two provinces. At Rheims, they make cloth after the fafhion of Berry, etamines, razes, cotdeliers,

## FR A

ferges, 8cc. At Rhetel, the fame as at Rheims, befides eftamets
and crapes. At Chateau-Portien, at Mezieres, Donchery, Mouzon, Firmes, Sainte Manehould, Sommepy, Ville on Tartanois, Soiffons, Chateau-Thierry, Charly, Orbaye, S. Martin Dublois, Bar fur Aube, Ferre en Tartanois, Neuilly, and S. Fond, they make only ferges, etamines, and defeverfins. At Sedan, they make a quantity of cloth, very fine and very good, alfo a great number of cloth ferges, and ferges after the fafhion of London. At Bouts, Pertes, and foinville, villages near Rheims, they make only white etamines, which they fell to Rheims. At Montcornet, ratines, reveches, cloth ferge, and eftametes. At Vervins, Fontaine, Plumiere, the like, alfo fome common cloth. At Montmirel, Langres, St Juft, Anglure, Sezanne, La Ferte Gouchier, and La Ferte Sous-Jouars, cloth ell wide, and above, to five quarters, all of Spanifh wool only. In hort, at Brienne, Chalons, Vitry, Joinville, Chaumont, Dionville, they make ferge razes, ferge after the faftion of LoNDON, cloth ferge, effametes, everfins, etamines after the fafhion of Rheims, and druggets ; befides, they make cloth at Chaumont. The wool, employed in thefe feveral manufactories, is partly foreign, partly French. The foreign is common Spanih wool, as de Caftille, and les Segovianes, and the like. The French wool is de l'Auxois, de Berry, de Champaigne, du Soiffonnois, and de Picardy. They reckon 1400 looms.
At Rethel, they ufe the wool of Champaigne, Picardy, and Soiffonnois. The mixture, which the workmen make of common wool with fine, lowers confiderably the price and quality of them.
The cloths made at Sedan, are fome after the fafhion of Holland, fomeafter the fafhion of England, and others after the fafhion of Spain. The wool they make ufe of in the one and the other, are wool de Segovie, Segovianes, Albarazines, des Soris, and other of the better forts.
'The fabric of ferges is alfo very confiderable at Sedan. The wool they ufe is that of Berry, Ardennes, Champaigne, Brie, and common Spanifh wool. They are fold in Holland, Poland, Germany, and within the kingdom.
At Donchery is made wide ferge, cloth ferge, ferge de Londres; the wool is that of Berry, Champaigne, and Brie. At Maufon and Autrecott, cloth ferges, ferge de Londres, \&c. they are all made of wool of the country. In the manufa ary of St Manehould they ufe only wool of the country, with which they make ferge after the fahion of Chalons, cloth ferges, eftamets, and frizes. At Siuppe, or Suippe, the manufactory is confiderable. All the ftuffs are made of wool of the country, i. e. everfines, cloth ferge, ferge razes, and frizes. At Ville en Tartanois, wide ferges, cloth ferges, all of wool of the country. Routz Perthes, and Sunville, are three villages near Rheims, where they make only white etamines of the wool of the country. At Monteomet, are made ferges, ratines, eftamets, reveches, cloth ferges, on which they employ only the wool of the country. Vervins, Fontaine, and Plumiers, afford common cloths, and ferges, of the wool of the country. At Neville St Front, are employed the wool of Brie, Champaigne, and Soifons, in making ferges de Berry, and cloth ferge wide. At Ferre en Tartanois, the manufacture is wide ferge, cloth ferge, and ferge after the falhion of Mouy, the wool of the country only. At Charly, they make wide ferges, cloth ferges, \&c. all of the wool of the country. Thefe above are in the department of Rheims (thofe that follow, are in the depatment of Troyes and Chalons) where they make near 84,000 pieces of fluff, employing for that purpofe 740,000 pounds weight of wool of Champaigne, Brie, Soiffons, and Bourgogne, befides above 530,000 pounds of Spanifh wool, and above 50,000 of that of Berry. They keep there 14 or 15,000 fheep, which produce $3,000,0007$ or 800,000 pounds of wool.
At Chalons, they make a quantity of ferge razes, ferge of Rheims, eftamines, everfines, cloth ferges, of the fathion of London. Of thefe laft, they make about 2500 pieces a year; of all the others, about 2000. The wools they make ufe of for the one and other, are fome of Champaigne, Brie, Soiffonnois, and Bourgogne, and fome Spanifh wool. There are 325 mafter clothiers. Befides, there are 30 or 35 other looms for a munufactory, that fome cloth merchants of Paris have got eftablifhed by letters patent. They make alfo, in that manufactory, ferge after the fafhion of LONDON, ratines, pinchinas; and employ in the one and the other, according to their quality, wool, prime Segovia, fine Albarafirt, and other Spanifh wool, with that of Berry, l'Auxois, Champaigne, and Brie. The product of this manufactory is in proportion as great as the others. They fell them throughout the kingdom, at Liege, and in ltaly. Liege takes off a great number, they being well liked there. At Vitry, are made ferge, razes, ferge after the fafhion of London, cloth ferges, druggets, and eftamets. The wools they employ are thofe of Champaigne, Brie, and l'Auxois. At Chaumont, are made a quantity of cloths, ferges croiffees, druggets; of the laft one is of wool only, the other of wool and thread. They ufe only the wool of the country.
VoL, 1 .

Of the trade for Spanih wool at Bayonne.
It is to be obferved, that the wools which the merchants of Bayonne have from Spain, have fome of them different names from thofe given in the dietionary, under the article of Wools, but in truth they are the fame, under different appellations.
It is computed, that the import of wool at Bayonne amounts to 15,000 bales, of all qualities, viz. fegovies, leonefes, fuperfines, common fegovies, fories, fogoviennes, burguletes, fories de caballeros, fories molines, grand albarazines, des cuencas, des etremenas, belchittes, compos d'Arragon, fleuretons de Navarre, and all forts of lamb's wool, fine and common, furge, and wafhed.
Many of the merchants of Bayonne give orders to have part of the wools bought en furge, and to have them wafhed upon the fot on their own account. Others have them from the Spaniards who are flook-mafters, or from the merchants of that nation, who trade in it, and every year fend or carry them to Bayonne, all waihed, and fell them there themfelves: fo that the people of Bayonne have a]ways their wools at the firth hand, and can afford them cheaper than others. Befides, the beft conveniences for wafhing are nearer that city than any other, even nearer than to Bilboa. The wool that comes from Bayonne, is moft profitable and beft triaged of all that comes from Spain. The weight they make ufe of at Bayonne, is fixteen ounces to the pound.
The price of wool is different, according to the difference of exchange. We fhall fet it here upon the foot of the price they fold at in November 1724, when the pifole was at 16 livres. Upon that foot, the fegovies leonefes (R.)* were worth 52 fols the pound ; (F.) 6 fols lefs; the common fegovies 48 fols; the fegoviennes 46 fols, fories fegoviennes, les Burgales, les cavalleros, 44-45; les fories, 41-42, with the fame diminution of 6 and 12 fols ; for the (F.) and (S.) other wools in proportion to their quality.

* Thefe three letters of the alphabet, R, F, S, are ufed in France, to diftinguifh the three forts into which every parcel of Spanilh wool is divided by forting, and therefore called triage.
They load commonly at Bayonne every year 30 or 40 veffels, which carry 200 or 350 bales of fine wool to Roan and Nantes, and 8 or 10 veffels to Holland: Languedoc allo takes off much wool of fories fegoviennes, and common fories, that are the molt proper for Londrines feconds, which are beft for the Levant trade.

Of the commerce of Limosin, Poictou, \&c.
At St Jean de Angelis; they make cloths ell wide, and etamines: at Nerac, commonly 1900 pieces of cloth, and 1250 ferges: at Angoulefme, ferges and etamines: La Rouchefaucault, only ferge: Limoge, reveches: Tulle, reveches, or petits razes: Brieve, reveches: St Leonard, Atrong and coarfe cloths for foldiers and peafants.
The ftuffs made at Poitiers are camblets, etamines, ferges, and crapes. At Chaftelleraut, they make ferges and etamines, in which they employ only wool of the country. At Lufignan, they make two forts of ferges, razes, and cloth ferge, both of wool of the country. At St Maixant, they make ferge razes, which are efteemed for their finenefs, although they ufe but the wool of the country, for which they chufe the fineft; and of the reft make reveches, and other coarfe goods. They make abundance of double caps and fockings with wool of the country, and of Limoges. The ferge made at La Mothe St Geraye, for quality, finenefs, and the wool employed there, are the fame as at Maixant.
At Niort, they employ only the wools of the country; the feveral forts of ftuffs, there made, are druggets of wool only, others of wool and thread, ferge razes, etamines buretes, and coarfe cloth ferges. At Fontenay le Comte, they make cloth yard wide, and etamines, both of wool of the country. At La Chateigneraye, are made cadiffes, fergettes, and cloth ferge: this, with the wool of the country, the others with fleuretons de Navarre. At Cheuffois, the fame as the former. At La Meillercege, they make only tiretaines and narrow druggets. At Pouzanges the fame. At St Memin the fame.
At Brefivire, is one of the moft confiderable manufactories in the department of the infpector of Poitiers. The ftuff made there, are tiretaines, of thread and wool, ferge razes and cloth ferges; all of wool of the country only. At Moncontan, the ftuffs are tiretaines of different fahions, of the refufe of wool, from Nicort, Bourdeaux, Xointes, and Senfa. At St Pierre, the fuffs are cadiffes, druggets, of flureton de Navarre, and cloth ferges ell wide, of the wool of the country. At Thouan, cloth ferge, ferge razes, and fome etamines. The druggets made at Partenay are much efteemed, and have a great vent; fome are of wool only, others of thread and wool. Thefe laft are made of wool of the country, the firt only of Spanifh wool. At Azais are made druggets, fome called imperial, others common; the laft of wool only, or wool and thread; the firft of wool and filk : to make the imperial, they employ only the wool of Campo; for the common, wool of the country. At Vivoufne are 10 P
made coarle ferge, and fome reveches of a low price. Meffe ferge razes of the wool of the country. Cuiray, coarfe ferges. Gencay, fome ferges, fome reveches, both of wool of the country. Coulognes druggets, all of wool.
They grow, in the generality of Poictiers, about 250 milliers of wool, which they employ in the above-mentioned fabrics, and of flockings and hats. They confume befides a great quantity of Spanifh wool, called wool de Campo, and fleuretons de Navarre; which they have by the way of Rochelle and de Nantes, to the amount of 2000 bales, every bale weighing 300 pounds. They make, in that generality, from 25 to 30,000 pieces of ftuff every year,

Of the commerce of the generality of Orleans.
They make capes of Spanifh wool, wool of Berry, and of the country, befides ftockings. Their manufactories in cloth and other woollen ftuffs, employ not only the wool of the country, but alfo a good quantity of the wool of Berry, Beaffe, Brie, Soulogne. The principal manufactories of cloth are, thofe of St Genoux, Clamecy, Chatillon fur Loing, and Montargris. There are many more, of ferges and other woollens, viz. at Orleans, ferge tremieres, ferges with two eftains, frocs, and baguettes. At Baugeney the fame, and moreover, cloth ferge. At Blois at Baugeney, alfo crapes. At Vendome, and at Pierre Fitte, eftamates, and ferges of feveral forts. White ferges, called tourangelles, and white cloth ferges, are made at Montoir, Salbry, Souefme, Nouan le Fuzilier, Vouzon, Jergeau, Chatres, St Fargean and Bron. There is at St Aigman a fabric of cordats, or cloth for the capuchins. The manufacture at Chateaunef and Brinont, are cloth ferges, baguettes, and tiretaines: at Gien, cloth tremiers, white and grey, white frifons and eftamines. At Charite and Penthieres, cloth ferges, and thofe called felins. At Pangoin, Chaudan, Razoches, and Illiers, only ferge of two eftains. At Anthoin, different forts of grey and white etamines, of wool of the country, etamines of Spanifh wool, called langres; etamines, mufe colour, of wool of the country; and other etamines, whereof the warp is of the wool of Maine; whence they have it ready fpun, and the woof of Spanilh wool, or fine wool of Berry.
Romarantin is the moft confiderable manufactory of the whole generality; they make above 5500 pieces every year, viz. white cloths five quarters wide, other cloths lefs wide, of the fame colour, white ferge, white grey, and grey and ferge croiffee, partly of the wool of Berry, partly of the country. They have alfo fetlled there a fabric of white cloths, half of Spanifh wool, half of fine wool of Berry, which cloths are fit to be dyed fcarlet. The manufacturers of Romorantin having been ufed to employ the wool of $\mathrm{N}_{2}$ varre and Barbary, they are forbid to do it, by an arret of council, April 1706, and again by the intendant of the generality, July 1716.
They confume in this generality 200 milliers of wool, for the moft part of the country. They make 25,000 pieces of cloth, \&c. Foreign pieces, to the amount of 14,000, are brought from neigbbouring places and marked there.
Of the commerce of Touraine, Anjou, Maine, and Perche.
The commerce at Amboife for etamines and druggets made there is much efteemed, and a good many hands are there employed in them. In Touraine, they make little elfe but etamines, ferges, razes, and druggets. The principal places where they are made, are Chinon, Richlieu, Loudun, Loches, Beauclieu, St. Chriftophle, St Pater, and Laval, for etamines and ferges. At Beaumont, La Roue, and Roziers, befides thefe two forts of ftuffs, they make allo razes and ferge tremieres; and at Montrefor, Villeloin, and Orbigny, only ferge half ell, of wool of the country.
The druggets and tiretaines of Amboife, are partly wool of Touraine, partly wool of Berry. At Beugnay, they ufe wool of Beauffe, inftead of that of Berry. At Chateau, Renault, Neuville, Pontpierre, Maray, Neufay, and Loifant, the razes, ferge tremieres, etamines, and druggets, are made of the fame wool as at Beugnay. In the fabrics of Montrichard, which confifts only of druggets and white ferge, they employ but wool of the country.
At Angers, they make etamines of different prices, and ferge tremiers, both of the wool of the country. At Cbateau, Gontiers, etamines, and druggets after the fation of Lude, ferge croifees. At La Fleche, etamines, ferges, druggets of the wool of the country. At Montreuil Bellay, the fame. At Beaufort and Durtal, ferges, etamine, druggets, all of wool of the country.
They make etamines and ferge tremieres at Mayette, Chateau de Loir, Ferte, Bernard, Beaumont le Vicomte, Mayenne, and Laval.
At Le Mans, are made double etamines and camblets, which are commonly dyed black, three parts of wool of the country, the reft of Poictou. At Manjette, ftrong ferge tremieres. Chateau de Loir, ferge tremieres, all of wool of the country. Ferte Bernard, all of wool, others of wool and filk, and druggets, thread and wool of the country. At Bonneftable, the fabric is confiderable; they make eta-
mines like thofe of Mans, except that they are all of the wool of the country, and that in the others a thind is wool of Poictou. At Beaumont le Vicomte, they make much the fame as at Bonneftable. At Mayenne, ferges tremiers, and druggets with thread. At La Valle, etamines, ferge tremieres, and druggets of thread and wool of the country. In the whole generality of Tours, viz. the provinces of Touraine, Anjou, and Maine, are made about 18,coo pieces of fuff, and above 11,000 foreign pieces are marked there. The wool they employ in thofe fabrics, are almoft all of the wool of the country; which is commonly fold for 60 to 75
livres the quintal.
At Nogent are made etamines.

## Of the commerce of the generality of Berzy.

Sheep and wool are the chief commodities of this diftrict, The wool is good enough, but they employ only the worft themfelves, the beft and fineft being bought up by the merchants at Roan; which is the reafon why the manufacturers of Berry make only coarfe eloth, called cloth of Berry ; they are excellent in their kind, but only fit for foldiers, fervants, and common people. The other fluffs of wool of Berry, are coarfe ferge, druggets, tiretaines, and pinchinate.
Bourges, Iffouden, Chateroux, Vierfon, Selles, Aubigny, and
Romorantin, are the places where the beft Romorantin, are the places where the beft manufactorics are fettled, among which that of Romorantin is moft efteemed. The other places of manufacture of wool of Berry, are Le Blanc, S. Amant, La Chaftres, Chaftillon, Mehun, Aubigny, Dun le Roi, St Benoilt du Sault, Buzancois, Leuroux, St Savin, Sancerre, Linieres, Leret, La Chapelle Danguillon, Aifne le Chateau, St Gautier, Ivry le Pre, Argenton, Newvy, St Sepulchre, Argent, Valencay, Cinconet, Baugy, Sancergues, Les Aix, Blancafort, and Enrichemont.
Befides what has been faid above, of the quantity of fine wool which the province of Berry furnibhes for Roan, for the fabric of cloth in Normandy, the merchants of that city (Roan) buy up others of the common wools of Berry for their manufacture of tapeftry. What remains, is ufed for making caps of all forts, made in the province, efpecially at Bourges.
In this generality, of 34 places where cloth and other woollen ftuffs are made, there are feven, viz. Bourges, Iffoudan, Chateau Roux, Romorantin, Verfon, Selles, and Aubigny where they commonly make from 3 to 4000 pieces each fix, viz. Le Blanc, Sancerre, Chateauneuf, Liniere, Ivoy le Prey, Concoins, where they make from 2 to 3000 pieces ; and 21 others, where they do not make above 8 or 900 pieces each. The ftuffs at Moulins and thereabout, are ferges, etamines, and crapes. At Montlucon, Heriffon, Decize, the fame. Cercy la Tour, partly ferges and partly etamines. Moulins Engilbert, cloths, and fome other fuffs. The tapeftry made in this generality amounts to 80,000 livres yearly.
In Auvergne, the manufacture of etamines, worfted camblets, burats, cadife, burailles, and other woollen manufacture, is very good.

Of the commerce of Normandy, as divided into three generalities, Rouen, Alençon, and Caen.

The principal commerce of the generality of Rouen confifts of cloth, ferges, tapeftry, wherein are employed 1200 looms. In the good manufactory, they ufe but Spanifh wool, or the beft of France; thofe of Normandy, are for ftuffs of an inferior kind. They import to Roan, communibus annis, 9000 bales, of which 5000 are Spanifh, the reft of the kingdom.
The principal fabric of the city of Roan, and which employed the greateft number of hands, was the cloth of Ufeau, ell wide, but now thofe after the falhion of Elbeuf have taken their place. This laft is good, and improving daily, neverthelefs it is not yet come up to the true cloths of Elbeuf. As to the cloths of Uffeau, they keep them up yef, but make lefs of them fince thofe after the fafhion of Elbeuf have prevailed. The third fort of cloth made at Rouen, after the falbion of England; but of this laff, not fo much as of the two former. Other woollens made there are, white druggets, commonly called efpagniolettes; other druggets, of all colours, half-ell wide, and white ratines, five quarters wide. They make alfo barracans of thread and wool, $\frac{3}{4}$ wide, very coarfe, and berlucha's, or druggets, of a better fort. Thefetwo laft fabrics employ about 60 looms, and the other near 200. At Darnetal, the woollen manufactory is very antient: theit firft ftatutes are in the reign of Henry III. (1587.) The different cloths there made are, after the fathion of England and Holiand ; cloths after the fafion of Elbouf, Ufieau, druggets, or pinchinats. Their manufacture of blankets is the fecond branch of the trade of that town and it's valley. At St Aubin la Riviere, the manufactory commenced in 1601, in vertue of letters patents of 1672 , under the title of a Royal Manufactory. They make cloths after the fathion of England and Hoziand, with fuccefs enough.
The manufachory of cloth at Elbouf is an antient eftablimment, and has always been in good credit for the forts of

- cloth undertaken there at different times. Before the great tegulation of 5669 , they made there only white coarfe cloths; but, all the manufactories of the kingdom having received encouragement from Lewis XIV. at the inflance of Monfieur Colbert, thofe of Elbceuf were the firft that reaped the fruits thereof, by two conifiderable eftablifhments for fine cloths, after the fafbion of England and Holland, and by means of the perfection to which they are arrived in other cloths.
At Orival they make only cloths after the fafhion of Elbceuf. At Louviers, there are two forts of cloth made; the one after the fafhion of England and Holland, the other after the fathion of Elbccuf. At Pont de l'Arche, the cloth manufactory is in great reputation; it was eftablifhed in 1690: the drapery is after the fafhion of England and Holland. At Gournay the manufacture is ferge only, after the fathion of London, well made. Bolbec is one of the moft confiderable places in the country of Caux for manufacturing a fort of ftuff called frocs, which are efteemed the beft of the kind miade in Normandy. They are of two forts; the one $\frac{2}{3}$ wide, the other half-ell $\frac{7}{16}$. They are both of pure wool of the country. Gruchet, the fame as at Bolbec.
At Fercamp the manufacture is diftinguifhed into old and new ; the old are very ftrong ferges, ell-wide, and frocs, the fame as at Bolbec; the new are, fine cloths, after the fafhion of England and Holland; the firft all of wool of the country, the other partly of foreign wool, partly of the beft wool of the kingdom. This manufactory met with difficulties in the beginning, by the fault of thofe intrufted with it by the undertaker. But the dexterity of three foreigners who had afterwards the management of it, bath carried it to fuch perfection, that cloth hath been produced there as fine, and in all refpects as good, as thofe of England.
There are a great quantity of frocs and belinges made in feveral villages of the bailiwic of Caux, efpecially between Fefcamp and Dieppe, but of an inferior fort to thofe of Bolbec, either for the making or the goodnefs of the wool.
Cloth, and other woollen ftuffs, made at Caen, are cloths after the falhion of Exgland and Holland, ratines, ferges called lingettes, frocs and reveches. The cloths and ratines of one manufactory, eftablifhed by Sieur Maffieu, about the end of the feventeenth century, are only of Spanifh wool. The other woollen fuffs made here employ near 700 looms. St Lo is in reputation for the manufacture of ftrong ferge, to which it has given it's name. They make allo there finettes and razes, very much efteemed. Thefe different fabrics employ about 2000 workmen, $g 0$ looms, \&c. Thefe ftuffs are excellent, efpecially if they employ only the wool of Coutantin.
At Vire are made common cloths, yard wide, alfo ferges linguettes; alfo in many villages thereabouts, efpecially at Conde, Caligni, Monfegre, Cartemont, Cerify, and Frênes. Thefe manufactures employ above 300 looms; they make commonly 12,000 pieces a year. At Valogne is made ftrong cloth, of the wool of the country. At Cherborough, the fame, but in greater quantity.
Cuutance, is very fit for a wool manufactory, having all proper accommodations for that purpofe. The wools grown there are excellent; the water good for dyeing, efpecially in fcarlet. There are abundance of teazles. They were once famous; but the war of the league having difperfed the chief manufacturers into other parts, they make only at prefent fome petty druggets, called belinges, and other nlight fuuffs partly of thread, and partly of the wool of the country. The reft of the wool is fold to other fabrics of the province, efpecially at St Lo, where the antient manufacture of ferge of Coutance remains.
At Bayeux is made cloth, ferges and ratines: they are good of their kind. At Frefne and St Pierre d'Antremont they make partly ferge, like that of Caen, partly flight fuffs of thread and wool, all of wool of the country.
There is a great quantity of wool grown in the generality of Caen, but of different qualities, according to the place; thofe that grow about the city of Caen are worft ; thofe that grow from Bayeux as far as Cherborough, and all along the coaft, are the beft : thefe laft are employed at St Lo, Vire, Valogne, and Cherborough.
The generality of Alençon is very confiderable for the manufacture of cloth, and other drapery. They make there 50 or 52,000 pieces, and mark befides 16,000 . Befides the wool of the country, they are fupplied from neighbouring provinces.
At Alençon they make frong ferge, $\frac{3}{3}$ wide, etamines, $\frac{1}{2}$ ell, crapes the fame. At Leez, fome flight drapery, viz. ferges, etamines. Argentan the fame. Falais for the moft part, ferge fur eftain, ell wide; ferge tremieres, $\frac{7}{8}$, \&c. Lifieux, a quantity of woollen ftuffs, called frocs. Vernevil, ferge croifsée, all of wool, druggets, thread, and wool. Dreux, cloth, ftrong ferges, ferges after the fafhion of London, eftamats, and demi-eftamats; thefe laft are called linings, becaufe they are employed to line cloth.
Aumale gives it's name to a manufachure of ferge much efteemed; they reckon near 1200 loom's at work there, and round about. It is the only fabric of the king in the king-
dom ; they reckon the commerce there amounts to $2,000,000$ when wool is at a reafonable price.
Nogent le Retrou is a town of the province of Perche, but of the department * of the manufactories of Alençon. The ftuffs there made are of three forts, etamines, of wool, others of wool and filk; druggets, thread and wool ; above 400 looms are employed there. The yarn made ufe of in etamines comes for the moit part from Mortagne, to the value of 200,000 livres per annum.
- The kingdom of France, where is any woollen manufacture, is cantoned into feveral departments, or diftricts, called generalities, with an infpettor to each, and fuperin-endant-general of the whole : and thus we come by this more particalar account of the woollen manufacture in France than of any other kingdom befides.

At Souence are made etamines, fome all of wool, others of wool and filk. At Ecouchay, ftrong ferge, ell-wide, and ferge tremieres, $\frac{7}{8}$. At Laigle, partly ferges, partly etamines, and the light flight ftuff.
At Vitre, ferges are made of thread and coarle wool of the country, from 12 to 20 fols the ell : there are alfo etamines, from 15 to 30 fols per ell.
In Bretagne are employed 800 looms, in making flight ftuffs of wool, viz, etamines, druggets, ferges, moletops, crapes, and narrow cloths, of the wool of the country. The principal places are Nantes, Rennes, Bourg, Dinan, St Brieux, Lamballe, Chateau-Briant, Nozay, Redon, Joffelin, Le Guay de Pletant, St Croix, Auyray, Vannes, Maleftroit, Rochefort, Chateauneuf, Lengonna, and Raviliac.

Of the commerce of Bourgogne, and the generality.
As great numbers of theep are depaftured in Burgundy, fo wool is a very confiderable commodity there : one part whereof is employed by the manufacturers of the province, who are numerous; the other part, which is not fit for their ufe, is bought up by the merchants of the neighbouring provinces. In the room of which, fome is alfo bought from R heims and Troie, more proper for certain manufactures, viz. for ferge, after the fathion of London and Siegnelay, where they mix the wool of Troie and Rheims with thofe of Auxerrois, which are the beft in Burgundy. The principal manufacturers are, cloths of Beaune, Vitaux, Semur, Saulies, Montbart, Rovray, Avalon, Auxerrois, Nuits, Pont le Vauz, Autun, Joigny, Sens, Villeneuve, l'Archeveque, Bigny, and Ancy la Franc.
The manufactures of ferges of all forts, efpecially cloth-ferges, and ferges after the faftion of London, are not lefs confiderable; they make them at Dijon, Marcy, Auxerre, in the hofpital, as well as in that of Beaune, at Siegnelay, Amay le Duc, Auxonne, Chatillon upon Scine, and Chaffnelles. Druggets, tiretaines, tolanches, are made at Samur, Montbart, Auxerre, Nuitz, Beaune, Louhans, Clungy, Macon, and Montluet ; alfo in fome of thofe cities, and efpecially at Autun, crapes called frater and freilles, three quarters and half wide. The bufinefs of flockings, after the fafhion of Havre and England, is carried on at Dijon.

Of the ftate of the woollen manufacture of Dauphiny and Provence.

Grenoble is the chief place of the fabrics round about; they make cloth : at Virin, and five parithes, are made druggets, and coarfe cloths: at Turio, and nine parifhes, cloth only : St-Marcellin, and four parifhes, cloth only : at Roybon, and feven parihes, cloth, ratines, and ferge. At Serre, and eight parihes, cloths only: At Beaurepaire, cloths, as alfo in three parihes belonging to it. At St Jean en Royans, and fix parifhes, fuffs, and above 1000 pieces of cloth. This place is very commodious for a manufactory, by reafon of it's water. At Romans, and in 12 parimes, the moft confiderable of the whole province, (except Dienlefit) are made of four forts of drapery, viz. cordelats 2000 pieces, ratines 1000 , eftameux 14 or 1500, cloths 15 or 1600 . At Pont en Royans, and 17 parifhes, are made cloths only; at Creft, and 13 places, ratines and cordelats.
At Montelimat is the greateft manufactory ; they reckon up 25 places where ratines and fergettes are made: Toliman, and nine parifhes, make fergettes: Dien de Fit, and 20 places, make fergettes only: Buis, and three places, fergettes and cordelets: Valence, cloths and ratines: Vienne, and 17 places, make druggets.
The wool of Provence is employed in different manufactures of ftuffs and hats. Their woollen manufacture is, cloth made all of Spanilh wool, and caps of the wool of the country. At Toulon are made two forts of pinchinets; one all of Spanifh wool, the other only of the wool of the country. The cadis, and cordelats are made of the wool of Provence, viz. in Aix, Gordes, Apt, Ayquires, Auriol, Signe, Colmars Digne, La Roque, Mauve, Soleres, Cuers, Pequant, Camoulles, Lue, Draguman, Lorgnes. They make alfo in Colmart and Digne, and thereabouts, cloths three quarters

## F R A

and balf wide, which are fold partly in the kingdom, and partly in Savoy.
In many places of the principality of Orange, they make ferge $\frac{3}{2}$ wide. At Arles, narrow raze; at Grignan, fergettes; all of wool of the country.

## Of the commerce of Languedioc.

The manufactures of wool eftablifhed in the two generalities of Languedoc are, cloth, cadis, burats, ferges, ratines, cordelats, bays, crapes, razes, tiretaines, druggets; the greateft part for the Levant, as the matrons and Londrins; the others for the Swifs and Germans, \&c.
The places where thefe are made are, Rieux, Granges des Pres, Lodever, Carcaffone, Limoux, Caftres, Alby, Alet, St Colombe, Lauclanet, Leiffac, La Grace, Saptes, Cbelabre, Mezanet, Ferriers, Caune, Bedarrieux, St Sivran, Quiffac, St Hypolite, Bauzely, Vigan, Ganges, Saumennas, Anduze, Alais, St Gervais, Sommieres, Gardonnaque, Salle, Beziere, Aniane, and Beaucaire.
The wool employed in thele manufactures is partly of the country, butthe greateft part is brought from Marfeilles, by the merchants of Montpelier, who buy them unwalhed, and after they have dreffed them, fell them, at the fairs of Pezanes and Montagnac, to the manufacturers.
At Alby in High Languedoc are but two forts of manufactures, cordelats and bayettes, the former of the wool of the country. At Carcaffone the cloths are made of wool of $\mathrm{Be}-$ zier, Narbonne, and Spain. At Saptes the manufacture* of cloth is very conflerable, the wool Spanifh, from the merchants of Toulonne, Bayonne, and Marfeilles. Limoux and Alet, the cloths there are made of the wool of the country, and of Rouffillon. Saiffac, a manufactory of common cloth. La Grape, cloths; Montagne de Carcaflone, cloths of different colours and breadths; Caftres, bayettes, burets, and caronines; Meizant, and it's dependencies, cordelats, white and mufc ; Boiffafon, cordelats; Varres, ferge ; Ferrieres, ferge; Caune, coarfe cloths; Bedarieux, two forts of manufacture, one of druggets, the other of cloths; St Ponts Ia Bafhde, white cloths; St Chiman, white cloths, from 3 livres ro fols, to 4 livres 10 fols per ell.
The manufacture of cloth at Lodeve is very confiderable; and in great efteem; they make 45,000 pieces, white and grey. At Montpelier, ftuffs, blankets, hats, fuftians; the blanketmanufactory is very confiderable. At Quiffac is a confiderable munufacture of cadis; Sauve the fame; St Hipolite cadis, 75 looms; Bauzely ditto, 60 looms ; Vigan cloths and cadis, a very confiderable manufacture; Ganges, fonie cadis'; Alais, ferge, cadis, ratines, 90 looms; Ulez, ferge, 60 or 70 looms; St Gignaix, cadis, 40 looms ;'Sommieres, cloth ferge, ratines, and cadis; St Jean de Gardonnengue, cadis; La Salle, cadis, 30 looms; Nifmes, a confiderable manufacture of cloth and ftockings ; Narbonne, knit fockings.
At Bezieres are different manufactures of wool, efpecially of fine cloth and druggets, like thore of Badrieux, fold chiefly to Germany. The royal manufactory of fine cloths, eftablifhed at Clermont, is very confiderable : there are alfo private manufactures there. The manufacture of hats is allo the moft conliderable in Languedoc. Aniane has a manufacture of cadis; Beaucaire, of cadis and ftockings, and hats; St Andre de Val Borgne, cadis and hats; Marvais, cadis and hats.
The Sieur de Varenne, having brought workmen from Holland, undertook to make cloths for the Levant trade. Saptes, near Carcaffione, was the place where he firft eftablifhed it; and we may confider it as the model and mother of all the others in the province of Languedoc. That of Clermont and Lodeve followed foon after, viz. in 1678 . The ftates of Languedoc lent them 130,000 livres for many years, without intereft, and gave them befides, by way of bounty, a piftole for every piece of fine cloth made there *.

- Let it always be remembered, as it appears in a great variety of inftances throughout this work, that when France has attempted to eftabliin any new manufacture, and to lupplant other nations in any valuable branch of trade, they have ever given fuch encouragements, in fome fhape or other, to effectuate it.

The third manufactory is that of Carcaflone, eftablithed and maintained by the Sieur Caftenir, which has not fucceeded lefs than that of Saptes, and Clermont Lodeve. The province gave him the fame advantages as to the two other royal manufactories. The eftates of Languedoc have fince added two others, with the fame encouragements, one at Rieux, under the conduft of the Sieur Guife, a Dutchman; the other in the Caftle de la Grange des Pres, near Penzenas, under the direction of the French manufacturers.
The laft royal manufactory of Langucdoc is that of Monf. Chamberlin, eftablifhed alfo under the authority of the flates. It does not make for the Levant trade, but only woollen ftuffs after the fahion of England, for the Spanifh trade.

## F R A

The annual product and manufature of Languedoc in the following articles is,

They import wool of Spain, Conftantinople, Salle, Algier, and other parts of Barbary, 40,000 quintals.

Of the commerce of Low Navarre and Bearn, Flanders, the Austrian Low Countries, Lorraine and Bar.
The wool of Navarre is good, and paffes for Spanifh wool the fineft forts are bought by French merchants of different provinces; of the others they make fome coarfe ftuffs for cloathing of the common people.
The product of Flanders, is corm, cattle, wool, \&c. Their manufacture, cloth, ferges, ratines, and other woollen goods, and ftuffs mixed with filk and thread; camlets, damakks, tapeftry, fockings and breeches, and other works of Bonmererie, knit and wove; burats, crapes, blankets, and the like; all there at Lifte.
At Roubais and Turcoing there are many looms for ftuffs of wool, or filk and wool, made chiefly for the Spanilh trade, and other foreign countries; fome are brought to France, and even to Paris. At Menin they make hats of wool ; at Tournay ftockings of wool, moquettes (a kind of pluif) the ftockings are for Spain and the Weft-Indies.
There are alfo a number of different manufactories; thofe of fine cloths, that were once fo flourifhing throughout this province (where it was faid were 400 looms) are now only at Ypres, Baiteul, and Poperingue. Their dyeing in fcarlet is very fine in the firft of thofe three cities; and they make alfo there, as well as at Hanfcotte and fome other places, ferge which is greatly efteemed.
At Bruges is the great magazine of Spanifh and Englifh wool, \&c. that ferves to fupply the manufactories of that important city. The ftuffs made there, among others, are anacoftes, lamparilles, and ferges fit for Spain and the Spanifh Indies, alfo bay and fome camlets.
The woollen manufactures of Lorraine and Bar are only at St Nicholas and St Mary, and Aux Mines ; the cloths are coarfe.

Of the commerce of the three bihoprics, Metz, Toul, and Verdun, of Alsace, Rousillon.
The beft manufactures of wool in the three bihoprics, are at Metz, and thereabouts; they are not very anticnt, efpecially fome of them, but have arrived to fuch perfection, and the trade is fo great, that the Council Royal * of the Commerce of France thought it neceflary, in the beginning of the 18 th century, to eftablifh an Inspector $\ddagger$ of them. They make ratines of all forts, different kinds of light ferge for women's wear, cloth like pinchinats for the country people, and fome druggets.
-The Royal Council of Commerce for the advancement of the trade of the kingdom of France in general, as an infitution, we may prefume to fay, fuperior to any other of this kind throughout the whole world. It had it's commencement the 29th of June 1700, and from that time the trade of this nation has been wonderfully increafed. For the nature and confitution of this royal council, and alifo of the Deputies of the Council of Trade in France, fee the article French America.
This is another admirable inititution for the encouragement of manufactures in France, which is not to be paralleled in Chriftendom. See the article Manufactures.

Toul and Verdun are lefs confiderable in their manufactures; they knit woollen ftockings in all their cities and round about; thore of Metz are moft efteemed.
At Strafburg, the capital of Alface, the woollen manufacture is tapeftry, narrow cloths, blankets, fuftians.
The wool of Roufillon is fine, almoft of the fame quality with Spanifh wool; therefore the manufacturers of France buy there every year, for confiderable fums ; and, though Roufillon has no confiderable manufactory, jet they make blankets, and fome kind of bures or coarfe cloths.

Of other branches of the trade of France.
The principal produce of France is their wine and their brandy, and their vinegar. Befides the quantity they con-
fume among themfelves, they fend abroad to foreign countries, according to a moderate computation that has been made, above 40,000 ton of wine annually from Bourdeaux, Rochelle, and Nantes, and the leffer ports thereabouts, and 25,000 ton of brandy and vinegar at leaft.
This extraordinary exportation of itfelf is enough to entich a country. Next to thefe are the exportation of linen from France, which has many years proved, and fill continues fo to do, a very capital article in the commerce of that king dom, by the exportation thereof to foreign countries: and the flax being of their own growth, as well as the workmanflip the labour of their own people, this enhances the eftimation of this great manufacture. Yet fince Scotland and Ireland have made fo exquifite a proficiency in the linen manufactures, we have abated in our imports of the French linens; though, it is greatly to be feared, that the quantity which is fmuggled into this nation, and fold even for our own as well as thofe of Silefia, are very confiderable. But as this is likely foon to come again before the confideration of parliament, we hope that an entire fop will be put to fo great an evil.
And, fince the admirable improvement in the filk manufactures of this kingdom at Spittalfields, near the city of London, the importation of this manufacture from France has greatly declined.
Yet the wrought filks of France are ftill extremely profitable to that nation, and are ufed for cloathing the ladies in moft of the courts and countries of Europe. They bave a vaft trade for them in Germany, to which their frontiers join a great way up the Rhine, and from whence they fend great quantities of manufactures quite thro' Swabia, Franconia, Bavaria, and even into Auftria, Hungary, and Poland.
Nor is their commerce lefs in proportion into the Lower Germany, particularly upon the Meufe and the Mofelle to the countries of Lorraine, Cologne, Munfter, and throughout all the circles of the Lower Saxony, the Upper Saxony, Mentz, Triers, and Weftphalia.
The Normandy window-glafs of France is the fame for kind, of which fo great a quantity is now made in England, and which we call crown-glafs. England formerly had it only from France, and imported annually large quantities of it; whereas they now make fo much in England, that they not only fupply themfelves, but fend it to other countries. The like is to be faid of all forts of plate-glafs, for coaches, look ing-glaffes, \&c. all which the Englinh were formerly fupplied with from France. However, the French have a very great trade for this glafs fill, as well for their own ufe, as to fend to Germany, Swifferland, and even into Italy itfelf.

## Remarks beforethelast War.

Their fabric of glafs, at St Gobin, is efteemed one of the fineft in all Europe. They are faid to run plate-glafs to great perfection, and of larger extent than in any part of Europe. In confirmation of which, it may not be improper to mention an inftance of my own knowlege, which happened a few years ago. An eminent merchant, of St Peterfburg in Ruflia, fent over a commifion to England for the purchafe of, a quantity of plate-glafs, to be fixed in the manner of our wainfcot pannel, in fome public room in the emprefs's royal palace ; the exact dimenfions of which I do not recollec, but the commiffion would not have amounted to much lefs than 2000 I. Accordingly I went to the glafs-houfe at Vauxball, belonging to Meff. Bowles and Dawfon ; and, talking with Mr. Dawfon upon the occafion, he told me, that they had not conveniencies ready built for the running of glafs of fuch large dimenfions; and that to erect proper conveniencies for that purpore would be fo expenfive, that it would not anfwer; orders of that nature being fo very uncommon, and perhaps they might never bave another of the like kind, and therefore it could not be executed in Eng-land.-But this commiffion, as I was afterwards informed, being fent to France, was there executed.
They have alfo no inconfiderable thare in the fifheries of various kinds [fee the article Fisheries] which has greatly promoted their brood of feamen, and increafed their maritime power.
Their fcarcity of black cattle makes them fcarce of leather; wherefore they drive a great trade to St Domingo for hides, and buy abundance alfo in Spain and Portugal; the Spaniards bringing them from Buenos Ayres, and the Portuguefe from the Brafils; notwithftanding which, they have a pretty large quantity from England and Ireland, fuch as calve's leather and neat's leather.
Their falt is partly a monopoly in the hands of the government, and is fold out to the fubjects in an arbitrary manner, and at an exceffive price. [See the article SALT.] What they fent abroad, is bought of the officers of the crown, and at a mote tolerable price: this is what we call bay-falt principally, becaufe it is made at feveral places in the bay of Bifcay.
The colonies and plantations of France, like thofe of other European nations, are chiefly in America; and next to thofe Vol. I.
of the Spaniards, are the greateft in that part of the woold, as to their extent on the continent, and the number of the iflands. The Portuguefe colony in Brafil is perhaps sicher with regard to gold and diamonds, than the French: but, for largenefs of territory, the French in Canada, and in their Miffifippi pretenfions, almoft exceed any other nations. See the articles Canada and French America.
The French colony of Canada, is a very valuable and important fettlement upon the river of Canada, and the great bay or gulph of St Laurence, in which the French have extended themfelves fo far, as from within ten leagues of the Englifh factory at Hudfon's-Bay [fee the article Hup-son's-Bay Company,] to within about two leagues of Hudfon's river, which runs into the fea at New-York, being from latitude $41 \frac{1}{2}$, to latitude $51 \frac{1}{2}-$ But, to leave the defcription of the extent of the French territories on the continent of America, we refer to the article Canada, and to the article French America; we fhall, at prefent, only fpeak to the trade of America in general, as connectivel confidered with the other commerce of France; left, it's being feparately and disjointedly viewed, the reader thould not take that comprehenfive furvey of the whole trade of France together, which may enable him to form a right judgment thereof, when compared with that of other nations.
The grand product of this colony is corn and furrs. This country chiefly fupplies Cape Breton, and all the fifhing veffels which refort thither, and which are very numerous, with grain in general, the inland of Gafpe not yielding any quantity of corn fufficient for them,-Canada allo fupplies the French ifland colonies with corn, as we fhall fee prefently; but thefe exportations do not carry off a quantity equal to the growth of fuch a vaflly extended country as this of Canada.
The other exportations are peltry, viz. furrs and finns, of which the principal produce- is the beaver. They have a great variety of fkins of other wild creatures, which thefe countries produce in common with the reft of North America: but the beaver is the chief, both as it is the moft profitable and moft numerous. See the article Beaver
So great is the multitude of beavers here, that the French in Canada are faid to fend over to France feveral hundred thoufands of their fkins every year; and yet they do not find the plenty of beavers to abate, but they are rather ready to over-run the whole country.
Befides beaver-fkins, they take an immenfe quantity of other forts of creatures, whofe furrs are valuable in Europe, and make a very large branch of commerce, confidered as wrought up into divers general manufactures.--Such as the ikins of orers, deer, bear, elk, buffaloe, mink, wild horfe, wild cat, mufquafh, raccoon, fifher, martin, fox, white, ditto black, very valuable, bullock, \&c.
At the mouth of the great river St Laurence, the French carry on the great filhery, commonly known by the name of the white fifhing, or cod fifhing of Newfoundland: how highly injurious this is to Great-Britain, and beneficial to France, [fee the article British America.] For, though the ifland of Newfoundland is now wholly a colony of GreatBritain, yet it is certain, that the French employ more fhips in this fifhing than the Englifh, and catch a much greater quantity ; the reafon whereof is, that the French carry the fifh not into Spain and Italy only, but alfo to their own country, to Marfeilles and Toulon, and to the ports of France in the ocean ; the French themfelves eating much filh, efpecially in Lent; whereas the Englifh bring little or none from thence, but what they fell to the Spaniards and the Portuguefe, or Italians: the Englifh, who keep little Lent, and being no filh eaters, in comparifon to Roman Catholic countries.
Befides, the whole coaft of Britain fupplies fo great a quantity of the fame fort of fifh, as well as of divers others, that they catch more by far at their own doors, than their home confumption calls for.
Quebec, weft long. 74. lat. 47, 35. the capital of the French colonies in North America, fituate on the weft fide of the river St Laurence, 300 miles north-weft of Bofton. This city is fortified, and defended by a caftle: the Engliih have made two or three unfucceffful attempts to reduce it, and had probably effected it the laft time, but they entered on this expedition too late in the year, and wanted good pilots to carry them up the river of St Laurence, which occafioned the lofs of fome tranfports, and feveral hundred foldiers, in the latter end of the reign of queen Anne. The viceroy of Canada who refides at Quebec, ftiles himfelf governor, and captain-general of New France and Louifiana; which, according to the French, comprehends all Canada and Florida, of which the Brition colonies are a part; and no doubt they will attempt to drive cur peop'e into the fea, in the language of a French writer, if we fuffer them to continue their incroachments on our frontiers, and do not poffefs ourfelves of the lakes which lie between Canada and Florida.
There are two feafons in which hips fail from France to this country, viz. towards the end of April, or the beginning of May, and at the clofe of Augut, or beginning of Seprem

10 Q
ber,
ber, that they may arrive as the ice is juft broke, or a little before it is formed, there being no going thither all the reft of the year.
The French hips, employed in this trade, export all their goods cuftom-free, neither are they liable to any duties in Canada, except for Brafl tobacco, upon which there is about 20 s. fterling per hundred weight. The cargo of thefe veffels is much the fame with what is fent to the Frerich iflands, and, as we fhall mention that prefently, we need not do it here-We hall obferve, however, that tobacco, fugar, and fome other Weft-Indian commodities, make a part of thofe cargoee, the foil and climate of Canada not affording the like; and, for the fame reafon, there is a difference in the woollen goods exported thither, coarfe cloths being fent to Canada, and thin and light ftuffs to the French ifland colonies in America. The profits upon the goods are very large; feldom lefs than 50 per cent. and thofe that go off beft are of leaft ufe, fuch as ribbands, laces, fnuff-boxes, watches, rings, necklaces, \&c.
As foon as the veffels arrive at Quebec, the merchants there fend away the greateft part of their cargoes that are fit for the Indian trade to Montreal, and the three Riyers where they have factors; but the fineft goods remain at Quebec, and are fold among the French themfelves; all their merchandize is paid for in money, in bills of exchange upon the merchants of Rochelle, in furrs, or in lumber.
It feldom happens that thefe fhips return full laden into France, the colony not producing roomy goods; and therefore, that their voyages may turn to the better account, they generally run down to Cape Breton, and there take in a large quantity of coal for the French fugar illands.
The next point requifite to be noticed in this part of America, poffeffed by the French, is Cape Breton, or the Ine Royal, as the French have chriftened it.-But having, under the article British America and Fisheries, taken fome notice hereof, and intending to make fome addition thereto under the article Frinch America, where we fhall confider thefe points more minutely, we fhall only oblerve here for the prefent, that, according to Charlevoix, the climate of this ifland is much the fame with that of Quebec. Indeed, all the lands here are not good, neverthelefs they produce trees of all forts. There are oaks of a prodigious fize, pines for mafts, and all forts of timber for carpentry work; the moft common forts, befides the oak, are the cedar, afh, maple, plane-tree, and afpin; fruits, particularly apples, pulfe, herbs, and roots; wheat and all other grain neceffary for futtenance; hemp and flax abound here lefs, but are every whit as good as in Canada.
All the domeftic animals, fuch as horfes, horned cattle, hogs, fheep, goats, and poultry, thrive well here. What is got by hunting, hooting, and fifhing, is able to maintain the inhabitants a good part of the year. This ifland abounds in coal-pits. There is no part of the world where more codfilh are caught, nor where there is fo good conveniency for drying it. The filhery alfo of fea-pike, porpuffes, \&cc. is in great abundance here, and carried on with great eafe.
The harbour of Louifbourg, called Englifh Harbour, when this ifland was in Englifh hands, is not above a league from the bay of Gaborie, and is, perhaps, one of the fineft in America; it is near four leagues in circumference, and every where there are fix or feven fathom water; the anchorage is very good, and you may, without danger, run a thip a-ground upon the mud.
After the ceffion of Placentia and Acadia to the crown of England, it is certain, the French had no other place, where they could dry their fifh, or even fifh in fafery, but the ifland of Cape Breton, They began by changing it's name, and called it the Royal Ifland. The cod-fifhing here is very -abundant; they fifl there from the beginning of April to the end of December, which employs many bundred fail of Frencb flipping, and is a grand nurfery of their feamen. See the article Fisheries.
. From our map of North America, and our notes and explanation thereof, together with what we have faid under the article British America, and what we hall alfo fay under the article French America, the reader will be enabled to judge of the great defigns of France upon the conunent of America, from Canada to Florida, [fee likewife the articles of Canada and Florida] comprehending all their fettiements upon the Miffiffippi, and the country round about it, which is called Louifiana. See Loursiana. Thefe French, colonies being upon the borders of the whole range of Britilh colonies upon the continent, and the French exerting: theirutmoft policy to cement friendhips, and making - interefting alliances with the Indian nations, who are as well neighbours to them as to us, and exciting thefe people fre-- quently to commit hoftilities againgt the Englifh; the fecurity of our northern colonies calls aloud for due attention to the meafures of the French in this part of the world, and to keep a vigilant eye upon them, left they fhould one day be capable of doing us unfpeakable injury in this part of America. [See the article French America.
Remaris finee the Definitive Treaty of 1763.
Thus ftood our work in the two laft editions, before the laft war; wherein it will appear, that we lave not proved falfe
prophets, and amufed the public with vifionary fectuations, with relation to the late conduct of France towards this king. dom: on the contrary, our judgment being grounded on FACTs, the inferences we naturally and unbiaffedly deduced therefrom, we have experienced to have come to pals. With regard to Canada and all it's Dependencies, the fame are ceded to the crown of Great Britain by the DepiNitive Treaty of 1763, which has been the confequence of the laft war: and with refpect to the Caribbee Infands, we have already noticed, under the article of America, where we have given the Definitive Treaty at large, in what manner the faid treaty has difpofed of them: we have likewife reprefented that matter under our article British America and French America, as was requifite, in purfuance of the plan of this performance: and that the reader may not miftake us, we are obliged, where neceffary, to make our Remarks, confiftent with the Definitive Treaty: to the end alfo, that the ftate of public affairs may appear in their true light, we have rather chofe to let them ftand as they were reprefented by us before the war, than only as they now are. For, by fo doing, we fhall be able the more inpartially to make a truer judgment, how far the faid DEFInitive Treaty has removed thofe Complaints on oar fide; that occafioned the laft war. See America, British America, florida, Bahama Islands.

Of the French Islands in America, as they flood before the laft war, and the Definitive Treaty of 1763 , took place.

To begin with Gramada: it is fituate in $\mathbf{1 2}$ degrees north latitude, about 30 leagues fouth-weft of Barbadoes, and about the like diftance north of Caribbiana, or New Andalufia: this ifland is 25 leagues in circumference, and has feveral good bays and harbours, fome of which are fortified. It is eftemed a fruitful foil, and well watered ; producing fugar, and fuch other plants as are found in the relt of the CaribbeeIllands ; there are abundance of very fmall illands that lie at the north end of Granada, which are called the Granadillas, or Granadines. Martinico is fituated between 14 and 15 degrees north latitude, and in 61 degrees of weftern longitude, lying about 40 leagues north-weft of Barbadoes. It is 20 leagues in length, but of an unequal breadth. There are feveral commodious bays and harbours on the coaft, fome of them fo well fortified, that they bid defiance to the Englifh, when they made a defcent there with feveral thoufand men in the laft war. The produce of this ifland is the fame with the Englinh ifland of Barbadoes, and has been the great inftrument, in conjunction with Guardaloupe, of enabling the French to rival us in the fugar trade at foreign markets.
Marigalante is fituated in 16 degrees north latitude, a littie to the fouth-weft of Guardaloupe, and is about five leagues in length and four in breadth. Du Pleffis fays, 'tis full of hills, and abounds with tobacco.
The ifland is covered with trees, among which is the cinna-mon-tree, that is always verdant, and it's other products are the fame with the reft of the Caribbees.
Guardaloupe is fituate in 16 degrees north latitude, and 6r degrees of weftern longitude, about thirty leagues north of Martinico, and near as much fouth of Antigua. It is faid to be the largeft of all the Caribbee Iflands, being 22 leagues in length, and half as much in breadth at each end. This, like Martinico, abounds in fugar, cotton, indigo, ginger, \&c. and is in a very flourihing condition as well as Martinico; and agreeable to the confequence it is of to the French, they have taken care to fortify it with feveral regular forts and redoubts. This ifland makes more fugar now than any of the Britifh Ilands, except Jamaica.
Defigda, or Diferada, the Defirable Illand, fo called by Co lumbus, it being the farft land be difcovered in his fecond voyage to America, anno 1493. It lies 10 leagues north.eaft of Guardaloupe. It is but a fmall iffand, nor fo fruitful as others that belong to the French.
St Bartholomew's is another fmall ifland, about io leagues north of St Chriftopher's. St Croix, or Santa Cruz, another fmall ifland, lying 17 degrees 30 minutes north latitude, about 20 leagues caft of Chriftopher's, and St Martin's, another finall inand, of no great confequence.
St Domingo belongs partly to the Spaniards, and partly to the Fiench. It lies between Cuba and Jamaica on the northweft and fouth-weft, and Porto Rico on the eaft, and feparated from the laif by only a narrow channel. It extends from longitude 6735 , to longitude 74 15, and from latitude 1737 , to latitude 20 , being near 400 miles from weft to eaft, and atmolt 120 where broadelt from north to fouth; and by fome reckoned 400 leeagues in circumference, exclufive of it's bays, creeks, \&c. which, 'tis faid, would make 200 more. This inand, which is the greateft of all the Antilles, [fee the article Antilles Isiands] is the moft fruitful, and by much the plealanteft in the Weft Indies; having vaft forefts of palms, elms, oaks, pines, the juniper, caramite, acajou, \&ic.-In the meadows, there are innumerable heads of black cattle; horfes enough in the weftern part, which belongs to the French, to fupply all their neighbouring colonies. - There is fcarce a country in the world better watered by navigable rivers full of finh, as the coaft is of crocodiles and tortoifes.

It has many mines of gold, filver, and copper, which, though wrought formerly to great profit, the Spaniards at prefent find themfelves too weak to carry them on for their own advantage, and take care to concea! them from the French.-The chief commodities of this ifland are hides, fugar, indigo, cotton, cocoa, coffee, ginger, tobacco, falt, wax, honey, ambergreafe, and various kinds of drugs and dyer's wood.The French here are faid to out-number the Spaniards, though both together are fhort of what the extent and fertility of the ifland is capable of maintaining.
It's principal trade confifted for many years in tobacco, in which, 'tis faid, there have been from 60 to 100 hips employed, but that funk to nothing on the eftablifhing an exclufive farm of this commodity in France, and fugar afterwards became the faple commodity of the ifland: fome think 'tis the very beft that is made in the Weft-Indies, and generally it yields 3 or 4 s. per bundred more than that of any of their other iflands.- It was computed in 1726, that there were then 200 fugar works in this ifland ; that, one year with another, they made 400 hogheads of fugar, each of 500 weight, and that it brought in 200,000 1. ferling per ann. to the French, and the indigo is reckoned to produce half as much. This French colony is allowed to be the moft confiderable and important that they have in thefe parts, and would be much more fo, could they get a ceffion of the other part from the Spaniards, which they have extremely at heart, but 'tis hoped will never obtain, they being already poffeffed of fo many noble harbours and forts, as give them an opportunity of difturbing and ruining the commerce of any nations which they happen to be at war with.
The ifland of Martinico is the chief of the French fettlements: the governor-general and intendants refide there; it is alfo the feat of the fovereign council, which bas jurifdiction, not only throughout the Antilles, but alfo over the French fettlements in St Domingo and Tortuga. The number of people in this ifland are affirmed to be 10,000 whites, and 20,000 negroes. Whence it appears, that the French are very numerous in thefe iflands; and, though they have been expofed to many great difficulties in eftablifhing thofe plantations, yet they are now brought to fa very flouifhing condition, and are daily improving them to the utmof.
The principal commodity the French raife at prefent in thefe iflands, is fugar, whereas formerly it was tobacco. Monf. De Poincy was the firf who taught them the art of raifing the fugar-cane, and curing the juice of it. 'He was a man of fuch extraordinary genius, that he improved upon the method then in ufe at Brafil and the Madeiras; the mills he caufed to be erected, were ftronger, neater, and better fitted for ufe; and his furnaces likewife were contrived to much greater advantage; fo that he not only introduced it, but carried the art of fugar-making to a very high degree of perfection.
Befides fugar, the French raife a great deal of indigo. -They alfo cultivate cacao to great advantage, and draw confiderabie profit from the ginger, caffia, and piemento, or what we call Jamaica pepper, or all-fpice, of which they export confiderable quantities.-They alfo manufacture rocot, for the ufe of the dyers, and fend home variety of medicinal gums, and wet fweet-meats of divers kinds.-Thefe iflands produce two feveral forts of valuable woods, which are ufed for dyeing, inlaying, and cabinet-work; fuch as rofe-wood, which, when wrought and polifhed, has a very beautiful appearance: as well as a fine fmell.- The Indian wood is alfo of the fame nature, and the iron-wood, fo called from it's exceffive hardnefs, is efteemed preferable either to cedar or cyprefs; Brafil wood they have in great quantities, and brazilletto, yellow wood, or fuftic, and green ebony, which is ufed both by the cabinet-makers and dyers. We may add, to there commodities, raw hides and tortoife-fhell, and then the reader will have a tolerable comprehenfion of the riches of the French in the Weft-Indies ; which added to their fifheries at Newfoundland and Cape-Breton, their peltry trade in Canada, and all their commetce with the Indian mations in their immenfe territory of Louifiana, muft give us an extraordinary idea of the ftate of their commercial interefts in America.
But, that nothing effential may be omitted, to enable our readers to form a right judgment of the benefits of the American commerce to Franct, it is neceffary to give an account of the trade of thefe iflands with their mother country, and of the effects thereof to the kingdom in general.
' T o which end, it is to be confidered, that, though thefe inlands produce fo many rich and eftimable commodities, yet they fland in need of very large fupplies of vaious kinds of neceffaries, withour which they could not fubfift; fuet as horfes, and cattle of all kinds; corn, roots, dry fifh, and all forts of Jumber, of which they receive confiderable quantities from Canada, and the reft from our northern colonies, in exchange for fugar, tobacco, indigo, and other goods, which are fent to Canada, and for melaffes to our colonies, where it is diftilled into rum, of which kind of commerce we fhall fpeak more largely under French America.
The inhabitants of thefe illands ftand always in want of negroes, with which they were formerly fupplied by their own

African and Senegal companies, which have been long ago united to the French Eaft-India company, by whom this nlave-trade is now carried on with great regularity, and extraordinary advantage. - The negroes are fent to Martinico where they are purchafed by the planters of the other inlands, at a fettled price of fo many hogitheads of fugar a-head, as in the Spanifh ports they are bought for fo many pieces of eight.
The quantities of fugar, together with their other productions, that are raifed in the French fugar iflands in America, employ in this trade about 400 fhips, from the burden of 100 to 300 tons. The time in which they fail from France is between September and February, that they may avoid as much as poffible, the burricanes, and arrive in a fit feafon for compleating their cargoes.
The veffels from Rochelle and Bourdeaux, are, generally fpeaking, laden with falt beef and pork, flour, brandy, all forts of wine of the growth of that part of France, and alfo Madeira, which they take in that ifland; dried cod, pickled herrings oil, cheefe, butter, tallow, iron, linen, and moft forts of mercery goods. The fhips from Roan feldom carry provifions, but are freighted with woollen and linen goods, filk, ribbons, fhoes, flockings of all forts, hats, tin, copper, and brafs ware, frrall arms, and fword blades, pewter, pins, needles, paper, pens, cards, and an infinite number of other things of the fame kind. The fhips from Marfeilles and Toulon are freighted with oil, dried fruit, wines, and feveral kinds of light ifuffs, that are manufactured in Provence. Thus we fee what prodigious advantages thefe fettlements bring to France, by encouraging induftry, employing a large number of chips, and confequently, raifrig and maintaining many hundreds of feamen. It is no wonder, therefore, that the French government pay fo much attention to this important branch of their traffic, and are fo careful in taking every poffible method to encourage thefe colonies, and to protect their trade, which, however, fuffered confiderably in the wars of king William and queen Anne, and fill more confiderably at the beginning of the late war : which effectually convinced us that the commerce of the fugar colonies of France was far greater than we ever imagined.
Before we quit this fubject, it is neceffary to obferve, that on the fouth fide of the French part of St Domingo, there lies a little inland, called A vache, at the diftance of about 12 leagues from the continent; which is about nine leagues in compafs, the foil very good, and there are two or three tolerable ports, one of which is capable of receiving fhips of 300 tons. This ifland lies very convenient for carrying on a trade with the Spanifh colonies on the continent of America; and,- fooner or later, the French will, in that refpect, make it turn to good account. - It is alfo very commodious for maintaining an intercourfe with the only fettlement they have on the coaft of South America, the ifland of Cayenne.
This ifland has heen a French colony ever fince the year 1625 ; it lies clofe by the continent of Guiana, and only cut off, and made an inland, by the rivers of Ovia on the eaft, and Cayenne on the welt, from which laft it takes its name. The town and fort, where the great road is; at the mouth of the river Guiana, are exachly in 4 degrees, 50 minutes of north latitude, and 3 degrees 32 minutes of eafl longitude, from Ferro. It is teckoned about 18 or 20 leagues in compafs, ftanding high on the coaft, and looks, at a diffance, like part of the continent.
The foil of Cayenne, by reafon of the continual rains, produces plenty of fugar-canes, which, though fmall and fhortjointed, yield very plentifully; affo mandioca, Indian wheat, rocou, cotton, acajou-apples, banellas, pete, ebony, letter, and violet-wood, anana's, tuberofes, very fine and large papaia's, and feveral forts of American and European grain and feed, befides lemons, oranges, indigo, and figs, \&ic.-The country abounds in wild boars, deer, agontils, woodcocks, ortelans, nightingales, anes, occo's, and other birds, remarkable chiefly for their delicious feathers.
The colony is partly fubfifted by provifions brought from France in merchant fhips, by way of trade, which commonly are wine, brandy, meal, and powdered or falt meat, for beef is very farce there; beffdes that, they are not allowed to kill any, nor calves neither, without leave of the governor, that cattle may multiply in the illand. All forts of linen cloathing, ftuffs, filks, fhoes, and other wearing apparel, are alfo carried thither from France, for the ufe of men, women, and children; and all forts of tools and fmall wares, either for the fervice of the colony, or for the Amazons and Indiantrade, are bartered for fagar, rocou, indico, tortoife-fhell, tyger-fkins, and other confiderable curiofities of the country, which turn to no inconfiderable profit to the traders there.
The other neceflary provifions of the product of the ifland are, manetada, and Indian wheat, of which each planter fows large quantities, both for the fubfiftence of their own families and flaves, and to fell to the other inhabitants.-The fea and river-fif, poultry, pigeons, quefts, or ring doves, whereof there is great plenty, and delicate turkeys, hare, venifon, agentils, hogs, and packs, are alfo a part of their fubfiftence.-The chief trade carried on here is an under-hand trade with the Dutch and the Portugueze, and chiefly by the Jews, who re-

fide here; and what quantity of gold and filver they have is in their hands.

Remarks fince the laft war, and the Definitive Treaty of 1763 , with relation to the French Islands in America.

In the laft war Great- Britain conquered the following French Sugar Islands in America, viz. The Island of Guardaloupe, Marie Galante, Debirade, and Martinico, as well as Canada on the Continent, and Cape Breton. For the Definitive Treaty, fee our articlés America, British Americia, Fiorida. At the peace, Great Britain gave up the faid fugat illands, purfuant to the Vill article of the Definitive Treaty of 1763, and by the IX article of the faid treaty, his moft Chriftian majefty cedes and guaranties to his Britannic majefty, in full right, the inlands of Grenada, and the Granadines; and the partition of the illands, called Neutral, is agreed and fixed, fo that thofe of St Vincent, Dominica, and Tobago, thall remain in full right to Great Britain, and that of St Lucia, fhall be delivered to France, to enjoy the fame likewife in full right; and the contracting parties guaranty the partition ftipulated. See our articles British America, America.

Of the East-India and African Trades of FRANCE, as thefe articles ftood before the laft war.

It was under the reign of Henry IV. of France that this nation firft attempted to fhare in the commerce of the Indies, which met but with bad fuccefs, till Monf. Colbert, fo much diftinguifhed by Lewis XIV. undertook the bufinefs. This active and intelligent minifter conceived the defign of reviving the French Eaft-India company, notwithftanding all the miffortunes that company bad met with, and which had, over and over, difappointed the fkill and care of all his predeceffors. But, before he made his intentions known to the public, he took care to make himfelf perfectly well inftructed in the affair he undertook; which he did, by drawing to his acquaintance fuch merchants and feamen as were held to undertand the fubject beft. And, although this company wanted no encouragement from the crown and the minifter, yet, upon ftating a general account in ${ }^{1} 684$, it appeared, that inftead of gaining one penny by their commerce, they had run out about 300,000 pounds fterling, which was one half of their original capital ftock.-There, and the fubfequent misfortunes of the company, occafioned general clamours againft it, and induced a general opinion, that it was abfolutely impoffible for the French nation to carry on a trade to the Indies with advantage.
But all thefe vexatious circumftances were nothing in comparifon of the lofs of their generous protector, Monf. Colbert, who was ready, at all times, to exert his influence in their favour.-The fucceffor of Monf. Colbert was Monf. Pontchartrain, who neither wanted abilities or probity, but whofe notions with refpect to commerce were either crude or undigeited, or, which was worfe, narrow and obfcure.-From the beginning of his adminiftration be was no friend to this company, he croffing every think they afked, and countenancing every attempt to injure them.
After a feries of difficulties and difcouragements, there fill arofe a new fpirit in France of curbing and diftrefling this almoft bankrupt company, under colour of augmenting the royal revenues, and protecting the manufactures, which afforded bread to the people: under which pretext, the company was firft reftrained from felling chints, and other piecegoods to foreigners; which not only proved a great lofs to the company, but to the French nation in general, among whom the money would have circulated for which the manufactures had been fold: whereas, by this prohibition, fo much ready money was kept out of France, and not a thread more of their own manufactures vended. - They fuffered many other obffructions to their profperity, too tedious to enumerate. And it was in particular the misfortune of the company, that, while they were diftreffed and maltreated abroad, to drive them out of the Indies, they were envied and perfecuted at home, on account of the fmall trade they carried on, under the appearance of public fpirit and concern for the poor, but, in reality, from private views and felfifh principles.
The firf feat of government of this principle in the Indies was at Madagafcar; but, after the firf Dutch war, they removed to Surat, and, after that, to Pondicherry.-This was in the beginning of the year 1674 ; and as the company at that time, had an extraordinary demand for piece-goods, they could not have fettled in a better place.-This place was immediately well fortified by order of the court; fo that in the year 1710 , this place was become one of the moft confiderable in the Indies; and, if their affairs in Europe had kept pace with their improvements made in the Indies, the French company would foon have been upon a level with their neighbours, the Eogliih and the Dutch.
The fertlement of Pondicherry becoming the capital refidence of the French Eaft-India company, it will be neceflary to
give the reader fome defcription of the place, and of the French government eftablifhed there.-The town is fituate in the province of Gingy, on the coaft of Coromandel, in the latitude 12 degrees north, and in the longitude of 114 from the meridian of Paris. -It ftands at a diftance of 100 yards from the fea fhore. The magazines of the company and of private perfons, are numerous and magnificent ; a fpacious and beautiful market-place, fix fine gates, in bations for the defence of the walls, a regular citadel wall fort fied; upwards of 400 cannon upon their works, befides an excellent train of field pieces, bombs, mortars, and all forts of military fores in their arfenal. - The governor lives with great fplendor and dignity, and has, befides his own palace, another grand one, adjoining to a moft beautiful garden, fu perbly furnifhed, for the reception of foreign princes and ambaffadors, who, whenever they refort thither, are treated with infinite refpect, all their expences defrayed by the company, which has been found by experience, of much greater confequence to the intereft of their commerce, than the expence it occafions.
The governor general for the company, as he refides in a fine palace, fo he makes a figure equal thereto. He has 12 horfe-guards, cloathed in fcarlet, laced with gold, and an officer with the title of captain, who commands them $-H e$ has alfo a foot-guard of 300 men , natives of the country, called peons; and, when he appears in public, he is carried into a palankin, richly adorned. This ftate is difplayed on the reception of princes and ambaffadors; at other times his guards are employed in the neceflary fervice of the company, and earn to the full the wages they are paid; for there are few fettlements, better regulated, or more wifely governed, than this, which the reader will more eafily believe, when he is told that according to the laft account taken of the inhabitants of this place, there appear to be no lefs than 120,000 Chriftians, Mahommedans, and Gentiles.
There cannot be a place better feated for trade than this, being in the midf of the European fettlements on the coaft of Coromandel, and having alt the bay of Bengal open before them; fo that here the company's magazines are full of all the commodities and manufactures, not only of the coalt of Coro. mandel, but of other parts of the Indies, fuch as Bengal, Surat, and the coalt of Malabar, as alfo of fuch as are imported from Perfia, and the coaft of the Red Sea.-Here likewife are their warehoufes for all forts of European commodities, which are conveniently tranfported from thence, as occafion requires, to all the markets in the Indies:
However, the ftaple trade of the place is piece-goods, of which the fineft are made in Golconda, and the beft painted here; they have likewife great quantities of filk, raw and manufactured, gold and filver brocades, perfumes, fices, and diamonds; in which laft branch of trade they have made a great progrefs of late, and for which it is certain they are very conveniently fituated, as being at a very fmall diftance from the fineft mines in the Indies, and by having perfons amongft them as well fkilled in jewels as any in the world.
We fhall now return to France, and view the flate of things at home, as well as in the Indies, with refpect to the commerce of the company.-And here they ftill laboured under fuch a continued feries of mifchiefs and misfortunes, as not only crufhed the trade, but almoft broke the fpirits of the company, which obliged them to have recourfe to expedients, which proved as little to their honour ar their profit.-In the year 1682, it mult be obferved, they had entered into a fcheme for permitting private trade, upon certain conditions; but their affairs were now fallen into fuch diforder, that they were not only content to fubmit to this, but even to refign it to them upon eafy conditions. - From which expedient they found fome relief, which induced them to extend their fcheme, and for the prefervation of their fervants in the Indies, who, by this time, were above $10,000,000$ in debt, they fairly facrificed themfelves. For,
In the year 1712, they entered into a treaty with fome private traders at St Malo's, by which they yielded up to them all their privileges as a company, on the beft terms they could obtain, with a view to furnifh fuch as were employed by them in the Indies, with fums fufficient to keep under the intereft of their debts, and thereby prevent all things from falling into confufion. So that on the expiration of their privileges, about the time of the king's death, they eameflly folicited a renewal of them, not from hopes of reviving their trade, but with intent to renew their agreement with the merchants of St Malo's, that they might gain enough thereby to preferve their fettements, and not to fuffer fuch as they had employed to be utterly undone in their fervice.
By this means the private merchants of St Malo's were enabled to increafe their fortunes, and carry on a trade to the Eaft. Indies with advantages, under the suthority of a company that was in a manner, become bankrupt; and this, notwithftanding they had confiderable fums out of their profits for partici-pating in it's privileges; for, as private men, they could make an advantageous bargain with the company, with fome reafonable affurance of having the terms of their contract complied with, becaufe made only for a certain time; enjoping alfo the benefit of thofe fettlements which the company had

## FRA

made, without contributing any thing to the expence which they originally coft, or even to that by which they were fupported ; fo that, confidered in this light, the company ftood between them and the government, and their private traders might be faid to enjoy, in France itfelf, thofe advantages that could be expected only in a land of freedom, and by the enjoyment of which folely, their trade became advantageous*.

* It is clear from hence, that the injury, done to this time to the French Eaft-India commerce, proceeded from the nature of the French government; for it mult be obferved, that the ediets for their eftablifhment, and the extenfive privileges granted by them, though they are neceffary to the being and foundation of the company, yet are hurtful and difadvantageous in another refpect. For all men of fenfe diftern, that in a country where fo much depends upon the mere will and pleafure of the crown, no commerce can ever be secure; for as the fame power that gives may take away, fo it may ikewife alter, abridge, and even deftroy, by NEw EDicts, any of thofe privileges, though granted and confirmed in any of thofe privileges, though granted a.
Befides, as the company muft be almoft fupported by aets of royal favour, fo the obtaining thefe muft always depend on the will of the prime minifter for the time being, which is fuch a precarious tenure, that no man who thinks at all can believe he has any property, while it depends thereupon. In the next place, the maxims of the government tendering it abfolutely necelfary to prefer the intereft of the royal revenue to any other interett whatever ; this is fuch a fource of danger and difquiet, as muft neceffiarily banifh all truft and confidence in the faith of fuch a government. Whence it may be obferved, that fuch as are engaged in the management of a company's concerns, under fuch circumftances, will look no farther than the time prefent; and, inftead of placing their hopes in the future profperity of fuch a company, will confine their views to the making the moft they can of immediate advantages, in order to fecure their private fortunes, let what will become of the public.

There are in arbitrary governments certain feafons, when, from a variety of accidents, there appears a ftrong fpirit of promoting the public welfare, not from any real principle of that kind, but to cover fome other defign, which could not otherwife be carried into execution, as in changes of adminiftration, efpecially in minorities, \&c.-This happened to be the cafe at the time when the French Eaft-India company were fruggling for a new grant of privileges, which they had enjoyed for 50 years, though fometimes in a larger, fometimes in a lefs degree.
The duke of Orleans, who defeated the old king's will, and eftablifhed a new kind of government, as it were, in France, found himfelf obliged to fuftain his authority, by endeavouring to acquire to bis adminiftration fuch a reputation as had never attended all the victories and power of Lewis the Great. Therefore, from the time he took the reins of government into his hands, he affected to act on motives directly oppofite to thofe of his predeceffors; he declared, that the great end of goverument was the good of the people ; that it was impoffible this fhould be promoted by perpetual wars or quarrels 'with neighbouring fates; that peace was an univerfal bleffing, to France as well as other nations; that commerce was the natural effect of tranquillity; and that the confequences of an extenfive trade were more certain refources of power than conquefts or arbitrary dominion.-This gave the company great expectations; but the regent's fcheme was diamotrically oppofite to what they expected; for his intent was to eftablifh what is called in France The Sys.tem.* To give a feecious colouring to this profound project, the Eaftand Weft-Indics companies were neceffary to be made inftrumental.
*This was the famous fcheme of Mr. Law, to pay the national debts of France without money; which proved a fuperlative bubble, called the Miffifippi fcheme, like to that of our South-Sea company in the year 1720.-See the artiticles Actions, Bubbles, and South Sea Company.

And, when the Eaft-India company reprefented their condition, and fued for affiltance and protection, they found they had to do with thofe who underftood their affairs as well as themfelves; and, therefore, inflead of governing them, as in many other refpects they had done former minifters, they were obliged to throw themfelves into the new miniftry's hands, and fubfirt on their generofity; which proved the diffolution of the company, or, which is the fame thing, its union with the Weftern company, which had already fwallowed up fome othere.-The edict of union extinguifhed the title of borh thefe companies, as well as the others comprized therein, and gave to the whole the comprehenfive and fignificant name of the Company of the Jndies.
In the preamble to this edict we have an excellent hiftory of the tranfactions upon which this union of the compounded company was founded; for therein it is faid, that the king having principally applied himfelf to the reftoring the commerce of the kingdom, and thereby repairing the loffes and decays occafioned by a very long and expenfive war, and ha-

Vol. I.

## FR A

ving already had the pleafure to fee the circulation of monct wonderfully quickened, by the eflablithment of the $\mathrm{W}_{\text {EST }}$. India Company*; his majefly bad from thence been mduced to look into the ftate of the old companies, erected before his acceffion to the throne; and, in partucular, into the flate of the Eaft-India company, which he found to be depiorable. For, in the face of 50 years, they bad, notwith ftanding repeated affiftances from the erown, managed their affairs fo indifferently, as to be obliged to abandon their commerce intirely, and w take up with fuch rrifling advantages as could be obtained by letting out their privileges to hire.

* It was with this view that the regent fhewed fo much fa vour to the Weft India company, and eftablithed it's capital at one hundred millions, and thereby he procured an opportunity of leffening that immenfe quantity of paper money which the long war had made requifite, and which was of great injury to the public credit.

The king declared he was fatisfied that this did not proceed at all from difadyantages in the nature of that commerce, but from the milfakes and ill conduct of fuch as had been intrufted with the management of the company's affairs, who, in the firft place, had made their bottom too narrow, and had undertaken the traffic of the Indies upon much too fmall a capi-tal.-- That, to keep up the credit of their own adminiftration, and to countenance their taking fuch confiderable falaries to themfelves, they had made large dividends, where there was no proftr ; and having, by this means, exhaufted the company's flock, they carried on their trade by borrowing as much monsy as they could, at very high intereft.---That, however, the king his great grandfather having always protected and encouraged this company, and even granted them a new term towards the end of his life, they might have drawn p-ofits from it, if their conduct had not become fo flagrantly bad, that neither the glory of the king, nor the intereft of his people, would permit him to overlook it any longer. - - On the one hand, there were continual complaints from the Indies, that the company had borrowed vaft fums of the Gentiles, without paying them either capital or intereft, having, in the fpace of 16 years, not fent fo much as one fingle fhip to Surat....On the other, the private merchants carrying on this commerce in the name, and under the authority, of the EaftIndia company, were fo oppreffed by the duty, and other gratuities they paid to the company, that they are unable to purfue their trade with the fame fpirit and advantages which are enjoyed by the fubjects of other nations; and moreover, being afraid to go to Surat, on account of the danger they were in of having their thips feized for the company's debts, they found themfeives obliged to purchafe moft of the Indian commodities and manufactures, which they brought into Europe, from foreigners, at a very high price, and this equally to their own and the nation's difadvantage.
For thefe reafons, and others of the like nature, alledged againft the China and African companies, his majefty declares, that the privileges of all thefe companies are, by this edict of his, dated in the month of May, 1719, revoked, extinguifhed, and fuppreffed.---He granted, at the fame time, to the new company of the Indies, an exclufive privilege of trading from the Cape of Good Hope to the utmoft extent of the Eaft-İndies, as alfo to the iflands of Madagafcar, of Bourbon, and of France, the coaft of Soffola in Africa, the Red Sea, Perfia, the dominions of the Mogul, of the king of Siam, and of the emperors of China and Japan, as allo of the South Seas, from the Streights of Magellan, or La Maire; to the EaftIndies that way, forbidding all the reft of his fubjects their feveral trades, under pain of the confifation of their veffels and effects.
He likewife gives and grants to this company the pofferfions and effects of the other companies, at the fame time charging them, however, with all the juft debts which there companies had contra\&ted.---The better to enable them to dilcharge which, and to carry on the extenfive trade granted them by this edict, he creates in their favour $25,000,000$ of new actions, to be purchafed for ready money, on the terms that the Weft-India company poffefled $100,000,000$ of actions, and with the like privileges and advantages.....He alfo grants full licence and authority to import all forts of manufactures of filk, filk and cotton, gold and filver ftuffs, dyed cottons, and alfo painted and friped, on condition that none of thefe thall be vended in his dominions, but be fold and difpofed of to foreign nations; for which realon they were to be depofited in magazines, under double lucks and keys, of one to be kept by the farmors-general, and the other by the directors of the company, for the betterpreventing frauds and collufions.... He likewife grants them permiffion to import all forts of white cottons, raw filks, coffee, drugs, fprices, metais, and whatever elfe the Eaft-India company might have imported under their privileges.
This edict had all the eftect, and even more, than was expected; fuch an cagernefs appeared of fubfribing, thar, inftead of 25 , the fubicriptions amounted to 50 millions; which encouraged the French miniftry to venture upon fome new regulations, that were made public by an ed: it of the month

10 R

## F R A

of June in the fame year : the principal of which was, that they Mould take off four times the number of old actions, in order to be intitled to the new: fo that, in order to purchafe 5000 livres of the new actions, the fubferibers were obliged to take 20,000 of the old.
The great end propofed by all this was, to find the means of fuppreffing that immenfe quantity of paper-money, which was fo beavy a burden on the flate. To which end, annuities to the value of 25 millions are created; which not anfwering that intention, the new company of the Indies offered their affifance, and undertook to dircharge them at the rate of 50 millions in one month: fo that the whole load of this papercredit, amounting to near 60 millions of our money, was to be extinguifhed by the end of July 1721 .
In confideration of the zeal and public fpirit manifefted by the company in this propofal, the king, by his arret; dated in the month of July 1720, changed the terms on which the company held their privileges, and declared them perpetual, reftraining himfelf and his fucceffors from ever treating them as other companies had been, in order to their eftablifhment : thus this company acquired the title in France of The Perpetual Company of the Indies, withail the privileges of the other four companies confirmed to them for ever.In two years time it was declared, that, in confequence of the annuities granted and affigned to the company from the crown, they fhould be able to divide annually the fum of 10 , per cent. which thould be paid duly and exactly for ever; in confequence whereof, the directors were to be at full liberty to export and import what they thought proper, without being accountable annually to their conftituents, becaufe the dividend was to be certain and regular, and they were to manage things fo, as that the deficiencies of one year might be made good by the profits of another.
This courfe of management, though it had certainly one great convenience, in afcertaining the intereft as the proprietors were to receive it, yet the circumfance of not accounting for the profits bas proved of fuch ill confequence, that, notwithitanding thefe dividends have been all along regularly paid till lately, yet the proprietors could never be cured of a fufpicion they entertained, that the Eaf-India commerce has not been carried on to that advantage but in their' name, for the king's ; and this has contributed to keep their actions low, though they had fuch extraordinary intereft paid them, with fuch regularity. The grounds of this fufpicion lying in the annuities paid by the crown to the company, which are fufficient for fecuring fuch a dividend, without the leaft affiftance from the profits of their trade, made the thing not altogether incredible; efpecially when it was perceived, that, for 20 gears together, the dividends remained fixed and fettled, though the trade of the company hias, for that time, been apparently increafing.
But, to underftand this matter rightly, as well as the true ftate of the company's affairs in general, and how they came to have a fund capable of difcharging regularly fo high an intereft for fuch a number of years, as well as to clear up fome things that may feem obfcure in the eftablifiment of the company now fubfifting, it will be requifite to give as clear and concife a relation, as is polifie, of the rife and progrefs of the other companies that have been incorporate with this, wy the edict beforementioned, and of the Weft-India company in particular, in which abundance of curious and inftructive parriculars will occur.
The China Company in France was originally fet on foot in the year 1660 , but was very foon after abforbed by that of the Eaft-India company, which had the fanction of royal authority given it in 1664 ; but, when the company began firft to decline in it's affairs, thofe who had the management were content, in fome meafure, to revive this old company; by granting their licence, which was likewife confirmed, by the crown, to one Mr Jourdan, a very rich merchant, who fitted out a very large fhip for that voyage, which failed in March 1698, and returned fafely to France on the third of Auguft, 1700, very richly laden.
The fuccefs of this voyage encouraged this great merchant, and thofe who were interefted with him, to fit out the fame fhip again, which they accordingly did in the following feting, and the returned in the month of September, 1703 , with as great profit as from her former voyage. This fuccefs, one would have thought, might have eftablifhed this new company; but the general war in which France was then engaged againtt moft of the powers of Europe, rendered it impracticable: and thus the company lay dormant, though flill poffeffed of it's rights, which extended to the coafts of China, Tonquin, Cochin-China, and the ifles adjacent, till fuch time as, for reafons of fate which we have thewn, it was united to the Weftern company.
The company of Senegal, though under another name, was one of the earlieft in France, being carried on by a fociety of merchants at Dieppe, though without the fanction of any public authority. They fixed a little fettlement in an ifland at the mouth of the great river. Nigra, called alfo the river of Senegal in Africa, and carried on a confiderable trade thither. This commerce came afterwards into the bands of the merchants of Rouen, who, in the month of November 1664, yielded it up to the Weft-India company.

## FR

But, when that company was diffolved about ten years aftef wards, the old company of Senegal was revived, and three rich merchants undertook that commerce; which they carried on with great profit to themielves till the year 1681 when the minifter, M. Colbert, conceiving this traffic might be greatly enlarged, prevailed upon thefe merchants to accept of a valuable confideration for their privileges, and to admit of it's going into the hands of a larger number of perfons, with new privileges, which they enjoyed for many years. But, it being difcovered, that the exclufive rights they had, were by much too extenfive for thefr capital, it was thought, for the public benefft, to divide this company; and hence arofe the Guinea company of France, to whom the greateft part of their privileges were affigned and the reft remained to the old company of Senegal, which ftill continued in a profperous condition.
Yet, from variety of accidents, this company capne to be fo reduced, that they were obliged to give up their privileges to fome rieh merchants of Reven, who carried on this trade with tolerable fuccelg," when it was united, as we have feen, to the company of the Indies.
As to the company of Guinea, that alfo had feveral rifes and falls, till the acceffion of Philip V. to the crown of Spalh, who, in the year 1701, granted them the liberty of tranfporting negroes to the Spariih Weft-Indies; whence it took the eitle of the Affiento company [fee AssientoCompany] under which it continued to flourih; but it loft it's being at the treaty of Utrecht, whieh revived the other branches of the French trade, and conveyed this to the Englifh, which gave rife to the Englifh South Sea company; and, how large their gains have been upon this occafion, will appear under the article South'Sea Company.
At this conjuncture the Miffiffippi fcheme took plage in France, in confequence of the difcoveries formerly made in America, by Monf. de la Salle, a native of Rouen, See the articles British America, Canada, French AmeRICA. The regent was confidering, at this time, of the project offered him, by the famous Mr Law, a Sedtch gentloman, whofe name is well known to the prefent generation, whofe abilities were extraordinary, and might have been renderéd importantly ufeful to France, or any other kingdom, under proper controul. - The end, aimed at by his project, was to reduce all the public debts in France into fome form ; for which purpofe, 'twas neceffary to ereet, under plaufible appearances, a new company in like manner, that, by the advice of Sir John Blount, the lord treafurer Oxford had done in England, by eftablifhing the South Sea eimpany; rejecting only that part of the project, which was cheating credulous people of their money, by running the actions of the new company into an exceffive rate : but this part was accepted by the regent of France, anid made that part of the defign, which is filed the fyftem in Frances as before obferved; and which was at once the moft iniquitous contrivance that ever entered into the heart of man. See the articles Actions and Bubbles.
As it was neceffary, to carry this fcheme into expcution, that a new company hould be fet, up, with fuch privileget as might create probable hopes of extravagant gains to the proprietors, this new fettlement was thought of for that purpofe; whence the project is called the Miffiffipi fcheme, though that was not the title of the company.-But I Chall not here enter into the enormity of this infamous fcheme, we having done that elfewhere:-All atmed at, at prefent, is to delineate the feveral feps, whereby a very confiderable part of the foreign commerce of Franice was thrown inte the hands of this great French company of the Indies. To complece this grand French fyftem,
The royal bank of France was likewife united ta the company of the Indies.-This was the grand engine employed to bring about the great end of the fyftem; which being once effectuated, the regent and his minifters turned their thoughts on the means of recovering the company from that dreadful confufion into which it had been thrown, by undertaking the execution of a defign equally prejudicitit to the general commerce, and private property of the inhabitants of France; which had deftroyed the public credtt, and put it out of the-company's power to carry on their trade.
The welfare of the kingdom was fo clofely connefted with that of the company of the Indies, that it was not in the power of the government to neglect either, or to feparate their interefts, which had been minifterially conjoined, to anfwer more myfterious purpofes thari the world in general is acquainted with.
The company of the Indies, at this time of day, was confidered as the center of the French commerce, it monopolizing fo great a fhare of it ; or, in other words, the rife and fall of that company's ftocks might be then locked on as a political or commercial barometer, which pointed out the condition of the trade of France in general.
This company has for many years divided io.per cent. annually on their capital, which, till the late war, was regularly paid. -But this dividend never arofe from the profits made by the company in the way of trade, but was pait to the proprietors, as creditors of the public (as is done to the
proprietors of our South Sea company) on (ettled Funds affigned them for that purpofe: wherefore we can attribute the lownefs of the French focks, in times of peace, to nothing but the diffidence that the people had of their own government.
The regular dividends made by this company had a double effect ; they fuftained the public credit, and that of the company. - The former was neceflary to prevent thofe confufions, which happened on the ruin of the fyftem, which was near ruining the nation; the fame regular payment of dividends was of unfpeakable fervice to the company in their trading capacity, without which they could not have fubfifted; this policy keeping the proprietors from either enquiring, or receiving any general Accounts of their Dealings. This was one of the great fecrets of the French councils, and the defign of reftoring the affairs of the company; and is what, of all others, they have conducted with the greateft addrefs; for by this means they gained time for the-company, and, by affording them monies in feafon, they revived the Eaft-India trade, put all the company's debts into a train of payment, replaced all her factories; and if the laft war had not broke out, would have foon placed her, as a trading company, in as good condition in that capacity, as fhe was as a corporation of public creditors.-And fuch is the policy of France, that they have now conquered all things in regard to this company, and made it as fubflantial to their general commerce, as to their public credit.
The effectual eftablifhment of this great company may be juftly attributed to the wife and peaceable adminiftration of the late cardinal Fleury; but was no otherwife due to him, than as he continued the direction of thefe affairs in the hands of Monf. Orry, who, perhaps, has done more fervice to this nation, than all the ftatefmen and generals that have been employed in this reign : and although his management was fomewhat thwarted and thrown into diforder a few years fince, yet he has overcome the greateft difficulties in regard to this company, and put her concerns into fuch a channel, as will, in very few years, perhaps, render this trading company formidable in comparifon to any other in Europe.
The capital of the prefent company, as before obferved, was compored of the original capital of the weftern company, and of 25 millions added thereunto, upon the incorporation of the Eaft-India company therewith; but after the ruin of Law's fyltem, and all things were in confufion, it was found requifite, that the king fhould make a revifion of the actions poffefled by the proprietors, in order to diftinguith between fuch as had acquired their property fairly, and fuch as had thruft themfelves into the company's books, to ferve the purpofes of mere ftockjobbing. In confequence of this revifion, the king fixed the actions of this company to 56,000 , and which formed a capital of 112 millions; for their dividend upon which, they had a yearly revenue afigned them of eight millions four hundred thoufand livres.-By another arret in 1725,5000 of thefe actions were cancelled and burnt; fo that the capital of the company, by this means, was reduced to 51,000 Actions, and their Dividends fecured by the annual payment of eight millions from the farmers-general of the farm of tobacco; the exclufive, perpetual, and ifrevo cable privilege of vending which, was granted to the company in 1723 , and confirmed to them in $\cdot 1725$, together with the profits arifing from the furrs imported from Canada; fo that the fund for the payment of their annual dividends was as effectually fettled and fecured, as it was poffible a matter of that nature could be in France.-Yet the affairs of this company went on in a very precarious way for about fourteen years.-But in the year 1737 , Monf. Orry being at the head of the finances of France, which he managed with furprizing fuccefs, the company fell under his care.-He faw that great fupplies were neceffary to extricate them from the difficulties under which they laboured, and therefore, having made a ftrict fcrutiny into their affairs, he furnifhed them with fuch fums as were neceffary for augmenting their commerce; fo that in the fhort face of two years he doubled their returns, and, in three years more, brought them to thrice as much as they had formerly been.
By the management of this able miniter, the company's fales at Port de P'Orient became regular and confiderable, increafing in fuch a manner, that the public fale in the year I 742 produced about a million fterling; befides which, they referved in their magazines goods, to the value of four millions of livres more; and the fift fhips that arrived in 1743 , brought home fill a richer and more valuable cargo. - This fudden and extraordinary change in the company's affairs alarmed all Europe, but more efpecially the maritime powers, who faw, with unfpeakable concern, a company, that but a few years before was looked upon as annibilated as to it's commerce, now rifing into as high credit as any in Europe ; which animated the northern powers to profecute fchemes of falling into the Eafl-India trade likewife.
But what was ftill more extraordinary than all the reft, upon the firft breaking out of the laft war, the company did not feem to be affeeted fo much as might bave been expected, their dividends beng fill regularly pard; and which kept up their credis to fuch a degree, that at Chriftmas 1744, their
actions were at 2000 - But the war with Great-Britain in. creafing the expences of France on the one hand, and leffening her income on the other, the fecret at laft came out, that Monf. Orry was obliged to acquaint the directors of the company, that the king's affairs were fo circumftanced, as not to permit him longer to fupply the company in the manner be had hitherto done; fo that now they were to ftand upon their own bottom, and carry on the trade for the future as well as they could.-This unexpected ftroke reduced the actions to 800 - And, during the time of the late war, their affairs were in a lamentable condition; for that occafioned fo high a demand for money in France, that it brought on a fufpenfion of their dividends, and thereby gave a fevere ftroke to their credit; and the blow ftruck by commodore Barnet in the Indies, and the lofs of their hips we took at Cape Breton, went fo far towards the ruin of their commerce abroad, that another fuch Aroke, from Great-Britain, would probably have abfolutely annihilated the company as a trading corporation, for one 20 or 30 years at leaft.-But, fince the peace, the company has furprizingly recovered itfelf.
That fome tolerable judgment may be made of the progrefs of this company, the following account of the number of fhips returning annually from Pondicherry, and the value of their cargoes, may be ufeful.

Of the commerce of the French company of the Indies; thewing the number of ihips returning annually from Pondicherry, and the value of their cargoes *, from 5727 to 1742 inclufive.

Ships: Pagoda's.

* The reader is defired to obferve, that the fame number of fhips were fent annually from Bengal as from Pondicherry, and confequently the number of this lift are to be doubled. He is defired to take notice allo, that the fums fet down are the prime coft of the goods in India. - And laftly, that the value of a pagoda is about 9 Fr . nch livres, or 7 s .6 d . fterling ; by the help of which directions, this table will be found to comprehend a fhort hiftory of the progrefs of this company.

From what has been faid, 'tis apparent, that the French have fpared no expence, nor lefr-untried any point of policy, to uphold their company of the Indies; and, notwithftanding what it fuffered in the late war, of 1740 , we find they are ftill in a flourifhing condition. Not can it be otherwife; for this company is eftablifhed on fo broad a bottom, that if one branch of trade proves temporarily bad, their other branches generally make them fome compenfation : as the intereft of this corporation is fo intimately interwoven with that of the ftate, we find, upon all critical emergencies, it flands in need of no aids which the frate can afford it.

Remarks on the French East India Trade, fince the laft war, and the Definitive Treaty of 1763.
By the Definitive Treaty of 1763 , article the XI. it is faid, that, "In the Eaft-Indies, Great-Britain fhall reftore " to France, in the condition they are now in, the different " factories which that crown poffeffed, as well on the coalt " of Coromandel and Orixa, as on that of Malabar, is as alfo in Bengal, at the beginning of the year $1: 49$. "And his moft Cbriftian Majefty renounces all pretenions "s to the acquifitions which he had maie on the coalt of
"Coromandel and Orixa, fince the faid beginning of " the year 1749. His moft Chriftian Majefty Chall reftore, " on his fide, all that he may have conquered from Great"s Britain in the Eaft-Indies, during the prefent war; and " will exprefly caufe Nattal and Tapanouliy, in the " Island of Sumatra, to be reflored; he engages fur" ther, not to erect Fortifications, or to keep " troops in any part of the dominions of the Subaf of " Bengal. And in order to preferve future peace on the "coaft of Coromandel and Orixa, the Englim and "French Chall acknowlege Mahomet Ally Khan for the " lawful Nabob of the Carnatick, and Salabat Jing " for lawful Subah of the Decan; and both parties fhall " renounce all demands and pretenfions of fatisfaction, with " which they might charge each other, or their lindian " Allies, for the depredations, or pillage, committed, on " the one fide or on the other, during the war.'

Of the African Trade of France, as the same stood before the last War.

Ore of the greateft advantages that this company has been to France, feems to be the encouragement which has been given, by means thereof, to the French fugar-inlands and colonies in America; for the French Senegal company (which was the African company of that nation) being united to this India company ; and this company having granted them fuch bounties, exemptions, privileges, and encouragements, as amount to above $40,000 \mathrm{l}$. fterling per ann. [See the article French African Trade] in order to enable them to carry on their African commerce to the greater advantage of the company, as well as of their fugar-colonies ; 'tis not to be admired, that the French flould make fo rapid a progrefs in the trade of America, as we experienced they had done in the lare war.
But what gives the French ftill a greater weight of intereft in Africa than the benefit of thefe encouragements, is the company's fole privilege of this trade, exclufive of all the other fubjects of France. For, by virtue of thefe powers and immunities, the French have fupplied their colonies with 10,000 of the choiceft and moft robuft negroes from Anamaboe on the coaft of Africa, to 1000 that have been carried by all the Britih traders to our own plantations. They have alfo incroached on our trade at Wydah, from whence they have many years carried confiderable numbers of negroes no way inferior to thofe brought from Anamaboe ; nay, they have abfolutely excluded us from the whole trade of the Gum Coaft, which extends between 4 and 500 miles; from Cape Blanco to the north of the fiver Gambia.
Before the French got poffeffion of the forts in the river Senegal, and on the illands of Arguin and Goree on the north coaft, the Englifh traded freely and openly to all places on that coaft, without any moleftation whatever: fince the French have been in poffeffion of thefe forts, they have affumed the right and authority to exclude the Britifh nation from thefe ports, and bave actually taken and confifcated fuch Britifh fhips and veffels as ventured to go thither.Nay, by the authority of two forts, the one in the river Senegal, and the other in the ifland of Goree, they not only claim the exclulive right of trade, as before obferved, but carry on a confiderable commerce in the river Gambia, within fight of the Britifh fort there, and allo to Anamaboe, within fight of Cape Coalt Caftle, the principal Britifh fort on the Gold Coaft. How beneficial this uncontroulable right to the whole African trade, as it were, the French have many years ufurped, has really proved to the French fugarcolonies in America, will appear under the article French America, where we fhall defeend to particulars, more minutely than we can do under this head. And if they gain their point with regard to the iflands of St Lucia, Dominico , St Vincent, and Tobago, the fate of the Britilh fugarcolonies muft be depolorable.

Particular Remaris on the trade of France in general, as before given, and the manifeft tendency of the extent thereof, and their Schemes of Power to arrive at Universal Monarehy; as the fame was given before the laft war, and the Definitive Treaty of Peace of 1763 .

From the plain narrative which we have given of the trade of France (and which we have crowded into as few fheets as poffible) the following obfervations will naturally occur.
That for many years before, as well as fince the treaty of Utrecht, the fteady fyftem of the French court, under all adminittrations, has been the advancement of their commerce and navigation in general.-This is indubitably true, from the feries of facts we have laid before the reader, and more efpecially with regard to the great point of the WOolen Manufactories of this nation; which, as they have met with fuch unparalleled encouragement from the fate in their fuft eftabligment, fo their progrefs has been equally admi-

FRA
rable, and the great perfection to which they have dube in their fabrics, is no lefs extraordinary.
We have feen llkewife, that the kingdom of France in Ena rope is very happily fituated for commerce and navigation: and in order to leffen the price of carriage of all merchandizes throughout their dominions, they have fpared no expence to add artificial to their natural navigable rivers. In order alfo to keep down the Price of Labour amomg their Manufacturers, to the end that their Merchandize may be afforded cheaper to foreign Countries than those of other Nations, they buy up Plenty of Grain, when cheap, to sell to the Poor, when deak, at the ordina. ry Prices.
From variety of inftances throughout this work it further ap. pears, that they have grudged no expence, nor left unpractifed any meafures, to obtain the moft ingenious workmen and manufacturers from all countries, whence they could allure them, in order effectually to eftablifh the credit and reputation of their own manufactories.-They have, in particular, highly encouraged the imitation of the woollen fabrics of every kind in this nation, and have alfo invented no little variety of their own; which they have wifely adapted to the tafte and climate of other nations, to encourage their exporta. tion.-By the former, and the ufe of the counterfeit Arts of practising the Manner and Customs of the English Manufacturers, in every Circumstancerelating to their Mánufactures; by thefe and other artifices before intimated, they at fuift deluded foreign nations into the purchafe of their fabrics; and, by the quality and cheapnefs of them fince, have fupplanted this kingdom at foreign markets far more, I am afraid, than we are yet thoroughly fenfible of, though the decay and complaints of our manufacturers too evidently manifeft the truth thereof.
${ }^{\prime}$ Tis obfervable, throughout the regulations of the commerce of France, that the meaneft trade, as well as the highef, is under fome proper and rational rules for it's good government, and wife regulation, even from the Bird-Catcher to the greateft manufacturer and artift, and to the fupreme merchant: this is evident from manifold inftances throughout our undertaking : and thefe regulations are fo calculated, as to put thefe artifts and manufacturers under the neceffity of excelling in their refpective employments; the ftate woll knowing, that their ingenuity is the foul of all their commerce and navigation; for that ration, which can beat all others in the quality, as well as the price of their commodities, will carry away the trade from the reft.
That the meafures taken by France for the raifing of her commerce to the pitch it is now manifefly advanced, may appear ; we fhall cite fome parts of various of their royal edicts and ordinances, which have been, iffued by authority for thefe falutary purpofes, they being too little known in thefe kingdoms, even by our great ftatefmen themfelves. See French America, allo.

Of fome of the meafures taken in France for the promotion of Commerce, extracted from the introduction to the French Tariff of 1664.

- But finding that thefe abatements [of taxes] would only - leffen the prefent miferies, and give our people the oppor-- tunity to live with more eafe, but did not tend to bring in - wealth from abroad, and that trade alone is capable of ' bringing this to pafs: for this purpofe we have'therefore - from the beginning applied to the proper means to fupport, - encourage, and increafe the fame, and to give all poffible - eafe to our fubjects therein: and, in order thereunto, have - caufed a general inquifition to be made into all the tolls ' which are raifed upon all the rivers in our kingdom, which c any way hinder the commerce, or the tranfporting goods - and merchandizes from place to place; and having inquired - into all the pretences every-where made for the raifigg and - levying the faid tolls, we have fuppreffed fo many of them, 6 that the navigation of our rivers is thereby made extraor-- dinary eafy.
- At the fame time we have effablifhed commiflaries in all - our provinces, to examine the dues of all our communities c or corporations; upon which we have made fuch regula-- tions as would reduce the fame for the prefent, and after-- wards intirely difcharge them: and in the mean time, we - have given a general liberty of trade to all people, which - they have been deprived of by the violences aforefaid.-- After this, we have endeavoured to caufe all our bridges, - caufeways, moles, banks, piers, and other public buildings, - to be repaired ; the bad condition whereof have been a great - hindrance to trade, and to the carrying of merchandize from - place to place. Alfo we have powerfully eftablifhed the - fafety 'and liberty of the highways, appointing feveral pu-- nifhments to highwaymen, and obliging the provofts of - our coufins, the marmals of France, to a careful difcharge ' of their office.
- And, after having thus done every thing that was in our

## F R A

- power to reftore trade within the kingdom, we have ap-- plied the greateft of our care for the encouraging of navi-- gation and commercealfo without, as the only means to in - rich our fubjects. To this end, having found by experience - that foreigners had made themfelves mafters of all the trade - by fea, nay even of the coafting trade from port to port, of our kingdom; and yet the fmall number of hips which - remained in the poffeffion of our fubjects, were every day - taken juft at our own doors, as well in the Levant Seas as - in the Weffern Ocean; we have eftablifhed the impofition 6 of 50 fols per ton, on the freight of all foreign ihips, at the - fame time difeharging thofe of our fubjects; encouraging - them thereby to build and fit out fufficient numbers of hips for their coalting trade. At the fame time we have put to - fea fo confiderable a fleet both of fhips and gallies, as hould - oblige the coafters of Barbary to keep their ports and places 6 of retreat. And, the better to fupprefs all manner of piracy, we have refolved to attack them in their own country; to the end that, having fortified fome confiderable ports,
we might be able to keep the fame in poffeffion.
At the fame time, we have fecured the navigation of our
f fubjects againft all other pirates, byallowing them convoys - of our men of war. We have fortified and augmented the - French colonies fettled in Canada, and the iflands of America *, by having fent our hips thither, making them ac: ' knowlege our authority, by fettling our courts of juftice ' among them. Alfo we have laid the foundation for the s fettlement of our Eaft-India and Weft-India companies,
6 which are now fet up in our kingdom, to our entire fatif-
f faction.
This was the firft effecual eftablifhment of the French colonies in America.
- But, alchough thefe great things are very much to our fatisfaction, yet the faid love which we have for our people, ' and it is every day ftirring us up to forget what is paffed, and to look ferward to what may be further done, to the in' creafe of their happinefs, we have refolved to erect a Coun-
c cil of Trade *, to meet in our prefence, and to employ to that end one of the councils of the finances, which, for
that purpofe, we fhall diffolve: in which council of trade
Thall be confidered all the means poffible for the increafe
and encouragement of trade, both within and without our
- kingdom, and alfo of manufactures; which having been
- happily performed in the firft day of their meeting, we have
made known to all our companies, as well fovereign as in-
' ferior, to all governors of provinces, and their intendants,
how tender a regard we have to the profperity of the faid
- commerce, with orders to them to employall that authori-
' ty which we have committed to them, for the protection
- of the merchants, and to do juftice to them, even with
- preference to others, that they may not be injured or cheat-
ed, or any way difcouraged in their bufinels. And we have,
by circular letters, invited the merchants to addrefs them-
' felves directly to us, upon all occafions; and to depute
- fome of their body near our perfon, to prefent to us their 6 memorials and petitions; and in cafe of difficulty, we have appointed a perfon to receive all their petitions, and follicit
for them at our expence. And we haye ordained there
Ghall always be a houfe appointed for that purpofe. We
6 have alfo refolved to employ a million of lives yearly for
c the fettling of manufactures, and the increafe of naviga-- tion. But, as the molt effectual means for the reftoring
of trade is the leffening and regulating the duties upon
goods and merchandize coming in and going out of the
- kingdom we have appointed our trutty and well-beloved the
- Sieur Colbert $\ddagger$, counfellor in our royal council, and in-
' tendant in our finances,' \&c.
-This was another admirable eftablifhment, for the benefit of trade, and has been productive of unfpeakable advantages to France. This council conlifted of fome of the principal officers of flate (as the comptroller-general of the finances, fecretary of ftate, and other particular counfellors of fate) who comrunicate what paffes at this council to the royal council, as occafion may require. The council of commerce confifts of 12 of the principal merchants of the kingdom, or fuch who have been a long time in trade: of this number two are of the town of Paris, and each of the other io are of the towns of Rouen, Bourdeaux, Lyons, Marfeilles, Rochelle, Nantes, St Malo, Lifie, Bayonne and Dunkirk; and they are elected annually by the corporation and magiffrates of the town; and the trading merchants in each of the faid towns; and every one of thefe towns has a chamber of commerce within itfelf, which hear reprefentations concerning abufes and difficulties in trade, and allo complaints concerning impofitions in trade, by governors, and other public officers in the French plantations, which are reprefented by them to their refpective deputies, elected as aforefaid.
$\ddagger$ This great minifter of flate having been frequently mentioned throughout this work, it may be fatisfactory to our readers to give fome account of him.
John Baptift Colbert, born in 162 . He was the fon of a wine-merchant ac Rheims, in Champaigne, and rofe to be comptroller-general of the finances uader Lewis XIV, who

F R A
knew how to diftinguilh merit, and reward it. M. Colber was equally able and fortunate; he had a prodigious genius, and to vaft natural parts added indefatigable application. The difcharge of his duty, the good of France, the glory of his mafter, were all the objects of his attention and the toil he underwent, joined to his emulation of the famous marquis de Louvois, is faid, to have occafioned his death, on the 6th of September, 1683 , at the age of 58.

To encourage the woollen manufactures of Languedoc, and facilitate their vent in the eaft, his moft Chriftian majefty, by an arret of October 3, 1712, granted the manufacturers and merchants of that province an exemption from the dúty upon cocheneal imported, as far as 2TO quintals annually, under certain reftrictions.
Senfible of the bad quality of the filk brought to France from the Eaft-Indies and China, and that the commodities made of it were very defective, and brought under difreputation fuch as were made in the kingdom of good French, Spanifh, or Italian filk, the importation of filk from China or the Indies, as well as the filks from thofe parts, was prohibited by an arret of March 13, 1714.
His moft Chriftian majefty, defirous that the province of Languedoc be well fupplied with wool for their manufactories, by an arret of April 7,1714 , prohibited the buying up the wool in the faid province, to fend abroad, under pain of confifcation, and a fine of 250 l. fterling.
His majefty, in confideration there was great quantity of grain in Languedoc the laft harveft, and a favourable profpect of fine crops the next feafon, by an arret of Auguft 1703, permitted them to export grain to foreign countries free of all duty.
By an arret of September 9, 1713, his moft Chriftian majefty granted an exemption from the duties of imports, for 10 years, upon bacalao, and oils that fhould proceed from the fiifhery of his own fubjects, in L'Ille Royal, before called Cape Breton, in order to encourage the trade and fifhery, but under certain reftrictions.
And, by another arret of December 30, 1713 , his moft Chriftian Majefty permitted fuch of his own fubjects as were engaged in the filhery of bacalao, to export free of duty, the ftores, arms, ammunition, utenfils, wine and provifions, that fhould be fhipped on board the veffels employed in the faid fifhery, as alfo the falt neceflary to cure their filh.

Several other very effential provifions made by the moft Chriftian king Lewis XIV, both in favour of trade and navigation, and other points of civil government.

The reign of Lewis XIV. has left fo many illuftrious examples to future ages, to thew how to infure the fame fuccefs he himfelf obtained in the grand affair of commerce, and other policies of civil government, that I have thought proper to fubjoin a Chort account, fays the wife Spaniard Uztariz, which I gave myfelf of that great monarch, in my approbation of a book mentioned above, under the title of, The Commerce of Holland, and of the reafons for the tramlation of it at Madrid in the year 1757, and referred to me by the royal council of Caftile.
6 This monarch obferving that the indulgences allowed to the ' people on pretence of fairs, to facilitate buying and felling, c or the barter of the fruits and commodities of their own - country, were abufed and converted to the advantage of fo' reigners, and a great injury to the trade of his own fub-- jects, he reformed alfo this diforder, by feveral regulations - and wife provifions.

- In every province he appointed commiffioners, to examine c into the debts and charges upon every trading company; ' the condition, management, and difpofal of their tevenues, ' and what charges and expences might be remitted. Thus ' by a thorough acquaintance with the fituation, he formed 6 general and particular rules, to prevent diforders, eafe their - charge and expence, pay off their debts, and fettle regular ' payments for the future, appointing officers of zeal and ، abilities to do it annually; by which provifions and relief, ' the people found themfelves in a condition to improve their - commerce.
- He ordered the repair of bridges, caufeways, pavements, - and other public works, that were in fo wretched a con-- dition as to render travelling difficult, and the carriage of - merchandize expenfive.
- He ordered his ports to be repaired, enlarged, and pro6 tected in both feas, and new ones to be made, and executed ' his fchemes with all the fuccefs and perfection the event - manifefts.
- He inftituted feveral academies, under the direction of able - engineers, to inftruct youth in cofmography, the art of na' vigation, fortufication, and the other branches of mathe6 matics which have a reference to war, either by fea or land, - not omisting the architecture, or building of fhips.
- He cauled to be diawn up very precife and well-adjufted - ordinances, for the fervice, difcipline, polity, pay and fit-- ting out of his fleer, the building of his fhips, the govern-- ment and prefervation of the ports, and for the eltablifh - ment and direction of she arfenals, docks, and magazines.

## FR A

- He gave allo ftated rules for the navigation, freights, con-- tracts, polity, fitting out, and other concerns of merchants men, and the form of traffic in thent, and deciding all - their caufes and difputes in thefe and any other points, by - a hort procefs.
- He made fome rivers navigable, and opened feveral canals, - with the defign of conveying, at the leaft expence, both - outwards and inwards, the merchandize and fruits of his - feveral provinces, that they might mutually fupply each - other, without the heavy charge in tranfporting them from * place to place by horfes and carriages; and lattly, proved - the greatnefs of his foul, as well as power, in uniting the - two feas by means of long and expenfive canals.
- He invited and encouraged the nobles, either in fingle or in * partnerfhip, to embark in trade as merchants, by fea and - land, declaring that it thould never be any imputation uponir 6 their honour.
- He ordered thefe provifions and maxims, fuitable to his - royal pleafure, to be communicated to the tribunals, both ' in the capital and out of it, as alfo to the governors-general " of the provinces, to the intendants, and trading companies * of the principal cities and towns, thewing them the par-- ticular attention his majefty gave to this great affair, and
- Atrictly enjoining them to exert the authority he had invefted * in them, for the encouragement and protection of all traders - and merchants, by adminiftring juftice to them in a brief - manner in preference to all others, that they might not - be drawn away from their bulinefs by the chicanery and ctricks of the law.
- He banifhed idlenefs, by employing the poor and vagabonds - to advantage, and made feveral other ordinances and proc vifions, that rendered his reign happy and glorious ; but - thefe I have not thought proper to mention here, as I con-- fine myrelf to fuch as relate to the point in hand.
- But what gave life and fpirit to all thefe provifions, was 6 the reputation of the government, and the good faith he - eftablifhed and maintained by a certain and punctual execution of his propofals and refolutions, and a facred obfer-- vance of all contracts and agreements made with the trading - companies, men of bufinefs, and others. And it was alfo a great encouragement, that his Majelty's whole life was a - continued and vigilant protection of commerce and naviga-- tion, and imitated by the minifters he had chofen for this © important direction, and whom he alfo encouraged not only - with repeated favours, but alfo fupported againft the ffrug-- gles of envy and emulation; and without fuch a powerful - fupport, all his eftablifhments, though folid, prudent, and 6 interefting, as the happy effects manifetted, would have
- been defeated.'

The particular protection commerce has received from feveral great kings of France.

I think it alfo not unfeafonable to infert here the fubltance of what Lewis Morreri, in his Hiftorical Dictionary, of the impreffion 1718 , fays in regard to commerce, on which fubject he has among others the following reflections :

- Commerce is carried on within a kingdom, and in foreign - parts. This powerful means of enriching fates has en-- gaged and become the care of moft kings, fovereign princes, - and republics. Under the government of the firft line of c French kings, who reigned from the year 418 down to ${ }^{6} 751$, it is not known what flate of trade was, becaufe - thofe princes, regarding only conquefts, were more attentive s to the profefion of arms, than to enrich the kingdom by ${ }^{6}$ traffic and commerce with foreigners. Charles the Great, ' the fecond prince of the fecond line, defirous of having - commerce flourifh, created an office of king of the mer-- chants, with an infpection and fuperintendency over all per© fons of that denomination, whofe jurifdiction was exerci-- Fed by deputies in every province and city of note.
- The great chamberlain, an officer of the crowin, and who - had already the jurifdiction of arts and manufactories, was s appointed in lieu of king of the merchants by Francis I. in - 1544. The father of arts and letters was the firft of our - kings, that projected the introduction of trade into France c by diftant voyages into the remote parts of the world.
- By the orders he gave to admiral Chabot, Cape Breton was - difcovered, as far as Florida and Virginia, as alfo the Ma-- rannan, and Canada in America.
- He refolved to fit out hips for the Eaft-Indies, but his wars 6 with Charles V. prevented it.
- In 1545, the employment of grand chamberlain of France 6 was vacant by the death of Charles duke of Orleans, and - his father king Francis I. annihilated the office, and revived ' that of king of the merchants, which continued till Henry ; the Great put an end to it, in 1587, and took upon him-- Yelf the charge of commerce, and was very zealous in it, - fetting up a fabric of tapeftry in the Gobelines, in the fub-- urbs of St Marcel at Paris, and another of gilt leather${ }_{4}$ hangings in the fuburbs of St Honoré and Jacques; the - mills of Eftampe to fplit and cut iron; a manufacture of - gold and filver ftuffs in the royal palace; thofe of gawfe, - \&c. in Mante ; of glafs at Paris and at Nevers, in imita-
- tion of thofe at Venice, and feveral other ufeful manu-- factures.
- He formed alfo a council of commerce made up of mint
- fters out of feveral tribunals, in which was debated and di - cided every thing relating to trade.
- In 1607, he appointed a new officer of mafter viftor and - reformer-general, to infpes all the manufactories, which - made up the principal branches of commerce.
- Lewis XIV. has added, in his conquefts, plenty and riches 6 in the kingdom, making the commerce of the French flou-- rinh in all the four quarters of the world. The vigilance of - Monf. Colbert contributed very much to this grand point.' I Gall not dwell longer here upon reprefenting all the meafures that this kingdom has uniformly and uninterruptedly taken for above this century palt, in order to raife their trade and navigation to the height it is at prefent arrived to: this work will not admit of my faying all under one head; but the reader will pleafe to obferve, that under every capital branch of trade, we do not deal in generals, but fo far defcend, and in fuch a manner, to particulars, as is requifite to give a proper idea of the commercial policy of this nation, and that from facts that appear to be inconteftible. Hut it our authorities are not authentic, or if our intelligence is erroneous; or if we are miffaken in point of judgnent, in the deduction of confequences, we fhall moft thankfully be fet to rights, by thofe who are better informed and have fuperior difcernment ; for we have no motives to induce us to impofe vifionary things upon our readers, nor rancour to influence us to mifreprefent any thing to ferve temporary turns.
We have declared ourfelves not to have any glimmering of antipathy againft the French, confidered as a nation : on the contrary, we admire them as a wife, a judicious, an induftrious people: their ftatefmen, the world knows, do not want heads to contrive, or hearts and hands to execute, the greateft defigns. If they were in general as upright in their negociations with other nations, as they are fanguine in promoting the intereft and glory of their own, at the expence of, or on the ruin of others, their ftatefmen would not be lefs admired for their honour, than the nation in general is for it's wifdom and politenefs.-But long experience hath convinced the whole world, as well as England in particular, that this is not the cafe; for, inftead of aeting upon the fquare, they adt upon the round of chicanery, upon principles that no nation can long maintain friendfhip with them.-In a word, their politicians feem to be fueceffively trained up in the grand arts of -- - and to fo fuperiative a degree, that they fcarce ever fail to outwit or deceive thofe of all other nations, as might be fhewn in numberlefs inftances; but that is not my bufinefs. -All that I aim at, is no more than to excite my countrymen to be as vigilant and zealous in advancing their own commerce and navigation, as the French have been to deftroy them. If, indeed, they can fairly beat us out of the trade of the world by their fuperior induftry and ingenuity, not by fuperior craft and Machivilian policy, they would deferve to be our mafters, and we to become their vaffals. - But this is far from the cafe. Our artifts and manufacturers, properly encouraged, are a match for thofe of any nation whatfoever; nor do our merchants want kill and penetration to extend our commerce to the remoteft parts of the globe, nor our reprefentatives wifdom and fagacity to regulate and advance it to the utmoft, when the true ftate of any branch of trade is faithfully laid before them for their confideration.
But let the wifdom of the Britifh tegiflature be ever fo profound, and their zeal in the great caufe of commerce ever fo warm; let our ftatefmen and our ambafladors be ever fo fagacious, yet, while this nation fhall act towards France perfectly confiftent with the principles of reafon, conffifent with her treaties and the national faith: while this flall be the irreproachable conduct of Great-Britain towards France, and all otber nations, and a conduct the reverfe bereof is thewn towards this kingdom, are we not under thefe circumftances, whenever this fhall happen, obliged to be upon our guaid in negociating with fuch nations, that we may not be perfidioufly tricked out of our commerce and poffefions, which we have been fo many centuries in raifing?
That France, in particular, has not for many years acted by this nation as fhe ought to have done, is apparent enough from what the has done, and what fhe is fill attempting to do, in North America, to the great injury of the Britifh colonies there. For the truth of which, fee our articles BRItish America and Fiorida.- And, for the further injury fhe had endeavoured to do, and is ftill attempting to do to our fugar-colonies, fee what we bave under the former of thefe articles, with regard to St Lucia, St Vincent, Tobago, and Diminico,-For what incroachments alfo they have made upon our trade on the Gum Coaft of Atrica, and how they have ufurped the right of trade at the Britifh fettlement of Wydah, and in the river Gambia, and at Anamaboe; and how, in confequence thereof, they have aggrandized their own fugar-colonies at the expence of ours, by fupplanting us in this capital branch of trade at foreign mankets; fee the articles English African Company, French America and Guinea Trade. See alfo our maps of North America, of Africa, and out paricular map
of the forts and fettlements in Africa, belonging to the feveral European powers, as alfo that of the Gold Coast. If thefe things are candidly and impartially examined into, we conceive it will appear, that no nation has fuffered fo much in her commerce, by French policy, as Great-Britain: and as it will alfo appear prefently, that this reftefs kingdom is fill fteadily purfuing the fame fyftem, which they have many years been governed by; is it not requilite that we fhould be duly apprized and alarmed of the danger?
In order to cherifh and fupport the fipitit of trade in France, hear what one of their moft judicious writers ufges, and of which Britons ought to make a proper ufe: 'What would - become of the nobility and ecclefiaftical eftates, fays this - gentleman *, were they not fupported by labourers and traders? This is what we may learn from a noble lord, - one of the firft quality in France, a good patriot and great - minifter, I mean the duke of Sully ; who, in his Oecono-- mies Royalis \& Servitudes Loyales, exprefles himfelf to this - purpore. After having pleaded the caufe of the nobility, "he fays, It will, however, be found true, if all circum-- ftances are minutely and well examined, that this body, " with all it's pomp and fplendor, whatever they may proudly - boaft, would become not only ufelefs, but even dangerous - to the flate, were they once deftitute of the aid, fupport, - and affifance, which they derive from the merchants, ar-- tifts, fhepherds, and labourers. Thus that great man lays - out the advantages of the one and the other, and concludes, -That, as to the bleffings and conveniencies of human life, " a fovereign ftate could more eafily difpenfe with the church-- men, nobles, officers of juftice, and all thofe who are con-- cerned in the management of the revenue, than with mer-- chants, artifts, fhepherds, and labourers.
* Refections politiques fur les finances.
- Why not then give more honour, eftecm, and protection, * to a profeflion which is fo beneficial to us? Why not an-- nex to it degrees of diftinction and preferment, fuch as - would hinder thole whofe talents are moft proper and ufeful * for it, from leaving it, to buy titles and difinctions, which are not to be got in their body? This evil is not perceived - by us, nor do we give fufficient attention to it : it is, how-- ever, an obftacle to our trade, and confequently to the - power of the ftate. If from the faint parallel I have drawn - between the fervices of the nobility, and thofe of the trading - part of the nation, we will balance them with equity and - free from prejudice, both will be found ufeful and honourc able; we Mall fee that prudence and capacity are no lefs c neceflary to carry on a great trade and extenfive navigation 6 with advantage, than valour and prudence to conduct a - company or regiment. Nay, I know not whether the
- ftate ought to make fo great a diftinction between the action * of an officer, who defeats, either in perfon or by his orders, - fome troops of the enemy, and the action of a trader, who - in time of war builds and fits out one or more fhips at his - own expence, commands them himfelf, or appoints cap-- tains over them, to fall upon the enemies of the flate, pur-- fue them and conquer them, with the hazard of being van-- quifhed in a bloody and obftinate engagement ; if victori-- ous, he brings his prize into France, frequently very richly - loaden; from this the public reaps advantage as well as the - trader: to me it would feem there is no lefs valour on the - one fide than on the other; they both weaken the enemies - of the ftate : why then are the honours and rewards fo dif-- ferent?
- In fhort, maritime trade, and in wholefale, bas nothing in c itfelf but what is honourable. Antiquity furmihes us with
4 illuftrious teftimonies, in favour of thofe who practifed it.
- Solomon, king of Ifrael, according to fcripture hiftory, - carried on a great trade abroad. Solon, that great legifla*tor of Athens *, who was of one of the nobleft families in - that flouribing republic, being by the father's fide de-- fcended from Codrus, the laft king of Athens $t$, in order - to repair the decays of fortune, into which his family was - fallen by the excelfive liberality of his father, chofe rather ' to carry on trade, than to take money from rich perfons, - who offered him large fums, and promifed never to allow - him to be in want. Now, at that time, fays Plutarch, ac-- cording to Madam Dacier's tranflation, after Hefiod, no - handicraft was thameful, no att or trade made any dif-- tinction between men. Merchandice efpecially was ho-- nourable, becaufe it opens a communication with barba-- rous nations, affords the means of making friendfhip and - alliance with kings, and leads to the knowledge of an in-- finite deal of things which would be unknown without it. - There have been merchants founders of great cities, as - Protus, who founded Marfeilles, after having gained the - friendfhip and efteem of the Gauls, who live upon the - banks of the Rhone. We are told alfo, that the wife - Thales and Hippocrates, the mathematicians, applied - themfelves to commerce, and that Plato defrayed the - charges of his journey into Egypt, by felling oil in that - country.
* He lived 598 years before Chrift.
$\dagger$ Plutarch's Life of Solon.

Cato, the cenfor *, that Roman Demofthenes, a man of fuch rigid and delicate fentiments of virtue and honour, - thought it not below him to acquire an eftate by commerce? wholefale trade, he faid, depended chiefly upon the mind, whereas trade in retail gave only employment to the hands. - As all the acts of the mind are noble, the laws, which have ' neglected the diftinction and illuftration of trade in retail - for certain moral reafons, have honoured and diftinguihed - wholefale trade.

* Plutarch's Life of Cato. He lived 196 years before Chrift.
- According to Cicero $\dagger$, trade in retail is mean and fordid, - but wholefale trade is not: this brings from all places in the world commodities and plenty; it requires genius and prudence, and 'tis as ufeful to the public as medicine, ar-- chitecture, \&c. which Cicero reckons honourable.
$\dagger$ Offic. lib. I. towards the end : he lived 78 years before
- As a proof that commerce had nothing in it bafe and dero-- gatory among the Romans, the emperor Pertinax exercited - it the greateft part of his life, and even after he was em-- peror $⿻$.
$\ddagger$ Hiffory of the commerce and navigation of the Aptients, by M. Hugt, chap. 57.
- Caracalla, in the cruel maffacre he caufed to be made at - Alexandria, had great regard to the body of merchants, c who were very numerous in that city: in giving orders to - all foreigners to remove from it, he excepted the merchants, © and allowed them to fay there at liberty. Alexander Se-- verus, from a view to make trade flourifh at Rome, and to 6 bring in merchants thither, granted them large immunities.
6 Maximinus himfelf carried on trade with the Goths, \&c.
* We may find a great many other examples, bad we a mind
- to feek after them, which would fhew us, that great men
- have thought it no difparagement to them to acquire eftates
- by trading; fuch examples are common among the Greeks
- and Romans, and thefe people had as delicate notions of
- honour as we. The Englifb, the Dutch, \&c. have the fame
- fentiments in this refpect, as the old Greeks and Romans.
- Why we thould not imitate them, is what I cannot ac-
' count for. The Venetians, in order to train up the fons
- of their nobility in the knowledge of the navy, oblige the - merchant fhips that fail into foreign countries to take al-
' ways two of them, whom the captain is obliged to main-
- tain at his table, without being bound to any work, but
' only to take notice how the fhip is wrought, and what ob-- fervations are made by the pilots.
- In fine, maritime trade was fo honourable among the an-- tients, that the emperors granted it a particular protection. - They honoured the cities that fignalized themfelves in com' merce, or in building thips, or that were famous for fome - confiderable fea-port. Thefe cities caufed their medals to
- be ftamped either with a fhip, or with a prow, or fome-
- times with a Neptune and his trident, or with a dolphin.
- Such were the medals of Tyre \|f and Sidon, of Bizantium,
' of Leucate, Chelidonium, Syracufe, \&cc. Hiftory of the
- Commerce and Navigation of the Antients, chap. xlvi.
|| The fcripture, Ezek. xxvi. furnihes ns with a glorious tefimony of the riches and maritime forces of the city of Tyre, which the prophet extols as well as her failors, her fhipping, her great trade, \&cc. But this might be the old Tyre. The new city far furpaffed it, according to the late M. Huet, in his Hiftory of the Commerce and Navigarion of the Antients, chap. viii. According to Herodotus, the Tyrians came from the Lydians.
- France, as well as the Roman empire, has maritime and 6 trading towns that deferve medals, and are undoubtedly of - confequence to be honoured and protected; becaufe they 6 have fignalized themfelves in trade, and by building of ibips.
- Nay, fhe has fome that have done more, and, though they
- have neither lands nor manufacture, have found a way to
- carry on navigation. They are accuftomed to hazards;

6 their fhips have braved the dangers of the main; they have - grown formidable to their neighbours by harrafling them - continually, and by weakening them to fuch a degree, that - thofe enemies, in revenge of their lofies, fwore the de-- ftruction of one of thofe cities; and to that effect, inventc ed that formidable machine, fo celebrated, which was to - reduce it into athes. What wonders have been done by the ' courageous intabitants of that city, equally diftinguifhed - in it's warlike and trading capacity, in defiance to all the - efforts of the enemies to the crown? Bounded to fome - rocks, they had found a way to render it inacceffible on all

- fides, to build formeffes, which fecure their port ; in a word, - to make their rocks a prodigy of art, and an eternal monu-- ment of a genius for war, matched with a genius for trade. - How many excellent fea-captains have been produced in - that city, and fome others like it, which cultivated trade!
- How many fhips have they built and fitted out! what noble ' Gailors! what excellent artilts! how many young com-

## F R A

- batants have they trained up! and then, how much gold and filver bave they brought into the kingdom ! Their thips, happily arriving from the South Sea in 1709, brought chome gold and filver bullion to the amount of thirty mil
- lions, which were a fupply to the ftate of fo much the more - importance, as thofe cities lent the king fifteen millions in a very prefling exigence. This is what we are told by the - mafter of the finances himfelf, in the 13 th page of his Me moir. What fooils of the enemy have thofe trading towns
- brought home, ruining the commerce of our neighbours,
' and fecuring our own! Shall the nobility, then, moft of
' them, live idly in their caftles, be thought more ferviceable
' to the ftate, more brave, more warlike, than thofe heroic c citizens? How would the republics of Genoa and Rome
chave heaped honours and rewards upon citizens fo worthy
- of that name!
- The maritime forces of the Romans contributed not a little
' to their great power. Accordingly we fee in the digefts ' fome laws, which inform us how much they applied them-
- felves to fea affairs in certain conjunctures, even during
- the heat of their wars. The exemptions from all muni-
- cipal charges, which they granted to the citizens to invite
- them to build hips and cultivate trade, are invincible proofs - of their having been perfectly fenfible, that maritime force * and commerce were neceffary to the prefervation and ad-
" vancement of their power.
- Cardinal Richlieu, who had fo extenfive views for aggran-
- dizing the ftate, found no way more effectual to promote
- the power of the king and the riches of the nation, than
- to improve navigation and trade; and indeed there is no
* other that can bring us in gold and filver. That great
" flatefman hews us, very well, the neceffity and ufefulnefs
c of a power by fea*. According to him, trade has a ne-
- ceflary dependence upon that maritime power.

## *The Political Teftament, chap. g.

- After having thewn the advantages which the Englifh * would have over us [the French] if our weaknefs by fea - Mhould cut us off from all means of attempting any thing - to their prejudice, he cites, by way of example, the infult - offered by that proud nation to the duke of Sully, fent by
- Henry IV. into England, in quality of ambaflador extra' ordinary; and he counfels Lewis XIII. to put himfelf in
- fuch a pofture, that he may not fuffer the like again. He
- Thews all the advantages of a powerful navy; be proves
- the ufefulnefs of it and of trade, by the example of the
- Dutch, who owe their power only to their navy and their ${ }^{6}$ trade. It was in time of his miniftry, that Lewis XIII.
- made that glorious ftatute of February the ift, 1629 ;
* where, in order to induce the fubjects to carry on fea trade,
- he declared by the 452d article, That the gentlemen who
- Thould apply themfelves to commerce in their own per-
- Tons, or by fubltitution of others, fhould derogate nothing
- from their nobility, \&c.
- It was upon thefe fame principles that the great Colbert,
- that faithful minifter, protected arts and manufactures.
- There were at that time in France a great many factors - and commiffioners from foreign nations, and very few tra-
- ders. He looked upon focieties or companies, as the moft
' proper means at firft to engage the French to carry on trade
by themfelves: and as, among all the examples of com-
- merce that are extant in feveral parts of the world, there is
- none richer nor more confiderable than that of the Eaft-
"Indies, he difcovered thereby the importance of naviga-
- tion and of long voyages; he oblerved, that thofe voyages
* not only were indications of the power of a flate, but allo
an infallible means of introducing plenty into it. He was "'of opinion, therefore, that it fuited with the glory of the - king and the interelts of his people, to undertake that trade, which Henry IV. and Lewis XIII. could not carry to it's - perfcction. He determined the king to form the fame defign in 1664, and to fpare nothing for the accomplifhment
- of fo great a work, which might be ranked among the moft
- famous tranfactions of the reign of Lewis le Grand. He
- formed an Eaft-India company, he protected it with all his - power, affited it with his money, and took upon himfelf the heavielt charges of the execution, though he would have no fhare in the profits of the fuccefs. You will even find, ' in Father Charlevoix the jefuit's Hiftory of Japan, that, - knowing the Japanefe received into their ports only Dutch - flips, and would traffic neither with the Spaniards nor the - Portuguefe, upon account of their profeffing the Catholic - religion, whereby they became odious to them, this mini-- Iter propofed, that the emperor of Japan thould be told, - that the king of France had a great many fubjects who fol" lowed the religion of the Dutch, and that, if he thought - fit, the king would fend fhips to him manned by none but - thofe of that religion. This is called thinking like a mi-- nifter. The project, however, did not fucceed, by reafon - of the prejudice of the Japanefe government, which is ter-- ribly apprehenfive of foreigners, having got intelligence of ' what paffed in the Eaft and Weft-Indies.
- In this manner did that great minifter encourage traders to

## F R A

apply themfeives to maritime commerce, and to build thip - proper for long voyages. That company was not the only c one he formed ; he eftablihed one for the Weft-Indies, for - the trade in the Levant, and for that in the North Seas,

- He laid out himfelf for the improvement of our old manu
' factures, he eftablifhed new ones; in fine, he gave power-
- ful protection to trade, arts, and manufactures, which he
- juftly confidered as the moft effectual means to encreafe the - power of the king, and the riches of the kingdom. And, - indeed, to fay it over again, there is no other way that can
- bring us in gold and filver.
- Monf. Colbert had the fatisfaction to fee that his endeavours
- were not ufelefs; he left trade in a flourifhing ftate : and
- though, as we have feen, the Eaft-India company, after
- his time, laboured under great difficulties, yet thefe are,
- fince, furprizingly overcome.
- Navigation, fays the fame judicious French writer, which 6 is the foul of commerce, procures always a vaft profit to - the ftate. The building of fhips, their victualling and fores, - confiderable articles of expence, which being laid out with-- in the ftate, furnifh feveral'ihhabitants with the means of - living and enriching themfelves. It emplogs all the inhabi-- tants of the fea-coafts, who can hardly be ufeful in any - other capacity, and, for want of this navigation, are in a - manner neceffitated to ferve in foreign countries*; this is
- what happened, whenever we gave over our fea-trade, By
- lofing them we fuftain a double lofs ; our coafts become be
- folate, our navigation languifhes, and that of our foreign - neighbours encreafes at our expence. Prohibitions againft - failora going out of the kingdom are ufelefs: they are bred
- only to failing, the fea is their element ; if we do not em-
' ploy them that way ourfelves, no prohibitions will prevent ' their going elfewhere to feek for employment.
* It is obfervable; that there are fewer of French failors in the fervice of other nations (though they are extremely numerous, as we fhall fhew under the article Sailors) than of any maritime country whatioever, they having foll em. ployment for them alwayp in their own kingdom.

Then this author continues to thew, with great judgment, the ftate of the French fleet in the year 1681, the moft flourifhing one that France ever had; but as entering into this matter would lead us too far at prefent, we fhall confider this point under the article of Naval Power.
That the grand fyftem of policy in France, is ftill to encreafe her commerce, and raife her maritime power, beyond thofe of England and Holland, appears from the concurring fentiments of all their ableft French writers themfelves, upon thefe to-pics.-Monfieur Deflander fays, in his addrefs to his late excellency the count de Maurepas, fecretary of itate, and of the marine in France, 'I cannot help telling you, fir, that ma-
' ritime power is the pillar, the fupport of the ftate; and * that when it fhall be numerous, and under a proper regu' Iation, it will be able to give law to all the maritime pow-- ers in Europe, the flate itfelf will be fecure, and have no' thing to fear.'-And in another place, he fays, 'All the 6 nations of antiquity, that were defirous of raifing an univer-- fal reputation, and to diftinguilh themfelves above others, - have cultivated a maritime force; and the more they have - cultivated it, the greater power and authority they ac-- quired. Amongft the Greeks, Themiftocles, and Pom' peyamongft the Romans, faid loudly, that whoever would ' command on the continent, muft begin by gaining the - command on the fea.' And again he obferves, in another place,

- That, from the beginning of this monarchy, we have al' ways underfood, in France, the utility of a maritime - power not only under the more politic reigns, but even in 6 the midft of thofe revolutions, with which it has been fome-- times thaken, that our greateft kings have fought to eftablifh - it, and that the moft judicious of our minifters have like-- wife bent all their ftudy, all their induftry that way; but ' divers obflacles have, from time to time, rifen and prevents ed their councils taking effect. The honour of eftablifhing - a maritime power feems to have been due to cardinal Rich-
- lieu, as the perfecting of it was to Lewis XIV. feconded - by the great Colbert, whom fciences, arts, genius, and ma' nufactures acknowledge for their creator.'
To keep up the finit of commerce and maritime power, this author further urges, 'That, of all the kingdoms of Europe, - France is that which has the greateft refources, and poffefles - more advantages than any other, for rendering a maritime - power flourifhing ; and that it is likewife that kingdom, - which, of all the reft, ftands moft in need of fuch a force, ' on account of the large extent of it's coafts, and it's many - ports and havens.' 'It is one of my old griefs, fays the great cardinal d'Offat, and one of the moft notorious and - harneful failings in the firit kingdom of Chriftendom, - flanked by two feas, and feated, by nature, in the faireft ' and moft advanrageous part of Europe, for executing, - affifing, or thwarting all great enterprizes, either by foa of - land: it is, I fay, one of my old griefs, to fee that this - kngiom is wanting to herfelf.'
- The laft of this gentleman's propofitions is, that maritime - power, fupported by the royal authority, hould ferve to - protect commerce, to extend it, to gain it, every day, frefh - acquifitions, and that commerce fhould ferve to introduce - abundance, and, by freading riches through the whole - kingdom, render it as powerful as it is pofible it thould be.
- Never, fays Maximilian de Bethune, duke of Sully, never
- Thall the kings of France, fupported by the brave and war-- like people whom God has fubjected to their authority, un-- lefs they place their principal delight in augmenting the - grandeur, trade, reputation, and indifputed pre-eminence - of the French monarchy, arrive, without difficulty, at be-- ing fole arbiters of Chriftendom, and giving abfolute law - to their neighbours, by their prudence, and by their al-- liances.'
- As to the advantages, fays this author elfewhere, which re-- gard the marine, and which France may find in her own - proper bofom, they may be reduced to four; of which, the - firf, without contradiction, is her fituation, the moft com-- modious, and the moft advantageous that can be in the - world, as well for attacking as defending, for difturbing the - commerce of others, as for cultivating her own, fending to - all places, and receiving trading veffels from all parts of the - earth. Hence it was faid to the late Czar, Peter I, whofe ' head was always full of valt projects, and to the king of ( Sweden, Charles XII, that, if any kingdom could afpire to - be the miltrefs of all her neighbours, it muft be France. - In effect, fhe is placed in the middle of Europe, nothing - can impede, nothing can prove an obftacle to her. She ' commands, on one fide, over the ocean, and it feems, by * the valt extent of her coafts, by their turnings and wind-- ings, that the feas of Spain, Germany, and Flanders, - Atruggle to pay her homage *; on the other, the is bounded - by the Mediterranean, looking full upon Barbary, having 6 on her right hand, Spain; at her left, Nice, Geooa. the - dominions of the grand duke, and all the reft of Italy. - What a fituation is this, if we knew how to make ufe of - it, and of opening our eyes to our intereft, we no longer ${ }^{6}$ languifh in foft effeminate idlenefs !

## * Hear, Britons, are not thefe alarming fentiments?

- The Englifh and the Dutch are forced to ftrike out far for - whatever is neceffary to them, and are conftrained to put - out to fea, in order to reconnoitre and attack their ene-- mies; whereas France is able to attack them, as it were, 4 hand in hand, to combat with advantage, and to retire * with eafe, which are advantages of no fmall confequence - at fea, where dangers are fo frequent and fo fudden. But - what is ftill more, foregn veffels, that return from long * voyages, worn and beaten by the winds, and by the tem' pefts, foul in themrelves, and weakly manned, pafs, as it - were, under our eyes, before, in the view, and at the mer-- cy of France, as cardinal d'Oflat obferves, and in fpite of - themfelves, muft approach our coafts. One may eafily - judge what a facility this gives, of carrying them off, or at - leaff difurbing their navigation, which muft turn, fays the - fame cardinal, to the profit and commodity, to the fafety, - grandeur, and reputation of the crown.
- A wife prince, continues he, and one who has regard to - his intereft, ought to watch attentively over every thing that - may contribute to the fervice, or prejudice of his crown.
- He ought, with the fame vigilance, to weigh daily the - prefent fituation of his own kingdom, and of the other - kingdoms that furround him. While the ballance conti-- nues even, an eafy and pleafant union will certainly reign ;
- but, as foon as this fails, quarrels, animofities, and diffen-
- tions will arife, and will encreafe. France is too clear-
- fighted ever to be ignorant of the extent of her power, and - nothing can enrage her more fenfibly, than to fufpect her - being ignorant of it.
- The fecond advantage in which we ought to think ourfelves
- happy, is the fecurity of our coafts, which, in a manner,
- defend themfelves, and which have hitherto defeated all
- the defcents that ever were attempted on them. Witnefs
- thofe that admiral Tromp would have made in 1674, not
- only at the mouths of the Loire, and of the Groyne, but - along the coafts of Bretagne, Poitou, Saintongue, and
- Guienne. He found that all was fo well guarded, and that
- every-where fo good orders were given, that he durft at-- tempt nothing confiderable. Witnefs again, the defcent " attempted by my lord Berkley, in 1694, at Camaret, in c which the Englifh loft upwards of 1200 men with general - Talmath, who commanded the troops that were debarked.
- The French, however, oppofed him with no more than - two independent companies of marines, and the militia - appointed for the defence of the coaft. Piqued at this un-- fortunate expedition, lord Berkley attempted feveral other - defcents on Normandy and Flanders, none of which, how' ever, were attended with any better fuccefs.'-So much for the felf-fecurity of the French. Thefe writers feem to think, that they have nougbt to do with the defenlive; their policy is only to act offenfively, and to bring other nations under their fubjection! Thefe are the fenciments of thofe able Vol. I I.
Vobjec

French writers, within thefe few years; the one even fince the late war, the other only a few years before it.
A man of genius, and one well acquainted with the intriguea of Lewis XIII, affures us, that the cardinal minifter received with the beft grace in the world, whatever propofitions were made him on the fubject of commerce; that be excited the principal merchants is the kingdom to travel into foreign countries, in order to examine there the moft curious manufactures, and to penetrate the fecrets of particular traders; that, befides this, he brought, at his own expence, feveral rich traders into France, fuch as Nicholas Witte, of Alcmaer in Holland ; Francis Billoty of Bruffels; John de Meurier, lord of St Remi de Redon, in Bretagne; with whom he was wont to retire, and to fpend feveral hours together in a free converfation. - There he weighed all the forces of the kingdom, entered into the moft perplexed calculations, and the moft laborious enquirics.; the principal defign of which was, to bring over foreigh manufactories, and naturalize them in France.-Thefe are the meafures, by which France has arofe arofe to that greatnefs of commerce and maritime power, we now fee, with aftonifhment, they poffers.
That Britons may have a true idea of the grand fyftem of France, with refpect to the increafe of their commerce and maritime power, from the time of Richlieu to the prefent day, under every adminiftration fince; we cannot give it in o narrow a compafs, as by quoting an excellerit Englifh author of authority, intitled, Britannia Languens, or a Difcourfe of Trade, publifhed in the year $1680^{\prime}$; who lets us into the great fecret of the cabinet councils of France; and their notorious conduct fince, will thew this to be the great key to all their myfteries of fate, let the pretence be ever fo much other wife.
This author mentions a treatife, written by a gentleman bred under Monf. Colbert, which he gave to the King in manufcript, and which coming afterwards to be printed, about the year 1664, the gentleman fell into difgrace, and was fent to the Baftile, and afterwards banifhed *; out of which he quotes feveral paffages, part whereof will be worth tranfcribing, to thew the projects entertained by the French, in order to eftablifh manufactories, and raife a naval'power, and plain the way to an univerfal monarchy ; fuch as: 'The - ftate is no further powerful, than in proportion to it's pub' lic treafure.-The foundation of the wealth of a ftate - confifts in the multitude of it's fubjects; for it is men that
' till' the ground ; that produce manufactures; that manage - trade; that go to war ; that people colonies; and, in a ' word, that bring in money. There cannot be too great a ' number of hufbandmen in France $\ddagger$, by reafon of the fer' tility of the country to produce corn, which may be tranf-- ported, and therefure we ought to make great flores cf it, - and have it, as much as may be, in readinefs.- Handicrafts6 men and artificers [See the article Artificers] are no ' lefs ufeful ; for' befides that manufactories do keep men at ' work, they are the caufe that the filk, wool, fkins, flax, ' timber, and other commodities that grow in France, are

- made ufe of; which being wrought up into wares, not
' made in foreign parts, the country people find a vent for ' them. And we may grow further into the making of - more valuable manufactures, as we now do of hats for - Spain, and fuffs for all Europe ; a matter of great confe-- quence: for this quickens trade, and makes money pafs to - and fro, which promotes the public, and therefore every - one's private advantage $\dagger$. There muft be merchants $\|$ al-- fo; for without their induftry, our commodities might be - locked up in warehoufes. Ail things confpire to give - France hopes of fuccefs; the work, however, is fuch as - muft be leifurely carried on, and perfected by little and - little, fo great a defign continually alarming Europe, Alia, - Africa, and America, friends and foes, the precipitation of ' it would be it's ruin: fix or ten years time ought to be al6 lowed for it.-The king may keep 100 gallies and 100 - Gips in the Mediterranean, and 200 fail upon the ocean: - the more veffels he thall have, the more able he muft be to - recover the expences made about them : the fea will yield ' maintenance for the fea, by commerce or war: there is ' timber in France; there is cordage; there are fails; there - is iron and brafs, \&c.
* This was for fuffering fo extraordinary an affair to become pablic.
$\ddagger$ The French have wonderfully encouraged agriculture fince Colbert's time.
$\dagger$ Have they not done this to admiration, as we have juft feen in our narrative of the trade of France? and is not this demonftrably confirmed, in numberlefs other parts of this work, from particular indubitable inflances?
$\|$ Have we not feen what mighty encouragement they have given to merchants, as well as manufacturers, within this period?
- When things have taken their courfe, feamen will be had - in time, and the profit that will increafe, will afford fore, - and bring them in from all the parts of the world [a]. - The fleets which the king needs keep upon the ocean, will

6 make him mafter of all the powers and trade of the north: - yea, though Holland and. England Arould unite againt - France, they could not avoid their ruin in the end; for, - how could the one or the other make good their commerce, ' (which is all they have to truft to) if they were forced to - keep great armada's to continue it? The point of Britain - is the gate to enter into, and go out of the channel ; fifty - Thips of war at Breft would keep thofe gates faft llut, and ' they would not open them but by the king's command.

- Thus there would need no war to be almoft for all thefe - things, nor his majefty's forces hazarded: it will be fuffi-- cient to give his orders to foreigners; nor will it be difficult
- to cut them out work in their own countries [b], and, by
- that means, ftay their arms at home, and make them fpend - their ftrength there. His majefty's power being thus ftrong-
- ly fettled in each fea, it will be eafy to fecure the commerce
- of France, and even draw merchants thither from all parts
- I fay fecure, for, 'till this be done, it will always be uncer-
- tain and dangerous. - It mult ftadioufly be prevented, that
- commerce introduce not, into the ftate, fuperfluity, excels,
c and luxury [c], which are often followed with ambition,
- avarice, and a dangerous corruption of manners.-It were
- to be wihhed the king did add to this kingdom all the
- Low Countries [d] to the Rhine, which would make him
- mafter of the north feas. It would be convenient that he
- had Strafburg [e]; to keep all Germany quiet. He had
- need to have Franche Comte [f], to lay a reftraint upon the
- Switzers. Milan [g] is neceffary, in refpect of Italy.
- Genoa [ h ] would make the king mafter of the Mediter-
- ranean fea Sicily [i] might eafily make an infurrection.
- Portugal $[\mathbf{k}]$ is a perpetual inftrument for weakening Spain.
- The Venetians [1] and people of Italy are wife; to reduce
- them to our intention, we mult work by downright force.
- The pope will ever refpect France, becaufe of the county
c of Avignon [m]. Holland will keep themelves to our al-
- liance, as much as poffibly they may: they are rich, it is - expedient the king did interpofe in their affairs, and that
- fome divifions [ n ] were fown among them. The Switzers
- are mercenary, who will always ferve the king for his mo-- ney [o]. The king of Denmark [ p ] is a prince whofe
- ftate is but fmall. The Swedes will never break of from
- the intereft of France [q]. We ought to confider all the - inftruments which, for our money [r], we may make ufe of
- to divert the forces of England and Holland, when his ma-
- jefty makes any enterprize which pleafes them not. The
- friendhip of Turkey [s] is very good for France. Laftly,
- he fpeaks of the Englifh as eafy to be conquered, having no
- friends, and is pofitive, that a war with France would ruin

6 them in three or four years, and, that no peace fhould be ' made with them, but upon conditions of the greateft ad' vantage to France [t], unlefs the king thinks fit to defer the 6 execution of his projects for another time. But that the - league with Holland fhould be renewed, and they put into - a belief [ $\mathbf{u}$ ], that France fhould give them all the trade ftill, - becaufe they have the knowledge of it, and are propor for ' it ; but that the French (as it is to be fuggefted) have no in' clination that way, and nature cannot be forced [w]: they 6 muft be told they are come to the happy time for advan-- cing their affairs, and ruining their competitors in the fo-- vereignty of the northern feas.'
[a] A few years after this grand fcheme of trade and maritime power had been hatched in France, they had a very flourifhing navy, accordingly--This navy was as fplendid and magnificent as it was powerful. It actually confifted of 115 fhips, of the firf, fecond, third, fourth, and fifth rates; of 24 fmall frigates, 8 fire-fhips, 10 barcalongas, and 22 pinks ; making, in all, 179 fhips, confifting of 7080 pieces of cannon, 1028 major-officers, $7955 \mathrm{ma-}$ rine-oficers, 20618, mariners, 10904 foldiers, the whole crew being 39477, (the 1028 major officers not included.)
[b] Are not the feeds of diffention fo effectually fowed by romebody in Holland, that this republic is fo finking, in it's commerce, as to implore the Almighty, in their daily public prayers, to profper the fame? And is not their marine in a languifhing condition ?' And have not rebellions alfo been cherifhed in Great Britain?
[c] France does not only, at prefent, fupply themfelves with all thofe woollen manufactures which they formerly took from England, and exclude the luxuries of other nations from their dominions, but they fupply them with their own fuperfluities; which are the greatelt luxuries to foreign countries.
[d] Have they not had this in their power, and how far are they off the fame at this junctare ?
[e] Strabburg was a city of Germany, before this fcheme was formed, in the circle of the Upper Rhine, capital of AIface, fituate near the welt bank of the river Rhine 55 miles weft of Stutgart, and 60 miles eatt of Nancy in 5 s. rain, a free imperial city and fovereign ftate, till it was treacheroully furprized by the French, anno 1682, in confequence of the grand project. It had then a great and flourifing trade, and the proteftant religion was eftablifhed there; but they have ever fince been obliged to fubmit to French tyranny and bigotry. Their new mafters have improved nothing but the fortifications, which are very formidable; and as long as the French are poffeffed of this capital (which, in a manner, commands Alface, and gives

## FRA

the French an eafy parfage into Swabia) the Germans with never be at teft long.
[f] Franche Comte, or the county of Burgundy, was part of the duchy of Burgundy, and fubject to the Spanilh branch of the houre of Auftria, before this icheme, but taken from them by Lewis XIV, and confirmed to France by the treaty of Nimeguen, anno 1678 . It is now a principality of France, is bounded by Lorrain on the north, by Alface and Switzerland on the eaft, by La Braffe and the Bugey on the fouth, and by the duchy of Burgundy, and part of Champaigne, on the weft.
[g] Milan, a duchy in Italy, bounded by Switzerland on the north, by the territory of Venice, and the duchies of Mantua and Parma, on the eaft, by the Appenine mountains, which feparate it from Genoa, on the fouth, and by Piedmont on the weft, being about 80 miles in length, and 60 in breadth, well watered with lakes and rivers, a temperave air, and the whole country one fruitful plain, almont abounding with corn, wine, and delicious fruits, intermixed with great numbers of fifte towns and villages, and fabject to the houfe of Auftria.-This part of the grand fyitem she French have not hitherto accomptilhed: yet they have fruggled hard for it, but Italy has hitherto proved the grave of the French
[h] Genoa, a republic in Italy, well enough known.-In order to perpetrate the grand French fcheme, Lewis XIV. ordered the city to be beat about their ears, but it has been fince rebuilt to great advantage, with refpedt both to beauty and ftrength.-When the spaniards poffefed Milan and Naples, this repablic was obliged to be governed by Spanifh councils, and, when the Auftrians poffefs thofe countries, they influence their affairs, which frequently draws on them the refentment of other powers, particularly the French, who have not only bombarded their towns, but obitructed their foreign trade; and their formidable fleets, which heretofore gained fo many vittories over the Greeks, the Venetians, Turks, Spaniards, \&c. and fetted fo many colonies in Afia, and the Euxine fea, are now dwindled and chiefly by the power and policy of France, to a few paultry gallies; and when they would have increafed them, it has been faid, that the French commanded them to for bear at their peril.- When the doge of this republic is elected, a crown of gold is fet on his head, and a fcepter in his right hand, as king of Corfica, which ifland is fubjett to this sepublic.-This ifland lies in the Mediteeranean between 8 and 10 degrees of eaft longitude, from London, and between 41 and 43 degrees of north latitude, abou 100 miles fouth of Genoa.-As the wars and machinations of France have reduced this republic already to a very low condition, and as the French have got footing in the illand of Corfica, we may reafonably enough believe, that as the grand fcheme fays, in order to become mafters of the Mediterranean fea, they would be glad themfelves to be mafters of all the Genoefe territories, let their pretenfions to the contrary be what they will.
[i] Sicily, the largef of the Italian inands, fituate between iz and 16 degrees of eaft longitude, from London, and be tween 37 and 39 degrees of north latitude; is lies in a warm, but pleafant, healthful climate, being conftantly re frefhed by cool breezes from the fea, or the mountains. It is exceeding fruitful, which has occalioned it's being called the grainery of Rome.-It's produce is corn, wine, oil, filk and excellent fruits, of which they export grear quantities. -It lies very convenient for the Turky trade, and the prefent king has opened a trade thither, which they never had before to fignify.-This illand, doubtlefs, would be mighty convenient for the French, but it may occafionally aniwe their purpofe, to make infurrections only, as the fcheme fays, to weaken Italy, when it faits their purpofe. Portugal $[\mathrm{k}]$ is to be played againft that crown, and the Venetians [1], it feems, they think to be too wife to bend, but by dint of force.
[m] Avignon, a large city of Provence in France, and the capital of the territory of Venaiffine, fubject to the pope.Here is an univerfity, and an inquifition, we may fuppoif, to pleafute the pope, there being none in any ocher part of France.
[ n ] Whether divifions have been fowed by France in Holland, to difract their councils and fink the flate, or no, we leave others todetermine, who are acquainted with the mylteries of flate, and juages of the present condition of that republic. [See the articles Flanders and Holland.]
[ 0 ] The French are feldom without many thoufands of thefe hired troops in their pay: and, to induce them to enter into the fervice, they have, in France, extraordinary privileges and immunities.
[p] Though thefe great politicians feem to quite overlook the kingdom of Denmark, as an infignificant fate; yet, the face of that kingdom is changed, fince the firt broaching of this fcheme; and, being bleffed with a wife prince on the throne, who is daily advancing the trading intereft and power of his people, aud has above 50,000 good troops at his command, Denmark may be made imfrumental, in fome fhape, to thyart thofe parts of this great defign, which remain unexecuted.
[ q ] The French, perhaps, are too fanguine, to imagine that they fhall always be able to purchafe the friendhip of Sweden. The prefent prince is wife and good, and knows the true intereft of his kingdom, as well as numbers of wife, brave, and incotrupe Swedes; who, however they may temporize occafionally, will hardly defert the proteftant intereft, when they find it in imminent danger.
r] Engaging fubfidies, and money otherwife properly applied, may, and certainly will, do mighty things towards

## FR A

the completion of this great defign; and, very probably, the fegacious application of Louifdors has proved a bewitching charm to many mean and beggarly princes, to become the dupes of this enterprizing court. It is pity, however, but fuch fhould become eternal and ignominious faves themfelves, who will fall in with fchemes to enflave all Chriftendom.-But if the wife ftates of Holland will act heartily and zealounly, in concert with the meafures of Great Britain, to fupport their common trade and liberties, [See the article FisaErizi] the proteltant-trading intereft may fill be more than a match for that of the popifh trading-intereft, which is furprizingly gaining ground every day. See the articles Biscay, Castile, Catalonia, and Spain, Italy, Portugal, and all the chief trading nations in Europe.
[s] The friendfhip of Turky is good for France, it feems, becaufe fhe can play the Turks againgt the houfe of Aufria, and the Mufcovites, when it fuits her fyitem. Certain it is, that fuch is the policy of this nation, that they have the art of infinuating themfelves, fome how, into the good liking of the great men of moft courts, that they rarely mifcarry in their fate intrigues : whether it be owing to their fuperior addrefs and urbanity of their public minitters, or being better ikilled, in general, in the pleafing arts of $b-y$ and in--gue, or more profufe in their prefents, or living with more pomp and magnificence, than the appointments of the minifters of other nations will admit them to do in foreign courts, which gives a more ex. alted idea of their monarch we know not: true, however, it is, 'that they are, in the general, more fuccersful in cheir negociations, and commonly jockey their brethren of other countries; who are obliged, at length, to obtain that by mere dint of fighting, which the other can accomplifh by intrigue.
If this may be attributed to the extraordinary advantages of a French education, as a late French writer, with great vanity, would infinuate (L'Efprit des Nations), it is the beft apology that can be made, perhaps, for the travel, at leaft, of our nobility and gentry into that inchanting kingdom. But we rather alcribe this to the great power of $\mathrm{F}-\mathrm{h}$ G-d, than to judgment and addrefs fo infinitely fuperior to thofe, which other publie minifters may be endowed with.
[t] However omnipotent we Britons may prefume to think ourfelves, it is certain that France thinks quite otherwife, and their conduat has often thewn it within thefe few years. But, before ever the grand frioke of reducing this kingdom to a flate of vaffalage to France is to be fruck, it is no bad policy to try our frength. and effectualry to feel the pulfe of thofe who pretend inviolable attachment to the French intereff.-And, we may reafonably enough fuppofe, the rebellions that have been excited, fince the prefent eftablifhment took place, have been faint effays only, tending to try the experiment, at length, effectually: and, if fome people, who are reckoned no fmall fools, are not quite out in their politics, there is no istention, any more than oc cafion, to make any frefh faint effays, but to ftrike the grand ftroke at laft; for it is faid, it feems, by the Don Quixots of a neighbouring nation, Aut nunc, aut nunquam. -Is this the reaton, why a certain perfon, that has made fome noife in the world, plays at bo-peep with us $\{$ Is this the reafon too, that duft is to be thrown in our eyes, by pretended divifions at home while they are really dividing other nations abroad, in order the more fuccefffully to execute the grand fyftem ?
[u] To this end, has Holland been fome years made to believe only, that France would enter into alliance with them to give them the trade fill. by flattering them that they only have the knowledge of it, and are proper for it, and that the French (and as it is to be fuggefted, fuggefted only, indeed ! ) have no inclination to trade, and nature cannot be forced.
[w] Exquifite policy truly ! And, has not Holland been fome years thus amufed and cajoled, that they are come to the happy time for advancing their affairs, and ruining their competitors [meaning Great Britain] in the fovereignty of the northern feas ?
Let the eyes of Holland as well as Great Britain be at length opened! For they may both fee clearly enough, if they will not obfinately thut their eyes, the myferious fcheme revealed, that has been long contrived for the ruin of the trade and liberties of both nations! And, can any thing more effectually accomplifh this glorious plan, than diftracting them in their domeftic concerns, as well as dividing them both in friendfhip and alliance as nations ? As thefe are fome of the chief arts of conqueft, ought not both nations moft heartily to contemn them? The world will afford trade enough both for Holland and Britain ; and, it they freartily and fincerely unite againft the common ene$m y$ to both, there is no great difficulty fo to diftrefs their trade, as to put all fchemes for univerfal empire for ever out of their power: and nothing but this, we have reafon to believe, will put them out of their intention.
Before we conclude thefe remarks upon this French fyftem, it may not be amifs to put the reader in mind in'few words, that, fince it firt took place, the new conquefts and acquifitions that France has made to her dominions, are thofe of Alface and Lorrain on the fide of Gernany; thofe of Artois, the Cambrefis, part of Flanders, Hainault, and Luxemburg, on the fide of the Netberlands; and Roufilion, formerly a part of Catalonia, on the fide of Spain.-Belides the mighty things they have done, and are ftill attempting to do, in America. For confirmation of which, fee the ar

## FRA

ficles British America, French Amerien: te all which may be added, to take in the whole at one view, the mighty trade they have fetled in all parts of the world as we have feen at large, and fhali make appear more minutely in the fequel of this work.

## Further Remarks on France.

We judging this article of the laft importance to the come mercial interefts of Great Britain in particular, as well as Europe in general, is the reafon we bave dwelt fo long thereupon; and, with refpect to what may concern the practical merchant, with relation to the commerce of France, we fhall give under the articles of thofe provinces of Fiance, wherein the chief trading cities of France are; as that of Lyons, under the article Lyonnois; Rouen, under the article Normandy; Marseilles, under the article Provence; Paris, under the árticle Isle of France, \&c.
But, in order to judge fill more minutely of the trade and navigation of France, and of the extent of their territories; See, in particular, the articles British America, Ca nada, French America, and other heads, from thefe, to which we refer

Remarks on our article France, fince the laft wat, and the Definitive Treatyof Peace, made in the year 1763.

We have here, with all brevity, traced the capital out-lines only of the conduct of France, both before and fince the treaty of Utrecht, in relation to the incredible progrefs which that nation had fuccesfully made in their commerce and navigation before the laft war, as well as their advances towards that Universal Empire, over Europe, with which they have been many years charged with attempting. Whether this imputation has been wrongfully laid, let the preceding fhort thate of their affairs, as given before the laft war, determine,-together with no little variety of other matter no lefs alarming, which has been interfperfed throughout the courfe of this work. See French America, British America, Frengh African Company, and fuch other heads as we refer to from them.

Hence may be judged, whether it was become neceflary to reftrain the power and dominion of France within narrower bounds, as well for the greater fecurity of Europe in general, as this kingdom in particular? And whether the Definitive Treaty of 2763 , tas effectually done that, time will hew.
Moft certain it is, that this nation has incurred an immenfe public debt by the laft war ; a debt near treble what the nation laboured under at the demife of queen Anne; and which has been thought infupportable by fome of our greater ftatefmen.
Had the treaty of Aix-la-Chapelle contributed to have lowered the creft of our reftefs enemy, and reduced their power, as ought to have been done, in that war, France would not have dared inftantly to prepare for a frefh'rupture with this nation. Experiencing that they had fuftained little injury by fuch a peace, and knowing that war had burthened us with a debt of Thirty Mileions, and that from the weight of our additional taxes thereby occafioned, our whole commerce was become burthened with proportionate additional incumbrances, they hoped afterwards to obfain that by dint of Commerce, which they, in that war, had not done by the Sword.
The plan of commercial empire which they had laid for that purpofe, appears throughout this work. They too fuddenly attempted its execution; but judged, if they failed, by another rupture with Great Britain, that they fhould fill more and more oblige her to augment their Public Debts, and thereby more and more compel her to load and incumber her commerce with a multiplicity of oppreffive taxes; and in conlequence thereof, that they could not fail to gain in point of trade, what they fhould lofe by war.-This feems to be the key that unlocks the political cabinet of Fiance.-Nor can it be yet faid, that they are miftaken in their fyftem.For our military conquefts feems to have afreh animated them to exert and extend their commercial. - We have extended our territories, and contracted thofe of France; we have near trebled our tax-incumbrances, and oppreffed our trade in general. -Of this we muft and will take advantage, fay our politic rivals ; on this we chiefly depend ftill to beat the haughty iffanders.
Let us not deceive ourfelves; let us not flatter ourfelves with fecurity, when danger feems at hand. Are they the beft friends to this kingoiom, who point out the danger, or they who footh us with lethargic fafety? To alarm the nation with falfe and vifionary fears, is what every well-intentioned man will deteft. True it is, that for many years paft, I have endeavoured to put my country upon it's guard.-Have not moft of the effential points hitherto come to pafs, that have been prejudged by the writer hereof? and had many meafures fuggefted by him, been duly adopted, they might have been infrumentu: to have prevented millions upon millions of

## FRA

the public debts we have contracted; and yet have been never the lefs victorious than we have been, nor lefs fecure by conqueft. - And would not our Commercial Interests have been more fecure, with many millions of lefs public debts and taxes that we at prefent labour under ?
The danger we are at prefent in, lies in the weight, the great and oppreffive weight of taxes, with which our whole trade and navigation are loaded. Does not this render the whole produce and manufactures of England fo exceffively dear to foreign nations, that they are not able ; they cannot afford to purchafe them; however they may be inclined to it?. Is not this the great objection againft our manufactures in general, in every foreign nation, with which we have dealings? Will not this give every commercial competing nation, whofe commodities are cheaper, an advantage over England? Can we flatter ourfelves with the continuance of our antient cuftomers, when they can buy the like commodities from 20 to 50 per cent. cheaper? Will the fuppofed fuperior quality of an Englifh commodity obtain the preference, though fo great a difference in the price? Is there any thing magically captivating in the term Englifh? Let us not be vain enough to flatter ourcelves, that old cuftoms and ulages may not be fo eafily laid afide in foreign countries; have we not feen how France has made their advantage hereof? Have they not politically imitated every capital Englifh manufacture, and that not only in length, and breadth, \&cc. but in the very manner of package, \&c. and have they not, and do they not daily continue to impofe them more or lefs in foreign nations for Englifh commodities? And while Englifh factors or merchants in foreign countries can difpofe of French commodities, by reafon of their price, preferably to Englifh, under the counterfeit difguife of being fuch, will they not combine with the French to carry on the deception? We know they will not fcruple any thing of this kind, the readier to fell their wares. And provided the difference in Price is greatly in favour of the fale of the French commodities, though their Qualities fhall be fomething inferior to the Englifh, which may not be the cafe in the general; yet their greater cheapnefs will induce foreign nations to give them the preference to real Englifh commodi-ties.-And by what means can practices of this nature be prevented effectually? Certainly by none fo effectual, as by thofe of being able to fell as good, or even better, a commodity for as little money as any foreign nation whatever fhall be able to do.-This will not only preferve our old foreign cuftomers, but attract new; and without it, we fhall lofe our old, and obtain no new to fupply their place.-I could wifh that our rulers would moft ferioufly think of a matter, wherein the greatest Interests of England is concerned; think of it fo as to devife all poffible meafures to prevent an evil fo abfolutely ruinous and deftructive of our whole commercial profperity.
${ }^{\prime}$ Tis true, we have beat both France and Spain in the field, and we have annexed very great and extenfive new territories to the Britif crown; but I defire to be informed, whether France, in particulár, is not likely to beat us in their turn in point of trade, by being able to fell their commodities confiderably cheaper than the Englifh will ever be able to do, while their trade is oppreffed with fuch a multitude of Tax-Incumbrances as the laft and our former wars have occalioned? France mult and will moft certainiy gain the commercial conqueft, though we have the military, unlefs our ftatefmen take and execute vigoroully the proper meafures to prevent it : and this without delay. For, when France bave eftablifhed a univerfal commerce over the world, by dint of the cheaper, and fafcinating modes of many of their commodities for which they are famed, will England be able foon or ever to fupplant them? Should that be ever accomplifhed, muft it not be by lowering the prices of our Englifh wates in general, and yet not by depreciating their quality? Becaufe, if we degenerate in quality, in order to leffen the price, that will totally ruin, inftead of promote, the reputation of the Englifh; and then it would be to the difadvantage of a rival nation to counterfeit the Façon d'Angleterre. They would raife their own credit upon the ruin of ours.
Provided then the exceffive dearnefs of our commodities, compared with thofe in general of our foreign competitors, is likely to prove deffructive of the Englifh trade; and that this is occafioned by the prodigious heighth and multiplicity of our Tax- Incumbrances, is it not the natural way to remove the caufe, that the effect may ceafe ? It requires no depth of underftanding to ftart this policy.
If then we fhall not be able to fell our Englifh commodities to foreigners, how long thall we be in a capacity to buy of other nations? Not long certainly. When this comes to be curcafe, how will the Revenue of Customs be affectep? If our Imports dwindee as our Exports qhale; will not this great Branch of the Pubiac Rrvenue deceinein Proportion?
Should our cuftoms diminifh in yearly produce, from one to twomillions, how will the legiflature be able to fupply fuch deficiency? And are not our cuftom-houfe funds mortgaged forthepa yment of interef to our public creditors, for as manf ailtions of principal money, as the diminution of the re-

## F R A

venue fhall amount to?' Nay, are they not mortgaged for the payment of the principal, as well as intereft of our public creditors? - But if once their intereft funds fail, by their annihilation, will not public credit inevitably fink, and the alarm of a general bankruptcy ensue? For we know not when it may ftop, when fuch a dread thould take place. When the cuftom funds fo diminifh, in what plight can we expect to experience our excife ones? If our imports decline fo fenfibly, will not that be a fure criterion that our exports do? And, if that be the cafe, how will the people be able to confume excifed commodities? Can we reftrain our artifts and manufacturers from ftealing out of the nation? What will it avail us to detain them to flarve?
In what condition this nation is to get rid of a competent proportion of it's Tax-Incumbrances, in order to per vent fo melancholy a cataftrophe, is confidered under Funds. See Labour, Duties.
FRANCHE COMTE, or county of BURGUNDY in France. This province is bounded on the north by Lorrain, on the eaft by mount Jura, on the fouth it borders on the countries of Breffe and Burgey, and has the county of AurCome on the weff.
There are in this country mines of copper, lead, iron, and filver: alfo mineral waters, and quarries of all forts; in fome of which, are very clear and white alabafter, black marble, and jafper of feveral colours; fome blocks of which, about Salini, are large enough for columns 12 or 15 feet high.
The furface of the earth produces abundance of wheat, wine, hay, flax, walnut-trees, 8 ac. and the hills feed great quantities of cattle.
Along the rivers Soan, Doux, and Lognon, are about thity forges, where they make a valt quantity of excellent ironworks, as alfo bombs and bullets. And at Befancon and Pontarlier are a great many armourers, who work extremely well. In the hilly parts they breed a great number of horfes, which is the moft profitable trade of this province. They make alfo here about twelve hundred thoufand pounds weight of faltpetre yearly, and could even make more, if required.
Gray, on the river Soan, drives a greater trade than any other city in the province, for here they load the veffels which carry wheat and iron to Lyons.
Salins, is a populous city, and famous for it's fprings of falt water, which are the moft profitable produce of this province. FRANCONIA in Germany. This duchy, which is one of the chief circles of the empire, is bounded on the north by Thuringia, Saxony, and Heffia, on the fouth by Swabia, on the eaft by the palatinate of Bavaria and part of Bohemia, and on the weft by that of the Rhine, part of Heffia and Watteravia.
The foil is in fome parts mountainous and barren, but in others very fruitful, producing corn, wine, liquorice, faffron, and fruits.
ERLANGEN, is a well built town, though fifty years ago it was only a little village in a foreft of fir-trees, but owes it's flourifhing flate to a colony of French people flying hither from perfecution. They have fet up all forts of manufactures here and have made it one of the prettieft towns in Germany.
Ansfach, is a fmall but pretty town, and has alfo good manufactures erected by the French refugees.
Wertheim, trades chiefly in making of wine, with which it drives a confiderable trade on the Mayne.
Nuremberg, is reckoned one of the largeft, fineft, and richeft cities in the empire, and the glory of Germany; and, confidering it's great diffance from the fea, is the wonder of Europe for trade and number of people.
No city in the world has a greater number of curious workmen, in metal of all forts, ivory, wood, \&c. nor affords artificial commodities fo cheap. The Nuremberg brafs is faid to be the moft ductile, the brighteft, and leaff fubject to flaws of any in Europe; and is made, chiefly, out of the Tyrol copper. They are particularly famous for clock-work. The citizens began to trade to foreign parts about the year 1300 , and their merchandize was not only carried throughout Furope, but to the Eaft-Indies and America; and they have a bank on the fame regulation almoft, as that of Venice. Here are two annual trading fairs, [fee the article Fairs; ] and 'iwas from this part of Germany, that thofe we called Dutch toys, ufed to be imported hither.
The Dutch, particularly the merchants of Amfterdam, carry on a great trade to Nuremberg; 'zis from thence they have fueh incredible quantities of mercery wares and toys, which are afterwards fent all over the world, and at fo low a price, that 'tis not eafy to conceive, how they can make and expors them. The Dutch, in return, fend pepper, all forts of ipicery, ginger, indigo, logwood, fugar in powder, and refined, ivory, Ruffia leather, thin woollen ftuff and camblets, cloths, ferges, flannels, India goods, munlins, \&c. The duties of exports from Nuremberg are very moderate; their fairs every year hold three weeks, during which time, all goods, of whatever value or quality, are exempt from duties; fo which reafon, all merchants, at this time, take what foreign goods they may have oecafion for: this exemption begins on Eafter day.

The bank in this city takes in only valuable coins ; all bills of exchange ought to be paid into this bank, where exchange, or returns of cafh, is as low as at Amfterdam; all bills of exchange have fix days grace, exclufive of Sundays and holidays. The fixth day it fhould be protefted, left the bill be seturned while the bank is fhut up, for thofe fix days are not reckoned, but as days of favour or grace; and though there intervenes a holiday during the fix days of grace, it is payable at the expiration of them, if the bank is open. There is no conftant open exchange between Amfterdam and Nuremberg; that is, Amfterdam rarely draws upon Nuremberg, but Nuremberg often does upon Amtterdam, upon paying in at Nuremberg from 130 to 140 rixdollars, to receive at Amfterdam 100 rixdollars bank money: Nuremberg bills are commonly drawn 44 days after fight. The pound of Amfterdam is two in the hundred lighter than Nuremberg; fo that a hundred pound of Amfterdam is equivalent to ninety-eight of Nuremberg.
100 Ells Nuremberg is $104 \frac{2}{3}$ of Amfterdam.
Rottemburg on the Tauber, in the marquifate of Anfpach, is a very pretty trading city.
Schweinfurt, on the Mayne, is neither large nor populous, but the territory belonging to it is very fertile, and faid to be the richeft fot in Franconia; fo that the inhabitants drive a great trade in corn, which they export by water, together with woollen and linen cloth, and goofe feathers.
FREIGHT, is a term of naval commerce, fignifying the hire of a fhip, intirely or in part, to carry goods from one port to another. It is called Nolis in the Levant.

## With regard to France.

When a fhip is intirely hired, and the freighter does not load it, the mafter may not, without his confent, or accounting for the freight, take in other goods to load bis thip up.
The merchant not loading the quantity fpecified in the char-ter-party [fee Charter-Party] muft pay the freight as if he did; and, if he load more, mult pay for that overplus.
A mafter, reporting his veffel of greater burden than the is, is liable to pay damages and intereft to the merchant, but not unlefs it exceed a fortieth part.
When a thip is laded by the hundred, or ton, the merchant may unlade before the fhip's departure, paying the charges of unlading, and half the freight.
The mafter may put on fhore any goods he finds on board, that were not mentioned to him, or take what freight for them he thinks fit.
A merchant, unlading his goods during the voyage, muft pay the whole freight, provided it be not the mafter's fault.
If a fhip be detained in her voyage, or at the delivering port, by the freighter's fault, or having been freighted out and home, is forced to return light, intereft for delay, and the whole freight, are due to the mafter; but, if it were the mafter's fault, he mult anfwer damages and interefts to the freighter, to be fettled by perfons fkilled in fuch matters.
If a mafter be forced to refit during the voyage, the merchant muft wait, or pay the whole freight. If the veffel cannot be refitted, the mafter muft hire another immediately; if he cannot, he is not to have freight but in proportion as the voyage fhall be advanced. If the merchant can prove the veffel was not in a condition to fail when the departed, the mafter lofes his freight, and muft anfwer damages and interefts to the merchant.
Freight is due for goods thrown over board at fea for the common fafety, at the charge of the contribution. Freight is alfo due for goods the mafter may be forced to fell for victuals, refitting, and other preffing neceffities, accounting for their value at the price the reft fhall fell for.
If trade be prohibited with the country to which a fhip is bound, and the mafter be obliged to return laden, he can only expect his freight outwards, though he were freighted both out and home : and if the fhip be flopped by Tovereign onder during her voyage, no freight is due for the time the is detained, if by the month, nor additional freight, if by the voyage, but an average is allowed for the failors wages and maintenance during that time.
When the perfon named in the bill of lading refufes to receive the goods, the mafter may fell them to pay freight, and lay the reft in a warehoufe, but muft do it by authority of juftice.
The mafter can claim no freight for goods lof by thipwreck, or taken by pirates or enemies, and muft even reftore any already advanced to him, unlefs it be otherwife agreed; but if the thip and goods were redeemed, the mafter muft then be paid his freight to the time of capture, even the whole freight, If he hath carried them to the intended port, contributing to the tanfom of them.
The contribution for ranfom is to be at the current price of the goods at the place where delivered, deducting for charges; and on the thip and freight, deducting for provifions confumed, and advances to the failors, who muft alfo contribute to the difcharge of the freight, proportionable to what is due of their wages.

Vol. I.

The maftet is allo to have freight for goods faved from hipwreck, conveying them to the intended port; and if he can find no veffel to convey them, he mult have freight only for fo much of the voyage as is made.
A mafter may not detain goods on board for freight, but only at delivering oppofe the tranfporting them, or caure them to be feized in the lighters.
The matter is prefereed for his freight, whether the goods be on board, in barges, or on the quay, even 15 days after delivery, provided they are not in the hands of a third perfon.
A merchant may not oblige the manter to take for bis freight goods leffened in price, fpoled by his own fault, or by chance. But if goods in cafks, as wine, oil, honey, and other liquors, have leaked alinoft out, merchants may leave them for the freight.
No perfon whatever may under-freight fhips at a higher price than the firft contactor, on pain of fine and imprifonment, according to the cafe; but the freighter may, to his own profit, take freight of other goods, to load up the veffel intirely freighted by him.
Thefe regulations are all taken from the book of marine ordinances of Auguft 168 r .
Receipt of freight is limited to one year after finifhing the voyage, and after that the mafter cannot demand it.

The cuftom of Amftesdam, and other ports of the United Provinces, in freighting thips.
The brokers ufually tranfact thefe affairs, to whom the merchants apply, whether they have goods fufficient to fieight entirely, or only part of a fhip.
When the broker has produced a proper fhip, the owners and freighters bargain about the price, either by the whole, or at fo much the laft or ton. When they freight a whole Chip, it mult be expreffed whether fhe is to be laden out and home, or to return free, or, laftly, to go light, and return laden.
It muft be oblerved, that if the cargo is intended for foreign countries, the price muft be agreed for in money there current, as in livres Tournois, if for cities of France fituated on the ocean; in piafters for Marfeilles, and others in the Mediterranean; in pounds fterling for Great-Britain ; in cruzados for Portugal ; in piafters or ducats for Spain; in mares lubs for Hamburgh; in rixdollars for almoft all the Baltic; in rubles for Mulcovy, and fo of others.
When a thip is feighted out and home, the freight is in florins current at Amiterdam, or other loading port.
The freighter can oblige the captain freighted by him, to Shew all his difpatches, letters of mark, pafforts, \&c: neceffary for the voyage.
In war time the freighter ufually furnifhes the palfport, if he freight the whole veflel, otherwife the captain.
To avoid all difputes in general with regard to affreightments, the agreement mult be for all the fhip can carry, not what the captain lays the can, which often exceeds the real burthen.
When a thip is freighted for foreign countries, a charterparty mult be made by a notary, to be paid by the freighter and mafter equally: but the mafter mult pay the broker.
The charter-party fhould contain, befide the price of freight, the averages and expences to be paid by the fretghter, the days of demurrage on arrival at the delivering-port, the allowance for every day afier, if the fhip be not laden within the time agreed on.
At Amfterdam, when the fhips are of too deep draught of water to pafs the Pampuis, either going out or on return, the owners mult find lighters; but if they are got by reafun of fome accident happeniag to the fhip at going out or in of the Texel, the charges are to be accounted as average.
The mafter, on return, may claim his freight before delivery of the goods, but the cuftom is to delver them to thofe who come for them, with the bill of lading indorfed by the merchant, to whom they belong; and fome days after the mafter, or broker, make out the account of freight and averages on the back of the bill of lading, fubfribing their acquittance on receiving the amount.
At Amfterdam, when they freight boats or fmall veffels for the neignbouring cities or provinces, the agreement with the watermen is by the laft, ton, piece, or baie, or for what the boat can take in. If the boats can frike their matts, and are not too big to pafs the bridges, the watermen are obliged to take in their lading before the merchant's houfe or warehoufe; or if too large, muft come as near as pofible; but the goods muft be brought thither at the merchants coft, who mult alfo find all the neceflary pafports, \&c.
'Tis cuftomary and proper to agree with the watermen for the time they are to lie at the delivering-port, without being paid more than the freight: thefe days of demurrage are fettled in fome places.
Freight, fignifis alfo in France, a certain due of 50 fols the fea ton, paid into the offices of the king's farms, by the mafters of foreign veffels, at going in or out of the feveral ports of the kingdom, purfuane to the declaration of June 1659.
'Tis to be obferved here, that velfels, not built in France, are 10 U
accounted
accounted foreign, though belonging to the king's fubjects, and as fuch are liable to the payment of it, unlefs otherwife exempt, and two thirds of the crew are French.
By the treaty of Utrecht in April 1713, between France and the States General, Dutch veffels were freed from this tax, and a decree made the May following to fecure the enjoyment of this exemption to them, in all ports of France, to or from what coutitry foever bound, loaden or light, except only when conveying goods from one French port to another. By the IIth article of the treaty concluded alfo at Utrecht, the Englifh are exempted from it, on taking off at the fame time in favour of the French the tax of five fols; but the execution of this act was fufpended, as well as the tariff propofed between the two nations.
The veffels of the Hanfe-Towns were alfo freed from it, in as full and ample manner as the Dutch, conformable to the fourth article of the treaty concluded at Paris in September ${ }^{1} 7^{16}$, between France and the cities of Hamburgh, Lubeck, and Bremen.

An order of the council of fate in France, in April 1701, regulating the payment of the duty of freight.

The king, being informed of the frequent contefts among the commiffioners of his farms, merchants, and mafters of chips, concerning the freight of 50 fols the ton, and defiring to put an end to them, ordaineth as follows :
Art. I. It fhall be paid by mafters or owners of foreign fhips, \&c. which are liable according to the import of the declaration.
2. Mafters of veffels muft make true reports of the burden and contents of their veffels, \&c. within 24 hours of their arrival.
3. If the commiffioners of the farms agree not as to the number of tons reported by the mafter, it may be amicably adjufted between the parties by the gauge of the veffels.
4. If they cannot fo adjuft it, it muft go before the judges who have cognizance of this tax, and are to caufe admeafurement by perfons fkilled, but without hindrance to the unlading or departure of the veffel.
5. The charge of admeafurement to be borne by the farmers or their deputies.
6. If the veffel be found not to exceed the burthen declared by the mafter, above one tenth, he is to be no otherwife fentenced than to payment according to the gauge.
7. If the veffel's burden exceed the mafter's declaration more than a tenth, he fhall pay the tax for that excefs, and 50 livres fine for every ton fo exceeding the number declared, and all expences.
8. If the velfel be found not to exceed the burthen declared by the mafters, the farmers fhall pay all cofts and damages. 9. Mafters of foreign veffels, \&c. liable to the tax, muft pay it at the delivering-ports, unlefs fpecified in the charter-party, bill of lading, \&c. that part of the cargo is to be delivered in ohe port, and part in another, or feveral others of the kingdom, in which cafe it thall be all paid at the firft of thefe ports.
yorts. If, however, a foreign veffel enter any river of the kingdom laden, on which are feveral ports, the fhall not be reputed to have made more than one voyage, and pay but once, namely, at the firft fhe begins to unlade at, though in the bills of lading, $\& c$. but one of thofe ports be mentioned.
1I. If the mafters of veffels lade in the firft or other of the ports mentioned in the bills of lading, \&c. goods of the kingdom, to carry them with the reft of their cargo to fome other ports of the kingdom, the whole tax fhall be due at every de-livering-port, though it were thofe figaified in the bills of lading.
12. A foreign veffel having unladed in one or more ports of the kingdom, and pay the tax, and proceeding afterwards to load in any other port or ports of the kingdom, for foreign parts, fhall not pay again.
13. And moreover, the faid ordinance of the farms of July 1681, and other regulations, concerning the tax of freight, thall be executed according to their form and tenor.
We have already mentioned the foreign nations exempt from this tax by treaties of commerce made with them. But it may be noted that, in time of war, the French king often grants the fame exemption to neutral nations, in order to facilitate the trade of his fubjects with flrangers. Such are, amongft others, the Swedes and Danes, in whofe favour Lewis XIV. made feveral decrees.
It may alfo be obferved, that foreign nations, though difcharged of this tax by their treaties, and in particular the Dutch, are neverthelefs to pay them, if at war with France, and obtain paffports to load wine, brandy, and other goods permitted to be exported, to import thofe permitted by their palfports. For this purpofe were the decrees of October 1704, of March 1705, and of Auguft the fame year.

## Of Freight according to the laws and ufages in England.

I. Refpect is always had herein to the thipitfelf, or a certain part of it. Again, merchants freight either by the month, the
voyage, or the ton; for to freight a flip, or to take certain tonnage to freight, are different things, as are allo to be a cap-merchant, or under freighter.
II. There was of old another way of freighting, the merchant agreeing with the mater for a fum, to convey his goods infured againit all peril, being refponfible for any lofs, but 'tis now out of ufe.
IIL. Freight is governed generally by the written agreement called a charter-party, executed between the owners or ma-
fter and merchants, or elfe by parole. fter and merchants, or elfe by parole.
The mafter or owners generally covenant to provide a pilot, and all neceffaries for the voyage, and for Jading and delivering.
If there be agreement and earneft, but no writing, the merchant breaking off lofeth his earneft, but the owners or mafter double the earneft.
But by the common law of England, the party damnified may bring his aetion, and recover all damages on the agreement
If a time be appointed by charter-party, and either the fip be not ready to take in, or the merchant to put on board, the parties are at liberty, with remedy by action, for the detriment. [See the article Charter-Party.]
If part be on board, and fome misfortune prevent the merchant's fending the whole in time, the mafter may contrat with another, and have freight as damage for the time they were on board longer than limited. And though it be not prudent for every merchant or mafter to break the contract, though the agreement as to lading be not according to promife (feldom or ever done, if part be aboard) yet 'us highelf juftice, that thips and mafters be unfettered and free: as, by the bare lading of a cafk or bale, they may lofe the paflige or feafon of the year.
So on the other hand, if the veffel is not ready, the merchant may fhip the remainder of his goods aboard another, and recover damages againf the firft mafter or owners. This is grounded on the like reafon.
Therefore, by the law marine, chance, or other notorious neceffity, will excufe the mafter, but he lofes his freight till he breaks ground.
But if the merchant be in fault, he muft anfwer the damage, or be liable to maintain the crew ten days; but if after that, the full freight : if damage afterwards, 'tis the merchant's rifque. But by the common law, while the goods are on board, the mafter muft fee them forth-coming.
IV. Charter-parties have always, by the common law, had a genuine conftruction as near as may be, not according to the literal fenfe of traders, yet mult be regularly pleaded. Wherefore, in an action of covenant on indenture of charter-party, dated Sept. 8. 38 Eliz. between the plaintiff and Francis Cherry; whofe fhip the plaintiff hired for a voyage to Dantzick, where (on taking the fhip) it was agreed fhe fhould take in corn for Leghorn. By agreement the defendant was to have half of the corn, which then was, or afterwards hould be laden during the voyage, covenanting to pay half of the money for it, \& c. and alledgeth in fact, that. Oct. 9. 38 Eliz. the fhip was laden with fixty lafts of corn, and for not performing this covenant the action was brought; the defendant pleaded, the deed was fealed and delivered, Oct. 28. 38 Eliz. and, as to then or after, there was not any corn laden there, and traverfeth the delivery Oct. 9 . or at any time afterwards, before 28 Oet. 38 Eliz. And it was adjudged upon demurrer, That in regard the plaintiff declared upon a deed dated Oct. 9 . $3^{8}$ Eliz. it thall be intended to have it's effence and delivery at that time, and no other; and if he fhould confefs it to be delivered at any other time, it would be a departure from his declaration, and the word (then) is referred to the delivery, and not to the date; and, if delivered ten months after the date, he fhould not have the benefit of the conn laden before the delivery: and therefore, the defendant was adjudged not to be charged with paying for any corn hefore delivery of the deed, the words of the deed being, to pay for the corn then laden, \& cc. which (then) is referred to the time of the effence of the deed by the delivery, and not to the date.
Atkinfon did contrad with Buckle for carriage of 100 quarters of barley, and promifed to deliver unto him the 100 quarters of barley, a fhip-board at Barton haven, in the county of York, to carry them for him, and for the carriage did promife to pay him fo much; and Buckle did promife carriage, and accordingly brought his thip to the faid haven, expecting there the delivery of the barley; but Atkinfon came not to deliver it, whereupon Buckle brought his action of the cafe upon the promife, and, upon non aflumplit pleaded, had a verditt and judgment, affirmed upon a writ of error. Charter-party (i. e. a deed or writing divided) is the fame, in civil law, with an indenture at the common law. It fettles the agreement and bills of lading, contents of the cargo, binding the mafter to deliver them well conditioned at the place of difcharge; and, for performance, the mafter obliges himfelf, hip, tackle, and furniture.
Covenant on a charter-party between Bolton owner and Lee and Morgan merchants, freighters of a fhip, by which Bolton put to freight the hip in a voyage to Guinea, at 481.

## FR A

the month; and there was a mutual covenant between the parties, and every one of them in manner following; and then divers covenants follow, concerning the fhip's tackle and performance of the voyage; and then a covenant for the payment of the freight, viz. when the thip arrived at Guinea, the freight then due was upon notice to be paid in England, and on arrival there, the refidue from the time of the laft payment was to be paid. And faith, that at fuch a time the fhip arrived, and that fix months and ten days were then paft; which came to fo much, of which notice was given : and that after fuch a time the fhip arrived at Engand, and the freight for fix months, from the time of the aft payment, and the freight came to 287 l .4 s , and that the defendant had not paid any of the fums, upon which the fendant demurred, and took thefe exceptions to the declaration:
r. For this, that the action is brought againft one of the defendants only, omitring the other.
2. For that it appears on computation, the plaintiff demanded more apon the furt breach than is due by 30 s . and lefs than is due upon the fecond by 16 s , and though the firft may be cured by the jurors finding lefs, or the plaintiff's releafing the overplus, yet where he demands lefs than due, tis incurable; and cited feveral books there quoted for that purpofe in alfumpfit; whereas, in this cafe, only damages are to be recovered; and on the other part was cited Cro. Jac. 498. Pemberton verfus Skelton, and 520, \&c. Hale chief-juftice took a difference between this cafe of covenant and debt, and held, that after verdict it had been cured without queftion, but upon demurrer there may be fome doubt, it being general; but, had it been fpecial, it had been ill, and uled judgment.
V. If goods are fully laded, and the thip hath broke ground, the merchant afterwards'declines the adventure, and will unlade again ; by the law marine the freight is due.
And if the fhip on her voyage become unable without the maiter's fault, or he be arrefted by fome prince or ftate in her voyage, he may either mend his hip or freight another. But if the merchant will not agree to it, the freight becomes due for what the thip has earned, otherwife the mafter is liable for all damages that Chall happen. If therefore the thip to which the goods were paffed, perifhed, the mafter fhall anfwer ; but if both perith, he is difcharged. But if there be extreme neceflity, as the fhip a finking, and an empty fhip pafs by, or at hand, he may tranflate the goods; and if that thip perifh, he is excufed : but it mult appear the hip feemed probable and fufficient.
VI. If a fet time be agreed on between the merchant and mafter, to begin and end the voyage, it may not be altered by the fupercargo, without fecial commiffion.
If a mafter thall fail on his voyage, after the time agreed on for his departure, if damage happen afterwards, he fhall make it good. Yet if a charter-party is made, that the plaintiff hall fail from London to Lifbon with the firf opportunity, \&xc. in confideration of which the merchant covenanted for fo much freight ; the \{hip departs not with the firf wind, yet aftelwards breaks ground, and arrives at her port, the freight here is due; for nothing can debar the thip of it but the not departure, which only is in law traverfable, being material to avoid payment of freight.
If it be agreed, the mafter thall fail from London to Leghorn in two months, if he begins the voyage within that time, hough be does not arrive at Leghorn in the time, the freight is due.
Where the Eaft-India company by charter-party might keep the fhip a long time in India, and did till fhe was unfit for fervice, and could not come home, they were obliged in Chancery to pay the damage, though by the charter-party it was payable at the fhip's return.
So where no freight was to be paid for the cargo outwards but homewards, and the factor abroad had no goods to load her homewards, payment of freight was decreed.
So though the officers and mariners gave bond not to demand wages unlefs the thip returned to London, fhe arrived at the delivering-port, and was afterwards taken by the enemy. They had their wages to the delivering-port.
VII. If the fhip be freighted from one port to another, thence so a third, \&c. and fo home to the port whence fhe firft failed (commonly called a trading voyage) 'tis all but one and the fame voyage, if in conformity to the charter-party.
A merchant agrees to pay a mafter a certain fum for carrying his goods to fuch a port; in the voyage the fhip is affaulted and robbed by pirates of part of her lading, and the remainder is carried to the delivering-port, yet the fum agreed on is not due, the agreement being not performed by the mafter. But, by the civil law, this is vis major, or cafus fortuitus, there being no default in the mafter or mariners, and the fame is in danger of the fea, which, if not expreffed in naval agreements, is naturally implied : for, had thole goods which the pirates took, been in ftrefs of weather thrown overboard, navis levandx caula, it would not have difabled receipt of the fum agreed on; tor, by both common and masine dw, the act of God, or of any enemy, thall no ways work a wrong in actions private.
VIII. If a fhip freighted by the ton be full laden according to the charter-party, the freight is payable for the whole; otherwife for the amount of the tons only.
If freight be contracted for lading certain cattle, or the like, from Dublin to Weft-Cbefter, if fome die before the Ihip's arrival, the whole freight is due as well for the dead as living.
But if contracted for tranforting them, if death happens, freight is due on delivery for the living only.
If the cattle or flaves are fent abroad, and no adreement made either for lading or tranfporting them, but generally, then freight thall be paid for both dead and living.
If freight be contracted for women, and in the voyage the be delivered of children, no freight is due for the infants.
The charter-party fettles the agreement, and the bills of la ding the contents of the cargo, and binds the mafter to deliver them well conditioned at the place of difcharge, according to the agreements; and, for performance, the matte obliges himfelf, thip, tackle; \&c.
If goods are fent aboard, generally the freight muft be according to freight for like voyages.
If a thip be freighted for 200 tons, or thereabouts, this laft word is meant of within five tons, more or lefs; as a moiety of the number ten, of which the whole number is com pounded.
If a chip be freighted by the great, and the burden not expreffed, yer the fum certain is to be paid.
IX. If the fhip, by any fault of the freighter, as lading aboard prohibited goods, be detained, he fhall anfwer the freight contracted.
If a fhip be freighted out and in, no freight is due till the voyage be performed: if, therefore, the thip perifh coming home, the whole freight is loft.
13 July 1680, in Chancery, a part owner of a flip fued the other owners, for his thare of freight of a voyage finifhed bat he would not join with the other owners in the charge of fitting her out; on twhich they complained in the admiralty, and were ordered to give fecurity for the plaintiff's hare, if the fhip perifhed in the voyage; in fuch a cafe, by the law marine, and courfe of the admiralty, the plaintiff was to have no hhare of the freight. It was referred to Sir Lionel Jenkins, who certified, that it was fo in all places, for otherwife there would be no navigation ; fo the plaintiff's bill was difmiffed.
X. A mafter freighting his thip, and afterwards fecretly taking in other goods, lofes his freight; and if any of the freighter's goods fhould, for the fhip's fafety, be caft overboard, the reft thall not be fubject to average [fee Average] but the mafter muft make it good: but if the goods are fhipped unknown to him, 'tis otherwife, and they are fubject to what freight the mafter thinks fit. The fhip putting into any other purt than the is freighted to, the mafter fhall anfwer damage to the merchant; but if forced in by ftorm, enemy or pirates, he then muft fail to the port conditioned at his own cofts.
Generally, the touching at feveral ports by agreement, imports not a diverfity, but a voyage entire.
XI. If paffengers having goods die on thip-board, the mafter is to inventory their concerns, which if none claim within a year, he becomes proprietor defeafible: but the bedding and furniture become the mafter's and his mates, and the cloathing muft be brought to the maft-head, and there appraifed and diftributed amongft the crew, as a reward for their care in feeing the body put into the lea.
The captain died leaving money on board, the mate became captain, and improved the money, he thall, on ailowance for his care, account both for intereft and profits.
XII. The Ghip's lading, in conftruction of law, is tacitly obliged for the freight, it being, in point of payment, preferred before any other debts to which the goods laden are liable, though fuch were precedent to the freight, for the goods remain as it were bailed for the fame: nor can they be attached in the mafter's hands, though it is vulgarly conceived otherwife.
Ships deferve wages like a labourer; and therefore, in the eye of the law, actions, touching them, are generally confrued favourably, for the Ship and owners : and tberefore, if four part-owners of five account with freighters, and receive the proportions, yet the fifth man may fue lingly both by common and marine law.
XIII. A thip in her voyage is taken by an enemy, and retaken by a hip in amity, reffitution is made and he proceeds on, the contract is not determined, though taking by the enemy divefted the owners of their property; yet by the law of war that poffeffion was defeafible, and being recovered in battle, the owners became re-invefted: fo the contract, by fiction of law, became as if the never had been taken, and fo the whole freight is due. Covenant by charter-party, that the fhip fhall return within the river Thames by a certain time (dangers of the fea excepted) within which time flue is taken on the fea. Refolved this impediment wai within the exception, the words intending as well the danger of pirates and men of war, as of the fea, by blipwreck, tempeft, or the like. Pickering and Berkley's caie.

## F R E

XIV, If freight be taken for too tons of wine, and 20 leak out, fo that there's not above 8 inches from the buge upwands, yet the freight is due ; beciufe from that gauge the king is intitled to cuftom; but, if under 8 inches, 'tis then conceived to be in the freighter's choice to fling them up to the mafter for freight, and the merchant is difcharged. But moft conceive otherwife; for if all had leaked out (if no fault in the mafter) 'tis no reafon the fhip fhould lofe her freight, which arifes from the tonnage taken; and if the leakage was occafioned by ftorm, the fame may, perhaps, come into an average. Befides, in Bourdeaux, the mafter fows not the goods, but officer's appointed for the purpofe, which note. A feecial convention may alter the cafe.
Certainly if a fhip freighted be calt away, the freight vanifhes; but if by the ton or pieces of goods, and part be faved, doubted whether, pro rata, fhe ought not to be anfwered a freight.
Debt on a charter-party on a penalty ; the covenant was to pay fo much a ton freight, and breach was affigned on nonpayment of fo many tons and an hoghead, which came to 10 much : on demurrer, the declaration was held to be ill, the covenant being only fo much a ton.
XV. A merchant freights by contracting with a mariner that is not a mafter; if lofs happens, he muft be content without remedy againft the owners; but the mariner, perhaps, fubjects himfelf to an action.
But if the mariner were hired or put in by the mafter or owners, there for reparation the owners become liable.
XVI. The mafter is not bound to anfwer freight to the owners for paftengers, if they are unable to pay.
If a hip by charter-party, reciting to be of 200 tons burden, is taken to freight for a fum certain, to be paid at her return, it mult be paid, though the fhip amounts not to that burder.
If a fhip freighted at 201 . every month the fhall be out, payable on arrival at London, the thip is caft away coming round from the Downs, but the lading all preferved, the freight is due: for the money is due monthly by contract, and the place mentioned only to fhew where payment is to be hade. Befides, 'tis due on bringing the goods to London, not the Mip.
If a man freights a fhip out, and covenants that, with the firt wind, the fail to Cales, covenanting, that for the freight of all the premifles he would pay to the mafter 184 I . the mafter not averring, the fhip did arrive at Cales, cannot maintain an action againft the freighter.
The mafter, entering into a charter-party for himfelf and owners, in that cafe may releafe the freighters without advifing with the owners; but if they let out the fhip to freight, though the mafter fubfcribe the charter-party, his releafe will not bind the owners, but theirs will conclude him : the reaion is, for that the mafter is not made a proper party to the indenture. And fo 'twas ruled in the cale of Scudamore and other owners of the fhip $B$, of which Robert Pitman was mafter on the one part, and Vandenfone on the other ; in which indenture, the plaintiff covenanted with Vandenftone and Pitman, and bound themfelves to the plaintiff and Pitman for performance of covenants in 6001 . and the conclufion of the indenture was,-In witnefs whereof the faid Robert Pitman put his hand and feal, and delivered the fame, in an action for not performing certain covenants in it; the defendant pleaded Pitman's releafe, whereupon the plaintiff demurred: and it was adjudged, that Pitman's releafe did not bar the plaintiff, he being no party.
If an indenture of charter-party be made between $A$ and $B$ owners of a fhip of the one part, and $C$ and $D$ merchants of the other, and $A$ only feals the deed of the one part, and C and D of the other; but in the indenture A and B covenant with $C$ and $D$, and $C$ and $D$ covenant with $A$ and $B$, who in this cafe may join in action againft C and D , though B never fealed the deed to which he is a party, and $C$ and $D$ bave fealed the other part to $B$ as well as to $A$.
XVII. Covenant on a charter-party, by which the mafter is to fail with the firf fair wind to Barcelona, and the mariners to attend with a boat to relade the thip, and then return with the firft' fair wind to London and deliver the goods, and the merchants covenant for fo much fretght and demurrage every day; for which the mafter brought his action, and declares he failed with the firft fair wind, and upon all the other points. The defendant as to the freight, that the fhip did not return to London, but went to Alicant and Tangier, and by thefe delays the goods were fooiled, and that the demurrage was occafioned by the mariner's negligence, in not attending with the boat to relade the fhip; to which the plaintiff demurred, the covenants being mutual and reciprocal, on which each thall have his action againft the other, but not plead the breach of one in bar of another; for, perbaps, the damages of the one and of the other, are not equal.
In covenant the plaintiff declared, he covenanted to fail with a fhip to D in Ireland, and there take 280 of the defendant's men, and carry them to Jamaica; and defendant covenanted to have them ready, and to pay 51 . each for their paflage ; but there were only 180 whom he carried, but defendant had not paid for them; defendant pleaded he had the 280 men
ready, and tendered to the plaintiff, who would not receive them, but faid nothing as to carrying the 180, nor to the payment ; and, for that it was not a plea at all, judgment was given for the plaintiff on demurrer.

## Some general allowed maxims, in regard to Freight.

I. All articles, for freighting of fhips, fhall be reduced to writing, and agreed to by the merchants that freight, and the matter or owners of the hips freighted.
II. The mafter fhall obferve the owners orders, when he freights the fhip at the place of their refidence.
III. The charter-party thall contain the name and burthen of the veffel, of the mafter and freighters, the place and time of lading and unlading, the freight, the time the veffel is to flay at the refpective ports, and the conventions about demurrage; to which the parties may add what other conditions they pleafe.
IV. The time of lading and unlading the goods thall be regulated according to the cuftom of the refpective ports, unlefs determined by the charter-party.
V. If a thip be freighted by the month, and the time of freight be not regulated by the charter-party, it thall only commence from the day the thip thall fail.
VI. He who having received a fummons in writing, to fulfil a contract, refufes, or delays it, thall make good all the lofs and damage.
VII. But if, before the fhip's departure, there Chould happen an embargo, occafioned by war, reprifals, or otherwife, with the country whither the fhip is bound, the charter-party fhall be diffolved, without any damages or charges on either fide, and the merchant fhall pay charges of lading and unlading his goods; but if the difference be with one another, the charterparty thall be valid in all ie's points.
VIII. If the ports be only flut, and the veffels flopped by force, for a time, the charter-party fhall fill be valid, and the mafter and merchant reciprocally obliged to expect the opening of the ports, and liberty of the flips, without any pretenfions for damages on either fide.
IX. However, the merchant may, at his own charge, unlade his goods, during the embargo, or fhutting up of the port, on condition to lade them again, or indemnify the mafter.
$X$. The mafter thall be obliged, during the voyage, to have on board the cbarter-party, and the other neceflary deeds concerning his lading.
XI. The fhip, rigging and tackle, frcight and goods laded, fhall be refpecively affected by the conventions of the charserparty.
XII. The freight of fhips thall be regulated by the charterparty, or bill of lading, whether the mips be freighted in whole or in part, for the voyage or the month, expreffing the burthen by the ton, the quintal, by parts, or any other way.
XIII. If the veffel be hired for the whole, and the freighter does not put her full lading on board, the mafter fhall wit take on board any other goods, without his confent, or rendering him an account of the freight.
XIV. A merchant, not lading the quantity of goods mentioned by the charter-party, fhall, notwithfanding, pay the freight, as if be tad done it; and if he lades any more, he fhall pay freight for them.
XV. A malter, declaring his veffel to be of greater burthen than the is, hall futtain the damages thereby happening to the merchant.
XVI. It thall not be deemed an error, in the declaration of the Mip's burthen, if the difference exceed not one fortieth part.
XVII. If the veffel be laden by parts, by the quintal, or ton, a merchant, being defirous to take out his goods before her departure, may do it at his own charge, paying half freight. XVIII. A mafter may likewife unlade, and lay down upon the fhore, any goods found in his hip, and put on boasd there without bis knowlege, or take the freight at the bighelt rate that any goods of that quality pay.
The mafter of a flip, letting her to freight to the merchants, hould thew them his cordage, ropes, and lings, for hoifting the goods in or out: and if they need it, he is to repair them; for if a pipe, hoghead, or other veffe!, thould, by default of fuch cordage, be fooiled or loft, the mafter and mariners ought to fatisfy the merchants. So alfo, if the ropes or flings break, the mafter, not thewing them beforehand to the merchant, muft make good the damage : but if the merchants fay they are good and fufficient, and they break, in that cafe they fhould divide the damage between them; that is to fay, the merchant, and the mafter with his mariners.
By the r2th article of the laws of Wifbuy, and the $7^{\text {th }}$ of king Philip's, the mafter, letting his fhip to freight, mutt thew her to the merchant or his agents. The confulate requires the fame, and that the mafter hould let the merchants vifit, not only the ropes, but all the fhip above decks and below, that they may fee what is wanting, and bave it mended; and if not mended, and the merchandize be damaged, the mafter fhall make good the lofs. The 49 th article of the laws of Wirbuy enjoin the mariners to give the mafter notice of the

## F R E

faults and defects in the cordage, or they thall be refponfible for all accidents: and if, ater fuch notice, the mafter does not take care to have them mended, he fhall aniwer the damage.
The Rhodian laws ordain, That the merchant, loading a thip, Ghall inform himfelf exactly of every thing, enquiring of thofe who have failed in her before; but that is of little ufe, except as to her failing, for thips grow daily more and more out of repair, and thould always be viewed by the perfon going to be concerned in them, not trufting to the information of others.

Of the validity of Charter-parties, with refpet to Freight.
If there is a charter-party in being, between the merchant and the mafter, it thall be valid; and though the merchant does not completely lade the fhip, he fhall pay the freight, according to the contents of that inftrument.
Thefe articles want no illuftration.

## Of Lets and Impediments in Voyages.

If, the mafter having received half of the freight, and fetting fail, the merchant will return, notwithftanding the charterparty, he forfeits the fum he has paid for that impediment. But the mafter, breaking the articles, forfeits the value of the whole freight to the merchant.

## Illustratione

That the reader may not miltake the true meaning hereof, he is defired to oblerve, that where the breach of verbal bargains is fooken of, the cafe is otherwife; whereas the penalties here are for breach of charter-parties, which are written inftruments, folemnly figned and fealed. And befides, it is more properly the impediments that may happen during the voyage, that are here treated of.
If a thip be detained by the merchant, ten days longer than appointed by charter-party to remain in any port, he fhall find the company in victuals and drink; and if ten days more pafs, the mafter fhall pay the freight, and quit the hip, except he be willing to add a realonable fum to that before agreed to; on payment of which, he may fail as he fees convenient.

## Of freighting hips, and giving earneft.

If any perfon, hiring a thip, and giving earneft, fays afterwards he has no occafion for her, he thall lofe his earneft; but if the mafter recede from the agreement, he fall give double the earneft.
This article needs no explication.

## Of Charter-parties.

In hiring of Ghips, the charter-parties thall tot be valid, except they be fealed; and the penalties may be inferted with the confent of the parties. But if there be no charter party, and either the mafter or freighter go from their word: as, fuppofe the merchant fhould not give the money agreed to, he mult pay half freight to the mafter; or, if the latter break his word, be fhall pay to the merchant half of the freight. But if the merchant pretend entirely to recede from the bargain, he fhall pay the mafter the whole freight, as a punihment for breach of promife.
This wants no illuftration.

## Of merchants freighting a whole fhip.

If a merchant, freighting a hip, agreed to lade it entirely himfelf, the mafter thall carry nothing in it but water, provifions, ropes, \&c. and other fhip"s neceffary tackle. However, if the mafter will put in other goods, be may, if the can carry them. But if the merchant, in prefence of three witnefles, protef againft it, and an ejection happen at fea, the mafter hall fuffer the damage; but if the merchant do not forbid it, they fhail contribute to the damage.

Some regulations, in regard to Freight, from Old Spain to New.
x. There are two ends in building and gauging of thips [See the article Gavging of Ships], the one to ferve in war, the other to traniport commodities from one country to another. Having therefore explained the manner of thipgauging, and given an account what a ton is, and how much room it fills, the next thing of courfe to treat of, feems to be the freight for every ton carried to or from the Indies, and how they fetth, what fowage every parcel will take up, that is fent abroad, which the mafters or merchants in Spain call valuing or rating. Freight is the price paid to the mafter or owners of the fhip, for the carriage of goods, from one port to another; fome will have it to be derived from the Latin word fero, to bring or carry, and others from flando, from the winds blowing, becaufe there is no failing without wind; but this we will leave to be decided by others.
2. All the laws relating to the form of adjufting the bulk of

Vol, I.

## F R E

commodities, are derived from an ordinance of the year 1543 , when it was thought convenient to prefcribe the bulk that Thould be allowed for every ton, that the fhips might never be over-loaded, nor under; but there was never any rate fet upon the freight, that being always left to the will of the owners and mafters, for their greater encouragement. Thus, formerly, the bulk that went to make up a ton was fixed, but not the price that was to be paid for it ; whereas, for many years laft paft, it falls out quite contrary; for there is a fettled rate to pay for freight, which is 44 ducats ftrong, for which the mafter obliges himfelf to delver the goods, weil conditioned, in the Indies, befides I4 ducats down, or to make good the damage. And there is no rule for computing the bulk, but the mafter and merchant judge it by the eye, computing the parcels by twelve parts; and fo many twèlves as they make, fo many tons freight they pay, and fo much proportionally for the aufwering of damages, which they now call valuing, as has been faid; and this is practıfed with all forts of lading, except pipes of wine, which are taken according to the ordinance, for fix twelfiths, or half a ton each; but if there be little flowage, there is a confideration, either in the price, or in the owner of the pipes, Iending the mafter money to fit him out. Though, confidering the prefent practice, it feems needlefs to give an account of the rules formerly prefcribed, for fixing the bulk of commodities to be fhipped, yet I will briefly acquaint the reader with it, that he may make the better judgment of the goods he may have occafion to thip off.
3. The law directs, that 5 buts be reckoned 3 ton, ánd 2 pipes I ton : and it is to be obferved, that thefe pipes are to be of the fize appointed by the ordinances of Seville, which are to hold 27 arroves a pipe, an arrove liquid being 32 pounds. As for chefts, that which is nine fpans in length, four in breadth, and three in depth, is accounted two thirds of a ton. Seven fpans long, two and a half deep, and as broad, the fame, obferving that thefe fpans are to be fuch, as four make a yard. Bales of two cloths each, fix to a ton, of French canvas, fix to a ton, and fo proportionably for bigger or leffer; iron, in fheets, 22 quintals, or one hundred and a half weight, to pay as a ton; barrels, of an hundred weight each, 15 of them to make a ton; four hogtheads, or eight half hogfheads, to pay as a ton, unlefs they be thofe of Santo Domingo, which take up twice the fowage. Small barrels of olives, 40 to a ton, and proportionably if bigger or lefs; and though one of the laws expreffes, that 56 arroves, or quarters of an hundred cafks or jars, make a ton, it is not to be underftood of fo many jars, but of fo many arroves, or quarters of an hundred, as is expreffed in the ordinance from which that law was derived. And if they are of oil, 40 jars make a ton ; though they be in jars of half an arrove; and if wine, 46 jars of an arrove and a quarter, which is the fize according to the ordinance of Seville, make a ton, and proportionably, if they are bigger or lefs.
4. Some of the laws appoint what bulk of flag-ftones, bricks, tiles, and fuch things then carried to the Indies, made a ton, but there being none carried now, it is needlefs to fpeak of them. Sixteen quintals of pitch make a ton, the fame quantity of rigging, wine, barrels of alquitran, a bituminous matter ufed in Spain, and three large bales of paper of 60 reams each. Many other things are mentioned, which are not now carried over, and therefore we pafs them by.
5. Under the fame head of laws, we find the court of Panama is directed to fettle a rate for carrying the king's plate from thence to Porto Bello; and it is prohibited to carry any gold or filver, either coined, or any way wrought, to the Indies; the penalty is the forfeiture of all that hall be fo carried. Among other things prohibited to be carried over, without his majefty's leave, are all forts of arms, particularly piftols, and all forts of German iron, either wrought or in bar, but only that of Rifcay is to be tranfported. There is alfo a prohibition againft carrying over any fabulous hiftories, or profane, or immodeft books; and there mult be leave from the inquifition, for all that are carried. Books pay no duty, but that for convoys; and the new prayer-books pay neither that nor freight.
6. That the mafters of thips may be at full liberty to agree the beft they can, for their freight with the merchants, it is ordained, that no commiffioner, or officer of the India-houfe, defire, intreat, or oblige the faid mafters to take on board any merchandize they have not agreed for the freight of be-fore-hand. In the year i656, there arore a controverfy concerning freight, which was, that his majefty took up a quantity of indigo in the cuftom-houfe, and fent it away to Flanders. The mafters demanded the freight of the owners of the faid indigo, who had recourfe to the council; where it was determined, that fuch as had received as much of the king as made the value of the freight, fhould pay, and thofe that had received none flould be forbome; which fhews that the freight is to be paid, though the whole product of the commodity fhould be no more than the value of it.
7. All the expence of tranfporting the plate on the SouthSea, as the carriage from Lima to Callao, houfe-rent in $\mathrm{Pa}-$ nama, and removing from port Perico to the fhore, is paid out of the king's revenue, as well that of his own plate, as that 10 X
of private perfons; and thefe only pay the carriage to the wa-ter-fide, in the ports of the South-Sea, and half the charge of loading and unloading the plate and goods at Panama, and carrying of it to the mafter's houfe, and the goods from thence to part Perico, the malter paying the other half upon the king's account ; for there the mafters are only ftewards of the freight, which is not their own, but the king's, and therefore they are paid all the expence they are at in managing it, and are allowed a falary, or confideration, for their labour. Therefore, the practice of the North Sea can be no precedent for the South-Sea, becaufe, in the north, the mafters are at all the expence with the plate and commodities, 'till they deliver them to their owners, without reckoning any thing for the expence, becaufe the freight is their own, and they are obliged to anfwer all damage.

## REMARK

The article of freight or carriage of merchandizes by fhipping, is, next to their filheries, the theet anchor of the commerce of the Hollanders, upon account of the great emoluments they derive from it, far beyond all other nations: and this is owing to the greater cheapnefs of their fhip-carriage, than that of other countries; the caufe whereof, is the great plenty of feamen, which their filheries and carriage trade breed, and the hard and parlimonious way of living of their failors, who fail for lefs wages, and are maintained at lefs expence than thofe of other flates.
The cheapnefs of freight being a very material article, with regard to the exportation of our Britifh commodities to foreign countries, they being to be afforded cheaper by our merchants to foreigners, in proportion to the cheapnefs of our freights; it is certainly highly for the intereft of Great Britain to embrace every occafion of increafing their feminaries of feamen. Our fifheries, as well as our coafting trade in general, having fo apparent a tendency to augment the number of Britifin feamen, to diminifh the price of freights, and to ftrengthen our royal navy (which we have more need of than ever); we muft be enemies to our own commerce, our own fecurity, and falvation, as a free people, if we neglect taking any meafures whatever, that nature, or good policy, can put in our power, to advance every branch of our maritime trade and power. For we may difcern, from what has been laid before the reader, under the article of FRANCE, to what a pitch the French trade is really increafed, and what effectual meafures they are actually taking, to render their naval power fuperior to that of Great Britain and her allies. And under the articles Brscay, Castile, Spain, and the principal maritime provinces of that kingdom, will appear what effectual meafures are taken to increafe the trade and navigation of the Spaniards alfo, at the expence of Great-Britain in particular For further confirmation, how irretrievably this nation is likely to lofe her trade, if the does not exert herfelf therein, to the utmoft, See likewife, all the chief ftates and countries in Europe.
FRIEZLAND, one of the moft northern provinces of the United Netherlands, bounded by the ocean on the north, by Groningen and Overyffel on the eaft, by the Zuyder-Sea and Overyffel on the foutb, and by the ocean on the weft.
The air of this country is not unwholefome, and the foil, in many places, affords good paftures, and fome arable Jands, efpecially in Ooftergow. Weftergow, which is the largeft tract, is more level and fenny, but abounds with filh and fowl.
The province is divided into Ooftergow, Weftergow, and Seven Wolden, or Seven Forefts.
I. Oostergow, the mof northern part of the country, has the German Ocean on the north, part of the province of Groningen on the eaft, Seven Wolden on the fouth, and Weftergow on the weft.
Leewarden, the capital of this divifion, is the largeft, richeft, beft built, and moft pupulous of the province. It ftands in a fruitful foil; and, by it's navigable canals, the largeft of which runs to the ocean, they have a good trade with Hamburgh, Bremen, Embden, and Holland; and are plentifully fupplied with neceflaries from the neighbouring countries.
II. Westergow, has Ofergow on the eaft, Seven Wolden on the fouth, the Zuyder-Sea on the welt, and the German Ocean on the north.
Francker, to miles weftward of Leewarden, abounds with channels, two of which run through the length of the town, and, by their communication with others, make it very neat, and advance it's trade.
Harlingen, the largeft city of this province, except Leewarden, is 4 miles weft of Francker, at the mouth of the canal that comes from that city, and on the bank of the ZuyderSea. Though the harbour be large, and much frequented, it will not admit veffels of great burthen, which muft either lie off at a great diffance, or lighten before they can get in. Their chief trade is in making fails, and importing and exporting corn, pitch, tar, fir-trees, and deal.
Bolswort, had formerly a confiderable trade by fea, but now the inhabitants deal chiefly with the neighbouring towns, by means of the canals.
SNEEK, fituated on a lake of the fame name, is a neat town.

The inhabitants trade with the neighbouring towns, by means of the canals, in fifh and other commodities, and are well furnifhed with frelh-water finh by the neighbouring lakes, both for confumption and fale.
WORCUM, though it's harbour be choaked up, has a good trade alfo with the neighbouring country, by the canals, and is we.! fupplied with fifh from the lakes near it.
STAvEREN, was a flourifhing place formerly, and prodigioully rich; but the harbour being choaked up, the trade is now very much decayed, and conlifts chiefly in fifing, and paf-fage-boats over the pools and lakes of the neighbourhood.
III. Seven Wolden, is fituated between Weftergow, Ooftergow, Overyffel, and the Zuyder-Sea. It is a barren, heathy, and marfhy country, but thinly peopled.
Sloot, or Slooten, the only town of any note, ftands on a navigable current, which comes from a neighbouring lake, called the Slooten-meer, and falls into the fea about 3 miles below the town, by which it has a trade with Holland, and other parts.
EAST-FRIEZLAND. This county or earldom be longs properly to Germany, It has the German Ocean on the north, the gulph Dollert, with the mouth of the river Ems, on the weft, which parts it from the province of Groningen; the bithoprick of Munfter on the fouth, and the county of Oldenburg on the eaft.
Embden, on the river Ems, and on the bay called Dollert, is a rich, large, and populous city. The inland Veffey, which lies in the Dollert bay, over-gainft this city, makes the harbour as large and convenient as any on the German coaft. They have alfo artificial canals, by which they can bring large veffels into the heart of the town. The inhabitants are very induftrious, and much addicted to trade.
The river Ems rifes in the bifhopric of Paderborn; and though it runs through a great part of the bifhopric of Munfter, the counties of Bentheim and Linghen, and divers others, and receives abundance of fmall rivulets; yet it takes in no confiderable river, nor fees any city or town of note, 'till it comes into the dominions of Ealt Friezland, where it vifits the city of Embden, capital of that province; a little below which, it opens into the fea, among a throng of difficult fands and illands.
This city of Embden is large, populous, and beautiful. It's friendhip is very fatisfactory to the Dutch, who have frequently taken the citizens into the protection of the United Provinces, 'even upon their own terms. The goodnefs of the harbour induces the Dutch merchants to direet many fhips to load and unload here. By the inland navigation of this river, there is carried on a very confiderable traffic, by veffels of good burthen, into Germany, Weftphalia, \&c. and that a great way : this is no inconfiderable advantage to the city, by increafing the commerce of the port, and filling it both with wealth and inhabitants.
The Englifh merchants ouce kept their faple here for woollen manufactures; but thinking themfelves not far enough out of the reach of the Spaniards, they removed to Hamburgh. The merchants of this city have a very good character for juft and upright dealing, and are efteemed for it abroad, wherever they correfpond.
The laft count of Eaft-Friefland dying without iffue, the king of Pruffia claims that country, to which other princes have alfo pretenfions; the determination of which muft be referred to time.
FRENCH AFRICAN TRADE and COMPANY. Under the article France, we have given a fate of the commerce of that kingdom, in as fuccinet a manner as we could, fo as to give the reader a pretty ftrong and adequate idea thereof: to this end, it was neceffary to take notice of the African trade of France, in conjunction with it's other capital branches: but as under that general head, we could not fo minutely defcend to particulars, as to enable the reader to form a true judgment thereof, we thall here refume the fubject.-Previous to which, we defire it may be obferved, that, under the article France, where we fpeak of their India-company, notice is taken of the French Wef-India, Senegal, and Guinea companies, which are united to their India-company: fo that the African trade of this kingdom is now carried on by their India-company, with privileges and immunities, exclufive of all other the fubjects of France.
For diftinction fake, however, we thall treat of the French African trade, under the title of the Senegal company, from the year 1718, when it was incorporated with the Indiacompany.
This company had then fix departments, or diftinct factories, viz. thofe of Senegal, Galam, Goreé, Joal, Gambia, and Biffeaux. The Senegal factory, at this time, fupplies annually about 50 flaves, 4000 hides, 1200 quintals of gum, and 20 quintals of elephant's teeth; Galam, about 600 liaves, 20 quintals of teeth, and 50 marks of gold; Gorée, 400 flaves, and 2400 hides; Joal, 100 flaves, 400 hides, and 10 quintals of teeth; Gambia, 400 Ilaves, 200 quintals of wax, and 200 puintals of teeth; Biffeaux, 250 laves, 250 quintals of wax, and the like quantity of teeth.

Remarks on the French trade of Senegal, as the same stood before the last War.

The kingdoms of Ovals and Foules border upon the river Senegal, and bave each their king, one called Le Brac, the other Seratic. It is always the intereft of thefe petty princes to live in friendfhip with the company; but king Le Brac committed hoftilities, and the company made reprifals; but the difference was pretty well accommodated by Damel, another of their petty princes, who interpofed in behalf of the other Negroe king.
Le Seratic the king is powerful, and muft be kept in fome fubjection, or he is frequently inclined to enhance the duties upon European commodities, when exchanged for theirs. The French commiffaries, however, are very vigilant on thele occafions.
The gums are gathered twice a year, in December and March.
They begin to trade in February, before the firft gathering, and continue'till May; their fecond trade begins in April, and holds till June.
The moors that fell the gum, are called Auladelhagi, in the Arabic tongue, and Darmenios, in the Negroes; their chiefs are called Chems, who lay a duty, of an eighth, upon all the gums the French buy. They trade at thefe places, for 1200 quintals of gum, weighing 450 lb . each.
The other goods fold at thefe two principal parts, are about 300 oxen, and 400 theep, fome ambergreafe and oftrich feathers. 50 packs of feathers are worth a quintal of gum. At the neighbouring places of Senegal they purchafe a quantity of millet, with which they feed the negroes, as well thore in the company's fervice, as thofe they tranfport, and even fometimes the French are glad of it themfelves.
When the waters are out, they trade to the adjacent lakes, at fome of which they get ebony, at others ivory, peas, hides, and fometimes ambergreafe.
There are fixed times and feafons for buying falt, for the fervice of the company of Senegal, as well as the curing the hides, and ftated times for buying provifions.
But the laft obfervation, is the time and feafon for going over the bar of the river, which is between April and July; after which, the bad feafon begins, and the waters are out.

## The Trade of Galam.

The old company of Senegal had a fort at Galam, built in 1700, but was carried away by the rapidity of the river. The new company afterwards built another, a league lower where they now trade.
They trade chiefly, at Galam, in negroes, gold, and ivory. It is thought, that the countries inhabited by the negroes, who are in the French alliance, bave mines of gold, filver, copper, precious ftones, and faltpetre. That there is among them fine marble, and curious wood, both for feent and colours, is certain ; but the negroes of this part are an untractable fort of people, and their king is with difficulty brought to reafon fometimes, with regard to the price of his flaves, or the duty on them ; yet upon the whole, the French purchafe them upon very moderate terms.

## The trade of Goree.

The ifland of Goree is the center of the company's fettlements, and it is there the flaves are kept, 'till they have a fufficient number, or till they have fhips ready to tranfport them to their Sugar-ifles.
The leather trade was formerly confiderable in this ifle. They have had 50,000 , and fometimes 80,000 hides a year, which has diminifhed of late years.
This was occafioned by the ufurpation of a tyrannical prince, who raifed the duties upon leather. But as the negroe trade is confiderable, having 4 or 500 annually, the French connive at trivial things.
Their flaves are fine, but muft be neither too young nor too old.
The hides are equally good, but muft be falted and doubled together, and during the hot feafon, beat every fortnight. At Rufirch and Portugal, they buy all the millet they have occafion for, and always keep their graineries full, for fear of a famine ; which often bappens, their harvefts being deftroyed by locufts. The greateft care imaginable muft be taken of it, and often turned over for fear of heating.

## The trade of Joal.

This is the laft fettlement of the French company's, and was built to fecure a port of trade, when this king firt began his reign. The feveral branches of this commerce, are falt, millet, negroes, ivory, hides, wax, and rice.

## The trade of Gambia:

The company bas two fettlements on the river Gambia, one at Albreda, and the laft at Bintau, eftablifhed in the year
1718. This laft place bas great pleety of millet, rice, kids, oxen, and fowls, all which are very difficult to have at Albreda, but there are wax and flaves.
Their merchandizes are exchange for fire-arms, fwords, powder, ball, and flints, they being a warlike people.
The Englifh have fettlements upon the river Gambia, as well as the French; but befides them, there are Portuguefe, Dutch, Englifh, and even French interlopers, that very much hinder the trade of the eftablifhed companies.
The Portuguefe have fome fettlements up the river, and are protected as natives, but in no efteem with the companies.
The proper feafon for the trade of negroes, is in the months of May and June. The Mercadois and Guineas bring down there 7 or 800 flaves ycarly.
Cantor, or Cantory, a fmall kingdom of Africa, upon the boders of the river Gambia. The inhabitants keep a good correfpondence with the Europeans, efpecially the Dutch, who trade with them for ivory, gold, and raw hides; falt and iron are good commodities there: The French trade confiderably on thefe coafts, where they have a fort, for the defence of their fettlements. Their chief trade is in furs and fkins, of different forts, where they pay to the king 16 per cent. duty. Befides this tax, every veffel that comes into the port, pays three bars of iron: this king has a cuftom-houfe to recenve the duties.
The inhabitants are either fmiths or weavers. They make a kind of blankets, which is their cloathing. The Europeans trade along the coaft with them. There are different forts of thefe blankets.
The Portuguefe, who have a fettlement in Cantor, have a number of flaves from thence. The moors of Barbary alfo trade there for gold duft.
Cassan, a fmall kingdom in Africa, on the north of the river Gambia, called Great Caffan, to diftinguifh it from another place, called Little Caffan.
In thefe two places is the chief trade of this part of the country. At the laft of thefe places is a market every Monday, and Great Caffan has two fairs yearly, where there are, not only negroes from all places, as Rio Frefco, Porto-Dale, and Juda, but alfo Europeans, French, Portuguefe, Englifh, and Dutch, and where the king of Caffan has an open trade.
The merchandizes brought there are Jeather, ivory, oxen, and cows, cotton-dreffes, tobacco, gold, flaves, falt, cotton, mats, pullets, and orher productions of the country.

## The trade of Bisseaux.

This fettlement was of the longeft ftanding of any the French company had; and there is to be feen, in the journals of the commiffaries, 1685 and 1686 , that they traded there yearly for 1800 flaves, and 300 quintals of wax; but, by interlopers, and the creole Portuguefe, it was difcredited, that the French abandoned it, and fetted and re-eftablifhed a factory in $\mathbf{1} 700$. The feafon for the trade of Biffeaux, and the neighbouring ifles, is before the rains. It confifts in laves, ivory, and wax. In the rainy feafons, the negroes drink a great deal of brandy, becaufe they have no palm wines.
Abassin, or Abasson, is about feven leagues in length; it's breadth, on land, uncertain. Trading veffels rarely touch there for provifions, becaufe almoft all the gold coaft is barren, are rarely cultivated. We can give no certain account of the inland countries along the gold coaft, any farther than faying, that thofe of the north; and north-eaft of Vetteres, and the rivers Arbini and Iffini are fruifful and well cultivated, and not only fupply themfelves with neceflaries, but thofe countries that are barren, as are all places that have rich gold mines, of which they have many among them. It is not certainly known in what manner they dig or work in their mines, but that there are great quantities of gold, fufficiently appears from what they exchange continually for their provifions, and merchandizes that are brought to them.
I fhall not here give any particular account of a project which the French had formed, and actually put in execution, for eftablifhing a fettlement among them, but through the jealoufy of the Dutch, they were deftroyed for want of affiftance; neverthelefs, the negroes feemed greatly to like them. The villages of Albiani and Tabo, the one about 6, the other about io leagues off Iffini, have generally trading Thips that anchor, and hoift their colours, as fignals of trade near them. The negroes, as foon as affured that they are friends, never fail to go on board and vifit them. As foon as they are prefented with a glafs of brandy, it is cuftomary to afk, how long fince they had any trading fhips that way, it being a general rule with them, to fet a value upon their commodities, more or lefs, according to their want of European merchandizes.
Guiomere, the nigheft to cape Apollonia, though but fmall, on the fea coalts, is confiderable within land; the people are very numerous, rich, and trade largely. Whether their riches are the produce of their mines, or their induftry and great commerce among themfelves, it is very certain they have much gold, and deal confiderably in flaves and ivory. About 8 leagues from St Apolline, is the village of Axjm.

## F R E

It he French fay, that the Portuguefe took this place from them, and built a fortification there, in 1515 , under king Emanuel, and kept it 'rill February 1642, when the Dutch befieged and took it, and remain in poffefion of it. This fort is on the eaft of the river Axim, and is only remarkable for it's fands, which have much gold in them, as beforementioned.

## Remarks

It will not be unacceptable, perhaps, to give fome account of their manner of diving, and finding thefe fands. The negroes of this country do nothing elfe but dive for this metal, and are brought up to it from their very infancy, and will ftay under water folong, that it is fearce credible what is reported. In order to reach the bottom the fooner, they plunge in, with their heads directly downwards: in their hands they have a flat piece of wood, and part of a calebaffe, with which they dive, and keep themfelves under water, until they bave filled it with the heavieft part of the fand, which, holding upon their heads with one hand, and fwimming with the other, with incredible dexterity, they bring it above water. After having got a fufficient quantity, or well tired themfelves, they bring it on Chore, where, in a bowl or platter, they walh away the fand, by a handful or two at a time, the metal always remaining at bottom, which they call gold duft, and fometimes it has grains of different fizes.
Next Axim is cape Three Points, formed by three mountains, between which are three very convenient bays to anchor in. It lies about four degrees of north latitude. The Pruffians had formerly a fettlement and built a fort there, which they relinquilhed in 1720, and the blacks took poffeffion of it, who acquainted the French, that they would deliver it up to them, and trade only with them ; who mifrufting their fincerity, the Dutch made ufe of the opportunity, and, under the conduct of the captain of their mine, took poffeffion of it in 1725.

This port is the moft confiderable on this coaft, has good anchorage and landing, the country is fruitful, and the people do not neglect the culture of their ground, like their idle neighbours, though they have much gold. Befides gold, there is a great trade in ivory. The flaves that cannot dive, are employed in carrying European commodities to the inland parts of the country, who return with ivory and gold, which turns greatly to their advantage. The women work moftly in the falt-pits, in which article they deal confiderably. Thefe people, though negroes, are very fincere, and, though fomewhat near and hard in dealing, yet afford great fatisfaction to all that trade with them.
The commerce of Grand Seftre confifts chiefly in pepper, teeth, and provifions, in great plenty, and extremely cheap. The king's dues are very trivial, and licence is granted for wood or water upon very eafy terms. The negro prince has his refidence about a league and half op the river. The negreffes bring the water to the boats, and think themfelves well paid, when the cafks are all full, if you give each of them a necklare of glafs-beads. There are fometimes flaves, but 'tis rare; fome were bought in 1704 and 1712, at 40 livres each, and fome for two brafs trumpets a-piece. Pepper is the chief trade of thefe coafts. This pepper is not to much valued as the Eaft-India fort, but turns to very good account, when the Dutch have brought but little, this being fold for 3 livres per quintal, and that paid in mercbandize. The whole coaft of Malaguette has all forts of provifions in great plenty, as fowl, theep, oxen, and cows, at a very fraall expence; likewife rice, millet, peafe, beans, \&c. The fruits, which are very excellent, as citrons, oranges, plums, and other fruits, are at fo very low a rate, as to be fcarce worth mentioning at all.
The Tooth or Ivory-Coaft, which is joining to Malaguette, and which extends as far as the river Suero da Cofta, that feparates it from the Gold Coaft, has the name for in's inhabitants being very favage and uncivilized, for which reafon the Europrans rarely go afhore, but are upon their guard, and generally trade on board.
They trade in little elfe except elephant's teeth, but in fuch abundance, that the great number of fhips that come that way from all parts of Europe, can always load there; nor is it a thing extraordinary, to fee teeth there of 200 lb . weight. 'Tis reported, that thefe animals fhed their teeth every three years, which is the reafon partly that ivory is common upon thefe coalts. The elephants are in fuch numbers, that the negroes are obliged to have their habitations under ground, in order to preferve themfelves from danger. There is likewife fome gold upon this coaft, yet not much traded in; but, in places that border upon it, that commodity is in greater abundance, and is called the Gold Coait. They take from this place a fort of blue and white cotton, which is a good commodity for the Gold Coaft, ufed by the natives to wear round the middle; alfo fteel menacles or bracelets, and little bells and toys are wore almoft all over the legs and arms of thefe wild fort of people, and are the chief commodities with which the Europeans trade, in exchange for their ivory, \&c. Provifions are in great plenty in this place.

## FRE

## Gold Coast.

The Gold Coaft begins at the river Suciro de Coftas ; 'tia about 130 leagues in length from eaft to weft, between and 5 degrees of north latitude, and between 16 and 25 of longitude. This coaft is the moft frequented of any in Af rica by Europeans; and none have fettlements there, bur the Englifh, Dutch, and Danes. Yet the French have mauy years traded under the very nofe of our Englifh forts at Ana maboe, and plentifully fupplied their American colonies with the choiceft negroes on the whole African coaft
$U_{p o n}$ this coaft, the gold of Axim is efteemed the beft, and is from 22 to 23 carats; that from other coalts is lefs fine, and that from Jetu is coarfe enough. Some of it is found by the negroes on the banks or in the fands of rivulets and currents, and 'tis that which we commonly call gold duft, where there is more or lefs in quantity found, according as the rains have fell upon thofe mountains, from whence thefe rivers, or cur rents, have their fpring. There is another kind of gold, called mine gold, or gold from the mines; of which 'tis reported, there is a confiderable one in the mountains of Tafou, about 30 leagues from Acara. It feems almoft incredible what fome who have traded on thofe coafts report, concerning the bignefs of fome pieces of gold found there. The third fort is that from Acanis and Fetu, which is found in the earth, that mult be deeply fearched into, and dug up firft, according to the veins. This gold is only from 20 to 21 carats. The gold that is taken out of the mines and the earth, is not refined nor wathed thoroughly, when brought on board by the negroes to trade with the Europeans, but direaly as 'tis found ; which makes it neceflary for a perfon to have judgment, not only of il's goodnefs, but of the richnefs of the ore, left he is cheated. He muft not he unexperienced, that trades in gold duft. Thefe negroes frequently mix with the duft fmall pieces of brafs and copper, or flings of pins, or mix them in melting, particularly at Comenda, whoare the greateft cheats of all on this coaft; yet thefe are little dealers that muft not be trufted; theconfiderable merchants, or even their brokers, are honourable enough.
Thofe that come on board to traffic, are generally officers, or in power, who are all merchants. As they come from different parts of the country, fo their methods are different in trade ; thofe fettled upon the coaft, trade for themfelves; they that refide more diftant, or inland, and are unacquainted with the language, as well as the manner of the Europeans deating, are ferved by brokers, who are commonly great merchants themfelves, but are glad of thefe opportunities of gaining bsokerage. They are generally the merchants upon the coafts, or within 10 or 12 leagues of it, that buy up all the goods from on board the fhips which anchor in the road who, after thefe hips bave fet fail, fell them again to the in land traders with a profit. The negroes have a cuftom among them, when they deal with Europeans, to afk for a prefent, and fcarce ever conclude a bargain without it. The Dutch introduced this cuftom, to difengage the negroes from the Portuguefe ; but what was firft only voluntary, is by ufe become neceffary ; and, at prefent, no negro will conclude any bufinefs, without being affured of a prefent. 'They'are utter ftrangers to credit, and make their payments immediately in gold; for which reafon they carry fmall fcales with them to weigh it, if a large quantity ; otherwife guefs at it, by taking a fufficient quantity up with their fingers.
Their fcales are only two fmall plates, hung at each end of a frall ftick, by a thread, and tied about the middle of the fame with another thread. Inftead of weights, they make ufe of little red grains, with which they weigh to the value of two pence in gold. Thus they weigh little by litte, until it amounts to a marc of eight ounces; but this practice is only among the mean negroes and ordinary people; merchants and fuch as trade largely, have fcales and weights from Europe, and know perfeclly well the urie of them
There is likewife an inland trade, which the negroes of the coaft, and thofe that live up the country, carry on with the Europeans that live among them on their market days, and fairs, kept once or twice a year. But they take care never to keep fairs on the fame days, at two different places : at thefe places, they bring whatever they have got, that is curious and fine, whether from Europe, or bought up in their cities or villages, though 200 leagues off. They keep their markets generally in the middle of the villages, where they range themfelves every one, according to the merchandize he fells, that they may be the more eafly found, in great order and filence, each fmoaking his pipe. At day-break the country people bring their fugar-canes piled up in bundles, fruits, and all forts of provifions, as rice, millet, melons, pepper, fowl, eggs, and bread; at noen palm wine 13 brought, and, between four and five, the fifhermen bring what fin they bavecaught. At the fairs none but blacks are fuffered to trade, but at their markets, if their villages are near the European fettlements, the white peopie nisy deal in what they will.

Remarke

Remarks on the French African Trade in general, as the same stood before the last War.

The African trade is eftimable to the French as well as other European nations, on account of the gold, the ivory, and the flave trade. The produce of this country in general, though it makes but few articles, in comparifon to thofe of other countries, yet it is very valuable ; and the more fo, in that it is fo neceflary a commerce to the European nations, as things are at prefent circumftanced. The returns of gold and filver were had formerly for trifles, fuch as fmall pieces of iron, painted glafs, knives, hatchets, glafs beads, and the like: fo that one of the Englifh Chips, which traded thither in the time of queen Elizabeth, brought away 170 pounds weight of gold duft ; the goods, wherewith the fame was purchafed, not amounting, as then valued in England, befides the charges on board, to above 2501 . fterling : whereas the gold, at that time, was worth above 14,0001. without reckoning the elephants teeth, and other things of great value, which they brought from thence befides.
The negroes of Africa, as they are improved and made crafty by their long acquaintance in the trade, and by the envy and animofities between the feparate Englifh traders in particular, and the late Royal African company, the Europeans in general do not now trade with them upon fuch advantageous conditions as formerly, but know how to trade with great art and fubtlety. On the other hand, and which contributes to make fome recompenfe for their wileinefs, they are brought to take off very large quantities of European commodities from the feveral nations with whom they traffic.
Nor is this commerce profitable only to the refpective Europeans, in the direct way of trading from their refpective countries to the coalt of Africa, but is fo much the more to thofe nations, which have colonies and plantations in America to fupport, by dint of the labour of negroes, for want as is pretended, of a competent number of white men, for the cultivation of their fugars and tobacco, \&c.
How extremely beneficial this commerce has proved to the French nation in this refpect, we may judge from the very extraordinary increafe of their fugar-colonies in America For it is not much above half a century, as will prefently appear from authentic vouchers, fince they did not employ above 100 fail of fhips, for the fupply of their own kingdom with fugars; but in the late war of 1740, it was difcovered, that they employed above 600 fail; and have, by the wife management of their African trade for the benefit of thofe colonies, fupplanted us more or lefs, at moft foreign markets, in this general article of traffic.
This is an indifputable truth: and, although we very fenfibly feel the effect, yet we do not feem to enter fufficiently into the caufe hereof; if we did, we fhould not admire, that fuch caufes fhould be productive of fuch confequences.
That the reader may have the real caufes of the fuccefs of France in their fugar-iflands laid before him, I fhall make no further retrofpection in the French policy, in regard to their African trade, than from the year 1700 , when the deputies of the council of trade in France, prefented a memorial to the royal council in the year 1701, concerning the commerce of that nation to their American ifands, Guinea, the Levant, \&c.
As I am, at prefent, confined to the African or Guinea trade of that nation, I hall not take into confideration what is not directly pertinent thereunto.-And all that is neceffary for that purpofe, is only to take notice of the preamble to this memorial, and to thew the fubfequent meafures that were taken in confequence thereof.
This memorial is introduced in the following manner, viz.
The commerce of Guinea, fay the French memorialifs,

- has fuch relation to that of the French inands in the Weft-
- Indies, that the one cannot fubfift without the other. By ' thofe trades, we have deprived our competitors in traffic of "the great profits which they drew from us*, and may put ourfelves into a condition, by their example, to draw profit in our turn from them, and efpecially from the Englifh $\dagger$.
We may increafe thofe trades confiderably, feeing that na-- tion in their iflands, with lefs advantage than we, in territories of lefs extent, and in much lefs time, have found means to employ yearly above 500 hips , while we do not, without great difficulty, employ 100 .
* Before the French were able to fupply themfelves with fu-睢至, we had a confiderable fhare in their fupply.
+ Their drawing profit from us in their torn, may fignify their view to fupply us with fugar ir time, as well as to fupplant us. as they have done from this time, at foreign markets; fo that they feem, even then, to have had a view to the ruin of our fugar-colonies
Every body is fenfible of the benefit of navigation, and - that the happinefs and glory of a ftate very much depend upon it: there can be no commerce without it ; it governs the furtunes of the merchants; it maintains a great number of fubjects, feamen, and mechanics. No one is ignorant, that the navigation of France owes all it's increafe Vol. I.
c and fplendor to the commerce of it's illands, and that it - cannot be kept up and enlarged, otherwife than by this - commerce.
' 'Tis beyond all doubt, that this commerce is more beneficial ' to the ftate, that all others (of long voyages) that are driven by the French ; becaufe 'tis carried on without exporting any - money, and without the help of any foreign goods and manufactures, fo that none but the fubjects of the king and ' kingdom have the profit of it,' \&c.
In confequence of this memorial, proper meafures were taken to render the trade to Africa fuccersful; upon which, as the memorialifts fay, the profperity of the French colonies and plantations in America abfolutely depend.

## REMARKs.

As thefe meafures, taken from time to time, cannot be fo effeetually reprefented, as by giving the authentic ordonnances, arrets, edicts, and patents, \&ic. which were iffued on this occafion, we fhall lay before our readers fome of the moft effential, according to the order of time.

The king's letters patent for the liberty of trade upon the coaft of Africa, publiffed at Paris in January 1716.

Lewis, by the grace of God, king of France and Navarre, to all to whom thefe prefents fhall come, greeting: By letters patent of the late king, our truly honoured lord and great grandfather, dated January 1685 , there was eftablifhed a company, by the name and the title of the Guinea Company, to continue for the face of twenty years, excluding all others the trade of negroes, gold duft, and all other merchandizes trafficked in upon the coaft of Africa, from the river Serre Lionne, to the Cape of Good Hope; and likewife granting to this company divers privileges and immunities; and, among other grants, exempted them from half the duties of all merchandizes, brought from all places within their diftrict and ifles of America upon their own account, although the time limited by thofe letters patent fhould be expired : the late king, our moft honoured fovereign, thought good on account of engagements this company had made, in order to fupply the Spanifh Weft-Indies with negroes by the Affiento contract, to continue to them the fame privileges and immunities, under the title of the Affiento treaty [fee the article Assiento] unto the month of No* vember 1713. The merchants of our kingdom having reprefented at this time, how much it tended to the benefit of trade in general, and in particular to the improvement of the French iflands in America, that the commerce of the Guinea coalt fhould be free and open to all his majefty's fubjects; the late king did not think it proper to form a new company, thaugh there were many perfons ready to offer themfelves and enter into fuch an affociation; and, as we are willing to encourage the freedom of commerce, and deal favourably with the merchants and traders who fhall undertake this traffic, and afford them every thing neceffary to render it more confiderable than it has been, and by that means to provide for our fubjects of the French inles of America a fuffcient number of negroes, for the improving the cultivation of their lands: for thefe and other reafons moving us hereunto, wee have thought fit, by the advice of our moft dear and truly beloved uncle the duke of Orleans regent, of our moft dear and truly beloved coufin the duke of Bourbon, \&c. and other peers of France, \&c. we have declared, refolved, and ordained, be it therefore declared, refolved, and ordained, That

Articlei.
We have permitted, and do permit, to all merchants of our kingdom for the time to come, to have a free trade for negroes, gold duft, and all other merchandizes that may be brought from the coalt of Africa, from the river Serra Lyonne to the Cape of Good Hope, provided their fhips are fitted out in the harbours of Rouen, Rochelle, Bourdeaux, and Nantes.
II.

The mafters and captains who trade to the coaft of Guinea, thall be obliged to declare at the fecretary's of the admiralty office, eftablifhed at the place of their departure, and give fecurity at the receipt of cultoms, to oblige them to return into one of the ports of Rouen, Rochelle, Bourdeaux, and Nantes; except, neverthelefs, thofe fhips which hall go out from Rouen, Rochelle, and Bourdeaux, fhould be drove at their return into Nantes or St. Malo.
III.

The merchants of thofe flips that fhall tranfport to the French infes of America negroes bought upon the coaft of Guinea, hall pay, upon the arrival of their fhips in the ports of Rouen, Rochelle, Bourdeaux, and Nantes, into the hands of the treafurer-general of the marine in being, the fum of 20 livres for every negro that fhall be carried to the faid illands, for which they fhall give fecurity to the fecretary of the admiralty, on their being permitted to take their leave of our moft dea: and truly beloved uncle, Lewis Alexander of Bourbon, count of Thouloure, admital of France: and
is $Y$

## FRE

as to thofe merchants, whofe fhips fhall only trade for gold duf, and other commodities upon the faid coaft, they fhall likewife be bound, upon the arrival of their faid fhips in the faid ports, to pay, into the hands of the treafurer of the marine, the fum of three livess for every ton his thip's burden hall contain ; which twentylivres aforefaid, and three livres, Chall be employed, by erder of the council of the marine, for the keeping in repair the fortifications, factories, and cuf-tom-houfes, which are or fhall be fettled on the faid coafts of Guinea, which expences we will defray for the time to come.
IV.

Neverthelefs, the payment of the faid three livres per ton duty is excufed during the three next following years, from the day and date of thefe prefent 9 , to all our fubjects, whofe thips fhall trade to the Guinea coaft, for gold and other merchandizes, llaves only excepted.
Be it enacted by the authority aforefaid, that all manner of merchandizes that fhall be brought from the coafts of Guinea, by our fubjects, directly to the ports of Rouen, Rochelle, Bourdeaux, and Nantes, we exempt from one half the duties of importation, that are farmed, or may be farmed; likewife our will is, that all fugars, and other merchandizes of all our fubjects that hall be brought from the French American Inands, arifing from the fale and truck of negroes, be equally exempted from the faid half duties of importation, on their producing a certificate from the fuperintendant of the illes, or commiffary governor, or commiffioner of the cuftoms in the Weft-Indies, that the goods thipped at the faid illands, arofe from the fale and barter of negroes, which the faid lhips had there unloaded, the faid certificate fpecifying the Chips names, number of negroes that thall be fhipped to the illands, and lodged in the receiver's office, who fhall grant to the captains and mafters a duplicate of the fame, without any expence.
All our receivers, commiffioners, or deputies, are forbid to take more duties, upon pain of four times the value.

## VI.

Linens of all forts, toys, mercery, glafs ware, wrought and plain, iron-bars, plate-iron, guns, fwords, and other arms, gun-fints, being the manufacture of this kingdom, fhall be free from all duties of exportation, ufual both in our receiver's office, and all the offices in their paffage, and the ports they are bound to, on condition it is proved they are intended for the Guinea trade; until which is confirmed, the faid goods-Thallabe lodged in the cuftom-houfe, under two different keys; one kept by the receiver-general of our cuftoms, the other by whomfoever the merchants thall propofe, at their own expence. As for the wines of Anjou, and other products of the river Loire, bound to Guinea, they fhall be under the fame reftrictions as thnfe bound to the French American Inands, according to the arret of council 23 September 1710 . And, with refpect to the wines of Bourdeaux, we will and ordain, that they are regulated, as if fhipped for the American Iflands, on taking a bill of loading there of the faid wines, and giving them the ufual fecurity.

## VII.

We grant to the faid merchants leave to lodge, in the ports of Rouen, Rochelle, Bourdeaux, and Nantes, the goods called cowries, ftriped blue and white India cottons, printed linnens, grain cryftal, fmall Dutch looking glaffes, Dutch tobaceopipes, and others from the north, coming only by fea for the Guinea trade: we grant likewife the fame room in our cuf-tom-houfe for two years and no longer, from the date of thefe prefents, for Dutch knives, kettles, and other fort of copper utenfils. Provided the aforefaid foreign goods thall be fpecified to the commiffioner of the cuftoms upon their arrival, and afterwards depofited in the king's warehoufe for that purpofe, locked with two keys, one to remain in the hands of the commiffioner, the other with whom the merchant thall name, all at their own expence.
VIII.

The commiffioner of the cuftoms in each of the aforefaid ports fhall keep a fegifter, which thall be lettered and marked by the director of the cuftoms, in which the aforefaid commiffioner thall regifter in parcels the goods fpecified in the two foregoing articles, as foon as they fhall be depofited in the warehoufe. The aforefaid commiffioner is forbid to give a certificate for their clearance, upon the fecurity that was taken at the firft office, until the proof, the regifter, and the unloading of them, fhall be examined into in the aforefaid ftaple warehoule, from whence they fhall not be taken until they are to be put on board the thips bound to the coaft of Guinea. And, at the loading of the aforefaid goods, both foreign and French, for the coaft of Guinea: our will is, that there be mentioned in the margin of the regifter, \&c. the name of the flip they were put on board, and figned by the commiffioner, the merchants they are configned to, and the captain who receives the goods on board, \&c.

## IX.

Neverthelefs, we grant leave to the merchants and traders of the city of St. Malo to fit out and equip, in their ports,

## $F^{\prime} \mathrm{R}^{\prime} \mathrm{E}$

hips for the coalt of Guinea, and for the French coafts of America, and to make their returns to the aforefaid ports on the foregoing claufes, articles, and exemptions, already menipned, paying us for the goods which thall come from the coaft of Guinea, and the French ifles of America, the fettled duties, according to the ufual cultom in the aforefaid port of St. Malo, for the profit of our moft dear and truly-beloved uncle Louis Alexander de Bourbon, count of Thouloufe duke of Penthievre, admiral of France, and governor of Bretagne, \&c.

Signed Lewis,
Duke of Orleans, regent
Prefent Phelypeaux.
Letters patents, containing regulations for merchandizes, which traders of this kingdom import from Holland and the North, for the Guinea trade. Given at Fontainbleau, September 7, 1728.

Lewis, by the grace of God, king of France and Navarre to all our friends and faithful counfellors, members of our court of parliament of Paris, greeting: it being reprefented unto us, that our letters patents of the month of January 1716, for the liberty of commerce upon the coaft of Africa; in the feventh article of which we have granted to all our merchants permifion to warehoufe in the ports therein mentioned, among other merchandizes, white, blue, and friped cottons, printed linnens, which they fhall import from Hol land and the North, by fea only, for the trade of Guinea: and being informed that, by the indulgence of this grant, they have introduced into our kingdom, to the prejudice of our eftablifhed manufactures, India cottons, of a finer quality than what need be fent for that trade; we have provided againft it by the arret of this day, given in our council of ftate, we being there prefent; for the due execution of which, we have ordered all neceflary letters to be difpatched: for thefe, and other reafons hereunto moving us, by the advice of our council, we have, by thefe prefents, figned with our own hand, ordained, and we do accordingly ordain, as fol lows

## I.

We exprefly forbid, and prohibit, all fhips in the Guinea trade, or other kind of trade, to import from Holland, or any other country of the North, into our kingdon, to commence from the publication of thefe prefents, under the pretence of warehoufeing, any white India linen, called caladaris, painted India linnen, called chints, or fuffs of all filk, or half filk, upon pain of confifcation of the faid goods, and a penalty of 3000 livres.
II.

We permit, neverthelefs, all merchants and traders to import from Holland and the North all other forts of linnen and fuffs fit for the Guinea trade, except thofe comprifed in the foregoing article, on condition they firt acquaint the fecretary of the admiralty of the place of their abode, the fhip's name on board which they are laden, and the office of cuftoms, of the quantity and quality of the linaens and fuffs which they fhall require to be imported from the faid foreign countries.

## III.

The captain who, in confideration of the aforefaid declarations, thall import merchandizes fit for the Guinea trade, and allowed by the above article, fhall be obliged to load them on board the Ghip fitted out for that purpofe, and fend them, in fix months at fartheft, to the coalt of Guinea, upon pain of confifcation of the faid goods, and 1000 liures penalty.

## IV.

If, neverthelefs, the merchant-adventurers fhould be, by any unforefeen accident, obliged to alter the voyage of the flip which was intended for the coaft of Guinea, he may, in the fpace of fix months, appoint another, on board of which he thall be obliged to load the faid goods, and, that time being expired, counting from the time of their gaods being landed, they flall be confifcated, and the adventurers fhall be condemned in 1000 livres penalty.
The owner of the goods ordered from Holland, or other country of the North, thall be obliged to fend, by his fator or fupercargo, the bills of loading, of which the captain is the bearer, the invoice of the faid goods, mentioning the particulars of their qualities and quantities, the bails, ehefts, or cafks, \&c. in which they are contained.

## VI

In cafe the aforefaid invoices are not according to the deciaration beforementioned, we will and ordain that the merchan dizes fpecified in the invoice be feized and conficated, and the adventurers condemned in the penalty of 1000 livres,

## VII.

We alfo forbid the adventurers to make any declarations, in ambiguous terms, of goods unknown, and the commiffary to receive them, upon pain of confifation of the faid goods, and the commiflary deprived of his place for receiving fuch declarations.

VIII.

We further will end ordain, that our forefaid letters patents, of the month of January 1716 , be executed, according to their form and tenor, wherein they deviate from thefe prefents. Thus we will and ordain.

Signed LEWIS, Phelypeaux.

The king's proclamation, concerning the commerce of Guinea; ordering that three negro boys fhould be paid for upon the footing of two negroes of maturity; and two negro girls for one negro. Given at Paris the I4th of December, 1716. Regiftered in parliament.

L EW IS, by the grace of God, king of France and Navarre, to all whom thefe prefents may concern, fends greeting: the late king our moft honoured lord and great-grandfather, having permitted, from the month of November i713, to the traders of the kingdom to go, by virtue of paffports, which were delivered to them, to contract for negroes at the coaft of Guinea, and afterwards to export them to the American illands; on condition of paying, for each of thofe as thall be fent to St. Domingo, 30 livres, and 15 for thofe which fhall be carried to the Windward iflands, according to which they are to fubmit; we have judged it neceflary, in the month of January in the prefent year, to grant, by our letters patents, the free liberty of commerce to that coalt (of which the Guinea company had the exclulive right of trade) till the faid month of November 1713. And, in confequence whereof, we have granted permifion, by the faid letters patents, to the traders of our kingdom, to fend their veffels thither, to agree for the purchafe of negroes, and afterwards to tranfoort them to the faid illands; for every one whereof that fhould be difembarked, we ordain that they fhould pay to the treafurer-general of the navy 20 livres. We alfo ordain, by an arret of the 28 th of the faid month of January this year, that the merchants who have taken paffports fince the month of November 1713, hall pay to the faid treafurergeneral the furns fpecified purfuant to their obligations; but, the merchants having reprefented to us that the fame duties were required for the boys and girls, as for the men and women negroes, although three negro boys coft no more in Guinea than the price of two negroes of maturity, and are only fold in the like proportion at the illands; and the fame for two negro girls, who are bought and fold for no more than one negro; whereupon we have refolved to explain our intentions: for thefe and other reafons moving us thereunto, and according to the advice of our moft dear and well-beloved uncle of Orleans, regent, of our moft dear and wellbeloved coulin the duke of Bourbon, \&ce, we have by thefe prefents, figned with our hand, declared and ordained, and hereby we declare and ordain, That fuch merchants who have fent, or fhall fend their fhips to the coaft of Guinea, to contract for negroes, and afterwards tranfport them to the illands of America, flall not be obliged to pay for every negro boy of 12 years of age, or under, that thall be difembarked at the faid inlands by the paffport-flaips of the late king, only the two-thirds of the duties to which they are liable for each negro; and for every negro girl, alfo, of 12 years of age, and under, the moiety, or half part of the faid duties fhall only be paid; and for every negro boy of the fame age that hould have been, or thall be difembarked at the faid iflands, by virtue of the faid letters patents, the twothirds of the duties hall be paid that is for each negro; and for every negro girl of the fame age, the moiety of the faid Juties, exc.

## Signed LEWIS, Orleans, regent Phelypiaux.

An arret of the king's council of ftate, concerning the commerce of Guinea, of the 13 th of September, 1729. Extracted from the regifter of the council of ftate.

The arret of his council, of the 8 th of September 1729, being laid before the king, and his letters patents difpatched upon it the fame day, containing regulations for merchandize imported from Holland and the North, for the Guinea trade; by the fecond article of which, his majefty has permitted to all merchants and traders to caufe to be imported from Holland and the North all forts of linens or ftuffs, excepting thofe compriled in the foregoing article; provided they. firft acquaint the fecretary of the admiralty with the place of their abode, and the thips they are put on board of. His majefty being informed, from the complaints of fome merchants, that the officers of the admiralty retarded their voyages, but refufing to receive their declarations, upon the terms of the faid fecond article, by reafon the faid letters patents were not addreffed to the admiral of France, nor regiftered: all which we being willing to remedy, the king being in council, and attending to the report of Sieur le $\mathrm{Pe}-$ latier, counfellor of fate in ordinary, and comptroller.geral of the finances, hath ordered, and accordingly orders, that the faid letters patents of the 7 th of September 1728 , be
executed, according to their form and tenor, to the intent that they may be regiftered at the admiralty-board, eftablifhed in the ports, deftined by the firft article of his majefty's letters patents, given the month of January, 1716, for the general freedom of commerce upon the coaft of Africa : his majefty commands and ordains Monf, the count of Thouloufe, admiral of France, to fee the prefent arret put in execution, which fhall be regiftered in the admiralty, eftablifhed in the ports deftined for the general freedom of the commerce of Africa. Made at the king's council of ftate, his majefty being prefent, held at Verfailles, the 13 th of September, 1729 .

Signed Phelypeaux.
The king's ordinance, prohibiting captains of hips that fhall bring negroes to the iflands, from landing, or fending their crews and cargoes thither, without permiffion from the governors. Of the $3^{d}$ of April, 1718 . By the king.

His majefty being informed that the captains of flips that bring negroes into the iflands of America, have communication with the inhabitants of the faid colonies, and fuffer their crews, their negroes; and other parts of their cargoes, to be landed, although the negroes that they bring, and other parts of their cargoes, are infected with the plague, which it is of high importance to prevent. To the end that from the frequency of thefe practices the faid contagious diftempers may not infect the inhabitants of the faid illands: his majefty, by and with the advice of Monf. the duke of Orleans, regent, forbids all captains of hips who thall import negroes into the faid illands, from coming on fhore, or to fuffer their crews or cargoes to be landed; and likewife to have no correfpondence with the inhabitants, either by themfelves, or by any of their hhip's crew or cargoes, without permiffion firtt had and obtained from the commanding officer of the place where they fhall arrive; which permiffion fhall be allowed them, provided there is no infectious difeafe on fhip-board; and, in cafe there is, a place fhall be provided for them, where they might land the infected, in order to have them cured before they have the leaft communication with the faid inhabitants. His majefty orders and commands Monf. the count of Thouloufe, admiral of France, and all governors and lieutenant-generals in South America, particular governors, and other officers, to pay due regard hereunto, \&c.

Signed
LEWIS,
Phelypeaux.
An arret of the king's council of flate, for the payment of the bounty of 13 lives for each negro, and 20 livres for every mark of gold that the Senegal company from the African coalt fhall caufe to be imported into Ftance, coming from thofe countries, granted to the faid company by the 24th article of his majetty's letters patents of the month of March, 1696 , during the eftablifhment of the faid company. Of the 22d of Auguft, 1724. Extrafted from the regifers of the council of ftate.
Upon a petition prefented to the king in council, by the old directors of the royal Senegal company of the coaft of Africa, eftablifhed by his majefty's letters patents of the month of March, 1696 , regiftered where meedful; containing that by the 24 th article of the faid letters patents, his majefty had granted to the faid company, by way of bounty, the fum of 13 livres for every negro that the faid company hould import into the iflands and colonies of America, and which Bould be paid to the faid company by his royal treafurer, in confequence of çertificates granted by the intendant of the faid illanids, or the governors in his abfence; and, by the 2 th artiele, his majefty likewife granted to the faid company the fum of 20 livres for every mark of gold that hould be imported ihto France, coming from thofe countries within the company's charter, which faould be paid him by the royal treafury, upon the certification of the director-general of the mint at Paris. In execution of thefe two articles, his majefty granted two ordinances to the faid company, the one of the 13 th of June, 1717 , of the fum of 34,374 livres, 7 fols, and 6 deniers, in conffderation of the importation into Cape Francois, on the coaft of St. Domingo, 2635 negroes, from the 17th of April, 1714, to the 27th of Auguft, 1716, purfuant to the atteffations of the captains of thofe fhips by which they were imported, as well as of the directors of the faid company eftablifhed at St. Domingo, and the certificates annexed, of Sieur de Boifmorant, chief fecretary of the marine of the 15 th and 16 th of November, 1716 , and what the faid company had imported, from the 6th of October, 1715, being five marks, feven ounces, fix grofs, of gold duf, which were fent to the mint of Paris, purfuant to the director's certificate of the faid mint: the other ordinance, of the roth of June, 1718 , the fum of 14,963 livres, for 1151 negroes that the faid company imported to the faid Cape Francois, from the 2d of February, 1717, to the 22d of February, 1718, according to five certificates for that purpofe; two of which are from the faid Sieur de Boilmorant, one from Sieur Mithon, commiflary-general of the marine, and two from Sieur

Chaftenoye,

## F R E

Chaftenoye, major and commander of the illand of the faid Cape Francois, bearing date 2 February, 26 March, and 30 November, 1717, and 22 February, 1718 ; all thefe certificates being dated and attefted in the faid two ordinances: but, as the faid company are not liable to produce thefe certificates to the Sieurs Gruyn and Turmenyes, they having been depofited in the office of marine, where they were reprefented; that it is impoffible to obtain duplicates, as well by reafon of the death as of the exchange of officers who figned them ; and moreover, becaufe it would be a great difficulty upon the faid company, under pretence that the faid certificates have not been given by the Sieurs intendants, governors of the faid iflands, purfuant to the terms of the faid letters patents, but only by the principal officers, who were then on the foot: the company hope that his majefly will be pleafed to order the payment of the faid fums of 34,374 livres, 7 fols, and 6 deniers, on the one part, and of I4,963 livres on the other, in producing only, to the faid Sieurs Gruyn and de Turmenyes, the faid two ordinances, with the acquittances of the cafhier, attefted by two of the directors, without being obliged to produce the faid certificates, which cannot be obtained, \&c.
In confequence of which petition of the company, the following patent paffed the royal council; which thews how inviolably thofe acts, in regard to trade, are obferved:

LEWIS, by the grace of God, king of France and Navarre, \&c. The old directors of the royal company of Senegal, and of the coafts of Africa, eftablifhed by our letters patents of March 1696, regiftered, where it was neceffary, have reprefented to us, that by the 24th article of our faid letters patents, we have granted to the faid company, by way of bounty, the fum of 13 livres for each negro that Mall be imported into our ines and colonies of America; which thould be paid to the faid company by our treafurer, on the certificate of our intendant of the faid inles, or our governors in his abfence. And, by the 25th article, we have likewife granted to the faid company the fum of 20 livres for each mark of gold that they hall caufe to be imported into France, coming from places within the limits of the company's charter, which fhould likewife be paid by our treafurer, upon the certificate of our director-general of our mint in Paris: that, in due performance of thefe two articles, we had granted two orders to the faid company, the one of the 13 th of June, 1717, of 34,374 livres, 7 fols, 6 deniers, in confideration that they had fent, from thofe parts of Africa to Cape Francois on the coaft of St. Domingo, 2635 negroes, from the 17th of April, 1714, to the 27th of Auguft, 1716, according to the copies of the declarations of the captains of the thips who brought them, and the directors of the faid company, fettled at the faid St. Domingo, and the certificates of fe Sieur Boifmorant, principal fecretary of our marine, commiffary of the port of Cape Francois, of the 15th and 16 th of November, 1716 , and that the faid company had caufed to come from Africa, the 6th of OQtober, 1715 , five marks, feven ounces, fix grains, of gold duft, that they bad remitted to the officer of our bank at Paris, according to the certificate of our director of the bank. The other order of the roth of June, 17.18 , of the fum of 14,963 livres, for 1151 negroes, which the faid company had caufed to be brought from Africa to the faid Cape Francois, according to five certificates, two of which were of the aforefaid Sieur Boifmorant, one of the Sieur Mithon, commiffary-general of our marine, governor of the faid counties, and two of the Sieur Chaftenoye, major of the ifland, our commandant of the faid Cape Francois, dated the 2d of February, the 26th of March, and the 30th of November, 1717, and the 22d of February, 1718; all which certificates were examined and dated in our two faid orders: but as the faid company could not fend them to the Sieurs Gruyn and Turmenyes, our royal treafurers (as mentioned in the preceding petition) being fent to the office of our marine, where they were exhibited and depofited, it was not poffible to bring duplicates of them, on account of the death of the officers that had figned them, and likewife would occafion the company fome difficulty, upon pretence that the certificates were not figned by our governors and intendants of our iflands, in the terms of our letters patents, but only by our principal officers that were there; the faid company petitioned that we would have ordered the payment of the faid fum of 34,374 livres, 7 fols, 6 deniers, for the one and 14,963 livres for the other, producing only, to the faid Sieurs Gruyn and de Turmenyes, our faid two orders, with the receipts of his cafhier, examined by the two directors of the fame, without being obliged to produce the faid certificates, which they fhould have done, if they had had them, \&ec. Upon which our orders were granted, which were fufficient warrant and authority, to our treafurer: whereupon we have, by our arret of council of the 22d of Auguft laft, provided in favour of the petitioners, and ordered all neceffary letters to be difpatched for the execution of the fame; which the petitioners have moft humbly accepted: for which reafons, and by the advice of our council who have feen the arret, made the faid 22d of Auguft laft, an extratt of which is hung to the feal of our chancery, we have, by thefe prefents,

## F. R E

figned with our hand, conformably to the arret, ordered, and we do order, that the Sieur Rolland Pierre Gruyn, our trea furer, and commiflary in the office of his late father, Pierre Gruyn, thall pay unto the faid company, upon the cafhier's receipt, the fum of 34,374 livres, 7 fols, 6 deniers, expreffed in our order of the 13 th of June, 1717 ; and that le Sieur Turmenyes de Nointel, alro our treafurer, pay the fum of 14,963 livres, mentioned in our order of the roth of June upon the receipt of the faid calhier; which fums thall be al lowed in the accounts of the faid Sieurs Gruyn and Turmenyes, by virtue of the faid receipts, examined by the two directors of the faid company only, without being obliged to produce the certificates upon which our faid two orders were granted, which we have difpenfed with, and do difpenfe with the manner in which it was done, neverthelefs not to be made a precedent, \&c. This is our pleafure. Given at Verfailles, the 2 d of December, 1724, and the roth of our reign.

Signed LEWIS,
Phelypeaux.
The king's declaration concerning negro ीaves of the colonies. Given at Verfailles, 25 December, 1738. Regiffered in the parliament of Paris.

LEWIS, by the grace of God, king of France and Navarre, \&c. to all that fhall fee thefe letters, greeting : the account we ordered to be laid before us, at our coming to the crown, touching the ftate of our colonies, has made us fenfible of the reafonablenefs and neceffity of thofe orders, contained in the letters patent, in form of an edict, of the month of March 1685, relating to negro flaves. We ordered them to be put in execution, by the firf article of our edict of the month of October 1716, and it being reprefented unto us, at the fame time, that many of the inhabitants of our inlands of America were defirous to fend into France fome of their nlaves, to be inftructed in the principles of religion, and learn fome art or trade, but were fearful left fuch flaves, upon their arrival in France, thould pretend they were free, and not flaves; we have explained our intentions, upon this fubject, by the articles of this edict, and have laid down regulations, which we have thought proper to be obferved by mafters, who thall bring or fend over flaves to France: We have been informed, that, fince that time, there have been great numbers fent over from thence; fo that the inhabitants, who have chofe to leave the colonies, and are come to fettle in the kingdom, keep their flaves with them, contrary to the meaning of the 15 th article of the fame edich, whereby many of the negroes there have contracted bad habits, and entertain notions of independency, which may be of dangerous confequence; and befides, their mafters have negleeted to have them taught fome ufeful trade; infomuch that, among the numbers that are brought to Erance, there are but few that have been rent back to the colonies, and thofe that havt, were of little fervice, and of very dangerous principles. The care we have always had, to the fupport and increafe of our colonies, would not fuffer us to let fuch abufes continue, which are fo contrary to both; in order to put a ftop to which, we have refolved to make fome alterations in our edict of the month of October, 1716, and to add others, that feem to us neceffary: for thefe, and other reafons of our own knowledge, full power, and royal authority, we have declared and ordained, and by thefe prefents, figned with our hand, we do declare and ordain, as follows:

## ARTICLEI.

The inhabitants and officers of our colonies, who fhall fend over negroe flaves into France, of either fex, for theirimprovement in the principles of religion, and inftruftion in fome trade or employment, proper for the colonies, thall be obliged to have permifion for fo doing, of the governor, general, or commanding officer of the ifland, where they thall be; which permifion fhall exprefs the owner's name who fends fuch flaves, or the name of him to whofe care they fhall be committed; the names of the flaves, with their age and marks; and the owners of the faid flaves, and thofe who fhall be charged with their conduct, thall be obliged to regitter the faid permiffion, as well at the office of the place of their refidence before their departure, as at the place of their enibarkation, in 8 days after their arrival, in the manner as is expreffed in the $2 \mathrm{~d}, 3 \mathrm{~d}$, and 4 th articles of our edict of October 1716 .
II.

In the regifters that fall be made of the faid permiffion, in the admiralty of the ports of France, there hall be mention made, of the day of the arrival of the llaves in the harbours.

## III.

The faid permiffion thall be regifered again, at the marble table of the palais at Paris, defigned for flaves that fhall be brought into our faid city, or at the regifter of the places where they hall be brought to refide; and it thall pecify in the faid regifter, the trade which the faid llaves hall learn, and the mafters who fhall inftruch them.

## F R E

## IV.

The faves, of either fex, who fhall be brought to France by their mutter, or by whomfuever fent, fhall not pretend they have their liberty, becaufe they are come into this kingdom; aut thall be obliged to return into our colonies, whenever their mafters thall think proper: but, if the mafter does not obferve the forms preforibed in the foregoing articles, the faid flaves fhall be confifcated to our ufe, and fent back to our colonies, and employed as we think fit.

> V.

The officers employed, by our authotity, in the colonies, who fhall have leave to come to France, and Ihall have brought flaves to ferve as domeftics, fhall not keep them longer than the time limited for their flay; but, at the expiration, fhall be fent back to the colonies; upon failure of which, they thall be confifcated and employed there, to our fervice, as we fhall think proper
VI.

The inhabitants, who fhall bring or fend flaves to France, to learn fome trade, fhall not retain them there longer than 3 years, reckoning from the day of their arrival in the port fuch flaves as are not fent back, as aforefaid, fhall be confifcated to our ufe, and employed in the colonies in our works.

## VII.

The inhabitants of our colonies, that are willing to fettie in our kingdom, cannot there keep, in their houles, flaves of either fex, when they have not difpofed of their habitations in the colonies ; and the flaves which fhall remain, fhall be confifcated, to be employed in the colonies for our ufe. They may, neverthelefs, fend them to France, obferving the rules above prefcribed, leaving the colonies to learn fome employment, in order to make them more ufeful, at their return, to the faid colonies; and in this cafe, they conform to the regulations prefcribed in the foregoing articles, under penalty of being carried there again.
VIII.

All who thall carry or fend negro flaves into France, and thall not fend them back, according as prefcribed in the 3 foregoing articles, thall be obliged, befides the lofs of their flaves, to pay for each flave, not fent back, the fum of a thoufand lives, into the hands of the commiffioner-general of the treafury of the marine at the colonies, to be employed in the public works; and the licence, which they might otherwife have obtained from the governor-general, and the commanding officers, fhall not be granted, until they have given fecurity into the hands of the aforefaid treafurer of the marine, for the payment of the faid fum, which fecurity thall be mentioned in the faid licence.
IX.

All thofe who have negro flaves in France, of either fex, fhall be obliged, in three months, teckoning from the day of the publifhing thefe prefents, to make a declaration of them, to the board of admiralty neareft their habitation, and give fecurity to fend back, in a year from the date hereof, the faid negroes into the faid colonies : upon failure of which, or not giving the aforefaid fecurity, the faid flaves thall be confifcated, and employed in the colonies for our fervice.
X.

The negro flaves who fhall be brought to France, fhall not marry there, without confent of their mafters, notwithftanding what is mentioned in the 7 th article of our edict, of OAtober 1716.

## XI.

Mafters that fhall have brought flaves, of either fex, into France, ©hall not make them free, under any pretence whatfoeiver, only by will; and fuch freedom, thus given, fhall not be of force, unlefs the teftator dies before the expiration of the time, in which llaves, brought into France, ought to be fent back to the colonies.
XII.

All flaves brought into France to learn trades, as aforefaid, their mafters, who are to inftruct them therein, fhall take care that they are brought up in the catholic religion.
XIII.

Our edid of October $\mathbf{r} 716$ thall be in full force, where it does not derogate from thefe prefents.
Thus we give in command, to our friends and faithful counfellors, members of our court of parliament at Aix, ordering thefe regulations to be read, publifhed, and regiftered, and their contents kept, obferved, and executed, according to their form and tenor, notwithftanding all edicts, ordinances, declarations, arrets, regulations, and ufages to the contrary, wherein they differ from this
This is our pleafure

Phelypeaux.
An arret of the king's council of ftate, which prohibits Gum * from the river Senegal, being exported out of the kingdom, for one year, under pain of confifcation, and three hundred livres penalty, 2d November, 1751. Extracted from the regifters of the council of ftate.

## F R E

gum from Senegal, that was exported to foreign countrics, would occafion a fcarcity of the faid drug in his own kingdom, which his majefty willing to prevent: the king being in council, and hearing the report, hath ordered, and does, by thefe prefents, order, that, reckoning from this prefent arret to the 1 It November 1752, no gum Senegal fhall be exported out of the kingdom to foreigners, on pain of confifcation, and three hundred livres penalty. Therefore, his majefty commands and enjoins the intendants and commiffarics, in the feveral provinces of his kingdom, to have due regard that this arret of council be ftrictly put in execution; which Thall be read, publifhed, and fixed up, wherever it hatl be requifite, that none may plead ignorance thereof. Done in the king's council of fate, his majefty there prefent, held with regard to the finances, at Fontainbleau, ad November 1751.

Signed M. P.
D'Argensen.
*This gum is an exceeding ufeful material, in the filk manufacture of France; and therefore the French have engroff ed almof the whole gum trade of the coaft of Africa, and even prohibited the exportation of the gum Senegal, left they themfelves fhould have a fcarcity, or rather other na tions the benefit of the fame, in their manufatures,

## REMARES.

We have been thus particular with refpect to the meafures that France has taken, in relation to their trade of Africa, in order to make a propet ufe thereof, occafionally, in the fubfequent parts of this york: but what gives the greateft weight to the African trade of this kingdom, at prefent, is perhaps, their great India company, which has the right in this trade, exclufive of all other the fubjects of France; to which privileges and immunities, they have alfo added the following.

An account of the bounties, exemptions, privileges; and encouragements given by the French to their African company, taken from a memorial of the deputies of the council of trade in France, to the royal council of commerce there.

1. An exemption from all local and pro* vincial inland duties of any kind, upon their good's and merchandize in France as alfo from all duties for merchandize exported to Africa, wherewith to purchafe negroes, gold, ivory, \&c. which, confidering the number of fhips they employ in this trade, cannot'be computed at near fo fmali a fum as 150,0001 fterling per annam; nor the whole exempted at to imall a rate as 3 per cent. per ann, ferr. thereon.
2. An exemption from half the cuftoms on all fugars, and other merchandize im ported from the French illands and colonies in America, being the produce of the fale of negroes there: the amount of which will appear by the following moderate computation, viz.
Suppofe 15000 negroes only, (whereas good judges reckon them not lefs than double that number) are imported into the French fugar illands annually; and that 10000 of that number fhould be fold for fugar to be returned to France, at the rate of forty hundred weight of fugar only per head
The duty on importation of fugar into France is 3 per cent. on about two-thirds of the value; which is at the rate of 2 per cent. And there is alfo an inland duty of three livres, or 2 s .9 d . fterling per hundred weight.
Suppofe the price of fuch fugar is computed at no more than 25 s. per hundred; which, upon 10000 negroes, makes 400,000 weight of fugar ; and this, at I per cent. being one half of the duty upon importation, amounts to
3. 400,000 hundred weight of fugar at Is. $4 \mathrm{~d} . \quad$ per hundred, being half of the above inland duty of three livres, or 2 s . 9d. ftetling per hundred weight, is

27,5001.
3. A bounty of ten livres, or 9s. 2 d. fterling to be paid out of the king's revenue, for every negroe carried to the French illands and colonies in America; which upon the faid 15000 negroes only, amounts to
4. A bounty of gs. 2d for every ounce

## F R E

Brought over_manns ferm
of gold duft that fhall be imported from Africa into France.
Suppore only 5000 ounces of gold imported from Atrica into France, which is quite trifling and inconfiderable, when we recollect how rich their fhips in the Guinea trade are in gold, as hath appeared by fome late captures, is - 2296

The total is per ann. in ferl. money - 44,671 .
N. B. The exemption of duties on what the other five thoufand negroes produce in coffee, indigo, cotton, cocoa, \&c. is left out in this account, left any exaggeration fhould appear ; and in every other article, things are extremely un-der-rated, which every one at all acquainted with the extent of the French trade to Africa and America, need not be apprized of.

So well calculated for the advance of the French trade of Africa, as well as of their fugar-illands in America, do thefe meafures appear, that the rapid increafe of thofe trades, in that kingdom, is not at all to be admired, and efpecially fo, fince, from the treaty of Utrecht, they have had no competitors in thofe trades, who have been able to do them any injury. Such has been the finking, and almoft bankrupt ftate of our late African company, from this ara, and fuch the jarring intereft between them and our feparate traders, that France bas taken advantage of both; for they have fome years fince abfolutely excluded our feparate traders, as well as the company, from the whole trade of the Gum Coaft; and from the impotent condition of the company to fupport their dignity and authority, purfuant to their charter, in Africa; this nation has, by means of their great company to the Indies, traded uninterruptedly under the nofe of our Britifh forts and fettlements, while our traders have not been fuffered to approach theirs with impunity.
Can we wonder then, that the French fhould fo well ftock their fagar colonies with negroc-labourers, as to be able not only amply to fupply their own European dominions with fugars, which they formerly took from us and the Portugueze, but to engrofs fo confiderable a thare of the fugartrade out of our hands in foreign markets?
Before the peace of Utrecht, the French had the Affiento for fupplying the Spanifh Weft-Indies with negroes; which proved the means of introducing immenfe quantities of the French manufactures into Spanig America; and, therefore, as the negro trade was carried on by France, it was extremely beneficial to that kingdom. But, when they had greatly enriched themfelves*, and had fo overdone that trade, as to render it good for little to any fucceffor, they very wifely parted with it ; and by the treaty of Utrecht, transferred the Affiento to the Englifh South-Sea company; and, what advantages they have made by $i t$, is too well known to need explanation. See Assiento.

* To fuch a degree did the French trade in the South Seas in the reign of Lewis the XIVth, that they were enabled by a compuration made from the feveral regitters in Spain, and remittances otherwife made (according to authentic intelligence now before me in manufript) to import, into the French dominions, two Huxdred and four Mililóns of Pieces of Eight ; which reduced the Spanifh Weft-Indies to fuch a degree of mifery, as obliged the viceroy of Peru to prefent a memorial to his catholic majefty, thewing the caufes of the inexpreffible grievance the trade laboured under by the French being permitted and countenanced in the carrying on fuch a deftructive trade in the South-Seas; which had, according to the words of the Spanifh memorial, occafionedThe whole trade to be at a fland.
The treafure of the kingdom to difperfe different ways, The negotiations of commerce to be embarraffed.
The merchants to be ruined
The fubjects to be poor.
The quinto's (or king's duties of $\frac{1}{5}$ ) to be decreafed.
The duties to be unjuffly applied.
The public revenue to be diftipated.
The traders in general to be without money :
And foreigners reaping the benefit.
By getting rid of the Affiento, at the time when they had made it worth nothing to any body elfe, they received this advantage by giving it up; they had greater plenty of negroes wherewith to ftock their own colonies, and they came cheaper by them; whereas the acceptance of the Affiento, at that time of day, rendered them dearer to the Britifh plantations, and they have continued fo ever fince: and yet the French have preferved a great thare of the Spanifh WeftIndia trade ever fince likewife.

Remarks on the French African Trade since the laft war, and the Definitive Treaty of 1763.
By the laft war Great-Britain made conquefts of the river
by the Xth article of the Definitive Treaty, his Bria tannic majefty reffores to France the inland of Goree, in the condition it was in when conquered: And his Moft Chriftian Majefty cedes, in full right, and guaranties to the king of Great-Britain the river Senegal, with the forts and facto ries of St Lewis, Podor, and Galam; and with all the rights and dependencies of the faid river Senegal. See English African Company.
To what a degree, and by what meafures, this nation has fo greatly and fo fuddenly advanced their commerce and navi gation in America, we fhall next take into confideration, under the article of French America,-See French America.
FRENCH AMERICA before the last War. Although we have taken notice of this point under the general article of France, yet we have there only touched it in a general way, and in one peculiar light, as preparatory to what we have faid under the article British America, and what we fhall further offer under the prefent head.
Undet the foregoing article of French Arrican Trade and Company, we have fhewed, from the autbority of the deputies of the council of trade in France, what neceffary dependency and connection they have judged there is between the trade of Africa, and that of the French iflands in America; and alfo of what high importance thofe deputies thought thofe colonies to be to the commerce and navigation of that kingdom in general. - This appears from a memorial of the faid deputies of the council of trade in France, to the ropal council in 1701, \&c. the preamble to which I have juft quoted under the article of French. African Trade.
That the commercial ftate of the Frenchiflands in America may be duly reprefented as they really were at this time ( 1701. ) we hall give the reader an authentic account thereof in as narrow a compafs as we can, from the abovementioned memorial: and by comparing their paft with their prefent ftate, [that is before the laft war] we fhall be able to make a true judgment of the advancement of the trade and navigation of thole Erench American colonies. After the deputies of the council of trade having reprefented to the royal council, in the aforefaid memorial, the dependency of the commerce of their American ISLANDS UPON THAT OF AFRICA, they lay before them the then fate of their illand colonies, which is as follows:
The fmall ifland with the terra firma of CayEnNa, comes firft in view. It's coafts are about 60 leagues in extent, not above 10 or 12 of it are inhabited. It's foil is very good; the fugars it produces, whigh are the brown, clayed, white, and middling forts, do near equal in goodnefs the white fugars of Brafil. It affords rocou, which is a drug for dyeing red : it has not above 600 whites, men, women, and chil dren, with about 2000 blacks of both fexes; fo that this large tract of land is almoft uninhabited. And as this ifland is fituated in very near the fame parallel as the Moluccas, where the fine fpices grew, 'tis believed that it might be eafy to cultivate them there, and fo fpare the buying them of tha Dutch; the rather, becaufe the Portuguefe on this fide of the river Amazons, in a fitwation more diftant from the line, have cinnamon.
The illand of Grenade, is in circuit about 15 leagues. The number of whites there is about 200, and of blacks of both fexes about 6oo. There is a pretty good fort on it. It produces fugar, indigo that is excellent ; alfo rocou, cotton, and caffer. The foil is very good, and the colony might be confiderably augmented.
Martinico is the principal colony; the governor and the intendant of our American illands bave their refidence there It's circuit is about 60 leagues. The foil is good, and very fertile in fugars rough and white; cacao, caffet, rocou; it affoids likewife fome indigo and cotton. It had formerly 3500 men bearing arms, and about 16,000 blacks of both fexes. It has three good harbours, feveral good roads for fhipping, and two fmall towns unwalled. It has a good fort in the Cul de Sac Royal.
Guardaloupe, and the land belonging to it, are about 50 leagues in compafs. The foil is pretty good, it's fugars very fine, it affords cotton and ginger. 'Tis not peopled. It had formerly 1500 men bearing arms, and about 8000 blacks of both fexes.
Marie Galante. It's circuit is about 16 leagues. The foil is pretty good, it's fugar fomewhat of the finer fort: it produces indigo, cotton, and ginger. It was taken the laft wat by the Englifh, who atterwards abandoned it. It is not yet able to recever itfelf, having but three or four fugar-plantations fet up again. It has a imall fort, which the Englifh demolithed : we have begun to rebuild it.
The ifland of St Christopher has 28 leagues in circuit. The foil is of an exceilent quality. The French poffefs one half of it, and the Englifh the other. In the laft war we drove the Englifh out of it, two years after they retook it by the treaty of peace, we were rettored to the poffefion of our part. It will be difficult to re-eftablifh that colony in it's firt condition: it would then have above 2000 whites bearing arms, and 12,000 blacks. 'Tis to be feared, that, the next rupture, the Englin will beat us out of it; the more

## FRE

eafily, becaufe they have the iflands of Antigua, Montferat, and Nevis, which lie very near, and are very well peopled. This came true, St Kitts being ceded to England by the treaty of Utrecht.
Sainte-Croix is about 25 leagues round: formerly it had 600 mon bearing arms, and many fugar-plantations. During the laft war the king caufed it to be abandoned, becaufe of the difficulties of defending it : the inhabitants were tranfported to St Domingo. Yet this ifland is a very good one, and produces fugars, indigo, cotton: it has a very good harbour, and a very good bafon, proper for careening fhips: it's harbour is very fafe, and Cheltered from hurricanes.
The laft colony is St Domingo. 'Tis about 500 leagues in circuit; the French poffefs one half of it, from Cape Frangois to the illand Vaches, and the Spaniards have the other half.
At Cape Francols there is a good port: there are 0,00 men bearing arms, and about 2000 blacks of both fexes. Southward is Port de Paix, which the Englifh have in part deftroyed, after plundering it. The inhabitants are difperfed, the place is almoft abandoned. The diftrict of Leogane is more confiderable; there the governor lives, and the fovereign council is held. It had about 2000 men bearing arms, and about 15,000 blacks of both fexes.
Petit-Guave has a good port, and had about 600 whites and 2000 blacks.
There are fome other illands, as La Dominieue, Les Xaintes, St Martin, and St Barthelemy, which are of very little importance, and almoft uninhabited.
The laft war, and the ficknef known by the name of Siam, which a fhip brought thither from that country, have much diminifhed our colonies; this, and the neighbourhood of the iffands which the Englifh poffefs, are very preffing motives io our fudying feriouly the fafety of thofe iflands and colonies. Nothing but the trade of blacks can furnifh us with hands enough to people and cultivate our iflands.
After this the deputies go on in their memorial, reprefenting the difadvantages of carrying on the Guinea trade by means of an exclufive company, which not being to my purpofe at prefent, I fhall wave.
When once, continue the deputies of the council of trade, this commerce thall be well eftablithed, and our colonies fhall be fufficiently focked, it will not be difficult for us to imitate the English of Jamaica, in the traffic they have with the Spaniards. Wemay, by the way of St Domingo, tradein negroes: by favour of that trade, we might vend great quantities of our goods and manufactures to the Spaniards of the neighbouring iflands, and on the coaft of the continent, and might get of them a great deal of gold and filver in exchange *. The grand occurrence of the union of France and Spain gives us hopes of an open commerce, and an eafy correfpondence, which may enable us to undertake any thing. We have a great many Thips that lie ufelefs in our ports, and are rotting for want of cmployment. The intendants of the maritime provinces can atteft this truth : 'tis grievous to the king's fubjects to fee their shippinft perifh thus, while they might make good ufe of them, had they the liberty which they defire.

* This we have feen they did, from the memorial of the commerce of Peru to his Catholic majelly, and have done fo more or lefs ever fince.

## Remarks.

Befides the foregoing iflands, except St. Chriftophers, France poffeffed Canada, and all it's Defendencies, as well on the continent, as the gulph and river St Lawrence. Gee Canada, America, British America.-They poffeffed alfo Cape Breton.-By the laft war we conquered Canada, and Cape Beton:-And by the Definitive Treaty of 1763 , Canada and all its Dependencies are ceded to the crown of England, and alfo Cape Breton; and the fmall iflands of St Peters and MignoLen, near Newfoundland, are ceded by Great-Britain to France, as a fhelter for their fifhermen only, it being flipuIated, that they fhall make therein no fortifications, nor have a guard of more than 50 men for the police. See America for the whole of the Definitive Treaty of i763, article VI.
We having alfo by the laft war conquered the French SugarIlands of Martinico and Guardaloupe, Marie Galante, and Defirade, and by the VIIIth article of the faid treaty, GreatBritain cedes them to France; and by the IXth article France cedes to Great-Britain the illands of Grenada, and of the Grenadines; and the partition of the iflands, called Neutral, is agreed and fixed, fo that thofe of St Vincent, Dominica, and Tobago, Shall remain in full right to Great-Britain; and that of St Lucra fhall be delivered to France, to enjoy the fame likewife in full right. See Brifish America.
A Continuation of the French Deputies Representation.
To omit notbing in a matter fo important, [as that of the French colonies] it is neceflary to reprefent, that the duties

## FRE

which were fettled by the arret of the 20th of June 1698 on the white fugars imported from the inands, at 15 livres the hundred weight, and on the brown fugars at 3 lives, over and above the 3 per cent. duty to the domaine of the weft, are too high, and prejudicial to the commerce of France, and advantageous to the trade of foreigners, for the reafons following:
I. The Portugal fugars which are imported into France, pay but 15 livres, the hundred weight, and are exempted from the duty of 3 per cent. of the weftern domaine, which thofe of our colonies pay.
II. High duties hinder great confumption; the dearer any thing is, the more fparing are people in ufing it; this is contrary to the defign of improving the colonies. 'Befides, 'tis certain, that, when fugars come to fink in their price, they cannot bear fo high a duty: it will therefore be expedient to reduce the duty of 1.5 livees to 8 , and the duty on brown from 3 livres to 30 fols; for, at this very time, white fugars are worth but from 25 to 30 livres the hundred weight, and the brown from 12 to 13 livers
III. When the crop of fugars fhall be in any degree plentiful, the entrepoft ought to be allowed, to favour the vending of it, and the carrying of the over-ftock to foreigners. In Holland the brown fugars pay but 20 fols, and the white but 30 fols; it would therefore beconvenient to reduce the duties in France to fuch a foot, that our fugars might be carried out with the fame advantages as thofe of nations.
The royal council feems to have defigned to remedy thefe in e conveniences, by the arrêt of the 28 th of June 1698 , which allows the carrying directly to foreign parts clayed and refined fugars, paying only the 3 per cent. duty on the weftern domaine.
But the execution of this arret would be prejudicial to the ftate, becaufe the French fhips, going diredty from the American iflands to foreign ports, are neceffitated, after they have unladen, to refit ; this creates expence; money muft be laid out in fubfifting the fhips companies, and in re-victualing to return to France. This is confuming foreign commodities; our carpenters, fail-makers, rope-makers, and other mecbanics who work to the fea, are deprived of the profits, which they would reap, if the thips made their voyage directly back to France.
The crews oblige the captains to pay them their wages; it cannot be avoided, the cargo being a fecurity for the wages of the feamen; this money is diffipated among foreigners in debauchery, and their families, which are in France, are deprived of their fubfiftence: in a word, this practice will ruin our navigation inftead of increafing it.
IV. The mifmanagement of the clerks (or agents) of the farmers, is very prejudical to this commerce; they make a difficulty to return the duties (or pay the diawbacks) which they are obliged to do, when the fugars refined in France are fent out of the kingdom: they take advantage of their authority, and of the protection with which the council honours them; the length and charge of the proceedings difcourage the merchants.
V. Provifipn fhould be made by proper regulations, againft the frauds which the inhabitants of the illands are apt to commit. Care has been already taken to correct thofe which they ufed in making of fugars, by ordering every one to put his mark on the calks with a hot marking-iron, in order to difcover and proceed againft the culpable: 'tis neeceflary to oblige every one of the inhabitants to kgep in his houle a good beam and frales, with weights of lead or iron, marked according to the fandard, and to forbid them to make ufe of filliards and weights of fone. It is likewife neceflary to oblige the director, who was paid a duty for weighing after the rate of one per cent. for all goods, though he does not weigh them, to fend every year an expert mafter-weigher, with brafs weights, and other neceffaries, for afcertaining, and marking according to the ftandard, all the weights of the inhabitants, making them pay for the materials added to defective weights, and this for remedying the frequent abufes which are committed by falle weights.
The deputies are obliged to obferve further to the royal council, that, for three or four years paft, a duty is levied at St Domingo of two fols per livre on indigo hipped off there. This novelty is the more pernicious, becaufe that drug ferves for dyeing our manufactures in blues or blacks, and becaufe we make a confiderable traffic thercof to the north. 'T is of great impartance for the royal council to be plealed to take off this duty, which is capable of ruining the cultivation of this drug, which is very near as good as that of Guatamala. VI. It might be proper to add to the regulation by which the council injoins every fhip to carry a certain number of lads or fellows, who hire themfelves to feryice for augmenting the colonies, which might be taken out of the Hôtel Diu, and maids brought up to, and expert in manufatures, to be married to the hired men-fervants after they have ferved out their simes; and to forbear fending the common proftitutes, who are more likely to corrupt and infect the country, than to people it ; and, as there are abundance of beggars in France able to work, who dive in perfect idlenefs, it would be ef-

## F R E

F R E

Tential to order the juftices to caufe numbers of them to be taken up, and thipped off to our colonies.
VII. Lafly, it would be convenient to eftablifh four confular juifdictions, in the illands of St Domingo, St Cbriftopher, Martinico, and Guardaloupe, in the nature of thofe eftablifhed in France: they might be compofed of one judge and four confuls, who might decide fovereignly all caufes to the fum of - - , and for greater fums give a liberty of appeal to the fovereign court of the place.
About fixty years ago the French were little verfed in commerce, and little fkilled in navigation. In thofe days it was neceffary to form compamies, and to grant them privileges, in order to engage them to beat out, for the king's fubjects, tracks of commerce which were unknown to them. 'Tis expedient and very beneficial to the ftate to act in the like manner, as often as new fettlements of colonies, clearing and cultivating of new difcovered places, or new inventions are propofed ; yet, in thefe cafes, the privileges ought not to be granted but for a certain number of years: but, unlefs on fuch occafions, nothing is more deffructive to a ftate than exclufive privileges.

Remarks with regard to the French laws, ordinances and regulations of their American colonies before the laft war.

No man of fenfe, and acquainted with the nature of trade, can read thefe fentiments of the French deputies of commerce, which they laid before the royal council, but muft applaud them, they being fo well adapted to the advancement of colonies, efpecially in their infancy, as it were : nay, we find, from the fenfe of thefe deputies themfelves, that the whole trade of France was then but in it's infant ftate; for they acknowledge, that, about forty years before this, the Erench were little verfed in commerce, and little fkilled in navigation : and, although England has bad the ftart of them in trade and navigation by fome ages, yet we experience, that they have already overtaken us. Could they have poffibly effectuated thefe great things, if the laws and regulations of their trade, and the encouragements they have conftantly given within this century, were not exquifitely well calculated to anfwer the end propofed ? They had the advantage, indeed, of our laws for their guidance ; and they bave fhewed as much fagacity in imitating the beft, as in rejecting the worfe: whereby they have, in many refpects, improved in their laws and regulations of commerce and navigation upon our's ; and, if there is any thing importantly ufeful to be borrowed from them in our turn, 'tis to be hoped, that we fhall not be fo unwife as to condemn it, becaufe it is of French production.
There is one thing of which our readers fhould be put in mind, efpecially as it frequently occurs, not only in the memorials of the French deputies of trade, but in many of their beft political writings; that is, not to be led away with the praifes they often beftow upon this nation, with relation to our laws for the regulation of trade, or pay too much regard to the profufe encomiums they have given upon the wifdom we have fhewn in conducting our colonies, an inftance of which we juft now had from the French deputies. Thefe are not to be confidered as genuine and candid reprefentations, flowing from the real fentiments of their authors in general, but as artificial colourings, neceffary to raife the jealoufy of thofe to whom they write, and making them thereby the more keen for taking proper meafures for the deftruction of our trade. When the old Roman fenator produced the fruits that came from the neighbourhood of Carthage, it was not fo much to magnify the foil where they grew, as to warm his countrymen into a defire of fubduing the inhabitants of the region that produced them.
Nor fhould it be lefs oblervable by the Britifh reader, with what freedom, with what becoming, yet unreftrained freedom, the deputies of commerce, chofen by the merchants *, addrefs themfelves to the king in council. What is ftill more encouraging and extraordinary is, that the deputies of particular trading cities are permitted, and, indeed, frequently commanded by the royal council, to make their objections againft what fhall be urged by the deputies of other cities : nay, they fuffer their replies and rejoinders to be laid before them, as long as either of the parties have any fignificant matter to urge. By this means, they have the fubject fo effectually canvaffed by the deputies, previoully to their own determinations, that the royal council rarely fail to obtain fo thorough an infight into the cafe at laft, as to enable them to take their refolutions for the public interefts. To fhew the nature of which, is one reafon for giving our readers a part of the memorial before reprefented. But it mult be obferved, that what thefe memorialifts fhall fubmit to the confideration of the royal council, is not to be taken as the real laws and regulations of the trade of France; thefe are only to be found in the arrets, edicts, ordinances, and letters patents; all which are the refult of the determinations of the royal council, in confequence of the information that has been laid before them by the deputies of commerce. I had taken no notice of this, had I not frequently obferved, that the memo-
rials of thofe deputies had been quoted by fome of our Englith writers upon trade, as French laws and regulations of validity: whereas they are to be no otherwife confidered than in the light wherein we have reprefented them.
*For the nature of this inflitution of the deputies of com merce in France, fee the article Chamber of Commerce.

Another reafon which induced me to cite fo much of the beforementioned memorial as I have done, is to hew, from the pen of the deputies of commerce themfelves, what was the ftate and condition of the French iflands in America when this memorial was drawn up; and, by comparing their ftate in 1701 . with what it is at prefent, we fhall be able to form a good judgment to what degree the commerce of their colonies has advanced in that number of years. This will an ufeful enquiry. Moreover.
As it will appear that thefe colonies have extraordinarily increafed in their trade and navigation from the year 1701, and that to fuch a degree as greatly furprized this nation in the late war of 1741, it may be further ufeful, and highly fatis. factory, to have before us in miniature the real meafures that have been taken by France, from time to time, to raife this commerce to the height they bave done; and more efpecially fo, as thofe French laws and regulations may afford many im portant hints for future confideration, with refpect to our own colonies in general.
Upon turning over the arrets, edicts, ordinances, declarations, and patents, iffued by the royal council, in relation to the French colonies in America, I fhall take notice of fome of the effential, fubfequent to the foregoing memorial.

Regulations concerning hired fervants, and fire-arms, exported by merchantmen to the French colonies in America and New France. November 16, 1716, regiftered in parliament.

The king, being informed that there were divers laws and ordinances which obliged merchants, at different times, to export, to the French colonies of America, cattle, hired fervants, and as much flour as the colonies had occafion for and, by thofe laws of the 19 th of February 1698, the 8th of April 1699, the 26th of December 1703, the 17 th of November 1706, the 3 d of Auguft 1707, and the 20th of March 1714, they were obliged to fend, both to the faid iflands and New France, a certain number of hired fervants and buccaneer guns for hunting ; which obligations were declared in his majefty's palfiports: but thofe merchants believing themfelves to be exempt from fuch obligation, by an edict of February 1716, they deffited from fending the particulars aforefaid. His majefty, never intending to free the merchants, by the faid edict, from the faid obligations, the inhabitants having now as much need of hired fervants and thofe guns as ever, has thought proper, by the advice of Monf. the duke of Orleans, his uncle, regent, to explain his intentions, and make the prefent regulation, which he requires to be executed for the future.

TITLEI.

## Of hired or articled fervants.

## ARTICLEI.

All captains of merchantmen that fhall go to the French colonies of America, and New France, or Canada, excepting thofe in the negro trade, fhall be obliged to carry thither hired fervants, viz. a thip of 60 tons, and under, fhall carry three hired fervants; from 60 to 100, four ditto ; and, from 100 and upwards, fix hired fervants.
The terms of carrying thefe fervants thall be mentioned in the permiffion given by the admiral to the captain for failing. III.

Thofe fervants fhall be between the age of 18 and 40 , none lefs than four feet in ftature, ftrong, fit to work, and thall ferve three years.
IV.

Such fervants fhall be examined by the officers of the admiralty at the port from whence the fhips hall fail, and thofe thall be rejected who are not qualified according to the preceding article, and of a good conflitution.
V.

Their particular characteriftics of the fervants fhall be minuted in the Chip's book.
VI.

Such of them that are handicraftsmen and mechanics, ufeful to the colonies, thall be accounted as two, and the trade each is of thall be fpecified.

## VII.

The captains of fuch merchantmen, as foon as arrived, thall deliver them to the commiffary appointed for the purpofe, who fhall examine whether they anfwer the defcriptions required, and are the identical perfons who embarked.
VIII. The

## F R E

VIII.

The captaine and inhabitants of the colonies thall agree upon the price ; but if they cannot agree, the commiflaries thall oblige thofe inhabitants that have not the number of hired fervants required by the ordinances, to take thert, and fettle the price.
IX.

The captains fhall bring a certificate from the commiffioners, tefifying the faid fervants to be the fame as embarked. X .
The captains, on their return to France, fhall produce the faid certificate to the officers of the admiralty.

## XI.

The captains and owners of fhips thall be abfolutely condemned in the penalty of 200 livres for every fuch articled fervant not carried to the colonies, without appeal.

## T I T L E II.

## Of fire-arms.

## ARTICLEI.

All captains of merchantmen who thall fail to the French ifland colonies in America, and New France, or Canada, except thofe who are concerned in the negro-ttade, fhall be obliged to carry thither in each veffel four buccaneer-guns, or four furees for hunting, mounted with brafs.
II.

The condition upon which thefe guns may be carried, fhall be inferted in the permiffion given by the admiral for fuch thips to faill.
III.

Thefe buccaneer-guns fhall be four feet four inches long, light, and carry balls of 18 to the mark pound weight.
IV.

The fufees for hunting fhall be four feet long, and light. V .
The faid captains fhall, on arrival in the colonies, depolit the faid arms into the king's arfenal where they fhall land, in order to be examined and proved in the governor's prefence.
VI.

If any piece thall not hold in the proof, the captain fhall be fined $3^{\circ}$ livres.
VII.

The faid 30 livres fhall be immediately laid out by the governor in buccaneer hunting-guns, and diftributed to the poor inhabitants.

## VIII.

The faid captains fhall leave the faid arms 'till they are fold, or 'till the governor fhall have diffributed them among the companies of the militia; in which cafe he, in concert with the intendant or commiffary, fhall order payment for the rame.

## IX.

The captains thall take a certificate from the governor, attefted by the iftendant, of the fending back fuch guns, and of the fum paid on account of not ftanding proof.
X.

They thall alfo be obliged, on their return to France, and in making their declaration, to carry with them the faid certificate to the officers of the admiralty.

## XI.

The captains and owners of fuch merchantmen fhall be condemned by the officers of the admiralty in 50 livres fine for every fuch gun that they fhall omit to carry into the colonies, without appeal.

## T I T L E III.

## Of profecutions and fines.

## ARTICLE I.

All profecutions, occafioned in difregard to the faid regulations, fhall be undertaken by the king's folicitor of the admiralty.

## II.

The fines made to the admiralty fhall belong to the admiral ; and thofe made by the marble-table, the one half fhall go to the admiralty, the other to the king, according to the ordinance of 168 r .
The governors, intendants, or commiffaries in the colonies, Thall jointly tranfmit an account every balf-year to the council of marine, of the number of articled fervants and guns that every merchant fhall fend to the colonies, of the fums paid for defective arms, and how the arms have been employed.

Signed LEWIS.
Phelypeaux.
In confequence of which, letters patents were granted by the king, in the manner we have before given inftances of, to caufe the faid regulations to be duly obferved in his dominiens.'

[^8]
## FRE

## Remarks.

It is obvious enough from the leaft reflection, that, (r.) The intention of the preceding regulations is, to people the French colonies with a number of Whites proportionate to that of Blacks, that the latter might not be an over-match for the former, and diffurb the plantations with infurrections. (2.) That, by fending over French workmen, as atticled fervants, is to render labour cheaper in the plantations, and fo far to inftruct the negroes in fuch workmanfhip as may render them the more ferviceable to the planters. And, (3.) To accuftom the people to, and inftruct them in, the ufe of arms, as well to defend their colonies at the leaft expence to the crown, as to train them to hunting; and that not only to fupply themfelves with food at the leaft expence, but for the fake of the peltry trade in New France, or Canada, which is the effential article of that commerce.
Nor are thefe regulations wifly adapted only to thofe good purpofes, but fo judicioully are the checks contrived among the officers, both in France and the colonies, who are to fee thofe regulations duly put in execution, that they are rarely neglected: and this is the cafe of moft of the laws in France; they are as vigilantly executed, as properly accommodated to the ends thereby defigned to be anfwered. Do not fuch-like meafures give firit to the laws, and prevent their remaining a voluminous dead letter, or incumbrance upon the people, made ufe of only by iniquitous law-trappers, the greateft peft of fociety, to fill the people with eternal difquietudes, at length to rain them, and unfit them to carry on their commerce?

Marine laws to be obferved in all the ports of the iflands and French colonies, wherever fituated. Of January the i2th 717.

The ordinances made by his majefty in the year 168 I , being reprefented to the king relating to the government of the marine, to be obferved in all places of his dominions, and which have never yet been put in execution; and there being no court of admiralty at prefent eftablifhed in the colonies of America, nor in the Eaft-Indies, which gives room to ignorant pretenders to fet up for judges in maritime affairs, to the great detriment of trade and navigation, which the kings, his majefty's predeceffors, always looked upon of the utmoft importance, and what cannot be well regulated but by wife and falutary laws, adapted to that purpofe: his majefty, by the advice of the duke of Orleans, his uncle, regent, \&c. has refolved on the prefent regulations:

TITLEI.
Of the judges of the admiralty, and their jurifdiction.

## ARTICLEI.

There fhall be, for the future, judges appointed, well ikilled in Maritime Affairs in all the French colonies, and in all places where the French have fettements, called officers of the admiralty, diftinct from the civil ones, who fhall conform themfelves according to the ordinances made in 1681, and other marine laws.
The king's * lieutenants and follicitors cannot be admitted 'till 25 years of age ; if they are not graduates, yet that fhall be difpenfed with, provided they have a competent knowlege of the maritime laws and ordinances, in which they thall undergo an examination before admittance.

* A lientenant, in this fenfe, is a magitrate that prefides in the courts of admiralty, to fee that the royal edicts, ordinances, \&c. are duly put in execution.

## T.I T L E IIf

Of the methods of proceeding in the courts of admiralty and their judgments.
Demands for the payment of part, or all a Aip's cargo, ready to fail to France from the colonies, fhall be tried fummarily, and executed, notwithftanding an appeal, and the detainers of fuch merchandizes fhall be compelled, by the fate of their effects, and even by the detention of their perfon, to difcharge their obligation, \&c.

## TITLE IV.

Of granting permiffion for failing, and reports relating thereunto.

No veffel thall fail from the ports and havens of the colonies, and other French eftablifhments, either to return into France, or to paff from one colony to another, without permiffion or licence from the admiral, on pain of confifcation of thip and cargo, \&c.
The mafters of flips whofe ordinary navigation lies in carrying fugars, or other merchandizes, from one port to ano-
ther in the fame iffand, as alfo thofe who navigate from illand to ifland, and go from Martinico to the inands of Guardaloupe, Grenade, Grenadins, Tobago, Mary Galante, St Martin, St Bartholomew, St Alouzie, and St Vincent, St Dominico, and thofe that go from the illand of Cayenne to the province of Guiana, to the coaft of St Domingo, and to the ifland of Tortuga, fhall take licences from the admiralty, which Ghall be granted to them for one year.
Thofe who carry on trade from the IAe Royal, or Cape Breton, from perte to port, or who go to the adjacent illands, as the iffand of Sable to that in the gulph of St Lawrence, and to the coafts of the faid gulph, fhall likewife take out licences from the admiralty, which ofall be granted them for one year ; but if they come to Quebec, they flall take out a new licence.
The mafters of the faid thips, before receiving their licences, thall give fecurity not to go into any ifland, or to any fereign coalt, on pain of confifeation of thip and cargo, and a fine of 300 tives.
The maiters of hips, who hall trade in the river and gulph of St Lawrenee, fhall alfo take licences from the admiral, which fhall be granted them for a year ; and thofe chat fall go from Quebec to Cape Bretorn fhall do the fame.
Licences For fithing thall not be granted witheut the confent of the governors, who thall take cognizance of that branch of trade, that it is not abufed by trading with foreigners.
All mafters of fhips arriving in the colonies and other Freach fettements, hall be obliged to make their report to the lipu-tenant-geneml of the admiralty, 24 hours after their arrival, on pain of fuffering an arbitrary fine.
Excepting only thofe who arriving at Cape Breton on the filhery account, for they may enter into the ports and havens where there is no admiralty; in which cafe they fhall make their report at the neareft place where there is a court of admiraley, and that within one month from the time of their arrimal, under the fame penalty.
His majefty forbids all mafters of hips from unloading any merchandizes before making their report, unlefs in cafe of imminent danger, om pain as well of corporal punidhment, as conffeation of the merchandizes fo unloaded.
The king's follicitaf of every court of admiralty fhall be opliged, at the end of every year, to fend to the admiral a ftats of the officers of the admiralty of their juridiction, and of whatever has occurred of importance, as likewife a lift of the hips arrived there, with the day of their arrival, and of gheir departure, according to the manner that thall be preferibed them.
All merchants, mafters, and captains of thips, are forbid navigating in the American feas, to carry on any commerce with foreigners, or to fand with this intent on the coaft or illands of their rettlements, under pain the firft time of confifeation of fhip and cargo; and in cafe of repetition, the mafter and failors fhall be fent to the gallies,
The mafters and pilots, in making their report, fhall reprefent their lieences, declare the time and place of their de-parture, and the loading of their fhips, the courfe they have feered, the hazards they run, the accidents happened to their veffel, and every circumftance relating to their voyage.They thall alfo reprefent the journal of their voyage, which Shall be returned to them, if defired by the officers of the admiralty, within eight days, and without any expence, after they fhall have extracted whatever is requifite to render the faid navigation more fecure*, of which they fall take care to give an account to the admiralty every three months.

- This is certainly a very judicious regulation, and tends greatly to the fecarity of navigation.

The captains and mafters of thips who arrive from the French colonies in the ports of France, thall be obliged, in making their report, in what manner they were received in the colonies, how juftice was adminitered to them, and what charges and averages they were obliged to pay from their arrival to their departure: his majefty commands the officers of the admiralty to interrogate the mafters and captains upon thefe particulars; to receive the complaints of the paffengers and failors, who have any to make $t$, and to direct a verbal procefs thereof, which fhall be made, in order to be fent to the admiral of France.
$\dagger$ This alfo is mighty well calculated for the regulation of navigation.

## TITLEV.

Of the vifiting of thips.
On the arrival of fhips, the officers of the admiralty thall vifit them, according to the edict of 171 I . They thall take account with what merchandizes they are laden, what failors they bave, what paffengers they have brought, and they fhall fignify the day of the fhip's arrival, and thall verbally give an account thereof.
The vifitation of fhips intended to return to France, fhall be made before their loading is taken in, by the officers of the
admiralty, with an approved carpenter, and in prefence of the mafter, who Gall be obliged to affift therein, under pain of an arbitrary fine, to examine if the veffel is in fit condition for the voyage intended.-They Chall likewife examine into all the fhip's tackle, and every thing thereunto belonging, excepting the failors and the provifions, and this before one or two captains appointed for that purgofe by the officers of the admiralty, in order to know whether the flip is fit for the voyage in all refpects; and the mafters of flips who are preparing for their loading, thall be obliged to apprize the officers of the admiralty thereof, two days before they begin fo to do, under the penalty, for difregard hereof, of the expence of unloading the faid fhip, and reloading of another $\ddagger$.

## $\ddagger$ Is not this exquifite policy, for many reafons that will naturally occur to the judicious reader?

They fall alfo take the declaration of the mafter, with regard to the quantity and quality of the provifioms, in order to judge whether they are competent to the length of the voyage, and the number of failors and paffengers.
If two thirds of the failors make declaration againit the mafter of the fhip and the purveyor, that the provifions are not of good quality, or that there is not the quantity mentioned in the mafter's declaration, the officers of the admiralty thall teftify the fame; and in cafe the declaration proves falfe, the mafter and the purveyor thall be each condemned in the fine of 100 livres, and to take the provifions themselves as Thail be ordered, which fhall be profecuted by the follicitor of the admiralty, and of apother whom the failors fhall nominate, \&c.
The officers of the admiralty thall prepare a verbal procels of the condition of the thip, of the tackle and the provifions; a copy of which fhall be delivered to the mafters, who are obliged to reprefent the fame to the admiralty at the place of their return, under the penalty of an arbitrary fine.
Done at Paris,

Then follow letters patents of the fame date, ratifying the foregoing, and ordering the frict execution thereof; of the nature of which, as we have given inftances before, fo we Shall not repeat the fame.
The king's letters patents, concerning the regulations for the commerce of the French colonies, of the month of April, 1717.

LEWIS, by the grace of God, king of France and Na* varre, \&c. The late king our moft honoured lord and greatgrandfather, having, by an edict of the month of Deceraber 1674, fuppreffed the Weft-India company, before eftablifhed by an edict of May 1664, with an exclufive privilege of trade to the French iflands of Anerica, and baving united the lands and countries thereunto belonging to the crown of France, and permitting all his fubjects to trade freely to thefe parts: his majefty being defiraus to render this commerce more flourilhing, by additional favour: this confideration excited him to iffue divers arrets of the 4 th of June, 25 th of November 1671, the 15 th of July 1673, the ift of December 1674, the 10th of May 1677, and the 27th of Auguft 1701; by which he exempted, from all duties of exportation whatioever, all provifions and merchandizes, being the product and manufactures of this kingdom bound to the French colonies ; and by the arrets of the Ioth of September 1668, the 19th of May 1670, and the 12 th of Auguft 1671, he granted them the liberty to admit, into the ports of his kingdom, merchandizes coming from the faid colonies: and we being informed, that the different fituation of public affairs occafioned a multiplicity of other arrets, irreconcileable with each other, and in confequence thereof created litigations between merchants and our farmers-general of the revenues, and prevented our fubjects from extending our commerce, proved a clog to trade, fo ufeful and advantageous to our kingdoms: we have judged proper to provide againft thefe litigations, by a fixed and ftanding law, after having examined the memorials that have been prefented to us upon this head, by the merchants of our kingdom, the anfwers of our farmers of the revenue, and all edicts, declarations, and arrets, relating to this matter: thefe, and other reafons moving us thereunto, we have by the advice of, \&c. and we will and decree, \&e. as follows :

ARTICLEI.
The armaments of fhips intended to fail to the faid ifland colonies, thall be made in the ports of Calais, Dieppe, Havre, Rouen, Honfleur, St Malo, Morlaix, Breft, Nantes, Rochelle, Bourdeaux, Bayonne, and Cette. II. ${ }^{\text {. }}$

Merchants, who fhall fit out ihips in the ports of the cities aforefaid, for the French inlands and colontes, thall give fecurity to the fecretary of the admiralty, whereby they thall

## FRE

be bound under the penalty of ten thoufand livres to caufe their fhips to return directly from the colonies into the fame port from which they failed, unlefs otherwife cempelied by ftrefs of weather or fhipwreck; and the merchants fhall caufe fuch fecurities to be depofited in the farmer of the revenue's office.
III.

All provifions and merchandizes, either of the production or fabrication of the kingdom of France, even filver plate, wines and brandies of Guyenne, or other provinces, defigned to be exported to the French ifland colonies, thall be exempted from all duties of exportation and importation, as well from thofe of the provinces of the five great farms, as of thofe reputed foreign provinces; and likewife from all local duties, in carrying merchandizes from one province to another, and in general from all other duties, which tend to sur advantage, thofe only excepted, which relate to the general farm of aids, \$c.

## IV.

All warlike ammunition, provifions, and other things necerfary, bought in the kingdom for the victualling and fitting out of fhips appointed for the French iflands and colonies, Chall enjoy the fame exemption from duties.

## V.

The provifions and merchandizes of the kingdom, appointed for the French inlands and colonies, and coming from one fea-port to another in the kingdom, fhall be, upon their arrival in the ports, where intended to be landed in the faid inles'and colonies, warehoufed, and not be moved from thip to fhip, on pain of confifcation, and a thoufand livres pepenalty.
VI.

Merchants who thall have brought provifions and merchandizes of the kingdom into the port, appointed for embarkation, Chall be obliged to declare, at the cuftom-houfe of the place of their unloading, if there is any one; if not, at the neareft to the faid place, the quantity, quality, weight, and meafure of the provifions and merchandizes defigned for the French illes and colonies, in order to have them vifited, leaded, or marked, by the commiffioners of the farms, to have their fecurity difcharged, and be obliged to return, within three months, a certificate of their being taken from the depofitory warehoufe for embarkation, as before declared; but fuch embirkation may be made without warehoufing of prowifions and merchandizes brought by land or river-carriage.

## VII.

Carriers fhall be obliged to reprefent, and caufe to be examined, thofe difcharges of fecurity by the commiffioners and directors of the farms in the cities, wherever they are eftabilhed; and the faid commifioners fhall teftify, without any delay or expence, the number of tons, cafes, \&c. included in the faid difeharge, and oblerve if the leads and marks affixed, \&c. are intire and undefaced, without minutely examining into the faid provifions and merchandizes, or opening the tons, bales, or cafes, \&c. unlefs the leads, \&c. Thall be broken, defaced, or changed. - And if, on examination, any fraud appears, the goods thall be confifcated, and the offenders condemned in 500 livres penalty.
VIII.

The faid provifions and merchandizes fhall, before their embarkation, be vifited and weighed by the commiffioners of the farm, in order to afcertain the quantity, quality, weight, and meafure thereof, and they thall not be laden in any veffel without the faid commiffioners being prefent.

## IX.

Merchants fhall give fecurity to the officer of the farms at the port of embarkation, to report, in a twelvemonth or more, a certificate of the difcharge of the faid provifions and merchandizes in the French inands and colonies; and the faid certificate fhall be wrote on the back of the difcharge of the fecurity, and figned by the governors and intendants, or by the commandants and commiffioners fubdelegated in their refpective diftricts, and by the commiffioners of the farms of the weftern domaine, on pain of paying four times the duties.

## X.

Provifions and merchandizes coming from foreign countries, whofe confumption is allowed in the kingdom, even thofe which come from Marfeilles and Dunkirk, fhall be liable to the dutics of importation due to the firft office of farms, by which they fhall enter into the kingdom, notwithftanding they thall have been declared to be intended for the French inlands and colonies; but when they Ghall be exported to the faid illands and coloniea, they fall be intitled to the exemptions mentioned by the third article.

## XI.

We permit, notwithftanding, to come from foreign countries, into the ports beforementioned in the firft article, falt beef, to be fent into the faid iflands and colonies, and the fame thall be free from all duties of importation and exportation, on condition that it Chall be warehoufed as aforefaid, on pain of confictation.

## FRE

## XII

Merchants of our kingdom hall not load for the French illands and colonies any foreign merchandizes whofe importation and confumption are probibited, on pain of confifcation, and 3000 livtes fine, which thall be impofed by the officers of the admiralty.
XIII.

The filk, and other merchandizes of Avignon, and the county of Venaifine, which thall be declared for the French iflands and colonies, thall pay the duties required at importation, and be exempt from all duties of exportation, and all others, thofe excepted which depend on the genesal farm of aids and domaines.

## XIV.

Swifs linens that are free from all duties of importation, thall not be allowed the exemptions mentioned by article the third, although defigned for the French. iflands and colonics.
XV.

Merchandizes and provifions of all forts, of the produce of the French iflands and colonies, Ball be warehouled at their arrival in the ports of Calais, Dieppe, Havre, Rouen, Honfleur, Rochelle, Bourdeaux, Bayonne, and Cette; to the end that, when they are unhoufed to be exported into foreign countries, they fhall be intitled to the exemption of duties of importation and exportation; even to thofe belonging to the farms of the weftern domaine, with a referve only of three per cent. to which they flall be liable, \&cc.
XVII.

Merchants of the cities beforementioned, who thall export by fea merchandizes which come from the faid inands and colonies, thall be obliged to make a declaration at the office of farms eftablifhed in the port from whence they fhall depart, of the place where they are intended to be fent into foreign countries, and to give fecurity, within fix months; or longer, to report a certificate in proper form of their unloading, figned by the French conful, and, in cafe of his abfence, by the judges of the place, or other public perfons, on pain of paying four times the duties.

## XVII.

Merchants belonging to the ports inentioned in the firf article, fhall be allowed to fend by land, into foreign countries, raw fugars, indigo, ginger, rocou, and cacao, which come from the French illands and colonies, and caufe them to pals, by tranfit, through the kingdom, without payment of duties of import or export, nor other duties, except thofe depending on the general farm of aids and domaines, on condition of declaring to the office of farms, at the port of their departure, the quantities, qualities, weights, and meafures, and of having them vifited and leaded, and taking the difcharge of their fecurity, and promife, within four month or later, to produce a certificate of the fending fuch merchandize out of the kingdom ; which certificate fhall be wrote and figned on the back of the faid difcharge of the fecurity, by the commiffioners of the laft office of farms at their going out of the kingdom, after the faid commiffioners have allowed the leads, and vifited the faid merchandizes; and the carriers fhall be obliged to caufe the faid difcharges to be infpected by the faid commiffioners of the farms of that rout, and by the directors of the farms, where fuch are eftablifhed: all which muft be done and performed on pain of paying four times the duties, and confifcation of the carriages and horfes of fuch who thatl neglect or offend as carriers.-Thefe precautions taken, the faid merchandizes hall not be opened, and the faid directors and commiffioners thall verify, without any delay or expence whatever, the number of tons, cafks, bales, \&c. and examine if the leads thereunto affixed are whole and entire; but in cafe the faid leads are broke or altered, or any way defaced, then they are to vifit the faid merchandizes, and feize them in cafe of the laws being violated, the goods to be conficated, and the offenders condemned in 500 livres fine.

## XVIII.

The five following forts of merchandizes, which fhall be fent by tranfit into foreign countries, fhall go out of the kingdom by no other places than thofe hereafter named, viz. thofe appointed for the ports of Spain, fituate on the Mediterranean Sea, by the ports of Cette and Agde.

## XIX.

Thofe which fhall go out of the kingdom by land for Spain, by the office of farms, from Bayonne, by the way of Beobie, Afcaing, and Dainhoa.

## XX

Thofe defigned for Italy, by the faid ports of Cette and Ag-de.-Thofe for Savoy and Piedmont, by the office of Pone de Beauvoifin, and of Champarillan.-Thofe for Geneva and Switzerland, by the office of Seiffel and Colognes. - Thore for Franche Comte, by the office of d'Auxonne.- Thore de* figned for the three bifhoprics, and Lorraine and Alface, by the office of St Minehould and Auxonne.-And thofe defigned for the Low Countries, belonging to foreign nations, by the office of Lifle and Maubeuge.

## XXI.

We abfolutely forbid the faid merchandizes going out of the kingdom by other ports and offices, when they paifs by tran-
fit, with exemption of duties, on pain of confifation of merchandizes, carriages, and horfes, and liable to 3000 livres penalty.
XXII.

The merchandizes hereafter fpecified coming from the French illands and colonies, and allowed to be confumed in the kingdom, Ihall pay, for the future, for duties of importation in the ports of Calais, Dieppe, Havre, Rouen, Honfleur, Rochelle, Bourdeaux, Bayonne, and Cette; viz.
Mufcavado, or raw fugars, the bundred weight, 2 livres io fols; 33 fols 4 deniers of which thall be appropriated to the farmer-general of the weftern domaine revenue, and 16 fols 8 deniers to the farmer-general of the five great farms. The clay or caffonade fugars, 8 livres per hundred weight; 2 of which thall be appropriated to the farmer-general of the five great farms.--Indigo, 100 fols per hundred weight.Ginger, 15 fols per hundred weight.-Cotton-wool, $3^{\circ}$ fols per hundred.-Rocou, 2 livres 10 fols per 100 weight. Sweet-meats and preferves, 5 livres per hundred weight.Caffia, I livre per hundred weight. Cacao, ro lives per hundred weight.-Dry raw hides, 5 fols a piece. -TortoifeGhell of all forts, 7 livres per hundred weight.
XXIII.

The fum total of the duties on the faid 9 laft fpecies of merchandizes fhall be appropriated to the farmer-general of the five great farms of the revenue.
XXIV.

The merchandizes fpecified in the preceding article, which fhall be carried by fea into the ports of St Malo, Morlaix, Breft, and Nantes, may not be brought into the other provinces of the kingdom to be confumed, but upon payment of the fame duties.

## XXV.

All merchandizes coming from the French iflands and colonies fhall pay, upon their arrival in the faid ports of Bretagne, above and befides the ordinary duties, thofe of provofthip, fuch as are done at Nantes, without any drawback thereof, when the faid merchandizes fhall be exported to foreign countries, nor any diminution of the duties declared by the 1gth article, when they are brought into the provinces of the five great farms, or other provinces of the kingdom.
XXVI.

White unrefined fugars coming from the colony of Cayenne, and entering by the ports of Calais, Dieppe, Havre, Rouen, Honfleur, Rochelle, Bourdeaux, Bayonue, Cette, and intended for home-confumption, fhall only pay 4 livres per 100 weight, in conformity to the arrets of the 19 th of September, 1682, and the 12th of OCtober 1700. And, with regard to thole which fhall be carried into the ports of Bretagne, they fhall three pay the fame duties as the clay fugars coming from the other French colonies; viz. at their arrival, the duties of the provofthip of Nantes, and other local duties ; and at their paffing out of Bretagne to go into the province of the five great farms, and other provinces of the kingdom, for confumption, the 8 livres mentioned in article 19.
XXVII.

Merchandizes coming from the French iflands and colonies, and not mentioned in the 1gth article, fhall pay the duties fixed by the tariff of 1664 , in the provinces of the five great farms, and the local duties, as has been heretofore done in the provinces reckoned foreign; excepting refined fugars coming from the faid inlands and colonies, which fhall pay, at every entrance of the kingdom, even in the ports of the province of Bretagne and Bayonne, 22 livres 10 fols per 100 weight, conformably to the arrets of the 25 th of April, 1690 , and the 20th of June, 1698 .
XXVIII.

The duties required by the faid arret of the 25 th of April, 1690 , upon foreign fugars of all qualities, fhall be alfo paid in all the ports of the kingdom, even in the ports of Bretagne, and in thofe of Marfeilles, Bayonne, and Dunkirk, notwithftanding all privileges and exemptions before granted : and the faid fugars need not be warehoufed, as required by the faid arret of the 25 th of April, 1690 , or other fubfequent arrets, which thall be made null and void; except neverthelefs with regard to the caffonade fugars of the Brazils, which Thall be warehoufed in the ports only of Bayonne and Marfeilles, and fhall not go out of the warehoufe with exemption from the duties required by the arret of the 25 th of ApriI, 1690 , but to be exported into foreign countries, \&c.

## XXIX.

All merchandizes of the production of the French illands and colonies Chall pay to the farmer-general of the revenues of the weitern domaine, at their arrival in all the ports of the kingdom, even in the free ports, and in thofe of the provinces reputed foreign, once for all, 3 per cent. ad valorem, when they thall be declared to be exported into foreign countries.
XXX.

We exprefsly forbid all the inhabitants of our illands and colonies, and all the merchants of our kingdom, to export from the faid illands and colonies, into foreign countries, or
into the foreign neighbouring iflands, any merchardizes of the produce of the French illands, on pain of conficiation of hip and merchandize, and of 1000 livies penalty; which thall be inflicted by the officers of the admiralty, and the cap tains and mafters of fhips to be anfwered in their own name befides imprifonment for a year, and alfo to be declared incapable of commanding or ferving in the quality of an officer aboard of a thip: wherefore, all captains thall be obliged to reprefent, at their arrival in France, a fate of the merchin dizes that fhall have been loaded at the faid inlands, frgned by the commiffioners of the weftern domaine
XXXI.

We prohibit alfo, under the like penalties, all merchants of our kingdom, captains and mafters of thips defigned for the French iflands and colonies, from taking or loading in any foreign country, even in the ifland of Madeira, any wines, or other provifions and merchandizes, to be carried into the faid colonies.

## XXXII.

All forts of fugars and fyrups of the French iflands and colonies thall be declared, at their arrival in all the ports of the kingdom, by the quantity of the cafks, without the merchants, captains or mafters of fhips, being obliged to declare them by weight; but the declaration of other merchandizes hall be made according to cuftom, by the quantity, quality, and weight; nor fhall any merchandizes be unloaded but in the prefence of the commifioners of the farms of the revenue.

## XXXIII.

The warehoufe wherein to depofit the merchandizes and provifions of the kingdom, intended for the French iflands and colonies, as alfo thofe of the produce of the faid inands, of fait beef from foreign countries, and of caffonade fugars of the Brazils, fhall be chofen by the merchants themfelves, at their own expence, and locked with three different keys; one of which thall be given to the commiffioners of the great farms of the revenue, the other to the commiffioner of the farm of the weftern domaine, and the third into the hands of an overfeer appointed by the merchant himfelf.
XXXIV.

The eafinefs of the duties of importation, by thefe prefents laid upon all raw and mufcavado fugars, coming from the French illands and colonies, the taking off the duties impofed by the arrets of the council of September 1684, and the Ift of September, 1699, upon the footing of 9 livres, and 6 livres 15 fols, fhall remain, for the future, regulated at 5 livers, 12 fols, 6 deniers, per 100 weight of refined fugar, in the cities of Bourdeaux, Rochelle, Rouen, and Dieppe, which Thall be exported into foreign countries; and, of the faid 5 livres, 12 fols, 6 deniers, there thall be reftored 3 livres 15 fols by the farmer-general of the weftern domaine, and i livre, 17 fols, 6 deniers, by the farmer-general of the five great farms.

Signed LEWIS,
And underneath, The Duke of Orleans, Regent, Prefent Phelypeaux, Daguesseaux.

On April the 3 d, 1718 , a royal ordinance was made, prohibiting all captains of hips who thall carry negroes to the French iflands, againft landing them, or any of their cargo, without leave had and obtained from the governors, in order to prevent any contagious diftemper being fread among the inhabitants.

Royal letters patents, containing regulations of trade between Marfeilles and the French iflands of America, given at Paris in the month of February, 1719.

LEWIS, by the grace of God, king of France, \&e. greet-ing.-Whereas the maior, fheriffs, and deputies of the council of commerce eftablithed in the city of Marfeilles, have reprefented to us, that although this city lies further from the French iflands of America, than the other cities of our kingdom fituated upon the ocean, the has heretofore fupplied thofe colonies with confiderable quantities of neceffaries; fuch as wines, brandies, foap, wax, glafs wares, oils, olives, draperies, filks, fhoes, drugs from the Levant, and other provifions and merchandizes, which are collected and fabricated in Provence, or that arife from the courfe of it's commerce; and which are requifite for the fubfiftence of the inhabitants of thofe colonies; and the merchants of Marfeilles bave, in return, imported fugars, indigo, cacao, ginger, and other fpecies of merchandizes, which they have afterwards re-exported to Spain, Italy, Geneva, and to the ports of the Levant : and whereas the deceafed king, our moft honoured lord and great-grandfather, being defirous to encourage them to undertake the navigation and trade of thofe colonies, \&cc. -On thefe conniderations, the maior, theriffs, and deputies of the council of commerce of Marfeilles, hope that we would permit the merchants of that city to continue a commerce, from which they feem to be excluded, the port of Marfeilles not being included in the number of thofe defigned by out letters patents of the month of April, 1717, which contain,
indced, many regulations they cannot comply with, the port of Marfeilles being a general magazine for all forts of merchandizes, as well of the produce and fabrics of our own kingdom, as thofe of other nations, which are fold and confumed according to the exigencies of their commerce ; it would be impoffible to diftinguifh thofe which, on their arrival, may be required, for the French illands in America, or for other places; fo that the uncertainty of their vent would fubject all indifcriminately to the entrepoft, or warehoufing, appointed by the 5 th, 6 th, 7 th, and 8 th articles of the faid letters patents.- To thefe confiderations may be added the freedom of commerce which that port enjoys, and which does not allow of the merchandizes coming from the faid iflands to be houfed in a warehoufe of entrepoft, nor that the merchants thould be obliged to give the fecurities required, and certificates of unloading thole metchandizes in fuch places whither they fhall be exported.-Thefe precautions not having been appointed for the merchants of other places of our kingdom, with defign to prevent being defrauded of our duties by fpurious declarations, and can be of no benefit, with refpect to the port of Marfeilles, where the importation and exportation of provifions and merchandize of all kinds are exempted from our duties: we have therefore judged it neceffary to enable the inhabitants of Marfeilles to recover a commerce, which they carried on fuccefsfully before our letters patents of the month of April, 1717 , wherein we have not comprehended them. The freedom of trade granted to the port, city, and territories of Marfeilles, is incompatible with many of our regulations contained in the faid letters patents for the maritime cities of our kingdom, which do not enjoy the fame franchifes: we have referved to eftablifh, by a diftinct law, the manner in which the Marfeillians may be admitted to fend from their port fhips to the French American iflands, without prejudice to our duties, nor to the fale of the provifions and merchandizes of our kingdom, or of thole which come from the faid American inlands: from thefe confiderations, and others hereunto moving us, with the advice, \&c. We now have declared and ordained, by there prefents figned with our hand, and we do declare, ordain, and appoint, as follows :

ARTICLET.
The fitting out of veffels defigned for the French illands and colonies of Americi, fhall be done in the port of Marfeilles as in the ports mentioned by our letters patents of the month of April, 1717.
II.

Merchants, who fit out fuch fhips, fhall be obliged to apply to the fecretary of the admiralty of Marfeilles, to oblige themfelves, under the penalty of 10,000 livres, to caufe fuch thips to return directly into the port of Marfeilles, unlefs compelled by fhipwreck, or other inevitable accident, juftifiable by verbal procefs. The merchants fhall give fuch obligation into the office of farms, and thall not embark in the faid hips any provifions and merchandizes without permiffion firft had and obtained in writing, and in prefence of the commiffioners of the farms of the revenue, under pain of confifation of the faid provifions and merchandizes, and a penalty of 3000 livers, which thall be laid by the officers of the admiralty.

## III.

All provifions and merchandize of the produce or fabrication of the kingdom, even filver plate, wine, and brandies, of Provence, Guyenne, or other provinces of our kingdom, arms and ammunition, and all neceflaries of our kingdom for the victualling and fitting out of hips, which thall come into the port of Marfeilles to be exported to the French iflands and colonies, fhall be exempted from all duties of export or import, as well thofe of the provinces of the five great farms, as thofe reputed foreign provinces; and likewife from all local duties, in paffing from one province to another, and generally from all other duties, which are to our advantage, except thofe depending on the general farm of aids and domaines; which exemption the merchants of Marfeilles cannot be intitled to, without obferving what is hereafter ordained.

## IV.

The provifions and merchandizes mentioned in the preceding article, coming by fea from another port of the kingdom into that of Marfeilles, fhall, at their arrival, be put into the warehoufe of entrepoft, and thall not be moved from flip to thip, on pain of confifcation, and of 1000 livres penalty.

Merchants, who hall caufe to be brought to Marfeilles, either by fea or land, the faid provifions and merchandizes defigned for the French iflands and colonies of America, fhall be obliged to declare, at the office of farms at the place of their unloading, if fuch office be there, if not, at the neareft there is, the quantities, qualities, weights, and meafures, to caufe them to be vifited and leaded by the commifioners of the farms, to take their difcharge of fecurity, and to fubmit to report, within three months, a certificate of their unloading into the warehoufe of entrepoft, on their arrival at Marfeilles : we will and decree, that, in fix months from the regittering of thefe prefents, the merchandizes manufactured in different provinces

Vol. I.
and places of our kingdom, except thofe in the city and territory of Marreilles, fhall be reputed as foreign merchandizes, and thall not be fhipped upon veffels which fhall depart from the port of Marfeilles for the French iflands and colonies, without paying the duties that fhall be hereby decreed, if, in the place the neareft to their unlading, declaration has not been made, that they intended for the faid illands; and if, upon their arrival in Marfeilles, they have not been put into a warehoule of entrepoft.

## VI.

The land-carriers thall be obliged to reprefent, and caufe to be examined, their difcharges of feurity by the commiffioner of the office of farms, and by the directors of the farmers of the revenue, in thofe cities wherein they are eftablifhed, through which the faid provifions and merchandizes pafs; and the faid commifioners and directors thall certify, upon the fpot, and without delay or expence, the number of tons, calks, and bales, \&c. contained in the faid difcharge of feeurity, and Shall infpect whether the leads affixed thereunto be whole, undefaced, and unchanged, without vifiting the faid provifions and merchandizes, or opening the faid tons, cafes, or bales, unlefs the leads are broken or altered : and if, on examination, any fraud appears, the merchandize fhall be confifcated, and the offenders condemned in 500 livres yearly.
VII.

The faid provifions and merchandizes fhall be, before their embarkation, vifited and weighed by the commiffioners of the farms, in order to certify the quantity, quality, weight, and meafure thereof, and they fhall not be loaded in any veffel, but in the prefence of the faid commifioners.
VIII.

Merchants fhall make at the office of farms their report, within a twelvemonth or more, a certificate of the unloading of the faid provifions and merchandizes in the French illands and colonies; and the faid certificate fhall be wrote on the back of the difcharge of the fecurity, and figned by the governors and intendants, or by the commandants or coms miffaries, fubdelegated by the commiffioners of the office of farms of the weftern domaine eftablifhed at Marfeilles, on pain of forfeiting four times the duties.
IX.

Provifions and merchandizes coming from foreign countries, the confumption of which is allowed in the country, and which thall be received in the port, city, or territory of Marfeilles, fhall not be embarked to be exported to the French iflands in America, 'till declaration has been made at the office of farms, of their quantity, quality, weight, and meafure, and that the fame duties have been paid at the office as required, when they were firft imported into the kingdom.
X.

Fcreign provifions and merchandizes, which fhall be confumed in the kingdom, and which, after having paid the duties of import at another office of farms, and brought into the faid city of Marfeilles, to be exported into the French illands and colonies of America, thall be intitled to thofe exemptions contained in article the 3 d, by obferving the fame regulations, which have been before prefcribed for the original merchandizes of the kingdom.
XI.

We allow to be brought from foreign kingdoms into the port of Marfeilles falt beef, in order to be exported to the faid inlands and colonies; and it fhall be exempt from all duties, even that of 40 fols, which is known by the farm of the gabelles, or excife duty, on condition that on it's arrival it fhall be houfed in an entrepoft, 'till embarkation, on pain of confifcation.

## XII.

There fhall not be loaded in the port of Marielles, for the French illands and colonies, any merchandizes; which import and confummation fhall be prohibited in the kingdom, on pain of confifcation, and a penalty of 3000 livres, that fhall be inflicted by the officers of the admiralty.
XIII.

The filk and other merchandizes of Avignon $_{3}$ and the county of Venaiffine, which thall be declared for the French iflapds and colonies, and which fhall have paid the duties of the cuftom-houfe of Lyons, with which they are charged in going out of the faid county, to come into the kingdom, Mall be exempt from all duties, as well upon their entrance into the territory of Marfeilles, as on their embarkation; provided, on their arrival at Marfeilles, they fhall be houfed in a warehoufe of entrepoft, 'till their embarkation; and the fame fhall be obferved, for the rate of the faid merchandizes, as has been before decreed in regard to thofe fabricated in our kingdom.
XIV.

Swifs linens, which are exempted from all duties at importation into the kingdom, fhall pay to the offices of farms, upon the confines of the territories of Marfeilles, the ordinary duties of export, although defigned for the French inands and colonies.
XV.

Merchandizes and provifions of all-forts, coming from the French illands and colonies, fhall pay, on their asrival at

Mar-

Marfeilles, once for all, the duty of 3 per cent. ad valorem to the farm of the weftern domaine, and that when even they fhall be intended to be exported into foreign countries.
XVI.

The merchants of Marfeilles may tranfport by land, into foreign countries, clay and caffonade fugars, ginger, and rocou, coming from the French inands and colonies, and caufe them to pafs by tranfit acrofs the kingdom without paying any duties at importation and exportation, nor any other duties, excepting thofe depending on the general farm of the aids and domaines; on condition of declaring, at the office of farms, the time of their departure, the quantity, quality, weight, and meafure, in order to be vifited and leaded, to take a difcharge of the fecurity, and be obliged to report, within four months or longer, certificates of the exportation of the faid merchandizes out of the kingdom; which certificates thall be wrote and figned on the back of the faid difcharges of fecurity, by the commiffioners of the laft office of farms at the faid exportation, after the faid commiffioners have infpected the leads and vifited the faid merchandizes; and the land carriers thall be obliged to caufe to be infpected the faid difcharges of fecurity, by the commiffioners of the offices of farms lying in the rout, and by the directors of the farms, where any are eftablithed; the whole hereof to be done and performed on pain of paying four times the duties, and of confifcation of the carriages and horfes of the carrier fo offending ; which precautions being taken, the faid merchandizes thall not be opened, and the faid directors and commifioners fhall certify only, without any delay or expence, the number of tons, cafes, or bales, and examine if the leads thereunto affixed be whole and entire : in cafe the faid leads fhall be broke, altered, or deFaced, we do permit the faid commiffioners, to vifit the faid merchandizes, and to feize them in cafe of violation of the laws, to be confifated, and the offenders condemned in 500 livres penalty.
XVII.

The faid three forts of merchandizes which fhall be fent by land from Marfeilles by tranfit into foreign countries, fhall. not be fent out but by way of the places hereafter named; viz. thofe deftined for Savoy and Piedmont, by the office of farms at the bridge of Beauvoifin and Champarillan.- Thofe defigned for Swifferland or Geneva, by the office of Seiffel and Cou-longes.- Thofe for Franche Comte, by the office of Aux-onne.-Thofe for the three bifhoprics, Lorrain and Metz, by the office of St Menehoult and Auxonnie.-And thofedefigned for the Low Countries, under foreign dominion, by the office of Lifle and Maubeuge.
We exprefsly prohibit the faid merchandizes from going out of our kingdom by any other offices, when they fhall pafs by tranfit with exemption of duties, on pain of confifcation of merchandizes, carriages, and horfes, and a fine of 3000 liveres.

## XVIII.

Merchandizes hereafter fpecified, coming from the French illands and colonies, and which, after their arrival in the port of Marfeilles, fhall be brought into the kingdom, accompanied with certificates of the commiffioners of the offices of weights, \&c. fhall after pay only for the duties of entry, viz.
Raw or mufcovado fugars, the bundred weight, 2 livres 10 fols; 30 fols 4 deniers of which fhall be appropriated to the farmer of the weftern domaine; and 16 fols 8 deniers to the farmer-general of the five great farms.
Clay or caffonade fugars, 8 livres the hundred weight; two livres whereof Mall be appropriated to the farmer of the weftern domaine and fix livres to the farmer-general of the five great farms.
Indigo, 100 fols per hundred weight.-Ginger, 15 fols per hundred weight.- Cotton in the wool, 30 fols per hundred weight.-Rocou, 2 livres 10 fols per hundred. weight.-Sweetmeats, 5 livres per hundred weight.-Caffia, one livre per hundred weight.-Hides, raw and dry, 5 fols a piece.-Tortoife-fhell of all forts, 7 liveres per hundred weight.
The fum total of the duties upon the faid nine lafts forts of merchandizes fhall be raifed for the benefit of the farmergeneral of the five great farms.
Cacao, indigo, cotton-wool, and hides raw and dry, coming from the French ifiands and colonies, fhall be liable to thofe eafy duties before decreed, only on condition that they are houfed, on their arrival at Marfeilles, in a magazine of entrepoft, from whence they fhall not be moved, but in the prefence of the commiffioners of the revenue-farms, to whom they fhall deliver their certificates; in default whereof, the faid merchandizes fiall pay, at their importation into the kingdom, the fame duties as foreign merchandizes do.
XIX.

Cacao and indigo. produced in the faid inlands and colonies, and which, on their arrival, have been houfed in a magazine of entrepoft, and taken thence in prefence of commiffioners of the farms, may be fent into foreign countries, and pafs, by tranfit, over the kingdom, in obierving what is required by the 16 and 17 th articles.

## XX .

White and unrefined fugars of Cayenne, which thall be ware-
houfed as aforefaid, on their arrival in the port of Marfeifler, and which hall afterwards be brought into the kingdom, fhall pay only four livres per hundred weight.

## XXI.

Merchandizes coming from the French illands and colonies, and not mentioned in the 18th article, fhall pay, at entrance into the kingdom, fuch duties as before known and ufual, except refined loaf fugar, which thall pay at every place of entrance into the kingdom (when even they are intended for the confumption of the city and territories of Marfeilles) 22 lives to fols per hundred weight, in conformity to the arrets of our council of the 25 th of April 1690, and 20th of June 1698.

## XXII.

The duties required by the faid arret of the 25th of April 1690 , on foreign fugars of all forts, thall be paid in the port of Marfeilles, notwithftanding all privileges and franchifes before granted to that city; and the faid fugars fhall not be intitled to the benefit of the entrepoft, granted either by the faid, or otber fubfequent arrets; excepting, however, the caffonade fugars of the Brafils, which fhall be warehoufed in the port of Marfeilles, and thall not be taken out of the fame with exemption of duties required by the faid arret of the 25 th of April $16 g 0$, unlels to be exported into foreign countries.

## XXIII.

We exprefisly forbid the inhabitants of thefe inlands and colonies, and all merchants of Marfeilles, to export from the faid iflands and colonies into foreign countries, or into the neighbouring foreign colonies, either on French or foreign bottoms, any merchandizes of the produce of the French inlands, on pain of confifcation of fhip and merchandize, and a fine of 1000 livres penalty; which fhall be laid by the officers of the admiralty, and againft the captains and mafters of ibips, to anfwer the fame in their own perfon, to fuffer a year's imprifonment, and be rendered incapable of commanding, or ferving again as an officer on fhipboard: wherefore, all captains hall be obliged to reprefent, at their arrival in France, an account of the merchandize they bave loaded in the faid inlands, figned by the commiffioners of the weftern domaine.
XXIV.

We exprefsly prohibit alfo, under the aforefaid penalties, all merchants of Marfeilles, captains and mafters of hips, bound for the French iflands and colonies, from lading, in any foreign country, even in the illand of Madeira, any wines or other provifions and merchandizes to carry them into the faid colonies.
XXV.

The duties of import which thall be paid upon merchandizes of the iflands and colenies, thall not be drawn back, when even they fhall be fent to foreign countries, and they fhall be liable to the duties of exportation; excepting, neverthelefs, fugars of all forts, indigo, ginger, calfia, rocou, cacao, drugs, and fpiceries.

## XXVI.

Sugars of all forts, and fyrups of the French inands and colonies, fhall be reported at their arrival, by the quantity of cafks or cafes, without fubjecting the merchants, captains, and mafters of hips, to report them by weight; but the report of other merchandizes fhall be made according to ordinary ufage, by the quantity, quality, and weight; nor fhall any merchandize be unloaded, but in the prefence of the commifficners of the farms.
XXVII.

Warehoufes ferving for the entrepoft, required by the articles $4,5,6,10,11,13,18,19,20$, and 22 , thall be chofen by the merchants themfelves, at their expence, and locked with three different keys; one of which the commiffioners of the five great farms fhall have, another the commiffioners of the weftern domaine, and the other any overfeer appointed by the merchants.-Thus we order and decree, \&c.

A royal ordonnance, iffued againft captains and fupercargoes of merchantmea, who fhall carry on foreign trade to the French illands in America. Paris, 26 November 1719. By the king.

His majefty being informed, that, notwithftanding the great attention and care that he is defirous of taking to prevent foreigners trading to the French illands of America, the captains and factors of the fhips of his fubjects that go to the faid illands, receive on board their veflels, in the roads, provifions and merchandizes, that are brought to them by foreign boats, and that they purchafe them, either with ready money, or with French or Indian provifions, from the facility they have to unload and fell them to the inhabitants: it being of importance to prevent a contraband trade fo prejudicial to the commerce of the kingdom, that it hinders the fale of the merchandizes and provifions brought from France, setards the vent of the cargoes of the faid fhips, prolongs their fay in the illands, which occafions mortality among the failors, and great expence to the merchants: all which being neceflary to put a fop to, his majefty, with the advice of the duke of Orleans regent, forbids all captains, factors, or fupercargoes of French hips, from carrying on any commerce, directly or indirectly, with foreigners, on pain of the offenders being fent to the gallies for ever. His majeity orders and commands Monf. the count of Touloufe, admiral of France, and all governors and lieutenant-governors of the faid illands, all particular governors and officers of the fuperior courts of the colonies, and other officers belonging thereto, to pay ftrift obedience hereunto, $\& \mathrm{cc}$.

Regulations by the king, concerning foreign or contraband commerce carried on in the French colonies.-Paris July 23, 1720.

The king being informed, that commerce with foreigners continues to be carried on in fome of his colonies, notwithffanding the prohibitions to the contrary that have been made by divers ordinances and regulations, and efpecially by that of the 2oth of Auguft 1698. And being defirous to prevent the continuance of this diforder, and to fecure to his fubjects the whole commerce of all his colonies, his majefty has judged it neceflary, by and with the advice of Monf, the duke of OHleans his uncle, regent, to make the prefent regulations.

## ARTICLE I.

His majefty orders all officers and captains of hips to feize all veffels, baiks, and others, as well French as forcign, carrying on contraband commerce with his colonies in America, and to reduce them by force of arms, and bring them into the nearelt illand where the prize was taken.

## II.

His majefty permits all his fubjects to fteer the proper courfe for the taking of the faid fhips and veffels carrying on foreign commerce; and orders that, for the future, it hall be in ferted in the commiffions of Chips of war and merchantmen, that fhall be granted by the admiral of France, that the bearers thereof thall be permitted to run upon thofe fhips, barks, and other veffels, as well French as others, carrying on a foreign commerce to the French colonies of America, to reduce them by force, and carry them into the illands neareft to the place where they were taken; the faid commiffions however, fhall not be granted without the fame fecurity being given as in times of war.

## III.

The prizes thus made, either by his majefty's fhips, or thofe of his fubjects, fhall be judged of by the officers of the admiralty, conformably to the ordonnances and regulations made for that purpofe, without appeal to fuperior courts; except in time of war, when the proceedings thall be fent to the fecretary-general of the marine, to be judged by the admiral as ufual; and, if the prize be condemned, one tenth fhall go to the admiral, according to the ordonnance of 168 s .
IV.

The produce of the prizes made by his ,majefty's fips falll be divided, after the one tenth part thereof appropriated to the admiral; viz. one tenth to the commander of the fhip that took the prize, one tenth to him who commanded the fquadron, one tenth to the governor and lieuteaant-general
of the colony whither the prize hall be carried in, one tenth to the intendant; and one half of the furplus moiety to the failors, the other to the commiffioners of the treafury of the marine, for the maintenance of the colonies, according to his majefty's orders.

Prizes, made by the Chips of his majefty's fubje Sis, thall be adjudged to him who took them ; except the one tenth to the admiral, and upon the furplus of the produce there thall be raifed one fifth; one half whereof thall be depolited in the hands of the commiffioners of the treafury of the matine in the colonies, in order to be employed for the maintenance of the horpitals of the faid colonies, according to his majefty's pleafure; and the other moiery fhall be divided thus, two thirds to the governor and lieutenant-general, and the other third to the intendant of the colony, where the faid vellel making the capture flall have been fitted out: and, with regard to thofe prizes, which fhall be made by fips fitted out in France, the faid moiety thall be divided, as aforefaid, between the governor and lieutenant-general, and the intendant of the colony where the prize fhall be carried in,

## VI,

His majefty orders, that the particular governors of the coIonies of Cayenne and Cape Breton thall enjoy, for the prizes which thall be brought into the faid colonies, either by his majefty's fhips, or by thofe of his fubjects, as alfo by thofe fitted out in the faid colonies, fuch.proportions as fpeciffed in art. the 4 th and 5 th of the prefent regulations made for the governors and lieutenants-general, and the commiffioner of the ordinances of the faid colonies fhall be intitied to thofe parts allotted to the intendant.
VII.

His majefty requires, that the prefent regulation fhall be executed according to it's form and tenor, notwithftanding all ordinances and regulations to the contrary, which his majefty hereby makes null and void. His majefty orders and commands Monf, the count of Touloufe, admiral of France, to have a ftrict regard to the execution of the preent regulations, to caufe them to be made public wherever needful, \&c.

The king's declaration, with regard to merchandizes of the French colonies.-Paris, 14 March 1722.

LEWIS, by the grace of God, king of France and Navarre, greeting-Whereas by the 26 th article of our letters patents of the month of April 1717, containing regulations for the commerce of the French iflands and colonies, we have exprefsly forbid the inhabitants of the faid iflands and colonies, and the merchants of our kingdom, to export into foreign countries, or into foreign neighbouring illands of the faid colonies, either by the means of French or foreign veffels, any merchandizes of the produce of the French iflands, on pain of confifcation of hips and cargoes, and a penalty of 1000 livres; and, befides the captains and mafters of fuch fhips being obliged to anfwer the faid confifcation and penalties in their own perfon, to fuffer a year's imprifonment, and alfo to be declared incapable of command, or ferving in the capacity of an officer on chipboard again: in confequence whereof, the captains are obliged to reprefent, on their arrival in France, a ftate, fighed by the commiffioners of the weftern domaine, of the merchandizes which they have laden at the faid illands and colonies. Although the laft difpofition of the faid article is effential, and the greateft fecurity that can be taken againft fuch foreign trade, by the certification that hould be made of merchandizes, on the arrival of thips in France, from the fate of the loading made in the iflands, yet we are informed, that the greateft part of the mafters of thips returning from the faid illands, are difpenfed with, in regard to their seport of a ftate of their loading, according to the form required; and that the commiffioners of our farms in the ports of France cannot fubject them thereunto, nor proceed fecurely againft them, apprehending that our judges will not have due regard thereunto, by reafon that the faid 26 th article of the regulations of 1717 does not inflict any penalty againft thofe, whe fhall neglect to make fuch report, ligned by the commilioners of the weftern domaine, but only againft thofe who thall carry on foreign trade; which renders the prohibitions in regard to this commerce ineffectual, from the impoffibility of knowing in France, whether all the merchandizes which bave been loaded in the faid illands are faithfully reported, at the ports of their return, and whether no part thereof has been unloaded in foreign countries: whereupon we judge neceffary to remedy the fame, by a certain difpofition which declares the penalties inflicted by the regulation of 1717, againft the mafters of fhips, who fhall carry on foreign commerce; that the fame penalties fhall be incurred by thofe, who thall negleet to report the ftate of their loading, figned by the comniffioners of the French inands and colonies, \&c.-For thete and other reafons us hereunto moving, with the advice of, \&c. \&cc-We have, by thefe prefents, figned with our

## FRE

hand; and we decree, will, and ordain, \& cc, that the 26th article of our letters patents of the month of April, 1717 , fhall be executed, according to the due form and senor thereof, and, in confequence of the fame, that mafters of flips, returning from the French iflands and colonies, fhall be obliged to reprefent, on their arrival in France, a ftate, figned and certified by the commiffioners of the weftern domaine, of the merchandizes which they fhall have loaded at the faid illands and colonies,-We decree, that on failure of the faid mafters making a report within 24 hours of their arrival in the ports of France, to the commifioners of the office of our farms, the faid ftate of their fhip's loading, or on failure of reporting the merchandizes agrecably to the faid ftate, fuch mafters of fhips fhall be looked upon as having carried on a commerce at thefe inands with foreigners; in confequence whereof their thips and merchandizes fhall be confifcated, the owners of the faid merchandize and the captains and mafters of the faid fhips condemned in the whole fine of 1000 livres, and be liable to the other pains and penalties inflicted by the faid 26th article of our letters patent of the month of April 1717. Thus we give and command \&c.

Letters patents, upon the arret, which fixes the time of a year of the entrepoft-of merchandizes coming from the French iflands and colonies into the ports therein mentioned, and of thofe which thall be declared by the entrepoft for the faid iflands.-Verfailles, May 23, 1723.

LEWIS, by the grace of God, \&c.--Whereas, by' our declaration of the Igth of Jenuary laft, we have, for the caufes and confiderations therein given, in confirmation of our letters patents of the month of April, 1717, for regulating the commerce of the French iflands and colonies, ordered, that the merchants proprietors of the provifions and merchandizes which thall be houfed according to the entrepoft, and defigned for the faid iflands and colonies, fhall be obliged, after one year's entrepoft, to declare to the offices of farms at thofe places, the quantities, qualities, weight, and meafure of the faid provifions and merchandizes, which fhall remain in warehoufes; which declaration fhall be certified by the adjudicatory commiffioners of our farms, and, in cafe of neglect, and falfe declaration, that the merchants proprietors of the faid provifions and merchandizes thall be condemned in 500 fivres penalty, befides the payment of the duties of the merchandizes which thall be found wanting in their declaration : and, in cafe of the fale of the faid merchandizes fo warehoufed the merchants proprietors thereof thall be obliged to difcharge the duties thereupon, one month after fale, on pain of the like penalty, and of 500 livres. - And being informed that it is yet neceffary to limit the time of entrepoft, as well for the provifions and merchandizes declared and intended for the commerce of the French iflands and colonies, as thofe which come from the faid iflands and colonies; in order to prevent the abufes introduced, and which will always increafe, by reafon of thofe entrepofts, if they fubfift for an unlimited time : we have provided, by an arret made in our council of ftate, we being prefent, the $3^{d}$ of the month and year of the date hereof, for execution of which, what we have ordered is requifite.-For thefe reafons, with the advice of our council, who have confidered the faid arret hereunto aninexed, under the counter-feal of our chancery, \&c. we have decreed and ordained, and by thefe prefents, figned with our hand, we decree and ordain, that the time of the entrepoft, as well with regard to merchandizes which fhall come from the French Ilands and colonies into the ports of Calais, Dieppe, Havre, Rouen, Honfleur, Rochelle, Bourdeaux, Bayonne, Cette, Marfeilles, and Dunkirk, as thofe which fhall be declared and intended for the faid illands and colonies, and warehoufed in the fame ports, and in thofe of St. Malo, Morlaix; Breft, and Nantes, fhall be and remain fixed, for the future, to one year, to be accounted from the day that the faid merchandizes and provifions fhall have come into port. And, with refpect to thofe which are actually warehoufed, they fhall be intitled to the benefit of the entrepoft for one year, from the day of the publication of the faid arret, and of thefe prefents; after which time, the faid merchandizes hall be liable as follow, viz.- Thofe declared and houfed for the French iflands and colonies, to the fame duties as they fhould have paid, had they not been declared for the illands; and thofe that come from the faid illands and colonies, fhall be fubject to the duties regulated according to our letters patents of the month of February, 1719, and according to thofe of the month of October, 1721.-Thus we command, \&c.

Signed LEWIS,
And underneath Phelypeaux.
An arret of the king's council of ftate, revoking thofe permiffions before granted to the merchants of the kingdom,

## FRE

to Carry to Cadiz, Genoa, Leghorn, and Naples, directly from the French iflands of America, metchandizes of the produce of the faid iflands. June 14,1723 . Extracted from the regifters of the council of ftate.

The king having been informed that to facilitate, during the time of the plague with which the city of Marfeilles, and fome other places of the kingdom, have been afflicted, the exportation of merchandizes of the French iflands of America into Spain and Italy, where the admittance of French fhip coming directly from the ports of France was refured; it was allowed to all merchants of the kingdom, to fend merchandizes to Cadiz, Genoa, Leghorn, and Naples, of the produce of the French iflands of America, without putting them into entrepolt warehoufes, required in the ports of France by virtue of the 15 th article of letters patents of the month of April, 1717 . But, the motives to this toleration ceafing, it becomes neceflary to re-eftablifh the execution ot the $2 d$, it ticle of the letters patents of the month of April, the intent of which is very important for the fecurity of the duties of the farms, and to prevent the contraband exportation of the mer chandizes of the French iflands of America into foreign countries : againft which his majefty being willing to provide, and being prefent in council, having heard the report of the Sieur Dodun, counfellor in ordinary to the royal council, and comp-troiler-general of the finances, hath revoked and annulled the faid permiffions granted to the merchants of his kingdom, to carry to Cadiz, Genoa, Leghorn, and Naples, directly from the French iflands of America, merchandizes of the produce of the faid illands: wherefore bis majefty orders and decrees, that all hhips which fhall depart from the ports of France, defigned, according to the firft article of the faid letters patent, for the commerce of the French iflands and colonies in America, as likewife thofe which thall depart from the ports of Dunkirk and Marfeilles, in order to fend the merchandizes of France to the faid French iflands and colonies of America, Thall be obliged to make their return directly into the port of their departure ; and, to this end, the merchants who fhall fit out the faid m ips, Chall make the fubmiffion required by the 2 d article of the letters patents of the month of April, 1717 , to the-fecretary of the admiralty, which fhall be executed, for the time to come, according to their form and tenor. Done at the royal council of ftate, held at Meudon, the 14 th day of June, 1723 .

Signed Phelypeaux.
A royal ordinance, declaring Gilles Robin, captain of the fhip St Michael, of Havre, incapable to fail, for the future, in any fhip intended for the colonies, for having carried on a contraband trade at St Domingo. The 25th of July 1724. By the king.

His majefty being informed that, in violation of the prohibitions fo often made and repeated, to prevent carrying on a contraband commerce with foreigners in the inlands of Ameca, feveral captains and traders have occafioned the lofs of their fhips, by foreign merchandizes, which have been brought to them by foreign veffels in the roads of the faid iflands, which is not only contrary to the trade of the kingdom, but caufes the ruin of thofe who fit fuch fhips out, thefe captains confuming, by the long ftay they make in the colonies, in carrying on this fraudulent traffic, the advantages the proprietors might have reaped, if their voyage was fhorter : the abovenamed Gilles Robin, commanding the thip called the St Michael, of Havre, fitted out for Leogane, upon the coaft of St Domingo, was furprized, in the month of February laft, carrying on, in the night-time, contraband or foreign trade, with a fmall Englifh fhip; upon which, he being tried in the court of admiralty of the faid place, his merchandizes were confifcated, and the faid Gilles Robin condemned in the penalty of 2000 livres, and fix months imprifonment. His majefty thinking it neceffary to fupprefs the like abufes, by examples which may include in their confequence captains of merchantmen, who may fall under the like circumftances, he hath declared, and does hereby declare, the faid Gilles Robin incapable of failing for the future in any thip bound for the colonies.-His majefty orders and commands Monf. the count of Touloufe, admiral of France, the governors, and lieutenant-governors of America, intendants of the marine officiating in his ports and colonies, \&c. to have ftrict regard to the due execution of the prefent ordinance, which fhall be regiftered by the fecretaries of the admiralties at the ports which have permiffion to fit out fhips for the faid iflands and colonies; and alfo read, publifhed, and fixed in the faid ports, \& 8 c .-Done at Chantilly, the 25 th of July, 1724.

Signed LEWIS,
And underneath Phelypeaux.
Roval letters patents, in the form of an edict, concerning the foreign or contraband commerce to the iflands and colonies of America.-Given at Fontainbleau, in the month of October, 1727.

## F R E

LEWIS, by the grace of God, \&c.-The care that the late king, our moft honoured lord and great-grandfather, took for the advancement of the commerce of our iflands and colonies, that which we alfo have taken by his example, fince our acceffion to the crown, the expence that has hitherto been for this purporé, and that we fill annually continue, have only in view the fecurity and the increafe of the trade and navigation of the faid iflands and colonies: and herein we have had all the fuccefs that could be expected; our faid colonies being very greatly augmented, and in condition to carry on a confiderable trade and navigation, by the fale of negroes, provifions, and merchandizes, carried thither by the fhips of our fubjects, in exchange for fugars, cacao, cotton, indigo, and other productions of the faid iflands and colonies. But we have been informed, that a fraudulent contraband commerce has been introduced, which, befides diminifhing the commerce and navigation of our fubjects, may prove of dangerous confequence to the fupport of our faid colonies. - The juft meafures we take that they may be fupplied from France, and from our other colonies, with the negroes, provifions, and merchandizes they need, and the protection we owe to the trade of our fubjects, have datermined us to fix, by a certain law, fuch precautions, and lay fuch fevere pains and penalties upon the offenders, as may put a ftop to fuch fraudulent traffic: for thefe, and other reafons us hereunto moving, with the advice of our council, and of our certain knowlege, full power, and royal authority, we have, by thefe prefents, figned with our hand, decreed and ordained, that there fhall not be received, into the colonies fubmitted to our obedience, any negroes, effects, provifions, and merchandizes, unlefs carried thither in French thips or veffels, which thall take in their lading in the ports of our kingdom, or in our faid colonies, and which fhall belong to our fubjects born in our kingdom, or our faid colonies : in confequence whereof we will and decree as follow, viz.

## TITLE I.

Of thips carrying on foreign or contraband commerce.

## ARTICLEI.

We forbid all our fubjects born in our kingdom, and in our colonies, to caufe any negroes, effects, provifions, and merchandizes to be brought into our faid colonies from foreign countries, or foreign colonies, except falt beef from Ireland, which Chall be brought in French Mips, and which have taken their loading in the ports of the kingdom, on pain of confifcation of chip and cargo, and 1000 livres penalty againft the captain, who hall alfo be condemned to the gallies for three years.
II.

We forbid, under the fame penalties, all our fubjects to export from our faid iflands and colonies any negroes, effects, provifions, and merchandizes into foreign countries, or into foreign colonies: we permit, neverthelefs, our French merchants to carry directly, from our iflands of America, into the ports of Spain, fugars of all forts, excepting raw fugars, together with all other merchandizes of the produce of the faid illands, according to the regulations made by the arret of our council of the 27 th of January, 1726.
III.

Foreigners thall not land with their Chips, or other veffels, in the ports, roads, or havens of our illands and colonies, not even in our uninhabited iflands, nor navigate their fhips within a league round thofe ifles and colonies, on pain of confifcation of their thips and veffels, and alfo of their loading, and rooo livres penalty, \&c.
$1 V$.
We order all our officers, captains, commanders of our thips, \&cc. to purfue all foreign fea veffels which they fhall find within the faid latitude, and even thofe belonging to our own fubjects carrying on foreign or contraband trade, and reduce them by force of arms, and bring them into the illand nearelt to the place where fuch prize has been taken.
V.

We permit all our fubjects to purfue the faid fhips and fea veffels, and thore belonging to our own fubjects carrying on foreign or contraband commerce; and we decree, for the time to come, it hall be inferted in the commiffions granted, either for war or commerce, by the admital of France, that thofe who bear fuch commiffions may purfue the fhips, and other fea-veffels, which they fhall find under the beforementioned circumftances, and reduce them by force of arms, and bring them into the ifland neareft the place where the prize has been made; but thefe commiffions thall not be delivered to them without giving the fame fecurity as is done in time of war. VI.

Prizes made on thefe occafions, either by our thips, or thofe of our fubjects, thall be adjudged by the officers of the admiralty, confiftently with the ordinances and regulations iffued on this occafion, without appeal to the fuperior council of the illands or colonies where the prize thall be adjudged ; with this exception, that, in time of war, the proceeding of the court, with regard to the prizes made upon thore
Vol. I.
nations with which we may be at war, thall be fent to the fecretary-general of the marine, in order that the cafe may be adjudicated by the admiral, as ufual on thofe occafons: and $\frac{\pi}{70}$ of the produce of thofe prizes determined lawful fhall be appropriated to the admiral, according to the ordinance of 168 I .
VII.

The produce of prizes made by our thips thall be divided, after deduction of the admiral's tenth; viz. $\frac{x}{10}$ to the commander of the veffel which makes the prize; $\frac{1}{10}$ to the governor, or lieutenant-general of the colony whither the prize thall be carried in; ${ }^{T} 10$ to the intendant; and the furplus of the moiety to the failors; and the remaining half part fhall be depofited in the bands of the commiffioners of the treafury of the marine in the faid colony, to be appropriated according to out orders, \&c.

VIII
Prizes made by the thips of our fubjects hall be adjudged to him who made them, except the $x^{x}$ to to the admiral, and he Thall be intitled to $\frac{\pi}{5}$ upon the furplufage of the produce; the half whereof thall be depofited in the hands of the commifioner of the treafury of the marine in the colonies, to be employed as we fhall judge proper; and the other half fhall be divided, the $\frac{2}{3}$ to the governor, our lieutenant-general, and the other third to the intendant of the colony where the fhip taking the fame fhall have been fitted out: and, with refpect to prizes made by lhips fitted out in France, the faid moiety Shall be divived, as before faid, between the governor, our lieutenant-general, and the intendant of the colony whither the prize fhall have been carried in

## IX.

The particular governors of the colonies of Cayenne, Guardaloupe, and Cape Breton, fhall be intitled, for prizes carried in thither, either by our fhips, or thofe of our fubjects, fitted out in France, or in the faid colonies, to thofe proportions fettled by the 7 th and 8 th articles of the prefent edict, to the governor our lieutenant-general ; and the commiffioners of the ordinances of the faid colonies thall be incitled to thofe appropriated to the intendant.

## $X$

We command all officers of our troops, or militia, commanding in the different parts of our colonies, even the captains of the militia in their divifions, to arreft fuch foreign veffels as thall be found in the ports, roads, and havens of their diftrict, and alfo French hips carrying on a contraband trade in thofe places: and $\frac{1}{10}$ of the produce thereof thall belong tothe admital, and $\frac{1}{3}$ to the officer who made the prize; $\frac{x}{5}$, which fhall be divided into halves, between him that commands the detachment, and the foldiers or inhabitants, who have compofed the fame. The remainder, or the whole, fhall be depofited in the hands of the commifioners of the treafury of the marine, to be employed according to our order, \&c.

## XI.

Ships, or other foreign veffels, either of war or merchantmen, which by form, or other urgent neceffities, fall be forced into our colonies, fhall not water, on pain of conffication of merchants ihips and cargo, except in ports or roads where we have garrifons, viz. in the ifland of Martinico, Fort Royal, in the borough of St Pierre, and à la Trinité ; in the ifland of Guardaloupe, at the road of La Beffe Terre, at Little Cul-defac, and at Fort Lewis; at Grenade, in the chief port, as well as at Marie Galante, and in the ifland of St Domingo, at Petit Goave, Leogane, St Lewis, St Marc, Port de Puifé, and Cape François: at which places they fhall not be flopped, provided they make appear they were not intended for our colonies; and, upon this appearing, all defirable fuccour and aid thall be given them. We order the governor, our lieutenant-general, or other commanding officers, to fend a detachment of four foldiers and a ferjeant on board the faid fhips and veffels, to prevent the imbarkation and debarkation of negroes, effects, provifions, and merchandizes, under any pretence whatever ; which detachment fhall remain on board fuch veffels, at the expence of the proprietors thereof, fo long as they hall remain in the ports and roads of our colonies.

## XII.

Captains of the faid veffels thus at liberty, who fhall have oecafion for provifions, rigging, or other utenfils, to enable them to continue their voyage, fhall be obliged to afk permiffion of the governor, our lieutenant-general, or commander, in his abfence, and of the intendant, to embark them; which permiffion thall not be granted 'till their requeft is communicated to the director of the domaine ; and thefe fhall be granted by the faid governor, our lieutenant-general, or commander in his abfence, and the intendant, fhall be tranfmitted, with a copy of the faid ordinance, to the fecretary of ftate for that department of the marine, to give us an account thereof: we require, however, that the faid ordinance be provifionally executed, \&c.

## XIII.

It is abfolutely neceffary to reft or careen the fhips of foreigners thus at liberty, to unlade their effects, provifions, and merchandizes, the captains thereof fhall be obliged to aik permiffion of the governor, our lieutenant-general, or com-

## F R E

mander in his abfence, and of the intendant; which permiffion fhall not be granted 'till the requeft be communicated to the director of the domaine : and there thall be granted an ordinance importing the faid permiffion. And, in cafe the director of the domaine oppofes the faid permiffion, his motives, as well as thofe of the governor, our lieutenant-general, \&c. Shall be reprefented, together with a copy of the ordinance, to the fecretary of ftate of the marine, to acquaint us of the fame: we require, however, that the faid ordinance be provifionally executed ; and, in cafe of the landing of the faid merchandizes, there thall be given a verbal account, in prefence of the director of the domaine, containing the quantity and quality thereof, figned by the captain of the fhip, and by the faid director of the domaine; which account hall be fent to the fecretary of fate of the marine; and the faid governor, our lieutenant-general, or commander in his abfence, fhall place a centinel at the gate of the warehoufe where the faid merchandize fhall be depofited, to prevent any being taken out, or fold in the faid colonies; and, while the faid merchandize fhall remain in the faid warehoufe, which fhall be fhut with three locks, one of which keys thall be given to the intendant, another to the director of the domaine, and the other to the captain of the faid Mip. We require alfo, that, in cafe he has landed negroes, he fhall draw up a lift, wherein they fhall 'be exactly characterized, who fhall be fequeftered in the hands of fome refponfible perfon, that they may be reftored again, \&c. the whole hereof mult be performed on pain of confifcation of the value of the faid negroes, and alfo the fhip and cargo.
XIV.

The expence of fuch fhips or veffels in our iflands and colonies fhall be made there, and paid in calh or bills of exchange: and, in cafe the captain has not money, nor can find any one in the faid illands and colonies, who will anfwer for the payment of the faid bills of exchange, permiffion thall be granted by the governor, our lieutenant-general, or the commander in his abfence, and the intendant, on the requeft of the captains of the faid thips (which fhall likewife be communicated to the director of the domaine) for the fale of a certain number of negroes and merchandizes, to make good the faid expence only; and an ordonnance granting the faid permiffion fhall be made, fignifying the faid expence, together with the quantity and quality of the negroes, and merchandizes fold : and, in cafe the director of the domaine fhould oppofe fuch fale, his motives, together with thofe of the governor, our lieutenant-general, or commander in his abfence, and the intendant, fhall be reprefented to be fent, with a copy of the ordonnance, to the fecretary of ftate of the marine: and we require that the faid ordonnance fhall be executed provifionally, and that the fale, fo permitted, thall not exceed the amount of the expence incurred, under any pretext whatfoever.
XV.

We require, that as foon as the faid foreign hips fhall be at liberty, and in condition to take in again their loading of negroes and merchandizes fo landed, there fhall be a re-examination of the fame, figned by the director of the domaine, a copy whereof thall be fent to the fecretary of fate for the marine, and after the faid embarkation the faid veffels fhall put to fea.-We require alfo, that thofe which fhall be thus at liberty, depart the firft favourable opportunity, after being in a condition for failing, on the penalty againft the captain of rooo livfes, and confifcation of Thip and cargo: the governors, our lieutenant-governors, particular governors, or other officers commanding in our colonies, fhall not permit the faid fhip to make any longer ftay, than what fhall be abfolutely neceflary to fit them for fea.

## XVI.

We forbid the captains of the faid foreign thips, fupercargoes, and others thereunto belonging, to land or fell any negroes, or other merchandizes brought by the faid fhips, nor to fhip any negroes or merchandizes of the French colonies, on pain of confifcation of the faid Thips and loading, and 1000 livres penalty befides, which fhall be paid without abatement by the captains and failors.

## TITLE II

Concerning negroes, effects, provifions, and merchandizes, found on the fea-fhores, and in the ports and havens, brought as well in French Gips carrying on contraband trade, as in foreign ones.

## ARTICLEI.

Negroes and meachandizes found on the fhores, ports, and havens, brought by French fhips carrying on unlawful commerce, fiall be confifcated, together with the thip and loading, and a penalty of 1000 lives laid on the captain, befides being condemned to the gallies for three years ; the moiety of which penalty fhall go to the informer.
II.

Negroes and merchandizes fo found upon the fhores, and in the ports and havens brought by foreign thips, thall alfo be

## FRE

confiicated, together with the veffel from whence they were unloaded, and the cargo, and the captain condemned in 1000 livres penalty, which fhall be paid without deduction by him and the failors, and one moiety thereof fhall go to the informer.

## III.

The faid confifcations, pains and penalties, thall be adjudged by the officer of the admiralty, without appeal to fuperior

T I T L E III.
Of negroes, effects, provifions, and merchandizes, found on land, coming as well in French Chips carrying on contraband commerce, as in foreign ones.

## ARTICLEI.

Negroes and merchandizes found on, land, brought by fhips belonging to our jubjects; carrying on illicit trade, fhall be confifcated, together with the hip and cargo, and the captain condemned in the penalty of 1000 livres, and fent to the gallies for three years.
II.

Negroes and merchandizes which fhall, in like manner, be difcovered landed, brought by foreign fhips, thall alfo be confifcated, together with the fhip and cargo, and the captain condemned in the penalty of 1000 livres, which fhall be paid without abatement, by him and the failors.
III.

Thofe in whofe poffeflion fuch negroes and merchandizes fhall be found, brought by French fhips carrying on illicit trade, and by foreign hips, Thall be condemned in 500 livies penalty, and be fent to the gallies for three years.
IV.

One moiety of the faid fines and confifcation lhall go to the informer, the other to the farmer of the revenue of our domaine.

## V.

Profecution of fuch offenders thall be made before the judges in ordinary, without appeal to fuperior courts.

## TITLEIV.

Of appeals in regard to fentences paft, as well with refpect to French fhips carryinu on contraband commerce, as foréign thips doing the fame.

## ARTICLEI.

Appeal lodged in fuperior courts, with refpect to fentences paffed in the ordinary courts of law, or in thofe of the admiralty, on occafion of contraband trade being carried on by French fhips and foreign ones, thall be adjudged in the following manner :

## II.

Our fuperior courts thall continue to affemble after the ufual manner.

## III.

The fittings which they commonly hold, and during which all caufes are difpatched that are ready to be heard, fhall be divided into two parts.
IV.

At the firf fitting there fhall be heard as well civil as criminal caufes, which concern individuals, and others that concern foreign or contraband trade, or have any relation thereunto, as foreign thips, \&c.

## V.

All caufes which concern the faid foreign or contraband trade, or have any relation thereunto, and alfo all thofe concerning foreign hips, fhall be heard at'the fecond fitting, which thall be held immediately after the firft.

## VI.

The governor, our lieutenant-general, the intendant, major officers, only thall affift at the faid fecond fittings, and alfo five counfellors that we fhall name for this purpofe, the folli-citor-general and the fecretary : we require, that in cafe any of the faid counfellors fhould not be at the faid fittings, either by abfence, ficknefs, or any other lawful caufe, fentence fhall be paffed, when there are but three of the faid counfe!lors only.

TITLEV.
Of merchandizes coming in foreign thips, and brought by means of French veffels.

ARTICLEI.
Merchandizes coming in foreign thips that thall be found in thips belonging to our fubjects, fhall be confifcated, and the captains of the faid veffels, factors, \&c. fined in three thoufand livres penalty without deduction, and moreover the captains to be fent three years to the gallies, and the factors, \&cc.
fuffer fix months imprifonment: the faid confications and penalties fhall go, the one half to the informer, and the other part thall be depoitted in the hands of the commiffioner of the treafury of the marine in our colonies, to be employed as we fhall direct, either for the increafing or maintaining horpitals, buildings, or to other neceflary works of the faid colonies.

## II.

The faid captains, faEtors, \&c. Thall be obliged to juftify by invoices, manifeftos, charter-parties, bills of lading, $\& \mathrm{cc}$. in regular form, and this before the intendant at the firft requifition, that the merchandizes fold are the entire produce of thofe laden in France ; and, for want of thofe, they fhall be cenfured and reputed to have fold merchandizes coming in foreign thips, or French fhips trafficking in foreign or contraband trade, and as fuch flall be condemned in the penalties contained in the preceding article
III.

We refer the cognizance of caufes that may require expedition, to the intendants of our colonies, and thefe we forbid to be tried in other courts.

## IV.

We require, that, in cales where the faid captains fhall be convicted of the faid offence, the faid intendants fhall place fome reputable perfon on board fuch fhips, in order to be carried into France to their owners.
V.

We require, that all perfons of what rank or condition foever, who fhall be convicted of contraband commerce by veffels belonging to them, or that they have hired thips on freight that have favoured fuch trade in foreign veffels, or who have fent, into foreign countries or colonies, negroes, effects, provifions, or merchandizes of our colonies, may be condemned, befides the penalties impofed by thefe articles, to the gallies for three years.
VI.

We require, that fuch foreigners who carry on foreign commerce, and import negroes, and foreign merchandizes into our colonies, and likewife thofe who-fend negroes and merchandizes from our colonies into foreign countries, fhall be liable to profecution for the fame, five years after commiffion, and that the proof thereof may be made within that time.
VII.

All contefts of this kind, either as plaintiffs or defendants, Thall be referred to the jurifdiction and cognizance of the intendants of our colonies, and we forbid all other courts and judges from trying the fame.
VIII.

We impower our commiffaries of ordonnances, and our firft counfellors in the inlands and colonies, where there is no intendant, to fupply their place.

TITLEVI.
Of foreigners fetted in the colonies.

## ARTICLEI.

Foreigners fettled in our colonies, even thofe who are naturalized, or who may be fo hereafter, fhall not act as merchants, brokers, and agents, in affairs of commerce, in any manner whatfoever, on pain of 3000 livres penalty to the informer, and be banibhed for ever from our faid colonies; we permit them only to purchafe lands and plantations, and to deal folely as planters in commodities produced therefrom.

## II.

We grant, to thofe who are at prefent engaged in trade, three months time, from the day of regiftering thefe prefents, to Jay the fame afide, and the offenders fhall be condemned in the penalties laid by the preceding article.
III.

We forbid all merchants and traders in our colonies, from having any agents, factors, book-keepers, or other perfons concerned in this commerce, who are foreigners, although they be naturalized: we require them to be difmiffed within three months at the fartheft, from the day of regiftering thefe prefents, on the penaity of 3000 livres inflicted on fuch merchants and traders, and againt the faid agents, factors, book-keepers, or other perfons who thall be engaged in their affairs, and to be banibed for ever from the faid colonies.

## IV.

We enjoin and command our follicitors-general and their fubftitutes, to attend duly to the execution of thefe three preceding articles, on pain of anfwering the fame in their own perfons.
Thus we require and command all our faithful friends who enjoy fuperior poits in the faid iflands and colonies, that thefe prefents may be known, publifhed, and regiftered, and the contents bereof frictly obferved according to their form and tenor, notwithitanding all edicts, declarations, arrets, and ordonnances, to the contrary, which we bave by thefe prefents made null and void. For fuch is our plealure. And, to the end that this may be for ever in force, we have hereunte affixed our feal. Given at Fontainbleau in the month
of Odtober, in the year of our Lord $\mathbf{1 7 2 7}$, and in the 13 th year of our reign. .ifor

And fealed with the great feal with green wax.
An arret of the royal council of fate, containing tegulations on the point of contefts between the admiralty of France; and the farmers-general of the revenue, with regard to contraband and prohibited commerce made as well at fea; and in the ports, havens, and water-fide of the kingdom; as in the French iflands and colonies of America.-Of the 25 th of May, 1728. Extracted from the regifters of the council of ftate.

The king being in council, and the memorials prefented as well by the admiral of Frannce, as by the adjudicatory of the united body of farmers-general of the revenue, on the fub= ject of controverfies arifen between the admiralty of France, and the faid farmets-general, in regard to contraband and prohibited commerce, \&c. And, in regard to the application of the penalties and confifcations made, which have occafioned contefts between the judges of the admiralty, and the judges of the faid adjudicatory of farmers-general : his majefty, to put an end to thofe contefts at prefent, and to prevent others, for the future, having determined by a certain regulation what are the rights, that belong to the one and the other, hath attended to the report of the Sieur Le Peletier, counfellor of flate in ordinary, and to the royal conncil, and comptroller-general of the finances: and his majefty, being in council, has decreed, and doth decree, \&c. what follows, viz.

## ARTICLEI.

The knowledge of offences committed, and difcovered in France, on the veffels, and in the ports, roads, coafts, and Ihores of the fea, with refpect to contraband and prohibited commerce, carried on by importation and exportation of merchandizes, fhall appertain to the Sieurs intendants, and commiffaries, refident in the provinces and generalities of the kingdom, in conjundtion with the officers of the admiralty, without appeal to the council in civil affairs, and lhall be the dernior refort in criminal cafes, \&c.
II.

The produce of the penalties and confifations fhall belong to his majefty, or to the adjudicatory of his farms, at whofe requeft and expence all profecutions fhall be carried on, without the admiral of France pretending any thing thereto, under any pretext whatfoever.
III.

The officers of the admiralty fhall have cognizance in the firft inflances of offences in regard to foreign commerce, as well in regard to affairs of a civil as criminal nature, and contraband or prohibited merchandizes, which hall be difcovered to be carried on by fhips, and in the ports, roads, coafts, and fhores of the fea in the French iflands and colonies, with appeal to fuperior courts, except thofe offences contained in title 5 of the letters patents of the month of Oetober 1727 ; the cognizance whereof fhall belong to the intendants and officers of the admiralty, in calling to their affiftance, if need be, the number of graduates, or officers, required by the ordinances in cafes of pronouncing corporal punifiment.
IV.

The produce of the penalties and confifcations arifing from fuch offences which thall be difcovered by the commiffioners of the weftern domaine, in the ports, coafts, and hores of the fea in the French iflands and colonies, fhall be remitted to the account of calh of the domaine, and belong one moiety to his majefty, or to the adjudicatory of his farms, and one moiety to the informers, and employed by the domaine that fhall have contributed to the difcovery and the capture.

## V.

The cognizance of fuch offences as thall be difcovered on land by the officers of the domaine to the faid inands and colonies, fball belong to the intendants, without appeal to the council, except where corporal punifhment is infliged; in which cafe, the cognizance in the dernier refort fhall be left to the faid Sieurs intendants, in calling to their affifance the number of graduates, or officers, required by the ordinance;; and the produce of the penalties and confifcations that thatl arife, as well in civil as criminal cafes, fhall be remitted to the calh-acrount of the domaine, one moiety whereof thall belong to his majefty, or to the adjudicatory of the farms, the other moiety to the informers, and the fervants of the domaine who have contributed to the difcovery and capture.

## VI.

The product of the penalties and confifations, which fhall arife from the prizes at fea by the pinnaces and commiffioners of the farm, authorized by commiffions from the admiralty of France, Ghall be remitted to the domaine, and be appropriated ( ${ }_{\text {to }}^{5}$ belonging to the admiral being deducted) one moiety to his majefty, or the adjudicatory of his farms, the
other moiety to the informers, and thofe employed by the domaine who have contributed to the capture.
VII.

The penalties and confifcations, with regard to affairs undetermined in France and America, thall belong to his majefty, or to the adjudicatory of his farms, according to articles 4, 5 , and 6 of the prefert, regulations.
VIII.

Effects and merchandizes feized, as well in France as in the French iflands and colonies, by the commiffioners of the adjudicatory of farms, hall be depofited only in the office of farms ; and, with relation to prizes taken at fea ( $\frac{1}{\mathrm{I}}$ of which fall to the admiral of France) the adjudicatory of farms, or their commiffioners, fhall be obliged to fecure them in a warehoufe, under two different keys; one of which fhall remain with the officers of the admiralty, and the other with the receiver of the depofitory of farms, 'till definitive judgment be given.

## IX.

And, to indemnify the admiral of France for thofe rights which may be pretended to belong to him, as well in refpeet of contraband trade in France, as that in the French inands and colonies, and to put an end to the litigations which fuch pretenfions may occafion, there fhall be paid to him annually, on the firft day of the year, by the adjudicatory of farms, to commence from the prefent year 1728, the fum of 20,000 livres; which, for the future, fhall put an end to all pretenifions of this nature in the prefent admiral and his fucceffors; nor fhall the farmers of the revenue interfere with the determinations of the officers of the admiralty, with refpect to confifcations, nor any thing which does not immediately concern contraband and prohibited trade, and the care of the duties of the farms.

## X.

The farmer of the revenue, under pretence of care thereof, be it either for the loading of falt, and to prevent contraband trade, or for whatever other reafon, fhall not have, or put to fea, any veffel of what fize foever, without leave and commiffion from the admiral of France, regiftered at the admiralty of the place, under the penalty contained in the ordinance of 1681 ; except, however, fmall boats requifite to vifit fhips in creeks, ports, and roads. With refpect to the loading of falt, there fhall be permiffions granted for fuch fhips every voyage: and, in relation to veffels and pinnaces that are always on the fea for the fervice of his majefty's farmers of the revenue, their leave and commifion fhall be granted them amually.

## XI.

The adjudicatory of the farms thall be allowed to have upon the fea and at the mouths or entrances of rivers, armed veffels, pinnaces; and thalops, on condition of the faid veffels tranfmitting, every fix months, to the fecretary of the admiralty of the province, an account, certified by the commif-fioner-general of the farms, of the fur and chriftian-names of all perfons therein employed.
XII.

The adjudicatory fhall be permitted to fit out the faid velfels, and to chufe their failors, provided they are not in the fervice of the royal marine.
XIII.

Licenfes thall be granted them from the admiral of France for fuch veffels and pinnaces which they may judge requifte for their purpofe, in order to be armed upon the coafts of the kingdom ; and there licences fhall remain in force for one year, and be renewed annually at their expiration, under the penalties contained in the ordinance of 168 r .
XIV.

With relation to thofe pinnaces, boats, or other veffels that the farmers of the revenue may think neceffary to arm at the inland-colonies in America, to go within the extent of the limits prefcribed by the regulations made in regard to veffels carrying on contraband commerce, they fhall be obliged to take out a commiffion of the admiral of France, as required by article the 5 th of the letters patents of the month of October, 1727, which commiffion thall remain in full force for one year only.
XV.

If any veffel, carrying on contraband commerce on the coalts of the illands of America, fhould be attacked by an armed veffel commiffioned by the admiralty of France, and alfo by a veffel armed by the farmers of the revenue, under the like commiffion from the admiralty, the prize fhall be divided between them, according to the number of failors and cannon in the refpective armed veffels, conformably to the ordinance of 168 I .

## XVI.

There fhall be no innovations made with regard to prizes and offenders, which concern damaged falt and tobacco, in the ports, and on the coafts of the kingdom ; the full power to judge of which remaining in the officer of the gabelles, and others who have cognizance thereof, according to the regulations iffued for that purpole; all which fhall be executed according to, their form and tenor, without deviating from the prefens ariet.

## FRE

XVII.

Upon this occafion, our letters patents of the month of O40 ber i727, fhall be taken into confideration, as likewife orher regulations concerning contraband and prohibited merchandizes. His majefty injoins the Sieurs intendants and commiffaries throughout the provinces and generalities of the kingdom, and the faid French illands and colonies, to be vigilant in the execution of the prefent arret, which fhall be executed, notwithftanding any obftructions thereunto; of which, if any arife, the cognizance thereof thall be left to his majefty in council, and all courts and ordinary judges are hereby forbid to interfere in thefe cafes.-Done at the royal council of ftate, his majefty being prefent, held at Verfailles the 25 th of May, 1728.

Signed Phelypeaux.
LEWIS, by the grace of God, \&cc.-To our faithful friends and counfellors, concerned in our councils, mafters of requefts of our houfhold, Sieurs intendants and commiflaries throughout the provinces and generalities of our kingdom; 'and our French iflands and colonies in America, greeting, \&c.-We command and injoin you; by there prefents, figmed with our band, to be vigilamt and attentive, each in his refpective ftation, to the due execution of the arret, the extract whereof is hereunto annexed, under the counter-feal of our chancery, iffued this day in our council of ftate, we being prefent, for the reafons therein contained.-In the firf place, we order and command our ferjeant, on this requifition, to fignify and publifh the faid arret, to all whom it may concern, that no one may be lignorant thereof, and to take all requifite meafures to put our commands in execution, without other permiffion, notwithftanding any impediments hereunto; the cognizance of which we referve to ourfelves and our council, and forbid all orther courts or judges any way to interfere there-in.-We will and ordain, \&c.

Signed LEWIS.
And underneath Phelypeaux.
Upon the 3d of October, 1730 , a royal declaration was iffued, concerning the regulation and collection of the capitation tax at the Windward inlands: of America: and, on October the $4^{\text {th, }}$ I 73 I , infructions were alfo iffued, to facilitate the execution of the faid declaration. In regard to the firft of thefe, although there is every thing done that could be, to prevent the evafion of the tax, and all frauds in the collection, yet there does not feem lefs judgment in joining moderation with rigour and feverity. Example: in article ze $9^{\text {th }}$ of the faid declaration it is faid, 'That fuch who fhall break up freth land in the French inands and colonies fhall be exempted, for two years, from the faid tax of capitation, not only for their own perfons, but for their domeftics and negroes employed therein.-Likewife thofe who fhall eftablifh new plantations, either for cacao or indigo, fhall be intited to the fame privi-leges.'-Thefe being the chief particulars which relate to traffic, we Gall take no other notice of the beforementioned declaration than to obferve, that the latter, viz. the inflructions for execution of Oetober the 4th, 1731, contain fuch plain and intelligible rules for the execution of every diftinct article of the former, that it is not poffible either for the officers of the crown to miltake their duty, or the people the intention of the legifator.
THE next effential particular that occurs, according to the order of time, with regard to the laws of France, in relation to their American iflands and colonies, is a royal regulation with refpect to the wheat-meal of Canada, which was iffued by the king the 18th of May 1732; and which is introduced with the following preamble :

- His majefty being informed, that the meal fold in Canada, and which is exported thence to Cape Breton, and other of the French inlands in America, is frequently of a bad quality, there being mixed therewith meal of other grain than that of wheat-corn, and that the fame is barrelled up too moift, or in cafks not fufficiently dried : his majefty defirous to prevent a continuation of the like abufes, which will abfolutely ruin and annibilate the faid commerce of meal, which is highly beneficial to the faid colony of Canada: his majefty has ordered, and does order, \&cc. as follows, viz.'

ARTICLEI.
Merchants and manufacturers of wheat-meal in the colony of Canada fhall be obliged, from the day of the publication of the prefent ordinance, to mark with fire both ends of the barrels wherein fuch meal fhall be packed, before the fail or embarkation of the faid barrels, on pain of three livres penalty for every barrel net fo marked, that hall be offered to fale, be fold, or embarked.

## II.

Merchants and others thall be obliged, on pain of 20 livres penalty, to depofit the image or impreftion of the faid firemark which they ufe fiviz. thofe merchants and other manufacturers of meal refiding in the city of Quebec, or under if's government) in the rolls of the admiralty eftablifhed in the faid city; and thofe dwelling in che cities of the thee rivers,
and at Montreal, or under the government thereof, fhall be depofited in the rolls of the royal jurifdictions of the city, within the diftricts of their habitation. III.

Thofe who fhall embark the faid bartels, if meal, thall be obliged to mention, in their invoice of the faid barrels, the difinct mark thereof, and to mention the fame likewife in the bills of lading, on pain of 20 livres penalty for every offence.
IV.

The captains of thote thips on which the faid barrels of meal Thall be laden, thall be obliged, before their loading, to certify whether the faid barrels be marked; and, in cafe they are embarked without marking, they fhall be condemned in the penalty of three livtes for every barrel fo embarked.
V.

Meal barrelled and offered to fale in Canada, which thall be found to be of bad quality, fhall be confifcated, and the proprietor thereof condemned in four livres per barrel penalty VI.

Meal fent from Canada to Cape Breton, and to other of the French iflands in America, which bhall be found to be of bad quality, fhall likewife be confifcated, and the proprietor thereof condemned in a penalty of four livres per barrel. II.

Cognizance of offences committed in Canada againft the prefent ordinance, on account of barrels of meal being expofed to fale on the land, and before having been embarked, and which barrels fhall not be marked, and on default allo of not depofiting the faid mark with the fecretaries of theroyal jurifdiction, together with the bad quality of the faid meal ; hall belong to the intendant of New France, or to his fubdelegates in his abfence; but, if the faid offences thall be difcovered in other places than on the keys, and in the flips and veffels, or in the warehoufes wherein they fhall be put from the firft time of their landing; and, in cafe the faid fire-mark hath not been duly depofited, in conformity to the prefent ordinance, in the rolls of the admiralty of Quebec, the officers of the faid court fhall take cognizance of the faid offences.
VIII.

The officers of the admiralty of Quebec, and thofe of Cape Breton, and of other French iflands in America, thall take cognizance, each within the extent of his diftrict, of offences committed by neglect of the fire-mark required at both ends of the faid barrels, and alro of the bad quality of the meal, provided the offence be difcovered upon the key, or in the fhips or other veffels, or in the warehoufes where they fhall be depofited for the firft time of their being landed : they likewife fhall take cognizance of the default, in omitting to mention the mark of the faid barrels in the invoices and bills of lading of the concerned.

## IX.

The officers of the admiralty of Cape Breton Chall be obliged to direct a verbal procefs, with refpect to the bad meal; which procefs fall be fent to the intendant of New France, in order to be tranfmitted to the officers of the admiralty of Quebec: on which account the proprietors of the faid meal fhall be condemned in the penalty of 4 livres per barrel, as forefaid.

X .
The officers of the admiralty of the other French illands in America fhall, in like manner, be obliged to direet a verbal procefs, with regard to the bad meal ; which procefs they fhall fend to the fecretary of ftate, having there the jurifdiction of the marine, to be tranfmitted by him to the officers of the admiralty of Quebec, to the end that the proprietor may be condemned in the penalty of 4 livres for every barrel of bad meal.

## XI

Cognizarce of offences committed againf the prefent ordinance, which thall be difcovered after the landing of the faid meal at Cape Breton, or at other French illands in America, and after they fhall have been bought up from the keys or warehoufes wherein they may have been put, thall belong to the intendant of the ifland where they fhall have been landed, and, in his abfence, to his fubdelegate.
XII.

The intendants of the faid iflands, or their fubdelegates in their abfence, fhall be obliged to direct the like verbal procefs, in relation to bad meal; which procefs they fhall fend to the fecretary of fate for that jurifdiction of the marine, to be tranfmitted by him to the intendant of New France, to the end that the proprietors may be condemned in the penalty of 4 lives per barrel which fhall be found bad.

## XIII.

Thefe verbal proceffes, made on account of the bad quality of meal arriving at Cape Breton, and other the French iflands in America, fhall fgnify the quality and condition in which the meal hall be found, together with the mixture of what other grain thall be therein made; they fhall mention likewife to what the bad quality of the faid meal is to be attributed.

Vol. I

## XIV

The penalties and confifcations which thall have beeti adjudged by the intendant of New France, fhall belong (viz for offences committed in the government of Quebec) to the general hofpital of the faid place; for thofe committed in the goveriment of the three rivers, to the Ho-tel-Dieu of the faid city; and, for thofe committed in the government of Montreal, to the Hotel-Dieu there eftablifhed.
XV.

The penalties and codfifcations decreed by the judge-commiffary of Cape Breton, fubdelegated by the intendent of New France, fhall belong to the hofpital of the faid ifland; and thole decreed by the intendant of the other Frerich iflands of America, or other fubdelegates, fhall be appropriated to the neareft hofpital.

## XVI.

The penalties and confifcations decreed by the officers of the admiralty, fhall belong to the admiral of France.
His majefty orders and commands Monf, the count of Thou loufe admiral of France, and the governors, his lieutenant general; and intendants in America, to keep a viglant eye every one in his own perfon, to the due execution of the prefent ordinance, which fhall be read, publifhed, and fixed up in every place where needful, and regiftered in the rolls of the admiralty of the refpective colonies wherein the have jurifdiction.-Done at Compeigne, the 18th of May 1732.

Upon the 2Ift of May following the count of Thouloufe, admiral of France, iflued his orders to all concerned, to have ftrict regard to the execution of the preceding ordinance.

Arl arret of the royal council, forbidding all privateers and merchants, carrying on trade in the French iflands and colonies, to fend ifulfs or painted linens of the Indies thither, or thofe of Perfia, China, or the.Levant.-May 9, 1733. Extracted from the regifters, of the council of ftate.

The king caufing to be laid before him the letters patents of the month of April 1717 , touching the regulation of the commerce of the French illands and colonies of America; by the 12 th article of which it is declared, that the merchants ofthe kingdom thall not fhip for the faid iflands ahd colonies any foreign merchandizes, whofe import and confumption in the kingdom are prohibited, on pain of confifcation, and a penaly of 3000 livres, which fhould be decreed by the officers of the admiralty: alfo other letters patents, of the month of February 1719, including regulations of trade from Marfeilles to the faid inlands and colonies, the 12 th article of which contains the fame difpofition: allo thofe of the month of October, 1721 , by which his majefty granted to the city of Dunkirk the privilege and liberty to carry on trade to the faid iflands; and ordained, by article 14, that the general regulation of the month of April 1717, fhould be executed in whatever was not repugnant to the difpofitions made by thofe laft letters patents: and his majefty being informed that the merchants who carry on the commerce of the faid French iflands and colonies, might export thither ftuffs and painted linens of the Indies, Perfia, China, or of the Levant, under pretence that thefe forts of merchandizes (whofe ufe and importation are neverthelefs probibited) are not exprefsly comprehended in the faid $\mathbf{2} 2$ th article of the general regulation of 1717; againft which his majefty defring to provide, and confidering the advice of the deputies of the council of commerce, heard the report of the Sieur Orry, counfellor of ftate, and counfellor in ordinary to the royal council, and comptrollergeneral of the finances, the king, being prefent in council, has ordained, and does hereby ordain that the letters patents of the month of April 1717, of February 1719, and October 1721, Thall be executed according to their form and tenor. In confequence of which, his majefty exprefsly forbids all privateers and merchants, carrying on trade to the French ifland and colonies of America, to carry thither fluffs or painted linens of the Indies, of Perfia, China, or the Levant, under what denomination foever, on pain of confifcation, and a penalty of 3000 livres, and to be Excluded from being concerned in the faid commerce for the future.- The like prohibitions are made to all captains, mafter-pilots, marine officers, failors, paftengers and others who make up the crews of thips defigned for the faid illands and colonies, to carry thither, in any thape whatfoever, any of the faid ftuffs and painted linens, on pain of confifcation, and of 3000 livres penalty againft the captains, mafter-pilots, marine of ficers and paffengers, befides their being rendered incapable of commanding and ferving in any veffel whatfoever; and, with refpect to fallors, and others whereof the fhip's crew confifts, on pain of one year's imprifonment, or more, according to the cafe: his majefty commands and injoins the Sieurs intendants and commiflaries in the marine provinces of the

1 I D
kingdom,

## FRE

kingdom, and the officers of the admiralty, and likewife the povernors and intendants of the faid French inlands and colonies, or all commanders and commiffaries fubdelegated, to have a frict regard, each for himfelf, to the execution of the prefent arret, which fhall be read, publithed, and fixed up, wherever needful. Done at the king's council, his majefty being prefent, held at Verfailles the-gth of May, 1733.

Signéd Phelypeaux.
LEWIS, by the grace of God, \&c.-To our friends and faithful countellors, concerned in our councils, the Sieurs intendants and commiffaries, difperfed, for the execution of our orders, throughout our maritime provinces, and to the officers of the admiralty ; alfo to the governors and intendants of the French iflands and colonies, of to the commanders and commiffaries fubdelegated in their diftricts, greeting: we command and injoin, by there prefents figned by us, to have a flrict regard, every one in his own perfon, to the execution of the arret hereunto annexed, under the counter-feal of our chancery, this day given in our council of ftate, we being there prefent, for the reafons therein contained, \&c.

And underneath, Phelypeaux.
An arret of the royal council of ftate, which grants the merchants of St Jean de Luz, for their whale and cod fifheries at Canada and Cape Breton, the fame rights; privileges, and exemptions granted by letters patents, of the month of April 1717 $^{17}$, for the trade of the French iflands and colonies of America.-July 20, 1734. Extracted from the regifters of the royal council of flate.

Upon a petition prefented to the king in council, by the merchahts of St Jean de Luz, containing, that as yet, with regard to the cod and whale fifheries, which is the only commerce of that city, they are under the neceffity of fending Gips, as well to the ifland of Terra Nova, which makes part of the French colonies of America, as to Davis's Streights in North America; notwithftanding they have never enjoyed an exemption of duties on merchandizes defigned for the French colonies, with refpect both to the cargo or the victualling of their veffels; of which they have always refufed the acquittance of fecurity at Bourdeaux, under pretence that there is no warehoufe of entrepoft eftablifhed in their port ; and that in the letters patents of the month of April 1717, containing regulations for the commerce of the French colonies, which fignify the parts where veffels are to be fitted out, that of St Jean de Luz hath been omitted: and, as that omiffion makes it impoffible for them to carry on the commerce of the colonies upon an equality with other merchants of the kingdom, included in the faid letters patents, they being liable to thefe duties, from which others are exempt ; which have proved fo burdenfome, that they have fuftained confiderable loffes for fome years paffed, in their cod and whale fifheries: for thefe reafons they requeft, that his majefty would pleare to order the eftablifhment of a warehoufe of entrepoft in the faid city of St Jean de Luz, for fitting out fhips for the French colonies of 'America, and that they may enjoy thofe exemptions of duties, and other privileges and advantages, granted to the merchants, contained in the letters patents of the month of April 1717. His majefty having feen the faid petition, heard the fentiments of the deputies of commerce, and the report of the Sieur Orry, counfellor of ftate, and comptroller-general of the finances; and the king being prefent in council, hath granted, and doth grant, to the merchants of St Jean de Luz, for their whale and cod-fifheries at Canada and Cape Breton, the fame rights, privileges, and exemptions which are granted for the commerce of the French colonies, to the merchants of the kingdom, included in the letters patents of the month of April 1717 ; to which end, his majefty orders that there may be eftablinhed, in the faid city of St Jean de Luz, a warchoule, wherein the merchandizes and provifions defigned for the victualling of hips fitted out for the faid finheries, fhall be lodged, according to the entrepoft, and in conformity to the 30 th article of the faid letters patents.-Done at the council of fate, held at Verfailles, the 20th of July 1734.

Signed Guyot.
An arret of the royal council of flate; and letters patents in confequence thereof, concerning the entrepoft, as well in refpect to merchandizes, intended for the French illands and colonies, as thofe which come from thence.-Of the 6th of May $173^{8}$. Regiftered in the council of aids.
The letters patents of the month of April 1717, being reprefented to the king in council, containing regulations for the commerce of the French colonies, by which his majefty hath ordered, by articles 5,6 , and 30 , that the provifions and merchandizes of the kingdom intended for the faid colonies, together with thofe alfo of the faid colonies, thall be warehoufed, according to the entrepoft in the ports therein defigned, and that the warehoufes for that purpofe fhall be chofen by the merchants, at their expence, and locked with

## FRE

three different keys, one of which hall be depofited with the commiffioner of the five great farms, another with the commiffioner of the weftern domaine, and the third with the overfeer appointed for that purpofe by the merchants: the declaration of his majefty, of the $19 t h$ of January 1723 which orders that the merchants, the proprietors of the provifions and merchandizes defigned to be warehoufed, and intended for the French inlands and colonies, fhall be obliged, after one year's entrepoft, to declare, at the offices of farms of thofe places, the quantities, qualities, weights, and meafures of the faid provifions and merchandizes, which fhall remain in the entrepoft warehoules; which declaration fhall be certified by the commiffioners of the adjudicatory of the farms; and, in cafe of offending thereagainf, by a falle declaration, the merchants proprietors of the fard interpofed merchandize fhall be condemned in the penalty of soo liveres, and likewite obliged to the payment of the duties of the merchandizes which thall be found wanting according to their declaration :' and lafty, in cafe of the fale of the laid merchandizes, the merchants proprietors thereof fhall be obliged to difcharge the duties one month after fale, on pain of the like penalty of 500 livres. The arret of the council of the 3 d of May 1723, and letters patents, in confequence thereof, of the 21 If of the fald month, by which his majefty hath fixed the time of entrepoft, as well with refpect to the merchandizes of the iflands and colonies, as of thofe declared and defigned for the faid iflands and colonies, fhall be to one year, reckoning from the day that the faid merchandizes fhall have been fo warehouled ; whichtime being expired, they thall be liable to duties. And his majefty being informed, that, in the cafcs where the farmer of the revenue, on account of the difficulties which attend warehoufes under keys, permits the merchants to make the entrepoft in their own warehoufes, many of whom lodge the faid merchandizès, or change the warehoules, without making any declaration thereof to the farmer, which hath occafioned divers abufes: his majefty, being refolved to remedy the fame, by adding to the abovefaid regulations freth precautions, which may, in fome meafure, fupply the default of the keys, which, in the terms of the letters patents of April 1717, fhould be depofited with the farmer of the revenue, \&c. The king having heard the report of the Sieur Orry, couniellor of ftate, and comptroller-general of the finances, being prefent in council, hath ordered, and doth hereby order, that, in cafe where the farmer of the revenue fhall permit merchants to put merchandizes in their own warehoufes, the faid merchants fhall be obliged to declare to the commifioners of the farms, the warehoufe wherein they defign to place them, and to give to the officer of farms fecurity to reptefent them in the fame quality and quantity, at the time required, under the pains and penalties hereafter mentioned. -His majefty forbids the merchantst to take out the faid merchandizes from the warehoufes wherein they fhall be depofited, or even to fhift them from one warehoufe to another, 'till they have made a declaration thereof to the faid office, and taken out a licence for that purpofe, \&cc. His majefty orders that, in cafe of fraud, the faid merchants fhall be condemned to the confifcation of the value of the merchandizes wanting, and befides in the penalty of 500 livres, \&c. and, in cafe of a change of warehoufe without declaration made thereof, they fhall be deprived of the benefit of the entrepoft, and liable to the payment of all the duties, \&xc.

May the 21ft, 174 r , was iffued an arret of the royal council of flate, permitting privateers for the French iflands and colonies to load falt in Bretagne, or in other parts where cuftomary, to be employed at Cape Verde, for the falting of beef defignied for the faid iflands, without paying any duties, \&c. On July the 1gth, 1742, a royal ordinance was made, forbidding all captains of fhips difarmed in the faid illands of America, from paying, in the faid illands, the balance due to their fhip's crew, and injoining them to make the difcounts in prefence of the officers charged to take an account of feveral claffes of the failors, and regulating the peculiar forms, requifite upon thefe occafions, \& c .
This ordinance being too long to introduce here, and yet having fomething deferving notice, we fhall refer the fame to the article Seamen.
The 13 th of June 1743, a royal ordinance was publifhed, concerning the regulation made on the reception of captains and mafters of hips in the French colonies of America,Which we fhall take notice of under the article Privateers.
June the $24 \mathrm{th}, \mathrm{J} 743$, an arret of the royal council of fate was iffued, ordering that the merchandizes of the produce of the French illands of America, intended for Cape Breton, Thall be difcharged to the Ift of January, 1747, of the duty of weight of I per cent. and that thofe merchandizes of the produce of the faid illands, defigned as well for Cape Breton as for Canada, fhall be difcharged, during the faid time, of
the duties of 3 per cent, of the weftern dornaine, together with the duty of 40 fols per 100 weight upon fugars of the faid iflands, which fhall be fent there.

## ExtraEted from the regifters of the council of ftate. See the article Sugar.

Oftober the 29th, 1743, an arret of the royal council of October the $29 t$, was iffued, ordering that the merchants and privateers of Marfeilles hall be obliged to bring to the office of the weftern domaine all merchandizes coming from the French iflands of America, fo well as thofe which fhall be embarked for the faid iflands, to be there vifited, and the duties difcharged.

## Extracted from the regifters of the council of ftate.

April the 20th, 1744, an arret of the royal council of 1tate was made, forpending, during the late war, the execution of the 2 d article of the letters patents of the month of April 1717, concerning the commerce of the French iflands of America.

## Extracted from the regifters of the council of fate.

On the 22d of December, 1750, an arret of the royal council of fate was declared, containing an exemption of the duty of 3 per cent. of the weftern domaine, on cottons brought from the French colonies of America, for home-confumption, and to fubject them to the fame duties of exportation that they paid before the arret of the I2th of November, 1749. Alfo, Ordaining that the duty of 3 per cent. of the weftern domaine fhall continue to be collected upon cotton of the French colonies exported to other nations; that the duty of $\frac{1}{2}$ per cent. eftablifhed by the deciaration of the Ioth of November, 1727, fhall continue to be collected upon the cotton. of the faid colonies, in the fame manner as collected upon othermerchandizes which come from thence.

## Extracted from the regifters of the royal council of fate.

'On the $17^{\text {th }}$ of Auguft 1751, an arret was iffued by the royal council of ftate, fixing at 8 livers per $x 00$ weight the duties on the exportation of cotton-wool out of the kingdom, coming from the French ifland colonies, and thofe on cottonyarn at io livres per too weight, as well for the duties of the five great farms, as for thofe of the weftern domaine: ordaining, alfo, that the duty of $\frac{1}{2}$ per cent. augmentation of the weftern domaine thall remain to be collected at importation in the kingdom upon cottons coming from the faid inlands.
Remarks on French America in general, as the fame ftood before the laft war.

We have dwelt the longer on the Jaws eftablifhed in France for the regulation of their trade of the American iflands and colonies, becaufe thefe things feem to be little known in this kingdom, and becaufe they point out the meafures which that nation bas taken, from the year 1700 to the prefent time, for the advancement of the commerce of their iflands and colonies in America: and, as the fuccefs and profperity of this neighbouring nation, in thefe illands and colonies, have been fo remarkable and confpicuous to the whole world, within a little above half a century, a knowledge of thofe laws whereby. fuch great things have been effected, one thould feem to think, muft be acceptable to all who would enter into the caufes of fuch extraordinary, and, indeed, unparallelled confequences.
That our readers may form a right judgment of thefe laws and regulations, we thall obferve the following particulars, viz. I. That they are grounded on the reprefentations of the $\mathrm{de}-$ PUTIES of COMMERCE, made, from time to time, to the ROYAL COUNCIL OFSTATE: that thofe deputies of commerce are perfons well filled and experienced in thofe branchos of trade about which they lay their fentiments before the royal council. See the atticle Chameers of Commerce.
2. That thefe laws and regulations, in general, are extremely minute, and appear to be derived from a very exact and circumftantial ftate of the commerce, as carried on by the PRACtical merchants and traders; which indicatesthat the legislators in all countries cannot be too fully and particulariy informed of all the various methods and arts made use of by TRADERS in the profecution of their refpective branches, the better to enable them fo to adapt and conform their laws to the nature of peculiar branches, that the national profperity cannot fail of being promoted.
3. That the fines and penalties on traders violating thofe laws are very rigorous and levere; and that the French nation are as ftrict in the execution of thofe laws, as they are circumftantial and deliberate in the enacting them: witnefs the cafe of captain Giles Robin, for carrying on illicit trade with an Englifh veffel at St. Domingo.
4. That the laws of trade in France fhould feem, fuitably to
the nature of the conflitution of their govemment, to be wifely accommedated to preferve the whole trade of their Sugar ISLANDSAND colonies to themselves, in order to render them abfolutely fubfervient to the profperity of their MOTHER-Kingdom.-That, to this end, we find them, by their laws, extremely vigilant to prevent all contraband trade from being carned on with foreign nations in their colonies, they judging it highly detrimental to the intereft of their colonies, as well as of the kingdom of France in general.
5. That, fince the laws of France in general are fo well.calculated to prevent fuch contraband trade, we may prefume that, whenever this nation permits, or winks, at fuch trade with their American colonies, they are certain to be galners by it ; otherwife we may reafonably entough believe, that they would foon put an effectual flop thereto, As the due execution of their laws could not fail of being effectual to that purpose.
6. That as the French wink at, and countenance a trade being carried on between the British northern colonies and the French sugar-islands in America, it is to be feared that the French ate too fenfibe of the advantages arifing from that trade, or they would as little admit of that in particular as any other ; and if that proves a gainful branch of trade to the French, does it not become the wifdom of Great-Britain fo thoroughly to examine into this commerce with the French colonies, as to determine Whet her a commerce benefieial to France can ee so in it's consequences to Great-Britain?
7. That the French take all proper care to promote a trade between Canada, or New France, and their ifland colonies; and that it hould not feem to appear bad policy in Great-Britain to promote, as much as poffible, the commerce of our Northe American colonibs with our own SUGAR-ISLANDS, rather than to permit them to carry on a trade to the French gugar-islands.
8. That the French have furprizingly increafed in their su-gar-trade, as well as in every other part of the commerce of their islands and colonies in America, is a fact uncontrovertable; and that their maritime power, in general, has augmented, in the like proportion, is as little to be difputed.
9. The Englifh nation are very apt to have too mean an opinion of the trade and navigation of other nations, particularly the French, notwithftanding the fuperiority they have infenfibly gained over us in feveral branches of commerce fince the peace of Utrecht.
10. The number of prizes that were taken from the French in the late war 1740, and the frequent arrivals of their numerous fleets, have rouzed and opened the eyes of many that would not be convinced before : and, fince our indolence is at length awakened, our fecurity alarmed, and every breaft feems to be filled with thofe palfons which are inkindled by the love of our country, not only from this inflance, but alfo from many other proofs that the French have of late years gained very great advantages over us in trade ; furely no opportunity ought to be loft to excite every Briton to the exertion of al! his faculties to difcover the caufe of fuch a furprizing change, and to find out fuch expedients as may enable us to bear up againft the flourifing ftate and ambitious views of the common difturbers of Europe.
II. In order to anfwer fo defirable an ens, it will be neceflary to fearch narrowly into the prefent ftate, laws, eftablithments, and rules of commerce, as well foreign as domeffic, and to retrench what is fuperfluous and inconvenient in our own laws, and to fupply what is infufficient by prudent regulations.
12. In the arret for eftablifhing a council of commerce in France, done in the king's council of flate, his majefty prefent, at Verfailles, the 2gth of June, 1700 , as obferved on another occafion, it is faid, 'Lewis XIV. king of France, - having at all times been fenfible of what importance it was - to the welfare of the fate to favour and protect the com-- merce of his people, as well within the kingdom as out of - it : and being, in the year 1700, more difpofed than ever - to grant a particular protection to commerce, to fhew his - efteem for the good merchants and traders of his kingdom, - and to facilitate to them the means of making trade flou-- rifh, and extending it: and judging that nothing could be - more capable of producing this effect than the forming a - COUNCIL OF COMMERCE, to be wholly attentive to the - examining and promoting whatever may be molt advanta-- geous thereto, and to the manufactures of Fiance in gene-- sal, effablifhed a council accordingly,' which confiffs of fome of the principal *OFFICERSOFSTATE, and 12 of the Princtpal merchants of the kingdom, as I have elfewhere obferved.

* The comproller general of the finances, fecretary of flate' and other particular counfellors of fate, who communicate what paffes at this council to the royal council, as occafion may require.

13. In this council of commerce, which fies at leaft once in every week at Paris, or where the court refides, are difcuffed

## F R E

and examined All propositions and memorials WHICH ARE SENT TOIT, together with the affairs and difficulties which may arife concerning commerce, as well by land as by fea, within the kingdom and out of it, and alfo concerning fabrics and manufactures.
14. Immediately upon the eftablifhment of this council of commerce, the ${ }^{*}$ deputies of the faid council applied diligently to the duty of their office, and the enfuing year prefented to the royal council no lefs than 20 memorials concerning the commerce of that nation to their American illands, Guinea, the Levant, Spain, England, Holland, and the North; the raifing nominally the value of coin, and the effects that has upon commerce ; the granting monopolies; the erecting of exclufive companies; and other chief points in trade.
*Thefe deputies have 10,000 livres per annum falaty (which is about 4001 . fterling) allowed by their refpective towns that elect them.
15. In thefe memorials are contained feveral propofitions for regulations and remedies in trade, many of which have fince been thoroughly executed, to the honour of thofe deputies, and to the great advantage and reputation of that nation, as they have, fince the reprefentations of the faid memorials to the royal council*, extended their trade to the Levant, the North, Africa, North America, the South Seas, and to the EAst and West-Indies, even fo far as to make more than double the value in SUGAR, INDIGO, GINGER, and cotton, in their West-Islands, than what is now made by the ENGLISH, who, before that time, ExCEEDED the French in this branch of trade abunDANTLY.

* It is computed that, before the year 1720 , there was no more than 30 fail of fhips annually ernployed in the American trade from Bourdeaux only, and thatthere are now 300 fail employed annually in that trade from that city only.

16. In the article of fugar only, they have, within that time, increafed, from the quantity of about*30,000 Englifh hogtheads per annum, to 120,000 , or thereabouts, whereof about two thirds are fhipped to Holland, Hamburgh, Spain, and tother foreign markets; and the Englifh rave increafed from about 45,000 to no more than 70,000 hogheads within that time, of which they now fend but little to foreign markets although they had formerly the beft thare of that trade, and even fupplied France with fugars. This increafe of the importation of fugar into Europe from America, by the FRENCH and ENGLISH, is owing to the great increafe of the general confumption of fugar in Europe, and the declenfion of the Portugueze fugar-trade.-And, moreover, the French have already engrofled the indigo-trade from the Englifh, and have greatly increafed in their fifheries, and and beaver and other fur-trade in North America, fince their fettlement of Cape Breton, which they bave fortified at a + valt expence; and it is from this laft-mentioned trade, and their fifheries, that they find a vent for moft of their melaffes and rum that the Englifh do not take off their hands.

* A hoghead of fugar, including freight, and other charges home, may be computed, on an average, at 121 . to 181. per hogfhead, according to the plenty or fcarcity.
$\dagger$ The fortifications of Louifburg, in the illand of Cape Breton, coft the French king fome millions of livres, befides a vaft anuual expence in maintaining them and the garrifons here, before the late war; and that it has coft them con fiderably fince, is recent in every one's memory.

17. They have alfo gained a great fuperiority over us in the fur-trade. It is computed they import into France from $\mathrm{Ca}-$ nada only, to the value of ${ }^{*} 135,000$. fterling per annum in beaver and other furs, including deer-1kins; and the Englifh, from all our northern colonies, not above $+90,000$. fterling. And the French are fo tender of this branch of trade, and fo - fenfible of the advantages that arife from the manufactory of thefe American commodities, that no one can re-export beaver from France unmanufactured, under the feverelt penalties. When thefe goods are munufactured, they exceed the value upon importation, in fome cafes, ten fold, and have greatly improved this branch of trade, and fupply moif parts of Europe and Spanifh America with hats.-In the late war of 1740, there was a fhip taken, bound from France to the Spanifh Weft-Indies, in which was a quantity of white beaver, and other hats, which were fold in London, and were fo much fuperior in quality to any thing of the like fort, that our manufacturers were furprized at it, as they were much beyond what they could have imagined.

FRE
18. The great advantages gained by the French from fuch a furprizing increale in trade, is confpicuous from the immenfe fums they draw annually from other countries, in return for their American products, as well as for their cambrics, tea, brandy, wine, and other home manufactures.
19. It is from hence they chiefly maintain fuch powerful armies, and afford fuch plentiful fubfidies and penfions to feveral powers in Europe, when fubfervient to their views and interefts : it is from bence they build their thips of war, and nourifl and maintain feamen to fupply them.
20. It is computed that they draw from two to three millions of pounds fterling per annum from foreign countries, in return for fugars, indigo, coffee, ginger, beaver (manufactured into hats) falt-fifh, and other American products, and near one million more from Great-Britain and Ireland only, in wool and cafh, in return for cambrics, tea, brandy, and wine, and thereby fight us in trade, as well as in war, with our own weapons.
21. Whether this great increafe of the French commerce is owing to the extent and fertility of their territories, or to their dent regulations and encouragements thereof, both at home and abroad, or to the experience and vigilance of the Council of Commerce, we will not determine; though, perhaps, chiefly to the latter.
22. The French, for the encouragement of the American ines and colonies, have, fince the year 1698 , laid little or no duties on the importation of their Sugar, or any other of their American products, however preffing the exigencies of the government might have been fince then.
23. They pay but $3 \frac{1}{2}$ per cent. on a low valuation; which reduces it to about 2 per cent. on the importation of therr fugar into France, befides an inland duty of 3 livres, or about 25 . 8 d . fterling per 100 weight; yet fugars, and other effects of their African company, are exempted from half the impofts payable at the cuftomhoufe, and from all local duties on what is imported or exported by them [as oblerved under French African Company.] The French planters pay but one per cent. on the exportation of their plantation products from their iflands, whilft the planters of Barbadocs, and the Leeward Inands, long paid $4 \frac{\frac{1}{2}}{2}$ per cent. on their exports.
24. The French king has many years fince allowed his fubjects that trade to Africa a bounty of 10 livres, or about 9 s. fterling a head for every negroe, and as much for every ounce of gold-dult which they carry from the coaft of Guinea.
25. Although the French king's edicts and arrets, or laws, are as ftrict as our acts of trade and navigation, as to the prohibition of foreigners from trading in their iflands and colonies in America, yet their great officers have difcretionary power to difpenfe with thofe laws, where it fhall appear for the benefit of their colonies, and without prejudice to the TRADE AND navigation of France- Whence it is they are permitted to exchange their furplus rum and melaffes with the Englifh, for cafh, horfes, fhipping, timber, and other plantation neceflaries.
26. There is alfo a confiderable traffic carried on between the French iflands and the Spanifh illands of Margueretta, Trinidado, Porto Rico, and other Spanifh ports in America, whereby the French receive from the Spaniards money, horfes, mules, cacao, cocheneal, tobacco, and other American products, in return for French manufactures and negroes; and the French employ between 100 and 150 fail of floops and other veffels, in and about the illand of Martinico.
27. The French king grants lands in his plantations gratis, to poor induftrious people, fent thither from France, and gives them other encouragements to go over and fettle there; and moreover lends money to his American subjects, incafes of hurricanes, or other unavoidable misfortunes.
28. They check exorbitant fees, extravagant port-charges and extortions, and difcountenance ufury and highintereft in their colonies, and take the greateft care that none of their planters eftates are broke up by hafty creditors. In a word, they neglect farce any meafures that have a tendency to the advantage of all parties interefted, as well as to the benefit of the colonies, in conjunction with that of their mothernation.
29. The fortifications in the French fugar illands are erected and maintained at the king's expence, which, in the Englifh illands, is chiefly done by the inhabitants.-They pay wages to marines that are taken on board their private fhips, which fhips are at the expence of victuals only for fuch marines; and they obferve the moft prudent regulations with regard to their marine in general ; they punifh defaulters, and reward the meritorious according to their deferts. See the article Marine Laws.
30. They coin fmall pieces of filver in France, for the particular ufes of their fugar-colonies, and fend them there to pay off their governors, and other public officers, and to eafe their trade: on the other hand, the Britifh fugar-planters raife money to pay not only their own governors, and other public officers, but alfo the governors of Bermuda and the Bahama illands in America, as well as the governor of the illand of Jerfey in Europe.
31. The tender care the French take of their trade is further evident from the following extract, taken from the before-
mentioned memorial, prefented by the deputies of the council of commerce to the royal council in 170I, viz.

- The depuries are obliged to obferve further to the royal coun-- cil, that, for three or four years paffed, a duty is levied at St - Domingo of 2 fols [above Id. $\frac{2}{\text { io fterling] per pound weight }}$ - on indigo, thipped off there. This novelty is the more - pernicious, becaufe that drug ferves for dyeing our manu-- factures into blues or blacks, and becaufe we make a con-- fiderable traffic thereof to the North. It is of great impor'tance for the council to be pleafed to take off this duty, "which is capable of ruining the cultivation of this drug.'How the French have advanced in the indigortrade fince this time, fee Indigo.

32. The French minifters feem fuccefively, from the time of Richlieu, to have fet their hearts on regulating commerce, and to turn every article thereof to the national emolument.
33. The French do not think their laws ought to remain unalterable, according to the maxim of the Medes and Perfians, for they at all times readily change their laws, when they experience the exigencies of commerce require it. We have a recent and remarkable inftance of this during the late wars; they permitted Dutch fhips toload fugar, and other commodities, at their Weft-India iflands, and carry them directly to Holland, or to any other part of Europe.
34. By this meafure the French encouraged their colonies in time of war, by ealy infurances and Jow freights, befides getting early with thair plantation-produce to foreign markets. In regard to the important article of fugar, melaffes, rum rice, \&c. the productions of the Britifh plantations, and the laws to which they are fubject in England and France, comparatively confidered, we Chall take notice of them under their diftinct heads.
35. In the mean time we fhall obferve, that, whatever practices among Britifh traders have any tendency to promote and advance the profperity of our rival American iflands and colonies, and injure our own, they ought to be thoroughly enquired into, and a ftop put to them. The practices, at prefent alluded to, are thofe of our Britifh northern colonies in America, carrying on a commerce with the French illand colonies there.

## Further REMAREs.

Whether the charge of our Weft-India merchants againft thofe of the northern colonies be well grounded, we will not take upon us to fay; but leave the decifion thereof, after giving a thort flate of the argument on both fides, to the impartial public; it being indifferent to us on which fide the trath may lie, if we can but be inftrumental to bring it to light.-According to the reprefentation of the Weft.India merchants the cafe is as follows, viz.
By the act of navigation, paffed 12 Car. II. cap. 18, it is enacted, That no goods hall be imported into, or exported out of, any territories belonging to the king in Afia, Africa, or America, in other veffels than fuch only as belong to the people of England, Ireland, Wales, or town of Berwick upon Tweed, or are built in the Britifh plantations, and owned by Britilh fubjects, and whereof the mafter and three-fourths of the mariners are Englifh, on pain to lofe fuch goods and veffels; and commanders at fea, having commiffions from the king, are impowered and required to bring ia, as prize, veffels offending contrary to this aft ; and, in cafe of condemnation, one moiety fhall be to the ufe of fuch commanders and their companies, the other moiety to the king. And, by the fame act, it is further enacted,
That no goods of foreign growth or manufaCture, brought into England, Ireland, Wales, Guernfey, Jerfey, or Berwick, in Englifh or other fhipping, belonging to fome of the faid places, and navigated as aforefaid, hall be brought from other places than thofe of the growth and manufacture, or from thofe parts where they can only, or have ufually been thipped for tranfportation, on pain to forfeit fuch goods and veffels.
That, by another act of parliament, paffed 15 Car . II. it is enacted, That no commodity of the growth or manufacture of Europe fhall be imported into any of the king's plantations in Afia, Africa, or America, but what thall have been Ohipped in England, Wales, or the town of Berwick, and in Englifhbuilt fhipping, navigated as aforefaid, and carried directly thence to the faid plantations, upon pain of forfeiture of the goods and veffels,
In the making of thefe laws (always looked upon as the bulwark of the Englifh commerce) Great-Britain had two vaft objects in view, One, the increafe of her naval power (by making her own people the fole carriers of the whole Britifh commerce:) the other, the appropriating and fecuring to herfelf, and her own fubjects, all the emoluments arifing from the trade of her own colonies; well knowing the importance of thefe two great fources of her wealth and power : and the nation has continued to enjoy the full fruits of thefe excellent provifions, from the time of making thefe laws down to the peace of Utrecht.
Nor has this been the policy of Great-Britain only, but every other nation allo fees the advantages thereof, and think they Vol. I
have a right of preferving the trade of their own colonies to themfelves. France, in particular, has been fo watchful in this refpect, that they feize every foreign veffel (except thofe concerned in the lumber-trade) coming within two leagues of their own hore; and feveral Britifh veffels have been confifcated at Martinico, for approaching within that diftance, looking on that as proof enough of an intention to trade, unleis they, on the other hand, fhewed that they were forced in by ftrefs of weather.
But, foon after the peace of Utrecht, a pernicious commerce began to lhew icfelf, between the Britih northern colonies and the French fugar-colonies, which began with bartering the lumber of the former for French fugar and melaffes. The French, who before that time had no vent for their melaffes, and could make no better ufe of it than to give it to their hogs and horfes, foon found the way (after they became acquainted with the northern traders) of diftilling it into rum, which their new correfpondents were as ready to take off their hands, as they had before been to take their furar and melaffes; and from hence they derived a new mine of profit, unknown to them before, and transferred to themfelves the benefit of a trade, which it was the chief defign of thefe laws to preferve to Great-Britain alone.
This being made appear to parliament, a further provifion was made for putting a ftop to this manifeft fubverfion of the fundamental maxims of the Britillh policy, for preferving her commercial interefts, by an act in the 6th year of the reign of George II. intitled, An act for the better fecuring and encouraging the trade of his majeity's fugar-colonies in America, whereby fuch high duties were laid on all foreign fugars, rum, and melafles, to be imported into any of his majefty's colonies in America, as it was thought were equal to, and would anfwer all the ends of a prohibition.
But experience has fhewn, that all thefe laws are too weak to anfwer the purpofes for which they were defigned, and that fome more effectual remedies might be found to keep the Britifh traders in North America within bounds, if Great-Britain refolves to preferve her right of controuling the trade of her own fubjects in that part of the world, and turning it into fuch channels only as her wifdom thall direct, and think molt conducive to the interefts of the whole community: for it can be made appear, beyond contradietion, notwithftanding all the laws which have hitherto been made,
I. That a fettled courfe of traffick has been carried on for feveral years, by many of his majefy's fubjects in North America, to the ports of Marfeilles and Toulon, in which their fhips have gone direetly thither, laden with pitch; tar, train-oil, timber-trees, and planks, for building Chips; fpars, ftaves, logwood, beaver, martins, deer, and elk-fkins, furs, and naval ftores; and have returned back again, without ever touching in Great-Britain, with goods of the growth and manufactures of France, and other foreign nations.
II. That they have carried on the like trade with Holland.
III. That, notwithftanding the aft made in the oth year of his prefent majelty's reign, the Britifh northern colonies ferve themfelves chiefly with foreign fugar, rum, and melaffes, without paying the duties impofed by that aft, and fometimes import them in veffels owned by foreigners; and that this trade is now carried to fuch a beight, that veffels have been purchafed for, and fixed in this commerce only, and conftantly and regulatly employed in trading backwards and forwards between the foreign fugar-colonies and the Britifh colonies in North America; and that, in order to facilitate it, they have fettled correfpondents and factors in the French iflands', and the French have done the like in our colonies in North America.
IV. That this trade is not only connived át, but cherifhed and encouraged, by the foreigners with whom it is carried on, who well know how much it tend's to inrich their own colonies, and impoverilh ours.

Some of the many Jll Consequences arifing from this trade to Great-Britain.
I. It will deeply affect the manufactures and products of GreatBritain, and in a much greater degree than is at prefent felt, if it be not timely ftopped, caufe a great declention in the trade of the kingdom, and not only deprive the nation of a profit to which they have a natural right, but many perfons now employed in thefe manufactures will be brought to want the means of fubfiftence.
II. The number of Englifb fhipping, and, confequently, of failors, will decreafe in proportion as this trade increafes, which laps the very foundation of the naval power of the kingdom. - The defign of the act 15 Car. II. forbidding the importation of any commodities or manufactures of Europe into the king's plantations in America, was intended to make a double voyage neceffary, where thefe colonies ufed any commodities of the growth and manufactures of Europe, but Britifh ; for; if they could not be fhipped but in Great-Britain, they mult firft be brought thither from the places of their growh or manufacture, and Great-Britain wopld confequently have the benefit not only of that freight, but of as many
thips and frilors as mult be employed in bringing them from thence. But, if the northern colonies thould be allowed to carry them directly from the places where they grow or are manufactured, not only thefe benefits will be loft to the nation, but likewife the profits arifing to the importers, the duties retained by the crown, where the whole is not drawnback, the warehoufe-rent, commifions, and many other incidental profits, not neceffary to be enumerated.
III. If a flop is not put to the progrefs of this trade, it will leflen the dependence of thefe colonies upon their mothercountry, and, in time, produce fuch connection of interefts between them and foreigners; as will, by degrees, alienate them from Great-Britain.

Some of the many Ill. Consequences arifigg from this trade to the Sugar Colonies.
I. It may be laid down as an undoubted truth, that, as the enlarging the vent of any commodity is one of the beft means that can be ufed to encourage its growth, and the teffening of it is the certain way to difcourage it; and from thence it neceffarily follows, that, as we have many rivals in this trade, nothing can be of more fatal confequence to the Britifh fugarcolonies, than to fuffer foreign fugars to be confumed in any of its own dominions; it being obvious, that this muft check the growth of fugar in our own iflands, and increafe it in theirs; and, therefore, would manifeftly tend to the flrengthening their colonjes, and weakening our own.
II. This trade, as carried on, raifes the price of lumber to the Britifh planters, and, as the northern traders often refufe to take any thing from them but ready money, drains them fo much of their gold and filver, that they are ofren brought into great diftrefs for want of it.
III. All the money which thefe northern traders receive from the Britifh planters, is carried to the foreign fugar-colonies, and there laid out either in the purchafe of foreign fugar, rum, and melaffes, or of foreign European and Eaft-India commodities, which are carried to the Britifh northern colonies, and there fupply the place of Britifh manufactures, and Britifh fugar, rum, and melaffes, and, confequently, rob the nation not only of the confumption of fo much of its own commodities, but of fo much gold and filver too: whereas, if the foreign colonies (who cannot bé fupplied with lumber but - from the Englifh) were conftrained to purchafe it with ready monev only, and not allowed to give their fugar, rum, and melaffes, in exchange for it, this would turn the tables upon them, and make the ballance of the lumber trade as much in our favour as it is now againft us.

Benefits which Great-Britain may derive to herfelf, and ber Sugar-Colonies, by putting an effectual fop to this trade.
It is well known to every one concerned in the fugar-trade, that the profits of the planter depend upon the vent which he finds for his rum and melafles; for, if fugar only, and no rum or melaffes, could be produced from the fugar-cane, it would hardly pay the expence of the culture and making; confequently, as the vent of rum and melaffes is ftopped or increafed, the fugar colonies (whether Englifh or foreign) muft refpectively thrive or decline. And, as rum is not allowed to be imported into Old France, or any of its colonies (becaufe it inteferes with brandy, which is the product of the mother country) this evidently fhews how much it is in the power of Great-Britain to check the progrefs of the French fugar-iflands and advance that of her own: for, if the bringing French rum and melaffes into any of the Britifh dominions were once effectually ftopped, all the profits made by rum and melaffes, in the French fugar-colonies, would be loft to them, as they could find no vent for it in any other part of the world. This point, therefore, ftrictly attended and invariably adhered to, would, in its natural tendency, damp the growth of the fugar in the French illands, and increafe it in our own; and might, very probably, in the courfe of fome years, be the means of enabling the Englifh to beat them out of all the foreign markets in Europe, and confine them to their own confumption.
It may not be improper to mention two things more, to fhew that Great-Britain is now more concerned, than at any time heretofore, to give attention to the trade of her fugar-colonies; becaufe the other trading nations in Europe feem now to be more intent than ever uppn wrefting this trade out of her hands, and grafping it themfelves. Of thefe,
The firt is, That the Danes have lately fettled a fugar colony at Santa Cruz, an inland in the neighbourhood of the Britifh Leeward Inands, and to which feveral of the Britifh fubjects in the Leeward Inlands have lately gone to fettle, upon the invitation and the encouragements offered them by the Danes, As the growth of fugar will be confiderably increafed by this new fettlement, the demand for a confumption of Britifh fugars abroad, will in confequence be leffened; and there is therefore the greater neceffity for obliging Britifh fubjects to confume no fugars but what are of Britifh growth, left our own
colonies hould not find a fufficient vent for what they grow; for, if that thould ever be the cafe; they would foon dwindle to nothing.
The fecond is, That all other nations, polfeffed of fugar colonies, feem to be fo fenfible of the advantages arifing from the fugar-trade, that they are more intent than ever upon extending it, and ufe their utmoft induftry to introduce their own fugars into Great-Britain; and it is but too notorious, that they have been fo fuccelfful as to find the way of cortupting the traders in our fugar-colonies, and making them the initruments of introducing foreign fugars, under the denomination and difguife of Britifh, into Great-Britain itfelf: from whence it is very apparent, that, without fome vigorous efforts of parliament, a great part of that wealth, which Britain might and ought to derive to berfelf from the trade of her own colonies, will be ravithed from her by the intrigues of foreigners, and the treachery of ber own fubjects.
It is bumbly fubmitted to the confideration of parliament, Whether this fmuggling trade (as the Weft-India merchants are pleafed to call it) fo apparently deftructive of the national interefts of this kingdom, ought not to be flopped without delay, and the importation of foreign fugar, rum, and melafes, into any of the Britifh colonies in North America, promibited under such penalties, and with such en. COURAGEMENTS TO SEIZE AND INFORM, AS MAY bE adequate to the disease, and effectualiy curb this ilcentious commerce.
In oppofition to this, it was urged in favour of the northern colonies, That the trade carried on by them with the French and Dutch Weft-India fettlements, inftead of being prejudicial to the intereft of Great-Britain, the taking off the duties already laid thereon, would tend greatly to her advantage, by promoting the exports of her manufactures to the northern colonies; which, in sonfequence of a prohibition, muft fenfibly decreafe.-That, when the honourable the lords commificners of trade, according to the advocates for the northern colonies, examined the evidences brought, refpecting the quantity of melaffes made in the Britigh Weft-India iflands, it appeared, all of them, together, did not export 12,000 hogheads, and that they never had any left on their hands.-That a veffel or two only went to Holland from the northern colonies, whofe whole cargoes did not amount to a roool. each; and that 2 or 3 others, in the late war, that is of $\mathbf{5 7 4 6}$, went as Hags of truce to the French iflands, under cover $e$ ewhich, they purchafed a cargo of melaffes for fifh. That now ard then a veffel from the northern colonies traded with the Britifh ifland colonies, the mafters of which would not take rum, fugar, or melaffes, for their cargoes, but infifted on calh, with which they would buy thefe commodities in the French fugar-illands.- The true reafon whereof, 2 a acknowledged, was, becaufe thofe perfons could go to thefe foreign inlands, and purchafe the fame articles ro or 15 per cent. cheaper; or, perhaps, to the next foreign illand, and get them a third part cheaper, and not becaufe they did not want thofe articles.-Then fay our northern colonies again, that, within thefe 15 years, the Weft-India' planters have given above double the price for lumber that they do now, and yet fold their rum and melaffes for lefs than half what they get for it now; and that, at this prefent day, they do not give the northern colony people the firft coft for what they buy of them.
It was faid alfo, before the lords of trade, that the northern colony people fènt their veffels to thefe foreign iflands, under pretence of getting melaffes, and there purchafed Eaft-India goods, \&c. The place meant here was St Euftatia, one of the leaft of the Caribbee Illands in America, belonging to the Dutch.-To this it was anfwered, that the Weft-India traders well know this not to be currently the cafe; for that there is not one veffel in ten that goes from the northern colonies to the Britifh inand colonies in America, whofe cargoes, neat, are fufficient to purchafe even a load of melaffes, of the value of 4 or 500 l . and not one out of twenty that ever purchafes a pennyworth of dry goods; but if, by arcident, a mafter of a velfel has 40 or 501 . more than he can Jay out in melaffes, and fhould purchafe a few pieces of duck, or quoils of rigging, which is the moft they do, what mighty fouggling is that? Yet, where one perfon lays out fuch a fum in dry goods, there are ten who carry home the produce of their cargoes in filver and gold. - And that they fometimes cannot get rum, fugar, and melaffes, was allowed, it feems, before their lordhips.
Much of the fame nature with the above-mentioned trade is, that the northern colonies are faid to carry on to Marfeilles and Toulon; and that ten fail of veffels from thefe colonies had not been at either of thefe places for thefe ten years paft; and when, by accident at any time, a veffel was fent with fuch a cargo, as mentioned, of oil, pitch, tar, furs, timber, $\log$ wood, fpars, oak, \&cc. yet the whole quantity, together, fearce ever produced 5001 . out of which the charges of the veffel was to be paid, and a load of falt to be purchafed in the firft place, and no grear quantity of velvets, filks, gold and filver-lace, \&ic. could be purchafed with the remainder of her cargo.-It may probably have happened, that
themalters of fome fuch veffets may have fometimes, with their own privite adventure, of the value, perhaps, of 40 or 50 l. purchafed a piece of velvet, with the pattern of filk for a gown, and feveral of thefe fmall articles enumerated by the Weft-India tradess, for fome friend or other ; and this is pretty near the extent of the mighty funuggling trade carried on from the northern colonies to Marfeilles and Toulon.
After this the northern colony agents retaliate upon the Weftlindia traders, and charge them with aiming at engroffing the whole of the French trade by fmeggling ; for that they at prefent have a good fhare thereof, by their own confeffion; that great quartities of foreign fugars are cleared out from the Enylifh illands as Britifh manufactures, but that no fuch fugars are ever hiaped in the northern colony veffels, is a fact not to be gainfard.
Afeer a little flourifh and alperity againft the Weft-India traders, all which I paifs over, the advocates for the northern colonies reduce the matter to the following heads of enquiry, in justification of their caufe. As,
Firn, What fort of manufactures, and what value, are exported from Great-Britain to the Britilh fugar inlands, in proportion to what the exports to the northern colenies?
Secondly, What returns does Great-Britain receive in lieu of what the exports to the Britifh fugar-illands, and what becomes of thefe returns?
Thirdly, What fort of manufactures, and what value, does Grear-Britain expart to the northern colonies, in proportion to what dhe exports to the Britifh fugar-illands?
Fourthly, What returns does Great-Bitain receive in lieu thereof, and what becomes of them?
Fifthly, How does the trade, carried on from the northern colonies to the French and Dutch Weft-India fettlements, affect.Great-Britain?
Sixthly, What end will a prohibition of this trade carried on from the northern colonies to the French and Dutch fettements ferve, and how will it affect Great-Britain? Seventhly, What end will the taking off the duties already laid on this trade carried on from the northern colonies ferve, and how would it affect Great-Britain?
Laftly, Would the preventing the northern colonies from carrying on this trade to the French and Dutch Weft-India fettlements be of any real difadvantage to their fugar-trade, and could the French fupply themfelves with finh and lumber without the affiftance of the northern colonies?
In anfwer to the firft of thefe enquiries it was faid, that at leaft two-thirds of the manufactures, exported from GreatBritain to the Britifh fugar-illands, are what the imports from foreigners; and that the whole, put together, does not amount to one half the value the exports to the northern colonies.
To the fecond it was faid, that they are chiefly fugars, and the price of them fo high, that none of them can be exported, but ale all confumed by herfelf.
To the third, that three quarter parts of the manufactures Greac-Britain exports to the northern colonies are of her make, and that the exports to thofe colonies above double the vatue that fhe does to the fugar-iflands.
Fourthly, it was anfwered, cafh, and bills of exchange, for almoft all the filh exported to Spain and Portugal; together with naval ftores, logwood, furs, \&c. a confiderable part of which Great-Britain exports again to her advantage.
Fifthly, inafinuch as it ferves to encourage the northern colonies in catching of fihh, making oil, and cutting of lumber, \& cc. this fupplies them, in a great meafure, with returns to Great-Britain for her manufactures; for want of which, thofe colonies could not take off near the quantity they now do, as they have no other way of paying for them; confequently, if a fop thould be put to that trade of theirs with the French and Dutch Weft-India fettlements, they would be neceffatat to SET UP THE MANUFACTORIES OF Great-Britain among themselveg, to her verygreat detriment.
Sixthly, only to encourage the Britifh fugar-illands, in diftilling up all the coarfe fugars they now fend to Great-Britain into rum, which they will difpofe of to the northern colonies on their own terms; by which means, not above two thirds of the rum and fugar will come to Great-Britain that now does ; confequently the price of what does come, will be proportionably inhanced.
Seventhly, this would give the northern colonies further encouragement to out-rival the French in the fifh trade (erpecially in the Weft-Indies) and enable them to make larger remittances for the manufactures of Great-Britain, and thereby increafe her trade.
Laftly, it is a certain fact, fay the northern colony advocates, that the French, in the Weft-Indies, fell their fugars from 40 to 50 per cent. cheaper than the Englifh do; therefore, if they had no vent for their melaffes, but were obliged to throw it away, as the Wef-India gentlemen pretend they would; although it was roundly afferted, that a great number of French veffels go yearly to Canada, wholly loaded WITH RUM, WHICH is MADE OUT OFIT (for the northern colonies feldom or ever take any of their rum or fugar) yet, as it produces them fuch a trife, they felling it for one
third the price that it is fold for in the Britifh inlands, the addition of 2 or 3 per cent. on their fugars at the foreign markets (where they are not in any danger of being rivalled by the Englifh, as it is not in our power ever to raife the quantities of fugar the French do ${ }^{*}$ ) would fully make up for it ; befides. there needs no ftronger argument to prove, that the French do not look upon the trade from the northern colonies as beneficial to them (notwithftanding the Weft-India gentlemen affirm, that the French do all in their power to encourage it) than their prohibiting it under the fevereft penalties $\dagger$.
*This is a melancholy confideration, and well deferves confideration to improve our fugar-colonies to the utmoft.
$\dagger$ This, we are afraid, is fallacious; for fo rigorous are the daws of France in relation thereunto, that it would be impoffible for a Britifh fhip to carry on any trade with them, Without their officers having orders to connive AT IT; and this chey would not have done, without they were convinced of its being beneficial to them; and its being fo likewife to our notthern colonies, is theit motive for carry ing on trade with them; but, if our own northern and illand colonies could reap the like mutual advantages by trade, it would be more eligible; and this ought to be the study of the nation that they might.
With refpect to the French being able to fupply themfelves with lumber, it is beyond difpute, fay the advocates for the northern colonies, that they may (fifh no body can deny but that they catch them at a cheaper rate than the Engliih do) and the quantities of lumber they take from the Englifh are trifing, as one of the Welt-India gentemen is faid to have declared before the lords of trade, they having the fame forts of trees grow both in Canada and Mississippi, that do in the northern colonies; and the only reafon they do not cut them, is on account of the navigation's being fomething more difficult; which would, perhaps, make the lumber turn out at a higher price than they give the Englifh; but, fuppore the French planters were obliged to give double the price for it to what they do at prefent to the Englifh, yet it would be giving it to their own people, and the addition of 2 or 3 per cent. more on their fugars would make up for it ; mill-timber, ftaves, and heading, are the natural growth of Hifpaniola, where they always ufe them; at Martinico, the moft of the ftaves and hoops they ufe there, are brought from Old France.

Remarks on thefe different reprefentations, as fated before the laft war.

The reafons that induced me to introduce the heads of this debate are, (1.) To fhew, that it is allowed on all hands, that the French fugar-colonies are in a very fourifing condition, and have fupplanted the Britifh in,that great article of traffic, at moft of the foreign markets of Europe, to the very great and extraordinary advantage of the kingdom of France, and the proportionable detriment of Great-Britain. (2.) That thefe effects have been apparently owing to the exquifite laws of France, for the regulation of the,trade of their illands and colonies in America; and to that in particular among the reft, which lays fuch fevere pains and penalties upon their own fubjects, as well as thofe of other nations, who carry on FOREICN OR CONTRABAND COMMERCE WITH THE SAID ISLANDS. (3.) That the remaikable rigour of the French, in regard to this matter, fhould feem to argue Atrongly, that they would by no means fuffer the Britifh northern colonies to carry on trade with their fugar-iflands, if it was not to the advantage of thefe inands. (4.) That this, if true, therefore, mult tend fill more and more to the benefit and fplendor of the French colonies and kingdom. (5.) That, from the different and repugnant $\begin{aligned} & \text { tates of the forego- }\end{aligned}$ ing queftion, by the parties therein interefted, it muft convince every one, how difficult it is for the Britih legiflature to be rightly informed of the true ftate of any branch of trade, when it fhall come under the folemn'confideration of that augult affembly. (6.) That, to prevent any impofitions of this nature, which may be attended with very injurious confequences to the interefts of the kingdom, it feems indifpenfably neceflary, that more efectual meafures fhould be taken, than hitherto ever have been in this nation, to prevent any mifreprefentations of the flate and circumftances of any branch of commerce; to the end that the reprefentative wifdom of the nation fhould not be milied in their councils upon thefe occafions. (7.) To which purpoife we would, with all bumility and deference, fuggeft, that nothing appears more naturally conducive hereto, than the authoritative eftablifhment of a feecial council of commerce, to confift of experienced merchants, or fuch who have been long engaged in the concerns of trace and colonies, and who are absolutely disengaged from the practice of trade, and have no visible interest in deceiving the legislature in whatever they shall lay brforethem. (8.) That fuch members be properly elected by the principal trading cities and towns of Great-Britain and Ireland, together with deputies from our colonies in America, the intereft of thofe colonies being intimately interwoven with that of

England;

Englarid; and that'fuch a council be authorized and' injoined to fit at leait once in every week in London throughout the year, in order to receive, examine, and difcufs, 'all propofitions and memorials relating to the colonies, and all branches of commerce and manufactures that thall be tranfmitted to them, and to confider of adequate encouragements to fuch who thall communicate any thing importantly ufeful to our trade and navigation. (1o.) That the faid council of commerce fhall be authorized to correfpond with all the confuls, refidents, and Britifh factories in foreign countries, for due information into whatever may be requifite in regard to trade, for them occafionally to lay before his midjefty in council, to be referred to the lords of trade and plantations, in order finally to be laid before the parliament, when they Shall require it.-And that the information, fo collected by the council of commerce, thall be properly regiftered, and fo alphabeticated, that immediate reference may be had thereto on all emergencies. (II.) That the reports of fuch a council of trade, from time to time, being made to his majefty in council, and referred to the lords commiffioners for trade and plantations in the ufual courfe: the parliament will, with far more eafe, and lefs liability of deceit and impofition, have the true and genuine ftate of all branches of trade laid before them: nor hould any thing of this nature be laid before the parliament, but what had been previoufly examined, difcuffed, and reported, both by the lords of trade, and by this fubordinate council. - Thefe proceedings' would effectually lead to the difcovery of truth, carry more weight, and be received with more attention by parliament, we humbly conceive, than the applications of any private man, or any particular fet of men, as is done in the ufual manner; which are too frequently, I am afraid, attended with tedious delays, and fuch artful oppofitions, which not only give the legifature great fatigue, but often tend to mifguide, perplex, and confound them, in their deliberations.
Had thefe meafures been effectually taken, and not made a matter of fuperficial form only, we fhould always have been properly apprized of whatever was doing, in regard to trade and navigation in foreign countries, and the interefting advancements which they were therein making to the detriment of Great-Britain. By this means we fhould have been able. fo to have promoted the profperity of our own fugar-colonies, that it would never have been in the power of the French to have raifed theirs upon the deftruction of ours, to their unfpeakable benefit, and our no lefs lofs and injury; for, aswe had the ftart of them fo many years, we might eafily have maintained our ground, and not have fuffered them to have fupplanted us at foreign markets as they have done, if our parliament had been rightly informed, from time to time, of the progrefs which they were making.-But 'tis the conflant policy of that nation, as I have thewn in many inftances, and fhall fhew in many more, to fecrete, as much as poffible, the progrefs of their trade; and, with refpect to that of their fugar-colonies, nothing fhews it more confpicuoully, than their not fuffering any foreigners in their illands to carry on trade, or even to act there in the capacity of a merchant's book-keeper, as we have feen by their royal arrets, ediets, and ordonnances, which were never made public in this kingdom till now.
Before we take leave of this article of Frinch America, on which we have enlarged longer than ordinary, becaufe it fo importantly concerns the trading intereft of thefe kingdoms, and becaufe we look upon fuch like capital articles as the flamina of our whole work; it may be neceffary to'refer the reader to what is faid upon this fubject under other heads; for we do not confine ourfelves to the confideration of effential fubjects in one light only, that being to take a very fuperficial and imperfect view of them. If the reader, therefore, will be pleafed to conjoin what we have here faid, with what we have done alfo, under the articles of British America, Canada, Colonies, and Florida, and what we fhall further urge under the article of Planta. tions, and divers others to which we have referred, and thall refer, he will be enabled to make a pretty good compasative judgment, perhaps, of the ftate of the British and French Trading Interests in America: he will be enabled to difcern, that, if the French carry the further great points which they at prefent aim at, in North America and in the West-Indies, the Balance of Trade in America muft pafs into French hands; and who will then hold the balance of trade in Europe, Asia, and Africa, no one need be told. For the further increafing trade and power of France, fee alfo the articles Flanders, France, French African Trade, Fisheries, Seamen, Ma. ritime Power.

Remarks on this article French America, fince the laft war, and the Definitive Treaty of Peace of 1763.

The preceding obfervations made on this article before the laft war, and foon after the peace of Aix la Chapelie, fhew the reafons, amongft numerous others, throughout this work,
why we had caufe to dread the rifing and formidable power of France in America; and that the fulnefs of time was come, that Great-Britsin fhould exert herielf to the utmoft, in order effectually to fop the career of our great competitors in the commerce of that part of the world; and this article, together with various other parts of our performance, will ftand emaining monuments, fhewing the neceffity of the laft war and therefore we judge it proper to continue unaltered.
Whether the Definitive Treaty of 1763 , has given fuch a check to the power of France in America, as we could have defired and expected, the reader will be able to judge by confulting our article America, British America, Coloies, Canada, Louistana, Mississippi, Florida Bahamalslands, Newfoundland, Leeward fslands, Indian Affairs in North America. Certain it is, that the ceffions made to Great-Britain of the French territories in North America, has at once annihilated all their foregoing laws, and royal edicts relative to their commercial intercourle between their northern colonies and the French illand. - Fhiey have likewife put an end to their long meditated enterprizes againft the Britifh colonies upon the Continent.-By our poffefion of Canada, and all its dependencies, efpecially that of Cape Breton; and leaving the French no other territories in this part of America, than the fmall illands of St Pierre and Miquelons for a thelter to their fifhermen at Newfoundland, and there upon exprefs condition never to be fortified, nor have more than 50 men chere for the police, Should feem to promife fair to keep that turbulent nation in awe for the future in thefe parts, left the government of England fhould at length be compelled to deprive them of all fhare in the Newfoundland filheries; in doing which, there does not appear any great difficulty at prefent, fhould that nation attempt a frefh rupture with the crown of Great-Britain: and what would, in fuch a cafe, be the fate again of their fugar-illands, is eafy to prejudge.
F ULL.ER; a workman employed in the woollen manufactories, to mill, or fcour, cloths, ferges, and other.ftuffs, in order to render them more thick, compact, and durable.
Fullers, in conformity to the regulations of the manufactures in France, are obliged to mark their ftuffs with a particular lead after fulling.--They are forbid, by the fame regulations, to draw out or tenter-ftretch their manufactures, that they may be made greater in length and narrower in breath, \&ec.
FULLERS-EARTH, a fat foffil earth, abounding with a nitrous quality, ferving to fcour cloths, ftuffs, \&c. and imbibing all the greafe and oil ufed in the preparing, dreffing, $\& \mathrm{c}$. of the wool.

An account of fullers-earth in Bedfordhire, as given by the Rev. Mr Hollaway, F. R. S. No. 379.

I went, fays this obferver of nature, to the fullers-earth pits at Wavendon near Wooburn, where there are feveral pits now open; but, 'as men were then at work only in one, and I underftood the earch was difpofed in much the fame manner in all, I did not trouble myfelf to go down into more than that wherein they were then digging, in which I found things difpofed thus:
From the furface, for about fix yards depth, there are feveral layers of fand, all reddikh, but fome lighter-coloured than others, under which there is a thin ftratum of red fand-ftone which they break through; and then, for the depth of about feven or eight yards more, you bave fand again; and after that come to the fullers earth; the upper layer of which, being about a foot deep, they call the cledge ; and this is by the diggers thrown by as ufelefs, by reafon of its too great mixture with the neighbouring fand, which covers; and has infinuated itfelf among it: after which they dig up earth for ufe, to the depth of about 8 feet more, the matter whereof is diftinguilhed into feveral layers, there being commonly about a foot and a half between one horizontal fiffure and another. Of thefe layers of fuller's-earth, the upper half, where the earth breaks itfelf, is tinged red, as it feems by the running of water from the fandy ftrata above, and this part they call the crop; betwixt which and the cledge above-mentioned, is a thin layer of matter not an inch in depth, in tafte, colour, and confiftency, not unlike to terra Japonica. The lower half of the layers of fuller's-earth, they call the wallearth; this is untinged with that red above-mentioned, and feems to be the more pure and fitter for fulling; and underneath all is a ftratum of white rough ftone, of about two feet thick, which, if they dig through, as they very feldom do, they find fand again, and then is an end of their works.
One thing is obfervable in the fite of this earth, which is, that it feems to have every-where a pretty equal borizontal level; becaufe they fay, when the fand-ridges at the furface are higher, the fuller's-earth lies proportionably deeper.
In thefe works they feldom undermine the ground, but, as they dig away the earth below, others are employed to dig and carry off the furface, otherwife the matter above, being of fo light and fitting a nature, would fall in and endanger the workmen: for, as was obferved before, the ftratum of fand-ftone, which occurs before they come to the fuller's-

## F U L

earch, does not lie, as in coal-pits, immediately over the matter they dig for, like a cieling, but even in the midft of the fuperjacent flrata of fand, and therefore can be no fecurity to them, if they undermine.
The perpendicular fiffures are frequent, and the earth in the ftrata, befides its apparent diftinction into layers, like all other kinds of matter, by reafon of its peculiar unctuournefs, or the running of the adjacent fand imperceptibly among it, breaks itfelf into pieces of all angles and fizes.
For the geographical fituation of thefe pits, they are digged in that ridge of fand-hills by Wooburn, which near Oxford is called Shotover, on which lies Newmarket-heath by Cambridge, and which extends itfelf from eaft to weft everywhere, at about the diftance of eight or ten miles from the Chiltern-hills, which in Cambridgefhire are called Gog-Magog; in Bucks and Oxon, the Chiltern-hills, from the chalky matter, of which they chiefly confift : which two ridges you always pafs, in going from London into the north, northeaf, or north-weft countries in the manner I before-mentioned: after which you come into that vaft vale, which makes the greater part of the midland counties of Cambridge, Bedford, Bucks, Northampton, Oxford, and Gloucetter; in which are the rivers Cam, Oufe, Nen, Avon, Ifis, and others; which I take notice of, becaufe it confirms what you lay of the regular difpofition of the earth into like ftrata, or layers of matter, commonly through valt tracts, and from whence I make a queltion, whether fuller's earth may not probably be found in other parts of the fame ridge of fandhills, among other like matter.
By 9 and Io Will. III. it hall not be exported under the penalty of is. for every pound weight, yet there are feveral fpecies of earths in foreign countries, which we make no doubt but would ferve for the fame purpofes that fullersearth does in England.

## REmARKs.

Soap-earth, or a fullers earth, if you pleafe, is found in two places near Duraclea, a large open village about fix leagues to the eaftward of Smyrna; and in a very flat plain, about a league weft-ward of the river Hermus, and feveral leagues from the fea. 'Tis a fine foap, and at the firft gathering whitifh earth, which boileth or fhooteth up out of the earth. 'Tis gathered always before fun-rife, and in mornings where there falls no dew, fo that a fock muft be laid up for the whole year in the fummer months. It comes up in fome places an inch or two above the furface of the ground. But the fun, rifing upon it, makes it fall down again. Every morning there is a new crop, though all be taken away which the preceding day afforded. The earth producing it lies low in both places, and is in the winter walhy; 'tis covered, though but thinly, with grafs.
Three hundred drachms of this earth put into a retort in balneo arenæ for 12 hours, cum igne violento, gave between five and fix ounces of an infipid phlegma, the fmell only fuch as proceeds in the like operations from the fire.
Finding therefore no volatile falt, as what muft have come over by the foregoing experiment, 200 drachms calcined at a bagnio fire, in a German crucible, were diffolved in water. The compofition of earth and water, boiled into a lixivium, made 500 drachms.
It was boiled fur three hours, ftill fcumming off the froth, then filtrated, after evaporated over a gentle fire; it was kept to cryftallize, and appeared of a fixed falt.
At the foap-houfes they mix $\frac{3}{4}$ of earth with $\frac{1}{4}$ of lime, and diffolve the compofition in boiling water; where, ftirring it often with a ftick, there floats a-top a thick brownilh fubftance; which fcumming off, they preferve in bafons apart, and this fcum is much richer than the liquor underneath, yet both are ufed in making the foap. Into a large copper caldron they put 50 quintals of oil, applying a very hot fire, which burns continually until the foap is made. When the oil has boiled, they begin to throw in of the fcum, and fometimes of the liquor from which the fcum was taken. They often repeat this throwing in of the fcum and liquor for 13 or 14 days, in which time the foap is ufually perfected. The brownin fcum, and what is ufeful of the liquor, incorporating with the oil, what is ufelefs finks to the bottom of the caldron, where it is let out, to make room for throwing in more. The water, thus let out, is again thrown upon a new compofition of earth and lime; but, when the liquor becomes wholly infipid, it is then judged to be exhaulted. A fter 13 or 14 days, when the foap is finifhed, it is laded out of the boiler, and laid upon a lime-floor to dry.
They proportion two loads of earth, of five quintals each, to 50 quintals of oil, the produce is between 70 and 80 quintals of foap.
The earth is bought at a dollar a load, and the foap, when this account was made, at $6 \frac{3}{4}$ a quintal. There are employed, in making foap yearly at Smyrna, 1000 quintals of oil.
Bringing foap-earth employs 1000 or 1500 camels daily, for eight months, the four fummer months being too hot for camels to travel.
Vol. I.

An ordinary foap-houfe produces 1000 dollars a year cleaf profit, communibus annis.
FULLING, the workmanhip of fcouring and prefing cloths, ftuffs, and ftockings, \&c. to render them more firm and ffrong. It is performed by a water mill, which, except in what relates to the mill-ftones and copper, is much like a corn-mill; and there are mills in France, according to Savary, that ferve indifferently for either ufe, corn being ground, and cloths fulled by the fame; and the like is done in England.
The principal parts of the fulling-mill are, the wheel, with its trundie, which gives motion to the tree, or fpindle, whofe teeth communicate it to the peftles, or flampers, which are hereby raifed and fallen alternately, according as its teeth catch on, or quit a kind of latch, in the middle of each peftle. The peftles and troughs are of wood, each having two or three pefles, according to the force of the water.
In thefe troughs the cloth, fuffs, \&c. are laid, which ar intended to be fulled: after which, letting the current of water fall on the wheel, the peflles are fucceffively let fall thereon, and, by their weight, prefs the ftuffs very powerfully; which, by this means, become condenfed and thickened.
In this operation they ufe fullers earth, with fome proportion of foap: proper foap alone would do much better, was it not dearer than fullers-earth.

Monfieur Colmet's method of fulling with foap, grounded on experiments made by order of the marquis de Louvois, then fuperintendent of the arts and manufactures of France.

## Of fulling cloths and woollen ftuffs with foap.

Let a coloured cloth, of about 45 ells, be laid in the ufual manner, in the trough of a fulling-mill, without firf foaking it in water, as commonly pradifed in moft places.-To full this trough of cloth, 15 pounds of foap are required, one half of which is to be melted in two pails of river or fpringwater, made as hot as the band can bear. Let this folution be poured, by little and little, upon the cloth, in proportion as it is laid in the trough: thus it is to be fulled for at leaft two hours; after which, let it be taken out and ftretched.This done, let the cloth be immediately returned into the fame trough, without frefh foap, and there fulled two hours more. Then take it out, wring it well, and exprefs all the greafe and filth.- After the fecond fulling, diffolve the remainder of the foap, as the former part, and throw it at four feveral times on the cloth, not forgetting to take it out every two hours, to undo the plaits and wriakles it got in the trough.- When it is fufficiently fulled, and brought to the requifite quality and thicknefs; it is fcoured out for good in hot water, keeping it in the trough till it be thoroughly clean.-White cloths fulling more eafily than coloured ones, a third part of the foap may be fpared.
Fulling of caps, ftockings, \&c. is performed either with the hands or feet, or a kind of wooden machine, either armed with wooden teeth, or thofe of horfes or bullocks.- The ingredients generally ufed on this occafion are urine, green foap, white foap, and fuller's-earth.-But a water foftened with chalk is far preferable.
FUNDS. This is a term adopted by the monied men, and thofe who fpeak of the public revenue of nations, to fignify the feveral taxes that have been laid upon merchandizes, either by way of duties of cuftom or exciff, or in any other fhape, to fupply the exigencies of the ftate, and to pay intereft for what fums of money it may have occafion to borrow. Thus we fay, Such a duty, or fuch a tax, is a good fund to anfwer fuch a purpofe. The term is alfo applied to the ftocks of great trading and monied corporations.
The funds, or taxes if you pleafe, of this kingdom, are, to fpeak in the language of parliament, either temporary or perpetual. Temporary ones are fuch which are impofed for a certain number of years, or annually, as the land and the malt-taxes; the perpetual funds are fuch whereon monies have been borrowed for the public fervice, and which are appropriated for the fecure and certain payment of the intereft of fuch monies, till the difcharge of the principal fo borrowed.

## REMARKs.

The following fands as this article did before the laft war, and the additional national debts and taxes, we have accumulated fince.
It is not within my intention to enter further into the caufes of our various funds than to ubferve, that the three great wars in the reigns of king William, queen Anne, and his prefent majeity, have given being and exiftence to them: the more immediate concern of the nation is, what meafures are eligible to get rid of thefe tax-funds?
The previous queftion, indeed, with fome is, whether it is needful at all for the fate to concern itfelf with the payment of its debts, and the annihilation of taxes in confequence I: F
thereof?
thereof? Much pains have been employed by fone, and very new doctrines devifed, to render a great national debt lefs formidable than it really is in the peneral opinions of mein. This may be pretty amufement enough for ftock-mongers and ufurers, over their cups, but a pernicious doctrine to be efpoufed and propagated by the SAGE SHATESMAN: and yet, I am forry to fay, thefe things have been. I have how feveral papers before the, calculated for that purpofe; tova of Which, in particular, I would only take notice of at preferts : the ore called, A Defence of feveral Propofals for raifing three Millions, \&x.. for the year 1746, with a Poffeript, containing fome fooforis relatiog to Publite Credit; and a nathe prefixed to it, of great zuthority in thercantile atnd montied matters. - The other, An effay on Public Credit, by an anonymous author, publifhed in 1748, occafioned by the fall of ftocks.
Before we remark anfy thing upon thefe pamphlets, it may not be ufelefs to obferve, that whatever is publifhed in prift upon temporary occastons, is too generalily calculated to anfwer TEMPORAR立 PURPOSES ONLY ; and, in thefe al. tercations, if the reader has judgment to difeern and diftinguiff the folid and effential matter from that which is either of a perfonal or party complexion, or propagated to anfwer the turn of the day, much wfful knowledge may be collected, that may be ever pertinently applied to the riational interefts. But the great diffculty, in the traze of controyerfy of any kind, is to be able to feparate the good from the impertinent matter ; the ond leading to errot and fallacy, the other to truth.
Ẅhenever, thèreforé, we make ufe of any author, we endeavour, to the beft of our ability, to collect fuch principles and fentiments as are national, and to apply them to national purpofes only, we having no turn to ferve but that of the PUBdic interests. With thls view we fhall extract fuch matter from the beforementioned pamphlets as we apprehend triay be ufeful to thew the neteffity of difcharging buí DEBTSAND taxes, and on fome other occafions; for, if people are not convinced of the neceffity thereof, it is fruttefs to point out ways and means to effectudte it,
The laft of the two writers, not contented with afferting, - That, if 60 millions of out debt be the property of the people of Greatr. Britain, we are not the richer nor the pooter for that part of the debb, proceeds to affirth, That it is to the NATHONAL DEBT WE OWE OUR pUCLIt CREDIt; and that, if it w̧ere polfible honeftly to difcharge the whole nătional debt, which would thereby annitiolate the whole public credit, fuch loffes and inconveniencies would arife, from the lofs of it, to trade and commerce, as would ereatiy diminish thé trade of our coúntry.
And, what confirms him it this opinion is, that, notwithtanding we have been engaged in two long and expenfive wars, fince the commencement of the public debts, he verily believes that mote riches have beeh accumulated to GreatBritain than any two centuries can boaft of before that time.' To which it was nationally replied, we apprebend, by another very judicious and anonymous reafoner, in a tract intitled, Confiderations upon a Reduction of the Land-Tax, in the year 1749, - And no wondet, fays he, it flould be fo, in 6 this author's hypothefis; fince according to his reafoning, - war and expence are blessíncs, as tutey are - the sources of debt: An enormots debtry fo - blesging, as it is théfountain of public credit; ' AŃd taxes bíing no detriment to prade.' The author of the Defence of the reveral Propofals, \& c . does not barefacedly go fo far as the laft mentioned. However, in his Poffcript, p. 63. 'He conceives, that the prices of funds do not in the leaft depend upon the quantity of them, either taken in the grofs, or any particular fort of them: that, if they were double to what they are now, it would not neceflarily follow that the prices would be lower ; nor yet, if they confifted but of half what they do now, would the price be from thence increafed.'
The high character of this author (the honourable and judicious Sir John Barnard, Knt.) acquired by mañy eftential fervices to his country, which I hhall hew in its plàce, will excufe our endeavouts to confute him ; fince it becomes neceffary to oppofe his own wo ds to his authority, which with multicudes, would bave greater weight than the moft fublitantial reafons from any other.
However ufeful his doetrine might have been, when the exigencies of the timies obliged the public to increafe its debt, yet, the neceffity of borrowing having how ceafed, it becomes expedient to difcover the errors of a doctrine, which, through inferences to be drawn from it, may tend to double our national incumbrances *. For,

* It is to be feared that the propagation of fuch wrong prinGiples as thefe are, have been the caufe, why our rulers
Have never exerted them to raife the SUPPLIEs, within the years, which would have prevented the Increase of our public Dibts and Taxes, to that enormous and dangerouş fize they have arifen.

If a greater'or lefs 'quantity of fubfifting furnds be quite indifferent as to the raifing or falling of their value, more remote
confeguences will the eafier give way to any new fothe of expence. Nor in this author's opinion are the mof diftan evils to Be apprehended; even from ati increafe of our deb beyond what it now is: for ' It is the quantity, fays he brought to tharket, compared with the purchaferg, he rifes or falls the prices of funds.' And, p. 69, 'When find - ate fold directly by the government, to perforts who defitn to - Keep them, they ate itmediately put out of the market - affed the price tro more that alf the quantity of the publi - funds which remains in the hands of perfons who the public ' of felling them.' Ibid. ' And, if timely notice were think ' every year, there would probably come in buyers, with 6 a defign to keep, fufficient to take off-alf the funds crested - that year, provided they may come in freefy at the original ' price.' Ibid.
If this probability be well founded, it arifes not in a froall part, but almoft ift the whole, amongt thofe defcribed in p. 71. ${ }^{*}$ Who live upon their income, whether by eflates in - land, or in the funds, or in moftgages: many of whom - are always faving a part of their income; and want to lay 'out.' Ibid. And 'among people who thrive in trade 6 and who are willitg, as they can fare money; to lay it out ' in fomething to fupport them more at their eafe.' lbid - And, Iaftly, as war neceffarily contracts trade, and, con-- fequently, fo much money cannot be employed therein as in - time of peace, thofe who have large eftates in trade muit

- have money gradually coming in ; which, when the funds
- are reafonable, they may chufe to lay out therein : and - fome, from this beginning, go on to draw all their money - out of trade, to place it in the funds.' Ibid.

In anforer to which it was faid,
From thefe feveral defcriptions, deduction mult be made of thofe who, with their favings, purchafe lands or houfes, or who lay out their money on private fecurities; who increafe their fock in trade in proportion as they thrive; who, in time of war, contract. their trade, in order to enlarge it in time of peace, and who place their money in the funds for temporary advantage, till an oppottunity ferves of attaining fome of there purpofes; not one of whom is a buyer in the fuids with a defign to keep.
If to thefe we add, whoever in time of public diftrefa withdrew their money out of the funds; and if the remaining number be clear fufficient to take off every year all the funds created in that year (which, in the year immediately fucceeding, amounted to 63 millions) we may pronounce the annual gains, throagh lands, mortgages, funds, and trade, immenfely hither than ever computed, and the parfimony of our people mifreprefented by derlaimers againft luxury.
The pofition in page 74, ' That any quantity of new funds, 6 to be created and fold in any one year, will not occafon * thete being lefs money the next year;' Was false in that very year, and in the succeeding; as it ever will be, when new funds are created to defray foreign expence, which has been the cafe of almoft all our funds. The argument, therefore, to be true, fhould rather bave ftood thus: - Any quantity of new funds, to be created and - fold in any one year, will occafion there being lefs money "the next year ; becaufe, as the government iflues out all 6 the money received (a great part of which is fent into other ' countries) the fame quantity will not be in private hands, ' as the year foregoing:'
If our author's calculation was true, it would not only juftify the fottrine oppofed by him under a former adminiltration That the creditors of the public could not bear to receive above an anNuai million in discharge of our D'EbTs; bet would bid fair for proving, with the namelefs author of the Effay upon Pablic Credit, that our debe is an adíantage, and every increase a public blessing ; fince it'would be hard to fay, how fo much fuperfluous wealth could be otherwife' difpofed of.
Every increafe of debt causes an increase of annuity; and an increafe of annuity muft be either defrayed by NEW TAXES, O BY SUCH AN APPROPRIATION OF THE SINKING FUND ASWOULD RETARD, if NOT TOTAILY extinguish, every possibility of removing any OF THE OLD.
Either of thefe would prejudice trade; and what prejudices träde mult affect the value of the funds.
Yet our author afferts, ' If they were Double to what they now are, it would not neceffarily follow that the prices Would be lower; nor yet, if they confffted but of half what ' they do now, would the price be from thence increafed.
Experience hath taught as, when latge fums muft be expended, and muft be borrowed, how very foom a combination of monied men can raife the price to the borrower. Nor does the evil end here ; for the fame combination will after operate, probably more effectually, towards preventing its reduetion; as it is found eafier to adrance the price of things upon thofe who are in want of them, than to lower the price when once adoanced.
Such combinations are great and powerfol in proportion as The debt isgreat: and, if it be raifed to fuch a fize as to admit no probability of ever difcharging it, or if the means for fuch difcharge be neglected or mifapplited, other men
may be deterred from releafing the public out of this bondage to their creditors, by new loans; and credit will be affected by an INCREASE OF PRINCIPAL, let the intereft be never fo well fecured.
Whatever the advantages may be refulting from the funds, through the facility of transfers, the punctuality of payments, and the certainty and fufficiency of the fecurity, yet they receive a confiderable diminution from this fingle circumfance, that the creditor is not intitled to demand the principal in any future RISE OE interest, but muft, if called upon by neceffity, fell out at loss.
This condition, as it was not felt, was not much attended to in fettled times, when the price of money was likely to remain unaltered; but at other feafons, we have feen it become an object of great importance; and it is now of weight and importance to thofe who apprehend, that, if all poffible means be not employed to lessen our debts, future exigencies, poffibly not far off, may feize us unprepared, fufficient to fwallow up the whole sinking fund in one perpetual mortgage.
Extravagant as this apprehenfion may appear to fome, it will not be fo to thofe who computed the debt accumulated by the late war, (that was the war in 1740) and find it amount to $32,818,2201$. and lamentable will our fituation be, if the only fecurity againtt fuch another be an improbability of fupporting the expence.
In this fituation, therefore, the apprehenfions of men may go farther, and tranfport them to a time when, after having appropriated every thing fundable, new expences may become neceffary. What the effect would be, imports us all to confider, for it regards us all: ruined credit, total ftagnation, univerfal bankruptcy.
It is true, a nation cannot be powerful where the individuals are poor : but it is certain, on the other hand, that the individuals of a nation may be rich, and the community poor, and without refources.
This was evident throughout the late war, in the cafe of the Dutch. And if, after being driven to an impoffibility of raifing the neceflary fupplies, we can reduce intereft, this country will furnifh another inftance of the fame truth within the fame period: for fuch reduction will be an inconteftable proof of the wealth of individuals, although that wealth was unavailing to the public in the time of trial.
But, wherever this cafe exifts, it conflantly proceeds from the fame caufe; from a load of debt, over-burdening the frame of public credit, frightening monied men from fettling within its reach, while all uniform and general means are exhaufted of drawing further fupplies from the drained bulk of the people.
Thus far it hath been endeavoured to thew how falfely and dangeroully they reafon who would center our whole concern in the reduction of intereft, and regard the principal of our debt as an immaterial circumftance.
Nothwithftanding thefe inferences are apparently deducible from Sir John Barnard's tract, yet I cannot believe that honourable gentleman intended the propagation of the doctrine of non-payment of the public debts: we have great reafon to judge otherwife: for, in another pamphlet of that gentleman's writing, now before me, in the year 1737 , intitled Reafons for the more fpeedy leffening the National Debt, and taking off the moft burdenfome of the Taxes; we find thefe exprefs fentiments:
"It is true, fays Sir John, fome modern politicians bave run - upon a notion, and feveral perfons are weak enough to - believe, that the not paying off the public debt widl en' gage people the more to preferve the prefent government: ' this policy, indeed, of theirs would hold good, if it could - be made out that the public creditors are fitonger and more ' in number than thofe concerned in the payments to the - public. But it rather feems to bold in fenfe and reafon, - that the throne of that prince, in a free ' nation, must ee moet firmly established, whose - affalrs will permit him to ask, and who de'sires to collect, the fewest taxes from his ' Peopie.'-And, with regard to the maxim quoted from Sir John's poffcript in the pamphlet beforementiened, which occafioned the other learned author's.reply, it thould be further obferved, in juftice to this great patriot, that, in the incroduction to the faid poffecript, he has the following paragraph: ' I hall, fays Sir John, now lay together fome no*tions relating to public credit, for the conflderation of my - readers. Many of them may be found fcattered through * the foregoing work, which I did not think a fufficient rea-- Gon for omitting them in this place, becaufe they may fetve - to exercife the thoughts of thofe who are defirous to be ac-- quainted with thefe matters: I will not take upen me to - fay that they are all right, although they now appear to me - to be fo ; but, when obje\&tions are farted, I may find my' felf miftaken.'- This is candid and ingenuous, and worthy the imitation of all who would not fet up for infallibility; and thofe who have been converfart with ftudies of this, or indeed of any other nature, that will not admit of pure mathenatical demontration, well know, that they ought tather to be modelt than dogmatical.

But to refume the topic of paying the national debts.- It has been a queftion with feveral judicious gendemen, Whether, upon the whole, the nation would be in ever the worfe condition, provided the national debts were never paid, and that a confiderable proportion of the public creditors remained perpetual annuitants only? To which it may be obferved, that the two principal national evils that attend the continuance of the public debts, to the degree they are at prefent advanced, are, (I.) The annuity we are conftantly obliged to pay to foreigners, for the proportion of the principal money debt, which has been eftimated by fome at $\frac{5}{3}$, and by others at $\frac{1}{4}$, of the whole debt; and, (2.) The other evil is, the weight of our tax-funds, occafioned by our debts, upon our trade in general. The firft of there drains the nation annnually of fo much hard money; the latter renders our manufactures dearer to foreign countries, by the whole weight that our tax- funds bear upon commodities.
To exonerate the kingdom from evils of this nature is certainly very defirable; and I can hardly believe that any one would undertake to prove the contrary. If our whole national debts were wholly owing among ourfelves, and the annuity paid for their intereft circulated wholly among ourfelves, the former evil would be leffened by all the faving to the nation ; and, if the annuity for the debt due to ourfelves only was no clog or incumbrance upon our foreign commerce and navigation, it would not matter greatly, perhaps, to the kingdom in general, if the debt due to ourfelves only was never difcharged.
But how can we pay foreigners off only, without affening the public faith, and without precluding ourfelves for ever from the aid of a foreign purfe, whenever our affairs may require it? Thefe are difficulties eafier raifed than anfwered. For my own part, I can difcera but one way of doing this; which is, by difcharging the whole of our prefent debts with all poffible expedition, and thofe of foreigners will be gradually difcharged with the reft: and, if we have occafion to contract new deets, while the old abe gradually paying off, let them becontracted upon NEW FUNDS, WHOLLY AMONG OURSELVES, if That be Possible and practicable. I am aware of the objection, that, while public fecuities are transferable (and they cannot be otherwife) and while foreigners have an opinion of the ftability of our public credit, they will become purchafers in our funds, unlefs they were abfolutely excluded by act of parliament, which might be dangerous, when we ftood in need of their money: and, when we did, the reltraint might be taken off. This would be an effedual way to try the wealth of the nation among ourfelves; and, perhaps, prove a prefervative againft running in debt to foreigners ever after. And foreigners would entertain fo bigh an opinion of the public credit of the nation, when we thould be able to do without any of their money, that numbers of the more opulent would take up their abode among us, become naturalized, and they and their families become one with ourfelves, for the fake of being proprietors in our public funds.
And if, in the courfe of payment of our old debes, and the contraction of new, the tax funds for the new debt flould be gradually and equally laid all over the nation, by fome fuch fcheme as that of the late Sir Matthew Decker, or by forme other that poffibly might be thought of, this would be pawing the way to take off all our old tax-funds, that now lie heavy upon our trade, and removing then, by rearon of any new-contracted debt, in fuch a manner as they might be no clog or incumbrance whatever upon our trade: and this, we humbly apprehend, carries nothing of the face of impracticability.
Let it be fuppofed, that the nation is notin a condition to pay off any of its prefent debts (which, for diftinction-fake, I will call old debts) and that, even as $f_{a} f$ as we pay off one million of old debt, we are are neselfitated to borrow a million of new debt, yet if, by this means, we thall be enabled fo to change the nature of our tax-funds, as to take them abfolutely off from our trade and navigation, and lay them equally all over the nation, this would anfwer the next good purpofe to the abfolute difcharge of our debts: for, if the annuity for the payment of intereft of our new national debts was fo univerfally equalized among the people, by gradual finall tax-funds being laid for that purpofe, and as unexpenfively collected as the land-tax, this would in a few years, we humbly conceive, to effectually demonflate the effrazy of changing our Oli) Debts, by the means of contractiag New, and fo effectually convince the nation that it is more eligilie to raife the whole annuity for the intereft of the public debts, BY ONE EQUAL and general tax, in the nature of Sir Mathew Decker's fcheme, that, upon thus flufting and changing the principal money-debr from the old to new, upon new tax-funds, we thould experience, before we had thus changed ten millons of the debr, the reafonabienefs and practicability of thes changing the whole of our Olb Tax-Funds, for one or more New General Funds, that would raife the annuity requifite, wishout any burden to trade, and without putting the nation under the neceffity, even in cafe of creating ftill greater national debts than we now have, of laying any taxes upon commoditics, except upon fuch foreign im-

## F U N

PORTS OF IUXURY, \&c. whofe confumption it may be good policy to check.
Here then feems to be a plain ealy way chalked out, whereby to relieve our commerce from the burden of all its tax-fund incumbrances; and this without the leaft injury, nay, with great advantage to the public credit.
The next point that obvioully falls under confideration is, how, and in what manner, this change of the national debt, and of the tax-funds to anfwer the fame, may be effected ? And this, the intelligent reader will pleafe to obferve, upon the fuppofition that we are under the neceffity of contracting New Debts, as faft as we difcharge the Old Debt, or rather change it for a New, for the fake of changing the Oid tax-funds for New tax-funds. I hope I am underfood; for I regard plainnefs and fimplicity of language more than pompous unintelligible elegancy.
With refpect to the ways and means of paying the nation's debt, feveral very ingenious gentlemen, warm in their country's intereft and glory, have offered to the public confideration various expedients; but it is to be feared that none of thofe propofitions, none, however, that have fell in my way, feem to be immediately practicable; and the reafon is plain, becaufe they have not been directly coincident with the eftablifhed fyftem and conftitution of our public funds; but, being attended with two great innovations upon the eftablifhed fyftem, they have been apprehended, we may prefume, to be liable to endanger the public credit.
It is not my intention to enter into a critique upon thofe divers propofitions; every gentleman deferves the thanks, the applaufe, and reward from the public, who communicates any thing, with candor and decency, for its real interefts. Nor is it my defign to depreciate the merit of any gentleman's propofition of this kind, with the mean view to fet off my own; for I have none of my own to propore there: I fhall at prefent, only confider the parliamentary meafures that have obtained by the eftablifhment of a finking-fund, for near 50 years paft.
What effect the invariable application of this fund would have had, by this time, upon the public debts, has been already fhewn under the article Debts [National Debts.] We have there fhewed how efficacious this fund would have proved, had it been facredly and inviolably appropriated, as was certainly firf intended by parliament, to the payment of the debts contracted before 1716 .
But, as this fund has been differently applied, I fhall not enter into the rectitude or the otherwife of that meafure. I have fome years fince attended to what has been faid on both fides of that important queftion, both within doors and without; but retrofpection is not my bufinefs here; we muft take things as they are, and make the beft ufe of them now, as things are circumftanced.
If, then, the ftate of public affairs hath occafioned us to run deeper into debt, inftead of being favourable to their difcharge, it behoves the wifdom of the nation to confider whether this fund [the Sinking Fund] can fill prove of any ufe towards the eafement of the public in any hape, if it cannot be applied to the real difcharge of its principal money-debt : for, if it cannot be applied to what it was originally defigned, the next beft ufe ought to be made of it that can. And,
Firft, Let this fund be abfolutely redeemed, and fet free, we will fuppofe, from every incumbrance, for it can be no way falutatily operative till it is fo.
Secondly, The moft eafy way ta do this fhould feem to be by fome general eafy duty, laid equally throughout GreatBritain and Wales (called the general fund of Redemption from all taxes on trade) upon the plan of that of Sir Matthew Decker, or any other that may no way effect our trade, commodities, and manufactures, and to collect the fame as cheaply as the land-tax is. For, as the benefit of taxes to the public refults only from the clear income, and the evil to individuals extends not only to the grofs produce, but to every other expence and lofs incident and confequential; that tax is moft beneficial to the public, and leaft hurtful to the fubject, which produces a large fum through a cheap collection, and which is free from every other eventual charge. To ufe a familiar inftance: he who attends to his own affairs, lives upon his own land, employs but one fteward, at a fmall falary, to receive his rents, and buys at the firf hand, may, from a fmall and compact effate, thus conducted, feend and fave more than the lord of an immenfe rental, widely difperfed, gathered by many hands, profufely paid; he living at a diftance, and purchafing what he confumes from the fourth or fifth retailer.
An eflay being made (to carry on the fuppofition) by this $\mathrm{Ge}_{\mathrm{E}}$ neral Fund of Redemption, the two following ends would be foon anfwered by it. (r.) It would redeem the finking fund. And, (2.) it would give the nation experience of the net produce of a general duty, laid equally throughout the kingdom, ; and, being collected as cheaply as the land-tax is, it would prove fogreat a faving with regard to the collection, and of no incumbrance to trade, that the nation would foon be able to judge, whether one fuch general fund of redemption would not effectually redeem them from all taxes on trade whatfo-
ever. And, if it is once experienced that fo fimple and unexpenfive a fund of redemption, in the collection, will redeem the finking fund, we fhall be certain that this fund of re demption, gradually increafed, will abfolutely free us from all other tax-funds whatfoever.
And, when the finking fund thall be fet free, by means of a general fund of redemption, what hinders but all our prefent national debts may be difcharged by it, and thofe of foreigners among the reft ? If the neceffities of the ftate require the borrowing of more monies, while the finking fund is operat ing in the payment of our prefent debts, let them be borrowed within our own nation only, upon the general fund of redemption, and let foreigners be excluded: fuch meafures would not obftruct the payment of our prefent debts, by the inviolable application of the finking fund to that purpofe. Nay, the gradual contraction of new debts, upon the new general fund of redemption, would prove the means of preventing fome difadvantageous confequences to the old public creditors, while that debt was paying off by the finking fund : becaufe the fubjects of Great-Britain would bave frefh occafions of laying out a part, if not the whole of the money received upon the new fund of redemption, by new debts: fo that, by the invariable application of the finking fund to the payment of the old debts, all our prefent duties and taxes on trade in general would be in a certain ftate of redemption, and the new contracted debts would be borrowed upon the new general fund of redemption, which would reduce all our tax-funds to that one general fund, as before obferved, and put the whole kingdom into the moft profperous condition, with regard to its public credit, and all its other interefts.
But, if it fhould not be found practicable to keep out of debt to foreigners, efpecially upon fo advantageous a change in the whole fyftem of our funds and taxes (which, perhaps, will make it impoffible, for all foreigners then, either in their own or borrowed names, would get into our funds, let whatever meafures, perhaps, be taken to prevent it) yet, if we put our prefent debts into a certain way of payment, and were obliged to contract as much new debt upon the new fund of redemption, the public creditors need not be alarmed with fuch apprehenfions of the payment of the national debt, as fuggefted by Erafmus Philips, Efq; and which, I am fenfible, is the opinion of many other very judicious gentlemen. It may not be improper, therefore, to quote what this learned author obferves, in order to fhew that what I have offered to confideration feems to obviate thofe inconveniences of which that gentleman feems apprehenfive. The chapter I thall cite is intitled,

The poffibility of paying the public debts depends on circulation.

- The paying the public debts, fays Mr Philips, is a matter 6 of the greateft concern, and feems to be the chiefeft care - of the adminiftration; the meafures that have been already - taken will, in all probability, in the year 1727, produce a
- finking fund of above a million of money.
' And, fuppofe we ftate the debt at 53 millions, the fund at - $1,200,000$, it is no great difcovery to fay, that, in lefs than - 26 years, this great debt may be paid off.
- But I muft beg leave to obferve, that, notwithftanding this - account is mathematically true, upon the fuppofition of fo ' much money received annually, yet, upon the whole, ei-
6 ther the creditor or the community mult lofe fo much of
- their principal before this debt can be paid off, or elfe they - muft acquire a new eftate.
- For inftance ; A, the government, owes B, C, D, 200 I. ( $\mathrm{E}, \mathrm{F}, \mathrm{G}, \mathrm{H}$, bave lands and goods to the value of 20,000 ). ' and the whole community have but 500 l . amongft them - in money, of which rool. a year are the revenues of $A$; 6 if the debt is at 4 per cent. the revenues of $A$, in lefs than - 20 years, will be fufficient to pay. Buthow? It muft be ' out of the eftates of B, C, D, E, F, G, H; fo that their ' eftates muft be diminifhed by fo much, or they muft ac-- quire a new eftate, anfwerable for this debt.
- It is true, the lofs may not fall upon B, C, or D, the im-- mediate creditor, becaufe any of them may purchafe the
- lands or goods of $E, F, G$, or $H$ : but then at lat it mult
- fall on him or them that have the money, becaufe that $A$
- has no other eftate to pay with but the money of $B, C$, - D, E, F, \&c.
- If it could be fuppofed that $\mathrm{B}, \mathrm{C}, \mathrm{D}$, fate creditors, - fhould keep all the money that was paid them by $A$, in five - years time they muft have all the money of the communi' ty; but, as this is unlikely, and their neceflary expences - muft make a circulation, fo of courfe it muft come about - to $A$, who has a part of almoft every thing that is bought - or foild.
- Perhaps it may be afked how fo large a money-debt could - grow out of fo fmall a capital ? To which I anfwer, that, the - annual charge of our fleets and armies chiefly confifting in - commodities of our own growth, the creditors were fatif-
- fied with an intereft for their money, fo that the annual
- payment of the eighteenth or twentieth part of the value
- of their goods was fatisfaction till the whole could be - paid.
= And, as to the money, it was generally lent by the fame - people who fold their fecurities to orhers at an advanced - price, and by this means were enabled every year to lend
- more, they being the refervoirs of all thofe little ftreams or
- parcels of money which belonged to the multitude, who
- demanded an intereft for them, the punctuality of pay-- ments, and facrednefs of the fecurity, in fome time making
- the intereft more valuable than the principal.
- Hence it is that people, finding themfelves in a fate of
- fafety, and that their intereft is well paid, raife the price - of their public fecurities, which of neceffity leffens the va-
- lue of money.
- If a million of the public debts were paid off, this money - muft come again to market, to look out for intereft, and,
- confequently, the remaining part of the debt would increafe
- in its value from the difficulty of finding employment for
" that million elfewhere; but then it muft be allowed, that
- there is a million lefs in circulation than there was before,
- becaufe this million, call it annuities or flock of any kind,
- did the office of fo much money; the fame thing muft be
- faid of every million that is paid off.
- It may be a queftion, wherher, after ten millions paid off
- (and, confequently, fo much lefs in circulation) there will
- be the fame confumption of commodities as there is at pre-
- fent; if not, the fame annuity cannot be collected, and,
- confequently, the débt will take a longer time in clearing
- off.
- It is demonftrable, unlefs people fpend out of their capital,
- the confumption cannot be fo great, becaufe, after ten mil-
- lions paid, there muft be fo much principal and intereft
- lefs in circulation than there was before, unlefs we fuppofe
- that, by the application of this money in trade, we get a
- fum equal to the intereft and principal.
- If, after 20 milhions paid, the difficulty of employing mo6 ney will become fo great as that half of it may become - ufelefs, that is, hoarded up, which may very well be the - cale; it is not then to be imagined the confumption of goods - can be fo great as now; the duties then of neceffity muft
- be lefs.
* If the confumption diminifhes, who is it that is moft likely * to fuffer? Why the trading man, mechanic, and landed - man. For inflance: if the monied man is reduced to live
- on three-fifths lefs than heretofore, or, which is the fame
- thing, the monied eftate is three-fifths worfe than it was
* before, the confumption of the proprietors muft abate in
- proportion; and, comequently, this muft fall on the trading
- man, mechanic, or landed man, becaufe under thefe three
- heads all the neceffary expences of life almoft muft be
- ranged.
' The landed man will be very much furprized to find his - yents diminifh, and yet his land rife in value, as to the pur* chafe of it; the merchant will wonder that, in a profound - time of tranquility and plenty, he has not that vent for his - commodities he was accuftomed to have. The poorme-- chanic will pine for want of employment: and this muat - be the confequence, if we have lefs to fpend than we had - before.
- But, perhaps, it would be thought advifeable to leave open 6 all the gates of circulation, that this alteration may come ' gradually, and not furprize us, that the advantages we - may have from trade may fill up thofe gaps which mult be - occafioned by fuch a tugnation as the payment of ten mil-- lions will make. If an annuity-office fhould be open to * all purchafers for their lives, people would, doubtlefs, ra* ther than have money lie idle, buy annuities for themfelves
* or their children ; and this would be always money in cir-
- culation; and I am certain, that, were this under a good - regulation, at the price annuities are now; the govern-' * ment would be gainers by the project, and, were it to con-- tinue, would, in the procefs of time, raife a fum of money - for any emergency.
- One thing I am fure of, it would greatly facilitate the cir-- culation of money, without which our debts can never be ' paid off.'

## Remarks.

When the prefent tax-funds upon trade fhall be annihilated, by the payment of our prefent public debts, for which they are mortgaged; and when the general fund of redemption, before fubmitted, fhould become eftablifhed in their ftead, our commerce in general will be fo relieved, as to employ very great additional fums of money therein; and, if every prudent meafure, under fuch circumftances, fhould be taken by the nation to advance our trade, as that increafed, it would call for a proportionable increafe of trading capital, wherewith to carry it on. But, if it was poffible to pay off our public debts without an increafe of our trade, the public creditors might be liable to thofe difadvantages which Mr Philips fuggefts; and to continue the public debts, which occafron the continuance of all our taxes on trade, the nation

Vol. I.
muft lofe its trade; and, if fo, the taxes arifing therefrom muft ceafe in their produce, the creditors in time have no interelf for their money, and the principal become nothing worth. If trade, however, is relieved of its prefent taxes, and one eafy general fund of redemption be fubftituted in their place, an unincumbered trade will fupport every thing ; it will either enable the nation gradually to pay its debts, with little difadvantage to the public creditors, or that alone will enable the nation to pay duly the intereft-money for our debts, without any incumbrance to trade, if it hould never be able to pay the principal. But, if it fhould ever become indifferent to the nation, whether their debes are paid or no, and that the creditors fhould be continued only as perpetual annuitants, then there is the greater neceffity to alter the fyttem of tax-funds on trade, by converting them, at once, into one General Fund of Redemption, which may fall lightly and equally, according to the circumftances of people, upon the whole nation, without any incumbrance whatfoever to our commerce. But, as the nation may be liable to increafe its debts in time of war, the policy of making the public creditors perpetual annuitants is the way to increafe the debt to fuch an enormous degree, that the taxes to pay, its intereft mult inevitably ruin the nation; becaufe further reductions of intereft, beyond certain limits, defeat their own intentions: for, the lefs the creditors have to receive for intereft, the lefs they muft fpend, and the lefs muft thofe taxes produce which are to pay their intereft, and provide for the exigences of the government: fo that, if the taxes, as at prefent conftituted, decreafe as much in their real produce as any future reduction of indereft below 3 per cent. 'amounts to, where lies the advantage? Our' large national debt is fraught with numberlefs inconveniences.
Firft, It has grievoufly injured our trade, by ferving for a pretence to continue thofe taxes on commodities, the deftructive confequences of which to trade are apparent to every man that will open his eyes.
Secondly, It deftroys private credit. The annals of Europe for the year 1739, p. 444, jufly, remark, that thefe funds firft drew out of private hands moft of that money which thould, and otherwife would have been lent to our merchants and tradefmen; this made it difficult for fuch to borrow any money upon perfonal fecurity; and this difficulty foon made it unfafe to lend money upon fuch fecurity, which of courfe deftroyed all private credit, and greatly injured our trade in general.
Thirdly, It encourages idlenefs; for feveral people, making from 3 to 4 per cent. of their money fleeping, are mere drones in the hive, improving no land, nor extending any trade.
Fourthly, It encourages luxury. Idlenefs is the mother of vice; and a mere ftockholder, being the idleft perfon upon earth, has nothing to fudy but how to kill time by vanities and luxuries, in which this nation has of late days made a great proficiency.
Fifthly, It waftes the body politic; for a great part of our national debt belonging to foreigners not refiding here, but whofe intereft is remitted abroad, they are in the fame ftate, with refpect to the nation, as landholders-abfentees, thofe cankers to the riches of a country. Suppofing the intereft remitted abroad to foreigners to be only 750,000 l. per annum. If our trade prove but a little beneficial, fo large a fum going out yearly will certainly keep us poor.
If our trade brings us in neither profit or lofs, and the current cafh of the nation is 12 millions, the intereft paid foreigners, in 16 years, will run away with all.
But, if the general balance of our trade comes to be againf us, the fending abroad yearly money to pay that balance, joined to the above 750,0001 . per annum intereft, mult bring deftruction upon us like a whirlwind. So fine a fituation have our debts brought us to!
Having thus made ourfelves tributaries to foreigners, poverty muft be our portion ; for a foreigner who for 50 years pafled has received from us, for his dividend in our funds, 1000 l. yearly, computing the intereft of money at 4 per cent. only, has drained us of 156,115 l. having his capital ftill unfatiffied. Nay this plunder, though monftrous, is much underrated ; for the intereft of money, at the beginning of this term of years, was much greater than 4 per cent.
We owe above 30 millions more than we did at the commencement of the laft war, (1740.) Who will believe that the prefent peace is likely to endure till this additional debt is difcharged? And is it not as plain as experience can make it, that a new war, with this new debt upon us, muft contribute to our undoing, if effectual means are not taken to leflen our debts, if we cannot difcharge the whole of them; or to to change the form of our tax-funds that lie heavy on trade, to that of one general fund, which may lie light and ealy upon the whole people. This is in our power, if it is not fo to difcharge our debts or any part of them.
Was not trade prejudiced by taxes before the war in 1740? Did not our rivals gain advantages over us from this caufe? Was not France become a great mercantile power by reafon thereof? Was not our debt fuch at the commencement of the faid war, as rendered the load unmanageable during its pro-
grefs? Did not national credit fink, and intereft of money rife? Did not payment upon fubfcriptions fail? And was not the peace of Aix-la-Chapelle concluded, becaufe we experienced it fo difficult to carry on war?
If our taxes on trade were grievous, they are now multiplied: if our debt was heavy, it is now then found increafed : if the finking fund was cafually applied to the current fervice of the year, it is now deeply mortgaged : and, if France fuffered in her trade during the war, fhe is now at liberty to repair thofe loffes. She hath the fame fkill, the fame induftry and parfimony, the fame good policy, the fame poffeffions, and aiming at great additional ones in America, Afia, and Africa : ihe hath numbers, the hath wealth; and a far more extenfive influence is derived to her fince than the had before the war. She hath experienced where the hath been unfucceffful, to improve the advantages of her fuccefs. Is not every prince in Europe, that has it the leaft in his power, encouraging trade by every poffible mealure? Is not Pruffia taking large ftrides to eftablifh a new commercial and maritime power; and is not-- likely to fall a facrifice; either to on the one fide, or - , perhaps, on the other? And what a chance Great-Britain will then ftand, is left to the judgment of others. [The whole of thefe Remarks, the reader will obferve was urged before the laft war.]
Thefe are unaggravated facts. Thefe cannot, like general epithets, be appiied to all times, and to all nations. They fpeak our fpecific fituation; and they would fpeak it as ftrongly, were the words Bankrupt and Ruinedexpunged out of the Englith language.
Some people feem to be unaffected with thefe clogs upon our trade, which are made by near an hundred different kinds of tax-funds. But,
In order to prove the evils arifing to our trade from the heavy taxes with which it is incumbered, it were, perhaps, not juft to confult the opinions of actual merchants, who, upon this fubject, are prejudiced judges.
But the teftimony of thofe who have withdrawn themfelves out of trade hath ever been deemed the beft authority; and, as fuch, the late Sir Matthew Decker's cannot be refufed.
He tells us, in favour of this fcheme; that 'It would fet the - merchant and fhop-keeper free from a multitude of falfe - and vexatious, or frivolous informations, which may now - be lodged againft them : that the charge upon the revenue c is now computed at above one million: that,' as the duty - upon merchandize imported from abroad, as well as upon - our own excifeable goods, amounts, on an average, to - about 50 per cent.' (And, fince he wrote, it hath been greatly increafed, by an immenfe additional duty on imports.) 'It would enable the merchant, as well as the fhop ${ }^{6}$ and warehoufe-keeper, to trade with half the ftock, and - make his profit the fame, or rather increafe it, in propor-- tion to the leffer fum for which he can purchafe the fame - commodity. This would create a greater plenty of money, c and, of confequence, greatly help to reduce the national - intereft.

- It would alfo encourage the great merchants, when they - buy any goods upon fpeculation, as they call it, to keep c the faid goods at home, and employ their own warehoufes; c whereas, as the cafe now flands, they are, in prudence, c obliged to fhip off fuch goods as are intited to a drawback - of 30,40 , and even more per cent. for Holland, or other - places; whereby the Dutch are not only benefited, but - we pay commifion, warehoufe-room, and other incidental - charges, which our own people might put in their own poc' kets, and have the goods in their own poffeffion.'
Mr Wood, befides much exceilent reafoning upon the fame principle, refers us, for farther proof, to the cuftoms, which, - fince the additional duties and impofitions on fo many fpe-- cies of goods, bave not actually produced fo much as before.'
It is computed by the Britifh Merchant, that, out of, $49,000,000 \mathrm{l}$. expended and confumed by our people at home, not more than $4,000,0001$. are of foreign commodities.
There remain, therefore, $45,000,000 \mathrm{I}$. for an annual expence and confumption in home product and manufactures. Of thefe the land-owner can expend and confume no more than his rents, and they are computed at no more than $14,000,000$ l. therefore above two parts in three of home product and manufactures are expended and confumed by all other denominations of our people.
Whatever is confumed and expended at home, or exported into other countries, whether of home or foreign commodities, is the fruit of our lands, of the labourer and artificer, or is purchafed by there fruits.
In 1713, the Britifh Merchant computed our imports at $5,000,000 \mathrm{l}$. and our exports at $7,000,000$ l. of thefe, one million he fuppofes to be of foreign commodities. Therefore, even at that time, our home confumption and foreign exportation amounted to $56,000,0001$.
But whatever is produced by land, by the labourer and artificer, is paid by thofe who rent lands, and employ labourers and artificers: therefore the farmer and trader contribute
three parts in four more than the land-owners can to the employment of our people, and to the wealth and expences of the nation.

## REmARKs.

Since I have been upon this fubject, a tract has fell in my way, which merits attention. It is intitled, an Effay on the National Debt and National Capital: or, The Account truly ftated, Debtor and Creditor ; by Andrew Hooke, Efq; wherein the learned and ingenious author hath corrected fome miftakes committed by our two great mafters of political arithmetic, Sir William Petty and Dr Davenant, who differ from each other, and both, as Mr Hooke hath endeavoured to fhew, from the truth, that we have little or no affiftance from either of thefe gentlemen. At prefent, I am confined to obferve only a feheme that I find this genteman has propofed for paying off the national debt; which, as it contains fomethipg new and curious, it may deferve the public regard, and, therefore, I Chall give it in the author's own words.

The fcheme for paying off the National Debt.
E It has been obferved, in the courfe of this eflay, that the national debt, reckoning it at 80 millions, is not a twelfh part of the national capital ; nor the annual intereft of it, at 4 per cent. a thirtieth part of the national income; and that the annual increment of fock, over and above the yearly expences of the people, is 11 millions and a half neady. Now this being proved, as clearly as the nature of fuch arguments will allow, and, in our opinion, fhewn to be the prefent ftate of the nation, beyond all-reafonable contradiction, we fhall have very little trouble to demonfrate the facility of difcharging the principal sum of 80 millions, not only without the leaft inconvenience to the crown or people, but with great and immediate advantages both to the one and the other; viz. by an actual fale, for a term of years only, of a lefs portion of the national income than is at prefent annually applied towards the difcharge of the intereft thereof. As thus:
If but feven-eighths of the interef of 80 millions, or two millions eight hundred thoufand pounds (which is not a thirtyfixth part of the national income, nor a fourtb part of the annual increment of the national capital) were to be converted into annuities at $3{ }^{\frac{x}{2}}$ per cent. and granted, in equal proportions, for a term of 99 years abfolute, unto a certain number of fubscribers, in manner as follows, the whole fum of 80 millions might, in our opinion, be foon raifed to difcharge the like principal fum of the national debt.
The method this :
Let the 80 millions debt be divided into 80 equal parts, of a million each, to be paid off feverally, by an equal number of feparate and independent claffes of fubfribers, whofe repective conftituents faall, in confideration of fuch fubfriptions, be, jointly and feverally, interefted in an equivalent annuity to be granted to each clafs, for the term aforefaid, with benefit of furvivorthip.
An inftance of one clafs will ferve for all.
Let it be enacted then, that the interef of one million, at $3 \frac{1}{2}$ per cent. be converted into a capital annuity of $35,000 \mathrm{l}$. and granted for 99 years abfolute, to any body or clafs of fubfcribers, who, in confideration thereof, will advance the fum of one million towards difcharging fo much of the national debt.
That the one million, fo to be fubfribed, be divided into four thouland parts, or fhares, of 2501 . and the capital annuity of 35,0001 . into four thoufand leffer annuities of 81 . 15s. each, anfwerable to the faid number of fhares, and vefted in the inviduals of each clafs, in proport!on to the number of fhares fubfcribed by them feverally and refpectively. That every perfon fubferibing 250 . or one thare, be intitled to one of the faid leffer annuities, during the life of any perfon the fhall nominate, fubject to the limitation in the faid grant ; and fo in proportion to any greater number of hares, provided always, that the number of his nominees be ever equal to the number of his fhares.
That in confideration of his finking the principal money, every fubfriber be further intitled to fuch annual augmentation of his annuity, or annuities, as fhall from time to time accrue by cafualties of mortality among the nominees of fuch clafs; fo that before the expiration of the original term, the whole capital annuity of $35,000 \mathrm{l}$. may velt in fuch fubicriber, or fubferibers, or his or their reprefentatives, as the cafe thall happen, whofe nominee, or nominees, thall be the laft furvivor, or furvivors, of the faid clafs.
That the government creditors have the preference to all other fubferibers, for fo much principal money as thall, at the time of fuch fubscription, be actually and bona fide due to them from the crown; and that, notwitfanding the clafles, as fuch, are, by this plan, to be independent of each other, yet, that individuals may become fubferibers in as many claffes as they pleafe, and their nominces in one clats be
be nominees in every other clafs, if they fhall think fit. And, laftly,
That the government, on payment of the capital annuities of 35,0001 , to the feveral claffes, be abfolutely difcharged from all future claims of individuals, touching their refpective ohares, proportions, and intereft therein; and that all matters relating thereto be tranfacted among themfelves, and determined by a court of directors, to be elected and appointed in fuch manner as fhall be thought fit ; who, by law, thall be fully authorized and impowered to make the refpective dividends, and from time to time adjuft all claims thereto: fubject, neverthelefs, to an appeal to the lords of the Treafury, who, in a fummary way, Gall finally hear and determine the fame.

The practicability of this fcheme, fays the author, will beft appear by thewing the advantages of it to fubfcribers.
A clear annuity, then, for 99 years abfolute, with government fecurity, is worth, at leaft, 30 years purchafe, and, confequently, every clafs, fubfribing a million, will gain $50,000 \mathrm{l}$. which is 5 per cent. on the whole fum; of which gain the individuals will feverally have a thare, in proportion to their fubfcriptions relpectively : for, by multiplying the capital annuity of 35,0001 . by 30 , the rate of purchafe, or value thereof, the product will be juft, $1,050,000$ I. as aforefaid.
The fingle confideration, if people generally underftood the real value of annuities, would be fufficient to infure the event; but, there being few who are much converfant with that fubject, it is not probable fo large a fum as 80 millions could be raffed without the addition of fome more ftriking and interefing motives; for which reafon, it was thought moft proper to fall in with the popular pafion of lotteries, and to erect one of fo peculiar a kind, as might hit every tafte, and, upon the ftrieteft examination, appear more advantageous to adventurers than any yet extant. For,

1. Every adventurer here will have a better intereft for his money, with government fecurity, during the life of his nominee, than he can reafonably expect to make by laying out the fame fum in the purchafe of lands in fee, in any part of the kingdom.
2. He will have a moral certainty of increafing his income annually, for 30 years to come,* a probability of the like augmentation for many years afterwards, and a poffibility of enjoying the whole capital annuity of 35,0001 . before the expiration of the original term.

* By the London bills of mortality, taken at a medium of to fuceeffive years, it appears that a life aged 4 is equal to a term abfolute of 38 years and a half; and one aged 19 , to a like term of 27 years and a half: the mean of which two numbers is 33 years for the term abfolute, to which every life between thofe two ages (which I fuppofe will comprize all the nominees) is aftually equal. Now, as 30 is juft three years lefs than his equal chance of life, fuch perifon may properly enough be reputed morally certain of furviving that term.

3. The advance of fo fmall a fum as 2501 . by any one who ought to become an adventurer in this lottery, cannot be injurious to his private fortune or family in any degree, becaufe he hath immediately more than a valuable confideration for his money, and may, if he pleafes, appropriate the benefit of it to the ufes of his family after his deceafe.
4. As the care of making provifion for children, and old age eqgrofles the attention of the greater part of mankind, and is the main point on which the views of the wifeft terminate; fo, by this fcheme, a way is hewn of doing it, at an eafier rate, and with more certainty, in cafe of life (and death provides for every body alike) that can poffibly be done by any other known method whatfoever.
Thefe reafons, taken together, are, in our opinion, fufficient to convince the moft cautious perfon that fuch annuity, with benefit of furvivorhip, though the adventurer, for want of knowledge, may not readily fee a ftrict arithmetical equivalent for his fubfcription, yet politically confidered, it will appear vaftly more valuable; and there is little doubt but this fcheme, when tendered properly to the public, will operate fo Atrongly on the ruling paffion of human nature, that every thinking perfon in the kingdom, who has a child or near relation to provide for, and 2501 . to fpare, will gladly become an adventurer in this lottery.
The advantages accruing to the government and community by this fcheme are thefe:
5. The national debt will be difcharged at once, with lefs than the prefent intereft thereof; and the intereft itfelf be annihilated at the end of the term for which the annuities are to be granred.
6. The reduction will create an immediate annual faving of $400,000 \mathrm{l}$. which may be added to the finking fund, or applied to the current fervice, as laall be thought moft convenient.
7. The national capital may for ever remain untouched, fince the annual increment of fteck, as ftated at it millioths and an balf, together with the finking fund, will be more than fufficient, even in times of war, to anfwer all the demands of the government.
8. This fcheme will be the beft pattern for raifing fupplies for the future, without burdening the people with new taxes, or incurring any fuch-like national debt; the finking fund itfelf, when converted into like annuities, being fufficient to furnith a million a year for 50 years together. And,
9. In which confifts its diftinguifhing excellency, this fcheme obviates all political objections to the execution of it, by preferving the fame dependencies, and equally fecuring the ftability of the throne; is inimitable by the French, our natural enemy, or any other arbitrary government; executes itGelf; is infallible in its operation; and abfolutely puts it ous of the power of any future miniftry to defeat the event.
The only objection of weight to it, as far as we can forefee, is this, viz. that, in this way of paying off the national debt, a heavy load of grievous taxes on the necellaries of life, fuch as foap, candles, leather, falt, \&cc. muft inevitably be fixed on the fubject for a long term of years to come, irredeemable by parliament.
This objection, it muft be owned, has a frightful afpect, and, were it unanfwerable, ought to damn the whole; but, in our opinion, the force of it is very eafily removed, by a lhort provifo in the aft to this effect, viz. That whenever the circumflances of the governmeat will admit of a reduction of any of the more burdenfome taxes, appropriated to the payment of the faid debt, fuch reduction may at any time take place, proyided the funds annibilated thereby be, from time to time, replaced out of the finking fund (which with the additional favings upon this plan, will be near $1,800,000$ l. per annum) or otherwife provided for by parliament.
It wauld be no difficult matter to enter into a particular detail of the great benefit the community might receive from the execution of this fcheme, by fhewing, in particular, which and how many of the more grievous and burdenfome taxes, during a time of peace, might be immediately repealed, without injury to the revenue; and in what manner an equivalent, in time of war, might be raifed for the fervice of the government, without a revival of thofe taxes, or any new impofitions on the people; but this being out of our province, which is only to give gerieral hints, we fhall leave the application of it to thofe who are more immediately concerned and interefted in that affair.' Here ends Mr Hooke's fcheme.
Sir Mathew Decker's fentiments with regard to the NAtional Debt.

## PROPOSALS.

( To pay off our debts by public bonds, bearing intereft, negotiable by indorfement, and liquidating part of oar debts yearly.
That books being opened at the Exchequer for receiving money from any perfon or perfons defiring public bonds, which money is to be applied immediately to pay off our national redeemable debts; thofe that bear the higheft rate of intereft, and are of the longeft ttanding, to be fift paid off.
That the faid bonds, for the conveniency of trade, be for any fums not lefs than 5 l. nor exceeding 10001 .
That they be divided into claffes, according to their rates of intereft.

That the ift clafs does not exceed 3 millions fer, at 3 per cent.

That the bonds of every clafs be numbered, and the numbers never altered.
That the intereft be payable at an office to be erected for that purpofe, whenever it be called for, and a new bond given in the name of the perfon receiving it, with its original number, and the date the intereft is paid to.
That the bonds be negotiable by indorfement to any creditor, and for any tax to the government.
That the bonds for the amount of both principal andintereft by a legal tender for any tax, bill of exchange, note, or any debt whatfoever.
That a fum equal to the amount of one fubfidy be granted yearly by parliament, to pay off our redeemable debts and public bonds; thofe that bear the higheft rate of intereft, and are of the longeft ftanding, to be the firft paid off.
That public notice be given in the Gazette monthly, by the commiffioners of the office, how far they can pay off the bonds, fpecifying the number of the clafs, and the number of the bond they pay to: the intereft on all the included numbers to ceafe and determine as the expiration of three months after fuch notice.

That accounts be delivered yearly to parliament by the commiffioners.
That a curious famp be added to the bonds; for, though their being negotiable, by indorfement only to creditors, may make forgery difficult, yet too much caution cannot be ufed to prevent it intirely, and give the bonds the greater credit.

## Of the benefits arifing by paying off our debts by public bonds.

J. It will increafe trade.

By putting our debts, that have almoft ruined us, on a footing of being fpeedily paid off with honour.
By creating currency more valuable than our coin; money lying by brings in nothing, but all thefe bonds pay fomething for keeping; and I prefume that no perfons (much lefs the bank or the bankers) would keep money' by them lying dead, when they could have current bonds that bore only a half per cent. intereft. Would the bank, who are computed to have always a dead cafh of above one million by them, refufe making 5000 . per annum profit of it, at a half per cent. in bonds? Could the directors anfwer to the proprietors the neglect of not adding fuch a fum yearly to their ufual profits? Would any perfon take out a bank-note, that bore no interef, when he could have a bond carrying a half per cent. and equally convenient; for any trader would as foon give change fur it as for a bank note!
By increafing the currency of the nation: for, as trade always languibhes where money is fcarce, fo the benefit by taking off all monopolies might be defeated, for want of a proper currency to carry on the flow of trade thereby caufed; whereas, adding an increafe of currency to an increafe of trade, muft carry it to a greater height than we ever yet knew.
By reducing the intereft of money, which is a great encouragement to trade, by forcing people to induftry, who wauld otherwife live idle on the high intereft of their money; whereas, the intereft of thofe bonds finking gently to a degree too low to indulge people in idlenefs, the poffeffors of them, who have not lands to improve, muft either find out new branches of trade, or ftudy to improve the old; enter into partnerlhip with traders of experience, or lend them their money to trade with, whereby private credit will be increafed, and our traders enabled to buy at home with ready money, and fell at long credit abroad, which will make them fteal away the trade of all thofe nations whofe high intereft will not enable them to do the fame; and, the lower the intereft, the more moderate profits our traders can content themfelves with, whereby the vent of our goods muft be increafed: for, was the natural rate of intereft at $\approx$ per cent. a trader who borrowed money would think 4 per cent. good profit ; whereas he who borrows money at 4 per cent. cannot be fatisfied with lefs than 6 or 7 , and muft neglect all trades that will not give that profit, which the Dutch, by their low intereft, are glad to undertake, and, when our cafe is the fame, fo hall we.
By making our people frugal : for, a low rate of intereft foreing a low profit in trade, people's expences muft grow more moderate, and, the lefs we confume, the more we hall have to fell, which is the moft folid way to make a nation rich.
By gaining more experience: for, low profits raifing eftates flowly, men cannot quit bufinefs fo foon for idle countrylives as they do now, but muft bring up their children to their bufinefs, in order to affift them in their old age, which may go on to the fourth or fifth generation, before an eftate is raifed to turn country efquires upon; whereby a foreign correfpondency with the beft houfes, the knowledge of proper workmen, and the characters of mafters of thips, are fecured to the fon by the father's experience; confequently, from fuch a foundation, the utmof fill in trade muft be attained.
2. It will employ our poor.
3. It will increafe the fock of people.

Thefe having been already proved to be the confequences of the increafe of trade, the reader is referr'd back to thefe heads in the remarks on the foregoing propofals.
4. It will increafe our riches,

Not only as a confequence of the above remarks, but allo by reducing thofe valt dividends the foreign proprietors of ftocks have now remitted to them, whereby more money will be kept in the nation.
5. It will increafe the value of our lands.

This is the confequence of all the above remarks; for whatfuever caufes trade, employs our poor, increafes the foock of people, and increafes our riches, muft increafe the value of our lands; for the proof of which, the reader is referred to what we thall hereafter fay.
The paying off our debts by public bonds is proved to be the caufe of trade, which is the caufe of all the other remarks; therefore, the paying off our debts by public bonds is a great increafer of the value of lands.
Befides, where plenty of currency is to be had, there it will be borrowed by the land-holders, and employed in different
cultures, plantations, new products, whereby yearly improve ments will be made, and, when the corn-magazines are compleated, there being no other employment for money but in trade or lands, thofe who did not underftand trade or care to truft their money to thofe who did, or who had raifed fufficient eftates by it, muft become purchafers of land; which number, by increafing, muft increafe their value Having thus attempted to thew that our natural advantages in trade are undoubtedly fuperior to any nation's whatfoever that, if properly cultivated, they would render us more formidable than France, confequently, than any country in Europe; that, if we had no taxes but on the voluntary confumers of luxuries, and if our trade was quite free, all fictitious value would be taken from our goods; whereby they might be afforded cheaper than any in Europe ; and, if thofe vaft fums that now lie dead in our funds were cisculating in bonds, we thould raife an immenfe trade all over the world a vaft navigation for our protection, increafe the number of our people, give employment to all our poor, accumulate riches yearly, and that all this cannot be done without vaftly increafing the value of lands, which, in the remarks on the feveral propofals I have endeavoured fully to prove, to the conviction, I hope, of thofe gentlemen for whofe benefit this effay chiefly was intended, viz. our country-gentlemen, the land-holders of thefe three kingdoms.
Before concluding I muft repeat, that my chief intent herein was to remove that deftructive prejudice arifing from the falfe diftinction of landed and trading interefts, by thewing that there neither is or can be any difference of intereft between them; for, whatever clogs trade, muft fink the value of lands, and that any benefit to trade, how remote foever it may feem from land, will at laft terminate in increafing its value ; therefore, I dare boldly affirm, that the giving trade the utmoft freedoms and encouragements is the greateft and moft folid improvement of the value of lands. It mult be evident, fays the author of Britannia Languens, p. 2go, that, were our trade eafed as our neigbbour nations, England would have the fuperiority, fince the fame caufes muft produce greater effects in England, being invigorated with thefe our national advantages, which no other nation doth or can enjoy.
Was our trade eafed and encouraged by the foregoing propofals, beyond that of our neighbours, to what a height of riches and power would not our natural advantages carry us? The confideration of which is hereby fubmitted to the legiflature, which can, whenever, it pleafes, make us the mof flourihing people in the world.'

Sir Matthew Decker's Propofition for one General Fund of Redemption, as I have calledit, to anfwer the end of all taxes on trade.

- My propofal in Chort is this, that there be but one fingle excife-duty over all Great-Britain, that upon houfes. As for England alone, exclufive of Scotland and Wales (to which I referve myfelf to fay fomething hereafter) the number of houfes, upon the fricteft enquiry, amounts to no lefs than $1,200,000$, and, according to the common computation, every houfe being reckoned at feven perfons, makes in all $8,400,000$ fouls.
Now confider only what a number of things muft be ufed by every one of thefe, for which high duties are paid, if imported from abraad ; or high excifes, if of our produce; and confider to what an additional price the feller of every commodity will exact from the confumer upon the fore of duty and excife; reflect, likewife, upon the numerous articles which every family actually pays for, fuch as foap, candles, windows (and, what is the moft confiderable of all) malt and land: and then judge if I am miftaken in my calculation, when I fuppofe that every one of the $8 ; 400,000$ perfons, above computed, pays, on an average, 40s. a year, without being a penny the better for it, either as to victuals or cloathing; and yet according to this calculation, $16,800,000$. will, in effect, be raifed upon the fubject *.
* I have been told that many people object to this calculation and think me miftaken when I compute that every perfon pays, in the confumption, 40 s . per annum towards the feveral taxes, and, by confequence, every family, at feven in number, 14.1 ; I fhall, therefore, only fubjoin a lift of fuch things as are either charged with high duties at their importation, or bigh excifes at home, and fuch as every family almoft is either more or lefs obliged to make ufe of; and then leave is to the judgment of every confidering man, whether I have it to the judgment of every confidering man, whether
dver-rated this matter, or not. Velvets, and all foreign-dver-rated this matter, or not. Velvets, and all foreign-
wrought filks; lace, callicoes, mulfins, and all foreign linwrought filks; lace, callicoes, mullins, and all foreign lin-
nen; all foreign wines, arrac, rum, brandy; all homenen; all foreign wines, arrac, rum, brandy; all home-
diftilled (pirits, beer, ale, cyder, mum, perry, fweet wines, diftilled firirits, beer, ale, cyder, mum, perry, fweet wines, and vinegar ; china ware, wrought plate, wire, cards, and
dice; hides, leather, parchment, vellum, paper, paftedice; hides, leather, parchment, vellum, paper, patte-
board, whale fins, and oil ; coffee, tea, and chocolate board, whale fins, and oil ; coffee, tea, and chocolat manner of apothecaries drugs ; almonds, rafins, plums, and all forts of grocery-ware; melaffes, fugar, foap, candles, fnuff, ftarch, tobacco, falt, and hops. Now I fay, when we take 4 view of this formidable lift, and conider the large
quantities of fome of thefe things which are ufed and confumed in the families of noblemen, gentry, merchants, fhopkeepers, farmers, and that no family can fubfift, however mean, without the ufe and confumption of many others of mean; I believe we fhall be tempted to think that I have rather made my calcalation too low, when I place it, on an average, at 40 s . per ann. each perfon, or 14 l . per ann. each family, taking one family with another.

That the moft wealthy and moft fubftantial part of any nation fhould bear the greateft part of the burden, is certainly moft reafonable, but as feldom put in practice; but it is a confequence of the method I propole, and thus I prove it : I will fuppofe, that, in the foregoing computation of $1,200,000$ houfes, there may be roo,000 at feveral times uninhabited; it would not be reafonable to expect that they fhould pay duty, whilft they remain fuch.
Next, I would fix upon 500,000 houres, which we may fuppofe inhabited by the loweit and pooreft fort of people; from thefe I would expect no duty, that thereby their labour might become fo much the cheaper, and the goods, which are the produce of their labour, might, by this means, be fold at as low, or even a lower rate, than can be afforded by other nations; for I do not know any country in Europe where the pooreft do not pay fome tax or other; whereas, by the prefent fcheme, thofe of this kingdom would be abfolutely free.
After this deduction of houfes, there will ftill remain 600,000 , which are to pay the whole duty, not including parochial charges, or the poor's rate, which, being things of a diffeent nature, belonging to every parith in particular, are no comprehended in. the general fcheme, but are left as they were.
Let us fee now, whether from the 10 600,000 houles may not be raifed a fufficient revenue to anfwer the ufes of the public: but, before we enter upon this, we muft compute a little what the public really wants. I would be underitood to make this computation, on fuppofition that providence may foon be pleafed to blefs us with an honourable peace, that, the intereft of the houfe of Auftria being once effectually fettled, we may not in hafte be under a neceffity of intermeddling fo much again with the affairs of the continent, and be driven to find out funds for fuch immenfe fums of money as have lately been raifed, and (to the great detriment of the nation) partly fpent abroad.
The queftion therefore is, what are the exigencies of the ftate in times of peace
I. His majefty's civil lift, amounting to - - I.800,000 II. Intereft money to difcharge the public debt, near, but not quite

2,000,000
III. Money for the current fervice of the year - 2,200,000

In all 1. $5,000,000$

In order to raife this money, I would propole, that a duty of rol. a year thould be laid upon every boufe, which, upon the 600,000 houfes, would amount to $6,000,0001$.
That I do not mean the fame fum of 101 . to be laid upon every fingle individual houre, I prefume every body will underftand; I fuppofe only, that fo much money may be raifed upon the whole.
There will be a difficulty in fixing the proportion. for each houfe, but this difficulty might be got over by the government's procuring an eftimate of the refpective rent of thefe houfes. And as the inhabitants would, by this means, be difcharged from paying any duties whatever, but fuch as are merely parochial, they would have no reafon to complain, if fuch an eftimate was made : for I believe they would find, that there would be a confiderable faving to every family, by paying one duty only, in lieu of the many which they now pay.
The method I would point out for collecting this duty is, that every houfe in England which is either let for, or inha.bited by its owners, worth 2001 . a year, or upwards, or where the inhabitant is in poffeffion of a real eftate of 1000 l . a year, or more, let the houle he liveth in be great or fmall, thould pay 100 l , and that all houfes may be ranged in their reveral claffes, the loweft at 51 . and the middle ones in proportion, with the addition of real eftates annexed to them. This is, in general, my notion of laying this duty.
Thus $6,000,0001$. might be eafily raifed; and as the government, by the above computation, wants only $5,000,000$. there would be an overplus of $1,000,0001$. This $1,000,0001$. therefore, together with what may hereafter be faved by the reduction of intereft (which I have likewife in my prefent view) I would propofe hould be applied to the finking fund *, towards difcharging the national debt: and I am perfwaded that the plenty of money would foon of itfelf occafion a reduction of interef, without any force or compulfion.

- Sir Matchew did not feem to be aware, that, if all other taxes are taken off, and his general fund fubflituted in their ftead, the finking fund would ceafe.

The fame finking fund would have a very confiderable ad dition, if the legiflature fhould think fit to charge all the houfes in Wales and Scotland, which have not been yet mencioned (after the fame deduction of thofe inhabited by the poor) with the half of what thofe in England pay; which muft amount to a confiderable fum; for, according to the beft account, there are in Scotland about 250,000 houles, and in Wales above 150,000 . If all this was faithfully laid out in clearing the public debt, it would be furprizing to fee how much it would be leffened in the fhort face of 10 or 12 years.
If in future times the public fhould want to raife a greater um for the current fervices of the year, it might eafily be procured by adding, for every million they wanted, one fixth part upon every houle; and fuch an addition would be raifed within the year, a thing greatly defirable by every body, and the want of which has been the caule of our prefent debt. Before I difmifs this fubject, I think it incumbent upon me to remove one objection, which may probably, and with ome lhew of reafon, be made, viz. that, by thus fecuring ix millions to be annually raifed for any determinate number of years, we fhall make it unneceffary to have a feffion of parliament every year ; and, fince this would be apparenty detrimental to the fubjed, as it might prevent redrefs of grievances, and tend to make the crown more independent on the people than is confiftent with the conftitution, I would propofe (in order to obviate this inconvenience) that only 61. on a houfe thould be fixed, to be certainly raifed every year, and the remaining 4 l . thould be annually granted by parliament, for anfwering the exigencies of the current year, in the fame manner as the land and malt-tax are at prefent granted.
And now give me leave modeftly to hint what I would have the legiflature do towards the furtherance of this fcheme.
I would humbly propofe, that the parliament fhould, firft of all, in the molt folemn manner, engage itfelf, that, if ever there fhould be a deficiency in the duty upon houfes, the interelt fhould, previoully and before any thing elfe, be faithfully paid to the feveral proprietors of the public debts, for which the whole revenue fhould ftand engaged.
Next I would have them provide, that all acts of parliament which ever paffed, and laid any duty whatfoever; all penal laws, either upon goods imported or goods now under the burden of excife, and, confequently, all forfeitures to be levied by any of the faid acts; thould be repealed.
The only act which I would have remain in force, is that moit glorious bulwark of our trade, the act of navigation and even here I would have a fmall alteration made, the pre fent practice being a hardfilip on the fubject, by which many an innocent perfon has fuffered wrongfully: I mean in rela tion to the claufe by which owners of fhips are liable to for feiture for crimes committed by mafters or failors, which they themfelves know nothing of, or, if they did, would not be able to hinder. This is the only alteration which I think requifite; for, fuppofing that claufe to be left out, I look pon this act as the beft which ever paffed for the benefit of trade.'-So far Sir Matthew Decker.

Remarks upon the whole of this article of Funds.
Before we conclude this article of the funds, it may be proper to obferve, that, under the article of Debts [National Debts] it is faid a finking fund of $1,200,0001$. inviolably applied to the payment of the public debts, would have difcharged 50 millions of debts in 25 years and a half; and that, if the nation had contracted a frefh or new debt of the faid fum of $1,200,000$ l. annually upon new funds, provided for the payment of intereft of thefe new loans, the nation would have been lefs in debt by the fum of $19,400,000 \mathrm{l}$. But my meaning having been mifapprehended by fome worthy and ingenious gentiemen, it may be neceflary to explain myfelf further upon this matter.
The reader, therefore, is defired to remark, that I am there fpeaking of the efficacious operation of the finking fund, provided it had been annually and inviolably applied to the payment of the public debts. And if it be true that a finking fund of $1,200,000 \mathrm{l}$. invariably applied (intereft reckoned at 4 per cent.) would have difcharged 50 millions of debt, and the nation had even borrowed the fame fum of $1,200,000 \mathrm{l}$. by a new-contracted principal debt, upon new-appropriated funds for the payment of intereft, and the intereft was duly paid for fuch principal debts, it is very obvious, we apprehend, that the nation could be no more principal money in debt at the end of 25 years and a half, than 25 times and one half the faid fum of $1,200,0001$. which is $30,600,000$ l. and this fum being deducted from 50 millions, leaves the fum of $19,400,0001$. which the nation would have been lefs in debt of principal money; becaufe it is taken for granted upon this fuppofition, that the intereft was duly paid by new funds, raifed annually for that purpoie, for the new-contracted principal debt: and, if the intereft be duly paid, that intereft-money cannot be reckoned as a principal money-debt at the end of the faid 25
years
years and a half, when the nation does not owe one farthing of it.
The plain queftion is, What the nation is really indebted of principal money at the end of 25 years and a half, provided it inviolably applies a finking fund of $1,200,0001$. to the dif. charge of 50 millions of debr, and borrows annually the fame principal fum of $1,200,0001$. where intereft is annually provided for by new-appropriated effective funds? But if the fimple intereft, paid from year to year, or half-yearly, \&c. may be reckoned, by an objector, as a new principal debt, when the nation does not really owe one fhilling thereof, the intereft of that intereft may, with equal reaton be added to that aggregate, and fwelled into a principal money-debr, at the end of the faid term; all which is quite befide the queftion.
The attentive reader will eafily difcern, by conneCting what is here faid with what has been alfo faid under the article Debts [Natronal Debts] that, if the nation inviolably applies a finking fund of $1,200,0001$. to the payment of the prefent national debt, and is under the neceflity to contract annually a new debt, upon new loans of no more than one half of the faid fum of $\mathrm{I}, 200,000$ l. the old national debt will be much fooner difcharged, and the nation ever after in a certain fituation to pay off all its debts gradually, from this principle; for if, after the firf old debt thall be abfolutely difcharged, and all the funds appropriated for the fame annihilated, the nation would be enabled to eftablifh a new finking fund for the payment of the new-contracted debt: and if, during the progrels of payment of the new-contracted debt, the neceflities of the ftate required ftill a further new-contracted debt, if the nation borrowed lefs from year to year than it paid off, all our debts and taxes would neverthelefs be in a certain ftate of redemption, and the public credit thereby wonderfully upheld. So that we may very clearly difcern, that, if the funds of this kingdom were once happily bottomed upon the fyftem of paying off old debts, only by the means of contracting one half the quantity of new debts, by new loans,
our funds would ever remain in a fure and certain fate of redemption. Moreover,
By this fyitem of diminihing of old debts, by the means of contracting of leis new debts, the nation will, from time to time, ever have it in its power to thift the tax-funds, fo to lay the eafieft upon the people, and to be of the leaft bur den poffible to our trade, if they need be of any at burThefe are the happy effects of preferving an unincumbered finking fund, to pay off old debts, by the means of conbered ing new gradually, lefs in quantity than what hall be paid off and, by fuch an eftablifhed fyftem of borrowing one half off three quarters of the fame fum paid off, by new half, or new loans, the public creditors would never be great fupton by the thus gradual payment of old debts, becaufe they would gradually find a market for their money in the contracting of new debts; and from the eafement of commerce, by thifting f the tax-funds, as before fubmitted, and opening every channel of trade. that inall be pomble, the nationg every capital will be fo augmented, as to find conftant employment or all the money the nation can raife! and, by this means, gradually convert the whole principal money-debt into a kind f a live-trading national ftock : which will enable us to dive every branch of trade on for the lowelt profit, and thereby prevent other nations fupplanting us in whatever branches of rade we judge proper to preferve. But it is well enough known, that my opinion upon RAising ale Supplies that may hereafter be neceffary, is, that they ought to be raifed WITHIN THE YEAR, without the further increafe of our public debts*; though when I wrote upon that fubject, I never thought, I muft confefs, that the Supplies raifed would ever have rofe to fo high a pitch as they did in the laft war. For more matter on this head, fee the articles Credit [Public Credit,] Debts [National Debts,] Mercantile Accomptanship, Taxes.

* See Postlethwayt's Great-Britain's Trua Systru.

## The Business of the CUSTOM-HOUSE, continued.

FEES--See our article FeEs in particular, for the table thereof at the Cuftom-houfe.

Goods not paying 20 s . cuftom, whether inwards or outwards, to pay but half fees.

- For butter, corn, grain, meal, and other goods which may be exported free, carried to or from any place within the port of London, to be 3 s . 5 d . and fuch goods to pafs by tranfire, without cocket or bond. I Ann. cap. 26. § I.
--For corn not exceeding 50 quarters, or hops not exceeding 50 bags, to be Is. 8 d . $\frac{\mathrm{x}}{2}$. I Ann. cap. 26. § 2.
--For a cocket or certificate outwards, to be paid in one fum to the officer granting the fame, Rule 25 th, at the end of letter A, figned Harbottle Grimftone, fpeaker of the houfe of commons.
- In other ports than London, to be fuch as were taken in the 4 th year of the seign of Jac. I.' till otherwife fettled by parliament. Car. II. cap. 4. § 8.
--In London, copies of the Table of fees, and of the order of the houle of commons, eftablifhing the fame, to be ret up to public view in the Cuftom-houfe, in fuch places where the fees are received. Ditto.
——Payable to the officers of the cuftoms in any port.
--For a port entry, when the cuftom is under 5 s . nothing; exceeding 5 s . and under $40 \mathrm{~s} .6 \mathrm{~d} . ;$ above 40 s . the lame fees as for the prime entry.
——But one fee to be paid by Britifh, for his own goods entered at one time in one fhip, though the duty be diftributed into feveral offices.
——The merchants are to pay for weighing all goods fhort entered above Ios. cuftom; but if duly entered, not to be at any charge.
on.
——Societies or companies of merchants, trading with a joint-fock, and entering a whole thip's cargo inwards, in one entry, the officers may take fuch gratuity as they fhall voluntarily give them.
- Unlawful fees exacted by officers; penalty, lofs of em-
ployment, and incapacity to hold any office in the cuftoms for the future, and to be liable to double colts and damages. Rule 24, at the end of letter A. 13 and 14 Car. II. cap. $11 . \$ 34$.
--Legal, not paid, difpatches may be fopped. Ditto.
-None to be paid for foreign coin and bullion inwards and outwards.
- Nor for diamonds, precious ftones, jewels, and pearls, inwards and outwards.
-None to be paid for goods under the value of 51 . in the book of rates, paying for fubfidy 5 s . or lefs. 12 Car. II. cap. 4. § 8.
——Not for corn exported, nor corn debentures. I W, and M. cap. 12. § 2: 12 and 13 Will. III. cap. 44. § I, and 7 Ann. cap. If. § 2, 10.
- Not for gunpowder debentures or certificates. 4 Geo . II. cap. 29. § I .
-Nor for falt debentures. 9 and 10 Will. III. cap. 44.
§ 13.
-Nor for the premium or naval fores. 5 Geo. I. cap. 11. § 18. and 2 Geo. II. cap. 35. § 1 r.

Nor for any entry, warrant, debenture, certificate, cocket, \& c. in relation to the one-third or two-third fublidies only, upon forfeiture of 40 l . for each duty, one third to his majelty, and two thirds, being cofts of fuit, to the party grieved. $\quad 2 \& 3$ Ann. cap. 9. §4. and $3 \& 4$ Ann. cap. 5. §3.

-     - Nor for paffing debentures for goods chargeable with any additional duties, more than was before payable for debentures, for repayment of the balf fublidy; nor any fee for any oath adminiftered upon this act. $4 \& 5$ W. \& M. cap. 15 . § 15 .
FISH——taken or imported by frangers, may not be dried within Great Britain, to be fold, upon forfeiture, or the value, to any perfon that will feize the filh, or fue for the value; to be applied to the repair and maintenance of the port, \&c. 13 Eliz. cap. 11 . § 6.
--Herring, cod, pilchards, falmon, or ling, frefh, falted, dried, or bloated; grill, mackerel, whiting, haddock, fprats,

## The Business of the CUSTOM-HOUSE, continued.

colefifh, gullfin, congers, any fort of flat-fifh, and any fort of frefh-fill, may not be imported in any foreign thip into, or fold in England, having been taken by, bought of, or received from foreigners, or out of a foreigner's fhip (except proteftant flrangers inhabiting this kingdom) upon forfeiture thereof, and the fhip and tackle; and alfo 100 pounds by every offender herein. 15 Car. II. cap. 7. § 16.18 Car. II. cap. 2. § 2. 10 and 1 I Will. III, cap. 24. §13. I Geo. I, cap. 18. § 1. and 9 Geo. II. cap. 33• § I.
-EExcept eels, ttockfifh, anchovies, fturgeon, botargo and cavear, and lobfters or curbots, which may be imported in any thip, and by any perfon, whether of Britifh or foreign catching. 1 Geo. I. cap. 18 . § 10.
—Mafters of filhing-fmacks, hoys, \&c. bringing in fifh of foreign taking, \&c. are to forfeit 50 pounds. I Geo. I. cap. 18. §2. and 9 Geo. II. cap. 33. § 1 .

- But profecution muft be commenced within 12 months after the offence committed. I Geo. I. cap. 18. § g. and 9 Geo. II, cap. 33. § 2.
-The forfeitures above may be recovered by any informer, in any of the courts in Weftminfter-hall, and diftributed, one moiety to the informer, and the other moiety to the poor of the parifh where the offence is committed. 9 Geo. II. cap. 33. § r .
--Herrings, pilchards, fcads, codfifh, ling, hake, falmon, or dried red-fprats, by whomfoever caught or cured, may not be imported, unlefs oath be made before the falt-officer, by the owner of the fifh, or matter of the veffel, that all the falt wherewith they were cured, was taken on board in Great-Britain, mentioning the time and place; and that no drawback was, or is intended to be obtained for the fame, upon forfeiture, and double the value. 1 Ann. cap. 21 . § 14. and $2 \& 3$ Ann. cap. I4. § 13.
--Herrings, white or red, to be packed in lawful barrels, juftly and exactly laid by fworn packers, who are to brand the calk with a mark denoting the gauge, quantity, quality, and condition of the herrings, and the place where packed. Magiffrates neglecting to appoint and fwear fuch packers yearly, forfeit 100 pounds. 15 Car . II. cap. 16. § 1, and 5 Amn . cap, 8. art. 8.

Herring barrels to contain $3^{2}$ gallons. 13 Eliz. cap. 11. §15. and 5 Geo. I. cap. 18. § 15 .
-Salmon barrels to contain 42 gallons. 5 Geo. I. cap. 18. § 15.
-Herrings and Salmon, exported in barrels of any other fize (except half-barrels) not entitled to the bounty. 5 Geo. I. cap. 18. § $55 \& 16$.
--Pilchards, exported, the words seyn or drift muft be burnt with an iron, in fome vifible part of the cafk or hogfhead, with the name and furname of the owner, and the number of pilchards contained in each; upon forfeiture of double the value of the fifh. I Ann. cap. 21. § 3 I.

Pilchards, fcads, codfin, ling, hake, red or white herrings, exported from Great Britain, the exporter to make oath before the principal officer of the port, that they were Britifh taken, and really exported for parts beyond the feas, and not relanded or intended to be relanded in Great Britain.
-The falt-officer is to pay the debenture within 30 days after demand, or, if he has not fufficient money in his hands, to give a certificate thereof gratis, and without delay, upon penalty of the forfeiture of double the fum to the party grieved; and upon fuch certificate, the commiffioners of excife upon falt are chargeable with the payment. 5 Geo. I. cap. 18. § 6.
——But if exported from Scotland, to be paid by the commiffioners of excife or cuftoms there, at the option of the merchant. Ditto.
-Laws in force in either kingdom, for preventing frauds in curing and packing of fifh, extended to Scotland. Art. 8. 5 Ann. cap. 8. § 1.
_-Codfif, ling, or hake, before laid on board for exportation, part of the tails to be cut off; and pilchards, fcads, berrings, falmon, or fprats, the barrels or cafks to be marked by the falt-officer. I Ann. cap. 2I. § I6. 5 Ann. cap. 29. §6. and 5 Geo. I. cap. 18 . § 6 .
--Such firh, after exportation, fraudently relanded, or reimported, are forfeited, and double the value. I Ann. cap. 2I. § 17 . and 5 Geo. I. cap. 18. § 6 .
--Such filh and congers, not well cured, or unmerchantable, not entitled to any bounty. I Ann. cap. 21. \$ 25. and 5 Geo. I. cap. 18. §6.

After fuch fifh are put on board any boat, barge, \&c. in order to be exported to foreign ports, may not be taken out, unlefs to be put into the fhip wherein they are to be exported; nor landed in Great Britain, except in the prefence of the faltofficer: upon forfeture thercof, and the veffel, with her tackle and apparel, and 20 pound by every perfon concerned, or fix months imprifonment. 5 Geo. I. cap. 18. § 23 .

- The former allowance or bounty on exportation, granted the 5 and 6 Will. and Mar. cap. 7. the 7 and 8 Will. III. cap. 3 I. 8 and 9 Will. III. cap. 20. 9 and ro Will. Ill. cap. 44. I Ann. cap. II, 5 Ann. cap. 8, and 29. 7 Ann. cap. II. is taken away. 5 Geo. I.cap. 18. § 1 .
- The prefent allowance or bounty, and the regulations
of exportation. See the conclution of the fecond volume of this work.
--Officers refufing or neglecting to pay the bounty due on exportation, or to certify the want of money to the commiffioners, are to forfeit double the fum of the faid bounty. 5 Geo I. cap. 18. § 6.
——W hite herrings fraudulently relanded, forfeited, and 20 s per barrel. 5 Ann. cap. 29. § 7 .

Duly entered and Chipped for exportation, loft or fpoiled before the fhip proceeds on her voyage, upon due proof on oath, to enjoy the fame bounty as if really exported ; provided the fifh was funk in the fea or port, where the fhip was loft or deftroyed, in fight of the proper officer, where any of the faid fifh thall come on thore, and that no ufe be made of the filh by the proprietor or his agent; and the officer is to caufe the fifh to be burnt, or otherwife deftroyed, 5 Geo. I. cap. 18. §8.
-Red herrings or fprats, confumed in curing, to be taken as if actually cured. 5 Geo. I. cap. 18. § 10.
--Salmon and codfifh cured in Scotland with foreign falt, tation, as was payable before June 24, cap. 3 o. § 42 .
be -White herrings cured with Britih or foreign falt, may be imported from Scotland into any port of England, for homeconfumption, the importer paying at the port to which they are brought, 3 s .4 d . for every barrel containing 32 gallons, and fo in proportion for half or quarter barrels. Alfo falmon, cod, ling, tufk, and other white filh, cured with falt made in Scotland, for which the duty hath been paid or fecured, may be fo imported for home-confumption, and the importer, paying at the port to which the fame fhall be brought 2 s .4 d . for every barrel containing 32 gallons of fuch fih wet, and 5 s .2 d . for every hundred weight of fuch filh dry; and fo in proportion for a greater or lefs quantity. 29 Geo. II. cap. 23. $\$ 7$ and 8.
-Herrings, falmon, cod, ling, tufk, or other white filh, may be imported from any place of Scotland, or the illands thereunto belonging, to any port of England, for re-exportation, the owner of the fifh, or mafter of the veffel, making oath that they were caught in North-Britain, or on the coafts thereof, and cured with falt, delivered duty free, from fome part of Great Britain, and when and where the fame was fo delivered: and fuch fifh fhall be entitled, upon exportation, to the fame allowance and bounties, as by 5 Geo. I. cap. 18. are allowed on exportation of fifh cured in England, and be fubject to the fame rules and regulations. See laft page of Vol. II. of this work. 29 Geo. II. cap. 23. §9, 10 .

Such fifh Ihipped in Scotland for England, whether for home confumption or exportation, the proprietor or his agent muft, before the veffel departs, make an entry, with the collector or principal officer of the cultoms there, of the fifh fo thipped, expreffing the number of barrels of wer fifh, with the mark and numbers; and the number and weight of each fpecies of the dry fifh; and declare on oath, that the faid fin were cured in Scotland, or on the coafts thereof, and whether they were cured with falt delivered duty-free, or with falt for which the duty has been paid or fecured; and that the faid falt was taken on board from fome port or place in Great Britain, and when and where it was put on board, and that no drawback for the fame hath been had, or intended to be had, upon the exportation of the faid falt. 29 Geo. II. cap, 23. § 12.

- The faid officer is to deliver to the mafter of the veffel, without delay, fee, or reward, a certificate or cocket, under his hand, that fuch entry and oath have been made; and the mafter of the veffel, or the proprietor of the fifh, or their refpective agents, are, before landing any part of the faid fifh, or putting it on board any other hhip or boat, in any other port or place in England, to deliver the faid certificate or cocket to the proper officer of the cuftoms in the port of importation, upon for feiture of fuch finh and double the value thereof, and alfo the calks or veffels in which fuch fifh thall be found; to be recovered of the importer, or proprietor, or mafter of the veffel. To be fued for, and levied in fuch manner, and with fuch power of mitigation, as any fine, penalty, or forfeiture, may, by any law of excife, or by any action of debt, \&c. and feizure may be made by any officer of the cuftoms or falt duties, \&e. 29 Geo. II. cap. 23. § 12 .
--Any perfon, who fhall counterfeit, raze, or alter, any certificate or cocket required by this att, or knowingly ufe fuch a one, frall incur the pains by law inflicted on perfons found guilty of forgery; and any perfon legally convieted of falfely making oath required by this act, thall forfeit 200 pounds, and be imprifoned for 12 months. 29 Geo. II. cap. $23 . \S 14,16$. - A mafter of any boat or veffel, bound on a fiflingvoyage to the North-fea, or Iceland, may take on board, in any part of Great Britain, any quantity of Britifh falt, paying or fecuring the duty. 12 Ann. cap. 2. § 2 .
--Codfilh, ling, or hake, may be imported and londed, upon oath being made, by the proprietor of the fifh, or mafter of the veffel, that they came from the North-feas, or Iceland, and were caught or cured there : but on landing, and before they are removed from the fhore, they are to be tendered to the officer, to have part of the tails cut off, that no allowance be
obtained

## The Business of the CUSTOM-HOUSE, continued.

obtained upon exportation ; upon forfeiture thereof, and double the value, to be recovered of the importer or proprictor. 12
Ann. cap. 2. § 3 .

- Foul falt, fo made ufe of, remaining, to be throw overboard, in prefence of the officer. 12 Ann. cap. 2. § 4. --Salt remaining unufed, to be entered, and the duties paid down within ten days after the fhip's arrival into port, otherwife forfeited, and double the value to be recovered of the proprietor or mafter of the veffel (except in cafe of being driven in or detained by ftrefs of weather, or other unavoidable neceffity. 12 Ann. cap. 2. § 5.
——-The mafter of fuch boats or veffels, upon producing the certificate aforefaid to the collector of the falt duties, and making oath to the quantity of falt in fuch certificate, and that the filh were cured and tendered as above, is to receive gratis, from the faid collector, a certificate of the payment of the duty of the remainder of the falt, being produced to the collector of the falt duties where the duty was paid or fecured, the fecurity is to
be dircharged, and the money repaid by the colledor, without fee or reward. 12 Ann. cap. 2. § 6.

Boats or veffets having taken in fuch falt, perifhed at fea, or taken by enemies, the proprietor, upon proof at the quarter feffions for the county, \&c. where he inhabits, within 9 months after fuch lofs, is to receive a certificate of fuch proof; which being produced to the officer where the duty was paid or fecured, the fecurity to be difcharged, and money repaid by the officer, without fee or reward. 12 Ann. cap. 2. §7. Vide Herring Fishery.
Flesh--viz. beef and pork, entitled to a bounty; before laid on board for exportation, the cafks to be marked by the falt officer. 5 Ann. cap. 29. § 8

After exportation, fraudulently relanded, or re-imported, forfeited, and 40 s . per barrel. 5 Ann. cap. 29. § 29.
--The allowance and bounty, vide laft fheet of Vol. II
Forfeitures --See the bufinefs of the cuftoms, the latter end of letter I, Informations.

## G A L

GABEL, according to the French duties of cuftoms, is a tax upon falt.
The gabel-duty is farmed, and makes the fecond article in the king's revenue;
There are three farms of gabels; the firt comprehends the greateft part of the kingdom; the fecond is that of the Lyonnois and Languedoc; and the third that of Dauphine and Provence. There are feveral provinces exempt from the gabel, having purchafed the privilege of Henry II.
This tax had its rife in France, in 1286, under Philip the Fair. Philip the Long took a double per liver on falt, by an edict in 1331, which he promifed to remit when he was delivered from bis enemies, and which he did accordingly in 1345. King John refumed it in 1355 ; and it was granted the dauphin in 1358 , to ranfom king John. Charles V. made it perpetual ; Charles VII. raifed it to 6 deniers; Lewis XI. to 12; and Francis I. to 24 livres per muid: it has been greatly augmented fince. Philip de Valois firft eftablifhed granaries and officers of the gabelles, and prohibited any perfons from felling falt: from which time the whole commerce of falt, for the inland confumption, has lain only in the king's hands, who fells the whole thereof by his farmers of the revenue.
The produce of this duty is computed to be no lefs thati one fourth part of the whole revenue of the kingdom.
GALICIA, a kingdom in Spain, is wathed on the weft by the ocean; on the north by the Cantabrian Sea, or Bay of Bifcay; on the eaft it borders upon Afturias and Leon; and on the fouth upon Portugal, from which it is parted next the fea by the river Minho.
It produces whear, millet, all kinds of herbs, plenty of cattle, efpecially hogs, whofe bacon far exceeds that of Weftphalia; ftrong mules, good horfes, though not large: but is moft famed for its noble wines, particularly that of Ribadavia. The country is by its fituation one of the coldeft in Spain; but is well fheltered by its mountains, which alfo afford them plenty of firing, and timber for building houfes and fhips, as they did formerly produce great quantities of gold, filver, and other metals; but thofe mines are at prefent either exhaufted or neglected, and only fome few of marble, which is here excellent, are now minded
GALLOONS, GALLIONS, or GALLEONS, are a part of the fhips employed in Spain, in the commerce of the Weft-Indies. The Spaniards fend yearly two fleets ; the one for Mexico, which they call the flota; the other for Peru, which they call the galloons. See the article Flota, Don Sebaftian de Covarrubias, in his treatife of the Spanifh tongue, obferves, galeafle and galleon take their name from a galley, though they are ftronger veffels, and not fo fwift, but better to endure thefea, becaufe of their highdeck. Afterwards the charge increaling, it was found neceffary to leffen the number; fo that in the ordinances of the hiberia [See HIBERIA] or duty for convoys, it was eftablifhed there fhould be 12 men of war and 5 tenders fitted out annually, for the armada of galleons; 8 hips , of 600 ton burthen each, and 3 tenders, one of 100 tons, for the ifland Margarita; and 2, of 80 each, to follow the armada. For the New Spain fleet, 2 fhips, of 600 tons each, and 2 tenders, of 80 each; and, for the Honduras fleet, 2 fhips, of 500 tons each: and, in cafe no flota happened to fail any year, 3 galloons and a tender fhould be ient to New Spain for the plate.
This was the regular method; but, on occafion of war, it has been altered. In the year $163^{\circ}$ it was ordered there fhould be 20 galloons; in 1634 there were 16 , and in 1638 they were fixed at 15. As the number has increafed in time of war, fo it has diminifhed in time of peace; accordingly in 1653, there were but 4 galloons and 2 tenders.
The galloons were appointed to be out in January, that they $\dot{m i g h t}$ coaft along the Firm Land, and come about the middle of April to Porto-Bello, where, the fair being over, they might take aboard the plate, and be at Havanta with it about the middle of June, where the New Spain fleet would foon join them, and they might come together fafer to Spain

VOL.I.
to which end, the viceroy of Peru was to take care that the plate fhould be at Panama by the middle of March : the plate is 15 days carrying from Potofi to Arica; eight days generally from thence, by fea, to Callao, and 20 from Callao to Panama, taking in, by the way, the plate at Paita and Trixillo.
To prevent the fleet being detained by contrary winds, as has happened, it was propofed to fit the galloons in the river of Seville, in Auguft andSeptember, and then fend them away to Cadiz, whence they might fail with any wind, and need not wait for fring-tides.
The reafons wherefore it was judged neceffary that the flota from the Firm Land fhould fail in September were, becaufe that was a fafe feafon to thip off the goods; they came to Porto-Bello at a healthy time of the year; the merchandize was conveyed over to Panama at a cheaper rate, and with lefs danger of damage; the merchants had time to fell their goods; the buyers a fit time to traval to Peru with fafety; and the armada's and flota's to return to Carthagena and Havanna, to get clear of the channel of Bahama, and to return to Spain in the beft month for the fea. In fine, it is found by experience, that the month of September is the fitteft for the fleets to fail ; and, though accidents retard them till October or November, yet that feafon is fitter than March.
By the king's orders, the galloons have put into other ports than thofe before mentioned, as Lifbon, Corunna, Malaga, Gibraltar, and others, where the plate has, for the moft part been conveyed by land to Seville.
Though it is requifite in general that the galloons, flota's; and all fhips whatfoever bound for the Weft-Indies, are to fet out from St. Lucar, and return to that port, yet there is an ordinance that the galloons, flota's, and any other fips whatfoever, for the time to come, fet out for the Weft-Indies from the port of Bonanca of St. Lucar de Barrameda; and return to it, on pain of 6000 ducats plate, to be paid by the admiral, captain, or owner of the fhip that fould do the contrary : which fum is to be levied immediately upon their arrival.-They are alfo declared incapable of going that voyage again, and the fhips of being employed in that trade; and they are alfo conftrained to go to St . Lucar without unloading; it being referred to further examination to inflict heavier punihments.
Though this inhibition is fo fevere, yet fhips may be forced into the bay of Cadiz by ftrefs of weather. By reaton of many misfortunes that happened in getting over the bar of St. Lucar, it was eftablifhed in 1665 , that no fhip be admitted to fail to the Weft-Indies that exceeds 18 cubits in breadth, and $8 \frac{1}{2}$ in depth, which, allowing hali a yard to a cubit, makes, of our meafure, 27 feet in breadth, and 12 feet 9 inches in depth. -Another ordinance, in the year 1621, exprefles that they be not above 550 tons burden. Sec the alticle Gauging of Ships.
Thefe ordinances are now out of date, the galloons and flota being appointed to fail for Cadiz, by reafon of the great bur den of the Chips. There has been more ftrictnefs obferved, as to the returns of the fleets, by reafon the concern was greater, as the preventing the running of filver and gold, and defrauding the biberia, or duty of convoy, and the king's other duties; and therefore, as well as for the fecurity of the port, in time of war, fhips that have put into Cadiz, have always been obliged to refort to St. Lucar, without unloading. Before we quit this point, it is to be oblerved, that, as Cadiz is a place of accefs, fo it is of no fecurity, being an open bay, expofed to the winds, and no lefs to enemies; but that called Bonanca at St. Lucar is a fecure harbour, being inclofed on all fides, and fubject to no danger but in the entrance. By the laws and ordinances appointed for the well governing the armada's and galloons, it is forbid making any cabbins or hen-coops on the quarter-deck, or over the round-houfe, or keeping any fheep or fwine there.

REMARKS.
In the year 1513 , a council of commerce for the Indies was 11 A
rected
erected in Spain, and the houfe where they fat in Seville was called La Cafa de Contractation, for regulating this trade In 1556 a royal court of juftice was alfo erected, for deter mining all difputes about that commerce, and allother things relating to it.
By virtue of thefe tegulations, and their being ftrictly obferved, the fate of the trade is punctually kept up to the firft intention, and is, perhaps, the beft regulated commerce in the world. Some, among others, of thofe prudent and politic regulations, are as follows:

1. No fhips are allowed to go to any of the king of Spain's dominions in America, without fpecial licence from him, which licences are directed out at this court, or chambet of commerce, at Seville.
2. No foreigner is allowed to go to the faid New Spanifh dominions in America in any of the faid licenfed fhips, upon any terms whatfoever, whether to fettle in the faid WeftIndies, or orly to trade there, Irifhmen only excepted, and thefe to be all Roman Catholics.
3. No perfon whatever, though he were a Spaniard born, and the king of Spain's fubject, can go to the Spanifh WeftIndia dominions without fecial licence to be obtained at the faid contractation office.
Befides thefe fundamentals, there are certain limitations to the number of fhips, and the quantity of goods; that is to fay; the tonnage or burden they fhall carry, which is always in the breaft of the aforefaid council of commerce, becaufe the quantity of goods fent foould not exceed the demand, and, confequently, glut the markets, and alfo abate the price and the profits of the trade *: likewife it is regulated there, at what times the feveral fleets of fhips fhall go out, and to what feveral places, and when they thall be obliged to come away, in order to their return.

* This feems to be a very wife regulation.

It is alfo regulated, that all the filver, gold or jewels, which thall be brought over, for whofe particular private intereft fo ever it be, fhall be regiltered and entered into the fhip's books of every thip, and likewife in a general regifter in the port from whence the fhips come, where alfo it is to be feen, and duplicates thereof are tranfmitted to the council at Seville. Some particular goods are not permitted to be loaden in OldSpain in any of the fhips, though thefe hhips are licenfed to go, thefe goods being referved to the king to export thither in his own name, or to give licence to others to do it ; with out which licence the faid goods are forfeited, if taken. The galloons may be increafed in number, as the king or the council of commerce fee fit. They go from Old Spain to and from Carthagena and Porto-Bello, and no where elfe. How often or feidom the galloons go out, the next fleet of galloons never go out till the laft are returned.
The other fhips that fail from Old Spain to New, are the flota, and Azoga hips. See thofe articles.
The galloons, on their return, go to the Havaina, where they meet with the flota; and then beating through the gulph of Florida till they come to the height of St. Auguftine, or, perhaps, to South Carolina, they fteer away for Old Spain. Some have attempted to make calculations of the magnitude and value of the trade between Old Spain and New; and, if the account taken out of the regifters of the faid council of trade may be depended on, it is a prodigy in itfelf, nor can we venture to vouch the truth of it: for they tell tis, according to the regifters of the council of commerce from the year 1519 to the year 1619 inclufive, being the firft hundred years of the trade, the value entered or regiffered, befides all private trade, was 5000 millions in gold, filver, pearl, jewels, and other merchandizes, though, for the firft 20 years, very little was brought: fo that it may be called rather 80 than 100 years-There is now paffed about another century; and, if the former account is true, we are certain that the amount muft have been confiderably more within the laft hundred years.
But, as the merchandizes that have been thus fent from Old Spain to New, have been confiderably more for the account of the various other trading nations of Europe, this has tended to the inriching of other nations, rather than Spain. -But the commercial fyftem of Spain feems now to be intirely changed and they are likely to become greater gainers by Spanifh A. merica than ever they were.-See the articles Spain and Spanish America.
GASCONY, the moft fouth-weft principality of France, is bordered on the eaft by Armagnac; on the north by Bazadois; on the weft by part of the fea of Bifcay; and by Bearn on the fouth.
It confifts of the territories of Landes, Chaloffe and Turfan. $\mathrm{D}_{\mathrm{Ax}}$, or Aces , the capital city of Landes, drives a good trade, by means of the river, which falls into the ocean about nine leagues below it, and its neighbourhood to Spain.
St. Sever is reckoned the capital city of Gafcony. They trade bere in wine, which they fend to Dax and Bayonne.
GAUGING. In cafk-gauging the officers ought to follow the moft approved authors on that fubject. The method which univerfally obtains, and is indeed the beft for common ufe, is to reduce the cafk to a cylinder of equal content; and
this is done by confidering what is called the variety of the cafk. If you fuppofe a cylinder infcribed in any cafk, and another cylinder circumfcribed about the cafk, there will be a cylindrical fpace included between the fuperficies of the two cylinders, the diameter or thicknefs whereof is equal to the difference between the bung and head diameters of the cafk; now the curvature of the ftaves of the caik takes in a certain proportion of this cylindrical fpace; which is greater or lefs, according as the curvature, bend, or bulging of the ftaves is more or lefs; and this is what determines, and is called, the variety: viz. firft variety, if very much bulging; fecond variety, if lefs, and fo on. It is therefore evident, that the diameter of the infcribed cylinder may be increafed, fo as to take in a portion of the interjacent cylindrical face equal to that taken in by the curvature of the flaves of the cafk ; and then the cafk and increafed cylinder will be equal in content. The diameter of the inferibed cylinder is the head-diameter of the eafk; the thicknefs of the cylindrical fpace is equal to the difference between the bung and head diameters. All the difficulty, therefore, lies in determining what portion of this difference we mult add to the head diameter of the calk, in order to obtain the diameter of the mean cylinder, or the cylindér of equal content.
Now experience thews, that, if $\frac{7}{10}$ of the difference between the bung and head diameters of any calk be added to the head diameter, the cylinder whofe diameter is equal to this fum, and whofe length is equal to the length of the calk, will contain as much or more than that calk, though the ftaves of the cafk have the greateft degree of curvature that is ever given to them.
And as the difference between the bung and head diameters of calks is feldom very great, the contents of a calk whofe ftaves are quite ftraight from bung to head, or of a cafl made up of two equal fruftums of two equal cones, will generally be nearly equal to the contents of a cylinder, whofe diameter is equal to the fum of the head diameter of the calk, and a litle more than half the difference between the bung and head diameters, and whofe length is equal to the length of the calk. Therefore all the varieties whereof cafks are capable lie between $\frac{5}{10}$ and 70 of the difference between the bung and head diameters : and all that a gauger has to do, is to take fuch a part of the difference between the bung and head diameters (but always between $\frac{5}{10}$ and $\frac{7}{70}$ ) as his judgment and experience tell him fuits beft with the curvature of the calk ; this, added to the head-diameter, gives the diameter of the mean cylinder.
I think it not amifs to note here, that the difference between the bung and head diameters may be very great, and yet the cafk have no bulging at all; for the bulging is the bend, or curvature of the balf ftave between the bung and head. Mathematicians give us abffrufe theorems for computing the contents of cafks, founded upon a fuppofed refemblance between the curvature of the cafk and that of an ellipfis, parabola, or hyperbola; but they may be as much miftaken in judging of the curvature, as an experienced gauger between ${ }^{5}{ }^{5}$ and $\frac{7}{70}$ : for, after all, the contents of cafks cannot be determined to a mathematical exactnefs, becaufe the forms of calks do not exactly anfwer to any mathematical figures. The burinefs of gauging is at beft but guefs-work; but it is fuch a way of gueffing as comes near enough to the truth for the common purpofes of life.
I thought thefe obfervations properly belonged to the article I am upon, and might help to illuftrate and explain the method of cafk-gauging, and remove that heap of hard words under which the rationale of it lies pretty much concealed at prefent. The reft I leave to the authors who have treated the fubject ex profeffo.
Let me add here fuch decimal multipliers, for the difference between bung and head diameters, as have been found by experience to be the trueft, and beft fuited to the feveral varieties or curvatures of cafks.
Firft variety, or ftaves very much buiging - ,7 or 695 Second variety, or ftaves not fo much curved ,65 or 63 Third variety, or ftaves ftill lefs curved - - ,6 or $5^{6}$ Fourth variety, or ftaves almoft fraight
,55 or 51
Examples of the practical methods to gauge cafks, both by pen and fliding-rule.

## R U L E.

Take the difference of the bung and head diameters of any cafk, and multiply that difference by the number which ftands againft the name of the cafk given in the following table: add the product to the head diameter, fo will the fum be the diameter of a cylinder (which, being of the fame length with the given cafk, will contain as much) fquare the dameter thus found, and multiply that fquare by the length, and divide that product by 359 for beer gallons, and 294 for winc. The multipliers for a cafk, which is taken for varicties. The middle $\left.\begin{array}{l}\text { 1. Of a fpheroid } \\ \text { 2. Of a par. fpind. } \\ 3 .\end{array} ._{3}^{7}\right\} \begin{aligned} & \text { Greateft bulge. } \\ & \text { Next lefs }\end{aligned}$

## G A U

## EXAMPLE.

Let a calk be taken as the middle fruftum of a fpheroid, let the bung diameter be $3^{2}$ inches, the head 26 , and length 50 inches: what is the content in beer and wine gallons, according to this rule?

Bung's diameter 32 inches
26
Difference is $\frac{6}{6}$
Multiplied by .7 as in the table

| Add the head diameter $26{ }^{4.2}$ |  |
| :---: | :---: |
| The mean diameter Multiplied by itfelf |  |
|  | 30.2 30.2 |
|  | 30.2 |
|  | $\begin{gathered} 604 \\ 906 \end{gathered}$ |
| Multiplied by the length ${ }^{912.04}$ |  |
|  |  |
| $\begin{array}{rr}\text { Divided by } & 359) 45602.00 \text { ( }\end{array}$ |  |
|  |  |

More examples of this kind would be fuperfluous; for what is faid of a cafk taken as the middle fruftum of a fpheroid, may be underftood of the other three, only, inftead of multiplying the difference of the diameters by 7 , as above, you muft ufe $.63, .56$, or .51 , according to the denomination of the calk you are to gauge.

To gauge cafks by the fiding-rule.
Upon the fide of the fliding-rule is placed a line of inches, and under it the three firft varieties of cafks, viz.

The middle fruftum of a fpheroid,
The middle fruftum of a parabolic fpindle, and
The middle fruftum of two conoids.
The ufe of thefe lines is, to reduce a cafk in any of the beforementioned forms to a cylinder; for which purpofe you may obferve the directions following :

EXAMPLE.
Let a caft be given to be gauged, in the form of the middle fruftum of a fpheroid, having the fame dimenfions as before, viz.

$$
\left.\begin{array}{l}
\text { Bung } \quad 32 \text { inches } \\
\text { Head } 26 \text { inches } \\
\text { Length } 50 \text { inches }
\end{array}\right\} \text { What is the content? }
$$

Firft fubftracl the head from the bung, and in this cafe you will find the difference to be 6 inches; find this difference in the line of inches, and againft that (in the line for the firft variety) you will find 4.2 ; which add to the head diameter, viz. 26, and the fum will be 30.2 , the mean diameter of an equal cylinder.
Then fet 18.94 (the gauge-point for cylinders) on D to the cafk's length, viz. 50 upon C , then againft the mean diameter, viz. 30.2 on D, you will find 127 on C, which is the content of the calk in beer gallons.

## For wine.

Set 17.14 on $D$, to the calk's length, viz. 50 on $C$; then againft the mean diameter, viz. $3^{0.2}$ on D , you will find 155.1 on $C$, the content in wine gallons required.

To find the ullage of a ftanding cafk.
R U L E.

Divide the wet inches by the cafk's length, and, if the quo. tient exceeds .5000 , add to the faid quotient one-tenth part of the excels; but, if it be under . 5000 , fubftract one-tenth part of the want; fo will the fum, or remainder, be a decimal number, by which if you multiply the content of the veffel, the product will be the quantity of liquor therein.

> EXAMPLE.

$$
\begin{aligned}
& \text { Leugth } 50 \text { inches, } \\
& \text { Content } 155 . \text { I gallons, } \\
& \text { Wet } 18 \text { inches. } \\
& \text { Wet }
\end{aligned}
$$

Length 50$) 18.000\left(\cdot 3^{600}\right.$ this wants 1400 of 5000

500

## Liquor in the calk 7.0000

If the cafk you are to ullage be a cylinder, or near that form, the preceding rule will be very near the truth; but, if the bung-diameter be much greater than the head-diameter, then, inftead of one-fourth part (as above) you muft add or fubftract but one-third part, and multiply the fum, or remainder, by the content, fo will the product be what is required.
EXA MPLE.

Let the content of a cafk that bulges much be 136 gallons,
Bung $3^{1}$ inches,
Wet in inches.
Bung 31) $11.0000(\cdot 3548$ this wants .1452 of .5000
. 0484 is one-third of .1452
Remainder .3064
Whole content 136

To ullage cafks by the fliding-rule.
To anfwer this purpofe, you have two lines of fegments, which are noted at the right end with Seg. ly, and Seg. ft, which fignifies a line of fegments of a lying cafk, and a line of fegments for a flanding cafk. To thefe lines belong a line of numbers, marked at the right end with N : the ufes of which are as follows:

EXAMPLE.

## G A U

## EXAMPLE.

Let a cark be in the form of the middle fruftum of a fpheroid,

| Whofe bung is | 30 inches, |
| :---: | :---: |
| Content is | 136 gallons, |
| Wet is | Io inches |

1. Set the bung-diameter; viz. 30 upon the line of numbers, to 100 on the line of fegments; then againft the wet inches, viz. 10 on the numbers, you will find 27.4 on the line of fegments, which keep.
2. Then fet 100 on $B$, to the calk's content, viz. 136 on $A$, then againft the number laft found, viz. 27.4 on B . you will find 37 gallons on $A$, and fo many gallons are now in the calk.

Example of a flanding cask.

> Length 46.5 inches;
> Content 138 Eallons,
> Wet 17.5 inches.

1. Set the length, viz. 46.5 on the line of numbers, to. 100 on the line of regments ftanding ; then againft the wet inches, viz. 17.5. you will find 36.5 on the line of fegments, which keep.
2. Then fet 100 upon B to the cafk's content, viz. 138 upon A ; then againft the number latt found, viz. 36.5 on B , you will find 50.5 gallons on $A$; and fo many gallons are now in the caik.

A T A BLE, fhewing (by weight) the quantity of gallons any cark of firits contains, from one gallon to a tun.

GAU

Gauging of hips in SPAIN.

1. Under the fame head which treats of the builders and buikding of $\mathrm{lh} i \mathrm{ps}$, in the abridgment of the laws, there are feveral relating to the gauging of chips: one of which ordains, that there be a gauger and meafurer of fhips belonging to the India-Houfe, who is to have 20 crowns a month falary.
In Spain the cuftom is to reckon the contents of a hhip by tons, each ton being the bignefs of two pipes, or eight cubicalcubits, meafured by the royal ftraight cubit of 33 inches, fuch as a vara, or yard of Caftille; bas 48; or, as it is vuigarly expreffed, of two-thirds of a yard cf Caftille, and one two-andthirtieth part of the two thirds. The ftandard of this cubit is kept in the India-Houfe, as is that of the yard of Caftille at Burgos, that of wine-meafure at Toledo, that of the peck and buthel at Avila, and fo of others. This meafure of 2 cubit was formerly ufed, but was of feveral lengibs; for, as Covarrubias writes, thefe was a cubit of fix handfuls, another of a foot and a half, and another literally taken, which was from a man's elbow to his hand, which fome pilots have made ufe of in founding the bar, which was forbid in the year 1666 , and they were all ordered to make ufe of the royal cubit, fent them for that purpofe, made and marked by the cofmographer inftrument-maker of the India-Houfe.
2. For many years the vifitors meafured the merchant-hips, and fome perfon, appointed by the prefident and commiffoners, the men of war; afterwards it was found convenient there fhould be a gauger, and accordingly the employment has been diftinct ever fince.

## Of fome of the principal particulars reláting to gauging of

fhips, extracted from the ordinances of Spain.
3. It is there declared, that there are five principal parts in a hip to be confidered as to its dimenfions, which are, the length upon deck, from the ftern-poft to the ftern, the breadth at the deck, the depth, the length of the keel, and the breadth in the hold: for, before that time, they onily took notice of the three firft of thefe five dimenfions, but fince they are ordered to take not only the five, but alfo the narrow of the thip both at head and ftern, and the middle diftance between the breadth and narrow at both ends; and the owners are to have certificates of the fame from the fuperintendant, overreers, or comptrollers of the docks; or, where there are none from the magiftrates, to be drawn by the cleirk of the com-mon-council of the place, that by thofe meafures the council may compute the burden; and, in order to it, the directions are as follows:
4. The breadth is to be taken from farboard to Iarboard, upon the upper fuperficies of the main deck, in the clear, from fide to fide, whether the faid deck be in the broadelt part of the fhip, or above or below it.
5. The height is taken from the main deck, in the fame part where the breadth was meafured, to the flooring at the bottom of the hold, without taking up the planks at the bottom of bulks, or ather veffels, built abroad, to thruft the pole down to the timber, unlef there be any falle foot, which hall be opened clofe to the pump, to lay open the bottom plank, and, laying a board on it three fingers thick, the meafure fhall be taken there.
6. The length of the fhip on the deck is to be taken from the ftem to the ftem-poft, along the deck, in the clear, without including the thicknefs of any timbers in the head or ftern, but from plank to plank.
7. The breadth in the hold is taken directly under the place where the breadth was taken on the deck.
8. The length of the keel, when the fhip is upon the ftocks, or careening, is taken from the points where the prow and
poop begin to be formed; but, if the veffel be in water, the ordinancesappoint a method of taking it on the infide, which has much of geometry and arithmetic, and therefore feldom uled by the gauger.
9. Though the five principal dimenfions are fufficient to work gauges by, whilf the fuperficies of the breadth, both on the deck and in the hold, diminith, orgrow narrower, towards head and fiern, according to the known and fettled proportions, yet, when thefe vary, the computation muft be altered. And it being rare for fhips to diminifh, or narrow away fo regularly, the ordinances have, therefore, appointed how to adjuft the difference, in care fhips vary in proportions, and fetted the matter in refpect to a dhip that is 16 cubits in breadth, which is to narrow a cubit in that part which is one-fourth part of the length on the deck, from the broadeft part towards the head; and two cubits in the fourthpartof the fame length, from the broadeft part towards the ftern; and half the breadth of the bott $m$ of the hold, at the fourth part of the fame length, from the fuperficies of the faid broadeft part of the Lottom towards head and ftern, which are the places where the fhip Charpens, that the water may run the itronger to the helm; io thar, if the greateft breadth at the bottom be eight cubits, each duftance of thefe towards head and ftern thall be four cubits wide. A , to the end the true proportion may be obferved in the af rementioned lines, and frauds prevented, it is appointed, that when a veffel is gauged, the meafure of the lines along the upper or lower fuperficies be taken at equal diftances from the place where the wide t part is found, and that they be the fourth part of the length upon deck from it, and the fame in the bottom, obferving the direction given for taking the greateft breadth both above and below.
And, to try whether the two lines meafured parallel to the line of the greatelt breadth are to be multiplied by 15 , and the product divided by 16 , and if the quotient, or fourth number, give the cubits found in the line meafured towards the head, then it bears a due proportion to the greateft breadth; but, if it produce more or lefs, the overplus or deficiency muft be fet afide. The greateff breadth fhall alfo be multiplied by 14, and the product divided by 16 ; and, if the quotient be the number of cubits found towards the ftern, the proportion is right; if not, what is over or under muft be noted, and the cubits of half the greatef breadth of the faid hips hall be divided by 8 ; and for every one of thefe 8 parts that is wanting in each of the four numbers of the two rules of three, to make up the cubits found in each of the faid two lines, there fhall be added one and half in the hundred, to the burden or bulk affigned by the rule of gauging; and, for every one of the faid eight parts, the fame four numbers exceed the cubits found in each of thofe fame lines, there fhall be one and a half abated of what the rule allows.
10. As for the two narrow parts, the ordinance directs, that the two lines taken in the narrow of the hold be tried, to fee what proportion they bear to the broadeft part; and, if each of them makes half the line in the broadeft part, they are right; if not, the cubits of the broadeft part hall be divided by 8 , and, for every eighth parteach of the faid lines fhall fall fhort of half the broadeft part, there fhall be one and a quarter in the hundred abated of what the rule of gauging allows, and as much added for every eighth part there is over. M. Having given thefe rules as to the dimenfions, the ordinances direct how to caft them up three feveral ways. The firft, and moft ufed by the gaugers, is thus: if the breadth of the fhip in the bottom of the hold be half the breadth upon deck (let the length above and below, and the depth be what it will) the whole number of cubits of the one is to be multiplied by half the cubits of the other, and the produet by half the fum of the length upon the deck and along the keel, which will produce the content in fquare cubirs, and that divided by 8 will give the content in tons. But, if the breadth in the hold be more, it is to be computed as abuve has been thewn; and the difference between that bottom breadth, and half the breadth above, hall be deducted, and, fubliracting this fum from that which ought to be the aforefaid half, the faid difference fhall be multiplied by half the cubits of the height, and the product hereof by half the length upon deck, and at the keel, added together; and that fum, if the breadth in hold be more than half that on the deck, Thall be added, or deducted, if it be lefs, and there will remain the content.
The fecond way is, when the breadth in hold is more or lefs than half the breadth upon deck, the difference befubitracted, and the halfof it deducted from the cubits of the breadth upon deck, if the balf of it be more than the breadth in hold, or added, if lefs. When this is added, or fubfracted, what remains of the breadth upon deck is to be multiplied by half the depth, and the product by half the fum of the length upon deck, and at the keel, added together.
The third way is, that when the hip, either great or fmall, has the breadth in hold equal to half the breadth upon deck, three fourth parts of the breadth above be added to half the breadth below, and the product multiplied by half the depth, and that again by half the length upon deck, and at the keel, added together, and it will produce the fame as the other
ways. Which is to be underftood, when all other dimen fions are regular; fo if they vary, the difference muft be ad jufted, as has been mentioned before, and thall be demonftrated.
12. The ordinance declares, that either of thefe three methods above mentioned ft :nds goond, when the deck is in the broadeff part of the fhip; but, if the breadth be above it, there mult be 3 per cent. deducted for every half cubit; or, if the breadth be below, fo much muft be added; to which purpofe, the broadeft part of the fhip is to be obferved; and when the whole fum of what the faid three in the hundred amounts to, is added or deducted, five in the hundred are to be deducted, for the fpace the malts and pumps take up, and the remainder will be the clear content in merchanc-fips : but, if they are gauged for men of war, and to be hired for that ufe, there muft be 20 in the 100 added for all the fpace between decks, and in the ftern and forecaftle; for there is different regard had to merchantmen and men of war, for, in the latter; all is confidered that is for ftrength and ufe, but in the former, only that part which ferves for fowage, and is called the hold.
13: Though we have fet down the rules for taking the gauge of a hip, yet it being difficuls to practife the fame, by only reading the method and inftructions prefcribed, we have thought it would not be amifs to give an example of the manner of working this queftion; the inftance fhall be from the galloon S. Jofeph, which ferved for fome years as admirai of the armada, or navy for fecuring the navigation to the Indies, and afterwards as vice-admiral to the royal navy of the
ocean.
14. The galloon $S$. Jofeph was 21 cubits in breadth upon the firf deck, 10 cubits and a half in the hold, 10 in height the broadeft part of it was in the hold theequarters of a cu bit below the deck; 60 cubits in length oy the keel, 72 and two thirds along the deck, 20 and thiee quarters at the balf was from the broadeft part towards the head, 18 and a half at the half way from the broadeft part towards the ftern, and 14 and one lixih in the narrowin:s at the bottom of the hold half way toward ftern and. ftern. Now working oy the whole breadth at the deck, becaufe the bieadth at the bottom of the hold is jutt half, the 21 cubits of the breadth above are multiplied by 5 , which is halt the depth, and produces 105 cubits; thefe ag in multiplied by 67 and one third, which is the half of 134 cubits, and two thirds the length of the keel and upon deck, 7070 cubits. Adding to this fum 318 cubirs, and 15 hundredth parts, to be alluwed at the rate of 4 and half in the hundred, for three quarters of a cubir breadth, there is in the hold, under the firft deck, more than upon it where the dimenfions are taken, after the rate of three in the hundred for every half cubit, as is appointed by the laft ordinances; which fame ought to be deducted, if the greater breadth were above the deck. Adding thefe two products, the total is 7388 cubits and 15 hundredth parts, and there being five in the hundred to be deducted for all the room the timbers take up in the hold, and 20 in the hundred to be added for all the face betwixt decks in forecaftle and poop, as is appointed by the ordinances, it turns to the fame account, to avord tedious working, to add to the laft product 14 per cent. the faid 14 per cent. make 1034 cubits 34 hundredth parts, which, added to 7388 and 15 bundredth parts, make the fum total of 8422 and 49 hundredch parts, produced by the dimenfions, and the breadth of the fhips under the deck more than upon it.
The ordinances direct, that the proportion for 16 cubits breadth, in the wideft place apon the deck, be 15 cubits breadth, half way from that towards the head, and 14 cubits half way towards the ftern; this being known, we muft add together the twenty cubits, and three quarters this gallown had in breadth, half way from the greatelt middle breadth towards the head, and 18 and half at the half way towards the ftern, and they make 39 and a quarter: then fay, if $16 \mathrm{cu}-$ bits, in the greateft breadth, give 29 cubits, that is, 15 half way forwards, and 14 half way towards the ftern, what fhould 21 the great breadth of this galloon gi e? The anfwer is 38 cubits and $\frac{1}{16}$, which is the due proportion to its greateft breadth. Now, becaufe this galloon had 34 cubits and a quarter, in the two dimenfions half way forward, and half way towards the ftern, the aforefaid 38 cubits and $\frac{1}{16}$ are fubftracted, and the difference is one cubit and $\frac{3}{16}$, which this galloon was bigger in thofe parts than the true proportion: then fay, If 1 and $\frac{5}{6}$ come of the eighth part of balf 21 cubits, the greateft breadth of this galloon, and gain 1 and $\frac{t}{2}$ in the hundred, what will one cubit and $\frac{-3}{18}$, this galloon was bigger than the proportion, gain? The product is 1 cubit and $\frac{1}{4} \frac{1}{2}$, which mult be multiplied by the laft product of 8422 cubits and 49 490, and gives 114 cubits and $\frac{25}{150}$, the product of one and a half per cent. for the eighth part of half the greateft breadth; which, added together, make 8536 cubits greatelt breadth; which, added together, make 8536 cubits
and $\frac{3}{4}$. The greateft breadth, at the bottom of the hold, is Io cubits and a half, which are fubfracted from 14 cubits and $\frac{1}{5}$, the breadth of the narrowing of the fhip in the hold, half way towards the head and ftern, and the remainder is 3 cubits and $\frac{2}{3}$, which the faid narrow parts are together more than the wideft : then take the eighth part of 10 cubits ard $\frac{1}{2}$,
the greateft bottom breadth of this galloon, and the product is, $I \frac{5}{1}$, and if thefe yield $I \frac{1}{4}$ per cent. what will 3 cubits and $\frac{2}{2}$, the excefs of bignefs of the leffer breadths over the greatelf ? and I find the 3 cubits and $\frac{31}{\frac{3}{3}}$; thefe are multiplied by the lalt product $853^{6}$ cubits and $\frac{3}{4}$, and it gives $29^{8} \mathrm{cu}$ bits and $\frac{10}{100}$, which two fums added, make 8834 cubits and $\frac{17}{2}$, which, divided by 8 , give 1104 tons, and $\frac{57}{160}$, the fraction being the third part of a cubit, the content of the faid galloon, according to the given dimenfions, as appears by the following demonftration:

Cubits produced by the five dimenfions of the breadth on the deck, and in the bottom of the hold, the length upon deck, and along the keel, and the depth
Cubits for the breadth, being more in the hold than upon the deck
Cubits for the excefs of the narrowing upon deck, half way towards ftern and ftern, above the
$8104 \frac{34}{100}$ $318 \frac{15}{15}$ half way to
proportion
Cubits for the excefs of the two narrow parts, half way forward, and towards the ftern, at the bottom of the hold, above the breadth of the wideft part
$8834 \quad \frac{17}{27}$
Tuns $1104 \frac{1}{8}$
To avoid the trouble of fo many fractions as occur in calting up of gauges, the beft way is to reduce the cubits of every dimenfion into inches, fuch as 33 make a royal cubit, fo adding, multiplying, dividing, and fubfracting under that denomination, and then the total fum produced is to be divided by 35937 , the inches of a cubical cubit, and the product will be royal cubits, which, divided again by 8 , will give the tons of the fhip gauged.
15. The falary allowed at firft to the gauger was 20 ducats-a month, which foon after was cut off, and no falary allowed, but only that the perfon employed, who was therefore either the cofmographer or pilot of the India-houfe, when he was fent to gauge any itip, fhould have a prefent allowance for his trouble, which was only propofed by the preffident and commiffioner of the India-houfe, but never practifed, and he that is now gauger ferves the place without any falary, being at the fame time chief pilot of the India-houfe.

The laws of England relating to Gavging.
I.Stat. 27. Edw. III. ftat. I. cap. 8. All wines, red and white, which fhall come into the realm to fell, fhall be gauged by the king's gaugers; and, if any will not fuffer the fame to be gauged, he fhall forfeit the wines, and be punifhed by imprifonment, and ranfomed at the king's will; and, if default be found in the gauger, that he be not ready to do his office, when required, or that he do fraud in doing his office, to the damage of the buyer or feller, he fhall pay the party grieved his treble damages, and lofe his office, and be punifhed by imprifonment, and ranfomed at the king's will; and, in cafe lefs be found in the tun or pipe than ought to be, the value of as much as fhall lack thall be deducted in the payment.
II. Stat. 31 Edw. III. ftat. cap. 5. If any fell a tun or pipe of wine not gauged, the feller fhall forfeit the wine, or the value, to the king.
III. Stat. 4 Rich. II. cap. I. All veffels of fweet wines of the Rhine, and of other wine, and other veffels of vinegar, oil, honey, and of all other liquors gaugeable, which fhall come within this realm, fhall be lawfully gauged; and, if any will not fuffer the wines, \&c. to be gauged, he fhall incur the pain ordained by the other ftatutes.
IV. Stat. J4 Rich. II. cap. 8. None 'hall be diftrained nor grieved in the Exchequer, nor elfewhere, for not gauging of wines of the Rhine, otherwife than has been done of old times.
V. Stat. 18 Hen. VI. cap. 1. fect. I. Whereas every tun ought to contain 252 gallons, every pipe 126 gallons, every tertian 84 gallons, and every hogfhead 63 gallons; from henceforth all tuns, pipes, tertians, and hogheads, as well of wine, as of oil, to be fold within the realm, fhall be gauged by the king's gauger before they be fold, upon pain to forfeit to the king all the wine, \& cc. contrary fold, or the value. And, in cafe any perfon fell to any of the king's people, for any price in certain, any tun, \&c. of wine, oil, or honey, which wanteth of the affize aforefaid, he fhall abate of the price as much as fuch default thall amount unto, upon pain to forfeit to the king the value of all the wines, 8 cc . contrary fold; any privy covenant to be made betwixt the feller and buyer notwithitanding: and every perfon that efpieth any of the forfeitures aforefaid, and doth inform the treafurer or the baronsof the Exchequer, fhall have the half of the forfeitures. VI. Sect. II. The gauger fhall have for the gauging of every tun and pipe of oil and honey, as he hath of every tun and pipe of wine, and for every tertian and hogithead after that rate. VII. Stat, 23 Hen. VI. cap. 16. The gauge-penny fhall not
be paid to the gauger, till he or his deputies have gauged the wines, and then he to take his penny without increafe; and he or his deputy thall be ready to do his office in all places, when required.
VIII. Stat. y Rich. JII, cap. 13. No perfon fiall bring into this realm any butt of malmiey to be fold, unlefs if concuin at leaft 126 gallons, nor no veffels with wines, nor of oil, unlefs the fame contain the affize following, viz. every tun 252 gallons, and every pipe 126 gallons, every tertian 84 gal lons, and every hoghead 63 gallons, and every barrel 4 gal lons and a half, and every rundlet 18 gallons and half: gad veffels of wine and oil hall not be put to fale till they be gauged by the king's gauger, upon pain to forfeit to the king all the faid wines and oil fold contrary to this ordinance, or the value. And in cafe any perfon fell to any of the king's people, for any certain price, any butt, tun, pipe, tertian, hogfhead, barrel, or rundlet, of wine or oil, lacking of the affize, the feller thall rebate of the price to the buyer, a much as fuch lacking fhall amount to, upon pain to furteit to the king the value of all the wine and oil fo fold; any privy contradt to be made betwixt the buyer and feller notwithftanding.
IX. Stat. 28 Hem. VIII. cap. 14. fect. 5. All the ftatutes for gauging of wine, oil, honey, or other liquors, fhall be put in execution.
X. Sect. 6. Every gauger fhall truly, within the limits of his office, gauge all tuns, butts, pipes, tierces, puncheons, tertians, hogheads, barrels, and rundlets, and mark on the head of every veftel the content; upon pain to forfeit to the party, to whofe ufe the wine, \&c. iball be fold, four times the value of that which the veffel marked fhall lack of his content; the fame forfeiture to be recovered, befides cofts, by original writ, \&c. And every perfon felling the wine, \&cc. in the veffel marked, fhall aulow of the price, the value of the lack of gauge, or default of filling, upon pain of forfeiture to the buyer, double the value, to be recovered with cofts as before.
XI. Stat. 3 I Eliz. cap. 8. fect. I. No brewer fhall put to fale any beer or ale in veffels brought from beyond the tea, with in the city of London, or fuburbs of the fame, or within two miles compafs without the fuburbs, before the fame be gauged, and the true content of every fuch veffiel fet upon the fame, by the gallon appointed for beer and ale, according to the ftandard by the matter and wardens of the coopers of London; nor hall put to fale any beer or ale in any fuch veffels, in any other place within England and Wales, before the fame be gauged, and the content fet upon the fame, by fuch as by fatute 23 Hen . VIII. cap. 4, are to have the gauging of barrels, kilderkins, and firkins, made for beer and ale in fuch other place, upon pain to furfeit all fuch veffels, and the beer or ale therein contained, to them that will feize the fame, and upon pain alfo to forfeit for every fuch vefte ios. the one moiety of which forfeitures fhall be to the queen, and the other moiety to him that will fue for the fame. And there fhall be taken for the gauging of every fuch veffel in London, and within two miles compats without the fame, by the mafter and wardens of the coopers of London, for every butt one penny, for every pipe one penny, for every puncheon one halfpenny, for every hoghead one halfpenny, and for every tierce one halfpenny, and for every other veffel after like rates; and there ghall be taken for the gauging of every fuch veffel in all other places, after fuch rates as are herein appointed to be taken within the city of London.
GELDERLAND, a principality of the United Netherlands, bounded on the north-welt by the Zuyder Gea, on the sorth by Over-Iffel, on the eaft by the bifhopric of Munter on the fouth by part of the dutchy of Cleves and Dutch Brabant, and on the weft by the provinces of Holland and Utrecht The air is much healthier and cleaner than in Holland, and the maritime provinces; and the foil in general fruittul in corn and paftures, and great droves of cattle are annually brought from Denmark to be fattened here
This province is divided into three quarters, namely, thofe of Nimeguen, Arnheim, and Zutphen.
I. The quarter of Nimeg पen is bounded on the north by that of Arnheim, from which it is feparated by the Rhine; on the eaft by the dutchy of Cleves, on the fouth the Masle parts it from Brabant, and it has Holland on the weft.
Nimeguen, on the river Wal, is a large city. The citizens are addicted to trade, and make grear profit by brewing of beer and feeding of cattle.
II. The quarter of ArNHEIM is bounded on the weft by the province of Utrecht, on the north by the Zuyder Sea, on the eaft the Iffel divides it from Over-Iffel, and from the country of Zutphen; and on the fouth the Rhine parts it from the quarter of Nimeguen.
Arnheim, the capital of this quarter, is fituated on the north bank of the Rhine.
Wageningen is fituated alfo on the Rhine. The chief riches of the inhabtants arife from their cattle, and the tobacco trade.
Hardewyx fands on the banks of the Zuyder Sea. In the neighbouring woods they have fuch plenty of blue berries in

## G E M

the feafon, which continues but fix weeks, that the very freight of what they fell at Amfterdam, where they are much efteemed, amounts to 400 crowns.
1II. The county or earldom of Zutphen, has Gelderland, properly fo called, on the weft, Uver-Iffel on the north, on the eaft the bifhopric of Munfter, and on the fouth the dutchy of Cleves.
Zutphen, the capital of the earldom, on the eaftern bank of the river Yffel, is a rich and populous city.
The country called the High Quarter of Gelderland, and Prussian Gelderland, though it does not entirely belong to the king of Pruffia, has Dutch Brabant, and part of the bifhopric of Liege, on the weft; part of the dutchy of Cleves on the north; part of the fame dutchy, and of the electorate of Cologne, on the eaft ; and part of the dutchy of Juliers on the fouth; fo that it is entirely divided from Dutch Gelderland
GEMS, a common name for all precious ftones or jewels.
The diamond, or adamant, is the hardeft, and moft tranfparent of all precious ftones, as alfo the moft fimple and homogeneous; feeming to be, among ftones, what gold is among metals. The peudo-diamond is fufficiently pellucid, compact, and weighty, but not fo hard, nor capable of the luftre and polifh of the true. See Diamond.
Some naturalifts divide them more minutely: bifhop Wilkins, confidering them in refpect of their value, makes an intermediate kind, viz middle-prized. He alfo divides them into more and lefs tranfparent, diftinguibing thefe laft, by their colours, into red, as the fardin and cornelian, \&c. the more tranfpirent into fuch as are colourlefs, as the diamond and white fapphire ; and culoured, as the ruby, carbuncle, \&c.
Dr. W.oodward, confidering them in another light, the value being arbitrary and extrinfic, divides them into thofe found in larger and in leffer maffes; fubdividing into fuch as do not exceed marble in hardnefs, and fuch as do. Thefe laft make the clafs of precious ftones. He divides them more precifely into (1) Opake, which are either of one colour, as the turquoife; or of various, as lazuli and jafper. (2.) Semi-opake, of permanent colours, as the agate, chalcedony, \&c. or varying, according to the pofition of light, as opal and cat'seye. (3.) Tranfparent ftones, coloured as the topaz, granate, fapphire, \&c. or uncoloured, as the cryftal, white fapphire, and diamond.
Dr. Slare feems to make the fpecific gravity their adequate ftandard, as many bodies appear in all refpects like ftones, but want the neceffary weight; fuch, $c$. gr. is chalk, and various other bodies, granted to be ftones, fome of thein nearer to earths, and others nothing but earth, fulphur, and metal. Of the former many fall fhort of the ftandard of ftone, and others exceed it: whereas true ftones, fays he, though differing in hardnefs, whether pebbles, flints, petrified waters, \&c. anfwer the fame ftandard of fpecific gravity as a diamond does; which is to that of water as $2 \frac{1}{2}$ to $I^{*}$.

- Philofophical Tranfactions, No. 182.

The hydroftatical ballance, fays Mr. Boyle, is of prime ufe in difcerning genuine gems from counterfeit, which too often pafs for tuue; for, as no qualities are more effential to bodies than their ponderofity, fo there's fcarce any more difficultily altered by impoltors, without difcovery. In feveral cafes, indeed, 'tis not fo; yet it may be impracticable to make any confiderable alterations in the quality, without a femible al. teration in fome other qualities, fubjecting the cheat to a dircovery.
Many authors are full of the virtues and medicinal properties of gems, but their reputation in this refpect is a little fallen. Yet, as the fragments are ftill preferved by the phyficians, in fome of the moft celebrated compofitions, and as feveral can. did and curious perfons have related confiderable effects of them, on their own obfervations, and laftly, as 'tis no way improbable the fofter ones may operate on the body, they are not indifcriminately to be rejected.
On fuch confiderations, Mr. Boyle wrote of the origin and virtues of gems, to fhew that fuch ftones were originally in a fluid ftate, or made of fubftances that were fo; and that many of their general virtues are probably derived from the mixture of metalline, and other mineral fubftances ufually incorporated with them: while the great variety and particular efficacy of their virtues arife from fome happy concurrent fubftances of that commixture, e. gr. the peculiar nature of the impregnating liquor, the proportion in which 'tis mixed with the petrefcent juice, and the like.
To fupport this hypothefis, he fhews that many of them are not concretions of any petrefcent liquors, but confift alfo of other mineral adventitious parts; which he argues from their feparability in fome ftones, the fpecific gravity in others; and the different tinctures in gems of the fame fpecies, as rubies, fapphires, granates, and even diamonds, of which fome are yellow, fome of other colours, and fome green, almoft like emeralds. There mav, therefore, be in fome gems numberlefs adventitious corpufcles, fome of which may be indued with feveral medicinal virtues, and many gems are richly impregnated with them. 'This is the fubltance of what is directly alledged in behalf of gems.

## G E M

The ftrefs of the objection is this. The mineral fubftances in them are fo clofely locked up, that they can hive no medicinal operation, being unconquerable by fo fmall a heat as that of the buman body.
But there are feveral particulars which obviate this objection. For a vigorous load-ftone, though frequently harder than many gems, is known to emit copious effluvia; and have fometimes had a manifeft and inconvenient operation on the body, being wore in the pocket, or long held in the hand. Mr. Boyle has found many tranlparent pebbles, which when cut refembled diamonds, that would emit copious and ftrongfcented fteams. And, if electrical attractions be owing to the efluvia of bodies heated by rubbing, very flight alteràtions may procure expirations from tranfparent gems, many of which are electrical, even diamonds, one of which Mr. Boyle kept by him, that upon a little friction would attract vigoroully.
To the objection of their not being digeftable by the heat of the ftomach, it may be replied, we know not how far digeftion is owing to heat. Nor is it proved they can have no operation without digeftion, as we know not what analogy may be between fome juices in the body and the mineral parts of the gems. And tinctures have been obtained from hard bodies without heat.
If it be objected, that 'tis unlikely they fhould part with any eflluvia, as they lofe none of their weight, it may be anfwered, that the antimonial cup imparts a ftrong emetic quality to wine or other liquors, without any fenfible diminution of weight.

## REMARKS.

Before we quit this fubject of gems, as they are aggregates of the moft perfect earth, it is to be obferved, that a knowledge thereof depends upoin two principal things, viz. their hardnefs nd their colour.
Their hardnefs is commonly allow?d to fand in this order; the diamond firft, as $m$ ft compact of all, next after which comes the ruby, then the fapishire, the jacinth, the emerald, the amethyft, the garnet, the carneol, the clialcedony, the onyx, the jafper; and thefe fucceed the agate, porphyry, and marble. This difference, however, is not regular and conftant, but frequently valics. Good cryfals may be allowed to fucceed the onyx, but the whole family of metallic glaffy fluors feem to be fill fofter.
In point of colour, the diamond is valued for its tranfparency, the ruby for its purple, the fapphire for its blue, the emerald for its green, the jacinth for its orange, the amethift carneol for its carnation, the onyx for its tawney, the jafper, agate, and porphyry, for their vermillion, green, and variegated colours, and the garnet for its tranfparent bloodred.
All thefe gems, as they are fometimes found coloured or fpotted, along with their tranfparency, fo are they fometimes perfectly limpid and colourlefs; in which cafe, the diamondcutter or polifher knows how to diftinguifh their feveral fpecies, from their different degrees of hardnefs upon the mill. For the cutting or polifhing of gems, the fine powder of the fragments of thofe that are next in degree of hardnef, is always required to grind and wear away the fofter; but, as none of them are barder than the diamond, this can only be polifhed with its own powder.
Mr . Boyle has many curious obfervations upon this fubject of gems, in fpeaking of a diamond that thone in the dark; where he finds that fuch diamonds as are left with fmall afperities or inequalities upon their furface, through an imperfection in the polifhing, have all of them this faculty, viz. of fhining luminous in the darkeft place.*

## * See Boyle's Abridgm. Vol. III. page 152-155.

As to the thing that gives the colour to gems, there are many different opinions, or rather bare conjectures. Thus much is certain, that, whatever it be, 'tis a real.fubflance, or certain individual opake corpufcles, that variounly reflect the light in its motion. But that this body fhould be copper, for inftance, which gives the fine blue to the fapphire, or to lapis lazuli, becaufe it gives the like colour to fint of fal ammoniac, feems the lefs probable, as this colour does not abfolutely depend upon the copper, but upon the property of the fpirit united with it: for the fame copper turns an acid fpirit of a green colour, and with a glafs fometimes make a green, fometimes a red, fometimes a blue, and fometimes a black. Upon no better foundation alfo ftands that opinion of the garnet, as receiving its colour from iron, becaufe iron exhibits fuch a colour in its, glafs; for iron does not produce fuch effect: as it is iron, but as iron differently prepared; and fuch preparations thereof are no where to be found natural: for inftance, the crocus martis made with vinegar*.

* See more of this apud Kunkel. in Neri Art. Vitrar, cap. $3^{2-35}$. and Mr. Boyle of Gems, Abridgm. Vol. III. pag. 118, 119, 120, 125, 127, \&c.

With refpect to the making of artificial precious ftones, fee the heads of the feveral natural flones of that fort.

## G E N

Upon knowing the different methods, lays Mr Boyle, of producing the adventitious colours of metals and minerals in bodies capable of virification, depends the art of making counterfeit gems: for whilft pure fand, or caicined cryftai, gives the body in their preparation, 'tus, for the moft part, fome metalline or mineral calx, mixed in a fmall proportion with it, that gives the colour. Calcined lead, fufed with fine white fand, or cryftal, reduced by ignitions and fubfequent extinctions in water, to a fubtile powder, will, of itfelf, be brought, by a due decoction, to give a clear maff, coloured like a German amethylt. But this colour may be eafily over-powered by thofe of feveral other mineral pigments, fo that with a glafs of lead, you may emulate the frefh and lovely green of an emerald; though, in many cafes, the colour which the lead itfelf, upon vitrification, tends tu, may vitiate that of the pigment defigned to appear in the mafs. Thefe colours alfo depend fo much upon the texture of the materials, that we have made the glafs of lead itfelf, compoled of about three parts of litharge, or minium, fufed with one of cryftal, or fand, very finely powdered, pafs through different colours, according as we keep it more or lefs in fufion. But the degrees of coction, and other circumftances, may fo vary the colour produced, that, in a fmall crucible, 1 have had fragments of the fame mafs: in fome of which, perhaps not fo big as a hazle-nut, four diftinct colours might be difcerned.
Befides the three mentioned orts of adventitious colours in metals, there may be others reducible under the fame head, of which I fhall inftance only in two.
The firt is afforded us from the practice of fcarlet dyers. A moft fameus mafter in this art affured me, that neither he, nor others, can Itrike the lovely colour called the bow-dye, unlefs their materials be boiled in veffels of a particular metal. Secondly, metals will afford uncommon colours, by imbuing feveral bodies with folutions of them, made in a proper menftrua. Thus though copper, plentifully diffolved in aqua fortis, will comunicate to feveral bodies the colour of that foution, yet fome other metals will not, as I have often tried. Gold, diffulved in aqua regia, dyes the nails and Kkin , the hafts of knives, and other things made of ivory, not with a yellow, but a purple colour ; which, though it manifeft itfelf but flowly, is iery durable, and can farce ever be wafhed out. Thus we formeriy faid, that the purer cryftals of fine filver made with aqua fortis, though they appear white, will prefently dye the fkin and nails, of a black not to be wafhed off like ordinary ink. And many other bodies may, in the fame manner, be dyed, fome of a black, and others of a blackifh colour.
GENEVA REPUBLIC, exclufive of the city of Geneva, is but of a fmall extent, not containing above II parifhes. The country in general is very fruitful and populous; it abounds with good fruit-trees, and produces wine, both white and ted ; the former fmall, the latter excellent. The only corn fowed here is wheat, which it's foil bears in great plenty; and the republic conftantly keeps a great magazine of it, againft a time of fcarcity, when they fell it out at reafonable rates, and at all other times fell it extremely reafonable.
The city of Geneva is conliderable for its fituation, as well as its commerce, it being the key and the moft flourifhing city of Switzerland. Its manufactures are chiefly gold and filver lace, thread-lace, filks, fhamoy leather, piftols, watches, and book-printing, of all which they have a good foreign trade. Dr. Burnet fays, it is furprizing to fee the learning there is here, not only among the profefiors of it, but the very magifrates and trading citizens are well verfed in the Latin tongue, mighty well acquainted with hiftory, and generally men of good fenfe.-Mr. Addifon fays, that here are merchants reckoned worth two millions of crowns, though, perhaps, not one of them fpends 5001 . a year.-He alfo fays, there are three of the little council deputed for this office, who are obliged to keep together fufficient provifion to feed the people at leaft two years, in cafe of war or famine; that they muft take care to fill their magazines in times of the greateft plenty, that fo they may afford them cheaper, and increafe the public revenue at a fmall expence of its members. They mult not, upon any pretence, furnifh the granaries from their own fields, that fo they may have no temptation to pay too great a price, or put any bad corn upon the public; and they muft buy up no corn growing within 12 miles of the city, that the filling of their magazines may not prejudice their markets, and raife the prica of their provifions at home.
The lake of Geneva is very remarkable; it is the largeft in this part of Europe, and, perhaps, in Chrittendom, except Sweden and Mufcovy. It is navigable by greater veffels than are ordinarily feen in rivers, which, by fome, are called Geneva flips, by others the Rhone fhips. This lake abounds with perch, and other excellent fith, efpecially trout, folarge that they are often fent as prefents to princes; and perfons of the firf quality.
Geneva, a liquor commonly called Gin, a fort of compound firit, which is fo denominated, as being extracted partly from juniper-berries, \&c. Is is a liquor common in Holland and England.

## G E N

## REMARKS.

The Dutch have an incredible trade to Straelfund, Stetin Colberg, Dantzic, Elining, Koningiberg, Memel, Riga, Revel, Narva, and Peterfiurgh, for their geneva, which: only a malt-fpirit tinctured with the juniper berry, -And it is faid that the Englifh have arrrived 5 ., fo great perfection in the miking of male-fpirits, that they thereby furpafs ihe Dutch in the article of geneva, and rival the French even in their brandies. See the article Distillation. If fo, we may hope for an increafe in the exports of ous malt-fpirits of every kind, that lefo may be confumed at home, and more in other countries: for the Dutch buy large quantities of Englifh malt for diftilling, to fupply other parts with their geneva. It is fcarce credible how this liquor is univerfally drank at this time in Mufcovy and Poland; and why may not the Englifh come in for a confiderable fhare of this trade?
G EN O A, a republic in Italy, whofe territories lie in the craf cent, on the Mediterranean Sea, for 150 miles from the town of Ventimiglia on the weft, almoft to the territory of the republic of Lucca on the ealt, and is called the Riviere, or coaft of Genoa, their country no where extending 20 miles from the fea, and m fome parts not io: the Appenine Mountains in a manner cover it on the land fide, and feparate it from the countries of Milan, Piedmont; the Monferrat, the Milanefe, and Parmefan. The tops of thefe mountains are perfectly bare, having neither trees or herbage upon them; but, towards the bottom, they are well planted with vines, olives, and other fruit; but the foil yields fcarce any corrt, and their fea not many fifh.
Genoa City, the capital of this republic, is fituate in 9 degrees 30 minutes eaft longitude, and in 44 degrees 30 minutes north latitude, part of it on a level ftrand near the fea, but rifes gradually to the top of the hill. The harbour is large and deep, but expofed to the fouth weft wind, only there is a mule for the fecusity of their gallies and fmall veffels, ard the city lies pretty much expofed to a bombardment, as they experienced in the year 1084 , when Lewis XIV. ordered the town to be beat about their ears. See the article France. There are here large quantities of filk manufactured, alfa velvets, tabbies, fattins, filver and gold brocades, \&c. as likewife fine point, gloves, and fweet-meats, which are in great requeft, as well as their foap.
St Remo is a fmall, but neat fea-port town, on the coafts of Genoa, and belonging to that republic, and efteemed a place of fome importance. It ftands on a fertile valley that produces vaft quantities of oranges, citrons, olives, and other fruits, and particularly many plantations of palm-trees.
Noli, Naulum, NAulium, ftands on a pleafant fertile plain, on the coaft of Genoa, and was founded by the inhabitants of that metropolis, and thofe of Savona. It hath a very good harbour, and was once a free port, and very profitable to its citizens; but it hath fince been fripped of that privilege, and much reduced from its ancient opulence, by the Genoefe wars, fince it hath been fubject to their dominion.
SAVONA, or SANA, flands on the weft coaft, about ro miles tothe north-eaft of Noli, and, next to Genoa, is the moft confiderable city in this ftate. It appears, however, to have formerly made a much nobler figure than it does now, it ha.ing had a very good haven, which brought no fmall trade thither, but which the republic hath caufed to go to ruin, that the commerce of Genoa might not be impaired by it. Yet, here is a confiderable filk manufacture carried on, and the place is famed for making the fineft fweet-meats. The territory about it is very well cultivated, and produces great variety of fruits, particularly lemons, limes, and bergamots.
Port $\mathrm{St}_{\mathrm{t}}$ Maurice, is another of thofe places which the republic of Genoa has caufed to be deffroyed, to bring the greater trade to their metropolis; fo that both it and the town are gone to decay.

## REMARKS.

The trade of Genoa is in wrought filks, which wascarried on here when all the filks made in the Milanefe and the Mantuan were formerly negociated here (that is, filks were bought here by commiffion from England and Holland) but this trade is extremely decayed, and both thofe countries are grown wife enough to employ their own people in the filk manufacture, and make the goods at home which were formerly bought here.
But there is another trade carried on here, in which the Genoefe have fo great a fhare, and have managed fo well, that it is thought they have gatned more by it than they did by all the commerce of the Milanefe: this is, that they make moft of the filks which they bought before, in their own little dominion, and employ their own fubjects: and, as the trade they carry on in thefe goods to Lifbon and Cadiz is prodigioully increafed, it is faid they flourifh more in thefe branches of it, than they did before with all the reft, not forgetting that they have ffill a confiderable commerce with Holland, and fome with England.

## GEN

OPERATION.

## I NSTRUCTION.

Reduce the liras into fols, and take in the 3 fols. Multiply the product by 673 marvedies, the price of exchange, it will produce $27460755 \frac{1}{2}$ for a dividend.-Multiply feparately the fols in a crown mark, by the marvedies in a rial ( 34 , and the quotient will give rials. The remainder $1947 \frac{1}{2}$ multiply by 34 , and divide the product by the common divifor, and it will produce 10 marvedies. - To reduce thefe rials into piaftres, you divide by 8 , fo many rials making a piaftre; and the guotient gives the piaftres, \&c.
N. B. If what has been faid, in relation to the preceding cafes, be attended to, the proof mult be eafy.

CASEVI.
The Exchange of Genoa upon Leghorn.
To reduce 2000 liras, bank-money of Genoa, into piaftres, fols, and deniers of Leghorn, exchange at $39 \frac{1}{2}$ fols per piaftre of Leghorn.

OPERATION.

INETRUCTION.
Reduce the 2000 liras of Genoa into half fols, and the price of exchange likewife; and divide the former by the latter product, the quotient will give 427 piaftres; for the remainder 151, multiply and divide as directed in the forgoing cafes.--For prool attend allo to what has been faid.

## CASE VII.

The Exchange of Genoa upon Rome.
To reduce 1500 liras, bank-money of Genoa, into Roman srowns of 10 julio's exchange at 102 fols per faid crown.

OPERATION.
1500 liras, multiplied by 20 fols
30000 fols, to be divided by the fols in the price of exchange, viz. (102) gives 294 Roman crowns, I julit, I rayoc, for which the draught upon Rome thould be made.

## INSTRUCTION.

The fum and price of exchange being reduced into the like denominaton; the founer is divided by the latter, and confequently gives the quantity of Roman crowns. For the remainder I2, multiply by to julio's, the value of the faid crown, and divide by the fame, it gives a julio, and, for the remainder 18, multiply and divide as before. - The reafon, and proof hercof is fo plain, that no further explication can be needful.

CASE VIII.
The exchange of Genoa upon Venice.
To reduce 1800 liras, bank-money of Genoa, into bank ducats of Venice of 24 groff , exchange at 103 marchetti, or fols of Vcnice, per crown current of 4 lira bank money of Genoa.

## G E N

## OPERATION.

1800 liras, $\frac{5}{4}$ of which is 450 crowns of 4 liras; to be multiplied by the - 103 marchetti of exchange.

| 1350 |
| ---: |
| 4500 |

46350 To be divided by 124 marchetti, the value of a ducat, you will have a quotient of 373 ducats' is fols; for which the draught on Venice fhould be made.

## INSTRUCTION.

Take the quarter of 1800 liras, and it will give 450 crovinns of four liras. Thefe multuplied by the price of exchange of 103 marchetti, and divided by 124 marchetti, the number contained in a ducat, you will have 373 ducats, bank money, and 98 for a remainder, which multiply by 20 , and divide by the fame divifor 124 , it gives 15 fols; and for what elfe remains; multiply by 12, and divide as before; and you have the money to be received at Venice.

## CASE IX:

## The Exchange of Genoa upon Naples.

To reduce 1400 liras, bank-money of Genoa, into ducats, carlins, and grains of the kingdom of Naples, exchange at 82 fols of Genoa per ducat of ro carlins.

OPERATION.
1400 liras, to be multiplied by 20 fols
82) 28000 fols, ( 34 i ducats, 4 carlins, 6 grains regnio, for which the draught fhould be made upori Naples.

## INSTRUCTION.

Reduce the 1400 lira into fols, multiplying them by 20 , the value of the lira, and divide the product 28000 , by the price of exchange, ( 82 fols) you will have a quatient of 341 ducats. The remainder 38 multiply by 10 carlins, the value of the ducat, and divide by the laid 82, it will produce 4 carlins, and 52 ftill remaining; which multiply and dívide as before, it will give 6 grains: fo that 341 ducats, 4 carlins, and 6 grains, are to be recived for the draught at Naples.

CASEX.
The Exchange of Genoa upon Milati.
To reduce 2500 liras, bank-money of Genoa, into livres, fols, and deniers, current money of Milan, exchange at 77 fols exchange of Milan for a crown of 4 liras bank of Genoa.

OPERATION:
106 fols exchange
2500 liras bank, multiplied
4 liras
42.4 liras, for

| 17500 |
| ---: |
| $\times 7500$ |

r92500, to be multiplied by

1347500
$48 \times 25$, for 5 fols the $\frac{\pi}{4}$ 9625 , for $i$ - the $\frac{4}{5}$ of 5
424) I405250 livres, for a dividend; will give 3314 livres, 5 fols, 4 deniers, current money of Milan, for which the draught is to be made.

## INSTRUCTION.

Multiply the 2500 liras; by the price of exchange of 77 fols of Milan, and the product 192500 fols, by 7 liveres, 6 fols (becaufe 7 livtes, 6 fols, or 146 fols, current mosey of Milan, make 106 fols of exchange money:) divide therefore the product, 1405250 , by the faid 106 fols, reduced into liras, viz. by 424 , becaufe the exchange crown of Genoa is 4 liras, and you will have a quotient of 3314 livres, and a remainder of 124 , which multiply by 20 fols, the value of the livres of Milan, and divide by the faid divifor, it gives 5 fols; and a furcher remaindet of 160 ; which being multiplied by 12 deniers, the value of $d$ fol, and divided by the fame divifor, it gives 4 deniers current; the fum to ba received at Milan for the faid 2500 liras of Genoa.

CASE

## G E N

## CASE XI.

The Exchange of Genoa upon Vienna.
To reduce 1200 liras, bank money of Genoa, into florins, kreutzers, and fenins of Vienna, excbange at 52 fols of Genoa, per florin, of 60 kreutzers.

OPERATION.
1200 liras, to be multiplied
by 20 fols,
by the price of exchange 52) 24000 fols, to be divided, will produce $4^{66}$ florins, 32 kieutzers, I tenin; for which fum the draught hould be made upon Vienna.

## I NSTRUCTION.

Reduce the 1200 liras into fols, by 20 , and divide the praduct 24000 by the price of exciange of 52 fols, and you will have the quatient 46 r forins, with a remainder of 28 , which multiply by 60 kreutzers, the value of the Vienna forin, and divide by the fard divifor, it gives 32 kreutzers, and alfo a remainder of 16 ; which multiply by 4 fenins, the value of the kieutzer, and divide as before, you will produce I fenin; which fum muft be received at Vienna.

CASE XII.
The Exchange of Genoa upon Palermo.
To reduce 1700 liras, 12 fols, bank-money of Genoa, into ounces, tarines, and grains of Palermo, Sicily, excbange at 45 carlins, per crown mark of Genoa.

OPERATION.
by the
1700 liras $\frac{3}{5}$ bank, to be multiplied
186 fols
8500
-3 6 6800
$55^{8}$ divifor
27 for the $\frac{3}{3}$ or 12 fols
558 ) 76527 dividend, ( 137 ounces, 4 ta-
rines, 7 grains; for which the $\mathrm{d}_{\mathrm{a}}$ aught fhould be made upon Palermo, or Sicily.

## INSTRUCTION

Multiply the fum of 1700 liras, 12 fols, by the price of exchange of 45 carlins, the product 76527 will be the di vidend: multiply alfo feparately 186 folls, the value of the crown mark, by 3 , the product 558 will be the divifor, which will give a quor rent of 137 ourices, and a remainder of 8 L . This multiplied by 30 tarines, the value of the ounce, and divided by the faid divifor, wil' give four tarines, and another remainder of 198 ; which multiplicd by 20 grains, the value of a tarine, and divided again by the fame common divifor, it gives 7 grains; which fum muft be received at Sicily. The reafon for multiplying by 3 the 186 fols, which are the value of the mark, is becaufe the ounce of Sicily is compofed of 60 carlins, and the lira of Genoa of 20 fols, which is the $\frac{7}{3}$ of 60 : the operation is expedited by this abridgment; without which, you muft have reduced the fum into fols, by multiplying by 20, and multiplied afterwards the faid 186 fols by 60 , which is avoided by this abbreviation.

The Usance of Genoa with regard to Bills of Exchange.
London is 3 months $\quad 7$ From the date of Lifbon, Cadiz, and Madrid, 2 months Amfterdam and Hamburgh, 2 months Rome and Venice, 15 days
Florence, Leghorn, and Milan, 8 days
From the date of the bills.
$\}$ Sight.
Naples, 22 days
They allow 30 days grace, after the expiration of the time of the bill, during which, the bearer may neverthelefs proteft the bill, and return it, if he will.

Of the Weights and Meafures of Genoa.
Their meafure is a canc, and that is of divers forts, viz. for woollen, the cane contains 9 palms; another forlinen, containing 10 palms; and a brace of $2 \frac{7}{3}$ palms for filk.
Genoefe canes have been found to make 15 ells in Lyons. 300 Genoefe canes make 328 ells of Holland, $245 \frac{1}{7}$ yards in London, 392 ells in Leipfic, 438 ells in Breflaw, and $3^{6} 7$ in Dantzic.
There weights are as follow, viz. 12 ounces to a lb . 18 ources to a rotello, 25 lb . to a reve, and 6 reves to a quintal.

G E N
100 lb . of Genoa make in Holland $66{ }_{3}^{2} \mathrm{lb}$; in Lyons $77 \frac{1}{4} \mathrm{lb}$; in London 73 lb ; in Hamburgh 68 lb ; in Franckfore $64 \frac{\mathrm{r}}{1} \mathrm{lb}$; in Leipfic 70 lb ; in Leghorn $96 \frac{3}{4} \mathrm{lb}$; and in Venice $110 \frac{3}{4} \mathrm{lb}$.
The Genoa weights for gild are reckoned thus: 24 grains to a denier, 24 deniers to an ounce, 8 ounces to a mark, of which 130 make about 100 pounds troy weight.
And 100 lb . troy weight is equal to $86 \frac{1}{2} \mathrm{lb}$, of their weight of filver, wherein they reckon 12 ounces to the lb.
They fell their wine by the miferold, reckoning 2 barrels to a milerold, and 5 miferolds make a botta divina, which is about 100 pints.
Corn is fold here by the mina; 20 minas make a tun of 40 buhhels, Winchefter-meafure.
Oil is fold by the barrel; 14 whereof make a tun of 236 gallons of London civil gauge.

Of fimple Arbitration of the Exchanges, by Orders and Chm miffions, given and received by Draughts and Reraitances between Amfterdam and Genoa.

## EXAMPLE.

An order comes to Amfterdam, to remit to Genoa at 82 d . and to draw upon London for the value at 34 : 4 ." When the order came to band, bills for Genoa were at 85 d . I would know at what price Ampterdam mult draw upon London, to compenfate the faid lofs by the remittance to Genoa ?

| $\begin{array}{r} 334 \\ 85 \end{array}$ |  |

| 1394 |
| $20 \frac{1}{2}$ |
| $\frac{141 / 4 \frac{1}{2}}{70 \frac{29}{4}}$ or $\frac{3}{4}$ |

Then as $76 \frac{3}{7}:: 100: 70 \frac{3}{4}$ to 92 . 182 decimals,
3074

REMARKS.
The better to underftand the nature of thefe fort of queftiong in the exchanges, we refer our readers to the article Arbi-

TRATION

## GEN

Thev have likewife a very confiderable traffic in paper, large quantitics of which are brought to England, bendes what they fend to Portugal and Span, as well for their trades to America refpectively, as for their own confumption.
This republic, for near three centuries, rivalled $\dot{Y}$ enice in the dominion of the Mediterranean, and the commerce to the Levant; but, after the memorable victory of Chiozza, the Venctrat,s bure away the maritime empire; yet they ftill maintain no inconfiderable fhare in the commerce of the Levant, and by the medium of Genoa foreigners carry on the trade of Lombardy.
Their manufactures for foreign markets are, plain and flowered velvets, and others with gold and filver grounds; fittins, tabbies, damafks, gold and filver tuffues, and variety of other kinds of rich filks. Befides thefe they traffic in all the produce of the Levant to a confiderable advantage.
What figure the Genoefefleets have formerly made, by means of their commerce, may be eafily conceived, by the many -iAories they have gained over the Saracens, Pifans, Venetians, Turks, Spaniards, \&c. as well as from their many large conquefts ; fuch as thofe of the inlands of Crete, Sardinia, Majorca, Minorca, Negropont, Lebbos, Malta, and their fettlements in Scio, Smyrna, Achaia, Theodofia, and other towns on the eaftern confines of Europe; but, at prefent, their whole navy is reduced to a fmall number of gallies, which ferve only to fetch them fome corn, wine, and other provifions; infomuch that when, in the late queen Anne's war, they had but fix of thefe gallies in all, and had refolved to build more, the French king fent expreffly to forbid it, telling them, that he knew better than they how many they had occalion for. See the politic intentions hereof under the article France.
The great wire-draw to the traffic of Genoa is a kind of free, as well as a fine port; for, on the arrival of foreign fhips, the merchandizes are depofited in à grand free warehoufe, no duties of import or export being paid, except in proportion to the fales that are made, and what remains unfold is re-imbarked without duty.

## Of the Bank of Genoa.

The moft confiderable body in power in this republic, is that which is called St. George's Bank, and is conftituted of fuch branches of the public revenue as have been fet apart by the government for the payment of fuch fums as have been borrowed during the exigencies of the commonweatth, and which bath never been violated, under the greateft troubles and perplexities of the ftate. Ti,c adminiftration of this bank being for life, and partly in the hands of the citizens, gives this body a great authority in the ftate, and a powerful influence over the people. This bank is generally thought a great load to the fate, and as a kind of inferior lenate, which breaks the uniformity of their ariftocratic government. The people, however, receive no fmall benefit from it, both as it is a check to their ariftocracy, and diffributes the power among more private members of the republic; and, while the republic kept out of the broils of Europe, the bank maintained a circulation for the fupport of the public credit and their commerce.
But this fate having unhappily taken part in a late war, wherein they exhaufted their public treafure, on which foundation the bank was confticuted, its credit has received fo violent a fhock, as not eafily to admit of a flourifhing revival.
Of Corsica, confidered as a part of the Genoefe territories.
It is an ifland, fituated between that of Sardinia and the fouth ern coafts of Italy, extending itfelf in length from 4I to 43 degrees of latitude, and from 9 to 10 degrees of eaft longitude. Its breadth, from the promontory called Capo di Faro, on the weff, to Aleria Deftrutta, on the ealf coaft, is about 80.It hath the flate of Genoa on the norih; Sardinia on the fouth, from which it is feparated by the Streights of Bonifacio; the Tulcan Sea, Patrimony of St. Peter, and Naples, towards the eaft ; and the Mediterranean on the weft.
The ifland in general is woody and mountainous, and the ground fodry and flony, that few things grow on it, of fruits, corn, \&xc. but by dint of labour. Some parts, however, are more fertile, and prodice, with lefs trouble, goad corn, neat wines, fige, almonds, olives, chefnuts, \& cr. and fome palture grounds breed quantities of cattle, as their forefts do plenty of deer, and other game; and the filh that is caught about it's coafs is in great plenty, and very good, particularly the ton, a kind of furgeon; and their fmall fith called, from the neighbouring ifland, fardines. Some good coral is found about the coaft, efpecially in the Streights of Bonifacio. The people having endured fo great hardihips and oppreffions from the Genoefe, they revolted from them, and put themfelves under the protection and command of Theodore, baron Newhoff, whom they proclaimed king of Corfica, and who, in an extraordmary manner, maintained bimfelf in that dignity for fome time, and was not a little beloved by them.
The principal articles of king Theodore's propofitions-were,
I. That they ought, as foon as poffible, to fet about making folt ponds, as the climate of the country promifed fo great a
quantity of that commodity as might load an hundred fhips annually; fo that the crown and fubjects might draw great advantages from this branich of commerce.
II. That they ought to encourase the working of the iron, copper, and lead-mines, which are difcovered to extract not only iron for common ufes, but for camion, bullets, and other things neceffary to put an end to this tedious troyblefame war, and thereby fave the grols fums fent out of the ine to purchafe them.
III. And, as this ifland greatly abounds with brimfone and falt-petre, they ought to erect gunpowder-mills on the moft commodious river, to make what quantity they fiall need in the kiagdom, and repair the want under, which they have hitherto laboured in this particular, and which has occafioned valt expences to the flate.
IV. Agriculture alfo fhould be Itudiounly cultivated, the majority of the beft lands being nieglected: to which end, there hould be eftablifhed in each pieve commifiaries, intelligent in this art, who thall be particularly charged to take care that the peafants till each a certain fpot in their feveral diffrects, for their own adyantage ; and, in parts improper for the plough, each peafant thall be obliged to plant at leaft 4000 vines, or 1000 olive-trees; and all forts of exemptions fhall be granted during to years, for thofe grounds fo newly cultivated.
V. By an ordinance publifhed throughout the kingdom, one conftant and uniform meafure thall be eftablifhed for all the fruits growing here, fuch is ril, wine, honey, pitch, tar, and atber cafked commodities; and, at the fame time, one ell, one weight, and one bufhe), conformably to the ftandards of other trading nations.
VI. All care fhall be taken to adyance the filk trade, as the kingdom is fo well fituated for it.
VII. And, as nothing can contribute more to the advantage of this nation than a regular foreign trade, and as our ki gdom is better fituated than any other for it, with fo great a iumber of gnod ports and bays, we would have our good ci-izens accuftom themfelves to it, by making, them fenfitle it the advantages arifing from fuch an application. To wh ch purpofe, we have thought proper to eftablifb a council of c m merce, at the expence of the cruwn; the crmmiffioners of which fhall be obliged to purchafe of our fubject, all the products of the country fit to be fent abroad, ate a market-price, paying them in manufactures, or our filver coin: but if the peafant will not exobange his products at fuch a price, he fhall bring them into the crown-magazines, where a receipt hall be given him. The commiffioners fhall fend thefe products with others, and their refpecive invoices, to the canfuls and correfpondents of the crown in foreign parts, with an order to draw out the particular accounts of the produce of thefe effects, in order that there be given to ewery one what belongs to him. The praprietors fhall receive at the council of commerce the returns or import of their accounts, on paying (befides the carriage) 5 per cent. on the capital, to defray the charges; and, if the peafant be neceffitous, and cenrot wait for the returns unaffifted, he may receive from the council the haif, or two thirds of the value of what he delivers, for which he flall pay, on ballancing accounts, one half per cent. for fix months, befides the 4 per cent. above mentioned. And, to give a greater credit to the faid council, we engage ourfelf and crown for it. And we order our confuls, refidents, or correfpondents, to contract and negociate only with the faid council, and they fhall fend us whatever we cannot do without in our ifle. No veffel ihall be admitted without the permiffion of the faid council ; and our correfpondents abroad hall have the fame credit as thofe here, and, befides that, the character of counfellor of commerce of this kingdom.
VIII. And whereas our kingdom abounds in wood, pitch, tar, hemp, and every thing neceffary for the fhip building, this article fhould be taken ferioully into confideration, as alfo what concerns the filhery, \&x.

Monies, of account and exchange in Genoa.
Books of accounts are kept in piafters, fols, and deniers, and in liveres, or lira, fols, and deniers bank, whofe fubdivifuens are by 20 and 12 .
The piafter is equal to 20 fols d'or, or 100 fols bank, or 5 lira.
The ful d'or is equal to 12 deniers d'or, or 5 fols bank.
The livre is equal to 20 fols bank.
The fol bank is equal to 12 deniers bank.
The current crown is equal to 4 liras, or 80 fols bank.
The filver crown, or croifat of Genoa, is equal to 7 liras 12 fols bank.
According to Monf. Larue's Bibliotheque des Jeunes Negocians, 8cc. publifhed at Lions in 1747 , this filver crown weighs in France 720 grains, and it is received at the ftandard of II $\frac{x}{2}$ penny-weights. - The mark crown is equal to 9 liras, 6 fols bank, or 180 fols bank. - The piftole of gold is equal to $18 \frac{4}{5}$ liras current money, and is received in France at the ftandard of $2.1^{3}$ carats, and it there weighs 126 grains.

## G E N

The eftabliffed courles of exchange between thefe places which follow are,

Suppofe that a merchant owed at Genoa, in bank money, the following fums, and would remit them to his correfpondents.

| Palermo | 1700 - - at 45 carlins per 1 crown mark |

## C ASEI.

The exchange of Genoa upon France.
'To reduce 297 piaftres, in fols, 10 deniers, bank money of Genoa, into livres, fols, and deniers Tournois of France, exchange at $99 \frac{1}{2}$, as above.

OPERATION.
Piaftres 297: II: 10 fum
The $99 \frac{x}{2}$ exchange
2673
2673
148 fols 6 den. for $\frac{\pi}{2}$ of the fol
$499, \quad$ for 10 fols, the $\frac{1}{2}$ of the exchange
$11 \frac{7}{7}$ for If fi, the $\frac{1}{10}$ of 10
$5 \frac{8}{\text { io }}$ for 6 den. the $\frac{d}{2}$ of a fol
for 4 den the $\frac{2}{3}$ of a fol

$$
2 \mid 0) 29610 \quad 1 \frac{4}{10}(
$$

livres 1480: 10:4 ro Tournois of France, the anfwer.

## I N S TR U C TIO N.

Multiply the 297 piaftres II : 10 , by the price of exchange of $99 \frac{1}{2}$ fols, and take the aliquor parts, as above, and the fum total will be fols of exchange, becaufe you multiply the fum of piaftres thereby ; which, being divided by 20 , reduces them into livres, fols, and deniers of France, and makes the fum to be received at Paris 1480 livres, 10 fols, 4 deniers, t $_{\text {to }}$ Tournois.

Proof of the foregoing.
INSTRUCTION.
Reduce the French livres $1480: 10: 4 \frac{4}{70}$ Tournois, into tenths of fols, and the price of exchange into the fame, and divide the fum by the price of exchange, and you will have the anfwer in piaftres. For what remains, multiply by the fubdivifions of the piaftre, 20 and 12 , and divide by the common divifor (the tenths of fols in the price of exchange) and you will have the fractional parts.

## CASE II.

Genoa exchanges upon Holland.
To reduce 574 piaftres, 12 fols, 10 deniers, bank money of Genoa into forins, flivers, and pennings, bank money of Amfterdam, exchange at $92 \frac{1}{4}$ pence gras per piaftre of 5 liras, or 20 fols.

OPERATION.
Piaftres 574: 12: io
$92 \div$ den. gros

| $\begin{gathered} 1148 \\ 5166 \end{gathered}$ |  |
| :---: | :---: |
|  |  |
|  |  |
| 9 | $\frac{2}{8}$ near for 2 fols the $\frac{1}{5}$ ofro $\}$ change |
| 2 | $\frac{2}{8}$ near for 6 deniers the $\frac{1}{4}$ of 2 fols |
| 1 | $\frac{1}{8}$ for 3 deniers the $\frac{4}{\frac{4}{2}}$ of 6 deniers |
|  | $\frac{3}{8}$ for I denier the $\frac{5}{3}$ of 3 deniers |
| $410) 530110$ | $\frac{5}{8}$ |

Florins $325:$ Io gros $=5$ fols, or ftivers, 5 pennings, bank money of Amfterdam, for which the draught hould be made upon Amiterdam.

## GE N

## I NSTRUCTIOṆ.

Multiply the fum of piaftres, fols, and deniers, by the price of exchange, $92 \frac{1}{4}$, and take the aliquot parts as above, and the product will be gros of Amfterdam, 40 of which making a florin or guilder, you divide thereby, and the quotient gives guilders, ftivers, and pennings, bank-moncy of Amtherdam.
N. B. As 2 gros is a fol, or ftiver of Amfterdam, for the remaining 10 gros, you may call it 5 ftivers; and, as 1 gros is 8 pennings, the $\frac{5}{8}$ of a grofs is five pennings.

## For proof of the foregoing.

INSTRUCTION.
Reduce the fum of florins, fivers and peninings, and the price of exchange, into the fame denomination of penaings, and divide the fum by the price, and the quote gives the anfwer in piaftres of Genoa. - To find the value of the fractional remainder, multiply by the fubdenominations of the piaftre, and divide by the common divifor in the price of exchange, and that will give you the fols and deniers.

C A S E III.

## Exchange of Genoa upon England.

To reduce 155 piaftres, 14 fols, 1 denier, bank-money of Genoa, into pounds, thillings and pence flerling of England, exchange at $54 \frac{1}{4}$ pence fterling per piaftre of 5 liras.

OPERATION.
Piaftres 1551: 14 : I

$$
54 \frac{1}{4}
$$

6204
7755
7755
$387 \frac{2}{4}=\frac{6}{3}$ for $\frac{1}{4}$ of 1551
$27 \frac{\frac{1}{2}}{2}$ of $\frac{1}{4}=\frac{5}{8}$ for 10 fols, the $\frac{1}{2}$ of the price ofexch
to near $=\frac{6}{3}$ for 4 fols, the $\frac{1}{5}$ of 20 fols for I denier

## 12) 84180 ( pence fterling

$$
2 \mathrm{lo}) 7015(\quad \text { 1od. }
$$

1. $350: 15: 10$ fterling

For proof hereof.

## INSTRUCTION.

Reduce the fum and price, being both fterling money, into one denomination, and divide the product of the fum by that of the price, and the quotient will give the piaftres: for the remainder obferve what has been faid already.

C ASEIV.
Of the exchange of Genoa upon Portugal,
To reduce 650 piaftres, 5 fols, 2 deniers, bank money of Genoa, into crufadoes of Portugal (of 400 rees) exchangeat 880 rees per piaftre of 5 liras bank.

OPERATION.
Piaftres 650: 5 fols, 2 deniers, bank money
880 rees, exchange

| 52000 |  |
| :--- | :--- |
| 5200 |  |
| 176 | for 4 fols the $\frac{x}{3}$ of the exchange price |
| 44 | for 1 fol the $\frac{5}{4}$ of 4 fols |
| $7 \frac{2}{6}$ | $=\frac{1}{3}$ for 2 deniers the $\frac{2}{6}$ of $I$ fol |

Rees
$4(00) 5722127$
Cruf. 1430 : 227 rees, for which the draught fhould be made on Lifbon.

## INSTRUCTION.

Multiply the piaftres by the Portugal price of exchange ( 880 rees) and take the fractional parts as directed. The fum total being of the fame denomination with the exchange, viz. rees, thefe muft be reduced into crufadoes, the fpecies whereon Genoa exchanges with Lifbon: and, 400 rees being a crufado, that is the divifor.

## For proof.

Reduce the crufadoes into rees, and divide by the price of exchange, and you have the anfwer in piaftres; for the remainder, proceed as in the foregoing cafes.

## CASEV.

The exchange of Genoa upon Spain.
To reduce 2040 liras, 3 fols, 6 deniers, bank money of Genoa, into piaftres, rials, and marvedies of old plate of Spain, exchange at 673 marvedies for a crown mark of 186 fols.

OPERA-

## G ER

fration of the Exchanges, the article Eng Land, and the article Exchange.
The Florentines, Genoefe, and Venetians, are faid to have been the firft trading countries who fell into the way of negociating money by bills of exchange, and firl difcovered the profits and advantages to be occallonally made thereby. It was they allo that difcovered the admirable art of accountanthip by charge and difcharge, according to the method of double entry; the nature of which we have particularly fhewn upon a fingle fheer, under the atticle BANKING.
GERMANY. The empire confifting of various flates, the reader will find their trade defcribed under thofe refpective ftates.
GEORGIA, in Afia, is bounded on the N. by Circaffia, on the E. by Dagheftan and Shirvan, on the S. by Armenia, and on the W. by the Euxine, or Black Sea.
it abounds with woods and mountains, but hath alfo many fine and fertile plains, if rightly cultivated. It is but thinly peopled, and hath but few cities, in proportion to its extent and fertility, which mult be afcribed to their neglect of manufactures, and infamous traffic in boys and girls, which they difpore of to the Turks, Perfians, \&c. Their moft noble product is their wine, inferior to none; great quantities of which they export into Media, Armenia, and particularly into Peria, for the king's own table. Though excellent, it is cheap; a horfe-load, or 300 weight of the very beft, felling at the rate of 8 or ten fhillings of our money, and the midding fort for half that price.
The court y produces likewife a good deal of filk, which they fcarce know how to manufaciure, but chufe rather to fend it into Turkey, efpecially to Erzerum, where it is wrought in great quantities.
Teflis is one of its chief cities; its trade is in furs, which are fent to Conftantinople by the way of Erzerum. They alro fend from this territory, and cthers of Georgia, above 2000 camel-loads of the root boya, into Diarbeck, for the ufe of the linnen-dyers, as alfo great quantities into the province of Indoftan for the fame ufe.
Gori is a fmall and ili-built town, but very well peopled, and moft of its inhabitants merchants, many of whom are rich. Georgra, an Englith colony in North-America. See British America, French America, and Spanish America.
GHILAN, with TABRISTAN, provinces in Perfa.
Ghilan is bounded on the E. by the Calpian Sea and province of Tabriftan, by Perfian Irac on the S. Aiderberzan on the W. and the heath of Mockan on the N
The country is very beautiful and even, and watered by feveral fine rivers, that abound with fifb, as does alfo the Cafpian Sea, into which they fall, and even to fuch a degree, that the farming out the privilege of fifhing there brings in a very confiderable revenue to the king of Perfia.
This province is the fineft and moft fruitful of all Perfia, and produces filk, oil, wines, rice, tobacco, and all forts of the beft fruits, fo abundantly, that it furnifhes a great part of Perfia, and even feveral foreign countries, with them.
The province of Tabriftan has the Cafpian Sea on the N. Ghilan on the W. Perfian Irac on the S. and Corafan on the E. The country is fruitful, but the air unwholefome.

Amoul is a large town, and drives a confiderable trade in provifions to Bukara, and efpecially in plums, which the foil of this city produces in abundance, and are delicious.
Tabaristan is a conliderable city for weaving and felling filks and velvets.
GINGER. This root was brought to us heretofore from the Eaft-Indies, but what is cultivated in the Weftern Inlands is more ufed, and much better, being dried with more care, fo that it is not paiched and withered.
Chufe fuch as is new; dry, well fed, not eafy to break, of a greyifh colour, refinous within, and of a hot piquant tafte. Ginger is hot and drying; tis uled in the theriaca, and other compofitions. Great quantities are ufed in France by the country hawkers and chandlers, who mix it with their pepper.
GLAMORGANSHIRE, in Wales, is a maritime county, having on the fouth the Severn Sea, or Britifh Channel, Monmouthibire on the eaft, Carmarthenfhire on the weft, and Brecknuck fhire on the north. It is about 116 miles in circumference. The air and foil of it are various. Sheep and other cattle abound in all parts of it, there being fruitful vallies among the mountains, which produce very good pafture. Other commodities are lead, coals, fifh, and butter. It has maty fmall harbours, from which they flip off their coals and provifions, which they fend in great quantities; the firf to all the coalts of Devoin, Somerler, and Corn wall, and fome to Ireland; and the laft they fend to Briftol, efpecially butter.
Cardiff, the capital town, is feated on the river Tauye, which falls into the fea four miles below jt , where is a commodious haven; but fmall veffels may come up to its very bridge to lade and unlade. 'Tis a pretty large town, is well frequented, and has a good trade with Briltol, and plentiful markets and fairs for corn, cattle, fheep, borfes, and fwine. Though the Wellh coalt is generally foul and dangerous, and VQL. 1.

## G L A

has never, it feems, been well furveyed, yet there is a goiod road before this place, and the courfe to it from the Fla Holmes, or Hungroad by Briftol, is north-north-wefl.
Cowbridge, on the river Ewenny, not frifrom its entrance into the severn Sea, has a market well fiequented for catle, theep, corn, and other provifions, and a harbour for boats. SWanser, a large, clean, well-built town, and drives the greateft trade of any in the county, efpecially in coals; holds a great correfpondence with Briftol, and has an exceeding good harbour, where fometimes a hundred fhips at a time come in for coals and culm, there being feveral very larze good coal works in and near it, from whence they are car ried into Somerfethire, Devoufhire, and Cornwall, and alfo to lreland, to the great enriching the town and country round.
GLASS. 'Tis controverted ationg naturalifts, to what clafs of bodies glafs fhould be referred; fome miking it a concrete juice, others a ftone, others again rank it among femi-métals; but Di' Merret obferves, that thefe are all natural productions; whereas glafs is a factutious c.mpound, produced by free, and never found in the earth, but only the fand and flones that form it; but metals are perfectly formed by nature into certain feecies, and fire only produces them byits faculty of feparating heterogeneous, and uniting homogeneous bodies; wheteas it produces glats by uniting heterogeneous matters, viz. falt and fand ; of both which it evidentiy confifts, 100 weight of fand yielding above 150 pounds of glafs.
The thief characters or properties of glats are, that it fufes in a vehement fire; when fufed, cleaves to iron; does not wafte in the fire, and is the laft effect of it; is ductile and fathionable into any forin whle ted-hot, but not malicablé friable when cold ; diaphanous, either hot or cold; flexible and elaftic; difunited, and broke by cold and moifture, and efpecially by faline liquors; is only cut by a dianond or emery; acid, or other juices, extract no quality from it ; it does not wear by the longeft ufe; nor will any liquor make it multy, change its colour, or ruft; it foftens metals, and makes them fufible; receives all metallic colous, both externally and internally; will not calcine, and may be cemented, like fones and metals.

## Making of glafs.

The materials, as already faid, are falt and fand, or ftones The falt is procured from the afhes of a water plant called kali, cut down in fummer, dried in the fun, and burnt in heaps on the ground, or on iron-grates: the afthes, called pulverine, 'falling into a pit, grow into a hard mafs fit for ufe. To extract the falt, they are powdered and fifted, then kept in boiling water till one third be confumed, ftirring from time to time for the better extracting all the falts; then the veffel is filled, and boiled again till half be confumed; what remains is a fort of lee, ftrongly impregnated with falt. Which lee, boiled over again in frefh copperas, tbickens, and in about 24. hours fhoots its falt; which is to be laded out; as it hoots, into earthen pans, and thence into wooden vats to drain and dry. Then'tis grofsly powdered, and dried in a fort of oven. Other plants, befides kali, yield a falt fic for glafs, as alga, common thiftle, bramble, haps, wormwood, woad, and the whole leguminous tribe, as peafe, beans, \&c. The fand or fones, called tarfo, is the fecond ingredient, and what gives it the body. They muft be fuch as will fufe, and the whiceft are the beft, fo that cryftals are prefetable to all others. At Venice they chiefly ufe a fort of pebble, refembling white marble. Flints are admirable, and make a pure cryftalline metal, but the expence of preparing them makes the glafimen faring of their ufe. Where ftones cannot conveniently be had, fand is ufed; which is to be white, fmall, and well wafhed before it is ufed. Our glafs houfes in Engs land are furnithed with a fine fand from Maidtone, the fame as is ufed for fand-boxes, and in fcouring; and with a coarfer for green-glafs, from Woolwich.
For cryftal glafs, to 200 pounds of tarfo, pounded fine, they put iso of falt, mix them, and put into the oven or reverberatory furnace, firft well heated. Here they are calcined for five hours, during which they are mixed with a rake: and, when taken out, 'tis called frit, or bollito, of which are three kinds; this is cryftal frit: the fecond, or ordinary frit, for the common white meral, is made of the bare athes: the third, for green glafs, is made of common aphes, unprepared, and a hard fand above mentioned.
Now to proceed to the operation of making glafs itfelf; they fet off this frit in melting-pots in the working furnace, adding in each a due quantrty of blackith fone, called manganefe, which purges off that greenifh caft natural to all glafs, making it more clear and azure. While tis in fufion, the workman mixes the metal well together with his fquare, fkimming off the fand, over which is a white falt, called fandiver, continually caft up from the metal, and fwimming on it's furface; which, unlefs purged off, would make the glafs brittle and unfit to work. When the vitrifaction is compleated, and the metal fufficiently clear, 'tis formed into the works required, by dipping a hollow iron into the melting-pot, and taking ous enough for the work intended. While red hor,
che work-man rolls it to and fro on a marble, to unite it's parts more firmly; then blowing gently fwells it, repeating till 'tis large enough; then whirling it about his head, he lengthens and cools the glafs; moulds' it in the ftamp-irens, and flats the bottom, by preffing it on the marble: 'tis af. terwards further falioned as occafion requires, being firft broke from the blowing-iron. As faft as the mafter finithes them, another takes them up with an iron fork, and places bem in a tower over the melting furnace to anneal, and, baving food fome time, they are put into iron pans, which by degrees are drawn further off, that they may cool gradually.
Though cryftal, in not being fufible, becomes unfufeeptible of dyes in fubftance, yet chemifts hąve found means to make it ferve for the bafis of precious ftones. For, though it will not fufe, it will calcine and make frit.
The art of making precious ftones in glafs is too curious to be paffed over; we hall, therefore, briefly point out fome of the leading compofitions.
To make a fea-green glafs, take cryftal frit, without manganefe; melt it, and, when clear, a falt will be on the top like an oil, which fkim off, while any rifes. Then mix calcined brafs and zaffer, and add it to the melted cryftal, Let the whole ftand three hours, to incorporate the colour; then ftir and mix again; take, a proof, and either heighten or lower the colour.
For an emerald-coloured glafs, thke the fame frit as before, pafs it through water once or twice to get out all the falt ; add half the quantity of common white metal ; and, when the mixture is well purified, add brafs thrice calcired, and crocus martis calcined with brimftone and reverberated: if any bluenefs remain, add more crocus. -For a turquoifecoloured glafs, evaporate all the moitture from fea-falt, till it become white ; then powder and add by degrees, to a feagreen cryftal metal, mentioned above, mixing well, till the green become opake, which the falt, now vitrified, effects. Upon this a little palenefs arifes, and by degrees the fkyblue required.-To makechalcedonies, jafpers, and agates, in glafs ; diffolve filver in aqua fortis; mix it in a glafs body, and add fal armoniac; when diffolved, add zaffer, maganefe, ferretto, crocus martis, thrice calcined copper, blue fmalt, and red lead, all in powder; keep the body ftopped ten days, flirring daily : then fet in a fand-furnace; in 24 hours the aqua-fortis will be evaporated, leaving a powder at bottom. Laftly, take very clear metal, adding to 20 pounds of it two ounces and a half of the powder, mix and let it ftand in the fire 24 hours'; and, when cold, waves and clouds of beautiful colours will begin to appear. Add tartar, vitrified foot, and crocus martis, calcined with brimitone, all powdered and mixed: let it boil and fettle 24 hours; and then make a glafs body of it, putting it in the furnace again and again, till fine ftreaks and fhades of blue, red, fea-green, and all other colours, appear; in which fate 'tis ready to be wrought into variegated veffels, \&c.
To make a gigld yellow in glafs, mix cry ftal frit with common glafs frit, and add fifted tartar and manganefe; place them in a furnace four days, with an ordinary fire; when well purified and coloured, work it.-For a granate colour, to cryftal and common frit mixed, add manganefe and zaffer; put them in a pot, and keep them in the furnace 24 hours.-For an amethylt colour, to cryftal frit, add manganefe and zaffer as before.-For a fapphire colour, either to common or cryftal frit, add zaffer and manganefe; mix and melt them in a furnace, and, when well coloured, work it.For a black colour, to cryftal and common frit, add calx of lead and tin; mix, and fet in a furnace: when melted and pure, add powder of calcined fteel, and fcales of iron; after boiling with the mixture, let it ftand and fettle 12 hours. -For a fnow white, to cryftal frit add calcined tin and manganefe; mix and fet it in the furnace to refine, for 18 hours: then caft the matter into water, and make a proof: if too clear, add more tin.-For a marble colòur, cryfta frit melted, and worked without purifying, fuffices.-For a deep red, put cryftal frit, broken white glafs, and calcined tin in a pot to melt and purify; when in fufion, add calcined feel, and fcales of iron, well powdered, thereto; mix and let them incorporate five or fix hours. Make an effay, and, if the metal be too black or opake, add brafs calcined to a rednefs; mix, refine, and make an effay as before, till it be of a blood-red; and work is fpeedily, left it lofe it's colour.
It is no inconfiderable improvement of the art of imitating gems, to make ufe of glafs of lead; the ftones, fo produced, far exceeding thofe made of common glafs, or even of cryftal in poine of colour. To pepare this glafs, the lead is firft fufed and calcined in a kiln; then recalcined in a reverberatory fire ; and, laftly, pulverine or rochetta frit being mixed with it, and the whole fet in the furnace for ten hours, 'tis caft out into water, and the glafs feparated from the lead. This glafs miy be blown or worked into veffels, after the ufual manner.-It becomes of an emerald colour, by adding pulverine frit to purify it, and brafs thrice calcined, and crocus martis, made with vinegar,-A topaz colour, by ufing
cryftal frit inftead of pulverine frit, and half the quantity of yellow glafs.-A granate colour by adding cryltal frit, manganefe, and zaffer.-A gold colour, by adding cryffal fitit, brafs thrice caleined, and crocus martis. - Colour of lapis laz brals thrice calcined, and crocus martis.- Colour of lapis la-
zuli, by adding the fnow white glafs already mentioned, with the painters blue fmalt.

## REMARKS.

Neri traces the antiquity of glafs as far back as the time of Job: that writer, fpeaking of the value of wifdom xxviii. ver. 17, fays, that gold and glais are not to be equali. to it: fo at leaft our verfion has it, after the Sepruagine, Vulgate, the Syriac, St. Jerom, \&c. But in other trandations, as well as in the original Hebrew, the word glafs is not feen: inftead thereof, the Chaldee ufes cryftal; the Arabic jacinth; the Italian, Spanif, French, Dutch, a diamond ; the Targum, a looking glafs ; Pagninus, a precious ftone; Vatable, a beryl, \&cc. The reafon of all this diverfity arifes hence, that the original word zechuchich comes from the root zacac, which fignifies to purify, cleanfe, fhine, be white, or tranfparent ; whence the fame word is applied to frankincenfe, Exod. xxy. 34, where the Septuagint renders it pellucid: fo that the word may equally fignify any thing beautiful and tranfparent, and is by no means peculiarly appropriated to exprefs what we now call glago*.

## * Merret Obferv. in Anth. Neri.

Pliny relates, that ' glafs was firf difcoverd by accident in - Syria, at the mouth of the river Belus, by certain mer-- chants driven thither by the fortune of the fea, and abliged - to continue there, and drefs their victuals by making a fre ' on the ground ; where there being great ftore of the herb ' kali, that plant burning to afhes, it's falt mixed and in-- corporated with fand, or ftones, vitrified $\dagger$.'
$\dagger$ Hit. Nat. lib. 36.
Dr. Merret will have glafs as antient as either pottery or making bricks; for that a kiln of bricks can fearce be burnt, or a batch of pottery be made, but fome of the bricks and the ware will be at lealt fuperficially turned to glafs: io that it muft have been known at the building of Babel, and as long before as that art was ufed; and likewife by the Eayptians, among whom the Ifraelites were many years employed in making bricks*. Of this kind, no doubt, was that foffl glafs mentioned by Ferrant, Imperat. to be found under ground in places where great fires had been $\dagger$.

* Obferv. in Anth. Neri.
$\dagger$ Lib. 25. 2. 7.
'Tis controverted among naturalifts, to what clafs of bodies glafs ought to be referred: Agricola, lib, xii. de re metall. makes it a concrete juice: Vin. Belluacenfis, lib. xi. calls it a ftone; and Fallopius reckons it among the media mineralia, or femi-metals : but Dr. Merrec obferves, as intimated, that the fore-mentioned are all natural productions; whereas glafs is factitious, a compound made by art, a production of the fire, and never found in the earth. To abviate this, Fallopius diftinguifhes between glafs contained in it's own mine, or it's own.ftone, and true glafs that is extracted from the fame. Now, the latter, fays he, is more artificial than a metal is, extracted from it's mineral; and as to the former, he urges, that as metal, by having its exiftence in the ore, fo glafs, by having it in the flone out of which it is educed, is natural. But this argumentation Dra Merret overturns, by fhewing, that glafs is never found in that form in any mine, but only the fand and fone whereof it is formed; whereas metals are perfectiy formed by nature into certain ipecies, in proper veins, though frequently in fuch fmall parcels, that they lie hid till the fire has collected them together, by feparating from them the other maters wherewith they were mixed. Accordingly, fire only produces metals by it's faculty of feparating heterogeneous, and congregating homogeneous bodies; whereas it produces glafs by uniting and mixing heterogeneous matters, viz. falt and fand into one. Fallopius, indeed, denies this, and pleads that 'tis falfe to fay that glafs is at all made of alhes: the afhes are only added inftead of the nitre ufed among the ancients, the better to extract the glafs out of the fubfance of the fone: but this is eafily refuted: for, if the glafs were procured from the flone alone, the weight of the metal mult be lefs than that of the flones; whereas in reality it far furpaffes it, 100 weight of fand yielding above 150 pounds of glafs. Add, that the falts made ufe of are of the moft fixed kind; which, therefore, we cannot fuppofe to be carried off by the fire; and that in the coarfer glaffes, which are corroded by the air, one may difcern, nay, pick out pieces of falt, difcovering themfelves to be fuch by their pafte.
Flint, fand, ftones, afford different Species of glafs; and $^{\text {tant }}$ the calces, according to the different manners wherein they are burnt and extinguihed, produce different degrees of
beauty in the glafs. So the athes of plants ufed herein, alfo, vary the goodnefs of glafs. A fixed alkaline falt, fharp and well purified, mixed with a pure calx of flints;, yields a glafs clearer than amber itfelf. It muft be owned, that by ufing a great deal of falt to a fmall quantity of flints, the glafs becomes very clear ; but is weak and frail, apt to crack by fire and water, and by age grows dull; and even infects liquors: put into it, and fometimes deftroys them utterly. So tea remains uncorrupted in green glafs, but in the clear kind is totally fpoiled. Hence, for our art, wie chufe a green durable glafs, made of a great proportion of earth and a lefs of falt, kept long in fufion, and well elaborated by a ftrong lafting fire. Confult Anton. Neri de arte vitraria; the excellent Agricola in his book of metals; Chriftopher Merret in his oblervations on Neri; and Jo. Kunkel, who, at the expence of that generous prince, the late elector of Brandenbourg, has brought the art of glafs to its higheft perfection, in a comment on Neri, Lipf. 1679, $4^{\text {to, and more elpecially in }}$ a treatife of artificial gems annexed thereto.
There is another fpecies of glafs contrived by chemiftry, which, though tranfparent, is at the fame time adorned with a beautiful colour, fo as almoft to equal the brighteft native gems. It is made of the pureft and moft perfect glafs, intimately penetrated, and embodied with metals, which thus communicate to it a durable luftre: in eftect, there is fcarce any gem or ftone valuable for its colour, but may be imitated in glafs prepared after this manner. If the art of glafsmaking dhould once arrive at perfection, as that by means of fire, we might be able to make glafs once and half heavier than at prefent, we hould then, with the affiftance of metals, makeartificial gems equally bright and beantiful as the natural ones; fince, by how mueh the tranfparent mater is more denfe and folid, the more lively and glittering will the metal appear through it. But as art has not yet difcovered any fuch method of giving denfity to glafs, the matter of factitious gems is too porous and rare, and thus produces a weaker and more languifhing reflection of the rays, which renders them inferior to the native kind. Some have endeavoured to increafe the weight of glafs, by adding lead to it, but this at the fame time increafes it's foftnefs. There is, therefore, ftill ground for thofe who purfue chemical enquiries, to endeavour at a method of condenfing the fubftance of glas, which will amply reward them for their pains.

Decrees of his late majefty the king of Spain, for fettling a fabric of cryftal and glafs in Spain.
His majefty, in confideration of the great importance it is to eftablifh in this kingdom a fabric of cryftal, which foreigners fupply us with, and by that means drain us of great fums of money, making ufe of our own fofa and barilla, the principal materials of the manufacture, of which there is great plenty in Spain, and in quality fuperiour to that of all other countries; his' majefty has been pleafed to grant, at feveral times, the three patents mentioned in the toyal decree, which was difpatched to the councils of Catile and the finances, January 30,1720 , and is as follows:

- Since the fabric of cryftal has not taken effect, with which - Don Thomas del Burgo, and company, charged themfelves - in the year 1712, when I granted them a patent; and that - alfo, which Don John Baptift Pomeraye, undertook by vir© tue of a patent I granted him two years ago, met with no - better fucceff; and fenfible of the great lofs my people and 6 my own intereft fuftain, from the decay of this manu-- facture, I have permitted Don Jobn Goyeneche to col-- lect together, in a place called New Baztan, mafters and * workmen, that withdrew out of my kingdoms upon the
- difappointment of the fabric fet up by the faid Don Tho-
- mas del Burgo, though the other be not expired, in order 6 to fet upa new one in the faid place; in conlequence of - which, he has collected to the number of twenty families 6 of foreign workmen, built for them in the faid place a - very facious dwelling-houfe, together with ovens, and c other workfhops, neceflary for all the materials and inftru-
- ments in this important undertaking, and ever fince it's - eftablifhment has maintained all the people at his own ex. - pence; and, having in view the great advantage that muft
- accrue to my kingdoms from the eftablifhment of the faid - fabric and others of the like kind; on which account, as it - is my royal difpofition to cherifh and encourage them as - much as pofiribe, I have granted the faid Don John de
- Goyeneche a patent for thirty years for the manufacture
c and free vending of cryftals and glafs, on the fame fa* vourable footing, which 1 granted to the faid Don Thomas - del Burgo and Don Jobn Baptift Pomeraye; and that, - on no pretence whatever, be be taxed for the barilla, which - under his own direction, or charge, fhall be fown, ga-- thered and confumed, in the quarter adjoining to the faid - fabrics, nor for any other portions he blall be obliged to - purchafe, of the product of thefe kingdoms; impowering - him alfo to have the firft refufal of thefe materials, at the " ufual prices, and alfo of the wood which it fall be necef-- Yary for him to buy in the places adjoining to his fabric.
- It Ghall be examined in the council of the firances, and the
- inftruments for putting this order in execution be fpeedily - difpatched.'

From the face of this rotyal decree it is vifible, that bieither the firft nor fecont co-partnerfhip, which undertook this fabric, could furmount the difficilties, or furnifh the confidetable expences fuch an eftablifhment ufually occafions at u's fetting out, efpeciailly when the mafter ditectors happen not to act with honour, a thing often expetienced in nesp projects; or the hands employed in the feveral works are not equally dextrous, for the fkill of fome may be deffared by an ignorance in others, which is too otten met with in thofe foreigners that have come over on their own heads, (and are not procured) and who generally leave their own country and original bufinefs out of levity, or are rejected by the trade for their unkilfulnefs.
And, even when the mafters and workmen are very capable and do their duty, there difficult and chargeable eriterprizes too often nifcariy, as it has fometimes been found in france, notwithftanding they collected and brought over artificers from Venice to lay the foundation, and Lewis XIV. for their encouragement, had granted the directors and proprietors many privileges, immunities; and fupphes of money; however, by perfeverance, and the application of his exalted meafures, this interefting project was at length fo happily executed, that the cryftals of that kingdom exceed thofe of Venice boch in quality and quantity; and in this inftance is verified the maxim, that founding fuch important eftablifhments refembled but fowing the feeds of plants, and wanted the fteady and due cultivation of a miniftry, as wefl as a firm and powerful protection of the prince, to ripen and gather the friits.
And in every refpect his moft Chriftian majeaty took alfo efpecial care to facilitate and fecure a good market for the cryftal that was manufactured (a thing mof materăl for the prefervation of manufactories) by anedict, that laid a duty upon foreign glafs imported into France of zooo Spanith seals per quintal, while that of French manufacture paid but 15 reals per quintal exported, with a view to encourage, as well the home confumption of their own goods, as the exportation of them abroad, difcouraging at the fame time by fuch heavy duties the importation of a foreign manufacture.
A few years after, the better to accomplifh thefe two intereft. ing points, he employed another meafure, which was an abfolute prohibition of foreign glafs; fo that now France not only anfwers her own demands, but exports alfo to other countries; and by this means has drawn money into the kingdom, and put a ftop to the extraction of confiderable fums that went to Venice, in payment for the great quantity of glafs they formeriy had from thence, as every perfon inuft think, who refleets upon the large confumption there is of it in France, both for what is expended for coaches, windows, looking glaffes and other ornaments, and it's being fo frail a commodity, that, as one biaft of wind forms, another deftroys it. Upon the fame account it is alfo evident, that the confurnption of this commodity mult be confdetable in Spain, which calls upon us to employ the moft vigorous and tffectual meafires, that are any ways practicable, for the enceuragement and prefervation of fuch a fabric, in imitation of his prefent-majefty's grandfather, fays a learned Spaniard.
Though thefe difficulties, a prodigious expence, and the recent mifcarriage of the two partnerfhips above mentioned in Spain, that had charged themfelves with this undertaking, twice defeated within the compafs of a few years, difheart ened, as it is natural to imagine, the generality of the kingdom, they were not fufficient to damp the zeal and refolution, with which Don Jofeph de Goyeneche, treafurer of the kingdom, undertook and purfues every meafure in this important project, which tends to his majefty's fervice, and the intereft of the public; as is vifible from the contents of the fame royal decree, and will appear farther from other decrees, that ball be produced hereafter, when we fpak of the many other ufeful manufactories that are fet up by the fame perfon, and ftill fubfift in his two towns of Yllana and Almeda, in New Baxtan, peopled at his own charge, and in other places, that fhall hereafter be taken notice of, For, in fpite of the above difficulties, the recent and repeated diffappointments of the project under two partnerfhip, he engaged in it at his own rifk, without any affociation; but his own induftry and fortune laid the foundation, and maintains it at an immenfe charge in New Baztan, where glafs is already manufactured fit for all ufes.
And though he might have been difcouraged, by finding it could no longer be fupported in that place for want of wood, great plenty of which is requifte for fuch a purpofe; yet he has bad the fpirit to engage in the new enterpize of tranfplanting it to the new town of Coron, near the vaft and fazcious forefts of Cuenca, and has fucceeded in it with a new charge of rebuilding dwelling-houfes and work-hops; and alfo to great advantage, both for the goodnefs and plenty of the cryffals, and the duration of the manufactory.
By the very fame aecident, a fcarcity of wond, the like mifcbance befel one of the partnerfhips that undertook this fabric in France; for, having fet it up in the fuburbs of Paris, they were obliged to remove into the neighbour hood of large foretts, with the advantage of a river to eafe the expence of carriage.

## G L:A

## A memoir on the fabric of glaffes at St. Gobin.

We have avoided in this memoir a too exact account of many meafures and effential precautions, to be obferved either in the ftructure of the furnace, or in the work; be caufe it is juft to let the undertakers of this manufacture keep to themfelves the knowledge of the particulars, to which they are intitled, exclufive of all others.
The building where the glaffes are run is called the hall, which may be eleven fathoms long, and about ten and a half broad in the clear. The furnace is in the center, and is three fathoms long, and two and half wide. It is built of very good brick. We fhall not determine the thicknefs any more than the height of its walls.
There are two doors three feet high on each of the fides, of two fathoms and a half, and a door three feet and a half high on the longer fide. The two former ferve to throw wood continually into the furnace, and the laft to get the pots and pans in and out, as will be taken notice of hereafter.
This furnace is upon folid foundations, and paved with fquare tiles of a well-baked earth, of the fame quality as that of the pots into which the matter is put to be melted: It is arched within to the height of ten feet. The tube for the venting of the fmoke is in the center.
On one of the fides of the length of the furnace, and at the height of three feet and a half, is the great arched aperture, ten feet wide and three feet high, and haped like the mouth of an oven. They through this aperture put in the folder and fand to be melted in the pots, and through it take out the melted matter which is carried into the pan, when they are ready to run it.
Round the furnace are the walls of the hall, well built with free-ftone: there are, in thefe walls within, apertures like the mouth of a common oven: the hearth of thefe apeatures, which are about four fathoms and a half deep, is two feet and a half from the ground floor. Thefe fmall furnaces are called carquaiffes, and ferve to neal the glaffes after they have been run.
Thefe furnaces make fo many fmall buildings round the hall, and much lower than the under part of the roof that covers it. There are without a like number of apertures of the fame fhape, right over-againft thofe that are within the hall, which makes a parallel arch three feet high. There are by the fides of thefe apertures fmall arched niches, with pipes to give vent to the fmoke. They light the fire in them to heat the carquaifes. A large gallery terminates thefe fmall buildings, and helps the outward fervice of the carquailfes.
The manufacture is compofed of many of thefe halls, and of a multitude of large rooms, the upper part of which ferves to lodge the workmen, It has fine buildings to lodge the mafters, a very pretty chapel, and wide yards, many of which ake full of ftocks of wood of feveral kinds. The compafs of the furnace is very large, and inclofed with good ftrong walls. The whole is fruated at the top of a fmall hill, clofe to the village of St. Gobin, near La Fere and Chauny, two towns of Picardy. The foreft of St. Gobin, which is of a confiderable extent, has given birth to the eftablifhmen of this manufacture. There are fine frings in the foreft that fupply on the declivities of the bill all the water necef fary for the work. Stone is very good and very common there : they even now and then draw fome out of the inclofure of the manufacture.
The matter of which the glaffes are made, is a compofition of folder, and of a very white fand, which is fetched from the neighbourhood of Creil, a place in leagues diffant from Paris. There are above 200 people employed round tables in the halls, about cleaning and picking the folder and fand, to take all heterogeneous bodies out of them, After this, the whole is wathed feveral times, and dried fo as to be pulverized in a mill, confifting of many pefles, which are moved by horfes that turn round with their eyes blindfold. This done, the fand is fifted through, filk fieves, and then carried to be dibed in narrow places, contrived in the corners of the furnace; four feet and a balf from the ground-floor, whence it is put into the pots to be melted, in the manner hereafter mentioned. The largeft glaffes are run; the middle-fized and fmall ones are blown. 1 fhall begin with the defcription of the running. The abovefaid furnace is not fufficiently heated before it has confumed 50 cords * of wood: it is able, after that, to melt the folder and fand, It keeps the fame degree of heat, by a continual fupply of wood. This is done by two men in their fhirts, who are relieved every fix hours. The furnace i never extinguifhed but at fix months end, in order to be rebuilt. During this time, they rebuild that which was cxtinguifhed before the furnace actually made ufe of was employed, and make the neceflary repairs in both the hall and the carquaiffes.

## * The French cord is two cart Ioads.

The furnace contains many pots, formed like crucibles, three feet high, and about as much in diameter, of a well-baked earch, of a whitifh colour, inclining to that of tripoly. Thefe pots may hold the quantity of a hogfhead of wine, and are
very cofly: Few of them will hold out the full fix months of the fuinace's being hot. It happens fometimes that the pots break when tull of matter, which is a confiderable lofs to the manufacture
Thefe pors being in the oven, the folder and fand are put into them by the men who run the glaffes, who have in hand an iron thovel, in form of the fcomp that ferves to take th water out of a boat, and which is full of either fand or folder: they pals one after another before the mafter poker, who puts fmall quantity, on each thovel-ful, to facilitate the meltins of it, by repeating the fame mixture till the pots are quite full. The folder and fand remain in the pots for 36 hours cogether, after which the matter is fit to be run.
All hands are now ready for the running of the glafles. They begin by emptying, with a large iron ladle, the matter out of one of the pots into a pan, which is put into the furnace for that purpore. This pan is of the fame earth as that of the pots, and may be 36 inches long, 18 inches wide, and as many deep: there are fome 30 inches long, with the fame depth and width as the reft, There are in the length of thefe pans notches three inches wide, to fop them on the fides of the fledge, which is all iron, and very low: the tall of this fledge forms a fquare kind of pincers, which, when thut into the pan, takes off the notches. The two fides of thefe pincers, itretched out in the form of an X, make the fhaft of the ledge. The motion of thefe pincers is made upon the axle-tree of the fledge, where there is a large iron peg that croffesit, and is flopped with a pin. They fix the pan upon the fledge, with an iron chain on the fide of the fhaft.
Several workmen carry the fledge over againft one of the heated carquaifes, where the glafs is to be rum upon a table of caft iron, which is horizontal, and level with the hearth of that carquaiffe. This table is 10 feet long, and 5 feet wide, and ftands folid upon a timber-fupport.
They put, in a parallel direction upon this table, a couple of flat iron bars, or rulers, of the thicknefs intended in theglafs, and which ferve alfo to fix the width of it; by their diftance from each other. They put on the right fide of the table an engine, in form of a crane, which is faftened to the wall at top, and ends at the bottom in a pivot, to make it turn as occafion requires. , This machine is full three fathoms high, its crofs-piece a fathom in length, and its upright beam 8 or 10 inches thick. This engine is moveable, and they carry it to all the carquaiffes. It ferves to lift the tub above the table, by means of a couple of iron bars, nine fest long, and forged fo as to clip.the whole tub, that it may be eafily inclined, and the matter run out of it upon the table. There are four iron chains to fupport the pincers, which unite at a big rope, that runs througha couple of pullies in the crofs-beam of the crane. The whole is lifted up or lowered with a cric*.

* Cric is the French word to be tranflated here : it is the dented machine that ferves wheel-wrights and coach-makers to lift up the wheel of a coach or cart from the ground, to make it turn freely upon its axle-tree when any ching is to be mended in it, and to fupport the coach on the lide. There are many iron teeth in a cric, which move up and down with a turning handle.

There is at the foot of the table a roller of caft irnn, five feet long, and a foot in diameter, refting upon a couple of timber treffels. This roller being laid upon the rulers, or bars on the table, that raife above the faid table the pan full of matter, led by two men, who holding the two fides of the bars, they grafp it like pincers, caufe the pan to lwing in the manner of a fweep, and pour down the matter before the roller, which is held by a couple of workmen. Thefe people make it roll fwiftly, and in a parallel fituation, aver the matter towards the carquaiffe, and roll it back the fame way, to bring it to its place again. They have the upper half of their body, and their face, wrapped up in a thick farp cloth, topreferve themfelves from the dartings of the fire.
There are on the three other fides of the tavle fmall wooden troughs, full of water, to recelve the over, lus of the matte juft run. The $m$ n that run the glafles are 20 in number at leaft, and ast fo perfectly in concert, that the work is done quickly, and without confufion, every one having his picuar province.
The running of the glaffes is performied in prefence of the head of the glafs houfe, attended by the overfeer and the fecretary. When the glafs is sun, theie gentlemen examine it, whether there are any bubbles in it : thefe are fuall places, fhining like ftars when the glafs is bot. It any are perceived, the glafs is cut directly in that place; if it is at the third or fourth part of the glafs, the parts cut off ferve to make imall glaffes: when they a e but fhards, they are thrown among the wafte.
The glafs being cooled, and declared good, or free from bubbles, by the approbation of the infpectors, they puth it off the table into the carquaiffe level to it. This is done with an iron raker, as wide as the table, that has a handle two fathoms long.
There are on the other fide of the carquaiffe without workmen, who, with iron hooks, pull the glais to them, and range

## G L A

## G L'A

it in the carquaife, which holds fix large glaffs. When it is full, they fop its apertures with the doors, which are of baked earth, and every chink of them with cement, that the glafles may be fmothered and better heated. They remain in that condition for a fortnight, and then are drawn out with all imaginable caution, to be put in boxes, and fent by water to Paris, where they are polithed.
It may be obferved, that the oven-full, or the quantity of matter commonly prepared, fupplies the running of 18 glafles, which is performed in 18 hours, being an hour for each glafs. The workmen work but fix hours, and are relieved by others, who perform the fame operations, tranforting hoth the crane and the table near another carquaiffe.
The manufacture would make vaft profits, if the 18 glaffes dd all fucceed, and were all of their intended meafure; but there are fometimes runnings in which not one of the glaffes will be able to preferve the fineft fize, whith is 100 inches in length, and 50 in width: however, many of them fucceed with thefe dimenfions.
The laft glafs being run, they fcour the pots before they put into the furnace the matter of another running, which is to begin 36 hours after the foregoing: fo that they put the matter into the furnace, and begin to run it, every 54 hours. The men who run the glafs have nothing to do whilf the matter is melting, except thole who are appointed to watch the fire.
Thefe are all the particulars belonging to the running: let us now fee thofe of the blowing of glaffes.
The hall of the blown glaffes is fmaller than that of the running: it is made in the fame manner, with this difference, that there are no carquaiffes round it. But there is, overagainft the furnace, a large covered gallery, 12 feet wide, in the middle of a building which is above 12 fathoms long: there are all along, and to both the right and left of this gallery, carquaifles, the hearth of which is raifed four inches above the ground-floor: they are is feet deep, and their arches three feet high, like thofe of the run glaffes. Гhe furnace here, as well as in the running, is not heated above fix months together; fo that there is a fecond hall to perform the blowing, whilf they are making all proper repairs in that at reff: the pots are of the fame earth as thofe of the run glaffes. They are fcoured, and the matter put in the furnace in the fame manner. The matter is metting the fame face of time, to be fit for the blowing of glafles, which are all of them lefs than 40 or 50 inches.
The workman who blows the glaffes when the matter is melted, takes an iron cane, fix feet long, and two inches in diameter, bored hollow quite through, fharpened at the end which is put in the mouth, and widened at the other, that the matter may adhere to it. He dips this cane into one of the pots, through the mouth of the furnace, and by that means takes up a fmall ball of matter, four inches in diameter, which fticks to that end of the cane by conftantly turning it. Then he takes it out, and blows a little into the cane, that the air may fwell this ball of matter. Next to this, he carries his cane over a large round bucket, full of water, and refting upon a three-footed fupport, at the height of four feet; then with his hand he takes water and fprinkles the end of the cane to which the ball of matter ficks, ftill turning the cane, that, by this cooling, the matter may coalefce, and make but one body with the cane, fo as that it may fuftain a greater weight.
This operation being over, he again dips the cane into the fame pot, to take a greater quantity of matter, fill turning the cane as before : he takes it out, and cools it in the abovementioned manner.
He , for the third and laft time, takes in the fame pot a quantity of matter fufficient to make his gla's. He takes the cane out of the pot, loaded with matter, and being of the fhape of a large pear, which may be ro inches in diameter, and a foot long, he goes to the bucket, and cools it at the tail: this cooling is performed more quickly than the other two, not to lofe the opportunity of the heat of this mals of matter. He at the fane time blows into his cane, and, with the affiftance of one of the labourers, gives his cane a ballancing motion, which caules the matter to lengthen, and which, by being thus blown and lengthened feveral times over, affumes the form of a cylinder, ending like a ball at bottom, and in a point at top, which fticks to the cane only by means of the feveral coolings already mentioned.
When the workman has blown fufficiently, and lengthened his matter fo as to make it become of an even thicknefs, he defires his affiftant to mount upon a ftool, three feet and a half high, on which there are two fmall upright pieces of timber, with a crofs beam of the fame, to fupport the weight of the glafs and cane, which are kept fomewhat obliquely by the affiftant, that the mafter may, with a punchion fet in a wooden handle, and with a mallet, make a hole into the mals. This hole is drilled at the center of the ball that terminates the cylinder: it is an inch in diameter at moft.
When the glafs is pierced, if there are any defects in it, they are perceived after this operation: if it has too many, they break it directly, and throw the matter among the wafte: if there are none, or very few about the extremities, the work-

VOL.I.
onan goes and lays his cane horizontally on a little iron treffei, placed on the fupport of the aperture of the furnace. He expofes the glafs to the heat of it for about balf a quarter of an hour, and then takes it away. In the mean time, the affintant mounts the foot-ftool again, in the former fituation, whilft the mafter, with a pair of long and broad mears, extremely fharp at the end, widens the glafs, by infinuating the fhears into the hole already made with the punchion, and by thrufting them more and more into it, as it grows wider. Whilft the affiftant turns the mafs of glafs, the mafter goes on with opening of it, till the opening is fo large at lait as to make a perfect cylinder at bottom.
Next to this, the workman lays his glafs upon the treffel at the mouth of the furnace, to heat it. Then he takes it, and gives it to his affiftant on the foot-ftool, and with large thears cuts the mafs of matrer up to half its height. If there are any defects in the glafs, it muft be cut in that place, as this fection makes the extremities of it.
There is at the mouth of the furnace an iron tool, called pointil, which is now heating, that it may unite and coalefce with the glafs juft cut, and do the office which the cane did before it was feparated from the glafs. This pointil is a piece of iron, fix feet long, and much of the form of a cane: there is at the end of it a fmall iron bar, a foot long, laid equally upon the long one, and making with it a T. This little bar is full of the matter of the glafs, about four inches thick. This red-hot pointil is, prefented to the diameter of the glafs, which coalefces directly with the matter round the pointil, fo as to be able to fupport the glafs for the following operations. This done, they feparate the cane from the glafs, by ftriking a few blows with a chiffel upon the end of the faid cane, which has been cooled; fo that the glafs breaks directly, and makes this feparation, the cane being unloaded of the glafs now carried by the pointil.
This done, they prefent to the furnace the pointil of the glafs, laying it on the treffel to heat, and redden the end of that glafs, that the workman may open it with his fhears, as he has already opened one end of it, to complete the cylinder, the affiftant holding it on his foot-ftool as before.
They then again, and for the laft time, put the pointil on the treffel, that the glafs may grow red-hot, and the workman cuts it quite open with bis fhears, right overagainft the foregoing cut. This he does as before, taking care that the two cuts make but one and the fame line.
In the mean time, the man who looks after the carquaiffes comes to receive the glafs upon an iron fhovel, two feet and a half long without the handle, and two feet wide, with a fmall border of an inch and a half to the right and left, and towards the handle of the fhovel. They lay the glafs upon it, flattening it a little with a fmall fick, a foot and a half long, fo that the cat of the glafs is turned upwards. They feparate the glafs from the pointil by ftriking a few gentle blows between the two with a chifel. This done, they carry the glafs on the fhovel to the mouth of the hot carquaiffe, where the glaffes are to be nealed. They take away the fhovel : the glafs grows red-hot gradually, by the vaft heat which is at the mouth of the carquaiffe: the workman beionging to it takes an iron tool, fix feet long, and widened at the end in form of a club at cards, four inches long, and two inches wide on each fide, very flat, and not half an inch thick. With this tool he gradually lifts up the cut part of the glafs, to unfold it out of its form of a flattened cylinder, and render it fmooth by turning it down upon the hearth of the car quaiffe. The faid club, being infinuated within the cylinder, performs this operation, by being puthed hard againft all the parts of the glafs.
This done, and the glafs being quite fmooth, the workman pufhes it to the bottom of the carquaife with a fmall iron raker. He ranges it with a little iron hook. When the carquaiffe is full, they fop and cement it as they do the carquaiffes of the run glaffes; and the glaffes remain there alfo for a fortnight, to be nealed. When this time is over, they take them out to polifh them.
A workman can make but one glafs in an hour, and he works but fix together, after which he refts fix hours, to begin the fame operation a-new. He is never at reft but when the matter is melting in the pot.
Of the principal laws of England relating to Glass.
By an act of the rgth of his late majefty, intited, An act for granting to his majefty feveral rates and duties upon glafs, it is enaeted, That upon all crown, plate, and Aint glars imported, a duty of 8 d . per pound weight fhall be laid; and on all green, or other glafs imported, 2d. per pound weight ; and on all quart bottles and flafks imported, 2s. per dozen; and on all bottles and flafks imported, containing more or lefs than a quart, 2s. per dozen quaris, be the bottles containing the fame greater or leffer, to be paid by the importers. Allo,
The fum of 9 9. $4^{\text {d. }}$. per 100 weight on all materials or metal, or other preparations made ufe of in the making of crown, plate, or flint glafs, and all white glafs, of what kind foever. And

Upon all the materials, or metal, or other preparations ufed in the making of common botties, and all green glafs, 2 s . 4d. per 100 weight, and after that rate for a greater or lefier quantity. Said duty to be paid by the maker.
In cafe any crown, plate; or flint glafs, or fuch bottles or tlafks fo imported as aforefaid, thall be landed before entry, and the duties paid, the fame thall be forfeited, one moiety to the ufe of bis majefty, the other to fuch who ghall feize or inform.
After the ift of May, $174^{\prime 6}$, no perfon thall import into Ireland any crown, plate, or white glafs, or common botties, or other green glafs, or of any other kind; other than of the manufacture of Great-Britain. All other kinds fhall be forfeited, and deftroyed within io days after condemnation, and the veffel wherein imported thall be alfo forfeited, with her tackle and furniture; ard the mafter, and all others concerned in loading the fame, fhall forfeit yos. for every pound weight, and fo in proportion for any greater or leffer quantity.
GLOCESTERSFIRE is an inland county, bordering on the eaft on Warwickfhire, Oxfordihire, and Berkfhire; on the fouth on Somerfethire and Wilthire; on the north on Worcefterfhire; and on the weft on Herefordinire and Monmouthifire; and is about 156 miles in circumference. It's chief tivers are the Severn, Wye, Avon, Ilis, Leden, Frome, Stroud, and Windrufh.
The air is wholefome throughout, but the foil various. In the eaft it is hilly; in the weft woody; but the middle is inriched with a fweet fraitful vale. The Severn, which wafhes the county for 40 miles together ( 70 , including windings and turnings) brings neceffaries to it from abroad, and conveys it's native commodities to foreign parts. This river is in forme places two or three miles broad, and comes in with a violent tide, called the Boar, which rolls with a head from two to four feet high, carrying every thing before it, and overflowing it banks.
The county abounds with all forts of grain, cattle, fowl, and yame, excellent bacon and cyder ; and it's rivers afford great plenty of fifh, efpecially falmon from the Severn, with lampreys and conger-eels.
It is ufually divided into three parts, viz.

1. Coteswould, the hilly part, which is not very fertile, lying expofed to the winds and cold, that it's corn is flow in coming out of the ground; hence the proverb among them, As long in coming as Cotefwould barley: but it is healthy, and feeds multitudes of theep, remarkable for the finenefs of their wool. It has been computed that, before our wool began to be clandeltinely exported to France, 50,000 cloths were made yearly in this fhire, eftimated at rol. a cloth, the fine with the coarfe; and the number of fheep kept in the county, moft of which are fed here, is computed at 400,000.
II. The Vale. In this part moft of their excellent cheefe is made; though what is fo called in London comes moftly out of Wilthire, the real cheefe of this county going more to Briftol.
III. The Forest of Deain, which was formerly covered with wood for the fpace of 20 miles long and ro broad; but the many rich veins of iron difcovered there, and forges eftablifhed by act of parliament for working it, the woods are not only reduced to a narrower compafs, but many towns and villages have been built in the foreft. Where the woods are fill preferved, the oaks are reckoned the beft in England. Glocester is feated on a branch of the Severn, which brings up fhips to it. Here are 12 incorporated companies for it's trade, which was confiderable till leffened by the neighbourhood of Briftol; but pin-making is now one of it's chief manufactures.
Cirencester, vulgarly Ciceter, has it's name from the Churn that paffes by it. It's Friday market, which is chiefly for wool, that manufacture being the principal trade here, is reckoned one of the greateft in the kingdom; and the weeks before Palm-Sunday and Bartholomew's are confiderable fairs for cloth.
Tiwksbury, on the conflux of the Severn and Avon, is a large, beautiful, and populous town, of which the chief manufacture is woollen cloth and fockings. The cloathing trade here is the better accommodated, by reafon of it's nearnefs to Cotefwould Hills and Stroud Water, the former furnifhing the fleece, and the latter the dye. It has been long noted for muftard-balls made here, and fent into other parts.
Campden is famous for the manufaeture of fockings.
Dean, in the foreft of that name. Cloth was once, but pins are now, it's chief manufacture; and the owners of lands here make good advantage by digging up iron cinders, which they fell at a good price to the furnaces.
Cheltenham, on a brook that runs into the Severn, drives a confiderable trade in malt, and is much frequented on account of its mineral waters.
Stow on the Wound. It's fairs; which are on May-day and the $3^{\text {th }}$ of October, are famous for hops, cheefe, and fheep, of which it is faid 20,000 were fold in one October fair.
Stroud ftands on a hill, at the foot of which runs the river

Stroud, which is exceeding clear, and particularly famous for it's peculiar quality in dying fcarlet broad cloth, and all other grain colours in the beft manner: fo that many clothiers live near, and along it's banks, for near 20 miles, who have erected many fulling-mills upon it.
Durrsiey; it's chief manufacture is woollen cloth.
Lechlade. The Thames begins here to be navigable, and brges for Londin, quay to take in butter, checfe, and other WOTt on under EDGE, is a pretty town, and has beens. noted for the making of cloth. Its pariin, in which arg abundance of the woollen manufacturers, is 12 miles in are cuit.
Tetbury, a handifome populous town, has a trade in yarn; and great quantities of cheefe, bacon, and other commodities, are fold in it's markets
Chipring-Sudbury has a good market for com, and other provifions, but efpecially cheefe, for which it is reckoned the greateft in England, except Atherftone in Warwickfhire.
Marshfield is a confiderable cloathing town, and drives a good trade in malt.
Kingswood is the name of a foreft near the city of Briftol, containing about 5000 acres. On the edge of it, at a place called Conham, are thofe famous works for fmelting copper, carried on by Mr. Wayne, \&c. who fupply the Eat-India and other companies with vaft quantities yearly, befides what is ufed by the brafs-work in that neighbourhood. The chief part of the ore is brought from Ireland and Cornwall, and the coals from pits in the neighbourhood.
GOLD, is the heavieft, and moft fimple of all known badies, and compofed of two fubftances; the one extremely pure and fimple matter, of the nature of mercury; the other, which is faid to fix it, is equally pure, and of the nature of fulphur. It is the molt malleable and ductile of all metals, wholly incapable of ruft, and not fonorous when ftruck upon, requires a ftrong fire to melt it, a greater degree than fufes tin, but lefs than is neceflary to fufe iron or copper. It turns white before it runs, and when in fufion it appears of a pale bluifh green colour on the furface.
It amalgamates the readieft of all metals with quickfilver; when in fufion, eafily and intimately blends itfelf with filver, with which, when mixed, it will alfo run into a mafs with iron. It more eafily mixes with copper and the other metals, and with fome of the femi-metals, as. regulus of antimony. It will remain unaltered, and undiminifhed in weight, in the fierceft common fire. Expofed to the ftrongeft burning giaffes, it fparkles and flies off in fmall maffes, which, examined, are found to be pure unaltered gold; but, if often expofed, it is faid, that part will fly off in fumes, and the remaining fubftance be of a purplifh deep blue, more of the nature of vitriol than of gold, as wanting the malleability and feccific gravity.
Gold is the moft divifible of all bodies; if melted with 100000 times it's weight of filver, it will be fo perfectly blended with it, that any grain of the melted mafs is, on affaying, found to contain it's propertionate quantity of it; and a fingle drop of its folution, in aqua regia, gives a metalline tafte to a pint of fpirit of wine. It's ductility is fucb, that the wire-drawers can extend a leaf of gold to the $12,000,000$ th part of an inch, in thinnefs, over a flatted filver wire, which will be perfectly covered, though viewed with a microfcope. It's fecific gravity is as 19420 to 1000 .
It's peculiar folvent, aqua regia, owes it's power over it to the fea-falt it contains, being almoft the only falt that willact on gold. This folution affords one teft for this metal, and fufion, with antimony, gives another; for on keeping up the fire to a great height, the antimony will be driven off in fumes, and leave the gold, if pure, unaltered in weight; the antimony taking any other mixture away with it, filver not excepted.
If falt of tartar, or any other fixed alcali, be thrown into a folution of gold, it is precipitated in form of a powder, that has a greater explofive power than gun-powder, and is called from its propetty aurum fulminans.
Gold is ulualiy found in the earth native, in it's own pruper form, not in the ftate of ore; but feldom quite pure, containing ufually fome copper, and oftener fome filver among it. Thus mixed with other metals, it is found fometimes in fmall granules among the fands of rivers, fometimes in larger maffes, loofe and alone, or mixed with red or whitifh marle, in the fiffures of rocks. But it's moft ufual form is that which is vulgarly, though improperly, called gold ore; that is in maffes of a whitifh opake ftone, like cryfal, in which the native gold lies like drops and threads, and fometimes veins It has many beautiful appearances, the ftone itfelf heing tinged with black, green, and other colours; fome fones there are coarfer. In all thefe ores, the gold is in its proper form; but in fome metalline fubttances it is reduced to the ftate of ore, being reduced to a difcoloured and brittle mafs, penetrated with fulphur or arfenic, thefe two fubffances naturally debafing the other metals into that ftate. Whenever gold is found thus altered, it has always filver with it, and the maffes are properly filver ores, or of fome other metalin which there is filver, the gold being always in the fmalleft quantity.

Among thefe gold ores, lapis lazuli is reckoned ; fome of them, befide the gold-coloured marcafite, containing alfo a little gold. Common fand and clay may alfo be seckoned among the ores, few but containing fome gold, though not enough to pay the expence of working, as is the cafe with orpiment.
The colour of our yellow marcafites has tempted many to believe them almoft all gold; but, on calcining them, they retain not their yellow colour, but turn red.
Gold refifting the action of lead, or glafs of lead, and fuftaining the copel and teft, in which other metals, except filver, turn to fcoria, is eafly feparated from its ore, by the common method of copelling and tefting.
When in it's native ftate, it is alfo conveniently feparated by amalgamation with mercury, as mixing more readily with it than even filver does.
The ready way of feparating it from it's ore by the copel, is to mix a quantity of it in fine powder, with eight times it's weight of granulated lead, keeping it red-hot in the teft, till the fcoria on the furface are perfectly vitrified; after which, the lead and gold, thus feparated from the other particles, are to be put into a copel, and kept on the fire till all the lead is burnt into litharge and fcoria, and the gold alone remains on the copel. When the ore is mixed with other fubftances, befides ftones or earchs, as pyrites and the like, a little glafs of lead is to be added, which makes them run thin, and more eafily precipitate the metal. Thele methods are to be ufed when it is in a ftate of ore; but when in it's metallic form, though mixed, the fhort way is by amalgamation. To do this, powder the ore, then wafh away the lighter and fouler part, infufe the reft in itrong vinegar, with a little allum diffolved, pouring off the vinegar afterwards, and walhing the ore with water; after which it is to be dried and rubbed with a mortar, with four times it's weight of mercury, till all the gold be taken up by it, feparating as much as can be of the loofe mercury, by ftraining through a leather, fqueezing well, and feparating the renainder by diftllation or evaporation ; and the metal left behind, is to be fufed with borax, till it is quite pure.
When there is gold and filver together, in the remaining mafs, they are to be feparated by aqua regia, evaporating it when it has diffolved all the gold, which muft be melted in a crucible with borax: the undifolved filver is to be melted in another. Finally, gold mixed in a regulus, with any of the other metals, is readily feparated from them by fufing the whole, with three or four times the weight of glafs of lead. Aqua regia, [fee that article] though the common folvent of gold is not the only one, it being long fince difcovered, that the fumes arifing from a mixture of the oils of tartar and vitriol will difolve it, and a common liquid menfruum may be produced from thefe, which will have the fame power. Mercury is alfo a true folvent by amalgamation; and the liver of fulphur, fufed with it, takes it up fo perfectly, that it will be carried into a milk of fulphur, by the common proceffes afterwards with it.
It's virtues, in medicine, feem altogether imaginary; wherefore, prefent practice allows it's ufe as an ornament only to medicines. The only preparation of it, ever received as a medicine, by rational people, is the aurum fulminans, and that has been of late proved to be a very mifchievous one.

## Aurum Fulminans

Take four ounces of aqua fortis, and one of common falt, mix, and they will make an aqua regia of a yetlowifh colour. Set off this liquor, in a fand-beat, and diffolve in it as much gold as it will take up, which is fomewhat more than a fift part of it's own weight. When the gold is difolved, pour the folution from the black powder, which will remain at bottom, if any filver was in the gold, and drop into the liquor oil of tartar per deliquium, till there is no more ebullition. The gold will be found precipitated in form of a yellow powder; this is to be feparated from the liquor by decantation, walhed feveral times with water, and dried by a gentle heat This powder is one fourth more in quantity than the gold ufed. If heated beyond a certain, very mild degree of heat, it goes off with a loud explofion, whether the heat be cauled by fire, or only rubbing too violently. This effect is prevented, by adding a larger quantity of oil of tartar than neceffary in the preparation, and if melted with four of brimftone, and the fulphur burnt off, it alfo lofes this property, and turns of a purple colour.
This powder, given internally as a fudorific and cordial, often occalions violent cholics, and other fatal fymptoms, and ought, perhaps, to be wholly banifhed out of practice.

## Tincture of gold, or aurum potabile.

There is no fuch thing as a true tincture of gold; but thofe who are defirous of what is fo called may make it thus: Diffolve any quantity of pure gold, refined with antimony, in 12 times it's weight of fpirit of falt; add half the quantity of the effential oil of lavender, rofemary or the like: fhake the two liquors together, and let it fand till the oil feparates to the top; it will have acquired the yellow colour the menftruum had, and is to be then poured off, and mixed with
four times the quantity of firit of wine : let thefe itand gether till they are of a purple colour.
This is fuppofed to poffers the virtues of a cordial and fudorific, which, if it have, muft be owing to the effential onl, not to the gold, which may be feparated in it's own proper form by mere evaporation.
Gold tinges tranfparent fubftances of a fine red colour: it is evident in the ruby, from the fragments of whith grld may always be feparated. The fame effect follows the artificial production of them: the fine fllings of it, fufed with borax, adding a fmall quantity of falt of tattar and crude nitre, give a fine, though not a deep red, to the gloffy matter refulting from this, as from all other fufions of borax. If one part of gold, and five of pure tin, be calcined together, they form a powder, a few grains of which, thrown into a compofition of red lead and cryital, vitrify, give the glafs the true culour of the ruby, and, if more be added, will be deeper and referrble the paler amethyfts. The fame effect will be alfo produced by a precipitation of gold from a folution in aqua regia, by adding a folution of tin.
Numberlefs. bave been the attempts to convert other metals into gold; but as they are all lighter, and as nothing is fo hard to give by art as gravity, they have been hitherto, and are likely always to be without fuccers.
The degradation of it feems nearly as difficult as the making it. Some have gone fo far towards this, as to bring it to a flate in which no reducing fluxes they were acquainted with would get it to iffelf again; but this is no proof others might not be invented that would. The vapour of pholiphorus calcines it indeed to a kind of calx, and fo will a long and gentle calcination of gold that has been amalgamated with mercury ; but we have been able to reduce gold in this tate, produced by either means, into pure and malleable gold again.
Of working Gold, \&c. in the large way of Business.

In the large way of bufinefs, filver or gold ores are treated either by amalgamation with mercury, or by fmelting and refining them with lead. The method by amslgamation is only ufed where the ore is exceeding rich, particularly at the filver mines at Potofi: for, by grinding fuch rich ores with mercury, the nobler metals will be drank up by it, and may be readily feparated from it again by diftillation; which carries over the quickifiver, and leaves the nobler metals behind. Lead is ufed along with the poorer ores, in order to drink up the nobler metals they may coptain; which it does much after the fame manner by fufion, as quickfilver does without ; fo as to feparate many heterogeneous parts, by keeping them floating, and afterwards reftoring the nobler metals by cupellation.
The large way of fmelting gold and filver ores is amalogous to the frall one of affaying [fee the article Assaying] all things being proportionably larger, the fre animated with bellows, and the blaft directed upon the furface of the melted metal, fo as to blow off the lead in the form of litharge, before it is fully vitrified. But here the filver is not perfectly refined at one operation; fome proportion of lead fill remaining mixed among it, that requires to be burned out after the fame manner in a ftronger fire: and even thus it is with great difficulty that filver can be obtained pure, or torally feparated, either from lead or copper. This large way of working raight, perhaps, be improved in refpect of the veffel, of tef employed, and the management of the fire, fo as to work by the means of flame, without the afiflance of bellows. With regard to the teft, we are to obferve that bone-athes, though ever fo well wafhed and fifteed, are not, perhaps, the fiteft matter to make tefts of; the tefts fo made being apt to crack in the fire, unlefs dried very gently for many days before they are ufed. But there is a particular kind of talc, or unvitrifiable fperth-ftone, that, being calcined to fine powder, as it readily may, and made up with a fmall folution of vitriol in water, affords fuch tefts as may be immediately uled without danger of cracking.
Again, The flame of a wind-furnace may be made to play upon the forface of the melted metal, fo as readily to perform this operation, without blowing with beilows, that violently tear away the filver along with the lead, in the form of litharge. And this farther convenience may be obtained, that not only fmaller and cheaper wood, but even pit-cod, , hall here ferve for the fuel, provided the fructure of the furnace be well contrived for the purpofe; and in fome places they have of late advantageoully ufed common pit-coal for telling in the large way; and the fame improvements might alfo be made in the fmall way of aflaying.
Toamalgamate gold, or to mix it with mercury, which is of ufe to gilders.
Take a penny-weight of fine gold, beat into very thin fmall plates; heat them in a crucible red-hot, then pour upon then 8 penny-weights of quick-filver, revived* from cinnabar; fir the matter with a little iron rod, and, when you fee it begin to rife in fumes, which quickly happens, caft your mixture into an earthen pan, filled with water, it will coagulate, and become tractable; wafh it feveral times, to take away in's
blacknefs:

## G O L

blacknefs: thus you have an amalgama, from which feparate the mercury, which you will find is not united, by preffigg it between your fingers, after you have wrapped it up in a linnen cloth.

* Reviving of quickfilver from cinnabar is thus performed; take a pound of artificial cinnabar, powder it, and mix it exactly with three pounds of quick lime, alfo powdered; put the mixture into an earthen pot, or glafs retort, whofe third part at lealt remains empty; place it into a reverberatory furnace; and, after having fitted to it a receiver filled with water, let it reft 24 hours at leaft ; raife your fire by degrees, and at laft increafe it to the height, and the mercury will run in drops into the receiver; and having wahed the mercury, to cleanfe it from the little portion of earth it might carry along with it, dry it with linnen, or the crumbs of bread, and keep it for ufe;

A particular method of gilding, which may be done more expeditioully than with quickfilver.
Take the fineft gold, diffolve it in aqua regia * [fee the article Aqua Regia] which has been prepared with falt; let the aqua regia be evaporated to half the quantity; then put the glafs into a damp cellar, on fand, and the gold will overnight fhoot into cryftals, which take out, and let them diffolve again in diftilled vinegar: put it again upon the fire, and let the half thereof evaporate; then put the glafs again in the cellar, as before, in moift fand, and over-night the gold will fhoot into cryfals, Diffolve thefe in rain water, and evaporate that to half the quantity, and again it will fhoot into cryftals; when this is done, take the cryftalline gold, grind it to powder with a knife; put that powder into the white of an hard-boiled egg, after the yolk has been taken out; fet it in a cool and damp place, and over-night it will diffolve into an oil ; and what filver you anoint with it, though ever fo thin, drying it gently, you will find the gilding of a perfectly high and fine colour.

* The preparation of this aqua regia only differs from the following receipt in ufing of falt inftead of fal ammoniac. The ufual way of making aqua regia, according to Lemery, is thus:
Powder four ounces of fal ammoniae, and put it into a matrafs, or other glafs veffel, of a good bignefs; pour up on it 16 ounces of fpirit of nitre, place the veffel in fand a little warm, until the fal ammoniac is all diffolved; then pour the diffolution into a bottle, and fop it with wax This is the right aqua regia.

## REMARKS.

Among many things that are grofs enough to be the objects of touch, and to be managed with our hands, there are fome which may help us to conceive a wonderful minutenefs in the fmall parts whereof they confift. I procured filver, fays Mr Boyle, whofe ductility is very much inferior to that of gold, to be drawn out to fo Ilender a wire, that, when it was accurately meafured, nine yards thereof weighed but about a grain in a very tender ballance. And, fince experience informs us that half an Englifh inch may, by diagonal lines, be divided into 100 parts capable of being eafily diftinguifhed for mechanical ufes, it follows, that a grain of this filver wire may be divided into 64,800 parts, and yet each of thefe will be a true metaline cylinder, which we may very well conceive to confift of a multitude of minuter parts: for, though I could procure no gilt wire near fo flender as our filver wire, yet a grain of fome I had by me was 14 feet long; at which rate, an ounce would reach about a mile. And if we fuppofe the gilt wire, as in probability it might have been drawn, as flender as the filver-wire, the inftance will be fill far more confiderable: for, in this cafe, each of thofe little cylinders, of which 64,800 go to make up one grain, will have a fuperficial area, which, except at the bafes, is covered with a cafe of gold, that is not only feparable from it by a mental operation, but, perhaps, alfo by a chemical one. For,
I semember, that from very flender gilt wire, though I could procure none fo Iender as this of mere filver, I more than once got out the filver; fo that the golden films, whilft they were in a liquor that plumped them up, feemed to be folid wires of gold : but, when the liquor was withdrawn, they appeared oblong, and extremely thin double membranes of the metal ; which, with a fine inftrument, might have deen ripped open, difplayed, and made capable of further divifions and fubdivifions. But, though each of the little filver cylinders juft mentioned muft not only have it's little area, but it's folidity, yet I faw no reafon to doubt that it might be very poffible to have drawn the fame quantity of metal to a much greater length; fince even an animal fubftance is capable of being brought to a flendernefs much furpaffing that of our wire. An ingenious gentlewoman of my acquaintance, who kept filk-worms, had once the curiofity to draw out one of the oval cafes they fipin, into all the filken wire it was made up of; which appeared in meafure to be much above 300 yards; yet weighed but two grains and a half; fo that each cylindrical grain of filk may well be reckoned to be, at leaft, 120 yards long.

We took fix leaves of beaten gold, and fingly meafuring them with a rule, purpofely made for nice experiments, we found them to have a greater equality in dimenfions, and to be nearer true fquares, than could be well expected: the fide of the fquare was, in each of them, exactly three inches and a quarter; which number being reduced to a decimal fraction, viz. 3. 25, and multiplied by itfelf, affords Io. 5625 for the area of the fix leaves. Thefe being carefully weighed, in a pair of tender fcales, amounted all of them to one grain and a quarter ; and fo one grain of this leaf-gold was extended to fomewhat above 50 inches; which differed but about a fifth part from an experiment of the like nature that I made many years ago, in a pair of exact fcales: and fo fmall a difference may very well be imputed to that of the pains and diligence of the gold-beaters, who do not always work with equal ftrength and ikill, nor upon equally fine and ductile gold.
Now fuppofing an inch, divided into 100 fenfible parts, to be applied to each fide of a fquare inch of this leaf.gold, it is manifeft that, by fine parallel lines, drawn between all the oppofite points, a grain of gold muft be divifible into 500,000 very minute fquares, but yet difcernible by a fharp eye: and, if we fuppofe the inch divided into 200 parts, the number of the fquares into which a fingle grain is capable of being divided, will amount to no lefs than two millions.
There is yet another way to fhew the great divifibility of gold. A refiner, with whom I ufed to deal, informed me, that to an ounce of filver he commonly allowed eight grains of gold, when it was to be drawn into well-gilt wire, as flender as a hair; but that, if it were to be more nightly-gilt wire, fix grains would ferve the turn. He alfo fhewed me a fair cylindrical bar of filver, as it was at firft gilt, whereon the leaf-gold that overlaid the furface did not appear to be, by odds, fo thick as fine Venetian paper; yet, comparing this with gilt wire, the wire appeared to be the better gilt of the two ; poffibly becaufe the gold, in paffing through the various holes in the making, was, by the fides of them, not only extended, but polifhed, which made it look more vividly than the unpolifhed leaves that gilt the ingot. So that, if we fuppofe an ounce of the gilt wire lately mentioned to have been gilt with fix grains of leaf-gold, it will zppear, by an eafy calculation, that, at this rate, one ounce of gold, employed in gilding wire of that fineneis, would reach between 90 and 100 miles.
But if we further fuppofe, that the flender filver wire firf mentioned were gilt, though we fhould allow it to have not fix, but eight grains of leaf-gold to an ounce of filver, it muft be acknowledged, that an hollow cylinder of gold, weighing but eight grains, may be ftretched fo as to reach as far as 60 times it's weight of filver wire, which it covers; and confequently, a grain of that wire having been found to be 27 feet long, an ounce of gold would reach 155 miles and above an half; and, if we yet farther fuppofe this hollow cylinder of gold to be flit along, and cut into as flender lifts as poffible, we cannot deny that the gold may be made to reach a flupendous length.

Of the extreme ductility of the conftituent particles of gold. By the learned Dr. Edmund Halley.
It is evident. fays he, from undoubted experiment, that gravity is in all bodies proportionable to the quantity of matter in each, and there is no fuch thing as a propenfion of fome more, others lefs, towards the earth's center; fince, the impediment of the air being removed, all bodies defcend, be they ever fo loofe or compact in texture, with equal velocity. It follows, therefore, that there is feven times as much matter in gold as in a piece of glate of the fame magnitude (their fpecific gravities being nearly as feven to one) and, confequently, that at leaft fix parts of feven in the bulk of glafs muft be pore, or vacuity. This fome favourers of the atomical philofophy have endeavoured to folve, by fuppofing the primary or conflituent atoms of gold to be much larger than thofe of other bodies, and, confequently, the pores fewer. In order to examine the magnitude of thofe atoms, I informed myfelf among wire-drawers, that the very beft doublegilt wire was made out of cylindric ingots, four inches in circumference, and 28 inches long, which weigh 16 pounds Troy; on thefe they beftow four ounces of gold, that is, to every 48 ounces of filver one of gold; and that two yards of the fuperfine wire weigh a grain. Hence at firft fight it ap. peared, that the length of 98 yards is in weight 49 grains, and that a fingle grain of gold covers the faid 98 yards, and that the ro,000th part of a grain is above $\frac{1}{3}$ of an inch long, which yet may be actually divided into so, and fo the 100,000 th part of a grain of gold be vifible without a microfcope. And, by means of the fpecific gravities of the metals, viz. filver $10 \frac{1}{3}$, and gold $18 \frac{2}{3}$, I found the diameter of fuch wire the the $\frac{1}{12}$ part: but the gold in thicknets not to exceed the ${ }^{7} \frac{1}{4} \frac{1}{4} \overline{5} \sigma$ part of an inch; whence it may be concluded, that the cube of an hundreth part of an inch would contain above $2,433,000,000$ (or the cube of 1345 ) of fuch atoms. And yet, though the gold be ftretched to fo great a degree as

## GOL

is here demonftrated, it hews itfelf of fooeven and united a texture, as not to let the white colour of the filver under it appear (even with a microlcope) through any the leaft pores; which argues, that, even in this exceeding thinnefs, very many of thofe atoms may ftill lie one over the other.

Gold and filver lace, thread or fringe, of their exportation.

* Thefe are, upon exportation into foreign parts by way of merchandize, intitled to a drawback; wherefore, not only an entry muft be made as for other goods, but proof of the manufacture, by oath, upon the bill of entry, as in the following example:
- 10 Ann. cap. 26 \$. 62.

$$
3^{d} \text { of March } 1730 \text { No. } 35
$$

In the Taviftock of London, Daniel Bright matter, for Jamaica.

Roger Granger.
Twenty-four pounds one ounce of filver lace; $\}^{\text {valued at }}$ wenty-eight pounds ten ounces of gold thread Ten pounds five ounces of gold fringe, all.

William Brooks [the maker] maketh oath, That the twentyeight pounds ten ounces of gold thread, twenty-four pounds one ounce of filver lace, and ten pounds five ounces of gold fringe, avoirdupoife weight, above mentioned, were all made fince the it day of July 1712, and were all made of plate wire fpun upon filk.

William Brooks.
Jurat 3 die Martil 1730, coram me,
A. B. Collector of the cuftoms.

And before they are flipped off, fufficient fecurity muft be given to the collector of the cuftoms for the due exportation, as follows:

A bond for the exportation of gold and filver lace; thread, or fringe.

Noverint univerfi, \&c.
Whereas the above-bounden Roger Granger hath this day entered outwards in the port of Southampton, on board the Taviffock of London, Daniel Bright mafter, for Jamaica, twenty-cight pounds ten ounces of gold thread, twenty-four pounds one ounce of filver lace, ten pounds five ounces of gold fringe, avoirdupoife weight, all made fince the ift day of gold fringe, avoirdupoife weight, all made fince the rit day of
July $17 \mathrm{I2}$, and made of plate wire fpun upon filk: and whereas the faid Roger Granger, upon exportation of the faid gold thread, filver lace, and gold fringe for foreign parts, is to have an allowance or drawback according to an act of parliament of the tenth year of the reign of her late majefty queen Anne, on that behalf made:
Now the condition of this obligation is fuch, That if the faid gold thread, filver lace, and gold fringe, and every part thereof, fhall be fhipped, and really exported into parts beyond the feas, and that the fame, or any part thereof, fhall not be relanded, or unfhipped with intent to be relanded, or brought on fhore again in any part or parts of Great Britain, then this obligation to be void, or elfe to remain and be in force, effect, and virtue.
Sealed and delivered
Roger Granger.

A. B. Collector.
A. B. Collector.
B. C. Comptroller

Britifh wrought plate, or manufagures of filver.

* As no molten filver whatfoever may be exported, but fuch only as has been marked or ftamped at Goldfmiths-Hall; and $\dagger$ as no manufactures of filver may be made lefs in finenefs than of eleven ounces two pennyweights of fine filver in every pound Troy; therefore proof of fuch marking and finenefs muft be made on the bill of entry, and likewife on the back of the cocket, as in the following example:
* 6 and 7 Will. III. cap. if. $\$ .5$.
t 6 Geo. I. cap. 11. §. 40.
I2th of January $173^{\circ}$. No. 6. Streights.

Joel Crifp.
One hundred and fifty ounces of wrought plate, of the finenefs of eleven ounces two pennyweights per pound Troy, valued at fifty pounds all.
Arthur Strong [goldfmith] maketh oath, That the one hundred and fity ounces of wrought plate above [or within] mentioned, are all of the finenefs of eleven ounces two pennyweights to each pound Troy, on which there is the Go'dfimiths-Hall mark.

Arthur Strong.
Jurat 12 die Jan. 1730, coram me, A. B. Collector.

VOL. I.

## GOL

* But if 'tis exported by way of merchandize, and the exporter would have the duty repaid him, then, as a foundation for a debenture, proof muft be made on the bill of entry, not only of the marking and finenefs, but likewife of the making, as follows:
* 6 Geo. I. cap. ir. §. 18, 40.

Arthur Strong [goldfmith] maketh oath, That the one hundred fifty ounces of filver plate wrought, above mentioned were all made fince the firft day of June 1720, and marked with the mark or ftamp denoting it not to be lefs in finenefs than that of eleven ounces two pennyweights of fine filver in every pound Troy, on which there is the GoldfmithsHall mark.

Jurat 12 die Jan. $173^{\circ}$, coram me;
Arthur Strong: A. B. Collector of the Cuftoms.

And, before it be fhipped, fufficient fecurity mult be given' for the due exportation, as follows:

## A bond for the exportation of wrought plate:

Noverint univerfi, \&c.
Whereas the above-bounden Joel Crifp, hath this day entered outwards in the port of Southampton, on board the Diligence of Briftol, Henry Hopkins mafter, for the Streights, one hundred and fifty ounces of filver plate wrought, all made fince the ift day of June 1720 , and marked with the mark or ftamp denoting it not to be lefs in finenefs than eleven ounces, and two pennyweights of fine filver in every pound Troy : and whereas the faid Joel Crifp, upon the exportation of the faid plate; according to an act of parliament of the fixth year of the reign of his late majefty king George the Ift, on that behalf made, \&c.
Now the condition of this obligation is fuch, That if the faid filver plate wrought, and every part thereof, fhall be fhipped, and really and truly exported into parts beyond the feas; and that the fame, or any part thereof, fhall not be relanded, or unfhipped with intent to be relanded, or brought on fhore again in any part or parts of Great-Britain, then this obligation to be void, or elfe to remain and be in full force, effect, and virtue.

## Of the importation of gold or filver thread, lace, \&c:

Gold or filver thread, lace, fringe, or other work made thereof, or any thread, lace, fringe, or other work made of copper, brafs, or any other inferior metal, or gold or filver wire or plate, imported, to be forfeited or burnt, and rool. paid by the importer for every parcel fo imported. io Ann. cap. 26. fect. 65 . And 15 Geo. II. cap. 2ar fect. 7.

## Gold Mines.

c Among the feven mine-towns, fays the learned Dr: Edward Brown, in Hungary (which are not far from one another, viz. Chremnitz, Schemnitz, Newfol, Koningfberg, Bochantz, Libeten, and Tiln) Chremnitz is the richeft in gold. They have alfo, at prefent, gold mines at Bochantz and Koningherg; and they report in that country, that there bath been formerly a rich gold mine at Glafs Hitten, but loft fince that Bethlem Gahor overrun thofe parts, when the undertakers fopped up the mine and fled.
They have worked in the gold mine at Chremnitz 900 years. This mine is feveral Englifh miles in length, and about 160 fathoms deep. Many veins of the ore run to the north and to the eaft. They work alfo towards one, two, and three of the clock, as they fpeak; for the miners direct themfelves under ground by a compafs, not of 32 points (fuch as is ufed at fea) but by one of 24 : which they divide, as we do the hours of the day, into twice twelve.
Of the gold ore, fome is white, and fome black, red, or yellow : that with black fpots in white is efteemed the beft, as alfo the ore which lieth next to the black veins. This ore is not rich enough to fuffer any proof in fmall parcels, like that in other mines, whereby to know what proportion of metal is contained in it; but they pound a very great quancity thereof, and wafh it in a little river, which runs nigh the town. The whole river being divided, and admitted into divers cuts, runs over the ore continually, and fo waheth away the earthy parts from the metalline. And, from a clear river above the town, by its running through fo many works, and over fo much pounded ore, it becomes below the town a dark yellow ffream, of the colour of the earth of thofe hills. See the article Assay.
There have been pieces of pure gold found in the mine; fome of which I have feen in the emperor's treafury, and in
the elector of Saxony's repofitory: one piece as broad as the palm of my hand, and others lefs; and upon a white ftone many pieces of pure gold, but thefe are very rare.
The common yellow earch of the country near Chremnitz, although it be not efteemed ore, affords fome gold : and in one place I faw a great part of a hill digged away, which hath been calt into the works, wathed and wrought in the fame manner as pounded ore, with confiderable profit.
Some pallages in this mine, cut through the rock, and long difufed, have grown up again ; and I oblerved the fides of fome, which had been formerly wide enough to carry their ore through, to approach each other, fo as we paffed with difficulty. This happens in moift places. The paftages unite not from the top to the bottom, but from one fide to another.
There is vitriol in this mine, white, red, blue, and green; and alfo virriol waters. There is a fubftance found, which flicks to the gold ore, of fmall pointed parts like needles, called by them antimony of gold. There are cryftals found here, and fome tinctured yellow.
The miners will not allow any quickfilver or brimftone to have been found here, yet, in the lately-mentioned antimony of gold, there is evidently fulphur, as I perceived by burning. The quickfilver mine, mentioned in the anfwer to Kircher's enquiries, Mund. Subter. is an Hungarian mile, or feven Englifh miles diftant from Chremnitz, and is not wrought in at prefent.
Thiere is a vitriol mine in thefe hills near the gold mine: the earth or ore of it is reddifh, and fometimes greenifh. This carth is infufed in water, and after three days the water is poured off, and boiled feven days in a leaden veffel, till it comes to a thick granulated whitith fubftance, which is afterwards reduced to a calk in an oven, and ferveth in the making aqua fortis, or the feparating water ufed at Schemnitz. See the article Aqua Fortis.

## Of the method of extracing gold out of the ore.

They have divers ways of taking the gold out of its ore, by burning the ore, by melting, by adding filver ore and other minerals, fand, and lead, as they find the ore fluid or fixed. But without lead they proceed thus:
They break and pound the ore in water very fine, then wafh it often, and lay it in powder upon cloths, and by the gentle oblique defcending of the water over it, and their continual ftirring it, the earthy, clayifh, and lighter parts are wafhed away, while the heavier and metalline remaineth in the cloths. Thofe cloths are afterwards wathed clean in feveral tubs, and the water, after fome fettling, poured off from its rediment, which fediment is again wafhed, and ftirred up in feveral veffels and troughs, till at length they fprinkle quickfilver upon it, and knead it well together for an hour : and then wafhing it again in a wooden veffel, after the feparating of much of it which the quickfilver touches not, by Atriking this veffel againft their leg, they bring the gold and quickfilver together, in an amalgama, to one corner of it. From this amalgama they ftrain as much of the quickfilver as they can, through coarfe cloths firf, and then through fine; then they put the mafs remaining upon a perforated plate, which they fet over a deep pan placed in the earth, in the bottom of which pan they alfo put quickfilver. This pan they cover, and lute the cover well; and then making a charcoal fire upon it, they drive down the quickfilver yet remaining in the gold, to the reft in the bottom of the pan ; then taking out the gold, they caft it into the fire that it may become purer.
Concerning Cranach gold, I cannot learn that there is any fuch gold, or place where gold is digged, in Hungary ; buc in Germany I think there is, for Agricola mentions fuch a place as Goide-Cranaeum, and another called Golde-Crona.

## Of the gold of the Eaft-Indies.

The chief places, where it is found in any quantities, are (I.) Achim, the capital city of Sumatra, and is as a meremerchandize, not as money or coin, it being the chief return for goods carried thither for fale. (2.) In Pegu, whence it is brought to Achim to be fold to the merchants. (3.) In China and Japan: in the former they fell it for filver, and that to the great advantage of merchants, particularly at Canton, Amoy, and other places. (4.) At the Philippine Illands, particularly near Manilla, where it is found in mines, and where they fay one mine yields the king of Spain 200,000 ducats a year in gold, befides feveral others which they do not work in. (5.) In the illand of Borneo, where they fift it out of the fands of the rivers, in their fearch after diamonds. It has been difputed by fome, whether gold be not found as well in mines and rocks in bulk, as in duft; but this is now out of all doubt, it being frequent to fee lumps of gold taken out of mines that fhall weigh feyeral ounces, and contain very little impurity. A few years fince, I remember to have feen a lump of fuch gold, which, if I recollect right, weighed four or five ounces, in the poffefion of Charles Hayes, Efq; the deputy-governor of the late Royal African company of England; which he affured me he brought from

Guinea, as it was taken out of fome of the mines by the negroes.

- I have feen, fays an author of good credit, one entire lump of pure gold, as it came from the mine; of an ounce weight, though it is not ufually found in fuch large pieces: not but that I have feen enough to convince me, that in fome places it grows in the middle of the hardeft fones.
A Madras fupercargo, in his return to Fort St . George from the weft coaft, brought a ftone of about a pound and half weight: it feemed to have been beaten off, or parted by violence from fome other flone to which it formerly grew: it was full of crannies or clefts, was coloured or veined like marble, and was very ponderous: it had feveral fmall branches of pure gold lying in thefe chinks or crannies, and fhooting out from them, and from other rough craggy parts of the fone; all which rendered it the greateft natural curiofity I ever met with: the gold it contained was valued at 5 I . 10 s . fterling, though there was farce the worth of il. in fight. There is likewife rock gold at Achim, which is very fine, and is known by its brightnefs.'
It is an eafy matter, in India, to cheat 5 or ${ }^{6}$ per cent. in golld duft, by mixing finall Bits of other metal with it, which none but men of experience and judgment can detect : wherefore it is advifeable to have one of the money-changers or examiners in this country prefent at all receipts, who probably may difcover thefe defects, which the Europeans frequently overlook.
At Fort St. George, the minit birings abové a thoufand pago da's a month into the company's coffers, at $\frac{1}{2}$ per cent. lor coinage of gold, and 2 per cent for filver. Gold and filver in relation to their finenefs are reckoned by matrs, and even fractional parts; as in England by carats, grains, \&c. ten matts being equal to 24 carats, full fine.
To receive a thoufand pounds, fays Mr . Lockyer in his time, at Achim, in gold mace, would be an endleis trouble; counterfeit ones in filver, brafs, and mixt metals, being fo common, that it is impoffible to avoid them, though we have one or two money-changers to examine them for us: they judge of then by the found of a wooden dilh; and are fo nice, that in 100 they frequently refufe 60, which the pext takes after the fame manner, leaving above half for bad; chough it may be, what he has made choice of, are not a jot better than the reft : however, if any are received by thefe fellows advice that prove fo bafe as to be refufed by every body, they are obliged to give good ones for them; in confideration of which, they are often honefter than they otherwife would be: Tho' gold is found here [at Achim] adds he, in greater quantities than in any place I know of in India, yet the great demand for it keepis it at a vêry high rate. The current price, June 1704, was tale 7, 2 per buncle of 10 ozi. no dwt. 21 gr. The current exchange from Fort St. George is 2 pagoda's a tale, which is not fo much by 24 fanhams per buncle as the gold will produce in the mint, for it generally holds out above $9 \frac{7}{3}$ matt, or 92 touch, and makes a buncle worth 14 pagoda's, 33 fanhams, 48 cafh.
A merchant of Madras let out pagoda's 1000 at 16 per cent. refpondentia, or on bottomry on the Stretham Eaft Indiaman, for this place [Achim] which he received in gold duft at the above rate, and loft 18 per cent. on it in Malacca: betwixt which markets is often a greater difproportion in the value of gold.
Gold is a metal of fuch value, that a fmall miftake in its finenefs may be 2 or 3 'per cent. lofs to the buyer. The Chinefe reckon their gold by touches; 100 is full fine, and equal to 24 carats Englifh; wherefore a fett of touches with filver allay, from 50 to 100 touch, rifing gradually as you are able to difcern the difference of colours on a touch-flone, would be a great help, though it muft be a nice judgment to diftinguifh to a touch, or nooth part.
Our Eaft-India company had formerly an affay-mafter, to try their gold at Amoy; but the merchants of Canton would allow of no fuch practice, though there is no abfolute fecurity in buying without an accurate affay.
Gold-makers at Canton (as they are commonly called) caft all the gold, that comes through their hands, into fhoes of about to tale weight, or 12 oz .2 dwt .4 gr . of an equal finenefs: as one makes them 93 touch, another is famous for $94,8 \mathrm{cc}$. A private mark is ftamped in the fides, and a piece of printed paper pafted to the middle of them, by which every one's diftinct make is known; as our cutlers and other mechanics do; in their, refpective trades.
Both ends of the fhoes are alike, and bigger than in the middle, with thin brims arifing above the reft, whence the upper fide fomewhat refembles a boat: from the middle, which in cooling finks into a fmall pit, arife circles one within another, like the rings in the balls of a man's fingers, but bigger: the fmaller and clofer thefe are, the finer the gold is. When filver, copper, or other metal is inclofed in cafting, as fometimes you may meet with it in fmall bits, the fides will be uneven, knobby, and a rifing inftead of finking in the middle: fometimes they caft their gold in this form, not above 50 or 60 touch, and gild it four or five times over ; fo that, relying on our fmooth ftones, you are liable to be impored on. Wherefore, experienced judges look on the rougher ones to

## GOL

be the beft, that are ufed by the Banians of Indoftan, with a ball of black wax: but, for want of thefe, sarfe the fides with a graver, or cut the metal half through with a chiffel, and break the reft; whence you may difcern the colour and grain, and detect their fraud, even by the fight, when once the grain of gold of various degrees of finenefs becomes familiar to a perfon. Should you cut it quite through, the chiffel will fo draw the gold over the allay [fee article A LLay] that you can learn nothing from it.
This they will not permit, but, on the contrary, be affronted at a requeft, that fhews fo great a diftruft of them : therefore, the moft eligible way is to make a bargain before you begin the trial, and you may manage them afterwards as you will. The gold in this form is called after the makers names, or from the places whence it comes, but more commonly by the former; for there is a great deal thus caft at Pekin; but none of that name; thofe of Chuja and Chuckfa are 93 touch, Tingza, Sbing, and Guanza, 94 . Of thefe the former turn to the beft account. Sinchupoa and Chuchepoa are reckoned 96 and 95 touch. The Chinefe, in gold and filver, always reckon one touch finer than it really is, and will allow you fo in the receipt of money.
Gold in bars or ingots comes chiefly from Cochinchina and Tonquin, and differs in fineneis from 75 to roo touch. It is of reveral fizes, and eafier much than the thoes to be counterfeit$\dot{c d}$, which the foregoing precautions may guard a perfon againf. Gold is a commodity as unfettled in its price in China, as any other.
Whatever you buy, as fo much per piece, pecull, \&cc. you are to pay in filver 94 touch, which is really but 93 , as traders will find in adjufting their cuftom accounts with the hoppos, who will not make the ufual allowance of a touch as the merchants do, except you pay in dollars, which he may take at 95 .
Bargains for gold at Canton are always fo many tale weight of current filver, 94 touch for 10 tale weight of gold, reckoning fo many tale as it touches, and adding or deducting as you agree for the over or under touch.-As, a fhoe weighing to tale, touch 97 at touch for touch, amounts to 97 tale of current filver of 94 touch. Ten tale weigit, touch 93 at 7 above touch, amounts to 100 tale current filver. Tale io, touch 94 at 3 under, amounts to 9 I tale current filver of 94 . Formerly they ufed to fell for Silee, or filver full fine, but the method is altered. Tin tale of gold 93 fine, 'fold for 'g4 tale weight of Sitee filvet, is 7 above touch. Ten tale of gold 100 touch, fold for ' 94 tale Sifee filver, is touch for touch. Ten tale of gold, touch 94 for 100 Sifee, is $12 \frac{14}{43}$ aboòve.
To'reduce Sifee into current filver, multiply by 100 , and divide by 94. The hoppos divide by 93 . All the eaftern people allay their gold with filver, therefore a copperifh bue is grounds for fufpicion. The coarfeft, or gold of the loweft touch, is moft advifeable: for, in a particular affay, you get all the filver that is mixed with it for nothing, viz. 80 tale weight, touch $5^{8,}$ is $5^{8}$ tale of pure gold, and 22 tale of filver allay, which you pay not a farthing for.
This is according to Mr. Lockyer; but, by a more modern account of the China trade, the names and touches of gold are as follows, with fome little variation in the orthography of the names; as well as in the touches, viz.

Touch.

| Chaya | - | Gold fhees |  | 93 |
| :---: | :---: | :---: | :---: | :---: |
| Chroja | - | - - | - | 93 |
| Chugra |  | - - | - | 93 |
| Shinjepou | - | - - | - | 94. |
| Tinjee |  | - Bar gold |  | 93 |
| Poojee |  | Bar gold |  | 96 |
| Yangpoho |  | - - | - | 96 |
| Cochinchi Samoy | Gold |  |  | touches |
| Pekin | - | Bars narrow |  | 99 |
| Shaja | - | Small fhoes | - | 97 |

## N. B. At Chinchew they falfify Yangpohooes gold.

Rule to bring different touches of gold into one.
Multiply the finenefs of each fort by its particular weight, and adding their feveral produĉs together, make a dividend of them; then adding the weights together, make that a divifor, and the quatient will be the finenefs or touch.

93 Touch of the whole.
REMARKS.
Pure gold, in England, is reckoned that which by the alfay is found to be 24 carats fine, though it is no eafy matter to refine it to fo great perfection; and that which is lefs pure, as the Englifh fandard gold of 22 carats fine, is fo many parts

## GOL

of 24 pure fine gold, and the remaining $\frac{i_{2}^{2}}{2}$ is allay. What is faid to be $18,19,20$, or 21 carats fine, is fo many parts in 24 fine gold, and the remaining part, that makes up the 24, is allay.-In China, their aflay account is divided into 100 parts, and what is faid to be fine gold, without allay, is 100 waters, or tonches, equal to our 27 carats fine. What is laid to be 94 or 95 touches fine, is fo many parts pure fine, and the remainder that makes up the 100 parts is allay. The allay of China for gold ought to be all filver, but they fometimes mix copper for that purpofe with the filver; and fometimes they unite ail copper therewith inftead of filver, which caufes a great alteration in the colour of the gold; making it look and touch higher than is really it by $\frac{1}{2}$, or $1 \frac{1}{3}$, and fometimes 2 per cent. yet thofe who are conftantly accultomed to deal in gold, will eafily diftinguifh this by the fight : for, the copper allay makes the gold look of a teddifh yellow colour, whereas the filver makes it look of a more pure bright yellow, a little pale.
To know the goodnefs of gold or filver by the touch-ftone, by comparing it to certain wires or needles of gold or filver of feveral allays; which was approved by Pliny, book 33. cap. 18. before the way of trial by aflay with fire was known; though not with the accuracy it is at prefent performed by 贷ilful modern affay-mafters and refiners, the method of aflaying by fire and aqua fortis being far preferable to that by the way of touch. But, fince the Indians do not rarely care to deal by fuch a characteriftic, it may be ufeful to give an account of the method by way of touch, viz. - Let thefe needies or wires, before mentioned, be made of four forts. (I.) Let them be made of gold and filver. (2.) Of gold and copper. (3.) Of gold, filver, and copper. And (4.) Of filver and copper. The three firft forts are only for the trial of gold, and the latter for filver.
Let there be 24 needies of wire, made of the feveral mixtures or allays following:
Thè $\left\{\begin{array}{l}1 \\ 2 \\ 3 \\ 4 \\ 5\end{array}\right\}$ of $\left\{\begin{array}{l}24 \\ 23 \\ 22 \\ 21 \\ 20\end{array}\right\}$ carats, that is, of fine gold $\left\{\begin{array}{l}\text { n } \\ 2 \\ 3 \\ 4\end{array}\right\}$ Carat of
And fo ftill I carat worfe, till you have but one carat of fine gold, and 23 of fine filver, all marked of what finenefs each needle or wire is of. There may alfo be made the like of the other two mixtures, viz. of gold and copper; likewife of gold, filver, and copper.
For the making thefe wires or needles for trial of filver, let the mixture or allay be as followeth:
The $\left\{\begin{array}{l}1 \\ 2 \\ 3 \\ 4\end{array}\right\}$ of $\left\{\begin{array}{l}\text { Fine filver } \\ \text { II } \\ \text { I0 } \\ 9\end{array}\right\}$ ounces of fine filver, and $\left\{\begin{array}{l}\text { I } \\ 2 \\ 3\end{array}\right\} \begin{aligned} & \text { ounce } \\ & \text { of cop- } \\ & \text { per. }\end{aligned}$ And fo till you have 1 ounce of filver, and in ounces of copper, all marked of what finenefs it is.

## The ufe of thefe reveral needles

Is, if you defire to know the goodnefs of any ingot, or piece of gold or filver by the ftone, touch the faid ingot or piece upon your touch-ftone, and by it touch fuch of your needles as flall be moft like the touch of your ingot, which will better appear by being wetted with your tongue, and that of your needle the gold or filver ingot, or piece, is belt like unto, of that finenefs it will be found.-This is efteemed one of the beft methods of judging of the fuperior metals by the touch; but thefe are all very imperfect ways of kriowing the qualities of gold and filver, in comparifon to that of an accurate affay. See the article Allay, Assiy, Acua Fortis, AQua Regia, Refining, Silver, Ores.

## R E M A R K S.

In purchafing of gold by the touch, where there is no opportunity of having an affay, it requires very conftant practice. Wherefore thofe who do not daily, deal therein, but only occafionally in foreign countries, thould; during the time of their voyage, often practife their touches; according to what has been before obferved, rubbing them on the touch-ftone one by another, till they become familiarized to diftinguif the qualities of the one from thofe of the other; which conffant practice will as eafily enable the fupercargo, \&c. as the domeftic goldfmith, to purchafe with fecurity.
Gold, by the laws of China, is forbidden to be exported; yet the mandarines themfelves will fometimes help you to it. Ten tale weight of gold, touch 92 , bought at touch for touch (the moft governing price) amounts to 111 oz .8 dwr . 5 gr . current filver; at 5 s .6 d . per ounce, is $1.30: 12: 8$, tor which you have 12 oz .2 dwit. 4 gr . worth about 4 l . an ounce in London, amounting to 1. $48: 8: 8$, and makes upwards of 58 per cent. profit.
By reafon of prohibiting the exportation of gold in China, the Europeans generally run privately moft of their filver; not to avoid any duties payable thereon, but to conceal the amount of their imports, that thereby no conjectures may be made of the gold they export.

## G O L

This valuable commodity is not altogether the produce of China, but is brought in great quantities by their junks from Cochinchina, in return for the goods fent thither.
Of the vait quantites of European coins which the Cbinefe receive, they preferve none entire, but run all down in iron moulds, forming a fhapelefs lump from 5 mace to 10 tale Weight; every man melts his own money at the goldrmith's; what is applied to the payment of fance and emperor's duties muft be Sifee, or 100 touch, no other being received into the emperor's treafury.-For other ufes they make different touches, as they may ferve their purpoles of trade, in the different provinces of the empire.

## Their weights for gold and filver.

 10 Mace $\quad$ T Tale, but this is rather too much.

Thefe are the weights for filver and gold, and may be called by the names of their money, for under thefe denominations are their accounts kept.

## Of the gold trade of Africa.

To what a degree this country abounds in gold, we have not only the teftimony of the Portugueze, the Dutch, and the French, who have fettlements on the continent of Africa as well as we, but we have numberlefs living witneffes now among our own nation, and the vouchers of the moft authentic hiftorians; whofe accounts, one would imagine, fhould roufe and animate us to pulh this traffic to the utmof degree and profit we are capable; for at prefent it is but in its infancy, which is no lefs true than extraordinary, notwithftanding, we have been in poffeffion of this trade ever fince the reign of queen Elizabeth.
There are no countries in the world, fays the celebrated hiftorian Leo Africanus, richer in gold and filver than the kingdoms in Africa; as thofe of Mandiago, Ethiopia, Congo, Angola, Butua, Quiticui, Monomotapa, Cafati, and Meheneınugi. By the means of fettlements of ftrength, adds he, upon the continent of Africa, Europeans may traffic with the bordering people of Guinea and Lybia, and get into their hands the gold of Mandingo, and its adjacent territories; among which are thofe of the king of Congo, whofe kingdom is one of the moft flourifing and plentiful countries in Ethiopia.
From this country we might alfo eafily have communication with that of Prete-Janny, which abounds with elephants, and fuch provifions and neceffaries as would give fingular eafe and conveniency to facilitate fuch intercourfes of commerce. Upon the confines of the kingdom of Congo lies Angola, with the king of which Paulo Dias, a Portugueze captain, waged war; the principal iealon whereof was, certain filver mines that the captain difcovered in the mountains of Cambabe, wo way inferior to thofe of Potofi in the Spanifh Weft Indies.
The fame hiftorian, fpeaking of the river Gambia*, obferves, that, by the exchange of European merchandize with the natives, we may eafily draw to us the gold of all thofe countries: and about ninety leagues up this river, there is a place called the Inland of Elephants, in regard to the prodigious number of thofe creatures, which alfo affords a very advantageous branch of traffic.

* Our prefent African company of England have James Fort and Illand in the river Gambia, on che north coaft, with various factories, many leagnes up the river; it formerly mounted 90 , now 31 great guns, contains allo mall arms and fores, feveral warehoufes for merchandize, a negrohou'fe for 200 negroes, and apartments for the governors, factors, writers, officers, artificers, foldiers, and caftleflaves.

But it would be endlefg to tranfcribe all the paffages in this biftorian, relating to the rich mines both of gold and filver, wherewith the Africans abound, and how eafy a matter it is for Europeans to carry on a very extenfive and very beneficial commerce with thofe people.
Ghana, or Guinea, fays another eminent hiftorian *, is the greateft city in all the countries of Negroland, the moft populous, and the moft abounding with merchandize: and not only very wealthy merchants travel thither from all the neighbouring parts, but alfo from the moft remote corners of the weft. This country borders upon the land of Vancara, very famous for the plenty and excellency of its gold mines. The king hath a grand palace near the banks of the Niger, and a mafs of gold therein of thirty pounds weight, as it was naturally produced in the mines; but what is extraordinary is, that this mafs of gofd is completely pure and malleable, without being at all fmelted by the ordinary arts of refining and feparation: it is alfo fo extremely fine and foft, as, naturally produced, to admit of being hammered out as a fpacious canopy of the prince's royal throne: to fo great a per-
fettion has nature brought gold ore in many parts of Africa.

* Vide Geographia Nubienfis, \&c. à Gabriele Stonita Syria carum \& Arabicarium literarium profeffore, $1619, \mathrm{p}, 10$.

A modern hiftorian $\dagger$, whofe credit I never heard impeached, hath alfo confirmed the great treafures in this part of the world, and hath defcended to a very minute fepcification of great variety of their mines.
$\dagger$ Nouvelle relation de L'Afrique occidentale, gar Le Pere
The greateft part of our lands, fays our author, where the mines are, produces gold in fuch plenty, that it is quite unneceffary to dig for it; it is needful only to take the fuperficies of the earth, and wafh it in a bowl, to come at the gold duft, and very often pieces of gold of pretty good weight ${ }^{\circ}, \& \mathrm{c}$. , The earth, fays he again, which produces it, is not very hard, or difficult to dig; it is generally of the clayey kind, of various colours, and mixed with fome fandy kind of ore; fo that ten men in Africa may do more work generally than 200 can in the richeft mines of Peru.

* Nouvelle relation de L'Afriquè occidentale, par Le Pere Jean Baptifte Labat. Vol. iv. p. 39.

The negroes, proceeds he, are totally ignorant of the peculiar nature of lands that yield gold ; they have no art or methods of judging, which do or do not afford that metal: they have a general idea, that there is plenty of gold mines almolt every where, and the drier the earth is, and more unkindly in the production of vegetables ${ }_{5}$ the more reafon they imagine there is to believe fuch places yield gold : wherefore they fcratch and dig almoft every-where indifcriminately; and, when by their rambling fearches they happen to difcover plenty in one place, they continue to work there fo long only as a diminution of the firft plenty does not difcontinue, and this without any workman-like Bill in finking any depth, or difcovering the courfe of the vein: and, fo foon as the mine remarkably diminifhes from its firft plenty, they immediately forfake that place, and go in quelt of a frefh one, without fearching there any further *.

* Nouvelle relation de L'Afrique occidentale, par Le Pere Jean Baptifte Labat. Vol. iv. p. 40, 4 I .

When they find the mine rich, and that they can, without much trouble, obtain a confiderable quantity of gold, they fometimes vouchfafe to remain digging at the fame place, even fix, or perhaps feven feet deep; but that extent generally determines their fearch; not becaufe the mine ceafes to be lefs plentiful (for they confefs, the deeper they fink, the greater quantity of gold they find) but becaufe they have no invention of fhafts, nor any other knowledge in the methods and nature of mining, to prevent the earth from falling in upon them.

* Labat, Vol. iv. P. 46, 47,

After this general account of the riches of Africa, our author gives us a detail of variety of rich mines; the truth of which appears, by his reprefentation, to be well attefted. As I. A gold and filver mine at Fourquarenne. 2. Another at Sambanoura, where he fays the negroes find gold only by mere walhing of the earth, without digging at all; they only rake it together with their hands from the furface of the earth. 3. A mine at Sagolla, where allo they find gold upon the furface of the earth, by fimple wathing of it, without finking at all. This gold is extremely pure, and very eafy of fufibility. It may be prefumed, he fays, that thofe metallic earths would afford confiderably more gold than what is found upon the bare fuperficies. 4. Guinguiua-Faranna is a place quite fowed, as it were, with gold mines; where take the earth almoft indifferently, and wafh it, you will find pure gold which melts with great eafe ${ }^{*}$.

* Labat, Vol. iv. p. 47.

What indicates the riches of the land here fill more is, that the very rivulets of water that arife from it, and run into the river Falleme, carry with them fo much gold, that the neighbouring negroes, when the mines are not wafhed by the permiffion of their prince, come to thefe rivulets, and employ themfelves with wafhing the fand, and find there confiderable quantities of gold. Nor is this practice forbid them; and, if the negroes were not fo indolent, they might greatly inrich themfelves, even by this peddling work *. 5. The mountains about Guinguiua-Faranna are of a foft earth, ftrewed with gold fand, which yields well in fine gold ; as alfo there are golden marcafites, which have proved of confiderable value $\dagger$.

* Labat, Vol. iv. p. 47, $4^{8 .}$
+ Ditto, P. 47 .
The

The mines likewife at Niafanbona are very rich, and eafy to be worked; but this ore fhould be pounded and fmelted. This requiring more art in refining than the negroes are mafters of, it would be eafy to get poffeffion thereof*. 6 The mof confiderable mine that is at prefent open, and which the negroes work with more care, is that between the village of Tamba-oura and Nettico, about 30 leagues eaft of the river Falemo, in the center of the country of Bombouco. This is furprifingly rich, and produces a very fine gold; and, for 15 or 20 leagues round about, here is fo great plenty of mines, that they cannor be well reprefented on the maps, by reafon that fo great a quantity would create confufion : it may be faid, with great truth; that mines in this place are fuperior to all others in thofe parts of Africa $\dagger$.

* Labat, vol. iv. p. so.
$\dagger$ Ibid. p. 51.
The want of almoft all the conveniencies of life here has put the negioes under the neceffity of working their mines with Fomething of more indultry than is ufual among them. They have funk here even io feet deep, which is very extraordinary with them, and a matter of great difficulty to accomplin, they wanting both materials and experience for matters of this nature.

7. They find, however, at this depth, gold in much greater abundance than by merely fearching the fuperficics of the earth, or by a little fhallow digging, as they do in all other places. It happens fometimes, that the veins they meet with are mixed with a kind of fand, or fume more congealed earth; and long experience has taught them to pound and wafh this ore, to feparate the gold from it; which then they find very plentiful, and very pure. But, if they were well acquainted with the arts of fmelting and refinng of ores, they would produce confiderably more; but they bave no knowledge thereof, nor have they ever yet come to the main vein of any of their mines*:

* Labat, vol. iv. p. 52.

8. There are two gold mines at Naye. That which is on the brink of the river has been a long time left off working, only becaufe it is fubject to be overflowed. But they have opened another a little diftance from this, upon the right of the river, which is not liable to be overflowed, and ${ }_{3}$ therefore, may be worked at all times *.

* Labat, vol: jv. p. 54.

9. About 20 leagues above Coinoura; to the left of the river, there is a gold mine, in the land of Tomane Niacalen, which is very rich, and of a pure metal. It is very eafy to work, and yet the negroes bave left it, upon an idle fuperftition that prevails among them*.

* Labat, voli iv: p. 54, 55 .
to. There are an infinite number of other places with evident fignatures of mines of gold. Among others, there are many about 17 leagues from the mouth of the river Faleme, in the Niger, which are no way inferior in value to thofe before mentloned in the mountains of Nettico and Tambaoura *.

Labat, vol. iv. p. 55.

## REMARKS:

That the inland parts of Africa, which have been little frequented by traders, abound with gold, feems to be a point out of all doubt, if we pay any regard to human teftimony, either by written or oral tradition; which might be fhewn from great variety of other authorities, was it needful. That the article of gold alone, therefore, would fupply the Africans wherewith to barter for European commodities to a far greater degree than has ever yet been experienced, is very reafonable to believe: and, confequently, thofe nations who have fo eftablifhed their trade to Africa, as to promote the greateft inland traffic with thofe people, are likely to be the greateft gainers thereby. May it not, therefore, ftill deferve confideration, whether the African trade of this nation is yet bottomed upon the moft beneficial footing? The mere ikimming a little of the coaft-trade for gold, ivory, and flaves, feems to be but a very fmall advance in this commerce, in comparifon to what it will certainly admit of.
By what means this traffic may be more honourably, and more humanely improved, fee the articles African Trade, East-India Company, English African Company, French African Company.

Of the Gold Trade of America.
It is generally underfood that filver is the peculiar wealth of Peru; and the Spaniards have allo gold mines there.-There are alfo two walhing-places for gold in the fouth part of Peru, near the frontiers of Chili. About the year $170 g$ there were two furprifing large lumps of virgin gold found in one VOL.I.
of thete places, one of which weighed 32 pounds complete; and was purchafed by the count de Monteloa, then viceroy of Peru, and prefented to the king of Spain: the other was fhaped fomewhat like an ox's heart: it weighed 22 pourds and a half, and was bought by the corregidur of Africa. To find thefe lavadero's, or walhing-places; they dig in the cornets of a little brook, where, by certain tokens, they judge the grains of gold to lie. To affilt in carrying away the mud, they let a frefh ftream into it, and keep turning it up, that the current may fend it along.- When they are come to the golden fand, they turn off the ftream another way, and dig with their mattocks; and this earth they carry on mules to certain bafons, joined together by fimall channels: into thefe they let a fmart ftream of water, to loofen the earth, and carry all the grofs part away. The Indians ftanding in the balons, and throwing out all the fones, the gold at bottom is ftll mixed with a black fand, and hardly to be feen, till it be farther feparated.
In thefe wafhing-places are found gold grains as big as birdthot; and in one, belonging to the priefts near Valparaifo, fome are found from two or three ounces to a pound and half weight.-This way of getting gold is much better than from the mines; here is no need of iron crows, mills, or quickfilver; fo that both the trouble and expence are much lefs.
The moft confiderable port in Chili is that of Valparaifo, which is efteemed one of the beft harbours in the South Seas. It lies upon a river 15 leagues below St. Jago, the capital of Chili. To this port all the riches of the gold mines behind it, and on every fide, are brought, particularly from thofe of Tiltil, which are immenfely rich; and lie between this port and the city of St. Jago.
The gold here is found in a very hard fone, fome of which fparkles, and betrays the inclofed treafure to the eye; but moft of it has not the leaft fign of gold; but appears to be an hard barfh kind of ftone; of very different colours, fome white, forme red, fonte black. This ore; broken to preces; is ground in a mill, by the help of water, into a grofs powder, with which quickfilver is afterxards mixed: to this pafte they let in a flarp ftream of water, which having reduced it to a kind of mud, the earthy particles are carried off by the current, and the gold and quickfilver precipitated, by their own weight, to the bottom. - When this mud has fettled a little, into a fort of pafte; they put it into a linnen bag, and ftrain it very hard, by which operation the mercury is driven out, or at leaft the greateft part of it, and the remainder they evapotate by the help of fire; fo that they have all the gold together in a little wedge, like a pineapple, whence it derives its name of pinna.-In order to clear the gold from the filver it is firft impregnated with, the lump mult be run, and then the exact weight is known, and the true finenefs; it is not done otherwife there.-The weightinefs of the gold, and the facility of its amalgamation with mercury, makes the drofs eaflly feparate from it: this is an advantage the gold-miners have over thofe of filver; they every day know. what they get, which is not the cale of the fivet-miners.--See the article Silver.
According to the nature of the mines, and the richnefs of the veins, every caxon, or 50 quintals, or 100 hundred weighr, yields four, five, or fix ounces.-When it yields but two, the miner does not make good his expence, which frequently happens; but he has fometimes gond amends made him, when he meets with rich veins; for the gold mines are, of all mines, thofe which produce metals the moft unequally. - They follow a vein, which grows wider, then narrower, and fometimes feems to be left in a frall fpace of ground. This fport of nature makes the miners live in hopes of finding what they call the purfe, being the ends of veins, fo rich, that they have fometimes made a man wealthy at once: and this inequality fometimes ruins them; which is the reaton that is is more rate to fee a gold-miner rich than a filver-miner, or of any other metal, though there be lefs expence in extracting it from the mineral. For this reafon, alfo, the miners have peculiar privileges; for they cannot be fued to execution on civil accounts, and gold pays only $\frac{x^{\frac{1}{2}} \bar{\sigma}}{}$ part to the king, which is called covo, from the name of the perfon to whom the king made the grant, becaufe they ufed before to pay the $\frac{i}{5}$, as they do of filver.
On the defcent of this mountain there runs, during the winter, or rather during the rainy feafon, a pretty brifk ftream of water, which, paffing through the gold ore, wafhes away abundance of that rich metal, as it ripens and breaks from its bed: and, therefore, for about four months in the year, this is accounted one of the richeft lavadero's in Chili, fince there are frequently found peliets of pure gold, of an ounce weight.
At Palma, which is but four leagues from Valparaifo, there is another rich lapadero; and, every-where throughout the country; the fall of a brook or rivulet is attended, more or lefs, with thefe golden fhowers, the richeft whereof fall into the laps of the jefuits, who farm, or purchafe, abundance of mines and lavadero's, which are wrought for their ben=it, by their fervants.

## G O L

Yet it is agreed, that a great part of the inhabitants do not feem to abound in wealth; which, however, may be very well accounted for, if we confider that fuch as deal in cattle, corn, and other the product of the country, acquire but moderate fortunes; and fuch as are concerned in mines are frequently ruined, by launching into too great expence about them. But, after all, fuch as are eafy in their circumftances, and, in confequence of that eafe, setire to St. Jago, live in fuch a manner as fufficiently demonftrates the riches of Chili, fince all their utenfils, even thofe that are moft common, are of pure gold; and it is believed that the wealth of this city alone cannot fall thort of $20,000,0001$.-Add to this, that the gold mines are continually increafing; and it is only for want of hands that they are not wrought to infinitely more advantage, thofe already difcovered, and neglected, being fufficient to employ 40,000 men. It may be likewife obferved, that the frauds practifed for deceiving the king daily increafe; and, as they meafure the siches of the Spanifh Weft-Indies by the ftandard of the king's revenue, this muft neceflarily make them appear poorer than they really are. As the policy of the Spaniards has hitherto confifted chiefly in endeavouring, by all ways and means poffible, to reftrain the valt riches of thefe extenfive dominions from paffing into other hands; fo the knowledge that other nations have of the mighty wealth of thefe countries, on the one hand, and of the great demand for European manufactures among their inhabitants, on the other, has excited almoft every nation in Europe to practife all methods poffible, in order to gain a fhare in them $;$ and this with fo good effect, that it is very doubtful whether any confiderable part of the riches of 'the Weft-Indies centers among the inhabitants of Old Spain. But the fyftem of Spain is now upon the change; and they feem determined to reap all the benefit in their power by the commerce of the Spanifh Weft-Indies, as well as by that in Europe. See the articles Biscay, Spain, Spanish America.
The gold trade of Brazil, belonging to the king of Portugal, being carried on in much the fame manner as that of Spain, it is needlefs to fay more at prefent, than to oblerve, that, in order to judge of the true value of gold belonging to the king of Spain, which there paffes through the hands of the prefident and commiffioners, it is all fold upon condition to be affayed, and not judged of merely by the touch, as is done in feveral parts of the Eaft-Indies. For,
Gold is fo precious a metal, that any very fmall difference, in the affay of fiver or copper in every piece, will run up to a confiderable fum ; and, therefore, the laws have Yettled the value of gold and filver, not by the touch, but by trial of affay, and this fo exactly and demonftrably, that what a very fmall fcale decides, is afterwards made out and proved by arithmetic. And becaufe not only money was to be made of this metal, but jewels, chains, utenfils, and other things; therefore the law appointed, that there fhould be a head marker and toucher, to overlook and approve of the reft of them, that, being expert at touching gold and trying filver, they might judge of the finenefs of the goldfmiths work. And whereas, in order to make an allay, fomewhat is to be taken of the ingot of gold or filver that is to be affayed, which cannot be done with jewels, chains, or rings, without fpoiling the faftion; therefore the only and univerfal method has always been to touch the gold, and mark the plate, relying only upon the exactnefs of the eye at certain times of the day, and on a ftone, upon which the true finene'fs does not fometimes appear fuperficially, either becaufe the gold is ill coloured, or not fo perfectly refined. As for filver, they rely altogether upon the colour that appears after it is tried ; both which methods are no better than conjectures or furmifes, in comparifon of the certainty of the affays. For which reafon, in criminal caules, againft fuch as do not work gold or filver according to the ftandard, no cafe has been decided by the head affayer, or judges to whom it belongs, without making experiment by affay; and had the touch been fecure, it would certainly have been relied on in fome cafes ; whereas, on the contrary, feveral perfons have been cleared by the affay, who have been fufpected for cheats by the touch. It follows, therefore, that merchants ought to be perfuaded it is much fafer for them to difpofe of their gold by aflay, than by touch; for otherwife there might be a vaft trouble faved in affaying all the king's gold over again, as is done at Seville, though it has been all actually affayed in the Indies. This has been the practice of all times in Spain ever fince gold was brought from the Indies, and touching was never yet admitted of.
A brief account of all the monies of gold and filver coined in the time of queen Elizabeth, with the true value theroof in current money.
Coined in flerling filver money in the mints in the Tower of London, from the year 1558 to the year 1572 , in the time of Tho. Stanley and Tho. Fleetwood, undertreafurers, in weight $549,644 \mathrm{lb}$. 10 dwts. making at 3 l. the pound
weight

More, from 1572 to 1581 , in the time of John Lonifon, mafter and worker, in weight $255,338 \mathrm{lb}$. 2 oz. 8 dwt. 7 gr. making, at the fame rate

6 the value of

- By an account which Mr Lowndes has publifhed in hisef-- fays, the filver money coined in the reign of king Charles - I. and by which we muft only undertand the filver mo-
- ney regularly coined in the Tower of London, amounted
- to the fum of $8,77^{6,5441 \text {. ros. } 3 \text { d. but of the gold there }}$
- alfo coined, during the fame time, I am not able to give fo
- exact an account. All 1 can fay is, that, by a paper I faw c in the hands of the late Mr Conduit, the weight of the an-- gel gold coined from the beginning of the king's reign to - the 25 th of November, 1642 , and which was coined into angels only, was that of 284 lb . 50 z .9 dwt. 9 gr . which
- made in money then current, at the rate of 441.10 s . the
- pound weight, the fum of $12,658 \mathrm{l}$. 5 s. 9 d . ob. And it
- appears, by the accounts of the pix, that there has been no
- angel gold coined in England fince that time. It alfo fur-
ther appeared, by the fame paper, that there was coined in
- crown gold, from the king's acceffion to the $3^{\text {rit }}$ of March,
- 164 I , in weight $68,832 \mathrm{lb}$. II oz. II dwt. 4 gr . and by
- two other papers, purporting to be the accounts of Sir
- Ralph Freeman, and Sir Thomas Aylebury, from the ift
- of Auguft, 1641, to the 5 th of May, 1643, and Sir Robert
- Harley, from the 6th of May, 1643 , to the 3 Ift of March,
< 1646, that there was coined, during that time, in crown
- gold, the weight of $7,052 \mathrm{lb} .20 \mathrm{z}$. 11 dwt. 1 gr . to
- which laft weight, if we add proportionably for the four
- months elapied between the 3Ift of March and the ift
\& of Auguft, 1641 , and for the 34 months between the end of
6 thefe accounts and the 3oth of January, 1648, we cannot
4 very greatly mitake in fuppofing the weight of the crown
- very greatly mitake in coined from the ift of April, I64I, to the time of
- the king's death, to have been of about $11,826 \mathrm{lb}$ which,
* added to the former quantity, will make, for the whole
- weight of the crown gold coined in this reign, about
- 80,659 pounds; and which, reduced into money, at the - rate of 411 , to the pound weight, produces of the fame - $3,307,0191$. To which if we add the value before given - of the angel gold, and of the filver coined in the fame - time, we fhall find that the whole fum in gold and filver - coined in the Tower of London, during the reign of king - Charles I. did not, in current money, amount to lefs than
© about $12,096,2201$. fterling *'

The care of this learned author, in the collection of the foregoing, and various other delicate particulars, may feem of little import to thofe who will not deliberately weigh the exrent of his penetration. For, amidlt divers other national purpofes that his judicious oblervations will anfwer, and which will naturally occur to every one that has a fuperior relifh for ttudies of this kind, there is one that will be generally ufeful, and upon whic! fome important principles, I apprehend; of political arithmetic, may be fuunded.-Let the gentleman Speak for himfelf

- Having now, fays he, gone through thofe obfervations I
- had to make upon our Englifh filver coins; from the Nor-- man conqueft to the prefent time, I fhall here add, as a - general abitract of the foregoing pages, and of what I prin-
* cipally defizned fhould be contained in' them, a fhort table, - exhibiting at one view the Itandard of our filver money as - to goodnefs, together with the true weight of 240 pennies,
- 'bo groatt, or 20 fhilling, making the pound fterling, at - the feveral times there noted in the firft column; to which - I have alio added, in the laft column, the fame intrinfic - value of the nominal pound fterling, expreffed in decimals - of our prefent fterling pound: whereby the proportion of - the intrinfic value of any furmer fums of money, as is now - called by the fame appellation, may immediately be known, * and the prices of provifions, labour, and materials, in for-
- mer times, may readily be compared with the different * prices which the like provifions, labour, and materials, are - found to bear at this day.

Now, by a comparifon of the foregoing table of filver coins, with a table of gold publifhed by the fame author, it appears, that in the 27 th year of king Edward III. I353, when the firt confiderable coinage of gold was made in England, fine cold was rated in our coins at eleven times and about one fixth part, as much as fine filver. But even this value of gold was thought too great in the time of king Henry the IV th, and the fame being complained of by the regulations mace in his 13 th year, 1412 , gold came to be exchanged for ten times and about one third of an equal'quantity of filvet. In the fourth year of king Edward the IVth, 1464; gold was again valued at a little mote than eleven times the price of filver. Duting the 140 years next following, there was Scarce any alceration made in the proportional value of the two metuls; excepting only in the times of contufion between the 34th year of king Henry the VIIIth, and the laft of king Edward the Vlth: and, by the indentures of the 43 d year of queen Elizabeth, and thofe of the firft of king James, 1603 , the pound weight of fine gold in the coin was yet rated at fomewhat lefs than eleven pounds weight of fine dilver. But foon after that time the price of gold was very fenfibly advanced, the pound weighe of it being valued in the inderitures of the 2 d year of king James, at better than twelve pounds and an ounce; and, in the 17 th of the fame king, at

VOL. 1.

And, in anno 1686, they were firbject to an additional daty of $t$ and $\frac{1}{3}$ per cent. confulado and lonja, which, with a premio of 5 per cept. amounted to $1 \frac{40}{500}$ per cent. whereby the whole duty on bays, \&c. were $26 \frac{10}{10 \%}$ per cent. and on fays, \&c. $24 \frac{35}{105}$ per cent.
Thefe were fuch exorbitant duties, that they formerly dIf: couraged trade, and introduced clandeftine importations: whereupon the adminiltrators, who collected thefe duties for the king's account, or the farmers who received them for their own ufe, according to the power granted them, made it a conftant practice in the cuffom-houfe to allow 25 per cent. to the merchants upon making up their cuftoms, which was called the king's gratia 3 and this effectually fecured their trade, and augmented the revenue.
When this abatement was firft fettled is very uncertain, but it has probably been of a long ftanding: it was an eftablifhed rule in 1667 , and was regularly and conftantly allowed by the farmers, until fuperfeded by the late treaty.
Since, therefore, by the third article of the earl of Sandwich's treaty, no new cuftom or duties whatfoever fhall be taken or increafed, other than thofe which in like cafes the natives themfelves and all other ftrangers are obliged to pay; and that the Spanifh farmers never difputed this deduction for To many years fucceffively with any foreign nation that traded into that kingdom, both before and after that treaty, or with the natives thereof; certainly, if this exemption had been infifted on, it muft have been allowed us; for to be treated in the fame manner as the moft favoured nation was our right, and it is laid down as a bafis of the treaty.
Thus then we had a right to the king's gratia, or rather abatement 'of 25 per cent. by cuftom or prefcription; and it will alfo appear, that we had as juft, if not a jufter right to the farmers gratia, though this proceeds from another caufe. For the Spanifh dollar or piece of eight pafling current, fometimes but for 12, and at other times for 15,20 , and 25 rials copper or vellon; therefore, as a greater or leffer number of thefe rials copper paffed for a piece of eight, the adminiftrators or farmers were neceffitated to increafe or diminifh their gratias to the merchants.
In the year 1670, when the piece of eight pafled for 20 rials, copper, the farmers gratia was then but 20 per cent. on all woollen goods; and though the pieces of eight, between 1670 and 1680 , rofe by degrees to 25 rials copper, yet $I^{-}$ cannot find that the farmers altered their gratias.
But after 168 o , when the piece of eight, by the king's proclamation, paffed for no more than 12 rials copper (whereby: our cuftoms were at once more than doabled) the adminiftrators and farmers fucceffively increafed their gratias.
As appears at large by the adjuftments made at Seville by the deputies of the Englifh, Flemifh, and Dutch nations, with Don Francifco Eminente, adminiftrator general, and afterwards with Don Gafper Ruiz Dias, who allowed us 50 per cent, on perpets, fays, \&c. and 40 per cent. on bays.
And, from 1686 to 1702 , during which time the piece of eight paffed by another proclamation for 15 rials copper, the farmers gratia was reduced to and fettled at 45 per cent. on fays and other goods, and 40 per cent. on bays, as all the merchants then refident at Cadiz and Port St. Mary's muft acknowledge.
By this management of the farmers, the king's revenue was not leffened, nor the cmerchants injured. For example, If a merchant in 1670 entered with the Spanifh farmers 100 bays, though they allowed thereon but 20 per cent. gratia, (befides the king's conftant gratia) yet, the piece of eight then palfing for 20 rials copper, the cuffom and duties on the faid bays, at $25 \frac{20}{100}$ per cent. amount to $222 \frac{6}{17}$ pieces of eight. And, if in 1686 he entered the fame quantity of bays, whereon the farmers gratia, or allowance, was then 40 (inftead of 20 per cent, as in 1670 ) yet thie piece of eight pafing but for 15 rials copper, the cuftom and duties at the fame rate of $25 \frac{20}{100}$ per cent. will amount exactly to the fame fum of $222 \frac{6}{17}$ pieces of eight.
So that it is very apparent, the difference occafioned by the dollar, or piece of eight, paffing but for 15 inftead of 20 rials copper, was juftly allowed the merchant by the increafe of gratias from 20 to 40 per cent.
It is as obvious alfo by other accounts, that the adminiftrators or farmers, upon every other confiderable alteration of this copper money, either augmented or leffened their gratia, according to the rules of equity and juftice.
From whence it mult be concluded, that the faid gratias did not proceed from a remiffnefs, or a falle fuggefted eafinefs in the Spaniards, but were granted, becaufe reafonable and juft, And, therefore, as they never deprived us of our undoubted right to thefe gratias or allowances, this alfo might probably have been fixed by the treaty, had it been well underftood and Atrenuoufly endeavoured; and in fuch a cafe we fhould have been effectually fecured againft paying any greater duties than before the war.
For though, as aforefaid, the cuftom and duties payable in the reign both of king Charles II. and his prefent majefty, were,

On bays, perpets, \&c. $26 \frac{60}{100}$ per cent.
And on fays, $8 x .24 \frac{35}{100}$ per cent.

Yet by the faid gratias allowed fince 1686 on the eftablifhed rates in the Spanih arancel, they were reduced to

9 8 970 per cent. on perpets,
$10 \frac{4}{8}$ क per cent. on fays, and
11 Tit per cent on bays.
And the valuation in the book of rates was fo favourable, that all thefe duties upon their fales came out but at
$9{ }^{\frac{3}{4} 0} 0$ per cent. on perpets,
$8 \frac{44}{100}$ per cent. on fays, and
$8 \frac{13}{100}$ per cent. on bays.
But by the three explanatory articles of the late treaty, we are liable to pay 10 per cent. on all goods and merchandize imported and exported; and this is not to extend to the alcavallas, cientos, and millones.
Thus thofe goods which were charged with $12 \frac{37 \frac{\frac{t}{2}}{100}}{100}$ percent. almoxarisfargo, are hereby to pay the faid duty of 10 per cent. and the alcav. and cient. $14 \frac{22 \frac{1}{2}}{100}$ per cent. thereonare; in all, $24 \frac{22 \frac{1}{2}}{100}$ per cent.
And thofe that paid $5 \frac{62_{2}^{\frac{2}{2}}}{100}$ per cent. almoxarisfargo, are alfo charged with the aforefaid duty of 10 per cent.
And the alcavallas or cientos thereon amount to $18 \frac{72 \frac{7}{2}}{100}$ per cent. in all $28 \frac{72 \frac{t}{2}}{100}$ percent.
Which is really on the eftablifhed rates;
$24 \frac{22 \frac{1}{2}}{100}$ per cent: inftead of $\left\{\begin{array}{l}9 \frac{97}{100} \text { per centit. on perpets, and } \\ 11 \frac{79}{100} \text { on bays, as aforefaid. }\end{array}\right.$
And $28 \frac{72 \frac{1}{2}}{100}$ per cent. inftead of $10 \frac{4}{100}$ per cent. on lays. Confequently, therefore, the dutics lately demanded in Spain, on the foot of the prefent treaty, amount to more than, -or are over and above the old duties,

> On perpets $14 \frac{25 \frac{1}{2}}{100}$ per cent.
> On bays $\quad 12 \frac{25 \frac{x}{2}}{100}$ percent.
> On fays $\quad 18 \frac{68 \frac{2}{2}}{100}$ per cent.

## REMARKS.

1. It may be obferved, that 101 . cuitom paid on goode, which are valued at 100 l . is lefs than ro per cent. of the real value of the goods, if they can be fold for 1201 . or for any thing more than 1001 .
It is apparent, from what has been faid, that our Englifh perpets, by the valuation in the arancel, or Spanifh book of rates, did not pay above 9 99\%, per cent. ; fays not above
 there goeds ufually fold for fo much more than that valuation, that the real cuftorns paid on the firft did not exceed $9_{9} \frac{3}{00}$ per cent ${ }_{0}$; on the fecond $8 \frac{44}{100}$, on the third $8 \frac{13}{206}$ percent. of the real value.
2. It is true, by gratias of the king of Spain, and by the farmers of his cuftoms, as they were called, the aforefaid goods paid no more than the aforefaid duties; but then, as the king's gratia was always the fame, viz. an abatement of one fourth part of the whole cuftoms, ever fince the treaty, of 1667 , and during that time the farmers of the cufloms, or the adminiftrators of the king's revenue, made always fuch an allowance in the tale of the goods, that notwithftanding all the variations in the Spanilh coin, yet the cuftoms paid on the real value were ftill the fame; it is a violent prefumption we had a right to that moderate valuation in their old arancel, and alfo to their gratias or abatements of the king and his farmers, or the adminiffrators of his public revenue.
3. But the very words, in the third article of the treaty of 1667, put this matter out of doubt, viz. 'That no new - cuftoms or duties whatfoever fhall be taken or increafed, - other than thofe which the natives themfelves, and all ' other ftrangers, are obliged to pay.'
No new cuftoms or duties to be taken by the treaty of 1667 ! But we ourfelves confented by the Utrecht treaty, that the king of Spain may take more than have been levied ever fince the former treaty, viz.

On perpets $14 \frac{25 \frac{1}{2}}{100}$ per cent.
On bays $12 \frac{25 \frac{1}{x}}{100}$ per cent.
On fays $18 \frac{68 \frac{1}{2}}{100}$ per cent.

## G R A

## GRE

So that the duties were more than doubled in Spain by tant treaty, and we confented to fuch duties as were inconfifent with any trade. But this was not the cafe of France at that time, for they were felling their goods; while ours lay perihhing in the Spanifh cuftom-houfe.
The treaty of 1667 was figned May 23, and the next day Sir William Godolphin, who was fecretary to our ambafly, and who was the chief contriver of that treaty, wrote thus to my lord Arlington: * The treaty of conmerce, I dare pro-- mife your lordfhip, comprehends not only all the privileges c and advantages which this crown hath ever granted to any - other ftate or people, but likewife Come conveniences * which it hath never yet permitted to any other ; for the c better fecurity and perfection whereof, I have diligently * perured all the treaties thefe people have made with others, - and all the royal cedulas they have granted in favour of any - particular faetories; and have not received from our fac-- tories any grievance or proportion of advantage in their commerce to be either remedied or procured for them, - which we think is not fufficiently provided for in this 'treaty.'
And, in another letter to his brother, May s 5 th, he fays, - I will only fay to you in general of the treaty of com-- merce, That befides all the freedomis and advancages of - trade, which the crown of Spain bath granted to any other - tate, we have thereby feveral conceffions and cortvenien-- cles whereof we find no example in their articles with any - other. And, I think, they have not made any other thefe - hundred years, which I have not learned as MY Lesson, © in order to the treating and perfection of this.
Sir William Godolphin might juftly fay this, and the world will believe him; fince, after that treaty, we paid no more than the moderate duties above-mentioned; and fince the privhege of a Judge-Conservator [fee Treatise of Commeree] without which we cannot trade with any feeurity in that country, and which was only granted before the royal cedulas to our merchants, and might have been revoked by the king, was confirmed to us by that treaty. But no man can believe; that the contrivers of the Utreeht treaty had learned all former treaties as their leffon, or that indeed they had ever read that of 1667 , though it is recited in their firf article: it is of almoft no ufe in that place, but to fhew the people what privileges they enjoyed before, which were taken from them by the Utrecht treaty. This confirms what lord Bolingbroke fays; in his letter to Sir William Wyndham, that the miniftry of his days were little acquainted with commerce; and he lays the blame all upon one man in the miniftry of his time; which is a moft pitiful fubterfuge, when he had ro great a flare in it. For the nature and foundation of treaties of commerce between nation and nation, fae our article Treaties of ComMERCE.
GRANAT, a precious ftone; of a high red colour. They are either oriental or occidental ; the former are brought from the Eaft-Indies, the other from Spain and Germany. Thole of the Ealt are difinguifhed into three kinds, the deep brown red, of which there are fome as large as an hen's egg; others are nearly of the hyacinth colour, with which it were eafy to confound them; but for their fuperior rednefs. The taft, having a mixture of violet with their red, are called by the Italians rubina della rocha.
The occidental granats are of divets reds. Thofe of Spain Imitate the colour of the kernel of a pomegranate; thofe of Bohemia have a golden calt intermixed with their red, gitttering tike a live coal: thofe of Silefia are the darkeft of all, and feldom thoroughly tranfparent.-Thofe of Bohemia are the moft valued; fome give them the preference to the oriental kind.

## REMARKS.

Of the imitation of the granat colour in glafo.
Take of cryftal frit, of frit of rochetta, each an equal quantity; mix them well, and to 100 pound of thefe materials add one pound of manganefe of Piedmont *, one ounce of raffer; mix them well with the frits, then put them, little by litcle, into an earthen-pot made red-hot in the furnace, becaufe the glafs is apt to rife and run over. After four days, the glafs being weil tinged and pirrified, you may work it: you may increafe or diminifh the coldur at pleafure; if the operation be performed with any judgment.
${ }^{*}$ Put the pieces of manganiefe into an iron ladie, and put them inte a reverberatory fire, and, when it begins to whiten, frprinkle it with good vinegar ; afterwards beat it and wafh it while hot; after that dry it, and reduce it into powder, and fift it, and keep it in a veffel covered for ufe. The beft is eafy to break, and very fhining, the great and lefs pieces of it full of rocky matter as can be.

To imitate a granat colpur in glafs of lead.
The vivacity of this colour appears no lefs in glafs of lead than in crytal, if it be carefully made. To make it, take

20 pound of eryfral frit, with 16 pounds of calx of lead and after having added three ounces of manganefe of Piedmiont to it, and half an ounce of zaffer *, both prepared as we have fhewn, put the whole into a pot heated in the furnace: twelve hours after, caft that melted matter into the water, and take out the lead that remains behind in the por. Then put the matter again in the fame pot, where it will be purified ten hours after. Mix it well, and let the fæces precipitate; then fee if the colour pleafes, and work it for what ufes you require, for you'll have a glafs of lead of a fine granat colour.
*Take zaffer in the largeft pieces you can get, pot it into earthen pans, and let it fand one day in the furnace; then put it into an iron ladle to be heated red-hot in the furnace, take it thence, and fprinkle it with lirong vinegar: being cooled, grind it fine on a marble forie, after whith wahh it with warm water in earthen-pans, lettixg the zaffer fettle to the bottom, and decanting of the water gently: this will reparate the impurity from the zaffer, which will remain at the botiom pure and clean, which you mult dry and grind again, and keep it in veffels well cloied for ufe: this will tinge glats much better than at firt.

Of making a pafte for oriental granat.
Take two ounces of natural cryflal prepared, [fee Crystal] lix ounces of minium, with fixteen grains of zaffer, prepared as before; let the whole be well pulverized and mixed together, and put in a crucible into the furnace with its cover well luted, there to bake, with precaution, and you'll have a very fine granat; as refplendent as the eriental, if the procefs be dexteroully managed:

## A deép oriental granat.

This colour will be not only deeper, but alfo thuch fairer than the preceding. To make it, take two ounces of natural cryftal prepared, five ounces and a half of minium : add fifteen grains of manganefe of Piedmont prepared: having pulverized it, mix the whole well together. As this matter rifes more than the other, you mult leave a greater empry face in the crucible. Cover the crucible with an earthen cover, lute it well and dry it, then put it in the botteft place of a potter's furnace, and let it ftand as long as their pots. You may take notice once for all; that you mult not break the crucible before the matter be thoroughly baked and purified; for; if you do, and fo are obliged to put the matter into another crucible, the pafte will be painted and full of blifters. Bet, well conducted, you will have a deeper oriental granat than the former, which you may polifh; \&c.
GREECE. Modern Greece; in its prelent flate, is divided into Macedonia, Albania, Epirus, Theflaly, and Achaia:
I. Macebonia hath for its prefent boundaries Servia and Bulgaria on the north, Bulgaria and the Archipelago on the eaft, Acbaia on the fouth, and Albania on the weft. It is rich in mines of gold, abounds with corn, paflures, cattle, and venifon; and in forme parts produces wime and oil
Salonichi, the capital city, flands at the bottom of a gulph, to which it giyes its name. It is a large and very populous city; and carries on a very confiderable tride, both becaufe of the advantageous fituation of it, and of the great quantity of filk, wool, leather of all forts, wax, powder, grains, cotton and iron, continually worked here. The trade is chiefly managed by the Jews, who alone have the monopoly of the manufactures of all the fuffs, made for the ufe of the Janifaries.
II. Albania, now called Arfaut, lies between Macedonia on the eaft, and the gulph of Venice on the weft, having on the north and north-eaft the Black Mountains, and on the fouth it is bounded by Epirus. Its foil is fruitful, chiefly in the north parts, producing flax, cotton, and excellent wine as allo wax in the woods, and fale is dug out of the mountains. The inhabitants make tapeftry, which, with the other cominodities, they fend abroad.
Scutari, the capital, is reckoned a confiderable trading town $_{2}$ as is alfo
Dulcigno, feated on the gulph of Venice, 20 miles fouthweft of Scutari. The Franks have a conful here.
III. Epires is bounded on the north by Albania, by Theflaly on the north-eaft, Achaia on the fouth, and the Ionian Sea on the weft. Its foil is for the moft part good, affording excellent pafturage.
Larta, or rather Arta, is feated at the bottom of a fmall bay, formed by the mouth of a river. This city, and the country about it, drive a great trade in tobacco, botargo (a kind of faufage made of eggs and the blood of a fea-mullet) and furrs.
IV. Thessaly, now called Janna by the Turks, is almont entirely furrounded with high mountains, which leparate it on the north from Macedonia, on the weft from Epirus, on the fouth from Achaia; on the eaft it has the IEgean Sea, and the gulph of Salonichi. This country produces very good horfes, and large buffaloes, reckoned the beft in Greece, except thofe of Santa Maura. The air is healthful, and the foil fertile in all forts of grain and delicious fruits and they make excellent wine.

5
Larissa,

Larissa, its chief city, feated on the river Pencus, is much fallen from its ancient grandeur, but has fome trade ftll, the mof confiderable branch of which is in Ruffia leather. It is faid here are above two hundred Jewifh families, moft of them bankers, and extremely rich. Here is alfo an Englifh conful, who carries on, for the account of his nation, a confiderable trade in corn, with which he loads feveral veffels for different parts of the world, and to his own great profit.
V. Achaita, now Livadiá, is bounded on the north by Epirus, Theffaly, and the ftrait of Negropont, on the eaft by the Archipelago; on the fouth it has the gulph of Egina, ifthmus of Corinth, and gulph of Lepanto, and on the weft the Ionian Sea, and part of Epirus; It is a pleafant and friitful country:
Livadia, the capital of this provinte, fituated on the river Hercyna, is a large and populous town, inhabited by many rich Turks. The trade confifts in fome woollen ftuffs made here, and in tice; which they fell ready huked; and prepared by the mills on the river, which cornes with fuch a plentiful fource from the mountain, at the foot of which the city fands, that it turns twenty of them in the town, not a bow-hhot off its rife.
SALONA is fituated upion a rock, in the inmoft recefs of a fruitful valley. Its trade confifts in fome cotton, but chiefly in tobacco.
Delphos has a fmall trade in the fame commodities, and their wine is exceeding good.
Lepanto, the chief town on the gulph, to which it has lately given its name, has a fmall harbour, but is too fhallow for any large veffels to enter. The trade of this place confifts in leather, oil, tobacco, rice, barley, and wheat; furrs are alfo pretty cheap here.
VI. The Peloponnesus, now Morea, is a large peninfula joined to the main land of Greece, by the ifthmus of Corinth. On the fouth it has the gulph of Lepanto and the fea of Candia, on the north-weft that of Patras, the Ionian Sea on the fouth-weft, the Ægean Sea on the eaft, and the gulph of Engia on the fouth eaft.
The foil is exceeding fertile, producing plenty of corn, wine, and oil, \&c. and its mountains are filled with game and medicinal plants.
Patras is fituated on a hill, not above a mile from the fea. Their trade confifts of raw filks, made in the Morea in great quantities; leather allo is cheap, and fo is honey, wax, wood, and cheefe.
-Modon ftands on a hill, which juts out into the fea, and at the foot of which is a good harbour: it is a ftrong, rich, and trading city.
Coron has no immediate port, but the gulph that bears its name is a fafe harbour. The country about it affords good ftore of fruits, grain, oil, and filks, which the inhabitants export to their great advantage.
Napoli di Romania has a capacious harbour, one of the beft in the Morea, being capable of containing a large fleet, but fo narrow at its entrance, that but one can pafs at a time. As its barbour is more fecure and has better anchorage than any other on the weft of this country, they drive here a confiderable trade in corn, wine, oil, filks, cotton, and tobacco.
The Iflands on the coaft of Greece,
St. MAURA is about forty miles in compafs, it is fruitful in corn, oranges, lemons, almonds, and pafture for their cattle.
Strivali, Sapienza, are fmall inands of no great note.
Candia is the largeft and moft celebrated on the coaft of Greece, and is about 600 miles in compafs.
They breed here abundance of poultry, pigeons, oxen, fheep, and fwine; the country abounds alfo in wine, and they export oil, wool, filk, honey, wax, cheefe, and laudanum. Their wine and wheat are excellent, but their wool, like that of Greece, is fit only for coarfe ftuffs. The filk would be exceeding good, if they knew how to manage it; the honey is excellent, and fmells of the thyme, wherewith the whole country abounds.
This ifland has no rivers navigable, even for boats.

## REMARKS,

With regard to the trade of Greece on the thore of the Ægean and Ionian Seas, it may be obferved, that, were it a barren inhofpitable foil and climate, that had neither production or people, or the people ignorant of traffic, we might eafily account for the trifling trade carried on here, in comparifon to what was heretofore.
Here is a rich foil, a delicate climate, excellent havens and ports, well-fortified harbours, populous cities, and in fome places a well-peopled country, and yet little trade. The reafon given for it is the ill government of the Turks, who, being averfe to the improvement of ufeful arts, difcourage commerce, leave nature to her rude felf, and yet opprefs the people in the pittance they by unexcited induftry acquire. Whence it is that the famed Arcadian plains, the flowery meads of the antients, bie defolate, without flocks of dheep,
herds of kine, without corn or wine, or oil in any quantur, fuitable to the extent of the land, though able to produce all in great plenty.
The Morea, in antient times, maintained innumerable people, and could furnifh and fupply competent quantities of cattle, corn, oil, winc, filk, flax, wool, wax, honey, fiys, almonds, pomegranates, lemons, citrons, and every, hins, requifite to feed and employ two millions of people; here being a fufficient fund of manufacture, either in filk, wool, or flax. But,
For want of trade, it is now fcarce able to fupply its own fea coaft towns, or fupport its own government ; the people being few, poor, difcouraged, and fearce able to raife corn and grapes for their food, oil for their lights, and a litule fruit for their ordinary fpending. -They buy their wines from their iflands, while their own wines perifh, and the grapes rot on the ground ungathered. - The land-owners call themfelves gentlemen, value themfelves on their alliances with ancient families, and lord it over the poor peafants with infufferable infolence, but meanly cringe to the meaneft Turk, who treats them with the baftinado ; fo that all is tyranny and mifery; and how fhould there be any trade ?
If they have any thing to fell, it is their corn, which the French, or the Venetians, or Tartans, come to purchafe; nor does all that rich country, where once the cities of Thebes, Sparta, Athens, and Corinth were fituate, afford at prefent any product more worth carrying away, though the people are incapable of confuming a very fmall part of what the land would produce. At the beft of their ports and moft populous of their cities, we fee nothing to buy, nor buyers for what may be carried for fale; the one for want of induftry, the other for want of money.
They have two articles of trade here, which are found no where elfe in thefe parts of the world, not, however, in equal quantity or quality, which are wool and leather, Here they drefs the leather after the Turkith manner, very fine, and render it foft and pliable.
The wine of Theffaly is efteemed the beft in all this part of the country; though that of Negropont, that is, of Attica and Achaia, is well accepied at Conftantinople, keeping better than that of the other iflands in the fame latitude.
The great exportation at Lariffa, the gulph of Volo, and along that coaft, brings a confiderable concourfe of merchants thither. 'Tis a confiderable place, populous and rich, and the Turks treat the merchants there with more civility and juftice than in other places. By this means, as the inhabitants are rich, and enjoy liberty, there is a fuitable return of European goods brought thither, not from the Turkin territories only, tut from Italy and France; efpecially the French, who frequently bring many cargoes of manufactures of filk, wool, hair, and cotton, \&c. by reafon of their fetching hence fo much corn.
Of the Italians, the Genoefe mofly vifit them, who come for corn, bringing catgoes of rpices, paper, Brafil fugara, lead, tin, and fire-arms, with feveral other goods.-Alfo the $\checkmark$ eretians bring them wrought iron and brafs, and variety of other fpecies of goods; and all carry back corn, but the Venetians alfo carry wine, oil, leather, wax, and honey.
North of this port is the city Salonichi, or Theffalonica, which is well fituated for trade, and is the greateft city of bufinefs in thefe parts. No port of fuch a magnitude and fituation can be without trade, Conftantinople being alfo fo near: it is, befides, the center of all the commerce of the three Macedonia's.
As the country behind it is extremely fruitful, rich, and populous, abounding with corn and cattle, and the product is almoft all carried to Conftantinople; fo Salonichi is the medium of the trade, it being the port where all the corn, catthe, and wine are exported, and where all the returns of merchandizes are imported, as well from Conftantinople and Smyrna, as from Venice, Genoa, and Marfeilles, \&cc.-It is, indeed; a mighty city for wealth, trade, and numbers of people: there are reckoned 300,000 people in it, whereof a great number are Jews.
There is nothing wanting to make this part a mart of commerce for all this part of the world, but a fine navigable river, to carry veffels of burthen 200 miles into the country, and to bring back the growth and product of the countries which lie to the north and north-weft of it, which are very large, populous, and opulent.--But, for want of navigable rivers, the inland trade here is carried on by land carriage with horfes and mules.
They have tolerable good wool here, and the French carry fome of it away, but it is not to be had in any great quantities. They have feveral curious manufaqures of cotton, but not fo delicate as the callicoes and mullins of the Indies.
As they carry corn, wine, fruit, leather, wax, \&c. to Conftantinople, and as they traffic with the Franks for the like kinds of goods; fo they receive in return fupplies of all the feveral forts of merchandizes, which their markets call for. From Conftantinople they receive all the fine filks of Perfia and India, which are brought to that city by the navigation of the Black Sea, from Trapezond, and other ports of Armenia and Poatus, or by the caravans of Aleppo, [fee the
article Carayans] or by the Ægean and Levant from Alexandria. So that by this conveyance they have filks, callicoes, carpets, drugs, fpices, coffee, and other rich goods, to a very great value ; alfo all kinds of copper veffels, which the Turks ufe in abundance. From Smyrna they have the like correfpondence, though only cafually. From France, Genoa, Leghorn, and Venice, they have all the ItaJian and French' manufacture, fuch as wrought filks, paper, fine woollen ftuffs, and fome Englifh and Dutch manufactures, but thefe come chiefly by the way of Genoa and Leghorn. From thefe they have likewife tobacco, fugars, dyers ftuffs, wrought iron and brafs, lead, block-tin, fire-arms, thot, caft iron and bar iron. So that this port is the general magazine of all that part of Europe, and is the greatelt city for wealch and trade that the Turks are any where mafters of in Europe, except Conftantinople.
On entering the mouth of the Hellefpont, the great paffage rut of the Mediterranean into the Euxine Sea, which, did not the Turks fhut up the paflage from the European nations, would open new fcenes of commerce to the world. Was our commercial interef more influentialiy cultivated with the Turks than it has ever yet been, this navigation might be opened, whereby our fhips would have a free trade to the mouth of the Danube, and by that great river convey our manufactures up to Belgrade, and into Hungary, where we have no trade, and where probably a very confiderable commerce might be raifed. Alfo
By the Palus Maotis and the river Don, a trade would be frruck out into the Wolga, and fodirectly to the center of the great empire of Mufcovy; likewife down that iiver to Aftracan, thence into the Cafpian Sea, and to the coaft of Guylan and Perfia.
By the fouth thores of the fame Black Sea, the trade would be opened to the coaft of Pontus, to Tripoli, Sinope, and to Trapezond: all which were formerly cities of great trade, made fo by the free correfpondence they held with the Mediterranean merchants, and by their trade to Corinth, to Venice, and principally to Genoz; for the Genoefe had once the dominion of that whole coaft as to trade. By this commerce a communication would be opened with all the northern part of the Leffer Afia, a part of the world wherewith England has little commercial correfpondence.
From Gallipoli to Conftantinople, there is a tolerable trade for corn, and other provifions to that city, as there is at all the towns upon that thore; but no bufinefs back again worth sotice, except fome few neceflaries and coffee, brought from Conftantinople to Gallipoli, for the Turks ufe, for the poor Greeks cannot afford the expence of it.
Wine is fold pretty openly at Gallipoli, and is very cheap; and the Turks are faid to take more liberty in drinking it there, than they do in any other place. They have fome fmall cotton filk manufactures there, and in the country towns all the way to Conftantineple : and their goods are fold at Conftantinople to good advantage. The Turks encourage the Grecks to weave and fpin, but none of them meddle with it themfelves.
We now come to the Porte itfelf, the city of Conftantinople, which is the center of trade of all that part of the world, as well of Europe as of Afia: and yet it muft be faid of Confantinople, that, except the city of Grand Cairo in Egypt, Conftantinople is the largeft city with the leaft commerce in the world.
The general trade of the city is little more than the fupply of provifions and apparel; nor is the latter any thing confiderable, compared to the other cities of Europe; the Turks not being like the Venetians or the French, who change their habits as often as they do their falbions. The chief trade, which employs the moft people, is that of furnifhing corn and cattle, and other provifions for the fupply of the multitude of people there. Another article of provifions is that of rice, and next to that their coffee. The firft comes chiefly out of Afia by the Black Sea, and the latter from Egypt alfo by fea, except in time of war, and then 'tis brought in caravans to Aleppo, and thence to Scutari by land.
As the Turks are not yet come into the drinking of tea, fo they do not ufe any extraordinary quantity of fugar: and, as they are forbid wine, and what they drink is, as it were, by fealth, fo the confumption is not fo great as to be worth naming in trade.
The general fupply of corn, except what comes from Therfaly, Macedonia, and Thracia, which is very infufficient for fuch a city, is from the coafts of the Black Sea, partly on the Afian fide, but principally on the fide of Bulgaria and Servia, and the country on both fides the Danube as high as Lemendria, and even to Belgrade. From thefe parts the quantity is fo exceeding great, and fometimes fo much above the confumption, that barley has been known to be fold at Conftantinople for 3 d. ferling per bufhel. The Turks generally feed their horfes with barley, as we do ours in England with oats.
The fhips from the Black Sea bring alio fruits and roots, efpecially onions, in great quantities. And, from the coalt of Greece, oranges, lemons, citrons, pomegranates, figs, raifins, and the like, as alfo falt. Before the conqueft of that country by the Germans, the flelh mear was chiefly fupplied

V O L. I.
from Hungary; at prefent 'tis brought from Molavia, wil. lachia, Bofnia, and the feveral countries upon the banks of the Danube and the river Pruth: and the quantity of blact. cattle, brought every year from thefe countries, is very great. Their other branches of commerce confift chiefy of, ( t ) That of the Franks, or that carried on by the French, the Dutch, the Engliih, and the Italians.-The trade of England to Turkey confifts but of few articles for this city, viż. blecktins and the woollen manufacture, chiefly of fine cloths, tome gold watches, lead, and toys; befides which, we carry lityle thither of confequence. The trade of the Dutch here is ftll 1 efs, being chiefly in cloth made in imitation of the Englifin, whale-fins, train-oil, battery; with fome dyeirg tturfs and fine linen, but in no great quantities. The trade of France here, as well as to other parts of Turkey, is, perhaps, fuperior to that of all other the European powers confidered together. See the article Levant Trade, Oriental Trade, and Turkey Trade.
The Italians, particularly the Venetians, häve a pretty good trade thither, confrfting in a great variety of goods of the growth and manufacture of other nations, not their own, as wrought iton, fugar, tobacco, oil, wine, 弟epper, and whatever goods they can find vent for.
'The commerce of the eaft country, which' we take to contain the importation of all fuch goeds as come by caravans from Perfia and India, either to Aleppo or Trapezzond, confifting chiefly of fine wrought filks, plain and figured, of divers foits and values; fuch as plain and ftriped Perifian filks, taffeties, damafks, fattins, cloth of filver, and feveral of the richeff kinds of fuch goods for the feraglio's, and for the houfhold: alfo India damafk, and other rich things, fuch as atlaffes, fine carpet-chints, and painted callicoes; befides plain callicoes, mullin, \&c. All thele, béing a valuable product, àre chiefly bought by the Jews, who do not keep fhops in the bazars; but the Jew-women, making up their fardels, wait upon the ladies in their baths, and, like our pedlars, trade with them in their dwelling-houfes; they are admitted into the feraglio itfelf, where they make them pay a fufficient price for moft things they buiy.
Another branch of their trade is from Egypt. There comes yearly a large fleet from Alexandria with corn, bringiing alfo the Grand Seignior's money, or revenues, and his coffee; alfo a great quantity of coffee for private trade. The fame fhips bring leveral merchandizes, as well of Indiä, which comes to Egypt by the way of the Red Sea, as of the country of Egypt itfelf, and of Africa. With thefe hhlps come in others from Cyprus and Smyrna, and fome of the iflands of the Archês, from whence they import to Conftantinople feveral goods, huch as wine, corn, oil, and other merchandizes, and manufactures of cotton, filk, and hair.
All thefe articles fuirnilh confiderable quantitics of goods to Coriftantinople, which are the fubjects of its commetce, and which are partly confumed in the city, and partly carried from thence to the Black Sea, and to the city of Adrianople, for the confumption of the inhabitants of that city, and the idjacent country; and alfo to all the ports on that fide the Leffer Afia, they receiving all their Europeari goods from this city. There is a confiderable trade likewife in this city for naval affairs : all the Grand Seignor's fleet, whether of gallies or men of war, are laid up here in the 'royal arfenal. Here moft of them are built; repaired, and refitted, and all the ufual trades are employed, and exceeding bufy, when the fleets are fitting out, juft as they are in other paris of the world; fuch as anchor-fimiths, rope-makers, fail-makers, painters, carvers, and innumerable others, who are all to be found here, and ready at call.
The quantity of naval ftores'for thefé occáfions muft be exceeding great; and, as they are not to be found in the adjacent country, they muft emiploy a confiderable number of thips to fetch them from diftant parts, as from the illands of the Archipelago, and the Adriatic Gulph.
The general apparatus of war makes no inconfiderable atticle in trade here, it being ufually all performed in or near Conftantinople: for example, cafting their cannon, which is always very numerous, and the pieces exceeding large ; cafting fhells, mortats, granaidoes, and fmaller pieces, even to their fire-aims: in fine, in furnifhing the navy with ftores, the trocps with arms, and the men with provifions and apparel. Likewife,
All the carriages, horfes, camels, \&cc. for any expedicion, are ordinarily prepared here, efpecially when the war is in Eu-rope.-Tet there are many obftructions to cotnmerce: as, (I.) They have no courfe of exchange between the imperial city, however opulent, full of people, or commerce, and any other part of the world: fo that if a mierchant at Conftantinople would buy a cargo of goods, fuppofe at Marfeilles, Leghorn, Cadiz, or Libon, he cannot remit the money for payment, but muft fend a fupercargo with it in the fhip, to buy, pay for, and bring away the lading. (2.) They have no correfpondence in diftant patts of the world, or trading with the merchants any-where but fuch as come directly to it: even the commerce of Salonichi, a city of their own, is carried on to Conftantinople, but not from it, the merchants going from Salonichi with their hips, and it, the merchants going from Salonichith with their bips, and
felling their goods to thofe of Conftantinople; but the merchants at Conftantinople neither fend to Salonichi, or go thither to buy.
Nor have they any poft for carriage of letters from place to place; fo that they may be faid to have no regular correfpondence (which is the life of commercial bufinef) with any part of the world, nor with the parts of their own empire, and can fcarce fend any letters but by exprefs meffengers.
They give no credit in trade; purchafes in'general are for ready caif, and they borrow on pledges commonly. Thefe things cramp trade, and prevent its flourifhing.
All their trade with the Armenians, Georgians, Perfians, and Egyptians, is managed by perfonal appearance: the Armenian, Perfian, and Georgian merchants come with the carayans to Aleppo, to Nicomedia, and Conftantinople (as they do to Scanderoon and Smyrna) where they fell their goods, and carry back the fame way the money they receive, or the goods they buy.
From the nature of this commerce it is realonable to enquire, how it can fubfilt, where they receive a general import, and have no produce or manufacture to export in return? How do they difcharge the balance, and whence comes all the money which muft go out in fpecie? For it is evident the Armenian and Perfian merchants carry away a great deal of money for their wrought and raw filks, manufactures, drugs, and India goods, and whatever elfe they bring. Some European cloths, indeed, and other goods, they take with them, as leather, paper, fine wrought iron, toys, \&c. but not equal in value to the goods they fell. Likewife,
All the trade of Salonichi, Lariffa, and the coaft of Greece to Conftantinople, which confifts of the product of the adjacent countries, is chiefly paid for in money, and thefe countries are inriched by it. But whence comes all this money? The anfwer to which queftion gives us the eclairciffement, which is very fingular, for there is not a city in the world, which, like Conftantinople, has neither product or manufacture in or near it, and yet receives fo much, and pays fo well; for, as intimated, they neither give or take credit.
Now the fource of money which fupplies this commerce, and which flows, as it were, into one channel to Conftantinople, is the Grand Seignior's revenues: here centers the public receipt: Conftantinople is the grand exchequer of the whole empire, the money flowing hither in a full fream. The fupply of money comes hither from all parts of the Turkifh empire; bither the feveral governors, bathaws, and, as we term them, intendants, bring in the taxes from the feveral provinces: hither the fleet, or convoy, from Alexandria, brings annually the taxes from the whole kingdom of Egypt, and the adjacent places. The gallies go annually round all the iflands of the 开gean and Ionian Sea, to receive the taxes of thofe that collect them; fo much for the capitation, fo much for the land-tax; 10,000 dollars from one, 5000 from another; and fo more or lefs as the commerce, number of people, or produce of the iflands direct. As this is the method throughout the whole empire, and all the treafures of the ftate comes to Conftantinople, we need enquire no farther from whence the balance of their trade is fupplied, without a return of merchandize
This money, it is true, comes firf into the Grand Seignior's coffers; but then, as the whole city, more or lefs, depends upon the Grand Seignior's houthold, that is, the feraglio, or upon the great officers of ftate, who receive their income from the government, or depend upon the naval affairs, or upon the army; fo that money immediately circulates again, and all have a fhare of it, more or lefs: and thus it goes back in a great meafure to the places from whence it came. See the article Levant Trade.
GREENLAND, or SPITZBERGEN, as the Dutch call it, is undifcovered on the north; on the weft it has the Northern Ocean, on the fouth the fame, between it and the Mufcovite Lapland, and the northernmoft part of Norway, overagainft which it lies; on the eaft it has an undifcovered country, to which it is joined by an ifthmus, which is by fome called Eaft, or New Greenland.
Spitzbergen lies neareft to the pole of any country yet examined by feamen; that is, from 76 to 82 degrees north latiude, and perhaps much farther for aught we krow.
There are no towns nor villages in this whole country, that we know of, it not being inhabited by the human fpecies that is any way certainly known. Such of the mountains as are expofed to the warm air and fun-beams are covered with heath and mofs; and in the cliffs of thefe rocks there are infinite numbers of fowls, that reft there all the year. The dung of thefe birds, with the mofs wathed down by the melted fnow, makes fuch a mould, in fome places near the fhore, where it produces a kind of lettuce, fcurvey-grafs, exceeding mild and pleafant fnake-weed, moufe-ear, heart's-eafe, frawberries, houfeleek, wall-pepper, and fume plants unknown to us.
The fea is obferved not to be fo falt here as in other places, and changes its colour with the fiky. The air is fo cold, that there is almont a continual froft, which is ftrongeft in April and May. South or weft winds bring fnow or rain, and moderate the celd. In June, July, and Auguft, the weather
is ufually calm, and in the two laft months, eppecially in July, the fun thines fo hot as to melt the tar between the fearns of a fhip, if the wind cannot come at it.
This country abounds with a kind of white bear.--The largeft are water-bears, which live upon what they can get at 筷a. Their fkins make very comfortable cloathing for fuch as travel in winter; and are dreffed in Spitzbergen by treading then in hot faw-dult. They have a fine kind of deer in this coem try; they abound in feal, fea-dogs; and horfes. There are few land-fowl, but water-fowl in abundance.
The fifh on this coaft require the mof notice, the taking them being the fole motive that brings fhips into thefe feas, where the whale-filhing is carried on with great profit. The true large whale differs from the reft of the filh fo called, by his having no teeth; inftead of which, on each fide of the upper jaw grows the whale-bone, in 4 or 500 different blades, at equal diltances, fome exceeding 12 feet in lengh, and a foot broad at bottom, growing narrow upwards, like the ftrokes of a fan inverted, the largeft weighing about 20 pounds.
The head makes $\frac{1}{3}$ of the whole body; his tongue is about eight feet long, and ro broad, weighing near 600 weight; his bones are hard, but, inftead of a large cavity in the middle, are porous, and full of marrow; his belly and back are red; his fefh coarfe and hard, mixed with many flnews, and is very dry and lean, becaufe the fat lies between the fleth and the $\mathbb{f k i n}$. The fat is mixed with finews, which holds the oil as a fponge does water: the other ftrong finews are about the tail, with which he turns and winds hmielf as a fhip is guided by a rudder. He fwims as fwift as a bird fies, and makes a track in the fea like a large fhip under fail. Befides the uppermoft thin fkin, there is another, almolt an inch thick, but neither very frong, which is thought the reafon why the whale does not exert that force that might be expected from a fifh of that lize. The middle fort of them are from 50 to 60 feet long, and yield from 70 to 100 barrels of blubber, though fometimes they are much larger. Martens mentions one that yielded 130 hogtheads. This blubber lies immediately under the fkin; they cut it into thin fices, which are put into hot coppers: the oil foon melting out, the fkin is thrown away.

## Of the manner of taking the whales in this trade.

As foon as the fifhermen hear a whale blow, they cry out, Fall, fall! and every fhip gets out its long boat, in each of which there are fix or feven men; they row till they come pretty near the whale; then the harpooner ftrikes it with his harpoon, which is a fharp iron, refembling the head of an arrow, fixed to a flick; and this requires great dexterity. Through the bone of his head there is no ftriking, but near bis fpout there is a foft piece of feith, into which the iron finks with eafe. As foon as he is ftruck, they take care to give him rope enough, otherwife, when he goes down, as he frequently does, he would inevitably fink the boat: this rope he draws with fuch violence, that, if it were not well watered, it would, by its friction againft the fides of the boat, fet fire to it. The line faftened to the harpoon is fix or feven fathoms long, and is called the forerunner: 'it is made of the finet and foftef hemp, that it may flip the eafier: to this they join a heap of lines, of 90 or 100 fathoms each; and, when there are not enough in one long boat, they borrow from another. The man at the helm obferves which way the rope goes, and feeers the boat accordingly, that it may run exactly out before; for the whale runs away with the line, with fo great rapidity, that it would overfet the boat, if it were not kept ftraight. When the whale is fruck, the other long boats row before, and obferve which way the line ftands, and fometimes pull it: if they feel it ftiff, it is a fign the whale ftill pulls in ftrength; but if it hangs loofe, and the boat hiss equally high, before and behind, upon the water, they pull it 'in gently, but take care to cover it fo, that the whale may have it eafily again, if he recovers ftrength : they take care, however, not to give him too much line, becaufe he fometimes entangles it about a rock, and pulls out the harpoon The fat whales do not fink as foon as dead, but the lean ones do, and come up fome days afterwards. They fink almoft as foon as they expire. - When they fpout, the fifhermen know that he draws towards his end, and prepare for cutting him up. In order to which, they haul him clofe to the fhip's fide and with great knives flice his fides, raifing the blubber by a hook and a pulley, which they lift up as they cut. Many of thefe great flakes they ftring upon a rope, and fo drag them on fhore, where they are heaved up by a crane, laid on the whale's tail, and afterwards hewed into pieces no bigger than renchers, and fo thrown into coppers.- So foon as they be come brown, they are called fritters, taken out, and calt away: the liquor is then laded into a boat half full of water to cool and cleanfe it; and thence by long troughs, that it may be more cool, conveyed into hog theads clofe to the fhore. In the mean time, the head is cut off, and drawn as near as can be to the fhore, and hoifted up by a crane, till the whalebone is cut out, and tied by fifties; and then the reft of the head is alfo boiled for oil. The tongue is craned up with greas

## G R E

care; that of a large whale yielding from feven to twelve hortheads of oil, thrugh there have been inftances of their yielding 24 hogmeads: but this is extraordinary.
Within the body of the whale is found seldom any thing but 10 or 12 handfuls of a kind of fmall black fpiders, and forne fmall quantity of green herbs, torn up from the bottom of the fea, and which are fuppofed to be the food upon which the whales chiefly fubfift. The fea hereabouts is fo covered with hefe infects, that it appears quite black; which is a fign, to thofe who go about catching of whales, that they are like to make a good booty, the whales delighting generally in that part of the fea which produces thefe infects.
All the requifite fifhing inftruments, fuch as harping-irons; or harpoons, lances, cutting-knives, nole-hooks, ines, thallops, cafks, \&ic. muft be provided, and the fhips completely fitted, victualled, and manned before the end of March; when, every thing being on board, the fhips muft fail at farthelt by the beginning of April for Greenland.
The veffels moft proper for the whale-filhing are thofe we call lly-boats, or cats, or hag-boats; they fhould be very ftrong-built, and particularly doubled at the bow, that they may refift the fhocks of the ice. The fize of thefe fhips commonly $u$ fed is about 200 to 500 tons; and they are fupplied with men and fhallops in proportion to their burden, as follows:

Tons. \begin{tabular}{l}
Shallops. <br>
A fhip $\left\{\begin{array}{lll}200 \text { mult have } & 4 \\
250 & - & 5 \\
300 & - & 6 \\
450 & - & 7\end{array}\right\}$ And $\left\{\begin{array}{l}29 \\
36 \\
43 \\
50\end{array}\right\}$ Men and

$.$

boys.
\end{tabular}.

The particular qualifications of the men for a fhip of about 300 tons and fix fhallops, are generally as follow, viz.
The voyage to Greenland outwards is commonly performed in four or five weeks, allowing for variable winds and foul weather, the feafon of the year being ufually formy when they fet out, and particularly fubject to long eafterly winds, otherwife they often run it, with a fair wind, in 18 or 20 days; and it is obferved that they return home, from the time of beginning to fail, in lefs time than they go out. The fihery begins in May, and continues all June and July; but, whether they have good or bad fuccefs, they muft come away, and get clear of the ice, by the end of Auguft; fo that, in the month of September at fartheft, they may be expected home : but a fhip that meets with a fortunate and early filhery in May, may return in June or July.
When the whale-fifhers fee feveral whales at-a time, two or three veffels generally agree to purfue their game in concert, and to affift one another in the catching; and they divide what they catch according to agreement.
If a dead whale be found floating upon the fea, the property is theirs who find it, and take hold of it ; and, to encourage the Chip's crew to be always very watchful, he who difcovers the dead whale has a premium of half a guinea. The trainoil of fuch a dead whale, efpecially if it died of itfelf, is of a reddifh colour, and not fo valuable as of a whale that is immediately killed; but the fins are of equal goodnefs.
There are, befides the whales, feveral other monftrous fifh found and catched in thefe feas, namely, (r.) The pot-fifh, or fperma-ceti-fifh: he is as big as the whale, having a monftrous large head, from which they take from 12 to 20 barrels of brains; which being well cleanfed, they call (but falfy) fperma ceti: they cut alfo from the body of the filh feveral puncheons of blubber; but he is not near fo fat as the whale. The fin-filh is almolt as big as the whale, and is diltinguifhed from it by a large fin on its back: he is not fo fat, nor hath fuch fins in his mouth, as a whale; fo that they are feldom thought worth the trouble of killing, or to venture the harpoons and lines on, as, being more nimble, they are more likely to efcape. Alfo,
There is fometimes met with in thefe feas a fifh called the unicorn, a creature beautifully fpotted, with a horn growing out of his upper jaw, and pointing ftraight forward, from three to 12 feet long, according to the growth of the fifh, which is as eftimable as ivory. The fifh will yield one or two barrels of blubber, and the train-oil of it is whiter than that of the whale.
The merfe, or fea-cow, called by fome the fea-horfe, is found here both in the water and on the ice: it is as big as a large bullock. From one that is pretty large they cut about a puncheon of blubber
The feal, or dog fifh, are often upon the ice, and are eafily taken. They afford very good train-oil; and the fat of about 12 or 20 feals will fill a puncheon. Their fkin is ufed by the trunk-makers, or dreffed as leather for divers ufes.

## R E M A R K S

Before we conclude this part of the trade of Great-Britain, it may be neceflary to mention (though it be renovare dolorem) that the Englifh were the firft that ever made the bold attempt of attacking that terrible creature a whale ; and, therefore, have a kind of title by inheritance to that trade, though
we enjoy but a fmall fhare therein, in comparifon to thofe who have fupplanted us.
The Englifh were the firt that ever attempted to fail among hefe illands of ice; and, in queft of new difcoveries, they raverfed the frozen zone to the latitude of 76 , far within the arctic circle. Here they difcovered Greenland, as we name r, or Spitzbergen, as others call it ; and, thrugh they f. und the land not capable of being cultivated or inhabited, yet they found the feas full of whales; and, finding them profitable, became dextrous harponiers. From them the Hollanders, Bremeners, and Hamburghers, learned it; and, in their firft attempts, they were obliged to hire Englifhmen for harponiers and fteerfmen, as we now are (fo unhappily are the tables curned) to bire Dutchmen and Germans, if we engage in the lame trade.
About the year 1597, when the Englifh nation thriving in trade, and encouraged by queen Elizabeth, fpread the northern leas, in quef of new difcoveries; in 1598 , they began this trade, though with two fhips only. The firf voyage they ftruck feveral whales, and fuch as would have made their voyage prodigioufly profitable ; but, by being unexperienced in the bufinefs when they ftruck the whales, they tore all away, overfet their boats; drowned their men, and even fometimes endangered their fhips : however, they killed feveral fmall whales, and made fo gainful a voyage as to encourage further attempts. Accordingly in 1599, when they went with five fhips, and furnilhing themfelves with fuch neceffaries as they had found needful, they made a good voyage; and boiling their blubber on fhote, on the ifle of Spitzbergen, they brought home fo much oil as turned to very great account. From that time they went on with great fuccefs, for Io or 12 years, particularly in 1608 , which proved extremely fortunate: and fo their trade continued till 1612 .
In which year the Hollanders, hearing of the fuccefs of the Englifh, and in hope of the like advantages, fent the firft time to Spitzbergen, fupplying themfelves with fkilful pilots and harponiers from England. But the Englifh claiming the property in this trade, as indeed was their due, forbid the Hollanders meddling with the fifh, and rent them home for the firft time empty. The Dutch, however, not giving it over, fent two thips the next year, 1613 ; and trole, being fhips of force, refolved to defend themfelves. But the Englifh attacked them and brought them to England, with all the oil, their fhallops, fifhing-tackle, \&c, the Dutch fhips being fully laden, and having made a good voyage; for the Dutch proved their lofs to be 130,000 guilders.
After this they had various bickerings, the Dutch pufhing into the trade, and the Englihh attacking them, till at laft; in the year 16 I 7 , the Dutch frengthening their fifhery with fhips of force, and the Englilh attacking them again, it came to a kind of general action, wherein the Englifh were worfted, the Dutch taking one of their ihips. - This they carried to Holland; but the ftates general, being unwilling to give offence to king. James I. then reigning, caufed the thip to be very honefly reftored, with all that was in her; and, in order to prevent the like for the future, fent over a deputation to England, to treat upon the fubject, and to fettle a freedom of the fifhery both for the Englifh and Dutch. But the king did not decide the queftion, nor encourage his fubjects to difturb the Dutch; fo it remained undetermined, and both fides went on fifhing together.
The Englifh had, indeed, poffeffion of the ifland of Spitzbergen, and of the harbours and bays where the fhips ufually went for ©helter, and where they built houfes and fheds to lay up their calks, to boil their blubber, \&c. and which were the beft in the place, viz. Clock-Bay, the Safe-Harbour, Englifh Bay, Englifh-Harbour, and the like.-Upon this the Hollanders went farther north, and fettled by themfelves in feveral other places, as at North-Bay, South-Bay, Holland'sBay, Amfterdam-Inand, and the like.-The Danes, who came afterwards, fettled likewife, and placed themfelves between the Englifh and the Dutch, at a place ftill called the Danilh Bay.-The Hamburghers came after the Danes, and pitched farther weft, calling their place Hamburgh Bay.After thefe came the French and the Spaniards, and they were obliged to go ftill farther north, and their fettlement is called Bifcay Hook.
But, as the inand became farther difcovered, and feveral other bays and harbours found out, all thofe nations Gifted their ftations, as they found the moft for their convenience; the ifland and the fifhery, alfo, being more than fufficient for them all, had they been many more than they were.
At that time, the whales, having not been ufed to be difurbed, frequently came near the Thores, into the very bays, and were accordingly killed almoft clofe to the fhore; fo that the blubber, being cut off, was immediately carried on thore in the fhallops, and boiled into oil on the foot. Thus the fhips took in nothing but the pure oil and the fins, and all the bufinefs was executed there; whereby a fhip could bring home the product of many more whales than the can according to the prefent way of conducting this trade. The fifhery alfo was then fo plentiful, that they were obliged fometimes to fend other thips to fetch off the oil they had made,
the quantity being more than the fifhing-hips could bring àway.
Time and change of circumftances have fhifted the fituation of this trade. The fhips coming in fuch numbers, the whales were difturbed, and gradually, as wher filh often do, furfaking the place, were not to be killed fo near the fhore as before, but are now found, and have been fo ever hince, in the openings and fpaces among the ice, where they have deep water, and where they go fometimes a great many leagures from the fhore. This alteration has rendered all their warehoufes and cookeries on fhore ufelefs, their ruins only remaining to be feen; for it is above 80 years fince they have been forfaken.
This filhery requiring to be managed after a new manner, and to be carried on in the high feas, and among the ice, became niore difficult and dangerous than it had been before; feveral fhips were lof in the beginning of it, before they could fo fully learn the nature and fituation of the ice, as to know where it was, and was not fafe to venture. Such as were over cautious in, venturing among the ice, frequently came home without any cargo at all, to the great lofs of their owners; and thofe who boldly followed the whales into the openings and hollows of the ice, not having had experience enough to judge where they might, or might not venture, were as often crufhed to pieces in the ice. This fodifcouraged the merchants, who before that carried on the trade in companies, not only in England, but in Holland and other countries, that they diffolved their focieties, and fo the trade feemed to be abandoned for a time, and by the Englifh for ever.
The Dutch, however, refumed it, though not in a company, yet by their private merchants, about the year 1638 , and foon fubdued all thofe difficulties which had before difcouraged them, and carried on the trade with more fhips than heretofore, and with far more emolument : and in this manner they have gone on ever fince.
The growth and increafe of this trade, and the extraordinary benefit thereof to the Hollanders, were minutely reprefented, fome years fince, by Mr Henry Elkin, a merchant of Bremen, in a memorial to the late Sir John Eyles, when fubgovernor of the South-Sea company, to induce the company to engage vigorounly in that fifhery; wherein he made it appear, that, from the year 1675 to the year 1721, the Dutch only, had
Sent to the whale-finhery - 6,995 fail of fhips. Thofe fhips killed 32,908 whales,
And brought home of train-oil $1,250,714$ puncheons,
And of whale-fins at leaft 40,000,000 of pounds weight.
The value of oil and whale-fin, thus brought home by the Dutch, amounts to no lefs than 150 millions of guilders, or 14 millions of pounds fterling.
Add to this account all the advantages which accrue to the Dutch by the building, fitting out, and furnifhing fo many of their fhips, the cooperage of fo many cafks, and the employment of fo great a number of their feamen; of which we fhall take more particular notice under the article Hol land. A melancholy article to be added to all this, as it relates to England, is, how great a quantity of this oil and fins the Britidh nation have bought from the Dutgh with their ready money, which they might otherwife have kept at home to fo great an advantage; and, indeed, inftead thereof, if they had been refolute in the firft eltablifhment of this trade, have fold oil and fins to the Dutch themfelves, or at leaft to thofe nations whom the Dutch now fupply with them.
Thus England has been obliged, ever fince about the year 1638, to fit down with the lofs of a trade which they were the firft beginners of in the world. There was an attempt, indeed, to recover this trade in the year 1694, when a company of eminent merchants undertook it, and fitted out two thips the firft year, having an act of parliament in their favour, particularly exempting them from any duties, and their men from being preffed into the king's fervice; which, at that time, was a valuable privilege.
But thefe gentlemen were ill ferved, and, wanting due information of the proper methods for managing the whole affair, they were impofed upon by almoft all the people they employed, both at home and abroad, running them upon irregular meafures and needlefs expences; fo that it is no wonder they loft by every flep they took, and at length annihilated their capital fock.
The next attempt was that made by the South-Sea company in confequence of Mr Elkin's propofition; but from what caufes this, and other concerns of trade, have no better fucceeded with that corporation, fee the article South-Sea Company,
It remains now only to enquire, whether England is not capable of carrying on this trade as much to advantage as any other nation whatfoever? See the article Fisheries.

The laws that have been made in England, from time to time, to encourage this trade.
I. Stat. 25 Car. IL. cap. 7. §. I. It fhall be lawful for all his majefty's lubjects, and for every other perfon refiding here, to trade to Greenland, and thofe feas, and there to take whales, and other filh, and to import oil, blubber, and fins; and it fhall be lawful for any perfon to import train-oil, or
blubber, of Greenland and thofe feas, or of Newfoundlith or of any other his majefty's plantations, made of fifh, or other creature living in the feas, and whale-fins, caught in fhips belonging to England, and imported in fuch fhips, without paying any duty; and for the tun of fuch oil taken, by any fhipping belonging to his majefty's platutations, and imported in fuch ihipping, there fhall be paid 6 s. and for every tun of whale-fins taken and imported in fuch flipping, 50 s . and for the tun of fuch oil taken by the faid lhipping, but imported in thipping belonging to England, $\& c$. 3 s . and for every tun of whale-fint taken and imported in fuch Chipping, 25 s. and for the tun of all fuch oil and blubber of foreign firhing, 9 l, and for every tun of whale-fins of foreign fifting, 18 l .
II. Sect. 2. No Englifh hip importing whale-oil, or blubber, or other fifi oil, or whale-fins of Greenland, hhall enjoy any benefit by this act, unlefs fuch fhip did proceed on her voyage for Greenland and thofe feas from England, Wales, or Berwick, and was victualled for the faid voyage in fome of thofe places, to be attefted by the collector of the port.
III. Stat. 4 and 5 Will. and Mar. cap. 17. §.9. The com. pany of London merchants trading to Greenland fhall during the continuance of the joint-ftock hereby appointed (and fince expired) enjoy the free trade of catching of whates, by fea or otherwife, to and from Greenland, and the Greeniand feas, and all other feas and places, except in the feas belonging to their majefties plantations in America.
IV. Sect. 28. No Thip belonging to England, Wales, or Berwick, employed in catching whales in the Greenland feas and other the places aforefaid, and importing whale-oil or blubber, or other filh-oil, or whale-fins, of Greenland, \&ic. thall enjoy any benefit by this act, unlefs fuch fhip did proceed on her voyage for Greenland, \&cc. from England, Wales, or Berwick, and was victualled for the faid voyage in fome of thofe places, to be attefted by the collector of the port. V. Sect. $3^{\circ}$. This act thall be a public act.
VI. Stat. 10 Will. III. cap. 25. §. 17. Whale-fins, oil, and blubber, taken and imported by the hips of the company of merchants of London trading to Greenland, were not intended to be made liable to the duty of 12 d . for every 20 s . value of goods imported, charged in the act 9 Will. III. cap. 23. but thall be free of the faid duties, as all finh of Englinh taking.
VII. Stat. I Ann: cap. I6. §. I. It thall be lawful for any of her majefty's fubjects, that will adventure to Greenland for fifhing of whales, to have all the privileges that were granted to the Greenland company by the act 4 Will. and Mar. cap. 17. and fhall not pay any other duty than if they had been of the faid Greenland company.
VIIİ. Sect. 2. No harpooner hall be impreffed for her majefty's fervice.
IX. Stat. 5 Geo. II. cap. 28. §. I. It thall be lawful for any perfons for nine years, from the 25 th of December, 1731 , to import whale-fins, oil, or blubber, feal-oil, feal-fkins, or any other produce of feals, or other creatures taken in the Greenland Seas, or Davis's Streights, or other parts adjacent, in Britifh fhips, whereof the captain, and one part of the mariners, are Britilh fubjects, without paying any duty.
X. Sect. 2. Nothing in this act ghall give liberty of importing any of the beforementioned commiodities duty free, unlefs the captain of the fhip fhall make oath before one of the commiffioners, or principal officer of the cuftons, in the port of importation, that all the whale-fins, \&c. imported in fuch Mhip, were really and bona fide the fins, \&c. taken in the Greenland Seas, Davis's Streights, or other parts adjacent, by the crew of fuch fhips only, whereof the captain and one third part of the mariners were Britifh fubjects. During the continuance of the act 5 Geo. HI. for encouraging the Greenland fithery (which by 13 Geo. II. cap. 28. 8. 3. is continued to 25 December, 1750 , and from thence to the end of the then next feffion of parlianient) every Britifh veffel of 200 tons or upwards, bound to the whalafifhery to the Greenland feas, \&c. Thall be examined by the proper officers of the cuftoms, and, if found to be duly qualified, certificate thereof to be made to the commiffioners of the cuftoms, and on oath of the owners and chief officers of the faid fhip, that it is their purpofe that the fhip fhall proceed on a fithing voyage to thofe feas, and on the malters becoming bound with two fureties in the penalties of treble the bounty, the commifioners are to grant a licence to proceed on fuch voyage.
On the Mip's return, the proper officers of the) cuftoms are to view her condition and lading, and take a fchedule of the perfons on board, and to certify the fame ; the mafter and mate making nath that they did directly proceed on fuch voyage as above, and no other, and ufed their utmoft endeavours to take whales, and other creatures in thofe feas, and that all the whale-fins, oil, and blubber (if any) imported in their fhip, was taken by their crew in thole feas; there fhall be paid by the receiver general of the cuftoms the fum of twenty fhillings per ton, according to the admeafurement of the hip

## G R E

6Gio. II. cap. 33. §. 1. 3, 13 Geo. II. cap. 28. §. 4. Nute, during the late war [with Spain] over and above the afore-mentioned 20 s . per ton, the commiffioners of the cuftoms may, on demand, caufe payment to be made of a further allowance of Ios. per ton.-I 3 Geo. II.

## GREENWICH-HOSPITAL.

Duty of 6 d . the month out of feamens wages, for the fupport of Greenwich-Hofpital.
By 7 and 8 Will. III. cap. 21.-Firt granted. 8 and 9 Will. III. cap. 23.-The former act enforced. 10 Ans. cap. 17.—New regulations.
2 Geo. II. cap. 7.———Further regulations.
Each man for every month employed - 0.6 duty, and fo in proportion for any leffer time.
To be paid by every feaman or other perfon whatfoever, employed in any of his majefty's fhips, or of thofe belonging to the fübjects of Great-Britain or Ireland, \&c. and by every matter or owner navigating his own fhip, except only fuch Hoys as are actually put apprentices by parifhes, till they are eirghteen years of age; (who are exempted by 2 Ann. cap. 6.) which directs regiftering theier indentures, and that none beallowed without endorfement; but not to extend to any other fervants, apprentices, or boys whatfoever; and alfo except thore employed in ariy coafting boat employed in filhing, and boats or veffels trating from place to place, within any river of Great-Britain and Ireland, or open boats on thefe coafts; and perfons employed on board hoys, \&c. belonging to London, and employed within the North Foreland in bringing corn, fifh, or other provifion for London.
But, that mafters of coafting veffels may not poffibly evade the duty under pretence of having been employed formerly in the manner before exempted, the receiver of the port to which they belong, muft, from time to time, call them to account.
And this duty may be deducted and detained by every mafter, \&c. of fhips liable to it, out of the wages, \&cc. of all employed, except apprentices, \&ic. as before exempted; to be paid by him to the receivers appointed, who in the out-ports are generally the collectors of the cuftoms deputed from the commiffioners appointed by the admiralty. In purfuance of which deputation, the collector is, on the firft arrival of any Ship or veffel, fubject to the duty from foreign parts, to require an account of the entries and difcharges of all the men employed, fince the laft payment of it; for which muft be produced regular receipts from fome collector, under the of-fice-feal, ftampt in the margin; which muft be fent to the office, with the next return of accounts: in either of which if there appear any irregularity, it muft be noticed to the commiffioners: but, if the mafter pretend he has paid the duty at fome other port, and will take oath that his laft receipt is loft or miflaid, the collector muft not accept it, but oblige him to produce it, or leave a depofit for the duty till he can produce a duplicate. Which being produced, the receiver muft carefully examine, that if he fhall judge the number of men mentioned lefs than what the fhip is ufually failed with, or fufpect any deceit in the times of entry or difcharge of any of the fhip's company, or any other fraud intended, he may examine the mafter or any other upon oath: and, when ratisfied of the truth, he muft then, to adjuft the duty, compute the time of each man's fervice, from the laft payment, as mencioned in the receipt, to the time of the prefent computation: and, in cafe of fhips loft homeward bound, the duty muft be paid only to the time the fhips arrived at their laft delivering ports abroad.
Note, That, though fhips from foreign parts muft pay every voyage, yet, for coafting veffels, the receiver of the port they belong to, needs not account every voyage, unlefs they are 30 days in arrear, or there be fome particular reafon: and that fhips belonging to the ifles of Guernfey, Jerfey, Alderney, Sark, and Man, or the Britifh colonies in America, are to pay, in Great-Britain, that part of the duty due at their arrival, and during their ftay; and fhips belonging to GreatBritain, trading from thence to thofe iflands, \&cc. and back again, are to pay the whole duty in Great-Britain.
The form of the computation of the fervice mut be as follows:

The fervice thus computed, the receiver muft demand the duty of the mafter with whom alone the receiver fhould account, and not with crimps, \& $\&$. unlefs the mafter is not to be found: the receipt to be given under the office-feal is as follows:
VOL.I.

## G R E

The twenty-third day of March, one thoufand feven hundred and thirty.

Tons Mez
Bo 5
(L. Sig.) Received of Mr. James Bell, mafter of the Providence of London, lately arrived from Rotterdam, the fum of four chillings and three pence half-penny, for the ufe of GreenwichHorpital, being fix-pence a month from each of the five perfons belonging to his faid fhip Pro-
vidence, between the third of January laft, vidence, between the third of January laft,
and the * twentieth inftant, in purfuance of an act of parliament made in the tenth year of the reign of her late majefty queen Anne, intitled, An act for the better collecting and recovering the duties granted for the fupport of the royal hofpital at Greenwich, \&c. Paid laft at Cowes the fifth of January 1730, amounting to fix thillings and eight pence, as by receipr appears
A. B. Receiver for the port of Southampton.

* The end of the voyage, or the time of the laft man's dif. charge, fo that the mafter and all the men muft enter anew the next day, if the fhip continues in pay, to account with the next receiver; but, if the thip be laid up, the beginning of the next voyage muft be accounted from the time of the firft man's entry for fuch voyage.
$\dagger$ The days amount to 77 , which being divided by 30 the number of days at which the month is always computed) the quotient is two months 17 days; therefore the 17 days are fet down in the column of days, and the two months are carried to the column of months.

And, if the mafter omit payment on his firft arrival, it muft be paid * before his veffel may be cleared inwards by the officers of the cuftoms; who are not, on forfeiture of twenty pounds, to clear fuch vefiel, or fuffer it to go out of the port, till the mafter produce'an acquittance, and that he is not more than chirty days in arrear, or is exempted: but to prevent needlefs expence to the crown, by keeping tidefmen on board on account of non-payment only, the commiffioners, by printed advertifements, give notice of the penalties for refufal of payment, in the following form, viz.

* Geo. II. cap. 7. §. z.

## Receiver's office for Greenwich-Horpital.

(L. Sig.) Notice is hereby given to all mafters of mer: chant-fhips, That they are, by an act of parliament paffed in the 2 d year of the reign of his prefent majefty, to pay the fixpence a month, deducted out of their men's wages, for the ufe of Greenwich-Hofpital, before their thips are cleared inwards, by the officers of his majefty's cuftoms, under a penalty of twenty pounds, for the ufe of the faid horpital, in cafe of refufal or neglect to do the fame: they are likewife to take notice, That if any officer of the cultoms fhall be continued on board their refpective fbips (purely for want of their not paying the duty) they muft expect to reimburfe the expence the crown may be at, on account of their negligence. Thefe are to be delivered to the tidefmen, when going on board any fhip liable to the duty; to give one to the mafter : and the collector and comptroller are to apply to the receivers for payment, if any tidefman be kept on board by the mafter's not paying this duty.
Any mafter attempting to go to fea, not having paid, his fhip may be detained; as likewife on difcovery of any fraud, till all dues and charges be duly paid : and, any mafter oppofing the receiver ftopping his thip, the vice-admiral of the county mult be applied to for affiftance.
But, if the mafter (or, if abfent, the owner) of any veffel not in the king's fervice, fhall neglect or refufe to deliver in the account, and pay the duty, the receiver may fummon him to his office, if not above ten miles off, and may examine him in the needful particulars; and upon non-appearance, or refufal to make full difcovery upon oath, or on negleet of payment before cleared inwards by the officers of the cuftoms, to forfeit twenty pounds; one half to the hofpital, the other to the perion fuing: the form muft be as follows :
(L. Sig.) Whereas by ad of parliament made in the tenth year of the reign of her late majefty queen Anne, intitled, An act for the better collecting and recovering the duties granted for the fupport of the royal hofpital at Greenwich, \&c. it is enacted, That it fhall and may be lawful for the receivers of the fix-pence a month out of feamen's wages, or their deputies for the time being, for the better difcovery of what fhall be due, to examine all owners, mafters, or others concerned, upon oath, and to fummon them for this purpofe ; to which they are obliged by the faid act to appear and anfwer accordingly, under penalty of twenty pounds for any neglect.
Thefe are, by virtue of the authority to me given in purfuance of the faid act, to require you to appear before me at my office at the cuftom-houfe, in the port of Southampton, to give an account, and forthwith pay all fuch money as Sall appear due from your hip's company, during the time aK
they

## G R E

they have ferved on board the fhip, whereof you are mafter, as by the faid act is directed, to avoid the penalties in the faid act mentioned. Dated at my office at this port of Southampton, on the 24th day of March, 1730 .
A. B. Receiver
' Co James Bell, mafter
of the Providence.
Any mafter thus fummoned, refufing to appear or give account, and any officer of the cuftoms offending in clearing any fhip, the receiver muft return their names to the commifioners, to take proper methads for recovery of the penalties. And, befides the aforefaid duty, the feveral following penalties and forfeitures are to be paid, for the ufe of Greenwich-Horpital, to the officer at each port, who collects the faid duty. I. Mafters or commanders of any fhip, \&cc, belonging to Great-Britain, bound to parts beyond the feas, carrying any mariner, except his apprentice, without firft entering into a contract for his wages in writing, fpecifying the wages, voyage, \&ic. forfeit five pounds each man: recoverable upon information, on oath of one or more witneffes, before a juftice of the peace.
Which forfeiture the receiver muft endeavour to get information of, and, on the mafter's return, apply to a juftice for a warrant to recover it.
2. Marines abfenting themfelves from the fhips they belong to, without the mafter's leave, forfeit for every day's abfence two days pay.

## GRE

3. Mariners (not entering into the king's fervice) leaving the hhip they belong to, without a difcharge in writing from the mafter, forfeit one month's pay.
Thefe penalties are to be deducted by the mafter out of any mariner's wages, who is to enter them in a book, and make oath before the collector to the truth of it; the book to be figned by the mafter, and two or more principal officers, fet ting forth that they are the whole ftopt during the voyage. And, on arrival of every fhip from abroad, the receiver mult And, on arrival of every ihip from abroad, the receiver muft
demand, of the mafter, an account of penalties incurred by, and ftopt from his mariners during that voyage, and muft fee the mafter's book, and compare the account with it. And any mafter deducting the penalties, and not paying then to the officer appointed to receive them, within three month after the deduction, forfeits treble the value: to be recovered after the deduction, forfeits treble the value: to be recovered
(with the deduction) as the penalties for not duly paying the (with the deduction)
fix-pence a month.
Upon receipt of any money for this duty, or for penalties, an entry mult be made in a proper book for that purpofe; from which muft be tranfcribed, every quarter, an account in the fame form, to be fent to the accountant for the out-ports, and the money, fo received, mult, from time to time, be remitted to the general-receiver of this duty.
And, in confideration of the care and trouble in collecting, recovering, and accounting for this duty and penalties, the receiver is to be allowed 2 s . 6 d . in the pound, for the money received or recovered by him.
The form of the account to be as follows:

Port of South- $\}$ An account of the duty of iix-pence a month, for the fupport of Greenwich-Hofpital, collected in the quarter ending at Lady-das, 173 J .

What receipt are

And, at the bottom of the aforefaid account, in the book, mult be formed an account current of the quarter's collection; as follows, viz
 To remittance to W. A. Efq; during this q
To poundage on the receipt of this quarter

To balance due from the receiver

But on the tranicript, or duplicate, which is to be fent to the office, the title muft be changed, by ming the receiver $\mathrm{D}^{\mathrm{r}}$. for what the commiffioners are here made $\mathrm{C}^{\text {rs }}$, and $\mathrm{C}^{r}$. for what they are made $\mathrm{D}^{\text {rs }}$
But on the tranfcript, or duplicate, which is to be fent to the office, the title muft be changed, by making the receiver D.for what the commifioners and alfo a certificate as follows, viz.

解

GRONINGEN, one of the feven United Provinces. This province, or lordflip, is bounded on the north by the German Ocean; the country of Embden on the eaft; Overiffel on the fouth; and Friefland on the weft. The air of this country is Marp, and well purified by continual breezes; and it abounds with good paftures, and large herds of great and fmall cattle.
Groningent, the capital of the province, is fituated on the conflux of the rivers Hunnes, or Schutfen, and Aa. It has feveral natural and artificial canals. The river $\mathrm{A}_{\mathrm{a}}$ is received into the city, and let out again by feveral large arches under the Sortifications, and, where it goes out, receives the Hunnes, which encompafs the eaft and north parts of the city, and form an barbour capable of a great number of veffels, by which means this city enjoys a pretty good trade.
Delfzyl, at the mouth of the river Ems, has a very good harbour, which, for fituation, and other advantages, exceeds that of Embden.
GUINEA, in Africa. This great region is divided into two large countries, called Upper and Lower Guinea, the latter of which is commonly called Congo. Thefe two together extend above 2500 miles along the fea coaft.
The moft general divifion of Upper Guinea is into three parts, viz. Malagucta, Guinea Proper, and Benin; which together extend 500 léagues from weft to eaft.

1. Malagueta. This country is generally knowen under the name of the Graia Coaft, from the paradife grain, or Guinea pepper, called malagueta in Spanifh, which grows here plentifully
This country is divided into the kingdoms of Sherbro, Quoja, and Sanguin, along the coaft', and Manou inland. But thefe are little known, eroept near the coaft.
The chief places frequented by the Europeans are Sherbro, the capital of a petty kingdom of the fame name. Sherbro River is navigable for canoes a great way up.-The chief trade here is in cham-wood. - Near the mouth of this river there is York Ifland, on which the Englifh had once a factory, and good fort, which is now in ruins.- There is alfo another ifland, called Farellons, which abounds with poultry, rice, potatoes, banana's, orange and lemon-trees. About 25 leagues diftant from the mouth of the river Sherbro, to the fouth-eaft, is Cape Monte. It is furnifhed with numerous villages, and the negroes on this part of the coaft are extremely induftrious : in planting of rice and boiling of falt they are indefarigable.
II. Guinea Proper. This country extends from Cape Palmas to the river Volta, about 140 leagues along the fea-coaft, which bounds it on the fouth: it has the kingdom of 'Bexia on the eaft; Gago and Melli on the north; and Malagueta on the weft. The Europeans divide it into two parts, the Tooth and the Gold Coaft ; the former extends from Cape Palmas to the river Sueira da Cafta; and the latter from thence to the river Volta.
The Tooth, or Ivory, or Quaqua Coast, is thus called from the great plenty of elephants-teeth traded in here. When they come to trade with any thip, the natives take fome water into their bands, and leta few drops of it fall into their eyes, which is a kind of oath, by which they fignify that they would rather lofe their eye-fight than cheat thofe they trade with. They are no lefs averfe to drunkennefs than to fraud; and though their country produces a prodigious number of palm-trees, yet they drink no palm-wine, but only a certain fmall liquor, which they mix with water. They have manufactures of cotton habits, which are called'quaqua gowns. A fundamental law of the country is, that every one is obliged to continue all his life-time in the condition in which he was born: fo that one whofe father was a fifherman, for inftance, can never become any thing elfe but a filherman; and to of all other trades and profeflions.
The Gold Coast follows next: but why it is particularly fo called cannot be-well accounted for, fince other countries in Guinea produce gald alfo. See the article Gold.
Undoubtedly all the countries in Guinea abound with gold mines; and, though the natives are not artifts enough to know where or how to follow a vein, yet they find great quantities of gold in feveral of their mines, which are all fo facred to them, that they will not permit any European miner either to fee their mines, or to fearch for others. Neverthelefs, they bring down good ftores of what they find to the fea-coalt, to traffic with all. Befides which, the natives near the fea have another way of finding gold, thus: in the rainy feafons, after a wet night, the fea fhore is covered with people, moftly women, each having a couple of bowls, made of calabafhes; the largeft of which they fill with fuch fand and earth as is drove down from the mountains, by violent floods, into the rivers and brooks, \&c. This they walh with many waters, by often turning the bowl round, till it wafhes over the brim; the gold, if there be any, finks to the bottom, by reafon of its weight; and thus they continue, till they have wafhed all the earth and fand away, except two or three fpoonfuls of the bottom, which they carefully take out, and lay by in the fmall bowl, atter filling of which they carry the dregs home, and fearch it diligently for the gold.
The moft remarkable places of trade are as follow, viz.
Assinee, a country abounding with gold, and formerly a confiderable trade was carried on'here; but, fince the devaftation
made by a neighbouring nation, there is yery little trade, in comparifon to what there was; and the litue gold dulf that is brought hither, is either fophifticated, or of very fmall va lue. From the. Alfinee, to Cape Apollonia, there is a grea deal of land cleared, and fowed with Indian corn.
Axim. The inhabitants here are generally prety opulent, driving a great trade with the Europeansfor gold, which the chiefly vend to the Engliih or Dutch. The natives induftriouly employ themfelvesieither in trade, fifhing, or agriculture and the latter is chieflyexercifed in the culture of rice, which grows here, above all other places, in-an incredible abundance and is tranfported hence all the Gold Coaft over. The inha bitants, in lieu thereof, return fratefft with millet, yams, potatoes, and paim-on, an which are very farce here; for the foil is generally moilt, and, though 'fit to produce rice and ome fruit trees, does not kindly yield other fruits.
The country upon all the Gold Coaft abounds in hills, all adofned with extraordinary high and beautful trees: the vallies between the hills are wide and extenfive, proper for the plant ing of all forts of fruitst; and, if they were as well cultivated as watered, would fupply half the coaft with provifions. The earth produces, in great abundances, very good rice, the richeft fort of millet, the grain of which is red ; yams, po tatoes, and other fruits, all good in their kind; nor is the foil deficient in fruit-trees. 'The fugar-ctas grow here in greater plenty, and larger, than any where elife on the coaft of Guinea. Palm-wine and oil are here in abundance, and very good: the country alfo abounds in all forts of tame and wild beafts. For the fate of the fort and factories, fee the articles English, Dutch, French, and Portuguese AfricanTrade and Companies. See alfo our new Máp of Africa.
1H. Benin. This country, which comprebends alfo the Slave Coaft, has Guinea Proper, or, more particularly, the Gold Coaft, on the weft; Gago, Brafera, with the defert of Seth, on the north; Mujac and Makoko on the eaft; and part of Congo, with the Ethiopic Ocean, on the fouth. It is commonly divided into three parts, viz. Whydah and Ardah, which two contain the Slave Coaft, and Benin Proper.
Whydah, as it is called by the Englih, is.called Juda by the French, and Fida by the Dutch. It is bounded on the welt by the river Volta; on the fouth it has the gulph of Guinea; on the eaft the kingdom of Ardah, and, on the north, the kingdom of Dahomy. Whydah is allowed to be a very delightful country; thenumber and variety of tall and beautiful trees feem as if planted in fine groves for ornament; the lands were in general well cultivated, till the king of $\mathrm{Da}_{2}$ homy conquered it;; before which, the natives were fo induftrious, that few places thought fertile efcaped cultivation: they were fo anxious in that particular, that, the day after they had reaped, they always fowed again, without allowing the land time for reft.
The Englifh African company have a fort here, wherein are mounted feveral pieces of cannon; and a little diftant there is alfo a French fort.
SABEE, the capital town of Whydah, is about four miles diftant from the French fort, towards the north; but it was reduced to afhes by the king of Dahomy. The town was very populous, and here were daily markets, wherein many forts of European, as well as African commodities, were exhibited to public fale, as alfo great variety of provifions. Near the European factom ries was a fpacious place, where grew a paicel of fine tall fhady trees, under which the Englifh, French, and Portugueze governors, facters, and fea-captains, walked and tranfacted bufinefs every day, as on an exchange. Alt thefe places were reduced to afhes by the King of Dahomy's army.
Adjoining to the kingdom of Whydah are feveral fmall royalties, as Coto, Little and Great, Popo, and Quahoe, fituate on the Slave Coaft. At Coto their land is flat, fandy, and barren; they have indeed the palm and wild cacao-trees, in tolerable plenty.-Their trade is chiefly that of naves and fifh. Quaboe, according to Bofman, abounds with gold, which the inhabitants carry through Aquamboe to Acra.
Dahomy Country is fituated to the north of the Slave Coaff, and extends greatly inland: its boundaries on the weft, north; and eaft, are unknown. This country is mighty healthy, lying high, and being refrethed with cool breezes. Their commerce here is chiefly in flaves, and fome gold.
Benin Proper has part of the Gulph of Guinea, and the Slave Coaft, or Ludra, on the weft; part of Gago, and Brafera, on the north; Mujac and Makoko on the ealt; and Congo on the fouth. Its extent, from weft to eaft, is abour 600 miles; but that from fouth to north remains unalcertained.
The country abounds with wild beafts, as elephants, tygers, leopards, boars, \&cc: -as alfo with game, as harts, hares, partridges, pigeons, turtle-doves, \&c. The foil alfo produces great variety of trees and plants, as orange, lemon, and efpecially cotton-trees; pepper, but not in fuch quantities as in the Eaft-Indies.
The natives here are pretty well civilized, and, if humoured in their ceremonious way of traffic, they may be managed to pretty good advantage. They are very expert in bufinefs, though tedious; which, however, they manage with fo much civility, that you cannot well be angry. The natives feem

## G U I

G U I
very obliging to each other; but this is only external grimace, for they repofe little confidence in their countrymen : they are jealoully prudent, and very referved, efpecially in the management of their trade, which they conduct with the utmott feerecy, left they fhould be reprefented as great traders to their governors; who, upon fuch difcovery, would certainly accufe them of fome crime or other, in order to poflefs themeives, though ever fo unjultly, of the effects of thefe rich merchants : wherefore, thofe who have no hare in the government, always pretend to be poorer than they really are, to efcape the rapacious hands of thofe in authority. This obliges them to a cunning fort of civility, to avoid accufers; but thofe European dealers who will conceal their tranactions with them, and deal upon the fquare, may do bufinefs with them to great profit.
Thofe men who have any thing of fock apply to merchandizes; very few of the commonalty among the males are induftrious; they lay the burden of labour on their wives and liaves, whether it be tilling of ground, finning of cotton, weaving of cloth, or any other handicraft employ.-Here are very few manual arts, befides weaving, practifed or underfood: the chief workmen are either fmiths, carpenters, or leather-dreffers; but all their workmanhhip is but mean, for want of proper inftruction.
Benin, which gives name to the empire, and is the king's refidence, is fituate about 60 miles from Agatton, a town at the entrance of the river Formofa, near the fea.. Continual markets are kept here of kine, cotton, elephants teeth, and European wares.
The inhabitants of this city are all natives, foreigners not being permitted to live there. Thereare feveral rich men, who continually attend at court, not concerning themielves with either trade, agriculture, or any thing elfe, but leaving all their affairs to their wives, who go to all the circumjacent villages, to trade in all forts of merchandizes, and are obliged to bring the greateft part of their gains to their hulbands. All male flaves here are foreigners, for the inhabitants cannot be fold for flaves, and only bear the name of the king's flaves. Nor is it allowed to export any male flaves that are fold in this country, for they muft remain there; but females may be dealt with at every one's pleafure.
AWERRI is about 20 leagues from Benin to the fouth, and is the capital of the kingdom of the fame name, whofe king is independent from the king of Benin.
Arebs, a common trading-place for the Europeans, fituate above 50 miles higher up than the mouth of the river Formofa. So far lhips may conveniently come in their paffage, failing by a great variety of branches of that river, befides creeks. There were here formerly two factories, one of which belonged to the Englifh, the other to the Dutch; but, the Englifh not having traded here but very littie for feveral years paft, they have no fort or factory.
AGat ton has feveral circumjacent villages, whofe inhabitants come hither at every confiderable market, which is held here for five days.
At Cape Form 03a the trade confifts in elephantsteeth, wax, and honey.
Cóngo, or Lower Guinea. This large country has Upper Guinea, or the kingdom of Benin, on the north: the Ethiopic Ocean on the weft ; the kingdom of Mataman, reckoned part of Cafreria, on the fouth; but its boundaries eaft and northeaft are not well known. The extent of this country, from Cape Lopo, in the firft degree of fouth latitude, to Cape Negro, 23. 30. of the fame latitude, is about 16 degrees 30 minutes, or about 990 Englifh miles: how far it extends eaftward is not known.
Congo is commonly divided into Loangò, Congo Proper, Angola, and Benguela. The greateft part of the copper that is here comes from an inland kingdom called Jufijeffes. It is brought by ftealth, becaufe that nation is always at war with the people of Loango. The Purtugueze buy here great quantities of red-wood and elephants-teeth. It is faid there are filver mines in Loango, but the people are fo lazy that they will not work them. In fome places there grows pepper, like that of Benin, ginger, and fome fugar-canes, of which they make little or no account.
To the weftward of Angola lies the kingdom of Anzrico, and the country of the Jagas, whofe inhabitants trade in the kingdom of Angola, whither they carry flaves from their own country, and from Nubia, which they exchange for falt, glafsbeads, filk, knives, and other wares.
Songo, or, as father Labat writes it, Sogno, has the river Zaire on the north ; Sundi and Pango on the eaft; Bamba on the fouth; and the ocean on the weft. The foil is dry and fandy. They are furnifhed wtth provifions from the mouth of the river Zaire, and their principal returns are in falt. Sundi, an inland country, has the river Zaire on the north; on the fouth-eaft the countries of Batta and Pango; on the north-eaft the kingdom of Makoko. The foil of this province is watered with fo many rivers, that its fertility is no wonder. It requires only to be better cultivated ; but nothing here, it is faid, can conquer the lazinefs of the negroes: they chuferather to live in want, than give themfelves the trouble to get a comfortable livelihood.
VOL. I.

The mountains here abound with the moft precious metals but, by reafon of the turbulent firit of the inhabitants about them, they are not fuffered to be wrought. None but the iron mines are worked, becaufe they want iron to make arms and inftruments for agriculture. To the north of the Zaire there are mines of fine copper, which are worked; and here the people of Loango refort to purchafe copper.
Angola. This kingdom bas that of Congo Proper on the north; Malemba, or Majemba, on the eaft; Benguela on the fouth; and the ocean on the weft. Here are a prodigious number of llaves. The Portugueze Jefuits alone, who perform here the office of curates, and take care of the fcholars, are faid to have above 12,000 llaves at Loando, which is the ufual refidence of the Roman Catholic bifhop.
Benguela. This country has Angola on the north; the country of Jaga Cafanii on the eaft; the kingdom of Matapan on the fouth; and the ocean on the weft. The inland countries are little known. Along the fea-coaft are feveral places, wherewith we are better acquainted. Thefe are, ac cording to De Lifle, as follow: Old Benguela, or Benguela Viella, Manikicango, Fort Cabuto, St Philip de Benguela, Angra de Sancta Maria, Farra Bay, Tortuga Bay, Angra de Negros, and Great Wiffers Bay.
The Portugueze have built a fort at Old Benguela, with palifadoes, and a ditch round it. The foil here is very fruitful, and the land low.-Here is plenty of black cattle, hogs, and Portugueze inbabitants, fine linnen and cotton cloths, gum, and gun-powder; and the European trade is here chiefly in Haves, fone gold and ivory.

## REMARKS.

The trade carried on here, whether by the Englifh, or other European nations, confifts in but three capital articles, viz. flaves, teeth, and gold: a very gainful and advantageous commerce, efpecially as it was once carried on, when thefe were all purchafed at low rates from the negroes; and esen thofe low rates paid in trifles and toys, fuch as knive: and fciffars, kettles, glafs-beads and cowries, things of little value; but even this part of the trade is greatly declined in profit, fince by the ftrife and envy among the tradera, efpe cially between our late royal African company and the feparate traders, we have bad the folly to inftruct the ne irces in the value of their own goods, and of the chespnets of ours; endeavouring to fupplant one another, by underielling and overbidding, by which we have taught the negroes to fupplant both, by holding up the price of their own productions, and running down the rates of what we carry them for fale.
Thus that gainful commerce, once fuperior to all the trades in the world, which carried out the meaneft of all exportations, and brought home the richeft, is finking daily, and we are fometimes faid to buy even the gold too dear.
But all this while here is not the leaft ufe made of the land, the fruitful foil lies waite, a vaft extended country, pleafant vallies, the banks of charming rivers, fpacious plains, capable of improvement and cultivation to infinite advantage, barren and untouched.
Now, why is all this wafte? What mean the Europeans, and others to neglect fuch advantages? Why do they not inclofe, fence, and fet a-part fuch lands for cultivation, as by their nature and fituation appear to be proper for the moft advantageous productions?
Let the fame climates be examined in other parts of the world, and the foil in thofe climates be compared with the foil in the fame latitudes on this coaft; and if it is the fame, or fo near the fame, as no vifible difference is found in them, why fhould they not produce the fame harveft, the fame plants, fruits, drugs ; or, whatever grows and is produced in one, why fhould it not be planted, grow; and produce the fame in another?
Let us reduce this to practice, and bring the latitude of places together, with the productions proper to thofe places: for example.
I. The coffee-berry is the natural product of the earth at Mocha, on the eaftern bank of the Red Sea, and the fouthweft point of Arabia Fœlix, in the latitude of 13 to 14 deg. there it grows, thrives and is produced, as it were wild, and with the leaft help of labour imaginable; what affiftance of art is added to it, is after the fruit is ripened and gathered, viz. in the curing and drying the berry, and preferving them for a market, and that is to be done in the fame manner in any part of the world as well as there.
The diligent Dutch, feeing the eafiners of the managing and curing the berry, and how that part had no dependence, either upon the earth, the air, the water, or any thing elfe more there than in another place, took the hint, and planted the coffee-tree in the ifland of Java, near their city of Batavia; there it thrives, bears, and ripens every jot as well as at Mocha; and now they begin to leave off the Red Sea, and bring 20 to $3^{\circ}$ tons of coffee at a time from Batavia, in the latitude of 5 degrees fouth.
Not content with this happy improvement, others of the fame nation have made the fame experiment, in near the fame latitude, in another quarter of the world, and with the

112
like
llike fuccefs; and now they begin to bring large quantities of coffexe from Surinam, on the north coaft of South America, lat. $6 \frac{1}{2} \mathrm{deg}$.
We are told likewife, though this, however probable, I do not affirm, that the lefs induftrious Portugueze are planting it on the coalt of Brazil, about the Rio de St Francifco, in the latitude of 12 degrees.
And befides thefe, we are affured the French have planted it without fuccefs at the Cape de Bon Efperanza: the reafon is plain, the place was too cold, and it might as well be planted at our colonies of Virginia and Carolina, the cape lying, as we all know, in lat. 34 deg. 20 min. or thereabouts.
But if at Batavia and Surinam, in latitude 5 to 6 degrees; if at Mocha, in latitude 14 degrees; if at Port Dauphin, in latitude $23 \frac{1}{2}$ degrees; why not at Seraleon, under Cape de Verd, in iatitude 13 to 15 degrees? Why not at Cape Coaft, and at Accra, in latitude 5 to 6 degrees? And in a word, why not upon all the Grain Coait, Tooth Coaft, Gold and Stave Coaft, where we have a free poffefion, Atrength for prateetion, and foil for production?
2. The fugar-cane. Our fuccefs with the fugar-canes is well known, it is produced to a very great advantage in our illand colonies of America. From St Chriftopher's in latitudé $17 \frac{1}{2}$ deg. and Jamaica in latitude 18 deg. to Barbadoes, in latitude I 3 deg. It is produced by the Portugueze in the Brazils, in the rame latitude, fouth of the line from the port of Fernambuco, in the latitude of 9 deg. to the Bay de Todos los Santos, or Bay of All Saints, in the latitude of 13 deg. 20 m . and it is produced by the Spaniards on the continent of North America, in the provinces of Guaxara, Guatimala, 8 cc . in the latitude of I4 deg. And why not then by us on the coaft of Africa, where we have the chaice of the country in the very fame latitude from the Gold Coalt in the Jatitude 6, te the Cape de Verd in the latitude 15 ?
Add to this the particular advantages which offer themfelves to the planter in fueli an attempt as this, on the coait of Africa, which he has not, nor can have, in any of thofe parts where the fugar is now planted, efpecially by the Englifh. For example,

1. The ealinefs of procuring negro labourers, which here would not coft above 4 or 51 . per head, whereas they are at this time, in Barbadoes and Jamaica, worth from 25 to 301. a head; at the Brazils from $3^{\circ}$ to 40 l. and to the Spaniards in the provinces of Guaxara, Guatimala, \&c. 50 to 601. fterling per head.
N. B. The difficulty of keeping the negroes from running away is not fo great as fome imagine, fince as they are brought from diftant provinces; though it be upon the fame continent, they know nothing of their own country; nor do they underftand the language of the next negroes, any more than they do Englifh; and if they thould fy to thefe neighbouring negroes, they would but make flaves of them again, and fell them to the fhips; fo that the flaves would notbe apt to fly, and, if they did, the lofs would not be near fo great as in Jamaica', \&c.
2. The eafinefs of getting provifions, which they would be fo far from fetching from Ireland or New England, as our colonies of Jamaica and Barbadoes do, and at a very monAtrous rate, that they would be always able to furnilh themfelves, as they do now, by the produce of the foil: as for rice, Indian corn, or maize, with roots, fuch as potatoes, parfnips, carrots, plantanes, and innumerable other forts, they Inips, carrots, plantanes, and
grow freely upon all the coaft.
The fhortnefs of the diftance, and the lafe paffage between England and thefe colonies, is fuch that the voyage is often performed in 15 or 20 days, whereas fix or ten weeks is counted no bad voyage between Jamaica and London : the expence as well as other inconveniencies of which are exceeding great, and the difference would give the fugars of Africa a great advantage at market.
3. Of the planting of tea. Every one that has been the length of Amoy or Chufan on the coaft of China, knows that the tea is produced ehiefly in the provinces of Xantung, Nanquin, and Canton, as alfo in the illands of Japan, moft of it between the latitudes of $3^{\circ} \mathrm{deg}$, and 24 deg . north of the line. With how much greater advantage then of the climate, might the fame plant be produced at Seraleon and on the Gold Coaft of Africa, the plants being fetched from China, as well as the method of curing it? which, according to Mynheer Nieuhoft; is not difficult. See the article TEA.
I need fay very little to the adyantages of raifing fuch a profitable plant fo near bome; the thing explains itfelf, and the difficulty of making the experiment feems not to be great. Nay, I am told, that, in the governor's garden at Cape Coal Cafle, there is, or at leaft was in the time of the government of Sir Dalby Thomas, a large plant of tea planted, and that it grew and thrived to admiration: and why fhould it not?
I thall conclude this head with one particular yet more confiderable than all the reft, and that is, the great article of the fpices, fuch as nutmegs, cloves, and cinnamon; the two latt are tound in the inands of Ternate, and others adjacent in the latitude of 2 to 4 deg. The nutmegs, indeed, are found
only at Banda, and fome foall inands adjoining and almol under the line; and fo it may be doubtfil except in the fange latitude, which is farther fouth than any of our fettlements in Africa: but the trial might be made of that too.
But, as to the clove, it is tound in the ifland of Borneo at Gilolo, and feveral other iflands, from the latitudes of 2 to $7^{\text {tdeg. }}$ which is exactly the climate of our Gold Coalt; likewife the cinnamon is found in Ceylon, in the latitude of 6 to 7 deg. and hits punctually with this coalt; and we can fee no realon why the fame climate on the fhore of Africa may not, by the help of art and induftry, produce the fame fruit. I fum up all withobferving, that there is no reafon to doubt, but all or moft of the productions, either of the Eaft or Wein-Indies, might be produced here; fuch as the cotton, ginger, fugar, cacao, pimento, indigo, and feveral others known at Jamaica; as allo the cocheneal, the vanelloes, and even the Peruvian bark; if induftry and application were fet on work to plant them.
Before we quit the improvements which might be made on the coaft of Africa, without mentioning a great correfpondence carried on among the feveral nations in the northern part of that country; which, even as it is now, caufes a great commerce over land, or taking notice withal how wonderfully it might be improved ; this trade is faid to be carried on by the negro natives, upon the great river Nigris or Niger; or, as we call it, the river Gambia, in conjunction with the natives of feveral nations, upon the fame river, eaft from the thore; and by all thefe together, correfponding with the Moors on the north coaft of Africa, at Fez, at Morocco, at Mequinefs, and other cities, where they now carry on a commerce, by vaft annual caravars. They tell us, that it is already a very great trade; but how would our propofal not only increafe this trade itfelf, but quite change and alter the very people themfelves! whle the north part of the country (being Chriftians) the favage part would be foon civilized, and become fo too, and the pegple learn to live, to be cloathed, and to be furnified with many things from Earope, which they now want; and, by confequence, would, with their manners, change the very nature of their commerce, and fall in upon the confumption of the European manufactures in general.
It would be needlefs to lay our fchemes of commerce among the inhabitants of the nations with thofe fouthern lands: numbers of European people, being but once fettled on the fea coaft, would foon fpread the commerce into the inland nations, and employ and enrich the inhabitants, by inftructing them in the arts of living, as well as of trade; and this brings me to a vipw of one of the greateft (cenes of improvement in the world, which is in short this, viza
That there needs little more than to inftruct and inure the barbarous nations in all our colonies, fattoriess \&c. in the arts of living : cloathing with decency, not fhamelefs and naked; feeding with bumanity, and not in a manner bru tal; dwelling in towns and cities with ceconomy and civil government, and not like favages.
It is the mott unaccountable miffake of its kind that can be imagined, that one fhould fuppofe civilizing nations does not increafe commerce; the contrary is evident in all our colonies : civilizing the American favages, who inhabited the countries on the back of the European colonies in North America, as well our own, as thofe on the French fide at Quebec and Canada, what has been the confequence? Take it in the following particulars, which, though few and fmall in the feveral articles, are yet confiderable in the whole, and abundantly confirm the propofition.
The Indians or natives, before the Europeans came among them, bad neither boufes, cattle, clothes, tools,' weapons, ammunition, or houfhold ftuff; their cattle were the beafts of the foreft ; their clothes were the fkins of beafts; their weapons bows, wooden fwords, clubs, javelins, and darts, pointed with teeth and bones of fifhes; their ammunition arrows and fones; their houfes mere wigwams, hovels and huts; their hourhold ftuff earthen-pans hardened in the fun; their beds matts, and fiins, Jaid on the ground: they could ftrike no fire, but by rubbing two fticks together; they had neither edged tools or orher tools, for they bad neitherr iron, fleel, hrafs, or lead; no grind-ftone or mill-ftone; their meat was flefh dried in the fun, and their drink no other than cold water.
The fame Indians, even thofe remaining wild and favage almoft as before, yet being convinced by their conveniencies, and prompted by necefliry, ferve themfelves of us with an infinite number of things, for the abundant accommodation of life; and thofe that are more civilized, do it more, and thefe altogether increafe our trade; for example, take their own goods firft, with which they purchafe ours. They fell the deer-1kins, bear-1kins, fox, beaver, and other furrs; all which, together, we call peltry: thefe, I fay, they fell to our people, and a very good merchandize they are, being an import that turns to very good account, when manufactured in thefe kingdoms,
With thefe they buy our woollen manufactures for their cloathing, fuch as duffeis, blankets, balfticks, kerfies, and fuch coarie goods; and others alfo of leather, with which
they drefs and kecp themfelves warm in the coldeft feafon; alfo they buy caps ftockings, hats, thoes, gloves, for the fame hard weather.
In order to provide fuel and food, they buy for the laft frrearms and ammunition, fuch as powder and fhot; and for the firft, hatchets and axes, knives, bills, as alfo fpades, fhovels, pickaxes, and other tools fitted for their work: for the building and furnifhing houfes to dwell in, they buy all kinds of edged tools, as allo nails, fikes, hammers, faws, chiffels, \&c. wrought iron for hooks, hinges, locks, bolts, and many other things: for their houfhold ftuff likewife they fometimes buy chairs, ftools, benches, beds, bedfeads, and the like ; alfo pots, cafks, and other veffels of eatth, pewter, brafs, and wood; and, in a word, every thing they want, which either art or trade can fupply them with, according to their way of living: and, as they grow more civilized, and come nore into the European way of life, the more of our product and manufactures will they ffand in need of.
All theie make trade, and as thefe demands increafe, the trade and commerce of Europe muft increafe; for increafe of the civilized people is an increafe of commerce in its neceffary confequences, let the degree of their demands be more or lefs.
What then have the people of England more to do, but to increafe the colonies of their own nation, in all the remote parts where it is proper and practicable, and to civilize and inftruct the favages and natives of thofe countries, wherever they plant, to as to bring them by the fofteft and gentleft methods to fall into the cuftoms and ulages of their own country, and incorporate among our people as one nation? I lay nothing of chriftianizing the favages, 'tis remote from my prefent purpyfe; but I fpeak of an incorporation of cuftoms and ufages as may in time bring them to live like Chriftians, whether they may turn fuch or not.
To bring this home to the coaft and country of Africa, of which we were juft now feaking: let the improvements propofed with regard to this commerce be calculated, in planting, filting, fhipping, and all the neceflary employments that would attend a public improved colony; and let them tell us, if the confequence would not be a confumption of mazafacture among the people where there was none befole, and in a place where we had no commerce to carry on before.
Nor let any weak-hearted Chrifian fuggeft, that this would be to anticipate our Weft-India trade, fupplant our other colonies, and weaken us on the one hand, while it frengthens us on another ; let thofe who talk fo confider, ift, The great imp:ovements propoled, without meddling either with fugar, ginger, or any of our ifland productions, and how great the improvement might be firft made in thefe things. And, 2dly, Let us add, that as it is evident all our ifland colonies are not at this time fufficient to fupply our markets with fugar, including the quantity that might be demanded for exportation; nor can the quantity, when our fugar trade comes to be properly encouraged, eafily be too great, nor indeed is there any danger of it, fo that thofe objections are cafily to be anfwered: let us fee the improvement begun, and let us fee the danger begun, of overitocking our markets, and hurting the trade of our illands, and let us hear if our illands complain; it will be then time enough to anfwer thofe fcruples: at prefent, they feem to merit no confideration. But, if the production of our fugars was three times, or, perhaps, twice three times more than it is, there is no great difficulty to find a vent for it, and to keep up the price to fuch a pich, as may be greatly to the advantage of the planter too. See the article Sugar.
On the other hand, there is a valt ocean of improvement in view upon the African coaft (though the fingle planting of fugar was omitted) and as there are, as well on this fide of the country, as on the eaftern fhores, vafty populous nations, nay, empires, where there are millions of people yet to trade with, who were never traded with before the prevailing on thefe nations to civilize and govern themfelves, according as informed nature would foon direct them, would neceflarily introduce trade, confume manufactures, employ fhipping and hands, and in time eftablifh fuch a commerce, as would be more than equal to any foreign exportation we have yet to boaft of.
There is but one confiderable country in the world that we have any knowledge of upon the furface of the globe, to which the inhabitants of Europe have no commerce, or with whom they have no manner of converfe : and this is the great empire or clafs of kingdoms called Ethiopia, or the Abyrfines.
There are but three ways for us to come to any part of this country in a courfe of trade or correfpondence, and at prefent they are all made impracticable.
4. Over land from Tripoli and the coaft of Barcan; and, were the Tripolins reduced by a proper confederacy for that purpofe among the Chriftian powers, this trade would certainly be fet on foot by caravans, as is done in Afia from Aleppo to Bagdat, to this day.
5. Up the Nile, from Grand Cairo into the lake of Dombea: but, though this is faid to be in ufe at fome certain
times, when the river is not fwelled beyond its bounds and banks, yet thofe that have examined it more nicely, tell us, that thore people are miltaken, and that the catarabis of water-falls, which are frequent in the river, from within $\boxed{160}$ miles of Grand Cairo fouth, cut off all poffibility of a navigation, or of any commerce by water farther that way. 3. The third way is by the coaft of the Red Sea; and this alfo is cut off by the Turks, who have feized upon all the weitern hores of the gulph or Red Sea, and, diving the Ethiopians from the coaf, have either hut all the nations of the world out from the Ethiopians, or have fhut up the Ethiopians from converfing with the reft of the world.
The commerce, however, is apparently practicable from the coaft of that gulph, farther fouith than the Turks bave yet poffeffed it; and there are two particular rivers on that coaft, viz. Zeila and the Houache, that are navigable far within the country, and beyond the coalt, which the Turks are poffeffed of; and that, by thefe rivers, a commerce may be eftablifhed into the very center of Echiopia, which is indeed the richeff and moft populous part of it, and that the mouths of thofe rivers are open for any nation to fertie and fortify at; which fettlements would be eafily defended, by having but two thips of force, from 40 to 50 guns, always there, by whom alfo, going and returning, the trade would be carried on round the cape
It may be fuggefted, that fuch a trade would be within the circle of the Eaf-India company's charter; to which it would be effectually anfwered, why then does not the company open the trade, and make a fettlement themfelves? If they do nor, no exclufive privilege of commerce is granted to any men, or company of men, to obflruct or deffroy a trade, but to improve and carry it on; and if they infift on their charter to have the right of trading to Ethiopia, but will not trade, their right is fo far void of courfe; otherwife they may as well tell us, they have a charter granted them, to fhut out the kingdom of Great-Britain from the Ethiopian trade, which would be abfurd, and contrary to the nature of the thing.
Contrary to the whole tenor of our correfpondence in the Indies, this trade would be exceedingly much to the advantage of Great-Britain, becaufe they would both receive our growth and produce, and make to us returns ingold and ivory; whereas, in all the trade of India and China, our cafe is the reverfe; for there we cannot fell our own goods at all, and cannot buy theirs, but with ready money. They will take off none, or but few of our manufactures, nor will they fupply us with theirs, but for hard filver; to the detriment, not of England only, but, perhaps, of all Europe.
6. The people, though the country is hot, goall modefly and decently cloathed; and 'tis known by thofe who have travelfed among them, that they would buy our Englifh fine cloths, in particular fuch as are carried to Egypt and Perfia, if they could come at them; and fome eflays of that kind have been made from Grand Cairo by land, though not fuch as are confiderable enough to be called a trade.
Upon the whole, fuch a trade would be infinitely advantageous; feeing the return for whatever of our manufactures could be fold there, would be in gold, in ivory, fulphur, civet, faltpetre, emeralds, and fuch-like valuable goods: there are other productions, which we have feen from thence alfo, as deer-flins in exceeding great quantities; hides of black cattle; leopards and lions fkius, and others of thofe kinds; allo fine copper, and fome very rich gums and drugs, fuch as frankincenfe, gum arabic, and aloes foccotrina. In exchánge for thefe, we fhould, without fail, introduce our broad cloths, fine fcarlet fhalloons, Cayes, ferges, and fuch other thin ftuffs as are ufually worn in hot climates; befides a great quantity of hard-ware manufactures, wrought iron and brafs, edged tools, weapons, fire-arms, ammunition, lead, pewter, tin, fine linnen, and perbaps filks alfo: for we are well aflured, they have no more trade with India, or any other parts of the world, than they bave with England. Thus you have three articles for the improvement of the Britifh commerce on the coaft of Africa only, all practicable, and all capable of raifing an immenfe confumption of our woollen manufactures, where there was little or no confumption for them before : one of which articles, viz. that of Guinea, is actually in our own power, and to little to be faid againgt the experiment, that nothing of its kind is more wonderful, than that the attempt has never yet been made. See the articles Africa, East-Lndia Company, Evglish African Company, French african Trade and Company, Gold.
The fecurity and extenfion of the trade to Guinea, and to all parts of Africa where Great-Britain has a right to trade, depends on keeping up forts and factories.
For near 300 years paft, it has been the conftant policy of all European nations, who have made new difcoveries, and gained any eftablifhed power and authority in barbarous countries, to erect and maintain forts and cafles; and, by virtuc of fuch poffeflions, to claim a right to whole kifigdoms, and to ExCl UDE all other nations from trading wish them.

## G U I

By this means the Portugueze long enjoyed the whole trade to Africa and the Eaft-Indies; the Spaniards claimed and engroffed to themfelves almoft the whole continent of America, and moft of the iflands adjacent thereunto: by this means alfo did the Hollanders become abfolute maffers of the Spice Illands, and now fupply the whole world with them, by fuch quantities, and at fuch prices, as they think fit. We once fhared the trade to India for nutmegs, cloves, and rpice, with the Dutch and Portugueze; but, for want of due encouragement given to the old Eaft-India company to preferve that branch of trade, the Dutch fupplanted us both, and have monopolized that valuable commerce to themfelves About 1660 the Dutch likewife attempted to gain the intire poffeffion of the moft valuable parts of the coaft of Africa, and to exclude Great-Britain from any thare or intereft therein, as they have done in the fice trade, and thereby brought on themielves a war with this kingdom in 1664 Before the late Royal African Company of England had built a fufficient number of forts and caftles on the Gold Coaft, the Dutch interrupted our trade, and feized and confifcated our thips on that coaft, and within its dependencies*: fince the company have built and maintained a fufficient number of forts and caitles on the Gold Coaft, the company's, and all other Britifh fbips and veffels have traded freely to this coaft, and all places dependent thereon, without moleftation from the Dutch, or any other nation.

Under the article English African Company, we have given a hort hiftory of the African trade in general; and here it may be ufeful to obferve more minutely, how this nation was annoyed by the Dutch in this branch of trade, and what ftruggles we have had to preferve any fhare in it. Having given an account hereof in a tract I drew up in the year 1745, when I was concerned in the direction of the Royal African Company of England, I hall quote what I have there faid. It is an extract from a difcourfe publiihed by Sir George Downing, who was envoy extraordinary to the ftates-general upon this occafion. The lift of hips taken, fays Sir George, underwent the flrictef examination of the parliament, and was made out upon fo clear and undeniable proofs, that it was impolfible to add any thing either to the folemnity of the debate, or to the weight of evidence (a).
(a) See a Reply of Sir George Downing, Bait. envoy extraordinary
from his majefty of Great- Britain, to the Remarks of the deputies
of the fates-general upon his memorial of December 20.1664
O. S. Printed in the year 1665 .

The hip St. John Baptift, Emanuel Hart commander, who had taken on board negroes on the coaft of Guinea, and bartered them for fugars, and other commodities, at Bavia in Brazil, was feized in his return, in June 1661, by a Zealand man of war, called the Golden Port of Middleburgh, Cornelius Trumcap commander, belonging to the Dutch African company.
The Merchant's Delight, belonging to John Young, and Company of Englih merchants, John Bonner commander, having fer fail from Dover, was feized near Cape Corfo, in Guinea, about Auguf: $166_{1}$, by a thip called che Amfterdam, belonging to the Dutch African company.
The Paragon, belonging to Bernard Sparke, John, Cooke, and company of Englifh merchants, John Bariford commander, laden ai Exeter, and bound for Guinea, was feized, mander, laden at Exeter, and bound for Guinea, was feized,
October 15 , 1661 , by two fhips belonging to the Dutch Octioer 15, 1661, by two fhips belonging to the Dutch
African company; the one called the Amflerdammer, of African company; the one called the Amfterdammer, of Amiterdam, Aaron Couzens commander ; the other cal
The Daniel, belonging to John Knight, Thomas Knight, Henry Oakes, and company of Englifh merchants, commanded by the faid Henry Oakes, fet fail from London about May 1661, from the coalt of Guinea; was feized by he flip Amiterdam, belonging to the Dutch African comany, Aaron Couzens commander.
The Brotherhood of London, belonging to Peter Caulier, Bartholomew Caulier, Abraham Caulier, John Beverly, and company of Englifh merchants; was feized on the coaft of Guinea in February 1665, by a frigate, called Gat, - Cox commander, and one Japoone, commander of a thip called the Kaler, both commifioned by the Dutch African company.
The Rappa Hannoeck, belonging to John Jeffrys, and com. pany of Englifh merchatts, laden at London, bound for the Coaft of Guinea; was feized near Cape Lopez, about the in th of September;'1656, by twe Dutch African company's fhips s the one the Mary, of Amflerdam, the other the Unicorn, of Middleburgh, John Serael, of Munekedam; commander
The Sarah, belonging to Anne Lewellin, adminiftratrix of Robert Lewellin, merchans, Humphry Beane, and company of Englifh merchants, Arthur Perkins commander, was reized on the coalt of Guinea, Augult 1656 , near Cape Lo pez, by two Dutch fhips, the Mary of Amfterdam, and he Unicorn, of Middleburgh, commanded by the forementioned Serael, of Munekedam.
The Fortune, belonging to Conflane Silvefter, and compa ny of Englifh merchants, was feized about Auguft 1656 , near Cape Lopez, on the coaft of Guinea, by the faid Mary of Amterdam, and the Unicorn of Middleburgh, John Serael, of Munekedam, commander.
The Black Eoy of Dover, belenging to Arnold Breams, nd company of Englifh merchants, Ralph Wood commander, was feized, April 13, 1661, near to Commenda

## G U I

Fort, on the coaft of Guinea, by a Dutch flip, cailed the Grafenna, which came from the Dutch caitle of Del Mina, and carried the faid thip into that tort.
The St. John, Cornelus Van lingen mafier, betonging to Vincent de la Barre, and company of Eaghlibh merchanto bought, by their order, at Middleburgh, April 1558 , and there laden to Callibar for negroes, was saken near Port Callibar, by a thip belonging to the Dutch African company, and confifcated at Callibar, although the Dutch company had granted permifion for the faid fhip to gothither. The Ethiopian, belonging to John Allen and Matchew Babb, Englifh merohants, Peter Blake commander, con fig ned to Bohure, on the coaft of Guinea, for negroes, was reized, in January 166r, by a fhip belonging to the Dutch African company, called the Pol-Horie, and carried to the cafte of Del Mina
The Lyon Providence, of London, belonging to Sir William Thomfon and company of Engliif merchats Wilat London for Guinea, was reized, in Augult 1656, near Cape Lopez, in Guinea, by two fhips belonging to near Dutch African company; the one called the Mary, of Am flerdam, the other the Unicorn, of Middleburgh, John Scrael commander.
The bazil frigate; of London, Belonging to John Bulhell, Edward Bufhell, and company of Englikh merchants, was feized berween. Angola and Fernambuco, in 1675, by a fhip from Flalhing, called the Sluce, - Quacrts com. mander.
The Content, of London, William Jordan commander, fet fail from the Downs in October 1661, to trade on che coall of Guinea, was feized there by a llip belonging to the Dutch African company, called the Holy Barbara, and carried to the ifland of Gene.
The Charles, belonging to James Barkin, and company of Englifh merchants, John Blacker commander, Jaden for the coaft of Guinea, was feized on the lald eoaft, in Augult 1661, by a fhip belonging to the Dutch. African cormpint called the Amfterdanmer, of Amliterdam, Aaron Conzens commander, and cartied to their caltle Lel Mina in Africa The Contant Mary, belonging to Francis Bellars, Fowke, Richard Glove, and company of Englioh Daniel Lefter matter, laden at London, bound ior was feized on the 8th of May, 16;4, zo leagues from Cape St. Vincent, by a Dutch man of war, called the Holy $\mathrm{Ci}_{-}$ cilia, Haufe Alburge commander, belonging to the Dutch African company.
The Leopard, belonging to Nicholas Bouchart, of London, and company of Englinh merchants, was feized near Cape Blanco, in October 1656, by the Challoup; a Dutch man of war belonging to the Dutch Africari Company, and carried to the caftle of Arengeny in Africa, at Cape Blanco. King Charles II. being acquainted that the nation rung with the outcries of our fuffering merchants againt the Dutch African company, judged it full time to chink of effectual meafures to protect this trade for the future, and to obtain reparation for depredations committed.
With regard to depredations, his majefty caufed an account of them to be tranfmitted to Sir George Downing, then his envoy at the Hague, with orders to infift upon fatisfaction; but none could be obtained : whereupon,' April I, 166 both houfes of parliament came to a refolution, viz. That the wrongs, dihhonours, and indignities, done by the fub ects of the United Provinces by invading his rights in $A$ frica, 8 cc . and the damages, affronts, and injuries done by them to our merchants, were the greateft obltructions of our prefenced to his majefty; and that he be mofl humbly moved prefented to his majefty ; and that he be molt humbly moved o take fome fpeedy and effectual courfe for redrefs there f, \&c
Upon this refolution of parliament, his majefly renew-d his inflances with the ftates for fatisfaction to our injured mer chants; but their remonfrances were treated with contempt the loiles of our merchants were too confiderable to be eafily eimburfed; and the benefits of the African trade, could they have monopolized the whole to themfelves, as they aimed at, were too important to be willingly parted with. Wherefore, inftead of giving us fatisfaction for the injurics futtained, they renewed their depredations in Africa, with greater violence than before, under the conduct of their ad miral De Ruyter; fo that the injuries of our merchants upon the whole, amounted to between 6 and 700,0001 . ferling.
The king, having tried all other methods in vain, found himelf at length under the neceffity, upen firlt notice of De Ruyter's hoffilities in Africa, of complying with the fenle of nis parliament, and the general voice of the people ; and accordingly, on the 22d of February, $1664-5$, he declared war in form againlt the flates-general of the United Provinces: of fuch high eftimation and concern to the nation was the trade to Africa then adjudged.
Nothing is more evident than that the chief view of the Datch, at this time, and for fome years before, had been totally to exclude the Englifh from the trade to Africa, and to engrofs the fame wholly into their own hands. Kather than fuffer this nation to enjoy a hiare of it peaceably with them, though they were therr predeceffors therein, and had a prior right thereto, they chofe to bear all the hazerds and inconvenuencies of a war with England.
However, they were happily difappointed; our African company maintained therr footing in Africa, by the treaty of peace concluded at Breda, 1667 (a).

Remarks withregard to the incroachments of the French on our trade to AFrica.
Before the French got poffeffion of the forts in the river Senegal, and on the illands of Arguin and Goree, on the north coaf, the Englifh traded freely and openly to all places on that coaft, without obftruction: fince the French have been in poffeffion of thofe forts, they have affumed the right and zuthority to EXCLUDE the Britifh nation from thofe parts, and have actually taken and confifcated fuch Britilh fhips and veffels as venture to go thither.
Such is the incroaching policy of that nation, and fuch their defire to engrofs the African trade to themfelves, that, by virtue of one fort on the River Senegal, and another a little diftance from the fame, on the ifland of Gorée, they not only claim an exclufive right to all the coaft, from Cape Blanco to the river Gambia, extending along the fhore above 400 miles, but carry on a confiderable trade in the river Gambia, within fight of the Britifh fort there: and, on the Gold Coaft, where, heretofore, they were never permitted, or ever prerumed to purchafe a negro, they have, of late years, come in great numbers, and traded at a place called Anamaboe, within fight of Cape Coaft Cafte, the principal Britifh fort and factory on that coaft, and carried off yearly from thence ten times more of the beit negroes to their fugar-colonies in America, than bave gone to the Britifh fugar-ilands; to the unfpeakable profit of the French fugar-iliands, and detriment of the Britifh. Can we, therefore, admire that the French thould fupplant us in a fugar-trade as they have done, when we have luftered fuch ihameful incroachments on our rights of commerce in Africa, and the French are fo tenacious of what is not their right there?
Have they not alfo incroached on our negro-trade of Whydah, as well'as on the Gold Coaft? And have they not, merely by our neglect and fupinenefs, wonderfully improved their fugar colomes, and prejudiced ours? And what right has this nation to exclude us from the whole trade of the Gum Coaft of Africa? See Gum Trade.
In thofe places where our African company have forts, as in the river Gambia, on the Gold Coaft, \&cc. all Britilh private merchants now trade freely with the natives, under the protection of the forts and factories. In thofe places where other nations have forts and factories, and our African company havenone, there all Britilh private traders are either abfolutely denied the liberty of trading, or their fhips are actually taken and confifcated. What greater conviction, therefore, can any reafonable man require of the indifpenfible neceffity of Great-Britain's maintaining forts and fettlements in Africa, while our rivals in that trade do the like?
It has been faid by fome, that although forts and fettlements may be neceffary for the fupport of the trade to Africa, yet they ought to be put folely under a military eftablifhment, that being more naturally adapted for the purpofe than a trading company.
Let gentlemen, who make this objection to the management of a trading company, inform themfelves, by the example of the Eaft-India compan", how effectually a mere military government would fupport their trade with the natives in India, who are more civilized than the negroes.-Long experiencein India hath proved, that a confiderable military force may be wifely conducled by a trading company, when the former is ab. folutely dependent on the latter; but what inftance have we of a trading company and intereft being conducted by a mere military government, independent thereon? They are quite incompatible, unlefs united under one and the fame head; and, fince the great end we intend to anfwer in Africa is the benefit of commerce with the natives, a trading intereft certainly fhould have the fole controul of the forts and fettlements. As our rivals in this trade act upon thefe principles, fhould we not be very impolitic to introduce any innovation in this refpect ; an innovation founded only on the conjectures of thofe who feem unacquainted with the nature and circumftances of this trade, in oppofition to the experience of time immemorial ? While we are, in every effential circumftance, upon the fame footing in the African trade with our competitors, we need be under no apprehenfion of danger from them or the natives ; but if we change our long-experienced fyitem, and eftablifh a new-fangled imaginary one in its ftead, different from that of all other nations, is there not reafon to doubr the fucceffful event? Gentlemen are too apt to run into a great miftake upon this occafion: they judge of the African forts and fettlenients as they do of Gibraltar and Port-Mahon; but the cafe is widely different: for what inland trade do we draw from theefe places? None at all, as we do by virtue of the African fettlements.- For more matter on this head, fee the articles African Trade, English African Company, French African Trade: fee alfo French America, France, British America, where are fhewn the incroachments which the French have made, and are fill attempting to make, on our trade to AMERICA, as well as on that of Arrica, which hasbeen the great lupport of their American trade; wherein, if they had been checked in due time by Great-Britain, they could never have made fuch rapidprogrefs in their fugar culonies which they have done. See VOL.I.
allo our Maps of North andSouth America, and out new Map of the Coast of Africa from Cape Blanco to the coalt of Angala.

The Exports from Engiand to Africa.
Annabafes, arrangos, roughamber, brafs of all forts; blankets, bays, bells, amber beads, cryftal beads, coral beads, all other beads, broad cloth, boyfadocs; carpets, camblets, copper of all forts, coral, cotton fluffs of many forts; worfted damarks, druggets, durois; earthen ware; fringe, fints, fire-fteels, fuzees, mufkets, carbines, blunderbuffes, buccancers, fowlingpieces, trading guns, piftols, gun-powder. Goods from the Eaft-Indies, viz. atlafles, atchabannies, allejars, allibannes, brawls, bafts, bejutepauts, Bombay ftufts; callicoes, carridarries, cherconnees, chelloes, chillas, chints, coopees, cowries, chucklaes, cuflaes, cuttances; elatches; ginghams, Guinea cloths; jamewares; long-cloths, longees, herba longes, filk or phota longees, lemannes; mullins, negannepauts, nillaes, niconees; pintadoes, photahs; poizees; romalls; falampores, fattins, feerfuckers; tapfeels, taffaties herba, taffaties filk, tepoy's, foufees, and many other filks and callicoes. Fine hats, felt hats, handkerchiefs, hollands: iron bars, wrought iron, knives, lead bars, and lead fhot. Liquors, viz. arrack, brandy, beer, rum, malt firits, wine. Long-ells, looking-glaffes; medicines; paper, padlocks, pewter, perpetuanoes, or ranters. Provifions, viz. beef, bread, butter, cheefe, flour, pork, fuet, vinegar, oil, fugar, raifins, fpices, tobacco. Shalloons, Silefia linnen, and all other German, Scotch, and Irifh linnens, fealing-wax, fwords of all forts, hangers, fcymetars, cutlaffes, foap, flops, tallow. Trimming, as lace, buttons, gold and filver thread, mohair buttons, filk, thread. Ticking, ftriped hollands and ftriped linens, Welch plains. Coats, waiftcoats, breeches-drawers, fhifts, fhoes, llippers, ftockings, perukes, wool-cards, all coarfe woolfen cloths, \&c. \&c.

The Imports from Africal to England.
Gold, bees-wax, elephants teeth, gums of various forts, cot-ton-wool, divers dying woods, and negroes, or labourers, for the plantations, \&c.
GUIENNE, in France, is bounded on the north by Saintonge, Angoumois, and Limoufin; on the eaft by Auvergne and Languedoc; on the fouth by the Pyrenean Mountains, which feparate it from Spain ; and on the wefl by the ocean. The government of Guienne is the greateft of all in France, for it contains 5 diftinct provinces, all under the fame governor, and which are as follow
Guienne, properly fo called, is bounded on the north by Saintonge; on the eaft by Perigord and Agenois; in the fouth by Bazadois and Gafcony; and on the weft t.y the ocean.
Bourdeaux, the capital of the whole government of Guienie, and a place of great traffic, being reforted to by merchants from moft parts of Europe, is fituated on the banks of the river Garonne, in a very fruitful and well-manured couitry Its haven is very capacious and fafe; it is called the Port of the Moon, from its form, being like a crefcent, into which the tide flows very high, and brings fhips of great burthen to the key.
Blayes on the Gironda, is built on a rock; it is divided by a fmall river into the upper and lower city, in which laft the merchants live, and have their warehoufes. Here all the fhips that go to Bourdeaux are obliged to leave their guns, and other arms. This port is very much frequented by foreign fhips, and by veffels from Britany, which come here to load wine of the growth of this diftria.
Libourne, a fmall city on the confluence of the rivers Lille and Dordogne, is very well peopled, and drives on a confiderable trade, the tide bringing up pretty large veffels. It is five leagues eaft from Bourdeaux.
II. Perigord is bounded on the north by Angoumois; on the weft by Saintonge and Bourdelois; on the fouth by Age nois; and on the eaft by Quercy and Limouftn. It is a mountainous country, in which are feveral mines of iron, and mineral fprings.
Bergerac, a finall city on the Dordogne, drove formerly a great trade; and was very populous. It is now the flapletown between Lyons and Auvergne.
Here are no other towns of any note.
III. Quercy is bounded on the weft by Agenois and Perigord; on the north by Limoufin; on the eaft by Auvergne and Rouvergne; and on the fouth by Languedoc. This province abounds in corn, wine, and fruit.
САноrs, the capital of the province, is a large and pretty-well peopled city, and has a confiderable trade in wine; of which they fell, one year with another, about 60,000 pipes: they fend it by the Lot and the Garonne to Bourdeaux, from whence it is tranfported into England and Holland.
IV. Rouvergne is bounded on the weft by part of Quercy, as alfo on the north; on the eaft by the upper Sevennes and Languedoc; and on the fouth by Albigeois.
Rhodes is fituated on a hill, furrounded with mountains. In the neighbourhood of this city they feed a vaft number of mules, in which they drive a confiderable trade: for it is faid

## G U I

that, during the two fairs kept yearly at Rhodes, that trade brings them in about chree hundred thoufand crowns. They make alfo bere a great number of grey linnen cloths, ferges, and other ftuffs, which they fell in Languedoc, and fend even into Italy.
Ville-Franche is a large, well-built and populous town, on the river Aveirou. They have here a pretty good trade of temp-cloth, which they fend to Touloufe and Narbonne.
V. Bazadois lies between Guienne Proper on the north and weft; the Landes, or Sandy Grounds, on the fouth; and Agenois and Condomois on the eaft. It is a country very fertile in corn, wine, and fruit.
Castel-Geloux, a fmall city on the banks of the river Avance, contains about 1200 inhabitants, whofe trade confifts chiefly in wine, honey and cattle.
Nerac, fituated on the river Baife, which begins here to be navigable, fo that the inhabitants drive a pretty good trade, for which reafon they are richer than thofe of the neighbouring cities.
VI. Agenois. This province has Condomois on the fouth; Quercy on the eaft; Perigord on the north; and Bazadois on the weft. It is the moft fruitful country of all Guienne, and furnifhes feveral provinces with corn, wine, and oil. The province is fmall, and has not many towns.
Clerac, a fmall city on the river Lot, near the Garonne, is inhabited by rich merchants, who carry on a confiderable trade in tobacco, wine, and brandy.
VII. Condomors lies between Armagnac on the fouth; the Garonne on the eaft, which parts it from Languedoc; Agenois and Bazadois on the north; and the Landes, or Sandy Grounds, on the weft. The chief-towns are Condom, Gabaret, and Mont de-Marfan.
VIII. Armagnac is bounded by Languedoc on the ealt; by Agenois and Condomois on the north ; by Gafcony, pro perly fo called, on the weft; and by Comminges on the fouth. In this province they make brandy, which they fend to Bayonne and Bourdeaux : they trade alfo in wool and flaz. There is a mine of chalk in the town of Laverdan; and at Anch and Mauvefin they make about forefcore or an hundred quintals of fals. The country befides is very fruitful in corn and wine.
IX. Comminges is fituated between Languedoc on the eaft; Argmagnac on the north; the county of Bigorre on the weft; and Conferans on the fouth. The chief trade of this province conifts in cattle and mules; Lower Comminges abounds in wheat and other corn, which they fend to Touloule by the Garonne.
Montergeau, a fmall city near the Garonne, has a pretty flourifhing trade.
X. Conserans has the county of Foix on the eaft; Comminges on the north and weft; and the Pyrenean Mountains on the fouth. There is but one confiderable city here, which is St Lizur.
XI. Bigorre is almof intirely in the Pyrenean Mountains, which feparate it from Arragon on the fouth; it is bounded on the eaft by Conferans and Comminges; on the north by the mountains of Armagnac ; and on the weft by Bearn. Its mountains are faid to have mines of copper, but they are not open.
XII. Gascony. This duchy is bounded on the eaft by Armagnac; on the north by Bazadois; on the well by part of the fea of Bifcay; and by Bearn on the fouth.
DAX, or Aces, the capital city, drives a good trade by means of the river Adour, which runs by it, and falls into the ocean about nine leagues below it, and its neighbourhood to Spain. It is alfo famous for its baths of hot water.
St Sever, on the Adour likewife, has a trade in wine, which they fend to Dax and Bayonne.
XIII. Soules and Labourd. The country of Soule is at the foot of the Pyrenean Hills, between Lower Navarre and Bearn. The woods here abound with timber proper for fhipping.
The country of Labourd is bounded on the north by the river Adour, and the Landes, or Sandy Grounds; on the ealt by Lower Navarre and Bearn; on the fouth by the Pyrenean Hills, which leparate it from Bifcay, and Spanifh, or Upper Navarre; and on the weft by the ocean.
Bayonne is fituated near the fea, on the banks of the river Adour. The trade carried on here is very confiderable. This city is the only one in France which has the advantage of being fituated on cwo rivers, into which the tide flows. The Nive runs through it, the Adour wahhes its walls, and they join their Atreams a little lower. By means of thefe rivers the merchants here import all forts of foreign commodities, which they fend into Arragon and Upper Navarre on mules, which come to Bayonne loaded with Spanifl wool, which is afterwards exported into feveral countries of Europe. They have alfo a great quantity of mafts from the forefts on the Pyrenean Hills, which they fend to Breft, and the other ports of France, where the king's fhips are built. They feñd likewife a great number of hips to the whale and cod-fifheries. They were the firf who fent veflels, in the year 1605 , to the coalt of Finland and Greenland, to take whales; but, as they were
at a great diflance, the fifh was corrupted before they could get home, which made them invent the fecret of melung the fat, and making the oil at fea.
GUM is a matter that exudes from certain trees and vegetables, They are fomething between acid and oil, being an acid falt fo fixed in earth, as that the greateft part of it is changed to an alkali, the other into oil, fo that the mixture arifing from thence is an oily falt, refembling the faponaceous concretes of the chemifts, made of oil of olives and a lixivium of tartar or the mucilaginous bodies formed of fpirit of wine and the volatile firit of urine. Thus we fee that all feeds which are oily, when ripe, are in the beginning only a mucilage, or imperfect oil. Refins confilt of oil and acid, and accordingly are artificially produced, by mixing firit of vitriol with f pirit of wine, or of turpentine. They are either folid or liquid; but thefe differ from one another only in the proportion of earth that enters their compofition. Melleous juices, which either exude fpontaneoully from plants, fuch as manna, or are obtained by art, as fugar, are effential falts, confifting of a mixture of acid and alkali, with a large proportion of oil *.

* This gummous confiftency vegetables attract from theirroots, and from thence it afcends to the branches; but fometimes it happens by the way to break out at the bark, where meeting with the cold air, it fubfifts and congeals to a gam. This congelation is not fudden, but requires fome fimall time; for, if you find it, while is is frefh, it is an exceeding fubtile moittare, but glatinous, for it will fpin into flting as fmall as any hair, and, had it paffed up to the braoches, it had been formed, in time, to a plumb or cherry.
If this then fhould prove the true foundation of all vegeta ble philofophy, there feems fomething deducible from the nature and quality of gums, that has not, perbaps, been commonly obferved; for, if this vilcous confiftency be the mo ther of all vegetables, fome fpecies of gums may be as nutritive to man, and other animals, as the fruits themelves which from thence are produced. The nearer, indeed, this gummons matrer approximates to become the fpecificated vegetable, the more it may probably participate of the pe caliar virtues of fuch vegetabie. But, for illaftration of my meaning by examples, fee my New System of Exper mental Philosophy, which will not be publithed till this work is completely finified.
- In every plant, fays the learned Boerhazve, is found one proper, or ípecific juice, formed by the joint force, or refult, of all the parts of the body, fucceffively applied to the crude juice imbibed; and, being thus ultimately prepared, contains the true properties of the plant, and the virtues arifing from them. This can fearce be referred to any clafs of known things, but muff be confidered as a thing fingular, and of its own kind.
If a leaf of the greater celandine be viewed as it grows on a living vigorous plant, the fibres may be feen iffuing from the falk of the leaf, and opening and difiperfing theanfelves through the whole extent thereof. Thefe ramifications frequently unite together, and form, as it were, a kind of net-work, wherewith the whole area of the leaf is filled. Upon pricking one of thefe nerves, there immediately jffues out of the wound plenty of a goiden juice, which contains mon aloes, in the f of the time, we find a yeilow bitter juce, lodged in proper duets for the purpofe, and capable of being drawn thence by art : fo a wounded poppy emits a pure milky opium. But, if thefe juices be mixed with others of the fame plant, there will anife from the mixture fomeching very different from what they are when feparate (a)
(a) Vegetable bodies are faund more uniform, in refpef of their elements, than fofilis: in the analyfis, they all afford falt, water, tarth, and ulphur; but then the har is of three diferent forts,
viz. acid, urincus, end lixiviate. Thefe principles are alf more or lefs volatile, as a greater or leffer fire is ufed, or as the plant has been fermented or yot.
Hence appears the vanity of thore chemilfs who undertake to exhibit fuch parts of vegetables feparate from the reft, wherein the whole virtue of each plant is lodged. It is certain they mult have fome other means for obtaining this end. very different from any hitherto known, or all their endeavours will little avail, unlefs to deceive themfelves.
Wirh the chemifts leave, their difillation, fermentation, putrefaction, and calcination, make fuch a change in the peculiar texture of each body, and the medicinal virtues depending thereon, that the utmoft care mull be ufed, before the caufe of their action can be affigned.
It does not hence follow that fo noble a fcience flould be rejected, but rather cultivated with the more zeal, as being the only one that hews what may be drawn out of a body by any certain operations, and the only one that deteets the failings of its profeffors; two excellencies which enable it to produce an infinite number of beautiful and ufeful things. A firitus redor, or prefiding firit; a fovereign oil, the true feat of this fpirit; an acid falt, a neutral falt, an alcaline falt, either fixed or volatile; an oil mixed with falt, after the manner of a foap, and a faponaceous juice bence arifeing; an oil firmly adhering to the earth, fo as fcarcely to be feparable therefrom; and, lafly, earth itfelf, the genuine firm bafis of all the reft : thefe are the principles, or matters, which a well-conducted chemiftry has hitherto produced from plants. See the arricle Vecetation.

Gum Ammoniac is fo called, becaufe it diftils from a fort of ferula, or fennil-giant, that grows near the place where the oracle of Jupiter Ammon flood heretofore : the beft is in large

## G U M

## G U M

yellowifh tears, and white within, dry, pure, having a bitter and difagreeable tafte.
It is given inwardly, in deoppilative electuaries, for fchirrous tumours of the liver, fpleen, and mefentery; it is ufed in emollient and attractive plaifters.
The way to purify it, is to diffolve it in vinegar, then, paffing it through a cloth, all the moifture is evaporated away over the fire; by this means it is cleanfed from fome ftraws, or other little impurities that it contained. But fome parts of its volatile firits are evaporated at the fame time, and in them confifts its greatcf virtue, while fome others are fixed by the acid, which always hinders the motion of volatiles: wherefore I would never advife, fays Lemery, this purification to be made; only powder it in a mortar, to mix it with what may be thought fit; for, though there fhould be ome littie ftraws in'it, that would rever be able to alter the nature of the remedy, or diminifh its virtue fo much as doth the deftruction of its volatile falts by the vinegar.
The fame thing may be confidered in the ule of all other gums; and, if fome of them, as galbanum and opopanax, are too moift to be powdered, you may cut them into little flices, and dry them in the fun.

## Diftillation of gum ammoniac

This is a feparation of the oil and fpirit of gum ammoniac from its earthy part.

Put a pound of gum ammoniac into an earthen retort, or glafs one luted, great enough for two thirds to remain empty; place this retort in a reverberatory furnace, and, fitting to it a receiver, begin the difillation with a very little fire, to warm gently the retort, and drive forth, drop by drop, a little phlegmatic water. When the vapours begin to appear, throw out that which is in the receiver, and refitting it, and juting clofe the joints, increafe the fire by degrees, and continue it until all is come forth. Then let the velfels cool, and unlute them ; pour out that which is in the receiver into a tunnel lined with brown paper, the fpirit will pafs through, and leave the thick black oil in the filtre: keep it in a phial. It is good for the palfy and hyfterical difeafes: the difeafed parts are rubbed with it, and it is given to women to fmell to. Put the fipirit into a glafs alembic, and rectify it by diftilling it in fand. It is a good remedy againft the plague, and all forts of malignant difeafes; it is ufed in the fcurvy, and all manner of obftructions; the dofe is from 8 to 16 drops, in fome proper liquor.
The firit of all other gums may be drawn after the fame manner.

## R E M A R K S.

Two-thirds of the retort muft remain empty, becaufe the gum rarifies exceedingly as it heats, and would be apt to come forth in fubtance, if it had not room enough. There is no need of adding alkali's for the rectification of this fpirit, as many authors would perfuade us; this circumftance doth rather more hurt than good, becaufe alkail's foil thofe forts of fpirits.
The phlegm is taken out of the receiver before the firits come forth; in order to their being purer, you will have fix drachms of phlegm, three ounces and feven drachms of fpirit, tix ounces of a black and ftinking oil, and there remain in the retort four ounces and fix drachms of a black, light, and very fpongious matter, which is to be flung away, according to the common practice: it is likewife a little inflammable, by reafon of fuliginofities which have fallen upon it; and this is that which gave it the black colour; a great deal of the afhes of this matier is requifite to make a little falt, for, tite falt of gums being commonly more volatile than fixed, it comes forth almoft all of it in firit.
The fpirit of gum ammoniacum is nothing elfe but an effential or volatile falt, refolved and raifed by fire, with fome portion of phlegm; it is fomewhat hath to tafte, and a little biting; it caules no fenfible ebulition with oil of tartar, nor with the fpirit of vitriol, but it renders the tincture of turnfole reddith, and thickens the diffolution of corrofive fublimate; which flews that it contains an acid and an alkali fo weak, that they want force to deftroy each other.
Gum Dragon. ' Gum dragon, Mr More, in his Travels into the inland parts of Africa, comes out of a tree called pau de fangue, which has a very rough bark; upon wounding of it, it fweats out in drops like blood, which joining together, and being dried by the fun, congeals into lumps: there are fome as large as pullet's eggs. One Junco Sunco, a jolloiff of Yanimarew, up the river Gambia in Africa, a Atirring man, having heard that I enquired much after gum, fent me down a fample of about a pound of very fine white gum, which proved to be gum arabic: I believe in all I fent, at different times, about a tun of gum, from the factories I was at, to James Fort. I began now to hope that the gum-trade might be enlarged and made confiderable, fince Job's country, which is called Foota, lay on the edge of the foreft, and was but four days journey from Fatatenda, and, by his bringing that people into a good opinion of the

Englifh, they might be prevailed upon to trade with $u$, and bring quancities of that commodity to Fatatenda, from whence it might be carried by water, with fmall charge, to the fort. And this might not be only the making of the factors employed in it, but allo of great fervice to the royal African company, and to the nation itfelf; fince there is a great deal of gum Senegal imported in a year to England, and almoft all of it bought of the French, who make a very profitable trade of it, as appears by father Labat's New Account of Africa, printed in 1728, wherein he fays,

- That country, quite bad as it is, and thofe roads fo dangerous for fhipping, are neverthelefs eagerly fearched out by the French, Englifh, Dutch, and Portugueze; they all frrive to fettle there, becaule they are the only places where a trade for gum can be had by thofe who are not mafters of the Sénegal river: a trade which feems a light matter in itfelf, but is, in effeet, very confiderable, whether we regard the price the Moors feil the gum for, which is very moderate, or the price it yields, out of Africa, which is very advantageous; or, lafly, the quantity of European merchandizes it takes off ready wrought, the vent of which makes manufactures fpread, money circulate, and fo finds work for abundance of hands, which is the main end of commerce
No wonder, therefore, that the moft experienced of European merchants have ufed all endeavours to hit into this branch of traffic, becaufe, the French being fole mafters of the Niger*, on which thofe other parts where a trade for gum may be had are fituated, they find themfelves obliged to take it as it paffes through their hands, fince the time there has been no free trade at Arguin or Portendie. This is the true motive that has put them on fo great expence to fettle and fecure a factory at Arguin, and, when they were driven from thence, to endeavour an eftablifment among the Moors at Portendie. This was, in effect, their only way to come in for fharers with the French in this commerce; in purfuit of which, they found means at length to engrofs it wholly to themfelves, by raifing the gum to an exceffive rate, and makeing bargains to their lofs, in order to engage the three nations of the Moors to bring their intire harveft to their market.
* Senegal.

They make two yearly gatherings of the gum: the firf in the month of December, which is the moft plentiful, and they pretend the balls are larger, cleaner, and drier, which are all the good qualities to be wifhed in gum. The fecond gathering is in March: this is the leaft, and they are convinced by long experience, that the gum of this gathering is more fqueazy, drofly, and not fo clear.
They do not weigh the gum, buc put it in a cubic meafure, called a quantar, or quintal, of a fize agreed upon with the Moors, the capacity of which the Europeans take care to augment, when occafion offers.
That which the Dutch made ufe of, when they were mafters of Arguin, held 220 pounds Paris weight.
It coft them a lingle piece of eight, worth three livres each; Or a dozen of padiocks;
Or two ounces of coral ;
Or four fatalas, or copper bafons;
Or half an ell of fine woollen cloth
Or three quarters of an ell of ordinary cloth;
Or three bars of flat iron;
Or three ells of bays;
Or fix ells and three quarters of baftas linen, i. e. blue cutlin. Or fix ells of Silefia's.
Note, The ells are Dutch meafure, which is about half an ell French.'
Thus far Labat.

## REMARKS.

Thus ftood this article before the laft war. But fince the Definitive Treaty of 1763 , Senegal and its DepenDENCIES are ceded to Great Britain by the tenth article thereof, which fays, "his Britannic Majefty fhall reftore to France " the Illand of Goree, in the condition it was in when con"c quered: and his Moft Chrifian Majefty cedes in full "' quered: and hats Muanties to the king of Great Britain, the " RIVER SENEGAL, with the forts and factories of St " Lewis, Podor and Galam ; and with all the rights and " dependencies of the faid River Senegal."-Thus Great Britain is become poffeffor of the gum-trade of this coaft, by virtue of the faid article in the treaty of 1763.
Gum Arabic is a dry and folid gum, brought in granules of various fizes. Thefe granules being broke into feveral pieces, face is rough, their colour when pureft, perfectly limpid. Sometimes thisgum is whitith, yellowith, or brownifh, though the darker pieces are fufpected of adulteration, the druggifts too often mixing various gums together by art. When this gum is pureft, it is extremely pellucid, in the writ is much fo; it is hard to break, but nut tount, an when broke, refombe the furface of broken crit: thas fcarce either fmell or tafte; diffolved in water, it becomes thick and vifcid.
It is brought from Arabia and Africa. It fhould be chofen pale-coloured, hard and dry, and free from all admixtures of
fou!ners.

## G U M

foulnets. There is fome of a brown-reddifh kind, found in large maffes; which nay be ufed by divers artificers, but not medicinally, as the other may.
The tree which produces this gum is large and fpreading. Its trunk grows to a foot, or more, in diameter: it is armed on the branches with large and fharp thorns. The leaves are pinnated, and about two inches long; the flowers yellow, of the fhape of the pea-bloffom, and ftand in clutters. The fruit is a pod, in thape of a lupine, four or five inches long: it contains fix, eight, or more feeds, and fwells to a confiderable breadth where lodged, but is fo narrow in the intermediate fpaces, that the feeds look only threaded, as it were. The Egyptians bruife the pods and feeds of this tree, while yet young, and exprefs from them a juice, which, when properly infpiffated, is the acacia of the fhops. [See Acacia.] The bark of the trunk and large branches of the tree naturally crack in feveral places; from whence iffues a thick liquor, as from our plumb and cherry-trees; which hardens in the air, and becomes what is called gum'Arabic.
A pound of this gum, chemically analyfed, yields firt about two ounces of an infipid phlegm, about five ounces of a red - acid liquor, after this about an ounce of an urinous alkaline liquor, and laftly about three quarters of an ounce of oil, partly fluid, and partly as thick as butter. The refidue in partly fuid, and partly as thick as butter. The refidue in calcined in an open fire, and lixiviated, yields near two drachms of a fixed alkaline falt.
This being fimply a gum, and having nothing of the refinous quality, is perfectly foluble in water, not in oil or fpirit of wine. In the fire it does not flame at all, but burns to a wine. In
black coal.
It is emollient and diuretic, and ufed in divers compofitions for difeafes of the thorax, it fheathing the fharp part of the ferum in the bronchia, by its mucilaginous parts; and, by the fame means becomes ufeful in difeafes of the kidnies, uterus, and bladder. For which reafon it is given in a dyfentery, frangury, heat of urine, \&c. Thefe are the principal gums.
Gum Senegal. It is fo denominated from the river Senegal in Africa, belonging to the French, the forefts bordering upon that river abounding with this gum. It greatly refembles the gum Arabic, but the granules thereof are ufually larger than thofe of the Arabic gum. They are commonly of an oval form ; the furface is very rough, and does not appear near fo bright as the inner fubitance, where broken. It is very hard, but not rough, confiderably heavy, and of an extremely fine and even texture. When broke, it is moft frequently of a pale brown colour, but, like the gum Arabic, it is fometimes yellowifh, reddif, or whitifh. It is fometimes artfully blended with the gum Arabic by fome dealers the fraud, however, is of no great confequence, both being pretty much of the fame nature and virtues; though that of Senegal is rarely ufed in medicine, unlefs as mixed with the Arabic: the dyers and other artificers confume the greateft quantities of it.

## REMARKS.

The French find the gum Senegal fo ufeful in their filk and linnen manufadures, that they occafionally prohibit its exportation. [See French African Trade and ComPANY.] The gum trade upon the coaft of Africa being one of the moft beneficial branches there, the French have engroffed the whole to themfelves, and excluded us from all the trade therein, to which we had a right, from Cape Blanco to the river Gambia, extending along the fhore about 400 miles ; but they carry on a confiderable trade in the river Gambia itfelf, within fight of the Britifh forts there; and allo on the Gold Coaft, where, heretofore, they were never permitted, or ever prefumed to purcbafe a negro, they have of late years come in great numbers, and traded to Anamaboe, within fight of Cape Coaft Cafle, the principal Britifh fort on that coaft, and have carried off yearly, from thence, ten timies more of the beft negroes, to their fugar colonies in America, than have gone to the Britifh fugar iflands. See Freneh America, french African Trade, GuiNEA; fee alfo our new map of Africa, of the Gum Coast, the Grain Coast, the Ivory Coast, and the Gold CoAst, together with an account of all the forts and fettlements belonging to the feveral European powers interefted in this commerce. See alfo the articles Africa, and English African Company, under all which particular heads, the whole of this trade is reprefented in various lights, both national and mercantile:

## GUNPOWDER.

## Of what it confifts, and how made.

It is a compofition of faltpetre, fulphur, and coal made with willow, or any other light wood, which, by means of vinegar and a fieve, is made into greater or leffer corns. It is made in many parts of the world, but moft plentifully in France and England.
'To make it, you muft chufe good and pure nitre, in large

## GUN

cryftals. Set on a moderate furnace fire in a kettle, gradu -
ally increafing the heat till the miviRure be ally increafing the heat till the muifure be evaporated, and it grow very white, firring it coninually uith a wcoden or iron ladle; then cover the nitre with water, and, when diffolved and bf a thick confiftence, keep conflantly ftirring, till all the moiffure be again evaporated, and it be reduced to a dry white meal. The fulphur muft be the pureft and beft, in very large lumps, perfecaly yellow, porous, and not too fhining. If, when fet on the fire, it freely burns all away, it is good. As alfo if prefled between two iron plates bot enough to make it run, if in running it be yellow, and the remainder reddifh, it is excellent for the purpqle; but, if foul, the powder-makers prepare it thus: melt the fulphur in an iron veffel over a gentle-fire, well kindled, but not flaming; fcum off what rifes on the top, then frain leifurely through a double linnen cloth. Powder this finely.
The charcoal muft be large, clear, free from knots, well burnt, and cleaving; but if not to be had, you muft make it thus : cut down hazel, afh, or juniper, \&c. in May or June, when it is apt to peel, cut into lengths of two or three feet long, taking off the rind and fuperfluous branches. When dry, make them into bundles, which being fet upright and piled, cover very clofe with earth or turf, ledving only a few vent-boles; when it is well kindled and in a red burning heat, ftop the vent-holes clofe with moiftened earth. The fire being thus extinguifhed, the coals will be pure and whole, without afhes, and may in 24 hours be taken out for ufe, reducing it to a fine powder.
Of thefe ingredients the country people in Poland, and the coflacks, make it with their own hands thus: they put their proportions of nitre, fulphur, and charcoal (all in fine powder) into an earthen pot, pouring fair water on it, then boiling till all is evaporated, and the matter be thick like pafte, which they dry in the fun or a ftove, till it is fit to corn; then they granulate it by paffing through a hair fieve. But, in order to know and make it truly, it is fit to know the kinds of it, and their different ftrength. The kinds are threefold, I. Cannon, II. Mufket, and III. Piftol-powder; and of each of thefe are two feveral kinds, viz, a ftronger and weaker, according to the proportions of the three ingredients.

The preparations declared, I. Cannon-powder; I. The ftronger; to every 100 lb . nitre, there is fulphur 25 lb . chatcoal 25 lb . 2. The weaker; to every 100 lb . of falt-petre, fulphur 2olb. charcoal 241b. and fo of the other forts.

## The way of making it.

The ingredients, all finely powdered, are to be moiftened with water, vinegar, or urine, which is moft ufual; then well beat together, 24 hours at leaft, and afterwards granulated through a freve, with a bottom of thick parchment full of round holes, but the pafte mult firft be moiftened with the following liquor, viz. brandy io lib, camphire i ounce, mix and diffolve; the mafs being made into balls as big as eges, put them into the fieve, with a wooden ball, to break and pafs them through the holes.
pafs them through the holes.
But, as making valt quantities by band would be tedious work, mills have been devifed, which do more in one day than a man can in a hundred.
In making piftol-powder, if defired ftronger, it mult be ftirred up feveral times while in the mortar, and moikened with water diftilled from orange or lemon-peets in an alembic, and then beat 24 hours as aforefaid.
Powder, when corned, is of much greater force than when in duft ; hence it is concluded, the larger grains are ftronger than the fmaller; for which reafon, cannon-powder is granulated larger than muiket, and that than piftol; and powder in charging fhould not be forced fo hard in, as to bruife the grains.
the grains.
To know the goodnefs of gun-powder, it is tried three ways. To know the goodnefs of gun-powder, it is tried three ways.
Firft, by fight. If too black, it is too moift, or has too much charcoal in it; if it be of a dufky azure, inclining to red, it is'a figh of good powder.
Secondly, by touching; if the grains break eafily, without fecling hard, it has too much coal in it. If, preffing on a fimooth hard board, fome grains feel harder than others, the fulphur is not well mixed, and the powder naught.
Thirdly, by burning; lay little heaps of powder, three or four inches afunder, on white paper, and fire one of them; if it only fires and burns all away fuddenly, without firing the others, and makes a fmall thundering noife, with a clear circling fmoke, it is good: but, if it leave black marks, it
has too much coal, or is not well burnt. If it leave a greafinefs, the fulphur or ritre are not well cleanfed. And, if two or three corns be laid upon paper an inch alunder, and, one of them being fired, they all fire at once, leaving only a white fmoaky colour in the place, and the paper not touched, the powder is good; as alfo ${ }_{5}$ if fired in your hand, it burns it not; but, if black knots remain, it is not ftrong enough, but wants nitre.

## Of the exportation thereof.

* Being permitted to be exported, only when the price does not exoeed five pounds the barrel; and, if exported as merchandize, being intitled to a bounty, oath mult be made on the bill of entry, as follows:
* 12 Car. II. cap. 4. §. 12.

$$
\text { 19th of March, } 173^{\circ} . \text { No. } 45^{\circ}
$$

In the Swallow of Southampton, Benjamin Rogers, mafter, for Guerney.

Henry Hubbard.
Fifty barrels, containing five hundred weight, an half, and fixteen pounds of gun-powder, unider five pounds the barrel.

Henry Hubbard maketh oath, That the true value and price of gun-powder, at this time, do not exceed five pounds the barrel; * and that the gun-powder above mentioned is all of Britifh manufaclure, and is intended to be exported to Guernfey as merchandize, and not for the ufe of the fhip in her voyage.

Henry Hubbard.
Jurat 19 die Martii 1730 , coram me, A. B. Collector.

* The part after this mark muf be omitted, when the bounty is not intended to be obtained.
*And, moreover, fecurity muft be taken at the time of entry, in the penalty of five pounds each barrel, containing one hundred pounds net weight for the due exportation thereof, in form following:
* 4 Geo. II. cap. 29. §. I.

A bond for the exportation of Britifh-made gunpowder.

## Noverint univerfi, \&c.

Whereas by act of parliament made in the fourth year of the reign of his prefent majetty king George the Ild. intitled, An aft for granting an allowance upon the exportation of Britifh-made gunpowder, it is enacted, that there thall be paid to every perfon or perfons, who at any time or times, within or during the term of five years, to be reckoned from the twenty -fourth day of June, one thouland feven hundred and thirty-one, or at any time or times before the end of the then next feffions of parliament, fhall really and truly export out of this kingdom, as merchandize, any quantities of gunpowder of the manalacture of Great-Britain, an allowance of the fum of fout frillinge and fixpence for every barrel of fuch gun-powder, coniaining one hundred pounds net weight, and fo in proportion for greater or leffer quantities; which allowance thall be paid and anfwered by the cuftomer or collector of the euftoms, with the privity of the comptroller of the pore from whence the fame fhall be exported, on a debenture to be made forth by the cuftomer or colleckor, according to the eatry of fuch gurpowder, without fee or reward, and the fhipping thereof verified by the fearcher on oatly; or, being of the people called Quakets, folemn aflirmation, made by the exporter on the entry or debenture, before the cuftomer or collector, or comptroller of fuch port, that the gunpowder is of Britifh manufacture; and is exportad, or intended to be exported, to parta beyond the feass, by way of merchandize, and not for the ufe of the thip in her voyage, and net relanded, or intended to be relanded, in any part of Great-Britain, the exporter fuft giving fecurity to the faid cuftonser or collector of the port, in a perratey of five pounds for each barrel, containing one hundred pounds net weight (which fecurity they are thereby impowered to take in the name, and to the ufe of his majetty, his heirs and fuetefloms) that the gunpowder fo fhipped, or intended to be fhipped, or any part thereaf, thall not be relanded or brought on thore again into any port or part of Great-Britain: and fuch fecurities fiall be difcharged in the manner therein and herein after mentioned, (that is to fay) for fo much of the faid gunpowder as fhall be entered for, or landed in the kingdom of Irelind, the illands of Guernfey and Jerfey, Alderney, Sark, or Man, or any of his majefly's colonies or plantations abroad. The condition of the bond fhall be, to bring certificates in difcharge thereof from each place refpectively, importing, that fuch gunpowder was there landed, and refifying the landing
thereof, which certificates fhall be figned by the proper of cer or officers of his majefty's cuftoms, as refpectively refide there; and for want of fuch officers reliding there, then by the governor of thofe iflands and coldnies; or plantations, or the deputy-governor thereof refpectively, who are thereby required to give the fame without fee or reward. And, for fuch gun-powder as hall be fo entered for any foreign port or place, to bring a certificate under the hand of any of his majefty's confuls refiding in fuch port or place, or under the hands of two known Britifh merchants, then being at fuch port or place, that fuch gunpowder was there landed. Or fuch bond or bonds hall be difcharged, upon proof in either of the faid cafes, that the fame was taken by enemies, or perifhed in the feas; the examination and proof thereof being left to the judgment of the cotmmiffioners of the cuftoms in England or Scotland refpectively, for the time being. And it is further enated by the faid act, that whereas gunpowder; exported for Africa, is fold and delivered in very fmall parcels, and at places along the coaft, where no certificates can be bad; in every fuch cafe, upen proof made upon oath or, being of the people called Quakers, upon folemn affirmation, of the mafter, mate, purfer, or other perfon hiaving charge of the fhip during the voyage, importing that fuch gunpowder was fold and delivered upon the coaft of Africa: and alfo of the oath, or folemn affirmation, as aforefaid, of the merchant exporter, if living, that, to the beft of his knowledge and belief, the faid goods have been difpofed of at the places to be mentioned in the refpective oaths, affidavits, or affrmations of the mafter, mate, purfer, or other perfon, having the charge of the chip, during the voyage, and that they have not been relanded or brought on hore again in any port or part of Great-Britain: the fame fall be taken in lieu of the certificates aforefaid; and be allowed of in full difcharge of the bonds to be given in purfuance of this act. Any thing in the faid Act contained, to the contrary thereof; in any wife notwithftanding.
And whereas the above-bound Henry Hubbard did, on the Igth day of March 1730, enter for exportation on board the Swallow of Southampton, Benjamin Rogers mafter, bound for Guernfey, fifty barrels, containing forty-four hundred; and half, and fixteen pounds weight of gunpowder as merchandize, and not for the ufe of the fhip in her voyage. Now the condition of this obligation is fuch, that if the above-mentioned forty-four hundred, and half, and fixteen pounds weitht of gunpowder, and every part thereof, thall be exported into parts beyond the feas (the danger of the feas excepted) and that the faid gunpowder, or any part thereof, fhall nor be relanded, or brought on fhore again into any port or part of Great-Britain; and that, if the above-bound Henry Hubbard and George Crowther thall bring and produce, or caufe to be brought and produced, a certificate in difcharge thereof, importing, that thẹ above-mentioned gunpowder was there landed, and teftifying the landing thereof, or make proof by oath or affirmation, as in and by the faid aEk of parliament, in the refpective cafes, is directed and required; or if the faid gunpowder fhall be taken by enemies, or perifh in the feas, and the commiffioners of the cultoms fhall be fatisfied of the proof thereof, then this obligation to be void and of none effect, or elfe to remain in full force, effect, and virtue.

Sealed and delivered in
Henry Hybbard*. the prefence of
A. B. Colleftor.
B. C. Comptroller.

## Some other principal laws relating thereto.

No perfon is to keep more than fix hundred pounds of powder at a time in a ftorehoufe, \& c . in the cities of London and Weftminfter, or the fuburbs, within three miles of the Tower, St James's palace, \&c. or two miles of any magazine. Perfons dealing in gunpowder, having greater quantities, forfeit 20s. for every bundred weight; and, refufing to be examined, Thall be committed to the county goal. 5 Geo . I. c. 26.

Storeboufes may be fearched by warrant in theday-time; perfons oppofing to forfeit 5 1. to any who will fue within fix months.
No more than twenty hundred weight of gunpowder to be carried at a time through London or Weffminfter, \&c. and thall be in covered carriages, and the barrels clofe jointed and hooped, and put in leather or canvas bags, that it may not affeet any of his majefty's magazines, $\& \mathrm{cc}$. Stat. 5 Geo . I. c. 26.

By ftat. II Geo. I. it is enacted, that it fhall not be lawful to keep within London or Weftminfter, \&s. more than 200 lb . weight at one time in any houfe, or other place under the fame roof, or in any yard, above 24 hours, on forfeiture of all the gunpowder, and the value.

Not to extend to the magazines of the crown, or to hinder the king's officers proving gunpowder as ufual, or carrying it to and from fuch magazines, \&c.
The act 5 Geo. I. c. 26. and all claufes therein not hereby altered, to be in full force, and both thefe acts to be deemed public acts.
By 22 Geo. II. after the 24th of June 1749, no perfon thall keep gunpowder more than 24 hours at one time, in grèater quantity than four hundred weight in any city, \&c. or within one hundred yards of the king's palaces, or one mile of the king's magazines; nor thall keep, above 24 hours at any time, more than 30 hundred weight, in any place whatfoever in England, except as hereafter.
That, after the 24 th of June 1749, places wherein gunpowder is kept by perfons making or trading in it, may be fearched by warrant, and if more than four hundred weight be found in any houfe, $\& \mathrm{c}$. city or fuburbs, or within 100 yards of any market-town, or two miles of the king's palaces, or one mile of the magazines, or more than 30 hun dred weight in any other place (except as is excepted) to be forfeited, to any who fhall fue within three months for it, or the value, with cofts; perfons detaining the fame, on feizure, till determined if torfeited, fhall not be liable to any action, other than for damage received during the time detained.
After the 24th of June 1749, none fhall convey, in any carriage within England, more than 25 bundred weight, nor in any open barge or veffel, within one mile from any city,
or market-town, above 50 hundred weight; and all land conveyance fhall be in covered carriages, and the barrels clofe joined and fecured; perfons offending forfeit their gunpowder to the informer.
After the 24 th of June 1749, perfons employed in any ftore. houre, or in conveying powder, wilfully committing any act that may endanger its taking fire, on conviction flal pay to the informer 5 s . for every hundred weight, or be im prifoned for fix months. This act not to extend to the king, ftorehoufes, \&rc. or to any mills, or the magazines now erected at Barking-creek's mouth in Effex, and Erith-level in Kent, or to the magazines near Liverpool
Juftices in every county may at their feffions appoint convenient ground at two miles from any city or marker-town not above two acres in one place, with ufe of roads, to erect warehoufes for keeping gunpowder in any quantity.
No forfeiture on account of gunpowder kept in greater quantities than 30 hundred weight, within any warehoufe already built, unlefs adjudged dangerous by the juftices at their feffions, and until fix months after fuch adjudication and provided fuch warehoufe be not in any city or fuburbs, or in, or within 100 yards of any market-town, or two miles of the king's palaces, or one mile of any magazine. All fuits to be tried in the court or place where the fact wa committed, and within fix months after the fact.
Nothing in this act to repeal any of the claufes in 5 Geo. I. for preventing mifchiefs by gunpowder, or in 11 Geo. I. for making that act more effectual.

## Of the PRACTICALBUSINESS of the CUSTOM-HOUSE,

- continued from the end of letter $F$.

A brief abftract of the chief general laws relative to the Importation of Goods from foreign parts, or

## GOODS INWARDS

GOODS INWARDS-brought from beyond the feas may not be taken up, or laid on land, out of any veffel, lighter, or boat, being not in aleak or wreck (except fifh taken by Britifh beftials, and falt) butat lawful hours, and only upon fuch open places, keys, or wharf, as fhall be appointed by his majefty's commifion out of the court of exchequer, without \{pecial fufferance and leave from the officer of the cuftoms, upon forfeiture thereof, or the value, and icol. by the mafter: offenders not revealing their offence within one month, are to forfeit 1001 . I Eliz. c. 11. §.2, 3, 7. and 13 and 14 Car. II. ᄂ. II. § 7,14 .
1mportedinto the port of London, may be unladen, or landed at any of the lawful keys between the Tower of London and London-bridge, and between fun-rifing and funfetting, from the roth day of September to the 10th day of March, and between the hours of fix of the clock in the morning and fix in the evening, from the ioth day of March to the 1oth day of September, giving notice to the proper officers: officers refufing to be prefent, to forfeit for every default 5 l. See Rules of the Customs, the latter end of letter $A$.
Imported into other ports, may not be taken up, difcharged, and laid on land, out of any ihip, lighter, \&c. being not in a leak or wreck, except firh taker by Britifh, and falt, but only in the day-light ; that is, from the 1 ft of March to the 3 oth of September, betwixt fun-rifing and fun-fetting, and from the 3oth of September to the ift of March, between the hours of feven in the morning and four in the afternoon. I Eliz. c. 1I. §. 2.
Wharfingers, or their fervants, landing, or knowingly fuffering to be landed; any goods or merchandizes, prohibited or uncuftomed, without the prefence of a proper officer, or at unlawful hours (except in the port of Hull) are to forfeit 1001 . I Eliz. c. II. §. 2, 3. and 13 and 14 Car. II. c. 11 §. 7 .

Of the growth, production, or manufacture of Muscovy, or Russia, or of any of the dominions of the emperor thereof, all mafts, timber, boards, falt, pitch, tar, rofin, hemp, flax, raifins, figs, prunes, olive oil, corn or grain, fugar, pot-ahhes, wine vinegar, aqua vitæ or brandy, muft be imported only in fhips belonging to GreatBritain, or Ireland; and currants, and all goods of the growth, Britain, or Ireland; and currants, and all goods of the growth,
product, or manufacture of Turkey, in fhips Britifh-built; except fuch thips as are of the buile of the country whereof the faid goods are the growth, production, or manufacture, or of fuch port where the faid goods can only, or moft ufually are firt thipped for tranfportation; on forfeiture of thip and goods. I2 Car. II. c. 18. §. 8.
But during the late war with France, this is not to extend
to prevent any perfon importing the faid goods, in fhipping built in Great Britain, Ireland, Guernfey, Jerfey, or any of the lands, iflands, dominions, or territories belonging to his majefty in Afia, Africa, or America, provided the mafter and three fourths of the mariners are Britih, or of the country of which the faid goods are the growth, production, or manufacture: but if fuch fhips are the property of foreigners, although Britifh-built, the goods are to pay aliens, and all other duties, in the fame manner as if they were foreign built. 29 Geo. II. c. $34 . \S$. 19, 20 .
Of the growth, production, manufacture of Asia, Africa, or America, may be imported only in Britifh fhips legally manned, or in hips belonging to his majefty's plantations there, on forfeiture of thip and goods. 12 Car. II. c. s8. §. 3 .
Offoreign growth, production, ormanufacture (that is, of Asia, Africa, and America ONLY, and not of Europe) may be fhipped, and brought from no other country but that of their growth, production, or manufacture, or from fuch ports where thofe goods can only, or have moft ufually been firt fhipped for tranfportation; and in Britifh fhips, or plantation fhipping legally navigated; on forfeiture of fhip and goods. I2 Car. IL. c. 18. §. 4.
But not to extend to goods of the Streights and Levant Seas, and East-India Goods, which may be brought from the ufual places of lading, in Britifh fhips duly manned, though thofe places be not the very places of their growth, \&c. but this exemption is repealed as to raw filk and mohair yarn of the product or manufacture of Afia, which can be imported from no parts or places in the Streights or Levant Seas, but fuch as are within the dominion of the Grand Seignor. 22 Car. II. c. 18. §. 12, 13. and 6 Geo. I. c. I4. §. I.

Nor to goods of Persia brought through Russia by perfons free of the Russia company. 14 Geo. II. c. 36. §. 1.
Nor to gUM SENEGA imported from any place in Europe by Britifh, in Britifh-built fhips legally navigated. 25 Geo. II. c. $3^{2}$. §. I.

Nor to goods of the growth, \&c. of the Spanish or Portuguese Plantations; which may be brought by any perfon from Spain, Portugal, or Weftern Iftands, commonly called Azores or Madeira, or Canary Inands, refpectively, in Britih fhips. I2 Car. II. c. 18. §. 14. and 17 Geo. II. c. $3^{6}$. §. 4 .

Nor to Bullion, nor togoods taken as prize by any fhips belonging to Great-Britain, \&c. 12 Car. II. c. 18. §. 15.
Nor to Cochineal, nor Indico.
Nor to Spice by licence, \&c.
Of the product and manufacture of Jersey, Guernsey, Alderney, and Sark, may, upon certificate from the governor, lieutenant, or deputy-governor, of commander in chief, and oath before the magiftrates of Jerfey and Guerniey, that they are of the growth, \&c. of the faid iflands, be imported into Great-Britain, duty-free, ex-

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

cept fuch excife, or other duty, as is now, or fhall hereafter for the time being be, due and payable for the like goods of the growth, produce, or manufacture of Great-Britain. 3 Geo. I. c. 4.§. 5
But goods of the product of any foreign country imported into thofe inlands, or foreign goods in part or futly manufactured there, are, upon importation into Grear Britain, liable to the fame duties as if imported directly from the place of that product. 3 Geo. II. c. 4. §.7.
Bulk may be broken in any lawful port, and cuftom paid for no more goods than are entered and landed.
Small parcels of fine goods, or other goods found in cabbins, chefts, trunks, or other fmall package, or in any private place; and all other forts of goods, for which duties are not paid or fecured within 20 days after the fbips entry, may be brought on fhore by the officers of the cuftorns, and 'fecured in his majefty's ftore-houfes till the duties be fatisfied, unlefs the fand officers have a jult caufe to allow a longer time. 13 \& 14 Car. II. c. 11 . §. $4 \cdot$
The officers may stay and remain on board till all the goods are delivered and difcharged out of the faid thips. $I_{3}$ and I4 Car. H1. c. II. §. 4.
Permittedtobetaken up by bills at fight or view, muft be landed at the moft convenient keys, and there, or in his majefty's ftore-houfe of the port, be meafured, weighed, and numbered by the officers, who are to perfect the entry, and return the fame under their hands, the next day, to the collector, \&c. upon forfeiture of $100 \mathrm{l} . \mathrm{I}_{3}$ and 14 Car. II. c. 11. §. 21 .

Not Keported and found on board any fhip without payment of duty, after clearing the fhip by the proper officers, and difcharging the tidefmen or watchmen from their attendance, are forfeited; and if fuch goods have been concealed, the mafter, purfer, or other perfon taking oharge of the fhip, forfeits 100 I .13 and 14 Car II. c. II. §.5. and 5 Geo. I. c. 11. §. 14. and 27 Geo. II. c. 18. §. 4 . Noperson, denizenorstranger, mayenterany goods, inwards or outwards, in the name of any other perfon than the very owner, being not fold, bargained or contracted for, to or with any perfong before entry, or before the arrival of the goods in parts beyond the feas, upon forfeiture thereof, or their values and offender to fuffer imprifonment, and make fine thereof at the king's pleafure. $33 \mathrm{Hen}$. VIII. c. 7. §. 1. and I Eliz. c. 11. §. 6 .

One British man may cuftom in his own name the goods of another Britifh man, and fo may one merchant-ftranger enter the goods of another merchant-ftranger; but he that fo enters the goods of other perfons, either inwards or outwards, that the king lofeth his duty, forferts the goods to the king, and the value thereof to the party grieved; and likewife all his own goods aind chattels perfonal for ever: the profecution to be in three years after offence committed. Value, are forfeited: 3 Hen: VII. c. 7. §.t. and 8 Geo. c. 8. §, 18. and 27 Geo. 11. c. 18. §. 5.

No goods coming into any one port of Great-Britain from any other, may be unilipped before the coalt-cocket, tranfine let-pats, or ceitificate, be delivered to the cuftomer or col lector and comptroller, and their warrant or luffanc granted for the landing, upon forfeiture of the value or the goods by the mafter, knowing and confenting thereto. 13 and 14 Car. II. c, 11. §.8. and 8 Geo. I. c. 18. §. 18 . and 27 Gco. II. c. 18 . \$.5.
Foreign, taken in at fea, or out of any fhip or velfel, by any coatter, in order to be landed, or put on board an other velfel, within the limits of a port, without payment of duty, are forfeited with treble the value by the maiter of both veffels, unlefs in cafe of neceffity. 5 Geo. I. c. 11. §3. and 27 Geo. II. c. 18. §. 4 .
Foreign, taken on board any coasting veffel in parts beyond the feas, or out of any fhip at lea, or in any purt of this kingdom, other than the port from whence certified, are forfetted, with double the value, and the malter of fuch veffel is to forfeit the value of the goods. 9 Geo. I. c. 2 f. 8. 8 . Offence discovered to any officer of the cultoms byany perfon (except the owner or claimer of the goods) fuch perfon is to have half of the officer's or profecutor's fhare of what fhall be recovered, the charges of profecution being firft deducted : the commiffioners of the cuftoms are to caufe fuch charges to be equally paid by the crown and the profecutor. Perfonsaiding the owner or claimer, difcovering their offence, are to be acquitted. 9 Geo, I. c. 2 r. §. 29.
ANY OFFICER, upon producing his warrant or deputation, may go on board any coafting veffel, within the limiss of any port, and rummage for prohibited and uncultomed goods, and remain on board during the veffel's ftay in the port. 9 Geo. II. ᄂ. 35. §. 9 .
Any person, obitructing or molefting the officer in fo doing; fhall forfeit one hundred pounds. 9 Geo. II. c. 35.§. 9. GOODS COASTWISE OUTWARDS, may not be laden, and carried from one port or creek of Great-Britain, Ireland, Guernfey, or Jerfey, to any other port or creek of the fame, in any fhip or veflel, whereof any ftranger born (unlefs fuch as be denizens, or naturalized) are owners, part owners, or mafters, and whereof at lealt three fourths of the mariners are not Britifh, upon forfeiture of the fhip and goods. 5 Eliz. c. 5. §. 8. and 12 Car. II. c. 18. §. 6.

SHIPPED, or put on board any hip, to be carried forth to the open fea, from any one port, member or creek in GreatBritain, to be landed at any one place in this realm, without 2 fufferance firft obtained from the officers of the cuftoms, are forfeited. 33 Hen. VIII. ..7. §. 4 . and $\mathrm{I}_{3}$ and $\mathrm{I}_{4}$ Car. II. c. 11 . §. 7 .

And before the departure of the fhip out of port, the mafter muft take out a cocket, and become bound to his majefty with good fecurity in the value of the goods, for the delivery thereof in fome port within Great-Britain, and to return a certificate within fix months, under the hands and feals of the officers of the port of difcharge, upon forfeiture of the bond and fecurity. 33 Hen. VIII. c. 7. §. 4, and 13 and 14 Car. II. c. II. §. 7.
The substance of such certificates muft be indorfed on the back of the bonds, and figned to by the officers tranfmitting them into the Exchequer, upon penalty of treble damages, and colts of fuit. I Ann. c. 26 . §. 3.
OR if A ship be laden with coals only, and the matter pays the cuftom, or overfea duty, in any port of Great-Britain, the cuffomer and comptroller of fuch port are to grant a certificate thereof; which being produced to the officers of the loading port, will difcharge the coaft-bond, in like manner, as if the coals had been landed in Great-Britain. 9 Ann. c. $28 . \S .6$.

## H A M

HADDING TONSHIRE, in Scotland, is bounded on the north and eaft by the Firth, on the fouth by the hills of Lammarmour, and by Mid-Lothian or Edinburghfhire on the weft. It abounds with corn of all forts, and has good ftore of grafs, coal, and limeftone, with fome confiderable woods. It has many falt-pans, where much white falt is made. Here are feveral convenient harbours, with the advantage of fome filhery towns; particularly there is a herring-fifhery every year after Dammas at Dumbar, where they take enough both for home donfumption and exportation
Dumbar, or Dunbar, has a good market, and generally a noble herring-fifbery at the feafon, which is their chief trade, tho' of late years much decayed. They cure the herrings here as they do at Yarmouth, but they are larger and fatter than thofe. It is a handfome well-built town, and it's port of vatt advantage to all hips in the river, in cafe of ftrefs of weather; but the entrance being difficult, by reaton of fteep rocks at the mouth of the harbour, an act of parliament was made in 1718, to continue 'till 1763 , for improving and preferving it.
HALBERSTADT, a principality in Germany. This is a fmall province, bounded on the north-eaft by the duchy of Magdeburg, on the fouth by the principality of Anhault, on the weft by the archbilhopric of Hildefheim, on the eaft by part of the electorate of Saxony, and on the north by Brunfwic Wolfembuttle. It has a good foil, yields plenty of corn, and the forefts ftore of venifon.
Halberstadt, heretofore an imperial city, is it's principal town, but the trade here is inconfiderable, by reafon of the fmallnefs of the river.
HALLAGE, a fee paid at any public hall, where goods are meafured or fearched; as at Blackwell-Hall, where woollen claths are infpeded, by proper officers appointed for that purpofe.
HAMBURGH, a city in Germany. It flands"on the north fide of the river Elbe, 72 miles from the mouth of it, and is feated with very extraordinary advantages for trade, both foreign and domeftic. It has fuch a port and river as nothing in Europe excels, unlefs it be the Thames. Befides the Elbe, which enters the German Ocean here, they bave a channel opened to the river Trave, for the fake of a communication with Lubec and the Baltic Sea, to avoid toll and other difficulties of the Sound: and veffels lying in the Trave are within 40 miles of the Baltic, whereas it is upwards of 400 round the coaft of Jutland by the Sound.
It's trade, in fact, exceeds that of any city in the world which has no kingdom or commonwealth annexed to it; and it's exports and imports are fuperior to thofe of many great kingdoms, even in Germany itfelf. The Elbe, and the many other great navigable rivers that fall into it after a courfe through fome of the largeft, richeft, and moft trading parts of Germany, furnifh it with all the produet and manufactures of Auftria, Bohemia, and Upper and Lower Saxony.
By the Havel and Spree, it has a trade with the eleclorate of Brandenburgh; and, by a canal from the Spree to the Oder, it's commerce is extended into Silefia, Moravia, and Poland, almoft to Hungary.
The chief merchandize which it exports (to Great-Britain principally) is linen of feveral countries and forts; particularly Silefia diapers, and the lawns of Mirnia and Lufatia, well known at London; Germany linen, called fo in general from the counties of Ofnabrug, Lunenburg, \&c. Hamburgh dowlas, and other linen from Lower Saxony; coarfe linen, barras, crocus, hinderlands, and many other forts from Lower Germany ; linen yarn in great quantities from the fame countries, efpecially Silefia and Lufacia; tin plates; and wire of iron, brafs and fteel, chiefly from Upper Saxony; clap-boards, pipe and hoshead ftaves, wainfcotboards, oak plank and timber, with kid-fkins in great quantities, from Brandenburg ; corn from many of the German provinces, but chiefly from Brandenhurg and Saxony. Of the numerous articles which they import, the chief are the woollen manufactures of England. The value of which Voz. 1.

## H A M

yearly fent from Yorkfhire only, and generally fhipped at Hull, is faid to be above roo,oool. the fingle article of ftockings, fent hither, comes to above 20,0001. yearly, and in thort, all the Englifh goods vended here amount to feveral hundred thoufand pounds a year. The Englifh merchants in particular, having extraordinary privileges granted them from this city, make a great figure here, different from thofe of all other nations: they appear as a body, with particular jurifdiction and powers among themfelves, and, as they are called in London the Hamburgh company, fo they are called at Hamburgh the Englifh hanfe, or fociety. The Englifh are pretty numerous here, this being really, as it was antiently called, the ftaple of the Englifh trade for this part of the world. They had a particular grant from the city by a treaty in queen Anne's reign, of the fame privilege to import herrings, that was allowed to the Dutch [See Fisheries.] The Hamburghers drive a very great trade allo to Ruffia and Livonia; and, for the goods which they fend to the north part of the empire and Poland, they have a great return, not only in linen yarn and fine flax, but in honey, wax, annifeed, linfeed, drugs, \&zc. all which come by the navigation of the Oder into the Spree, and fo into the Elbe in the marquifate of Brandenburgh; and therefore the Danes cannot interrupt this trade, or obtain any part of it, nor hinder the great vent of Englifh manufactures back into all the before-mentioned countries; which is the capital branch of all the Hamburgh trade, and has vaftly enriched it. The number of veffels of any confiderable burden, belonging to the town, is computed at 400 , of which 30 of the principal are employed in the trade to and from London. They have many in the French trade, particularly about 40 , which bring wine and other commodities from Bourdeaux; 50 or 60 in the Greenland trade, befides many which navigate the Baltic, and fome alfo to Portugal, Spain, the Mediterranean, \&c.
This city has alfo a good fhare in the Greenland whalefihery, to which they commonly fend 50 or 60 fhips every year, and have generally had good fuccefs. See Grefniand. Befides the beer brewed here, of which great quantities are exported, they have not long ago erected feveral manufactures, which they carry on with great induftry and fuccefs: particularly, I. The weaving of damaks, brocades, velvers, and the richeft kinds of filks. 2. Sugar-baking, here being as good loaf-fugar as is made in London, but, having no colonies, they are obliged to buy their mufcovado fugars from Great-Britain and France. 3. Callico-printing, which employs abundance of their people; and of late they have begun alfo to print linens, and make fome gold and filver lace. By thefe and feveral other branches of it's trade, it is become a rich and powerful city, and, without difpute, diyes the greateft inland trade at this time, of any city, at leaft, in Europe, London and Amfterdam only excepted.

Remarks.
The Britih factory, which is removed from Flanders to Hamburgh, are poffeffed of privileges fince 1610 , confirmed by a convention with the regency, as diftinguifhed as any body of foreigners enjoy in any part of the commercial world. The Hamburghers found it their intereft to indulge them; infomuch that, tull the revolution, they had an exclu. five privilege of importing cloth; but this liberty is now free to any of the inhabitants of the city. This factory is incorporated into a company, confifing of 13 members, a governor, and deputy-governor. All difputes among themfelves are referred to the final decifion of a majority of voices. They alfo judge with regard to their demands on burghers, but in this cafe a deputation of two fenators is required to act in concert with them. Their judgments are fo juft and fummary, that the burghers generally make application to them, when they have demands upon any of the Britifh factory, preferring their decifions to any other court in the juriddiction of the city. - The trade of this compary is nor fo confiderable is it was at theiatter end of the latt century.
Hamburgh is a hanfe-town [fee the article Harse-Towns] of more importance than any in Eurrpe. This Flace nay
be confidered, with refpect to Germany, what Amferdam is to Europe, a magazine of the different produce and merchandize of the trading world. Commiffion bufinefs made a very confiderable article of the profits of Hamburgh, but a great part of this branch is fallen into the hands of the merchants of Altena, the Hamburghers having injudiciouly charged a fmall duty on them, which they have lince taken off, and made it a free port for the tranfit of all merchandizes; but they cannot recover this bufinefs in the fame manner as before; fo difficult is it to alter the channel of trade from the current it has once obtained.
There are other branches of which the Hamburghers have been obliged to yield a part to other nations. The trade of -ubec, which was funk very low, has mended of late years: Stetin, which was hardly known as a trading town, now begins to make fome figure in commerce; and we find the king of Pruflia endeavouring to eftablith Embden as a place of trade. [See Prussia.] Copenhagen of late years is improved; and a vaft trade is eftablifhed in St. Peteriburgh, which did not exilf till this century ; but, above all, France, fince queen Anne's war, has made large ffrides in the advancement of her commercial intereft. See the article France, and French America, British America, Canada, Florida. Thefe concurring reafons muft neceffarily diminih the trade of Hamburgh,
What has clipped the wings of the Hamburghers, though not in fo great a degree as generally imagined, is the neighbourhood of Altena, as before intimated, which fignifies much too near, as indeed it is for their intereft, having the advantage of fituation the fame as Hamburgh; but it has no fortifications, nor is the Danifh fovereignty fo great a fecurity of it's commerce as the independency of a Hanfe-Town is to Hamburgh. Altena has been long confidered by the Hamburghers as an object of great jealoufy. In the war with Sweden, in 1713 , this town was burned to the ground, and now appears as new.
The continual lofles fuffered by the Algerine rovers, who thought it their intereft to decline accommodation, have been a great obftruction to the trade of Hamburgh ; and the more as they can hardly, with any affurance, afk the affiftance of any fovereighn prince, and particularly a maritime power, who is a competitor in point of commerce. During the laft war, they had leveral fhips on the Weftern Ocean and the Mediterranean; but hoftilities at fea were no fooner ended, than they were obliged to alter their meafures.
The Algerines, finding the Spaniards meant to make war with them in good earneft, entered lately into a treaty with the Hamburghers, not of friend dip $^{2}$ only, but of commerce alfo. This the Spaniards highly refented, and put the Hamburghers under the neceffity of annulling that treaty, or of being excluded from their trade with Spain. Being reduced to this alternative they have chofen the former.
This city feems to owe its fafety to the jarring interefts of the neighbouring powers. It is furrounded by the Danes on the north fide, in Holftein, Slefwick, Deitmarfen, \&c. who have often made pretenfions to it. It had the Swedes on the weft fide, in the duchies of Bremen and Verden; and both thefe had forts upon the Elbe, the one at Gluckftadt, the other at Stadt, where, by their thips of war they could intercept the Hamburghers trade. They had the princes of the houfe of Lunenburgh on the fouth, poffeffed of Lawenburg on the Elbe, above the city, and fo able to ftop all their navigation upwards, and of Harburg over againft them. And, laftly, they had the houfe of Brandenburg, now Pruffia, on the eaft.-All thefe princes have been ready enough to find pretenfions upon the city of Hamburgh, and were feverally able to pufh thofe pretenfions; but none of them being willing that the Hamburghers fhould fall into the hands of any but themfelves; this clafhing of interefts, has been the prefervation of the city, they having never failed of fuccour on one fide or other.

## Monies and Exchanges of Hamburgh.

They keep their accounts at Harnburgh in rixdollars, fols, and deneirs lubs, or in marks, fols, and deniers lubs.
The rixdollar is worth three marks, or 48 fols lubs, or $g^{6}$ deniers gros*.

* In the year 1623 , it was regulared that the fandard fhould be ro deniers 14 grains, and that it fhould weigh 532 grains.

The dollar is equal to 2 marks, or 32 fols lubs, or 64 deniers gros.
The mark is equal to 16 fols lubs, or $3^{2}$ deniers gros.
The livre gros is equal to 20 fols gros, or 120 fals lubs, or $7 \frac{1}{2}$ marks lubs.
The fol gros, or fchelling, is equal to 12 deniers gros, or 6 fols lubs.
The common fol is equal to 2 gros, or 12 deniers, or penings. To reduce marks lubs into dollars and rixdollars muft be fo eafy, as to need no explication.
Suppofe you owe the following fums of Hamburgh money to your correfpondents at the following places, what fums mult be paid for the lame in the monies of their refpective counties.

H A M

Of the Exchange of Hamburgh upon Holland.
Case I.
To reduce 1728 dollars, $16 \frac{1}{2}$ fols lubs banco, Multiply by $32 \frac{7}{8}$ fols banco of exchange.
$\qquad$
$\left.\frac{1}{2}\right)_{5} 682 \mid 5$ fols
2841 florins, 5 fols banco, for which the
draught muft be made on Amfterdam.

## INestruction.

Multiply the fum of dollars by the price of exchange of $32 \frac{7}{6}$ fols, and take the aliquot parts, as directed by the operation, and the fum total will be fols or ftivers bank money, which, being divided by 20 , gives for anfwer forins and ftivers bank, to be received at Amfterdam.

PRoof.
Operation.

## Instruction.

Reduce the fum and price of exchange into the fame denomination, viz. eights of ftivers, and divide the fum by the price, and the quote will give the number of times that the price is contained in the fum, which is the anfwer in dollars: for the remainder, multiply by 32 (the fols lubs in a dollar) and divide by the common divifor, and you have the foll equal to the fraction.
N. B. In ordinary practice, the defcending to the eighth or fixteenth of a fol is reckoned fufficient.

## Of the Exchange of Hamburgh upon France.

## CASE II.

Reduce 975 marks, $2 \frac{2}{3}$ fols lubs, bank money of Hamburgh, into livres, fols, and deniers Tournois of France, exchange at $27 \frac{1}{4}$ fols lubs bank, per crown of 60 fols Tournois of France.

## Operation.

975 marks, $2 \frac{1}{3}$ fols lubs ban. ex. at $27 \frac{1}{24}$ fols lubs

649) $394456-24$ ths dividend ( 576 crowns, 58 fols, 5 deniers, 3 livres
1730 livres, 18 fols, 5 deniers
Tournois, for which the draught muft be made upon Paris.

## Instruction.

Reduce the fum given, and the price of exchange, into the 24 ths of fols lubs (viz. by 16 s . the value of a mark) and for the $\frac{1}{3}$ of a fol reckon $\frac{8}{2+}$, which is equal thereto. [See the article Arithmetic.] ${ }^{2+}$ Divide the product of the fum by the product of the price of exchange, and the quotient will fhew how many times the price of exchange is contained in the fum, or how many crowns are contained in the number of marks. For the remainder 632 , multiply by 60 fols (che value of the crokn) and, dividing by the common divifor, it

## H A M

gives 58 fols, and a further remainder of 278 , which, multiplied by $: 2$, and divided as before, gives 5 deniers.-To reduce the crowns into livres, multiply by 3 (fo many livres making 1 crown) and add 2 livres, 18 fols, and 5 deniers, for the 58 fols 5 deniers. This gives 1730 livres, 18 fols, 5 deniers Tournois of Paris, to be there received for the 975 marks $2 \frac{1}{3}$ lubs banco of Hamburgh.

## Proof of the foregoing.

3) liveres $1730: 18 \quad 5$ Tournois exchange, at $27 \frac{\sigma_{1}}{2}$ fols

Crowns $57^{6} \cdot 5^{8}: 5$

fols lubs 16) $\overline{15602} \frac{1}{16}(975$ marks, 2 fols, and allowance for the fractional parts will make $\frac{1}{3}$.

Of the Exchange of Hamburgh upon England.
C ase III.
To reduce 1541 marks 14 fols $\frac{1}{3}$ lubs, bank money of Hamburgh, into fterling money of England, exchange at $32 \frac{1}{3}$ fols gros per pound fterling.

1164) 148022 thirds of den. dividend (1. $12 \eta: 3: 4$ fterling) for which the draught is to be made on London.

## INSTRUCTION.

Reduce the fum given, and the price of exchange, into thirds of deniers, by multiplying the marks by 32 deniers gros, the value of a mark, and taking the aliquot parts for the $14 \frac{5}{3}$ fols, as above directed.-After which, multiply the-product by 3, which, gives thirds of deniers gros.- Then multiplying the exchange fols by 12, gives deniers.-For the $\frac{x}{3}$ of a fol add 4 deniers, that being $\frac{1}{3}$ of 12 -And multiply alfo the product by 3 , gives thirds of deniers. - The fum and price being both reduced into the like denomination, divide the fum by the price, and you have the anfwer in pounds fterling.--For the remainder 194, multiply by 20, and divide by the common divifor, and you have the fhillings; and for the fecond remainder, 388 , multiply by 12 , and divide by the fame divifor, and you have the pence.

The $P_{R}$ OOF. F ,

1. $127: 3: 4$ fterling, exchange at $32 \frac{1}{3}$

$$

1541 marks 14 fols $\frac{1}{2}$, for which the draught mult be made on Hamburgh.
INSTRUCTION.

Multiply the 1. $127: 3: 4$ fterling, by the price of exchange, $32:$ fols gros, and divide the product of fols by 20 , gives liveres, fols, and deniers gros. Multiply the zos livres, II

## H A M

fols, and 9 deniers, by $7 \frac{1}{2}$ marks, the value of a livre gros, and take the aliquot parts as above, and you will have the product 1541 marks $14 \frac{1}{2}$ fols bank, as proof fufficient of the preceding cale.
Of the Exchange of Hamburgh upon Cadiz.

## CaseIV.

To reduce 2025 marks $12 \frac{2}{3}$ fols lubs, bank money of Hamburgh, into ducats, fols, and deniers, and afterwards into rials and marvadees of Spain, exchange at $93 \frac{1}{2}$ deniers gros per ducat of 375 marvadees old plate.

Oferatyon.
2025 marks $12 \frac{2}{3}$, exchange at $93 \frac{1}{2}$
Multiply by $3^{2}$ deniers gros 6

| 4050 <br> 6075 | 561 fixths of den. |
| :--- | :--- |
| $25 \frac{1}{2}$ |  |
| $64825 \frac{1}{2}$ |  |

$561) 388952$ fixths of deniers ( 693 ducats, 6 fols, 4 den. for which the draught thould be made upon Cadiz.
Thefe 693 ducats, 6 fols, 4 deniers, multiplied
By 11 rials 1 marvadee

## 7623

7646 rials, 28 marvadees old plate, to receive in Spain.
Instruction:
Reduce the fum and the price of exchange into fixths of de. niers, by multiplying the former by 32 deniers gros, the vaIue of a mark (adding $25 \frac{1}{3}$ for the $12 \frac{2}{3}$ ) and after by 6.With regard to the exchange, multiply that by 6 , and for the $\frac{1}{2}$ take in $\frac{3}{6}=\frac{1}{2}$, and divide the product of the fum by that of the price of exchange, and the quotient will be 693 ducats, with the remainder of 179 , which multiplied by 20 , the value of a ducat in fols, and divided by the fame, it produces 6 fols, and a further remainder of 214, which multiplied by 12 deniers; the value of a fol, and divided by the fame divifor, it gives 4 deniers; which quotients being multiplied by II rials i marvadee, value of a ducat, will produce 7646 rials, 28 marvadees, to be received at Cadiz.
But, if you would at once reduce the marks into rials and marvadees, and not into ducats, you muft multiply by 375 marvadees, the value of a ducat, the $64825 \frac{1}{3}$ deniers gros, and divide the product 24309500 marvadees by. 3179 marvadees, which is the exchange of $93^{\frac{1}{2}}$ deniers gros, multiplied by 34 marvadees, the value of a rial ; and this will give you for quotient the fame fum of 7646 rials, with a remainder of 2866 ; which multiplied by 34 marvadees, and divided by the fame divifor, it gives 30 marvadees, two more than the preceding method does.

PRoof.
Reduce 7646 rials 28 marvadees, old plate of Spain, into marks, fols, and pence lubs, bank money, at the courfe of exchange of $93 \frac{1}{2}$ gros per ducat of 375 marvadees of Spain.

Oferation.
7646 rials 28 mar. 375 mar. multiplied by $3^{2}$ gros,
$\frac{34}{30612}$
$\frac{22938}{259992}$

171) 131848 quarters of deniers gros (771 cturfadoes 16 rees, for which the draught upon Lifbon fhould be made.
Instrutcion.

Multiply the fum of 1030 marks 1 fol by 32 gros, and afterwards by 4 for quarters of gros.- Reduce the price of exchange alfo into quarters of gros, and divide the one by the other, and you will have a quotient of 771 cruladoes, with a remainder of 7 ; which multiply by 400 rees, the value of a crufado, and divide by the fame divifor, you will have 16 rees. By multiplying the crufadoes by 400 rees, and adding the 16 rees, the fum total 'will be 308416 rees to be received at Lifbon.

> Proof.

771 Crufadoes 16 at $42 \frac{3}{4}$
$42 \frac{3}{4}$

$$
\begin{aligned}
& 1542 \\
& 3084 \\

\end{aligned}
$$

32) 32962-(1030-1 fol of Lifbon.
INSTRUCTION.

Multiply 771 crufadoes I 6 rees by the price of exchange, and take the aliquot as above. The product being deniers gros ( 32 of which makes a mark) divide thereby, and the quotient gives marks $\frac{2}{3}$, or $\frac{1}{16}$, or fol lubs.

## Of the Exchange of Hamburgh upon Venice.

CAse VI.

To reduce 1500 marks lubs, bank money of Hamburgh, into ducats, fols, and deniers, bank money of Venice, exchange at $86 \frac{7}{6}$ deniers gros of Hamburgh, per ducat of 24 gros.

Operation.
1500 marks lubs each at $68 \frac{7}{8}$ deniers gros
Multiply by 32 deniers gros

$$
\overline{695} \underset{\text { gros }}{\text { eighths of deniers }}
$$

695) 384000 eighths of deniers gros ( 552 ducats 10 fols 4 deniers, for which the draught mult be made on Venice.
INSTRUCTION.

Reduce the fum and price, according to the foregoing examples, into one denomination, the eighths of deniers gros, and dividing the former by the latter, the quotient gives ducats 552 , with a remainder 360 ; which multiplying by 20 fols, the value of a ducat, and dividing by the fame divifor, it gives 10 fols, and 250 remaining. -This multiplied by 12 deniers, the value of a fol, and divided again by the fame, it gives 4 deniers bank money to be received at Venice.

> Proof.

| $\begin{aligned} & 552 \text { Ducats io fols, } 4 \text { at } 86 \frac{7}{8} \\ & 86 \end{aligned}$ |  |

|  |  |
|  | $\frac{3}{6}$ and more for 4 demers, the $\frac{1}{6}$ of 2 fols |

32) 4800 - ( 1500 marks lubs, reckon $\frac{2}{8}$ for the fractional parts remaining.

## H A M

## Instruction.

Multiply the fum by the price, and, for the $\frac{7}{8}$, multiply by the 7, cancel the product, and divide by 8 gives the value of the $\frac{7}{7}$. For the ten fols 4 deniers, take the aliquot parts as above, and the fum total will be deniers gros; which, divided by 32, the value of a mark, the quotient gives 1500 marks, the proof.

## Of the Exchange of Hamburgh upon Vienna.

Case VII.

To reduce 1200 marks 12 fols lubs, bank money of Ham. burgh, into rixdollars, gros, and fenings of Vienna, ex change at 39 rixdollars of Vienna, of 90 kreutzers per $10{ }^{\circ}$ rixdollars, of 48 fols lubs of Hamburgh, of the fame money.

Operation.
If 100 rixdol. of Hamburgh give 139 rixdol, of Vienna, what will $400 \frac{7}{4}$ of Hamburgh? 4004

Instruction.
Reduce the 1200 marks lut's into rixdollars, in taking $\frac{1}{3}$ thereof, the rixdollar being worth 3 marks lubs, it produces $400 \frac{1}{4}$ rixdollars (each making 48 fols lubs, the 12 fois make $\frac{1}{4}$ ): fo that the proportion will run thus: as 100 rixdollars of Hamburgh is to 139 rixdollars of Vienna, to is $400 \frac{1}{4}$ rixdollars of Hamburgh to $55^{6}$ rixdollars, 10 gros, and 5 fen-
ings of Vienna.
The product of the multiplication of the fecond term by the laft, is 55,634 rixdollars, 22 gros, 6 fenings, which being divided by the firft term ( 100 ) 'tis only cutting off two figures to the right-hand; and the remainder being multiplied by 30 gros, the value of the rixdollars, and divided again by the roo, you have 10 gros; this further remainder allo being miltiplied by 12 fenings, the value of a gros, and divided again by 100, it gives 5 fenings to be received at Vienna.

## Proof of the foregoing.

Operation.
If 139 rixdollars of Vienna give 100 of Hamburgh, what will 556 rixdollars 10 gros, five fenirgs? 100

55600
, 33 . 16 for 10 gros the $\frac{7}{3}$

$$
\begin{array}{r}
1: 18 \text { for } 5 \text { fenings } \\
\hline
\end{array}
$$

Divide by 136) $55634: 34$ fols ( $400 \frac{1}{4}$ rixdollars, bank money.

## Of the Exchange of Hamburgh upon Nurembrrg.

## Case VIII.

To reduce 600 rixdollars of 48 fols lubs, bank money of Hamburgh, into rixdollars of 90 kreutzers, current money of Nuremberg, exchange at 135 rixdollars of Nuremberg per 100 of Hamburgh.

## Operation.

If 100 rixdollars of Hamburgh give 135 rixdollars of Nuremberg, what will 600 of Hamburgh? 600

## 810,100

Anfwer 810, for which the draught lhould be made upon Nuremberg, of rixdollars.
INSTRUCTION.

After flatirg the cafe according to the rule of proportion, you multiply the fecond and third terms together, and divide the product by the firft, by cutting off two figures on the right-hand, as in the preceding cafe, and you have the number of rixdollars to be received at Nuremberg.
If the remainder had been otherwife than cyphers, you muft have multiplied by. 90 kreutzers, the value of a rixdollar, and, feparating two figures to the right as before, you would have the kreutzers.-And if any further remainder hould occur, you fhould multiply it by 4 fenings, the value of a kreutzer; and, feparating the fame, it would give the fenings.

PRoof.

## H A M

Proof.
If 135 rixdollars of Nuremberg give 100 of Hamburgh, what will 810 of Nuremberg?

100
135)8:000(600 rixdollars bank, for which the draught upon Hánburgh fhould be made.

## Instruction.

From a direct rule of three, faying: if 135 rixdollars of Nuremberg give 100 of Hamburgh, how many will 810 give!
The product of the fecond and third terms being multiplied is 81000 , which being divided by the firf $\mathbf{I} 35$, the quotient is 600 rixdollars of 48 fols lubs, to be received in bank at Hamburgh.-If any thing had remained, you fhould multiply by 48 fols lubs, the value of the rixdollar, and divide by the 135 , it gives fols lubs.-And, if any further remainder had arofe, it fhould be multiplied by 2 gros, the value of the fol, and divided by the fame, it gives grofs to be received with thefe rixdollars.
Thefe are fome of the principal places of Europe; with which Hamburgh has dealings by way of exchange.

## Of the Weights and Measures of Hamburgy.

In their weights they reckon as follows, viz. $=$ loodt $=\mathrm{I}$ ounce, 16 ounces $=1 \mathrm{lb}$. ic lb. =1 fone of wool or feathers, 14 lb . $=$ a difpound, 20 lb . = 1 ftone of flax, 8 difpound $=1$ center, about 120 lb . avoirdupoile of London, 16 lb . is a difpound, 20 difpound $=$ a fehippound bf feathers or wool, and 16 difpounds $=1$ tun of butter or tallow. roo lb. of Hamburgh $=98$ in Amfterdam, $103 \frac{r}{2} \mathrm{lb}$. of Antwerp, and $107 \frac{16}{\ddagger} 1 \mathrm{~b}$. in London.

## Of the ordinary Cloth Measures of Hamburgh:

roo Ells $=$ in Amfterdam $38 \frac{1}{3}$ auns, in Breflaw $104 \frac{1}{5}$ auns, in Dantzic $92 \frac{1}{2}$ auns, in Londoh $62 \frac{1}{2}$ yards, in Nuremberg $87 \frac{1}{2}$ ells. The Lubec ell is $\frac{1}{\mathrm{~T}}$ fhorter than the Hamburgh one.
All filken goods are for the moft part bought and fold in Hamburgh by the Brabant ell, 5 whereof $=6$ Hamburgh eils.
In regard to corn, they reckon go fcheppels to a laft, and 83 fcheppels $=10$ quarters in London.

## Of the Bank of Hamburgh.

This bank is judged to be inferior to none in Europe, in point of recurity. It is under the direction and management of four of the moft diftinguifhed perfons of the city, who are, at certain feafons, elected by the whole body of the republic, who ftand engaged to make good all deficiencies that may happen by fraud or embezzlement of any kind. However, to prevent thefe things, the officers are obliged to Itate and clear all their accounts twice a weck.
Here they receive only, as at Amfterdam, the fineft and beit of their current money into the bank, and will allow $\frac{1}{4}$ or $\frac{3}{8}$ per cent. to thofe who make payments there in rixdollars. This bank is under much the fame regulation as that of Amfterdam; and all perfons who do bufinefs therein, are fubject to divers fines and penalties, as checks upon their conduct. For inftance, no fum under an 100 marks can be entered in the bank, and for every fum that is under 300 marks, 2 ftivers muft be paid for entering the fame.
The time for writing in the bank is from 7 to 10 in the morning. You may write therein at any hour from 10 to 1 , or from 3 to five, but then you mult pay 2 ftivers for every fum that fhall be entered within thefe hours.
The time for enquiring if a fum has been entered in the bank, is from 7 to ten in the morning; yet a perfon may be informed at any of the hours between io in the morning and 5 in the afternoon, if he pays 2 ftivers, and then he may afk divers other queftions of the like nature, at the fame time, without farther charge. But the merchants, and other confiderable dealers in the bank, commonly give the bank bookkeepers from 20 to 40 marks per ann. for any extraordinary trouble they may give them at undue hours; but none but the inhabitants of the city have the privilege of keeping accounts in the bank: if a flranger is defirous of keeping an account therein, he mult purchafe his freedom of the city for that purpofe.
This bank, however, will lend money to foreigners, as well as citizens, upon their pledging to them the value in jewels, plate, or the like fecurities, to reftore the like fum with intereft, for fix months time; and, if they fail in fo doing, the effects are forthwith expofed to fale, upon a day fpecified in a placart affixed at the bar, to give notice to any perion who is inclined to purchafe them.
The bank is generally fhut up from the laft of December, to the $15^{\text {th }}$ of January.
The agio is often very high here, it amounting fometimes from 30 to 40 per cent.
Vol. I.

## H A M

## Remarks

All bills of exchange are paid in bank.
The value of the rixdollar being every-where known, and it's fandard invariable, it is ufed to the valuation of all forts of merchandizes, and of all coins, and alfo in excharge.But the current money in many refpects differs from the rixdollar, as well in the finenels as weight; every prince, and almoft every city in Germany coining a different fpecies and, by thefe coins, the commerce is regulated in every province and city refpectively.
The principal current coins in thofe patts, are thofe of Denmark and Holfein, and the cities of Lubec and Hamburgh. 125 Dollars current money $\frac{25}{2} \frac{5}{7}$ ths ought to make 100 crowns or rixdollars, or crowns of the empire: fo that the mark fil ver of 16 lots, or 12 deniers, which is 9 rixdollars, make If $\frac{\pi}{3}$ dollars of this current coin: and, by this proportion, the city of Hamburgh has always governed itfelf in it's commerce.
But his Danifh majefty and the duke of Holltein, after obferving the fame regulation for many years, as their anceftors alfo did, at length changed the rate of their money, and coined fixpenny pieces, about 18 per cent. inferior to the ancient money.
Here began all the confufion that has happened in thefe parts, on account of the coin; thefe princes, and efpecially the king of Denmark, endeavouring by feizing the Hamburghers fhips, to compel them to receive thefe new coins according to fuch rate or value, as he arbitrarily impored upon them, and without any regard to the diference of their intrinfic value.
This neceffarily caufed the as io of the current coin, which before was at but from 14 to 16 per cent. in exchange for crowns of the bank, to rife in proportion; till at laft, before the introduction of the new money at Hamburgh, the agio, tofe to 43 per cent. and the falfe coiners made their market of this diforder, picking up. all forts of the old fpecies of money, which was good according to the flandard, melting them down, and felling them to the managers of the mint, to coin into fixpenny pieces of the new alloy; or, which was worfe, coining them for themfelves of a yet bafer kind: and thus gradually all the good money difappeared, and the fixpenny pieces fpread over the whole ccuntry, but efpecially in the city of Hamburgh, till it threatened the ruin of the citizens, and of their whole commerce : for that vifibly declined, the value of houles and land, which, according to cuftom, were always rated in rixdollars, fell, and the public revenues were almoft annihilated.
In this extremity the city of Hamburgh, after many deliberate confultations how to prevent the growing mifchief, refolved to coin a confiderable quantity of money of her own, according to the ancient flandard which the had long adhered to, and fuch a quantity as thould be fufficient to anfwer the ordinary demands of her commerce.
This being done, they publifted fuch conflitutions under the authority of their government; as fhould fix an invariable agio upon this money, agreeably to it's intrinfic value, and fettle the difference in all payments berween the new money, and the payments in bank. This agio was found to be 16 per cent. and it was then fettled accordingly; fo that any one might reccive 100 crowns bank for 116 crowns of the new thoney, and fo vice verfa, any one paying in 100 crowns bank might receive 116 crowns new fecie.
For the eftablifhing this new fettlement with more fecurity, laws againtt falfifiers of the coins being always infufficient to prevent the evil, they erected a bank of this new money in particular, after the manner of a fund for circulation, and according to the method of their predeceffors, to preferve the currency of the new fpecies; which new bank was obliged to correfpond on all occafions with the old bank : by which means, befides making the payments of money ealy and current on all occafions, the new coin is preferved from being clipped, melted down. counterfeited, or otherwife defaced in any manner whatoever; for now there was no more to do, than to lodge the new fpecies in it's proper bank, and upon any occafion of payment, either in one fpecie or the other, to write off the money, or transfer it, as 'tis called, by a draught, or affignment, from one bank to the other, as the nature of the payment dire $\mathcal{L e d}$.
By this regulation, payment of money in Hamburgh is now made the certaineft and plaineft thing imaginable, and the advantages thereof are apparent to all the trading part of the world: for the commerce of the city of Hamburgh greatly encreafed upon this occafion, all foreign merchants becoming abundantly fatisfied with their payment of any feccie; becaufe they are fecure that they can never fuffer any lofs upon a coin, whofe value is always the fame, unalterably eftablifhed by authority, and liable to no change in it's intrinfic value.
It cannot be wondered if this regulation of the money, fo much to the public credit and advantage of the city of Hamburgh, gave for fone time a blow to the currency of the foreign money of Denmark and Holtein, and that the king of Denmak took geat offence at it: nor is it to be wondered,
that,
that, finding the fpecies of Hamburgh immutably fixed, the king took all meafures to mortify the Hamburghers in other parts of their commerce: and this may account for all the prohibitions and edicts of the Danifh court, for excluding the Hamburghers from their trade in Denmark.
HAMPSHIRE, is bounded on the weft by Dorfetfire and Wilthire; on the north by Berkhire; on the eaf by Surrey and Suffex ; and on the fouth by the Englifh Channel, and is above 150 miles in circumference.
The air of this country is pure and piercing, efpecially on the downs. The foil is various as to it's fertility, the hilly parts being barren, like other downs, and fit only for fheep; but the lower grounds are fruitful in corn and herbage. This county is particularly famous for it's honey; and their bacon is allowed by all to be the beft in England, the fwine being plentifully fupplied with acorns from the New Foreft, and other woods, in which they run at large. Kerfey and cloth is made here; and, though not in fo great plenty as in WiltShire, Somerfethire, and Gloucefterfhire, yet fufficient not only for home-confumption, but for a foreign trade, which the convenient ports and harbours it has have brought to it; and, in the war with France, Portfmbuth was a fure market for any of it's commodities, as it always will be on fuch occafions.
Southampton, the county town, has been formerly a place of great trade, and famous for the great refort of merchants to it, for the number and neatnefs of it's buildings, and for the wealth of it's inhabitants ; but having loft much of it's trade by the late wars with France, and other accidents, it has alfo loft many of it's inhabitants. There are fome merchants here that carry on the Port and French wine trade; but their greateft dealings are with Jerfey and Guernfey. There are, indeed, others who trade to Newfoundland for fifh, which they carry to the Streights, \&c.
Portsmouth, the key of England, and it's only regulas fortification, ftands at the entrance of a creek of the ifland of Portfea, which is about 14 miles in compafs. Since the revolution, this port has fourifhed mightily, being the conftant rendezvous of the grand fleets and fquadrons, for convoy of merchant fhips homeward and outward bound. By thefe means it is fo increafed and inriched, that the houfes and inhabitants are near double to what they were before, and the fortifications as regular as any in Europe. A thoufand fail of thips may ride lafe in this harbour. The entrance is fecured on Gorport fide by four forts, and a platform of above 20 great guns. Gofport is a large town of great trade, where the failors wives live for molt part, and travellers generally lodge, every thing being cheaper and more convenient there than in Portfmouth, and boats continually paffing from one to the other, it being as Southwark to London, only there is no bridge; but it is all called Portimouth, though they are different paribes.
Christ-church; is a large, populous borough. Here are officers employed to take care of the cuftoms; but it is rather to prevent the fmuggling of goods, than in expectation of a receipt of duties, the foreign crade here not being worth the mentioning. It's chief manufacture is fockings and gloves.
Lymington, is a fmall but populous fea port town, on a hill oppofite to the ifle of Wight. It's chief trade is in falt, of which great quantities are made here; and it is faid to exceed moft in England for preferving flefh. The fea comes within a mile of the town; and, though the river on which it ftands is not navigable very far up, yet here it makes a very good and commodious port for fhipping.
$W_{\text {hitchurch }}$ is but a fmall mean town; it's principal' trade is in thalloons, ferges, and other woollen manufactures.
Andover is a great malting town, and it's chief manufacture is fhalloons. To the weft of it is a village named Weyhill, where is only a defolate church, on a rifing-ground, with hardly a houfe about it, yet it is of note for a fair, reckoned one of the biggelt in England for hops, cheefe, and feveral other commodities; and for fheep there is none fo big, which the farmers come or fend for from feveral counties.
Ringwodd is a large thriving place, on the river Avon. It has a pretty good manufacture in druggets and narrow cloths, fockings and leather.
Basingstoke, is a large populou's town, and has a great market for all forts of corn, efpecidly barley, there being a great malt trade carried on here. Of late years the manufactures of druggets, fhalloons, and fuch flight goods, have been carried on here with good fuccefs.
The Isle of Wight: This inle is feparated from the Brition continent by fo fmall, though rapid a channel, that it feems to have been joined to it. It is about 60 miles in circumferente. The air is very healthy, and the foil as fruitful, it being obferved that one year's crop of corn is enough to ferve the inhabitants feven. Through the middle of the inland runs a ridge of hills, where is plenty of pafture for fheep, whofe wool is in great requeff among the clothiers; and here is found the milk white tobacco-pipe clay, the beft in it's kind, which they export, as allo fine white fand, of which drinking-glaffes are made, as good as thofe formerly at Venice.
Newfort, the principal town, feated near the midole of the

Illand, on Cowes River, is a large populous town. Small veffels can come up to the key here, but the bigger flips de liver at Cowes, and the morchandize is brought up hither in barges.
Cowes is the name of two towns, one on the eaft, the other on the weft fide of it's river. Thefe ports throve apace while
the heavy duties lay on the plantation goods ; f the heavy duties lay on the plantation goods; for then fhips from Virginia and the $W \in f t$-Indies ufed to unload here, pay the cuftoms, take in their cargoes, and then proceed to Hol and, Hamburgh, and other markets; by which they were entitled to a drawfack of the greateft part of thofe hravy impofts. Here alfo mafters of fhips, and mercbants home ward or outward bound, are furnihed with moncy for bills and the fhips fupplied with ftores of freht provifions. Several merchants live here, and good houfes have been built within there 50 years; but it lies low, and is not reckoned very heatthy.
Jersex. This illand lies about 16 leagues from Carteret, of Port Bail, in Normandy: it's buildings may be difcerned from either coaft. It is not above 12 miles in length, nor much above fix where broadeit, which is at the two extremities.
In the weft part of the inand is a large track of land, once a very good foil, and cultivated, but now a barren defert, caufed by the weft wind's continually throwing up of fand to the to of the higheft cliffs. The middle part is fomewhat mountainous, but the vallies have a rich foil, and are finely wa tered with brooks, that drive near 40 corn-mills, befides fulling-mills. It produces all manner of trees, roots, and herbs, but not corn enough for the inhabriants, who have it from England and France, and fometimes, for cheapnefs, from Dantzic; for the increafe of the focking manufacture has caufed a decay of tillage, to the improvement, however, of navigation and commerce, and to the culture of cyder of which no place in the world, of the fame extent, pro duces fo much; they having made in fome years 24,000 hogf heads. Their butter and honey is excellent, which laft bears four times the price of what comes thither from France. They have fore of fifh common to other places, befides fome peculiar to this ifland.
The air of the ifland is healthy, and the people live to a great age. There is fuch a vaft chain of rocks about it, and the tides fo rapid, that there is never any ftill water, and the navigation is extremely dangerous to thofe who are not perfectly acquainted with the coaft.
St. Helier is the capital of the ifland ; it's market is more like a fair. The inhabitants arechiefy Mopkeepers, artificers, and retallers of liquor
St. Aubin is a town of merchants and mafters of fhips, who firf fettled here for the fake of it's port, the beft and moft frequented in the ifland. It's market is rather an exchange for the merchants.
Trade, which is the life of this ifland, was very much improved before the late war with France, tho', in the main, they did not lofe much by it; for, as they lie fo con""enient, their privateering did, and always will, curn to their advantage. They not only trade to England and France, but alfo to Spain and Newfoundland, to which laft place they fometimes fend near 30 fail of fhips.
It's ftaple manufacture is ftockings, which are knit by the women and children; whereof 8 or 10,000 pair have been bought weekly in St. Helier's market for exportation, thoush, fince Colbert the French minifter laid fo high a duty on this manufacture as amounted to a prohibition, London has becn their chief market. The wool they are wrought with comes from England, 2000 tods uncombed being allowed them yearly, by act of parliament, for the fupport of the faid manufacture, and employment of their poor.
Gyernsey. This ifland, about 24 miles diftant from Jerfey, is naturally much more rich and fertile than it, but does not yield fo much, the inhabitants neglecting the culture of it for the fake of commerce. However, they are fufficiently fup. plied with corn and cattle, both for their own ufe and that'of their fhips. Here is a better harbour than any in Jerfey, which occafions a greater concourfe to it of merchants. It is full of gardens and orchards, and cyder fo plenty, that it is the common drink of the meaner people, the better for having French wine almoft as cheap as beer is in England.
The only harbour here is St. Peter Le Port, a little market town on the fouth-eaft fide of the ifland. The mouth of the haven is well fet with rocks, and defended by a cafte on each fide. It has a good road, from whence fhips may go out with any wind.
Alderney is about eight miles in compafs; it is a healthy ifland, and fruitful both in corn and paffure. The inhabjtants here are all compact together, for the greater fafety, in one town of the fame name, of about 2 co houles, and 1000 inhabitants. This ifland is not fo much inclofed as the others It is faid there is a common field of about 5 co acres, that bears excellent corn, and has not once lain fallow this hun dred years, being always kept in heart by a fea weed called uraic. The illand has but one harbour, to the fouth, called Crabbie, which is a good diffance from the town, and only capable of fimall veffels.

Sark is another fmall ifland, not above five miles in length, and three where broadeft. The foil is, for the moft part, hot and fandy, yet fruitful enough to afford all neceffaries for it's inhabitrnts; and filh and wild fowl they have in great plenty.
The trade extends no farther than to Briftol, and fome of the welt ports; and the chief, if not the only manufacture of the ifland, is knitting offockings, gloves, caps, and waiftcoats, in which the men, women, and children are employed; and there they trade with to the ports of England, and return with neceffaries, for which purpofe they bave feveral frall veffels.
HANOVER. This is a part of thofe German dominions that belong immediately to his Britannic majefty, as eleClor of Brunfwick Lunenburg, or Hanover. The extent of the particular dominions of the elector are reprefented by the author of the Prefent State of Germany

The principality of Grubenhagen is interfected in two parts by the bifhopric of Hildefheim: that on the eaft is bounded on the north by the duchy of Wolfenbuttle; on the weft by Hildefheim; on the eaft by Hart's Foreft; and on the fouth, by Eisfield. The weft part is allo bounded on the north by Wolfenbuttle ; on the fouth by Oberwaldt; and, both on the eaft and wcht, by Hildefheim. Both parts are almoft overgrown with woods of fir and pine, that formerly belonged to the Grabes, and is of a barren foil, moft of it's treafure being hid under-ground, efpecially in the eaft part, where are moft of the mines of filver, copper, and lead, befides the numerous forts of minerals.
The eaft part is generally inhabited by miners. The chief places are,
Ardrearburgh, famous for it's rich mines of iron.
Eymbeck, the capital of Grubenhagen: it ftands in a fine corn country, and carries on a confiderable trade in beer, which is in great requeft, but was more fo before the fweet malt liquor, called the brewan, cane fo much in vogue.
Gotringen is of moft note lately for an univerfity founded here, in 1734, by his late majefty.
Duchy of Hanover, is very fruitful, has fine meadows and fields, breeds excellent horfes, and affords fheep and wool for export, and falt and tobacco fufficient for home confumption.
The chief town of this duchy is
Hanover, the metropolis, and the feat of the prefent elector. It is pleafantly fituated, in a fandy foil, on the river Leine, which is navigable here for fmall boats. Here are four trading fairs a year, much frequented by foreigners. It was once a free imperial city, and a hanfe-town, when it had a flourifhing commerce [fee the article Hanse-Townsj but its chief trade is now in beer.
Brunswick-Lunenburg Duchy, in which Zell is comprehended, and therefore called Lunenburg-Zell, has the dominions of Brandenburg and Mecklenburg on the eaft; the county of Hoye, with the duchies of Bremen and Verden, on the weft; the territories of Lubec and Hamburgh, and the duchy of Saxe-Lawenburg, on the north; the duchy of Brunfwick, the bifhopric of Hildelheim, and the duchy of Calenberg, on the fouth.-The duchy abounds with woods and forelt, confifting of good fir, oak, and elm, which they fell to the Hamburghers and the Durch, together with wild fwine, and all forts of deer, and other venifon; of which there is fuch plenty, that the neighbouring princes and nobility have an annual affembly here for hunting.-A great part of it confifts of vaft heaths and waftes, the largelt of which is on the weff fide, between Lunenburg and Harburg, where it is defert for feveral leagues; yet in the barren parts the intabitants keep bees, and make great profit of their honey and wax.-Their lakes, pools, and rivers, abound with good finh, and breed great numbers of pheafants.
ZeLl lies on a fundy plain, near the conflux of the Aller and Fuhie, 24 miles north of Hanover, 32 north-eaft from Brunfwick, 35 fouth of Lunenburg, and 47 fouth of Harburg. Betweenthis town and Harburg it is a fandy road, with fcarce any thing but heath. Though there is a great deal of heath between this town and Hanover, yet the country is very well cultivated; for the inhabitants not only make turf of the heath for fuel, but it alfo ferves for pafturage and manureThere is a trade from hence to Bremen by the river Aller.
Walstrade, on the river Bohme, is a confiderable town, with a good trade in honey, wax, wool, and beer. It fands in a pleafant valley, encompaffed with woods and mountains. Harburg, on the river Lotze, near it's influx into the Elbe, almoft over againt Hamburgh. It has great privileges, is populous, and enjoys a pretty good trade, having near as convenient a fituation for it as Hamburgh, with a tolerable
harbour, which bas been much improved fince it feil into the hands of a power able to protect it from the infults that Hamburgh is liable to from it's neighbours. The illands between this and Hamburgh are all of them very agreeable, being furrounded with dykes, and by that means being recovered out of the Elbe, and made firm. They look much like the meadows in Holland, and bring the owners a good revenue. LUNENBURG, which gives name to the duchy, and is it's metropolis, fands on the river Elmenaw, which is navigable bere, and falls into the Elbe 13 miles below the town. It's chief trade is in falt, made from fprings that rife within the walls: the water is greenifh, but a mixture of lead purifies it, and makes it preferable to that of all other falt fprings. The falt houfes are fenced, and contantly guarded, as being the main fupport of the city, a confiderable branch of the elector's revenue, and an inceffant employment for the poor. The falt is effeemed the beft in Germany for colour and tafte, and, therefore, much of it is exported.
Dannederg, which gave title to a branch of the family, ftands in the moft eaflern part of the duchy, on the river Jetze, 6 miles from it's influx into the Elbe, and 33 fouth-eaft of Lunenburg. It is the chief town of the rich and fruitful country of this name.
Sneckenburg, which belongs to this county, is a large trading town, at the conflux of the Elbe and the Weakt, or Beffe, 65 miles fouth-eaft of Lunenburg.
Saxe-Lawenburg Duchy is the fartheft province to the north-eaft of the king of Great-Britain's dominions, and lies on the north and fouth banks of the Elbe, between Holftein on the weft and north; Mecklenburg on the eaft ; and Lunenburg on the fonth. It abounds in pafture and good cattle, is well fupplied with wood and water, and is, in hort, much of the fame nature with Holftein, and has fome fmall, but populous trading towns on the Elbe, befides it's capital.
Lawenburg Town is well fituated for trade, only that is moft engrofled by Hamburgh.
The Duchy of Bremen has the Wefer on the weft ; the Elbe, and part of Lawenburgh on the eaft; the German Sca on the north; and part of Verden, and Oldenburg, on the fouth. The Prefent State of Cermany makes it 60 miles in length, and 40 in breadth, including Verden, lietween Bremen and Stade the country is defert, and either a barren fand or a morafs; but the other parts towards the rivers are very pleafant, and abound with fields, meadows, and orchards. The fituation of the country between two fuch navigable rivers bas turned the thoughts of $i \boldsymbol{i}$ 's inhabitants in general to trade.

## Remarks.

The Swedes continued their mafters till 1712 , when this country, and Verden, was conquered by the king of Denmark. This prince mortgaged it foon to the late elector of Hanover; who, in 1715, had 250,cool. granted him by the parliament of England, to enable him to make the purchafe of it. There was an oppofition, indeed, made to it, in both houles, and a clamour raifed againlt it without doors; but, however convenient it might be for the elector of Hanover, whofe family was polfefled of Bremen once before, and to whofe dominions it lay contiguous, the Birifh legiflature wifely judged it might be of the moft dangerous confequence to the crown of Great-Britain that any foreign prince, efpecially a maritime power, fhould hold the key, which the king of Denmark then had, of the Eibe and the Wefer
Any one who takes the pains to perufe the maps of this part. of the empire will perceive, that, whilft that king was in poffeffion of the duchies of Bremen and Verden, he was mafter of the fea-coaft from Denmark almeft to the Seven Provinces. The maps fhew that the Eibe runs, for above 500 miles through Bohemia, Saxony, Brandenburg, and the reft of Germany; and that the Wefer paffes, for above 250 miles, through Heffia, Weftphalia, Oldenburg, and fome other countries of the empire; and the valt importance of thefe rivers to the Britifh trade will be confeffed by every one who confiders that all our woollen, and other Englifh manufactures, and almoft all our commodities, both domeftic and foreign, to the value of above $300,0 c 01$. a year, are by thofe ftreams conveyed to innumerable markets; and that by the fame navigation, a great part of our riches flows centinually home to us; a trade ton precious to have lain at the mercy of any foreign power, either to lock it from us, or to lay what impofitions they pleafed thereon, as might have been the cafe, if his late Britannic majefty had not got Bremen and Verden out of the hands of the king of Denmark. In 1720 the crown of Swedea confented in form to the difmemberment of this duchy from it's other dominions, and confirmed it to the houfe of Brunfwick.
Stade, the fecond town in the duchy next to Bremen, has a good trade and air, in a fruitful country, on the river Z winga, Schwingel, which falls into the Elbe two miles below it, 27 miles weft of Fiamburgh, and 44 north of Bremen. This, befides it's having been a free imperial city, and one of the hanfe-towns, was formerly endowed with great privileges, with a right of toll for Chips paffing up the Elbe; but became fo poor, by Hamburgh's outffripping it, that it was forced to fell it's tock to that city, and put itfelf under the
protection
protection of the archbifhop of Bremen, it having formetly been the capital of a marquifate of it's own name, which was annexed to that fee by it's marquis, in the 1 3th centory. After'ir's above-mentioned decay, our Engliih merchants, upon- fome difgult taken at Hamburgh, removed hither; which revived the trade, fo that it again became rich and populous, and is in good condition at prefent, though the Etiglifh returned to Hamburgh.
Here is a large commodious haven, that will admit larger hips than Hamburgh: and, as it fands fairer for trade than Bremen, and 30 miles nearer the fea, 'tis thought ftrange that it has not more engaged the attention of the miniftry of Hanover.
Brunshusen, at the mouth of the Schwing, a fort where out king has a confiderable toll; all fips; except the Hamburghers, that come up the Elbe out of the fea, being obliged to ftop here, and give an account of their lading; for which, when they come to Hamburgh, they muft pay a certain duty to a comptroller, placed there by the government of Hanover: and an Englifh man of war, of 24 guns , rides at anchor on the Elbe, at the entrance into the Schwing, in order to oblige them to bring to; which veffel is of great fervice alfo to the Englifh trade and navigation in thefe parts, for preventing clandeftine practices, and preferving the rights and freedom of our commerce.
Ritzbuttle, a bailiwic, confifting of a cafte with fourteen villages, belonging to the Hamburghers, and fituate on the coalt where the South Elbe falls into the North Sea, not ten miles from the utmoft point of jand of this country, and 32 north-weft of Stade. Here the Hamburghers have a pretty good harbour, called Cuhaven, which is of great benefit to fhips coming on the Elbe ir winter, when the river is full of ice. Here likewife their hips often ftop, at their arrival from long voyages, for orders and news, and to know whether all is well with the city, before they venture up. Here are their privileged pilots, who, by their flatutes, are obliged to have a yacht always at fea, near the outermof buoy, ready to put a pilot or two, as occafion hall require, on bourd of every fhip coming into the Elbe.
Bremen, the capital of the duchy, ftands in a fruitful plain, 23 miles eaft of Oldenburgh, 60 fouth-weft of Hamburgh, 55 eaft of Embden, 83 north-weft of Brunfwick, 80 weft ot Lunenburg, 65 weft of Zell, 90 north of Muniter, and about 460 north-weft of Vienna.
'Tis a great, populous, and fourifhing town, a free imperial city, and the third in sank amoing the hanfe. The inHiabitants have the privilege of fifhing from the bridge of Hoye, four German miles above Bremen, down to the fea, as likewife in divers rivers which flow into the Wefer. The city is well fupplied with fifh, both from it's rivers and the fea; and they have every month feyeral forts in feafon. Among others, they catch great quantities of falmon and lampreys, the former of which, being dried and fmoked, and the latter pickled, are in great efteem throughout all Germany. It hảs a juridiction about 10 miles round, abounding with paftures well focked with cattle, and is bordered with terititories belonging to his Britannic majefty, for which reafon it always courts his favours.
HANSE-TOWNS. The hanfeatic fociety was a league between feveral maritime cities of Germany, for the mutual protection of their commerce. Bremen and Amfterdam were the firf that formed it, whofe trade received fuch advantage, by their fitting out two men of war each, to convey their merchants fhips, that more cities continually entered into their league: even kings and princes made treaties with them, and were often glad of their affiftance and protection: by which means they grew fo powerful, both by fea and land, that they raifed armies as well as navies, enjoyed countries in fovereignty, and made peace and war, though always in defence of their Trade, as if they had been a united flate, or commonwealth.
At this time alfo abundance of cities, though they had no great intereft in trade, or intercourfe with the ocean, came into their alliance for the prefervation of their liberties; fo that, in 1200 , we find no lefs than 72 cities in the lift of the towns of the hanfe; particularly Bremen, Amfterdam, Antwerp, Rotterdam, Dort, Bruges, Oftend, Dunkirk, Middleburg, Calais, Rouen, Bourdeaux, Rochel, St. Malo, Bayonne, Bilboa, Lifbon, Seville, Cadiz, Carthagena, Barctlona, Marfeilles, Leghorn, Naples, Meffina, London, Lubec, Roflock, Stralfund, Stetin, Wifmar, Koninglberg, Dantzic, Elbing, Marienburg.
This alliance of theirs was fo powerful, that their thips of war were often hired by other princes, to affift them againft their enemies. They not only awed, but frequently defeated, all that oppofed their commerce; and particularly, in 1348 , they took fuch revenge of the Danifh fleet in the Sound, for having interrupted their commerce, that Waldemar III, then king of Deninark, for the fake of peace, gave them up all Schonen for 16 years, by which they commanded the paffage of the Sound in their own right.
In 1428, they made war upon Erick king of Denmark, with 250 lail, and 12,000 men on board, facking and plundering
all the coail of jutland, \&cc. fo that he was glad to make peace with them. Many were the privileges granted and confirmed to them by the kings Lewis XI, Charles VIII, Lewis XII, and Francis I; of France, as well as by the emperor Charles $V$, who bad divers loans of money from them; and by king Henry III, who alfo incorporated them into a trading body, in acknowledgment for money which they advanced to him, as well as for the good fervice they did him by their naval forces in 1206.
They exercifed a jurifdiation among themfelves, to which purpore they were divided into four colleges, or provinces, diffinguifhed by the names of their four principal cities, viz. Lubec, Cologn, Brunfwick, and Danczic, wherein were held their courts of judicature. They had a common ftack or treafury of Lubec, and power to call an affembly as often as neceflary.
They kept magazines or warehoutes for the fale of their mérchandizes in London, Bruges, Antwerp, Berg in Norway, Revel in Livonia, Novogiod in Mufcovy, which were exported to moft parts of Europe in Englifli, Dutch, and Flemifh bottoms. One of their principal magazines was at London, where a fociety of German merchants was formed, called the Steel-yard company, to which Edward I. had granted great privileges; which in 1552 , in the reign of Edward VI, were revoked by act of parliament, on complaint of the Englifh merchants, that this company had fo engrofled the cloth trade, that in the preceding year they bad exported 50,000 pieces, while all the Englifh together had Chipped off but 1100 .
Queen Mary, who afcended the throne the year following, having refolved to matry Philip the emperor's fon, fufpended the execution of the act for three years: but after that term, whether by reafon of fome new flatute, or in purfuance of that of king Edward, the privileges of the faid company were no longer regarded, and all efforts of the hanfe-towns, to recover this lofs, were in vain.
Another accident that happened to their mortification, was while queen Elizabeth was at war with the Spaniards; when Sir Francis Drake, meeting with 60 mips in the Tagus, laden with corn, belonging to the hanle-towns, took out all the corn as contraband goods, which they were forbid to carry by their original patent.
The hanfe-towns having complained of this to the diet of the empire, the queen fent an atmballador thither to declare her reafons. The king of Poland likewife interefted himfelf in the affair, becaufe the city of Dantzic was under his protection. At laft, though the queen frove hard to preferve the commerce of the Englifh in Germany, the emperor excluded the Englifh company of merchant-adventurers, who had confiderable factories at Stade, Embden, Bremen, Hamburgh, and Elbing, from all trade in the empire. In hhort, the hanfe-towns in Germany, in particular, were not only in fo flourifhing, but in fo formidable a flate, from the $14^{\text {th }}$ to the 16 th centuries, that they gave umbrage to all the neighbouring princes, who threatened a frong confederacy againf them; and, as the firft ftep towards it, commanded all the cities within their dominion or jurifdiction, to withdraw from the union, or hanfe, and be not farther concerned therein. This immediatly feparated all the cities of England, France, Spain, and Italy, from them.
The hanfe, on the other hand, apprehending danget, prudently put themfelves under the protection of the empire. And, as the other cities juft now mentioned, had withdrawn from them, fo they withdrew from feveral more, excluding them from their fociety; and madè a decree among themfelves, that none hould be admitted to their confederacy, but fuch cities as flood within the limits of the German empire, or were dependent thereon, except Dantzic, which continued a member, though in no wife dependent on the empire, only it had been fummoned formerly to the imperial diet. By this means they maintained their confederacy for the protection of their trade, as it was begun, without being any more envied by their neighbours. Hereby, likewife, they were reduced to Lubec, Bremen, Hamburgh, and Dantzic; in the firft of which they kept their regifter, and held affemblies once in three years at leaft. But this hanfe, or union, has been for fome time diffolved, and now they carry on a trade every one feparately for itfelf, according to the Atipulation in fuch treaties of peace, 8 c . as are made for the empire, betwixt the eniperbr: and other potentates.
HARPINEER, or HARPONEER, a Gifherman, employed in the whale-fifhery of Greenland, who manages and throws the harping-iron, which is a fort of fpear faftened to a line, wherewith they catch whales and other large fifh in the Greenland feas.
The harponeers are the moft dextrous perfons among the fhip's crew. Their place is at the end of the pinnace, and they direct the fteerfman as well as the rowers. When they come within reach of the whale; they dart their harpoon with great vehemence into a part near his bead, fo as to penetrate the fkin and fat, and enter deep into the flefhy part. Upon which the whale dives with furprizing fwitnefs to the bottom, and, when he returns to the furface of the fea to take
breath,

## H A T

breath, the harponeer ftrikes him again with another har pron. See the aiticles Fisheries, Greenland Fishery.
HARTFORDSHIRE, is bounded on the eall by Effex, on the fouth by Middlefex, on the north by Cambridgeflite, and on the weft by Buckinghamihire, and is about 130 miles in compais.
The fertility of it's foil is more owing to the culture beflowed on it, than to it's own natural goodnefs, but the arr is accounted very healthful.
It's chief rivers are the Lea, Coln, Stort, Ver, and NewRiver. As there is little or no manufacture in this fhire, whech is full of malefters, millers, dealers in com, \&c. fo the trade would be inconfiderable, but that it is a great thoroughfare, and for it's neighbourhood to London, which makes the chief market-towns much frequented, for the fale of wheat, barley, and all forts of grain, the growth of this and feveral other thires.
IIARTFORD, the fhire-town, is pleafantly feated on the river Lea, The chief commodities of it's market, are wheat, malt, and wool. 'Tis faid it fends 5000 quarters of malt weekly to London, by the river Lea. It's fair on St. Simon and Jude is for all forts of cattle; as is alfo another on the Saturday fortnight after Eafter, and the Monday following; and it's Midlummer fair is chiefly for horfes.
Hirchin, is reputed the fecond town in the flire for number of ftreets, boufes, and inhabitants. Great fore of malt is made here, and the market at which great quantities of it and corn are foll, is held by prefcription free from the payment of toll for any fort of grain that is vended here.
$W_{\text {ARE }}$, is one of the molt noted towns in the county, and a place of trade by means of it's market, and it's navigable river the Lea. The market is a very great one, efpecially for corn; and the malt trade here and in the neighbourhood is folarge, that 5000 quarters of malt and corn are often fent in a week to London by the barges, which return chiefly with coals.
Hempsted is a pretty populous town, watered by the river Gade; the market is one of the greateft in the county for wheat brought out of the neighbouring counties; and 'tis faid to exceed even that of Farnham in Surry, 20,0001. a week having been frequently returned there for meal only, which is ground by eleven pair of mills, within four miles of the place. Befides it's great corn market, fome thoufand pounds are returned here every year, in the mean manufacture of ftraw hats.
Tring is a pretty little town, and the market no inconfiderable one, efpecially for corn, of which here are very large granaries.
Barnet is a famous market for corn and cattle, efpecially fwine.
HATS, make a confiderable artisle in commerce. Thofe moft in efteem are made of the pure hair of the caftor or beaver; which are plentifully taken in Canada, and other provinces of North America. They are alfo made of the hair or wool of divers other animals.- The method of making all is much the fame.-To make the beaver hats, they tear off the long and fhort hair from the Kkin , with knives fuitable to the occafion. After which, they proportion the quantity of the divers forts of beaver hair, by mixing one third of the dry caftor or two thirds of old coat, which is a term for a fkin that has been wern fometimes by the Indians of America, who catch and fell them to the Europeans. This hair, fo mixed, is carded and weighed out into parcels, according to the fize and thicknefs of the hat intended. The ftuff is now laid on the hurdle, with an infrument called a bow, refembling that of a violin, but larger; whofe ftring teing worked with a fmall bow-ftick, and made to play on the furrs, they fly and mix them together, the duft and filth at the fame time paffing through the chinks. Inftead of a bow, fome hat-makers ufe a fearce of hair, through which they pafs the ftuff. Thus they form hats of an oval figure, ending in an acute angle at top. With what ftuff remains, they flrengthen them where flendereft.Yet they defignedly make them thicker in the brim, near the crown, than towards the circumference, or in the crown itfelf. They ncxt harden the ftuff fo managed into more compact flakes, by prefling down a bardened leather thereon. This done, they are carried to the baton, upon which laying one of the hardened hats, fprinkled over with water, and a fort of mould applied thereto, the heat of a fmall fire, with the water and preffing, imbody the fuff into a flight hairy fort of fuff, or felt: atter which, turning up the edges all around over the mould, they lay it by, and thus proceed to another. This finifhed, the two are jonned together, fo as to meet in an angle at top, forming one conical cap.The next ftep they take is to remove the bafoned hat to a trough, refembling a mill hopper, which is a copper-ketule filcd with water and grounds, kept hot for the purpofe; and alter beng dipped in the kettle, the bafoned hat is laid on the floping fide, called the plank. Here they proceed to work it, by rolling and unrollust it again and again, one pait after another, firf with the hand, and afterwards with a imall wooden roller, tahing care to dip it from time to cine: thll at length, by thus fulling and thickening it four or
Vol. 1 .

## H A T

five hours, it is brought to the dimenfions intended. To fecure the hands from being injured by this frequent rolling, \&c. they ufually guard them with, a kind of thick leather gloves. The hat thus wrought, they give it the proper form, by laying the conical cap on a wooden block, of the crown fize, and tying it round with a ftring, called a commander. After which, with a bent iron called a ftamper, they gradually beat down the commander all around, till it has reached the bottom of the block: thus the crown is formed; what remains at bottom belongs to the ftring, below the brim.- Then it is fet to dry, and, when fufficiently fo, they finge it, by holding it over a flair of ftraw, or havings; and afterwards rubbing it with pumice to take off the coarfer nap; then it is rubbed over afrefh with feal-fkin, to lay the nap ftill finer; and, laftly, it is carded with a fine card, to raife the fine cotton; then fitting it to the block, they tie it cut round the edges, and fend it to be dyed, which is done in a copper tio large, as to hold 10 or 12 dozen of hats. The dye ufed for this purpofe, is made of logwood, verdigreafe, copperas, alder bark, galls, and fumac. Thus the hat is kept boiling for about three quarters of an hour, then taken out to cool, and returned to the dye, for ten or twelve times fucceffively. The dye being compleated, the hat is returned to the maker, who dries it, by hanging it on the roof of a kind of ftove, heated with a charcoal fire. When dry, it is filfened with melted glue, or rather Gum Senegal [fee that article] applied thercon, by firft fmearing it, and beating it over with a brufh, and rubbing it with the hand. Then it is fteamed on the fteaming-bafon, which is a little hearth or fire-place, raifed about three feet high, with an iron plate laid over it, exadty covering the hearth, or fire-place. On this plate they firft fpread clothes, which being fprinkled over with water to fecure the hat from burning, is is placed thereon, brim downwards. When moderately hot, the workman frikes gently on the brim with the flat of the hand, to make the, jointings incorporate and bind, fo as not to appear; turning it from time to time, and at laft fetting it on the crown.-When thus fufficiently fteamed and dried, it is put again on the biock, bruihed, ironed, and well fmoothed, and fitted for lineing.

## REMARK's before the laft war.

The procefs of hat-making, or indeed of any other general manufacture, may appear infipid to thofe who do not enter into the public utlity of bringing every manufactural art to it's latt perfection; for excelling in that, and the article of cheapnefs; are the great wiredraws to gain or advance any branch of trade. And, by means of the goodnefs and cheapnefs of this manufacture, we have taken this trade out of the hands of the French, for this was a very confiderable manufacture once in France, hats being made in immenfe quantities at Caudebec on the river Seine, and exported in great quantities to England, Spain, Italy, and Germany: but we have not only left off wearing thefe French hats, but have fallen into the way of making light hat like thefe, fo much better, and yet fo cheap, that there are fcarce any hats at prefent made at Caudebec; what they ufe being made now chiefly at Rouen and Paris, and very few exported in .comparifon to what there ufed to be; for England now fupplies Spain, Portugal, Italy, and Germany, with hats in extraordinary quantities: and this manufacture, confidered as a merchandize for exportation, is, in a great meafure, loft to that kingdom. But,
As this general manufacture greatly depends on the furr trade of North America; and as the French at Canada, and on the river Miffifippi, are ufing every endeavour to draw off the Indians from our alliances, from whom we have a confiderable part of the furr trade; it behoves us to be on our guard, to protect our colonies from their incroachment, and to cultivate a commerce with the Indians to the utmof degree it will admit of, by bringing them into fuch a civilized European way of living, as may occalion the greater vent of our manufactures among them. See the articles British America, Canada, French America, Florida, Mississippi.
It is true, the northern parts of Europe, as well as of America, furnilh us with great variety of furrs, of great foftnefs and luftre. Yet the lefs quantity we take from foreign countries, and the more we take by means of our own plantation-trade in return for our own manufactures, the greater will our exports thither be, and the more independent fhall we be in regard to materials, which fupport fo many valuable manufactures, as the fkin trade with foreigners in general does.

## Remarks fince the laft war, and the Definitive Treaty

 of 1763.Canada, and all it's Dependencies, being ceded to the crown of Great-Britain by the definitive treaty, [fee America, British America, French America], we thall, in time, very probably, be able to grafp into Britifh hands, the whole furr and peltry trade of Canada: and this, added to that of Hudfon's Bay, and what other branches

12 C
thereof

## H A W

thereof we may naturally be prefumed to derive from our other new acquifitions on the continent of America, efpecially, if we fhall be able effectually to attach the Indians to our intereft, will enable us to obtain great plenty of materials for the manufacuure of Hats of the bell quality : and if we can be able to make them of a price fuitable to the abilities of our foreigners cuftomers to buy them, we can never want a vent of that article; and may, at a reafonable rate, fupply our home confumption with a very good commodity.
HAWKERS and PEDLARS, in a trading fenfe, are fuch, who go up and down the town and councry on foot or on horfeback with packs, \&c. to fell goods by retail.

## The principal laws of England relating to hawkers and pedlars.

By ftat. 8 and 9 Will. III. c. 25. every hawker, pedlar, or petty chapman, or other trading perfon, going from town to town, or other men's houfes,

1. s. d.

If on foot muft pay - - $\quad 400$
If with horfe, afs, or mule, for every one of
them four pounds a-piece - $\} 400$ Every hawker, \&c. mutt take a licence; and, if he travels without, or contrary to his licence, he forfeits for every offence, to the informer and poor of the parifh where difoovered, itl.
And, if he refufe to thew his licence, being demanded by any officer of the peace, he forfeits to the poor where the demand fhall be made 5 l. and for non-payment of the fame mult fuffer as a vagrant, and be fent to the houfe of correction.
Whofoever fhall forge, or travel with any forged licence, Forfeits 50 I . one moiety to the king, the other to the profecutor, to be recovered in the courts of Weftminfter, and be, fubject to the penalties for forgery.
Perfons fued may plead the general iflue, and give the act in evidence, and, if verdict for them, fhall have treble cofts. Conftables, or other officers, neglecting or refufing to affift in the execution of this act, convicted on oath before a juftice of the peace, forfeit for every offence to the poor and profecutor, to be levied by diftrefs, \&c. 2 I .
Any perfon may feize and detain fuch hawker till he produce a licence, or, if trading without a licence, till notice be given to a parilh officer, who is to carry him before a juftice of peace, who, upon confeffion of the party, or oath of one witnefs, that the offender had traded without a licence produced, fhall by warrant levy 12 3 .

Not to extend to fellers of
Acts of parliament.
Almanacks licenfed.
Fairs, felling goods therein.
Fifh.
Fruit.
Markets, feling goods therein.
Prayers, forms thereof.
Papers licenfed.
Proclamations.
Victuals.
Makers or their agents, apprentices, children, fervants, of any goocs or wares in this kingdom, and felling goods of their own making.
Artificers, coopers, glaziers, harnefs-makers, plumbers, tinkers, or other peifons trading in mending kettles, tubs, houfhold goods, or harnefs, going about and carrying with them proper materials for mending the fame.
All perfons may fell any forts of goods in any public market or fair, as they lawfully might have done before the making the faid act. And, by 9 and 10 Will. III. c. 27. the act is not to extend to licence any hawker, \&c. to fell any wares, $\& c$. in any city, borough, town corporate, or market-town, otherwife than might have.been done before the making the faid act.
By 3 and 4 Ann. c. 4. the faid acts are continued from 1710 , for $9^{6}$ years; and every perfon trading as a hawker, \&c. is to produce his licence on demand, or elfe he fhall be liable to the fame penalties, as if he had traded without a licence. And, if any perfon lend a licence to hire, the lender or the trader fhall forfeit 40 . one moiety to the king, and the other to the informer, to be recovered by action of debt, information, \&ic. and the lender fhall forfeit the licence. But traders in the woollen and linen manufactures, felling their goods at markets or fairs, are not to be deemed hawkers. And makers and fellers of Englifh bone-lace, going from houfe to houle, \&c. are not adjudged hawkers, by 4 Geo. I. c. 6 .

## A conviction of a hawker refufing to produce his licence.

Memorandum, That on, \&c: at, \&c. A. B. came before me, and, as well for himfelt as the poor of the parifh, exhibited an information on oath againft E.F. of, sic. that he the faid E. F. not being the real worker or maker of any goods, wares, or merchandizes, within the kingdom of England, \&cc. and nor being the apprentice or fervant of any reat worker or maker of goods, wares, or merchandizes, on, \&c. in the parifh of, \&c. was found wandering abroad from houle to houle, and trading as a hawker, pedlar, and petty chap-
man, carrying about with him divers parcels of goods, viz. $\& \mathrm{c}$. and that, in fuch wanderng, he the faid E.F. did ex. pofe to fale feveral goods, not being in any market or fair, without producing any licence for the fame, contrary to the ftatute in that cale made. And the faid E. F. after having been filt fummoned, in his own proper perfon, appearing before me one of his majefty's jultices of, \&c. (and the information being read to him and heard) he the faid E. F. did confefs betore me, that he did on, \&c. Fell, \&ic. as in the information mentioned. Whereupon it doth, manifefly appear, that he the faid E. F. is gulty of the offence ladd to his charge in the information; and I do hereby declare him convicted thereof, \&c. In witnefs, \&c.

A warrant to levy 12 l. for hawking without a licence. Effex, If. Whereas information hath been given unto me, one of his majefty's juftices of the peace for the faid county, upon the oath of C. D. of, \&c. that A. P. of, \&c. labourer, did, on the $4^{\text {th }}$ of May inftant, trade and hawk without h cenfe, in, \&rc. and carried about, and expofed to fale, three pieces of filks, called, \&c. he not being the maker of fuch filks, nor apprentice, agent, child, or fervant, to the real worker or maker of fuch filks he fo carried abroad and expofed to fale as aforefaid, which the faid A. P. hath confefied before me upon his examination, contrary to a late act of parliament for licenfing hawkers, \&c. For which faid offence he the faid A. P. hath forfeited the fum of 121 . the one moiety to the informer, and the other moiety to the poor of the pariin of, 8 cc . where the faid offence was commitred: theie are therefore to authorize and require you, or any of you, upon fight hereof, to demand of the faid A. P. the faid fuma of 121 . and, in cafe he refufe to pay the fame, that then you levy the faid fum by diffrefs and fale of the goods, wares, and merchandizes, of the faid A. P. (fending to him the overplus, if any be, reafonable charges for taking the faid diftrefs being firt deducted) to be employed to the ufe above-mentioned; and, in cafe of his inability for payment thereof, that then you forthwith bring the faid A. P. before me, or any other of his majefty's juftices of the peace of the county atorefaid, to be farther dealt with as the laws in that cafe provided do direct. And hereof fail not. Given; \&cc. See the article Fairs.
HEMP, may be ranked in the fame clafs with flax. See the article Flax. When the hemp and flax have been gathered, which is done by plucking them from the earth, the ftalks are expofed to the fun, in order to ripen the feeds, which are afterwatds threfhed out of the heads, and then the ftalks are tied up in bundles, and fteeped in a ftanding water (the cleareft is always the beft) they, are faftened to poles, and left to foak about 15 days.
When the fubftance of the ftalk is almoft rotten, the bundles are taken out and well dried. But, inftead of fteeping the flax in a flanding water, it is ufually expofed to the moif air of the night, and the heat of the fun, alternately, by which it feceives a finer colour. When the flax and hemp are well - penetrated, and afterwards completely dried, they are bruifed by handfuls on a block, with a kind of mallet; all the bullen, which is the inward fubftance of the ftem, flies off in fhivers, by the force of the blows, and nothing remains in the hand of the beater but the thin bark, difengaged in large threads, through the whole length of the ftem. This parcel of threads is afterwards hung on a perpendicular board, and bruifed with a wooden beetle, in order to Shake out all the little ftraws that may happen to remain in the bullen. All the grofs parts are now feparated from the ftem, and the threads of the bagk that remain in the hand of the manufacturer are intirely pure, and receive their perfection from the comb; or, in other words, they are drawn firft through large cards, or iron teeth, and afterwards through others that are finer, that they may be purified from whatever may be fill too thick and grofs. This refufe is what they call tow, of which matches for the artillery are made, and likewife a thick yarn, for packing cloths, whofe uffulnefs is infinite, fince they wrap up and preferve the mof valuable commodities in their tranfortation from one country to another.
When the hemp has been thus prepared, it is tied up in bundles, to be fent to the rope-yards; but, if it prove fine and fit for the fipinfer and weaver, it is formed into twifts, and fitted for the diftaff and fpindle.

## REMARKs before the laft war.

Hemp and flax are the materials of variety of proftable mamufactures; for, though weaving of linen is not fo much uled in South-Britain as of woollen, yet in North-Britain it is, and may be further improved, not fo much by laws to direat the workmen in their making it, as by apt methods to encourage them: and even in South-Britain feveral counties ate employed thereon, who not only fupply themfelves, but furnifh thofe bordering on them with fuch cloth as anfwers the ends of foreign linens we were want to import: befides which, great quantities of ticking, of all fineffes, incle, tapes, fack!ng, girtwip, and many other things, are made thereof: alfo cordage, twine, nets, with multitudes of other manu-

## H E R

factures, which employ the poor, and bring, by their exports, profit to the nation; and, with regard to fail-cloth, we have made a wonderful progrets therein, at the expence of private ftocks. But, as we are under the neceffity of importing very large quantities of hemp from foreign countries, the produc tion of this article among ourfelves, and in our plantations, cannot be too plentifully cultivated, nor too highly encouraged. See the article Naval Stores.

Remarks fince the laft war, and the Definitive Treaty of Peace, 1763.
However exculable we might be before the laft war, for not fupplyıng ourfelves from our North American colonies with HEMP, which has coft this nation fuch large out-goings to Ruffia for that purpofe, it is to be hoped we hall now be no longer neglectful of a matter fo apparently interefting to the tinudom; otherwife, to what end have we made thofe conquefts, and to what end have fuch extenfive territories been ceded to the crown of Great-Britain? We can no longer complain for want of variety of climates, wherein this article may be plentifully produced, and that of the beft qualities, and to the beft advantage, as well of thole engaged in it, as the kingdom in general. As our whole mercancule, as well royal maritime power, depends on fupplying ourfelves at a reafonable expence with cordage, we fhall never longer difregard a matter fo manifefly lucrative to the kingdom, out of complaifance to a nation we are not fufficiently obligated to, as to throw away near a million a year, for what we can have an our own territones.

## The Laws of England relating to Hemp and Flax.

By flat. ${ }^{15}$ Car. II. c. 15 . Foreigners ufing the trades of breaking, hickling, or drefling hemp or flax, and of making and whitening thread, and fpinning, weaving, making, whitening, and bleaching cloth, made of hemp or flax only, and making twine, or nets, for filhery or ftores, cordage, or making tapeftry hangings, and taking the oaths of allegiance and fupremacy before two juftices, thall enjoy all privileges whatfoever as the natural-born fubjects of this kingdom, atter having exercifed the faid trades three years; nor thall they be liable to other impofitions than natural-born fubjects, unlefs they trade as merchants to and from foreign parts, in which cafe they fhall pay aliens cultom for five years next enfuing, and no longer.
HEREFORDSHIRE, is bounded on the north by Gloucefterflire; on the fouth by Monmouthfhire; on the weft by Brecknockfhire and Radnorfhire; and on the north by Worcefterfhire and Shrophire; and is about 108 mailes in circumference.
The air is accounted good, and the foil is very fruitful, abounding in good corn and pafture, wool, water, and wood; and their cyder, the general drink of the county, was generally efteemed the beft in the kingdom till of late years, that the rough has been preferred to the foft, and the Southam cyder of Devonilhire has juflly got the preference; not but that there is a great quantity of rough cyder made of late years in this county.
The rivers which water this fruitful county are the Frome, Loden, Lug, Wye, Wadel, Arrow, Dare, and Monaw : they abound with falmon, efpecially the Wye.
It's metropolis, and only city, is Hereford, feated on the Wye. It's chief manufacture is gloves, and other leather commodities.
Leominster, or Lemster, is a large, handfome, populous borough town. It lies in a rich valley, through which three rivers run fwiftly, where the inhabitants have mills, and other machinery in the various branches of their trade, which is very confiderable in wool, hat-making, leather-dreffing, \&cc.
Kyneton, is inhabited chiefly by clothiers, who drive a good trade in narrow cloths, and 1 's market is one of the moft confiderable in the county. Some of the wool of this county is efteemed as good as Spanifh wool.

## REMARKS.

This county is reputed the orchard of England, it excelling many other places, in general, in good hulbandry. It is obfervable, that here the wifeft and beft of our gentry are remarkably careful in purfuing fuch kind of hufbandry as beft agrees with the nature of the foil where they inhabit. From perfonages of the firftrank, even to the meaneft cottager, every habitation is encompaffed with orchards and gardens, and in moft places the very hedges are inriched with numberlefs rows of fruit trees. For the breed of large flocks of fheep, the Ghepherds of Lemfter-orer and Irchin-Eield are incomparably more expert than thofe of any other county in England, and therefore the wool is fuperior. Upon the whole, this conunty feems to be an example to all others in the kingdom. HERRING-FISHERY. Under the article Fisheries we have given a pretty ample account of the white herring branch: wherefore here we thall only obferve the extraordinary progrefs which has been made therein fince the parliament has been pleafed to encourage the fame.

H ER
The Society of the Free Britifh Fifhery have now off Shetland 50 veffels, among which is the Prince of $W$ ales's ftoreMip, burden 330 tons; the whole protected by his majefty's floop the Grampus. Befides the above veffels, there are 4 buffes from the chamber of Whitehaven, 2 from that of Edinburgh, 2 from Montrofe, and 2 from Invernefs; the total (with thofe of the fociety) make 60 Britifh veffels; on board of which are above 1000 fhipped man. There are not many apprentices on board yet; but it is affured that the fociety will have a large number next year.- Befides the above vei-, fels, there are many private adventurers.

June 25, 1753.
Free British Fishery Office, Royal-Exchange.
To the Truftees of the feveral Charity-Schools and Workhoufes.
The Society of the Free British Fishery, being defirous of furnifhing employment for the Poor (particularly children from 8 to 14 years of age) throughout the kingdom, in order to eafe the feveral parifhes, to which they are now a burden, and to affift in training up the prefent growing generation to Industry, to prevent their falling into the vices now in fafhion, the bad confequences of which are but too vifible at this time: do hereby propofe to employ charity-fchools and workhoufes in braiding of nets for their filhery, in manner following, viz.
The charity-fchool, or workhoufe, hires a man or woman, by the quarter, the half, or whole year, to teach the children, scc. to braid; which is firft done with an ordinary fort of twine, till fuch time as the children, \&cc. are capable of braiding the twine, fo as to be fit for the fociety's nets.
As foon as a number of children, \&c. are become expert at braiding, then the fociety will fupply fuch fchool or workhoufe with a quantity of good twine, in proportion to the number of children, \&cc. qualified to braid. This twine is weighed out to the fchool or workhoufe, for which the overfeer mult give a receipt. The charge of carriage, out and home, is to be borne by the fchool or workhoufe; and is weighed out, by the overfeer, on delivering it, when braided, to the fociety (or their agent) who will make an equitable allowance for waftage in the braiding.
The mefhes are of two kinds, viz. the Shetland, or large mefh, and the Yarmouth, or fmall mefh. The dimenfions of thefe will be beft known by the famples, which the fociety give, at their office, to each fchool or workhoufe (or their agents) where they may likewife have pinns, of the proper dimenfions, for the performing this work.
The prices paid by the fociety for braiding are, 16 d . per fcore yards for the Shetland mefh, and 18 d . per fcore yards for the Yarmouth mefh.- Each yard (in length) both of the Shetland and Yarmouth netting, is to be 80 mefhes deep. It'may be obferved, that this fort of work (braiding) is better adapted to children than to grown perfons.

## By order of the Council,

John Lockman, Secretary.

## Remarks.

The Dutch, to the number of ten or eleven hundred fail, enter filhing upon the coaft of Shetland the beginning of June, where they continue fifhing till the beginning of September, during which fpace they load fundry times, carry the firft to Holland, where they fell them at an exorbitant rate, feeing a bundred dollars is reckoned but a fmall price for a barrel of herrings at Amfterdam or Rottesdam, for the firft that are caught upon this our coaft; afterwards, when they are ferved, they fend the other loads all over Europe, up the Mediterranean, and all over Italy; and the Italians, who are great eaters of fifh, on account of their many lents, readily barter their goods with the Dutch for their herrings, the product of our coafts; the profit of which muft, upon a moderate computation, bring the Dutch in a million fterling annually; they even difpofe of them at our own markets, and we have been fo weak as to pay them ready money for them; fo that, in this great article, the Dutch have hitherto outdone us, both in induftry and prudence. But 'tis to be hoped, that we have at length feen through our miftake, and Chail make the beft advantage of this bleffing, that the divine providence has thrown in our way.
The Dutch mechod of curing and lafting, or cafking the herrings, though they have been always very thy, and backward to let any of the natives of the ifland of Shetland into it, yet, in fite of all the arts they could make ufe of to conceal that fecrer, it has been difcovered, and their method is this:
After they have hawled in their nets, which they drag in the Aterns of therr veffels, backwards and forwards in traverfing the coaft, they throw them upon the fhip's deck, which is cleared of every thing for that purpofe; for they never carry any boats or yawls along with them, as they would be an incumbrance to them in drefing the herrings; they carry many hands on board, even to the number of thirty or forty

In each veffel, whom they feparate into fundry divifions, and each divifion has a peculiar talk; one part opens and guts the herrings, another cures and falts them, by lining or rubbing their infides with falt (which is all done upon the deck) the next packs them, and, between each row or divifion, they fprinkle handfuls of falt; then the coopers put the finifhing hand to all, by heading the cafks, and ftowing them in the hold; thus they go on, while barrels and falt laft, and, when that is exhauited, then they retire; but the jaggers or ftorefhips commonly provide them with every thing neceflary, fo that they feldom or never depart the coaft before they are brimful; and really (to give them their due) they are the beft fifhermen in the world; for they are not only ingenious in cvery article of their tackling or materials, but alfo diligent, induffious, and endure the great fatigue to admiration: See Fisheriss.

## Further Remarks fince the laft edition:

It has greatly puzzled and confounded many men of fenfe, candour, and integrity, how it has come to pals, that this defign has not fucceeded to the degree it was at the firft expected : it has not feemed to want any neceflary encouragement, which makes it the more extraordinary. What avails the liberality of nature to us, in beftowing upon us fuch immenfe fhoals of thefe excellent fifh, if we will fuffer our neighbour and rival nations to reap the benefits of our rights and property, and we not? However bountiful we may chufe to be to others, does it not appear impolitic to make fo little advantage of what foreigners do fo great, at our expence? Where the fault lies, I am not able to conjecture, it being thought the gentlemen, who have had the management of this defign, have not been lefs judicious than incorruptible. The only colourable reafon, which I have ever heard for the ill-fuccefs, has been, that we are not able to carry on thefe our own coaft-fifheries at' fo cheap a rate as foreigners are able to do, though it has received fuch encouragement. If this is the only true caufe, fhould it not alarm us? If the extent of our public debts and taxes are the occafion of this, may they not foon operate as fatally upon our other branches of traffic? For if our produce, as well as manufactures, come fo dear to foreign countries, that they cannot purchafe them, 'tis no wonder that they will give the preference to thofe fold by foreigners at a cheaper rate, although foreigners know thofe very produce comes from our own coafts? When foreigners experience this to be the cale, in regard to our whole produce, no lefs than our manufactures in general, does it not become the wifdom of the nation to remove the caute, with all poffble expedition, left we irretrievably lofe gradually our other branches of trade?
See the encouragement given by parliament to this Free British Fishery, at the end of this letter H,-The Business of the Custom-house.
The landgravate of HESSE, in Germany, lies on the north fide of the river Mayne. The whole country is bounded on the north by Weftphalia; on the weft by the duchy of Berg, and electorate of Triers; on the fouth by the electorate of Mentz, and Franconia; and on the eaft by the duchy of Weimar, and Thuringen.
The air is cold, but healthful, the water wholefome; and the foil fruitful, producing much corn, and, towards the banks of the Rhine and Lohn, grapes. Here are alfo large forefts, with ftore of deer, and other game : and mountains, in which are fome mines of copper and lead.
The chief commodity of this country is wool, the vallies abounding with fheep, which have the fineft in Germany. It ufed to be bought by the Englifh merchants, and made into cloth here, or in their factories abroad.
Cassel, one of it's principal towns, feated in a rich pleafant plain, on the river Fuld, is a place of good trade for wool, and other merchandizes. It is obferved, as a reproach to the inhabitants, that, for want of induftry, they fuffer other nations to run away with the profit of manufacturing their wool. The fureets of this city are fpacious, and full of fhops, and here are feveral fine markets, with good provifions of all forts.
Smalcald, 50 miliss fouth-eaft of Caffel, has a good trade for iron ware, many mines of the neighbourhood furnifhing the inhabitants with plenty of that metal, which they work and fend abroad to foreign parts. They alfo make and temver fteel, from whence a village near it is called Stahlberg.
Gissen is a fair town; it's trade is dreffing and felling of cloth.
Friedburg is a rich and imperial city; it hath four annual fairs ${ }_{3}$ one of which is held on the firf Sunday after Trinity, in remembrance of the dedication of their church on that day, which at firft brought only pedlars thither with toys, but came at laft to a fubftantial trade.
Waldeck is a fmall city, the capital of a principality about 20 miles in extent, which is reckoned one of the moft confiderable and wealthieft in the empire, for it's bignefs, and ferihity in corn, wine, and pafture, befides mines of coal, iron, copper, lead, quicktilver, \&ic.
The bifhopric of HILDESHEIM, in Germany. This country les between the avers Leina and Ocker, with Hal-
berftadt, on the north-weft; and Lunenburg, or Zell, on the north; Grubenhagen on the fouth; and is elfewhere furrounded by the dominions of the duke of Brunfwic.
The city of Hildesheim, which was one of the banfe-towns, ftands on the river lnnerfte, 15 miles fouth-eaft from Hanover: it's chief trade is in corn.
HOLLAND. This province, including North Holland, otherwife called Weft Friefeland, is bounded on the weft by the German Ocean; on the north by the Zuyder Sea; on the eaft by the fame fea, by the province of Utrecht, and part of Gelderland ; and on the fouth by Dutch Brabant and Zealand. The foil is low and marhy; but, by the induftry of the inhabitants in draining out the waters with mills and canals, it is made to yield very good pafture, and fome corn. This province is divided into South Holland and Nouth Holland, generally named Weft Friefeland.
Amsterdam, the capital city of South Holland, is fituated on the conflux of the $Y$ and the Amftel.
The ftrong fituation of this city, feconded by all the advantages that art can furnif, fecures the town againft the attempts of an enemy from without; and the popular government places the force and power of the city in the hands of her proper magiftrates, who are too much interefted in the happinefs of it to wifh a revolution. Thefe circumftances ought naturally to procure a very great credit to the Bank, but are fill infufficient to make money depofited there of greater value than what a man has in his own cuftody, which is in reality the cafe, however; and bank money is worth a great deal more thran current. This is expreffed by the word agio, a term denoting the difference between bank money and common fpecie. la $16 g 0$ the agio rofe to 17 per cent. on account of a bafe coinage then made current; which being afterwards reduced to near the intrinfic value, the agio has been fince from $4 \frac{x}{2}$ to $5^{\frac{x}{2}}$, and fometimes even 6 per cent. part of which may be accounted for thus: a ducatoon paffes for 63 pence in current payment; but, when paid into the bank, it is only received for 60 pence, or 3 guilders, which is it's intrinfic value, the odd three-pence having been added to it to anfwer the charges of the mint. In the fame manner wedges, bars, and ingots of gold and filver are received in the bank by their weight, and the fum brought to the account of the proprietor. Thus there is a real difference of 5 per cent. between bank and current money; but the agio fluctuates with the exchange; fo that it is not abfolutely determined by the difference of intrinfic value between one fpecie and the other. This will be underfood more perfectly, by obferving that all bills of exchange drawn upon Holland muft, if the proprietor pleafes, by the cuftoms and laws of the country, be paid in bank, which neceffarily obliges every confiderable merchant to keep an open account there : and thus bills of exchange drawn upon Amfterdam or Rotterdam are, after acceptance, frequently lodged in the bank; and the acceptor is obliged, at the time they become due, to make a transfer of bank money to the proprietor's account, for the amount of the bill, which would otherwife be liable to a proteft, without ever prefenting it for payment, after it has been once accepted. Thus when large remittances are made upon the bankers of Amfterdam, and they are under a neceffity from thence of having a great deal of money in bank, the agio rifes; it finks in proportion when, on the contrary, there are many fellers and few buyers. But, when this happens, the directors have recourfe to ftratagem, in order to keep up the value of the agio, by agreeing privately with fome of the monied men to buy up fuch a quantity of bank money as anfwers the immediate-neceffity of the fellers. Thus appearances are faved; and, by fupplying their agents with cafh in the moft fecret manner, they fupport the common opinion, that the whole buinefs of the bank of Amfterdam is managed by transfer, and that no money is ever iffued thence upon any occafion.
Ii cofts near a pound fterling to open an account with the bank, and fix-pence for each transfer; and there is a penalty on every perfon |that draws upon the bank within about two pounds fterling of the whole money he keeps there; and the advantage made upon all this is applied to pay the clerks, and defray other charges: whence it is evident, that every proprietor pays confiderably for' keeping his money in the bank, inftead of drawing an interelt upon it.
The reafon of which is, a firm belief that it remains untouched, which opinion is induftrioully fpread by thofe concerned.
If the bank lends money occafionally, it is certainly to the directors of the Lombard, an incorporated body, authoriz.d to lend money upon pledges, at a moderate intereft. This being granted, it will prove, indeed, that the bank traffics, in fome proportion, as well as the other banks in Europe; but this can be no juft caufe of difcredit, the money being advanced upon real fecurity; for the Lombard lends fufficiently within the intrinfic value of the pledge, and the interet is not fuffered to accumulate. Thus the elector of Bavaria's jewels, pawned to the L mbard of Amfterdam, were more than once ordered for fale, and would certainly have been fold, had not the intereft been dilcharged. Where a pawn is very confiderable, and a large fum demanded, probably the

## H O L

## H O L

bank both advances the money, and receives the interelt, under the borrowed name of the Lambard. Thus if a merchant has a commodity not perifhable, as tin or lead, for which there may pollibly be no immediate demand, he may have two-thirds of the value advanced, on a very finall intereft, which enables him to wait for his market. The ufe and advantage of fuch practice, in a trading country efpecially, is very obvious; but the reafon of this conduct's be ing made a fecret may be, that fhould, the proprietors of treafure there know it to be fo, they would be apt to think they might employ it that way themfelves.
As to the government of the bank, it is very folemn and regular. The whole city is bound to make good the money there depofited, and the treafure is fecured under four diffesent locks, the keys of which are kept by four of the principal magiftrates, one of whom is always the prefident burgomafter for the time being.
The harbour of Amfterdam is one of the largeft and fafett in Europe ; but there is at the entrance of it a bar of mud and fand, called the Pampus! It could have been eafily removed, but the magiftrates choferather to leave it, for very good reafons: for, as the large veffels cannot come into the harbour without being unloaded, or carried over the bar by what they call camels; fo that fame bar fecures the city, no, enemy's fleet being able to approach it; befides, it affords a livelihood to vaft numbers of people continually employed in loading and unloading the veffels
This city alone is in poffefion of half that immenfe trade which the Dutch carry on to the Eaft-Indies; , and governs the whole. It's commerce with Spain and the Spanifh Weft Indies is very great, nor is it lefs confiderable to the Levant, Italy, and Portugal. It alone ingroffes the whole Northern trade, which the Dutch carry on to Norway, and the countries fituated on the Baltic, Denmark, Sweden, Pomerania, Livonia, Polifh Pruffia, and Mufcovy, together with the greatel part of Germany. Navigation and general commerce between this city to France, and England are not very great, but the correfpondence between the bankers, or mo-ney-negociators, of Amfterdam and tifofe of London and Paris, and the bufinefs of exchange, is very confiderable. To this prodigious extent of foreign commerce may be added the manufactures, which, though carried on in other towns of Holland, are alfo more or lefs practifed here, excepting only Delft ware. A multitude of hands are employed in all linds of tapeftry: there are numbers of mills for fawing all forts of wood; others to work and polifh marble;' powdermills, fnuff-mills, and for drawing oil from feed; refineries for fugar, falt, cinnamon, borax, fulphur, yellow wax, \&c.
Haerlem, 10 miles weit of Amfterdam, is a large and populous city, and a place of good trade; for, befides the fine linen wove here, they draw vaft quantities from the neighing provinces of Groningen, Friefeland, and Overyflel, from the country of Cleves, and even from Silefia; all wbich are bleached at Haerlem, and receive that beautiful white fo generally admited, and for which the waters here have a parficular quality hardly to be met with elfewhere. They alfo manufaclure here plain and flowered velvets, gold and filver fuffs, rich and light filks, gauzes, \&c.
Leyden is advantageounly fituated, in the middle of the other cities of Holland, and is furrounded with canals. There is here an annual fair, which begins on Afcenfion-Day, and continues a whole week
There is a woollen manufactory carried on here in all 'it's branches of broad and narrow cloth, camblets, ferges, druggets, \&e but that of cloths is very much decayed of late, their trade to Turkey and the Levant being almoft loft, as well as that of England, and engrofled by the French, their common rival.
DeLfT is a large and ftately city, and is famous forit's fine earthen ware, made in imitation of china, and called Delft ware. Here are alfo a great many brewers, who make a vaft quanity of excellent beer, which is fold in the villages round. They have likewife a few clothiers, employed in the woollen manufactory.
Rotterdam is feated on the north bank of the Maes. The canals which run through this city are fo very broad and deep, that thips of the greateft burden lade and unlade at the merchant's doors.
This city is in poffeffion of the trade to Great-Britain and Ireland, almoft to the exclufion of all the reft. It's commerce to France is likewife very confiderable, and much fuperior to that of any other town in the province; it's trade allo to the Eaft and Welt-Indies, and to the Levant, Italy, Spain, and Portugal, is confiderable.
The glafs-houfe here is one of the beft in the Seven Provinces: it makes abundance of glafs toys and enamelled bowls, which are fent to India, and exchanged for China ware, and other oriental commodities.
Schienam is a fmall but populous town, where they make a valt quantity of fifhing-nets for their herring buffes.
The Briel ftands in the ifiand of Voorn, near the mouth of the Maes. This town has a convenient port, which brings it a pretty good trade, and makes it populous.
Dordrecht, and by abbreviation DORT, is a large, tich, ORDRECH
and populous city, and was formerly famous for the Englifh trade, as it is now for Rhenifh wine, which is brought down the Rhine by a very cheap and commodious tranfport; and a valt quantity of tiriber is fent from Germany in foats down that river, directly to this city, from whence it is diffrbuted, into other parts of Holland. The beft linen thread is fpur here, and they have feveral refiners for falt, and now and then an Englifh fhip unloads at Dort; and the magiftrates omit nothing that may poffibly encourage our couritrymen to return thither; but at prefent there is no appearance that they wilh ever recover the Englih trade from Rotterdam.
Gorcum is a neat well-built city. They have a daily market for corn, butter, cheefe, fowls, wild ducks, and other provifions, brought thither by the river Ling, on the mouth of which it ftands, from the country of Betau in Gelderland which they fend by the Maes into Holland, Zealand, and adjacent countries.
Schoonhoven ftands on the river Lech, and is chiefly famous for the great quantity of falmon catched here, of which they have a very good trade; and they have confiderable advantage by herfing-fifhing.
Gouda, Gauda, or TER-Gow, is feated on the fmall river Gow, and the Yeffel, which, about five miles lower, falls into the Maes. There were formerly here 350 brewhoules which furnifhed Zealand and a great part of Flanders with beer ; but that branch of trade is dwindled almoft to nothing and their chief manufaclures at prefent are of cordage, and particularly of pipes, which are the neatef in the world, and of which they have a very extenfive trade. They make, alfo, in the neighbourbood of this city, a valt quantity of bricks and tiles.
In North Holland, or Weft Friefeland are
SARDAM, at the mouth of the river Saren; it is but a village, yet deferves mentioning, for it is very populous and large and fo remarkable for fhip-building, and well tored with fhip carpenters, that they build here above 300 veffels a year and thefe carpenters, if they have but two months notice, will undertake to build, during the whole year next following, a man of war every, week ready to launch. This is their chief trade, by which their town is grown very rich.
Edam, at a fmall diftance from the Zuyder Sea, to which it has a fmall channel, which makes a pretty good haven. It's chief trade is hip-building, and making excelleht cheefe, with a red rind, much like our Chemire cheefe.
Alcmaer is a beautiful town, furrounded with pleafant gardens and rich paftures. From the milk of their numerous herds of cows they make vaft quantities of cheefe and butter, which inriches the town.
Hoorn, frtuated on a bay of the Zuyder Sea, is a pleafant, rich, and large town; the trade of it confifts chieny in butter and cheefe, great quantities of which they export to Spain and Portugal, and other parts, efpecially at their annual fair in the month of May. They have alfo a confiderable trade in Danifh cattle, which, being broughtlean here, are fattened in the adjacent paftures, and then dreve to the other places in Holland. They have alfo here a good trade in building thips, which makes it a rich and fplendid town, having befides a thare in the whale-fifhery. Here is one of the fix chambers of the Dutch Eait-India, company : the chamber of North Holland for the Weft-India company is alfo fettled here.
Enchuysen fands on the Zuyder Sea the harbour is one of the beft in this country. They build many fhips here, drive a great trade in herring-fifhing, and fend large fleets into the Baltic, and other places; by which, as alfo by their refining falt from Britany in France, the city is in a very founhing condition.
Medenblick lies on the Zuyder Sea, feven miles north-weft of Enchuyfen. The town is fmall, but has a noble harbour, capable of containing 300 large veffels. The chief trade of the inbabitants confifts in timber, which they fetch from Norway, and other places in the Baltic. The neighbouring country abounds in excellent paftures; where they breed a prodigious number of cattle: See our articles Flanders, Dutch East-Iñia Company, Dutch West-India Company, Netheriands.

An account of the Bank of Loan of Amfterdam, commonly called the Lombard.

This houfe was firf built as amagazine for the ufe of the poor inhabitants, and was finifhed in the year 1550 , and made ufe of the igth of Augult, and in the year 16I4; and then the following refolution was taken by the magiftrates of Amfterdain:
6 Whereas the fix-and-thirty lords of the council of Amfer' dam have thought it fit and ufeful that the table of loans ' fhall be fupported by the city, and belong to it; and that - alfo the houle of the poor inhabitants, fituated on the Old - Side, fhall be appropriated for this: therefore have the lords, ' the burghermafters of this city, at the defire of the mafters ' of the faid houfe, given 2000 guilders a year, during the ' time the aforefaid houfe hall be made ufe of as before-men' tioned; to begiry on the firft of May, 1014. And the lords - burghermalters promife, on the part of the city, to caufe 12 D
the faid 2000 guilders to be paid to the mafters of the afore' named boufe. In witnefs of which, the feal of the city - was hereunto affixed, January 19, $16155^{\circ}$

The government of Amfterdam hearing daily the melancholy complaints of their poor inhabitants, and how they were forced, in time of want, and when oppreffed by poverty, to pawn their goods to the pawnbrokers and lombards, and were vexed by large unreafonable intereft, have refolved (in order to free them of fuch a confuming intereft) to erect by the city fuch a bank of loan, or Lombard, as the above-cited refolution fets forth.
This refolution being taken by the thirty-fix counfellors, they ordered the faid houfe to be fitted up for it on the 25 th of April, 1614, and prohibited other perions to lend in this manner, either in public or private, trufting the direction of this bank to two commiffioners, the firf of which were Mr. Francis Henry Oetjens, formerly burghermafter, and Mr. Jonas Cornelius Witfen, formerly a judge. Thefe were chofen by the burghermafters; and the faid commiffioners were either yearly changed, or continued at the pleafure of the magiftrates.
The city increafing in extent and number of inhabitants, there was another very large houfe built; and it was, in the year 1669 , joined to the abovefaid houfe. Since the enlargement of the buildings there is a place made on the fide of the canal, where the goods that have been left a year are publicly fold; and in the front of one of thefe building is wrote, On the 2gth of April, 1514, was the firf pawn brought in here.
The cormmiffoners, of the city fit in the new building, and fee none but the great pawns; the leffer being managed by a fervant appointed oy them, at a building in the middle of the ftreet, where a gate of ftone is built, with a bafle relief, reprefenting the manner of borrowing, \&xc. The lenders fit every day in the morning, from eight till eleven, and, in the afternoon, from two till four o'clock, to lend on all pawns, and to releafe them, except on Wednefdays in the afternoon.
The above-named commiffioners meet every morning, from nine till eleven o'clock, and no longer, and then enter into a boak all the pawns on which a hundred guilders and upwards are lent, and which are called the great pawns. They alfo keep the account of the cafh themelves, and keep all thefe large pawns in their own cuftody, fo that none can come at them without their confent: they have alfo in their own keeping the great cheft with money; and in their fervice a perfon who has the direction over all the inferior fervants; alfo a calhier, who is called the great cafhier, and an appraifer of the jewels, gold, and filver, who is obliged to appraife thefe treafures at his own peril; for, if the bank fhould hereafter lofe by it, then he muft make it good, for which he gives fufficient bail.
The above-named great caflier gives fecurity for rio,000 guilders. The fervant who tooks after the goods gives bail for 4000 guilders. There is, befides this, an appraifer of woollen goods that are valued at above 100 guilders; and the cahier makes tip his accounts with the commiffioners every month. If he has then much money in his hands, he is obliged to deliver it up to the commiffioners; if he has but little, then they give him what they think neceflary; and thefe commiffioners deliver up their accounts every year to the burghermafters, who appoint alfo the under-fervants; that is, as far as it regards the great bank of the pawns of above 1000 guilders each pawn.
The little bank has a cafhier ; four lenders, who lend on all pawns that are not of gold or filver, according to their orders; three releafers, to whom all who cone to redeem their pawns muft addrefs themfelves. Thefe have likewife a book-keeper, or comptroller, and each of them finds fecurity for 400 guilders. Thefe lenders tax all fmall paxins under 100 gdilders; and thofe who pawn their goods receive a note, on which the name of the owner, and the fum, or the value, is wrote, as alfo the quantity of the things; and fuch a note is alfo hung to the pawn. When this bas been flewn to the calhier, then he gives the money upon it, and enters it in the book, which he daily examines, and checks with the book-keeper's book. All thefe goods are fet down by the book-keeper, and he makes each chamber (which are divided according to the values) debror to the cafh. Here is alfo a chamber for filver, from 95 guilders to 25 ; and one from 25 guilders to one guilder.
The chamber of copper, pewter, and pictures, belong to the firf chamber of filver; there are befides chambers for woollen and linen goods, as one from ninety-one to twelve guilders; one from twelve to five; from five to three and to two guilders; and one from two guilders to two ftivers, or pennies. Each of thefe chambers have a keeper of the pawns, or an overfeer, who, when any one comes to redeem his pawn, goes with the above defrribed note to the redeemer, who fends it up to the keeper of the pawns, who muft then inmediately deliver it up. The chamber or ware houfe-keepers mult anfwer for all the pawns delivered inte their cuftody, and, if any are mifing, then they mult mak. them good. All thefe pawns lie in order, each in their pro
pet chamber, and every one according to it's month and day, that fo they may be the eafier found.
All the notes for the pawns are wrote in cypher, or unknown characters, and none can read them but thofe who have the key, that fo all deceit and counterfeiting may be prevented. All thefe chambers are kept very neat and clean by the pawnkeepers, and they are every day aired by opening of the windows. This bank has twelve watchmen to prevent all thieving; thefe walk about all night, and the fervant of the bank (who lies there) is the captain of them, becaufe the city muft make good all that is ftolen. All thefe fervants are under oath of fidelity and fecrecy.
This being the foundation of this very laudable work, it was neceffary, in order to keep it up, to fupport it by good decrees, which were made on the 25 th of April 1614 , and on the 8th of July 1616 .
All pawns worth lefs than a hundred guilders, or about ten pounds, pay every week one fixteenth part of a ftiver, or one fixteenth of a penny intereft. Thofe from a hundred to four hundred feventy. five guilders, at the rate of eight in the hundred in a year; and all pawns of five bundred guilders and upwards, fix in the hundred in a year. To be thus 40 derftood, that, at all times when the owner will redeem his pawns, in that cafe, the weeks, months, and fix weeks catered into thall be counted, and they do not lend by days.
This city is fecurity for all pawns that are delivered into the hands of thefe managers, who are obliged to reftore the pawns to thofe who bring the notes, and pay the fum borrowed with the intereft, without taking any notice whether they be the real owners or no, unlefs it appeared to them that there was a manifelt deceit; for, in that cafe, all folen and intrufted goods are reftored to the owners, provided they give fecurity to the fatisfaction of the diectors.
If it hould happen that the pawns depofited in this houie fhould be loft by fire, or other ftrange accidents, in fuch a cafe, the owners of the pawns on which from a hundred guilders to five hundred guilders and upwards are lent, muil bear and fuffer the lofs, and they are befides obliged to pay the fum they have borrowed on them.
All pawns that are brought into this houfe, and have lain there a year and fix weeks without paying the intereft that is due, unlefs that the owners have agreed with the directors, are fold either by auction before the door, or within by brokers, which is done four times in the year. Though the overplus money goes back to the proprietors, yet the interclt goes on to the prejudice of the owner, 'till the money for which the pawns are fold is received. Thofe whofe goods are thus fold, are obliged to demand and to receive this money; out of which the charges of the fales are dedufted, within three years, according to the orders of the 24 th of March 1616, elfe the faid furplus goes to the profit of the poor of the city. And thofe who thall after that time demand the faid overplus money, fhall be deprived of all right to it; nor fhall the overfeers of the poor, who may recene to it; nor thall the overfeers of the
this money, be obliged to reftore it.
In order to prevent all damages or loffes by fales, an auctioneer is appointed, who is chofen out of the moft ikilful oticers of this bank, and who gives fecurity that the goods fold Mall be paid for, before he lets them go; and he has from the city five in the hundred for his trouble, on condition that he fhall anfwer all loffes.
If it thould happen that ftolen goods were brought into this bank of loans, and money was advanced thereon, then the right owner cannot have his things back without returning back the money, unlefs he had given notice to the bank that fuch goods were folen before any money was lent on them: in that cafe, the goods are retained and reftored to the owner; for which be is to give fomething to the poor's box, of which the burghermaters have the difpofal.
On the zoth of January 1682, all this was confirmed and explained by a placart, or fort of proclamation.
When any perfon lofes his note, and comes to claim his pawn, then he muft give fecurity, to the fatisfaction of the directors; and the bail is attacked by a fudden execution, in cafe any fraud be difcovered.
On the 24th of April 1682, it was ordered by the government, that none fhould lend money on any moveable goous; and alfo that no private perfon thall be allowed to keep a lombard-houfe, (which anfwers to our pawn-brokers hops); and that no perfon whatever thould lend lefs than a hundred guilders on goods, nor then take more than four in the hundred for the intereft of a whole year.
The government of the city having found, that, notwithftanding their repeated orders, many perfons did fecretly lend money on pawns at a high intereft, and kept lombard-houfes to the great prejudice of the bank of loan, and allo to poor people, who were quite exhaufted by them, therefore they publifhed, on the 27th of January 1684 , the following order: I. That hereafter no perfons whatfoever thall be allowed to make it their bufinefs to lend money on moveables ufually brought into the bank of loan, at a higher intereft than at the rate of four in the hundred in the year; and that thofe who fhall be conviated to have elected a lombard in their houfes thall not only be deprived of all right or aetion

## H O L

againft the owners or givers of fuch pawns；who fhall have power to challenge them and retake them at any time，with－ out reftoring the mpney borrowed，or the intereft；but fuch lenders hall befides be fined in a fum equal to the fum they fhall have fo lent；and，befides that，according to the cir－ cumftances，they fhall undergo a farther puninhment，ac－ cording to the will and arbitration of the judges．
11．That thofe who heretofore ufed to make fuch loans，and continue to do it，be obliged，after the time for which the mo－ ney is lent hall be expired，to refore all the pawns to the owners，and not continue them at a higher intereft than at the rare of four in a hundred in a year，or to bring them to the bank of loan，where they will receive what is due． Thofe who thall fail to follow this order，fhall be fubject to the penalties mentioned in the firlt article．
III．That hereafter no perfon whatigever fhall prefume to lend lefs than a hundred guilders on any pawn，be it at a high or at a low intereft，on the above named penalty．
IV．That this order may be the better obferved and executed with greater vigour，the lords of the government and jultice have ordered all the officers and fervants of the juftice，as alfo all the officers of the bank of loan of this city，to in－ form them from time to time，whether this order be in any manner infringed or brake，and，if they find it is not ob－ ferved，they hall inform the lord high officer of this city of it，and he is to profecute in that cafe；and thofe who are convicted by half，or imperfect proofs，fhall be obliged to clear themfelves by a folemn oath，and fwear that they have not lent any thing in that manner；and，in default of this， or if they refule to take the faid oath，they fhall be con－ demned into the penalties here above－mentioned．One third of all thefe forfeitures thall go to the informer，though he fhould be the perfon that berrowed the money；one third to the lord high officer，and the other third to the hofpital of the children fupported by alms．
The bank was firft ereeted by people who raifed a fum of money by fubicription，at fix in the hundred；which was afterwards reduced to four，and then to three and a half in the hundred；and，in the year 1682 ，the city redecmed it， and became entire mafter of this bank of loan．It confifted in a fund of a million of guilders．
Two watchmen fand continually centinel in two centry－ boxes before the warehoufes，and they have dark lanthorns． This bank appoints a good number of brokers，whofe em－ ployment is wrote on a board before their door，and there thofe who do not care to difcover their want or poverty，can go and have their goods brought to the lombard by the faid brokers，who keep it fecret，and do this fervice for a fmall＇ matter，and fecurity to the city for their fidelity．

REMARKs．
What an advantage might it have proved to the city of Lon－ don，if that had been blefled with a Charitable Cor－ yoration，as wifely conftituted and as equitably conducted， as the lombard of Amfterdam has been？

## Of the Monies and Exchanges of Holland．

The Hollanders keep their accounts in florins or guilders， ftivers and penings．The florin $=20$ ftivers，the ftiver $=8$ duits or 16 penings，or 2 deniers gros．
The rixdollar or patagon $=50$ fols，or deniers gros．It was regulated in 1606，that they fhould be of the ftandard of $10 \frac{\pi}{2}$ deniers，and of the weight of $53^{6}$ grains；and in 172 I ，that the ducat of gold fhould be of the ftandard of $23 \frac{1}{3}$ carats，weighing 64 grains $=5$ florins bank．
The pound gros $=6$ florins，or 20 fols gros．
The fol gros or fchelling $=6$ common fols，or 12 deniers gros，the gros $=8$ penings．
There are two forts of money，current and bank；all bills of exchange ate paid in the latter；the difference between them is from about 3 to 6 per cent．according to the ftate of commerce and money tranfactions relating thereto，and this difference is called the agio．

## Case I．

To reduce Current into Bank Money．
Suppofe the agio 5 per cent．fay，

## Operation

If 105 florins current give 100 bank，what will 1628 florins 6 fols 4 penings current give？

Of the Exchange of Holland on France．
To reduce 2133 florins 2 fols bank money of Holland，into crowns，fols，and deniers of France，exchange at $55 \frac{3}{4}$ de－ niers gros，per crowns of 60 fols Tournois．

Case II，
Operation．

By 443） 682592 eighths（to be divided，give 1540 crowns， 50 fols， 4 deniers．

## Instruction．

Multiply the florins by 40 deniers gros，the value of a forin， adding 4 for the two fols，the fol being worth 2 deniers gros； and reduce the product into eighths，the fame denomination with the price of exchange；and divide the fum by the price，and the quotient will how how often the one is contain－ ed in the other，which is the anfwer， 1540 crowns，with a remainder of 372 ；which multiplied by 60 fols，the value of a crown，and divided by the fame divifor，it gives 50 fols， and a further remainder of 170 ，to be multiplied by 12 de－ niers，the value of a fol ，and divided by the like divifor，it produces 4 deniers．

## Proof．

1540 Crowns， 50 fols， 4 den．at $55^{3}$
$55 \frac{3}{8}$

## 7700 7700

385 for $\frac{2}{8}$ the $\frac{1}{4}$ of 1540
$192 \frac{1}{2}$ for $\frac{1}{8}$ the $\frac{5}{2}$ of $\frac{2}{8}$
$27 \frac{3}{\frac{3}{8}}$ for 3 ofols the $\frac{1}{2}{ }^{\frac{8}{8}}$ of the exc． $55^{\frac{3}{8}}$
${ }^{2} 9 \frac{5}{8}$ for 10 fols the $\frac{1}{3}$ of ditto
$4|018532| 4 \quad \begin{aligned} & 4 \frac{9}{8} \text { for } 5 \text { fols the } \frac{1}{2} \text { of } 10 \\ & 4 \frac{4}{8} \text { for } 5 \text { fols ditto }\end{aligned}$
Fl． $2133: 4$ den．$=2$ foll $\frac{3}{8}$ for 4 deniers $\frac{5}{2} \frac{5}{5}$ of 5 fols
$85324 \frac{3}{8}$ with the other fmall fractions
［above，allow $\frac{3}{8}$ more．

## Instruction．

Multiply the fum by the price of exchange， 55 deniers，and for the $\frac{3}{8}$ take the aliquot parts as directed above．For the 50 fols 4 deniers，make the divifions alfo as explained in the operation．－Add the whole together，and the fum will be deniers gros，the fame denomination with the exchange，by which you multiply：this fum divided by 40 ，the deniers gros in a florin，the quotient gives florins， 4 deniers $=2$ tivers，the proof．

## H O L

Of the Exchange of Holland upon London.
CASE III.

To reduce 2580 florins 10 fols bank of Amfterdam, into fterling money of England, exchange at $34 \frac{1}{2}$ fols gros of Holland, per pound fterling.

OPERATION.
2580 Florins io fols at $34 \frac{1}{2}$
$\frac{40 \text { deniers gros }}{\substack{12 \\ 200 \\ 20 \text { for the } \frac{t}{2}}}$
414) 103220 den. gros (1. $249: 6: 5$ therling, for which the draught is made on London.

## Instruction.

Reduce the fum and price of exchange into deniers gros, and divide the former product by the latter, and the quotient is the anfwer. 40 Deniers gros making a florin, as in thepreceding cafe, you multiply thereby : for the 10 fols you add zodeniers gros, 2 being $=1$ dol; this gives the deniers gros contained in the fum. For the $\frac{1}{2}$ fol in the price of exchange take in 6 deniers, 12 deniers gros making i fol, and divide the product of the fum by that of the price: the remainder, I 34, multiplied by 20, the fhillings in a pound fterling, and divided by the divifor, gives 6 fhillings, with a further remainder of 196 , which multiplied by I2, the perice in, a fhilling, gives 5 pence fterling.

PRoof.

1. $249: 6: 6$ fterling, exchange at $34 \frac{x}{2}$ $414=11$. fterling
${ }^{-12}$ 414 deniers gros
996

263)909200 eighths ( 3457 marks 6 deniers lubs bank, for which the draught muft be made upon Hamburgh.

## Instruction.

Multiply the fum given by 40 , becaufe the mark lubs is half one dollar, and reduce the fame into eighths, and alfo the exchange of $3^{2} \frac{7}{8}$ : then divide the product, 909200 , by 263 , which gives a quotient of 3457 marks: for the remainder, 9 , multiply by 16 fols, the value of a mark, and, as the product is lefs than the divifor, multiply by 12 penings, and divide by the fame divifor, and you have 6 deniers, or penings, the anfwer, in Hamburgh money.
For proof hereof fee the article Hamburgh, the exchange thereof upon Holland.

Of the Exchange of Holtand upon Spain.
C ASEV.
To reduce 1550 florins, 15 fols, 8 penings, bank money of Amfterdan, into ducats, iols, and deniers, and afterwards into rials and marvadees, old plate, exchange at $97 \frac{1}{4}$ deniers gros, per ducat of Spain of 375 marvadees.

## H O L

Oferathon.
1550 florins, $15 \frac{1}{2}$ fols, at
$\frac{40}{6203 \mathrm{I}}$
$\frac{97}{389}$
quart.

Imuft be made in Spain.
89) 248 I 24 quart. ( 637 ducats in fols, for which the draught II rials I marvadee

| 637 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 637 |  |  |  |  |
| 18 rials 25 mar, for 637 mar. divided by 34 |  |  |  |  |
| 5 | 17 |  | Io the fols $\frac{1}{2}$ |  |
| 2 | 25 |  | 5 the fols ${ }^{\frac{2}{x}}$ |  |
| I | 3 |  | 2 the fols ${ }^{\frac{4}{4}}$ | $\int$ rials |

7035 rials 2 mar. old plate.

## Instruction.

Multiply, by 40 deniers gros, the 1550 florins $15 \frac{1}{2}$ fols, as in the former cafe, and take in 31 for the $15^{\frac{5}{2}}$ fols: reduce the product, 62031 , into quarters, and alfo the price of exchange, $97 \frac{1}{4}$; (if the fraction had been eighths, you muft have reduced the fame into eighths: divide the product of the fum by that of the price, and the quote will be 637 ducats, with a remainder of 33 I ; which being multiplied by 20 fols, the imaginary fubdivifion of the ducat, and divided by the fame divifor, it gives 17 fols, and a further remainder of 7.-This multiplied by 12 deniers, the value of a fol; but the product, 84 , being lefs than the divifor, 389 , it gives no deniers; for the proof whereof, fee the article Spain, the exchange thereof on Hollanó.
To reduce thefe 637 ducats 17 fols, into rials, they muft be multiplied by 11 rials i marvadee, the value of an exchange ducat, and it will produce 7035 rials 2 marvadees; old plate, to be received at Madrid.

## Advertisement.

Although the fubdivifions of the ducat are rials and marvadees; and not fols and deniers, it is better, for the facility of computation, to multiply the remainder by 20 and 12, to obtain fols and deniers; becaufe, if you multiply the remainder by 1 I rials i marvadee, and by 34 , the operation would be very troublefome for difpatch in bufinefs: but, when you may require a quotienc of rials and marvadees, and not of ducats, the following is the method:
Take the preceding 6203 I deniers gros, at $97 \frac{1}{4}$ deniers gros multiplied by 375 mar. $=1$ duc. 34 mar. $=1$ rial

$6613) 465232.50$ divid. (7035 rials 4 mar, old plate, the fame as before produced.

## INSTRUCTON.

Multiply the fum, as above, by 375 marvadees, the value of a ducat, and afterwards by 2 , for half marvadees.- Multiply alfo the exchange, $97 \frac{1}{4}$, by 34 marvadees, the value of a rial, and afterwards by 2 , to produce half rials, taking in the one half.-The quotient is 7035 rials, with a remainder of 795 ; which multiplied by 34 , and divided as before, it gives 4 marvadees, two more than by the other method, which is with greater precifion, though the other is accurate enough for bufinefs.

## Of the Exchange of Holland upon Genoa.

CAse VI.
To reduce 1325 florins, 5 fols, 8 penings, bank money of Amfterdam, into piafters of 5 livres, or 20 fols d'or, and afterwards into livres, fols, and deniers, bank money of Genoa, exchange at $92 \frac{1}{4}$ deniers gros per piafter.

Oferation.
1325 florins, 5 fols, 8 penings, or II demi-fols 40 deniers gros, or demi-fols
5301Igros Exchange $92 \frac{1}{4}$

4
369 quarters-divifor
369)212044 dividend ( 574 piafters, 12 fols, 10 deniers bank, for which the draught mult be made.

## H O L

## Instruction.

Reduce the fum and the price of exchange into quarters of deniers gros, and divide the product of one by that of the other, and you have a quote of 574 piafters, with a remainder of 238; which multiplied by 20 fols dor, the value of the piafter, and divided by the fame, gives 12 fols, and a remainder of 332 ; which multiplied by 12 deniers d'or, and divided by the like divifor, you will have ro deniers d'or to be received at Genoa.-For the proof whereof fee the article Genoa, for the exchange of Genoa on Holland. But, if you would reduce the faid florins at once into liras, fols, and deniers bank, inftead of operating as above, and afterwards multiplying the 574 piafters, 12 fols, 10 deniers, by 5 liras, the value of a piafter, to have 2873 liras, 4 fols, and 5 deniers bank (which is too tedious) you may multiply the product, 5301 x deniers gros contained in the fum, by 5 liras, the value of a piafter, and afterwards by 4 , for the quarters, the produt whereof, 1060220 , being the dividend, and the quarters in the exchange, 369 , the divifor, the quotient will be the fame, 287 ? liras; and for the remainder, 83 , multiply by 20 and 12 , and divide by the common divifor, 369 , and you will have the 4 fols 5 deniers̄.

Of the Exchange of Holland upon Portugal.
Case VII.
To reduce 1242 florins i4 fols, bank money of Amfterdam, into crufadoes and rees of Portugal, exchange at $44 \frac{3}{8}$ deniers gros per crufado of 400 rees.

> OPERATION.

## Instruction.

Reduce both the fum and the price of exchange into eighths of deniers gros, and divide the product of the fum by that of the exchange-price, and you will have II 20 crufadoes, with a remainder of 64 ; which being multiplied by 400 rees, the value of the crulado, and divided by the 355 , gives 72 rees, to be received at Lifbon. For proof hefeof fee Portugal, for the exchange thereof upon Holland.

Of the Exchange of Holland upon Leghorn.

## Case VIII.

To reduce 1832 florins 7 fols, bank money of Amfterdam, into piafters, fols, and deniers of Leghorn, exchange at $86 \frac{7}{2}$ deniers gros per piafter of 20 fols d'or.

> Operation.

173) 146588 demi-deniers ( 847 piafters, 6 fols, 7 deniers, for which the draught thould be made upon Leghorn.

## Instruction.

Reduce into half deniers gros both the fum and the price of the exchange, and divide the product of the former by that of the exchange-price, and you have the piafters, with 57 for a remainder; which being multiplied by 20 fols, the value of a piafter, and divided by the fame divifor, you will have 6 fols, and 102 remaining. - This multiplied by 12 , and divided by the like, gives 7 deniers, to be received at Leg-horn.-For proof hereof fee Leghorn, the exchange thereof upon Holland.

Of the Exchange of Holland upon Ventce.
Case IX.

To reduce 23 fo forins, ro fols, 8 penings, bank money of Amfterdam, into ducats, fols, and deniers, bank money of Venice, and into liras, fols, and deniers, of the faid money.
Vol. I.

## H O L

Operation.
2340 florins 10 fols $\frac{x}{2}$, at $-88 \frac{1}{4}$ deniers 40 deniers gros, or demi-fols

353 quart.-divifor

|  |  |
|  |  |
|  |  |
|  |  |
| 6577: 6:10 to be received at Venice in bank. |  |
|  |  |

## Instruction.

Reduce the fum and the price of exchange into quarters of deniers, and divide the product; 374484 , by 353 , and you will have a quote of 1060 ducats, with a remainder of 304 : which multiplied by 20 imaginary fols, by way of facility of operation, and divided by the faid divifor, it gives 17 fols, and 79 for a remainder; which multiplisd by I2 deniers, the value of the faid fol, and divided by the aforefaid divifor, produces 3 deniers; the proof whereof you will find under the article $\forall$ enice, the exchange thereof upon Holland
To reduce the ducats into liras, mutiply by 6 liras 4 foldi, the value of a ducat, as above, and you will have the 6577 -liras, 6 fols, to deviers bank.
Although the duats are of 24 grom, I have neverthelefs reduced them by 20 and 12 , for reafons given in the exchange of Holland upon Spain.

Of the Exchange of Holland upon Geneva.
Case X.
To reduce 1434 florins I2 fols, bank money of Amfterdam, into crowns of 3 livres, fols, and deniérs, and allo intolivres, fols, and deniers, current money of Geneva, exhange at $90 \frac{1}{2}$ deniers gros per crown of 60 fols of Geneva.

Operation.
1434 florins 12 fols bank, at $90 \frac{x}{2}$
mul. by 40 den. gros, or demi-fols 2

$$
\begin{array}{r}
573^{8} 4 \\
2
\end{array}
$$

I8I demi-den-divifor
181) i 14768 demi. ( 634 crowns, 4 fols, 8 den. for which the draught fhould be 3 made on Geneva.

> 1902 livtes, 4 fols, 8 deniers, current mo-
> ney of Genera.
> Ins, truction.

Reduce bath the fum and price of exchange into demi-deniers gros, and divide the former by the latter product, and you will have a quotient of 634 crowns, and 14 a remainder; which multiplied by 60 fols, the value of the crown, and divided by the 181 , you will have 4 fols, with a further remainder of 116 ; which multiplied by 12 deniers, the value of a fol, and divided by the faid divifor, it gives near 8 deniers, to be received at Geneva; which may be eafily proved, if the examples before given are underfood.
To find the liyres, you need only multiply them by their value of 3 livres; and, if you would reduce the faid florins directly into livres, they muft be multiplied by 240 common deniers, the value of the livre of Geneva, and the product divided by the fame, divifor, 18 I , the quotient will be the fame fum of 1902 livres, 4 fols, 8 deniers, with the trifing difference of near a denier.

## Their wine meafure.

$2 \frac{1}{2}$ Virges or virtules $=1$ fteekon, 2 feekons $=1$ anchor 4 anchors $=1$ aum, 14 aums of Amfterdam $=1$ voedar. N. B. The voedar is a veffel ufed in Germany, for keeping the wines that grow upon the Rhine and the Mofelle.
2 Pints $=1$ mingle, 2 mingles $=1$ ftoop, 8 ftoops $=1$ fteekon, 6 mingles $=1$ virge for wine, and $6^{\frac{3}{4}}$ ditto $=1$ virge for brandy, upon the Rhine and Mofelle.

## Their brandy meafures.

It is common to put French, Spanif, and Portugal wines into pipes, butts, and other pieces; fome of which contain at Amfterdam, from 60 to 90 virges: therefore 'tis ufual with the Hollanders to reduce thefe meafures into butts, by the following reckoning.
27 Virges of Coniac, Monguion, Rochelle, and the ine of Rhé. 29 Ditto of Nantz, and other places in Britany and Anjou. 32 Ditto of Bourdeaux, and the other places in Guienne. $3_{2}$ Ditto of Amfterdam, and other places in Holland. 30 Ditto of Hamburgh and Lubec.
27 Ditto of Embden.
At Bruges they call the virges feftiers, reckoning i6 foops to a feftier, and they fell it at fo much a ftoop.

## Meafure of falt.

Salt is sold in Amfterdam by a great hundred of 404 fchep. pels, which is reckoned 7 lafts, or 14 tun, or $23,000 \mathrm{lb}$. weight, $=208$ facks, and is fold by the pound Flemilh: I $\frac{\rho}{2}$ lafts of Amfterdam $=$ the great hundred of the ille of Rhé in France.

## Meafure for grain

Three fcheppels $=1$ fack, 4 fcheppels $=1$ muid, 36 facks, or 27 muids, $=$ I laft, weighing 4000 Jb . weight, and in London is about $10 \frac{1}{4}$ quarters.
The land laft is not the fame in all places, there being fome difference introduced by cuftom, in the feveral countries in Europe.
A laft of wheat, in Amfterdam, commonly weighs between 4200 and 4300 lb .
Ditto of rye, between 4000 and 4200 lb . Ditto of barly, between 3200 and 3400 lb .
There is a duty upon wheat fold for the ufe of the inhabitanta of Amfterdam, of 131 florins 12 fivers per lait, befides brokerage and meetage, \&c. which the citizens and bakers likewife pay. The above, and fuch fort of goods, are compmonly bought and fold in Amfterdam, by che gold avin of 28 ftivers.
The laft of Amfterdam = in Paris ig fextiers, in Bourdcanx 38 bufhels, and 3 batts of Amiterdam $=4$ lalts of Rouen; the laft of North Holland is the fame as that of Amferdam. In Hoorn, Enchuyfen, Muyden, Naerden, and Weiop, a laft is 22 muids, or 44 facks of 2 fcheppels each.

## H O L

## HOL

In Haerlem they reckon 33 facks to the laft; their fack is 3 fcheppels, 4 of which make the hoedt of Rotterdam, and 14 of thofe facks make one hoedt of Delft.
In Alchmear, in North Holland, a laft contains 26 facks. In Leyden, they reckon 8 fcheppels to a fack, and 44 facks to a laft.
In Rotterdam, Delft and Schedam, they reckon 29 facks to a laft, 3 fcheppels to a fack, and $10 \frac{2}{3}$ facks to a hoedt; the laft of thefe places are two per cent. more than that of Amfterdam.
In Tergow, they reckon 28 facks to a laft, 3 fcheppels to a fack, and 32 fcheppels to the hoedt.
In Utrecht, they reckon 25 muids or facks to the laft, and $10 \pm$ facks to the hoedt of Rotterdam.
In Montfoort, Yfelfain, and Vianen, \&c. they reckon 2 facks to a muid, and 18 muids to a laft.
In Friefeland, Lewarden, Haerlingen, and in other towns in Weft Friefeland, and at Groningen in Eaft Friefeland, they reckon 33 muids to the laft.
In Gelderland and the county of Cleves, viz. in Nimeguen, Arnheim, and Doerburgh, they reckon 4 fcheppels to a mouver, 'and 2.2 mouvers to a lafl, and 8 mouvers make one hoedt of Rotterdam.
In Thiel, they reckon 33 fcheppels to a laft.
In Ruremond, they reckon 68 fcheppels to a laft.
In Haerderwick, they reckon II muids equal to 10 -muids of Amfterdam.
In Over-Yffel in Champen, 25 muids are equal to a laft, and 9 muids $=1$ hoedt of Rotterdam.
In Zwell, 9 muids $=1$ hoedt of Rotterdam.
$\ln$ Deventer, 4 fcheppels $=1$ muid, and 36 muids to a laft.
The lafts of Zealand. In Middleburg 4 facks $\frac{1}{2}=$ to a laft, the fack being not much more than 2 fcheppels.
In Flufhing, Zurickfee, Brill, and fome other places in the neighbourhood, $2 \frac{7}{2}$ fcheppels $=$ to a fack.
In Liege, 12 fextiers $=1$ muid, 8 muids $=1$ latt.
In Tongres, 15 muids $=1$ laft of corn, and $I_{4}$ muids $=1$ laft of oats.
The lafts of Brabant. At Antwerp, 30 virtules make a laft, and $37 \frac{1}{2}$ of their virtules make a laft of Amfterdam ; 4 mukens make a virtule, and 32 virtules make a fack of oats. In Bruffels, 25 facks make a laft of Amfterdam.
In Malines, 28 virtules make a laft of Ámfterdam.
In Lovain, 37 muids make a laft, and 8 halfters make a muid. In Breda and Steenberge, $33^{\frac{1}{2}}$ virtules make a laft of corn, 29 virtules a laft of oats, and 13 of thefe virtules make 18 facks, or i hoedt of Amfterdam.
In Bregenopzoom, 34 virtules make a laft of corn, and $28 \frac{x}{4}$ virtules a laft of oats.
In Boilleduc, $10 \frac{1}{2}$ mouvers, $x$ hoedt of Rotterdam.
The lafts of Flanders. In Ghent 2 halfers make a fack, 6 facks a muid, 29 facks, or 58 halfers, a laft of corn, and 19 facks, or $3^{8}$ halfters, a laft of oats.
In Bruges, $17 \frac{1}{2}$ hoedt make a laft of corn, and $14 \frac{1}{2}$ hoedt a laft of oats, the latter being equal to the laft of Amiterdam. $I_{n}$ St. Omer's 2 fcheppels make a razior, and $22 \frac{1}{2}$ raziors a laft.
In Dixmude, $30 \frac{\mathrm{r}}{2}$ raziors make a laft of wheat, and 24 raziors a laft of oats.
In lifle, 41 raziors make a laft of wheat, and 30 raziors a laft of oats.
In Dunkirk, 18 raziors make one hoedt of Rotterdam.

## Of oils and honey.

The oil olives are ufually kept in butts and pipes, containing from 20 to 25 fteekens; 16 mingles make a fteeken; 717 mingles, or 1434 pints, make a tun of oil in Amfterdam, which is there fold at fo many pounds Flemifh per tun.
Coarfe fifh oil is commonly kept in barrels, containing between 15 to 20 fteekens, and is ufually fold in Amfterdam at fo many florins per barrel.
Honey is kept in various kinds of veffels, both of wood and earth : in fome places it is fold by meafure, in others by weight. In Amfterdam, they fell it at fo many pounds Flemifh per tun, confifting of 6 tierces, or aums, and alfo by fo many florins per barrel, or by the hundred weight. The duty of weighing is 43 ftivers per 1000 weight; and this, as well as brokerage, is paid one half by the buyer, the other by the feller.

Of fome curious cafes, exemplifying the arbitration of the foreign excbanges, wherein Hoiland is concerned.
Suppofe that you are prefented with bills of exchange upon Naples, for which an exchange of 82 fols per ducat of 10 carlins is required.
To this fuppofition let us add another, which is, that before you receive thofe bills of exchange, you would know how many fols you can afford to give for every ducat, after having circulated them through feveral places, and paying $\frac{t}{2}$ per cent. provifion to each correfpondent through whofe hands the money fo circulates.
Let it be further fuppofed, that Naples which is the chief object of confideration, exchanges with Rome, by giving 124 ducats del regno for 100 Roman crowns:-that Rome
re:ains a provifion, andexchanges with Venice, by giving 6 crowns d'eltampe for 100 du ats bank money:- that $V$ nice exchanges with Amfled dam, by taking godeniers gros per he faid ducat, and alfo referves provifion money:-that Amfterdam exchanges with Madrid at 96 deniers gros per ducat, of 375 marvadees, and retains the provifion: ind, laftly, that Madrid exchanges with Lyens at 76 fois per piafter of 272 marvadees of plate, and retains provifion money.
Thefe things previcully fuppofed, the queftion is to find the anfwer above recured, according to that admirable rule of conjunction, practifed by the moft fkilful money-negociators in Europe.
In order to judge of the rationale of this operation, the reader is defired to confult what I have faid under the article Arbitration of Exchanges; alfo the article Exchanges, and fuch others to which I sefer from thofe heads.
The cafe, ftated according to the reafons there given, will ftand as follows:

Antecedents.
If4 Ducats Naples
Equality. Confequents.
$=92 \frac{r}{2}$ Roman crowns, provi-
$\beta$ Roman crowns $=\neq$ Crowns $\begin{gathered}\text { [fion deducted. } \\ \text { d'eftampe of }\end{gathered}$
64. Crowns d'eftampe $=99 \frac{1}{2}$ duc. bco. of $\begin{aligned} & \text { [Rome. } \\ & \text { Venice }\end{aligned}$
[provifion deducted.
$x$ Ducat bco. of Venice $=1 / 44$ Marchetti bco. of Ven. ró' Marchetti bco. $\quad=99 \frac{1}{2}$ Marchetti bco. provi[fion deducted.
124 Marchetti bco. $\quad=\not \mathscr{夕}^{6} 3$ Deniers gros bco. of
røб Den. gros bco. of Amft. $=99 \pm$ Deniers LAmterdam.
[vifion deducted.
gt Den. gros bco. of Amft. $=3 t\rangle \$$ Marvadees of plate, at
[Madrid. 100 Marvadees of plate $=99$ Marvadees provif. ded. ${ }_{272}$ Marvadees $=\underset{76}{ } 19$ Sols Tournois.
Then quere, How many of thefe laft fols will be equal to one ducat of Naples?

## Explanation.

The antecedents and confequents, being thus ranged, are abridged and cancelled, according to the axioms given under the before-mentioned article of Arbitration of ExChanges; and the product of all the confequents multiplied together for a dividend, and allo the product of all the antecedents multiplied together for a divifor, the quotient will give the anfwer 83 fols Tournois of Lyons per ducat of Naples.
The advantage, propofed to be reaped by this operation, is to difcover if the profit of a fol per ducat, that is fuppofed to be made, by the circulation of your money in this manner, will fufficiently anfwer the negociator's end in being out of his money: that it will not, is apparent at firf glance of the eye, if due attention be given to what I have faid under the before intimated articles; fo that it may be obferved, that the anfwer, produced by this operation, is a touchftone to the foreign banker whereby to regulate his conduct, upon occafions of the ike nature.

## Another Example.

To know the profit, by circulating of money as follows, in divers foreign places.
Suppofe you have 2000 florins bank money in a correfpondent's hands at Amfterdam, and would know if it is more profitable to draw directly at 56 deniers gros per crown of 60 fols, or to pals the net proceeds to Mr. Berens of London, at 34 fols gros per pound fterling, with order to remit to Mr. Deftaundau of Lifbon, at 66 pence fterling per milree, and he to remit to Nozzolini of Leghorn, at 770 rees per piafter of 20 fols d'or; and this latter to remit to Mr . Joyez of Madrid, at 123 piafters of 8 royals old plate, per 100 of the faid piafters of Leghorn, in order to make a remittance at 76 fols Tournois per piafter of 8 royals, in paying $\frac{1}{2}$ per cent. provifion to each correfpondent, excepting him at Lifbon, according to mutual agreement.
$y$ Florin bco. $=y_{t}^{\prime} ;$ Den. gros bco. of Amfterdam. rof Deniers gros $=99 \frac{1}{2}$ Ditto, provifion deducted. $y \neq$ Deniers gros. $=f$ Sol gros bco. 34 Sols gros bco. =to Pence ferling. føø Pence fterling. $=99 \frac{1}{2}$ Ditto, provifion deducted. $\beta 6$ Dito $=$ r' $\phi \dot{\rho} \dot{\circ}$ Rees of Libon. $77{ }^{\circ}$ Rees of Lifbon $=\not \subset$ Pialler of Leghorn. Tơo Piafters of Legh $=1 \neq \$ 64$ Piafters of Madrid.
J $\sigma \sigma$ Piafters of Madr $=99 \frac{1}{2}$ Ditto, provifion deducted.
 roó Sols Tournois 三 99 Sols ditto, provifion deducted. $\beta \delta$ Ditto $=3$ Livres Tournois. Quere, How many lives Tournois will $20 c 0$ forins bank money of Amfterdam make? Anfwer, 4414 livres 12 fots 2 deniers Tournois.

Expla-

## H O L

## EXPLANATION.

The antecedents and the confequents of this numerical equation are alfo abridged, according to the axioms given, under the article of Arbitration of Exchanges, and the one divided by the other, as in the preceding example:

## EXAMPLE of another kind.

To know by time and rule, how much per cent. profit is to be made by arbitrating the exchanges, and the place through which the circulation hould be made preferably to another. As the mercantile ftudent cannot underftand the true advantage, without computing what a fum will produce, if drawn directly from one place upon another; to compare this way with that of the cisculation through one or more p'aces, to know what you have gained or loft upon the 2000 florins that were due to you at Amiterdam, the operation fhould be made firft directly, according to the courfe of exchange of the day, upon which you have given your correfpondent orders: as for example, of 56 deniers gros per crown, by ftating it by the rule of conjunction, thus:

I Florin bco. $\rightleftharpoons 4_{4}^{\prime} \sigma$ Deniers gros bco. ró Deniers gros $=99 \frac{\text { I }}{2}$ Deniers gros, provifion deducted.

$=3$ Livres Tournois.
Quere, How many livres Tournois will 20 的 bco. make?

## ExplanATION.

The antecedents and confequents abbreviated, according to the foregoing direction, will give a product to the latter of 29850 for a dividend, and 7 will remain as an antecedent divifor, which will produce a quotient of 4264 livres, 5 fols, 8 deniers : but the fum, produced from the foregoing inftance by circulation, is 4414 liveres, 12 fols, 2 deniers: fo that the former deducted from the Jatter affords a profit, by circulation, of 150 livies, 6 fols, and 6 deniers.
Now, if you would know how much per cent. profit this produces, fay, by the direct rule of proportion,
If 2000 tlorins give 150 livers, 6 fols, 6 deniers, what will 100?
Anfwer, $7 \frac{1}{2}$ livres per cent. florins, which is the advantage, and fomething more, that may be made by this procedure.

## Advertisement.

The ftudent thould be apprized, that he ought not to expect the returns of his funds after the circulation, in order to difcover the profit or lofs $\}$ but his calculation hould be made before engagement, or he may be greatly difappointed by this kind of banking.

## Remakks before the laft wari

Under the article France, we have fhewn the general fyftem of French politics with regard chiefly to their commercial interefts, ever fince the time of Mazarine, and the glaring effects thereof to various powers in Europe, and more particularly with regard to the true interefts of Great-Britain and Holland, in the deftruction of the Dutch barrier: which, as it has continued in a very precarious ftate, and does to this moment, notwithftanding the conclufion of the late peace fome years fince; it behoves the public wifdom to confider, what was the general fenfe of the nation, when this matter was before in a ftate of the like uncertainty. See alfo the article Flanders, where we have fpoke to this matter.
In refpect to the houfe of commons, their fenfe can no way be better feen than from their own journals, and therefore I hall give the reader the abftrach of them.
In the beginning of $367 \%$, the commons in very prefling terms reprefented to the king, that the minds of his people were very much difquieted with the dangers arifing from the manifeft growth and power of the French king; efpecially by the acquiftions made, and like to be made by him, in the Spanifh Netherlands. 'In the prefervation and fecurity * whereof, fay they, we humbly conceive the intereft of "your majefly, and the fafety of your people, are highly - concerned; and therefore we moft humbly befeech your - majcfty to take the fame into your royal care, and to - ftrengthen yourfelf with fuch ffricter alliances, as may fe' cure your majefty's kingdoms, and preferve the faid Spanifh ' Netherlands, and thereby quiet the minds of your majefty's ' prople.'
And when the lords, who concurred with the commons in this addrefs, would have had particular mention likewife made of Sicily, it being of great importance to our trade, that Sicily be not in the hands of the French king; the commons difagreed to it for this reaton, becaufe ' the fpecial * mentioning of Sicily would feem to put lefs weight upon * the prefervation of the Spanifh Netherlands; the conferva' tion of which they conceive to be of much more moment ' to his majefty's kingdoms, than that of Sicily. For tho' c it may be of great importance to our trade that Sicily be 6 not in the hands of the French king, yet the fafety of his * majelly's kingdoms is not fo immediately endangered there' by; and therefore it ought not to be equally infifted on.'

The king agreed with his parliament, in owning the great importance the confervation of Flanders was of to EngLAND; but the reft of his anfwer, which hewed his averfion to enter into a war for it's defence, was fo little fatisfactory, that a motion was immediately made for a fecond addrefs to his majefty, to enter into a ftrict and fpeedy alliance with the confederates; and, in purluance of this motion, the houfe did about a fortnight after (March 30) in a fecond addrefs, ' with moft earneft and repeated dcfires, implore his majefty, that he would be pleafed to take timely care to prevent thofe dangers, that may arife to thefe king ' doms by the great power of the French king, and the pro' grefs he daily makes in the Netherlands and other places 6 and that he would not defer the entering into fuch alliances 6 as may obtain thofe ends, promifing fully to aflift his ma' jefty, if he fhould be engaged in a war in purfuance of - fuch alliances.'

Within three days after the king's anfwer to this addrefs, April 13, the houfe made a third addrefs, to affure his majefty, that 'they would with moft chearful hearts proceed, " both then and at all other times, to furnifh bis majefty 6 with fuch large fupplies upon this occafion (to preferve the - Netherlands and check the growth of France) as - might enable him, by God's affiftance, to maintain the al 'Tiances they had advifed, againt all oppofition whatfoever.' This addrefs, upon the king's anfwer to it, was immediately followed by a fourth, April 16, affuring his majelty of their duty and affection; and that he might not only depend upon the fupply he defired, but upon all fuch affiftances as the pofture of his affairs fhould require: ' In confidence where' of, fay the commons, we hope your majelty will be en' couraged in the mean time to fpeak and act fuch things as ' your majefly fhall judge neceffiary, for attaining thofe great "ends we have formerly reprefented to your majefty.
Thefe repeated addrefles from fo loyal a houfe of commons fufficiently thew how much the nation was alarmed upon the dangers to which they faw the Netherlands expofed The commons were fo bent upon this point, as a matter of the laft confequence, that they would take no denial, which made the court refolve upon adjourning them for 5 weeks. But what paffed in this interval did not make the commons alter their fentiments, or lefs earneft in the purfuit of them. When they met again, May the 21ft, they fell into very warm debates, and refolved to advance ftill one ftep farther in a matter of fo great concern, which was to addrefs his majefty to enter into a league offensive and defensive with the States, and to make other fit alliances againit the growth and power of France, and for the prefervation of the Spanifh Netherlands: and in this addrefs they tell his majefty, how highly fenfible they are of the neceffity of fupporting as well as making, the alliances defired in their former addreffes; ' which we ftill conceive, fay they, fo important ' to the fafety of your majefty and your kingdoms, that we - cannot, without unfaithfulnefs to your majefty and thofe ' we reprefent, omit upon all occafions humbly to befeech ' your majefty, as we now do, to enter into a league offen' five and defenfive with the States, \&c.' And, that no time might be loft in doing this, they gave his majefty this reafon amongtt others; ' the great danger and charge which muft ' neceflarily tall upon your majefty's kingdoms, if, through ' want of timely encouragement and affiftance, the States, ' or any other confiderable part of the confederates, fhould ' make a peace with the French king (the prevention where' of hitherto, fay they, muft be acknowledged to be a fingu' lar effect of God's goodnefs to us; ) which, if it foould ' happen, your majefty would afterwards be neceffiated ' with fewer, perhaps with no alliances, to withftand the ' power of the French king, which has fo long and fo fuc' cefffully contended with fo many and potent enemies; ' and, whilft he continues his overbalancing greatricfs, muft ' always be dangerous to his neighbours: fince he would be - able to opprefs any one confederate, before the reft could * get together, and be in fo good a pofture of offending him - as they are now, being jointly engaged in a war; and if ' he fhould be fo fuccefsful as to make a peace, or difunite ' the prefent confederation againft him, it, is much to be - feared, whether it would be poffible ever to reunite it. At ${ }^{6}$ leaft it would be a work of fo much time and difficulty ' as would leave your majefty's kingdom expoled to much ' mifery and danger. Having thus difcharged our duty, in ' laying before your majelly the dangers threatning your ' majefty and your kingdoms, and the only remedy we can ' think of for preventing it, and quieting the minds of your - people, we moft humbly befeech your majefty to take fuch - refolutions, as may not leave it in the power of any neigh'bouring prince, to rob your people of that happinefs they ' enjoy under your majefty's gracious government.' Then they oblige themfelves not only by their promifes with great unanimity renewed in a full houfe, but by the zeal and defires of thofe they reprefent, and by the intereft of all their fafeties, moft chearfully to give his majefty (peedy and plentiful fupplies.
This earneft and importunate addrefs, which was prefented May the 26th, expreffed not only the fenfe of a very full

## H O L

houfe, but, indecd, of the whole nation; which gave it fo much weight that the court faw they fhould be forced to comply with it, unlefs they betook themfelves to the laft refuge in fuch cafes, and immediately put an end to the feffion. The parliament, therefore, was accordingly difmiffed, and not fuffered to fit again till the end of January 1677-8. But, though the court could interrupt the fitting of the parliament as they pleafed, it was not poffible to change their fentiments; and they no fooner met again, but they refumed their former debates with more earneftnefs, if poffible, than before. For, as that long interval, in which they had not been fuffered to have any opportunity of interpoing their counfels with his majefty, had given the French fo much farther leifure to finifh their defign upon the Netherlands, the nation was fo much the more alarmed; and, in a new addrefs, January 3I, they 'humbly defire his majefty, with - the higheft zeal for his honour and the fafety of his people, * not to admit of any treaty of peace, whereby the French * king fhall be left in polfeffion of any larger dominions and ' territories, or of any greater power than what he retained - by the Pyrenean treaty; lefs than which; they conceive, - can't fecure his majefty's kingdoms and the reft of Europe, - from the growth and power of the faid king, but that he - alone may be able to difturb the peace thereof, whenio" ever he is inclined to attemptit.'-And they farther defire, a that, in all treaties in order to the obtaining that end, his * majelty would be pleafed to provide, that none of the par* ties that fhall join with him in making war for that pur-- pofe may lay down their arms or depart for their alli6 ances, until the faid king be reduced at leaft to the faid "treaty., The commons had reafon to hope for a compliance with this addrefs; the king having in his fpeech acquainted them, that he 'had made, according to their de-- fire, fuch alliances with Holland, as were neceflary for - the prefervation of Flanders; that, fince a good peace - could not be had by fair means, it fhould not be his fault if c it were not obtained by force of arms; that if he be fupa ported by them, he will not be weary, till Chriftendom be - reftored to fuch a peace, as it thall not be in the power of ' any pince alone to difturb.'
But, whatever influenced the counfels of the court, this addrefs met with no better reception than their laft. They had been then told, that ' what they did was an invafion of the ' prerogative;' and now they were told, not only the fame thing, but, what is more furprizing, that, 'the king, having - afked the advice of both houfes, can't act upon any that ' does not jointly come from both.' The commons, however, not rebutted by this treatment, perfevered; immediately voted a good fupply, and, upon March i4, refolved to addrefs his majefty, 'That, to quiet the minds of his fub6 jects, and encourage the confederates, he would be pleafed - immediately to proclaim and enter into an actual war * againft the French king, promifng conftantly to ftand by - and affift his majelty with pleniful fupplies :' to which addrefs they defired the concurrence of the lords; but, before it could be entirely obtained, they were adjourned to the middle of April, and from thence to the 2gth; when the Jard chancellor acquaints them, in the king's name, ' that - the States, whom he had long found weary of the war, (and, indeed, had made fo; for they were quite difcouraged from expecting help from England, when they faw the zeal and fpiric of the nation entirely defeated and eluded by the court;) ' were making hafte to get out of it, and were en' tered upon confiderations of accepting fuch a peace, as - France had thought fit to offer, though it be, without his - majefty's confent or privity; a peace as ill for themfelves ' and the reft of Chriftendom, as their enemies could wifh. And, in this difficult conjuncture, the king defires their advice, (when it is too late) and refolves to purfue it now; though their giving it before in time, when it would have been of the greateft confequence, was made a high crime. It is not my bulinefs to expofe the infincerity of the court in this whole affair: they who would fee this, need only read Sir William Temple's Letter's and Memoirs; a perfon of undoubted reputation and authority, and who was in thofe times his macefty's ambaffador in the Low Countries. But I cannot but ubferve from thele words, what a character the king gives of that peace that was a little after concluded at Nimeguen ; and, what made that peate fo ill a one, was the leaving fo much of Flanders in the poffeffion of France, and the remainder fo much expoled by a weak and infecure Barrier.
But to proceed: the commons, who were willing to hope, that if the court were fincere, things might be yer retrieved, came May the $4^{\text {th }}$ to two refolutions, which they laid before the king, withour flaying top put them into the ufual form of addrefs, by reafon of the importance of the affair; and the exigency of the time. In the firft, they 'declared the ' league made with the States to procure a peace between "the two crowns upon certain terms therein fpecified, not ' to be purfuant to their addrefies, nor confifent with the - qood and fafery of the kingdım:' and yet by thefe terms (had France been obliped to accept them) Tournay, Conde, and Valunciennes, wele to be rettoret, together with the Vol. 1.
dukedom of Lorrain. The other refolution was, to defre his majefty 'forthwith to enter into the confederacy for the ' vigorous carrying on of the prefent war; and particularly, 6 that effectual endeavours might be ufed for continuing the - States in the confederacy; and that no peace might be ' made with France, without general confent firt had.' And, upon the king's refufing to give any anfwer till he had the concurrent advice of both houfes, they immediately refolved to addrefs his majefty to give a fpeedy anfwer to their laft addrefs, and to remove thole counfellors who advifed the anfwers to the former addreffes of the 26th of May and 3rit of January, or either of them; ' by which anfwers, they - fay, his majefty's good fubjects had been infinitely difcou' raged, and the ftate of his affairs reduced to a moft deplo'Fable condition.' They mean the progrefs of the French in Flanders, and the great jealoufy and uncafinefs which that gave the nation. And, notwithftanding the king told them May the $2{ }^{2}$ d, that things were driving violently on towards a peace, yet ftill, to prevent fo much of Flanders remaining in the hands of France, they refolved, if his majefty would then enter into a war againt the French king, they were, and always would be, ready to affift him. But thefe, and all the other efforts the commons could make, could not force the court into right meafures, or prevent an ill peace; and ferved only to vindicate themfelves to pofterity from having any hand in it.
It is impofible to read this fhort account of the proceedings of the commons, and not obferve of how very great importance they thought the faving of Flanders was to the fafety and fecurity of this nation. This was fo plainly the known and certain intereft of England, that all the arts the court could ufe, could not divert them from purfuing this point. This was the firft parliament that was chofen after the reftoration, which continued fitting above 17 years, and cannot be fufpected either of not having a true regard for the prerogative, or a due deference for the fentiments of the court. But the intereft and fafety of their country was fo much concerned in the prefervation of Flanders, that this confideration carried them into thefe mealures, in oppofition to the miniftry, in which they fteadily and unalterably perfevered, and the nation was entircly with them ; the point, they preffed againft the court, having apparently no other foundation than their hearty zeal and concern for it's true intereft. And the king himfelf thought fit, when it was too late, to exprefs at lealt the fame concern they did, and to concur in the fame fentiments; as appears from his fpeech to them not long after, in which he opens his heart freely to them, and tells them he was' refolved to fave Flanders, either by a war or a peace, 6 as the greateft foreign intereft of this nation: that things ' feem already to have determined in a peace, at leaft as to ' Spain and Holland ; that he is refolved to give his guaran-- ty to it in the ftrongeft manner he is able; but that he - could not tell how far that would go, for that they had - already fent him word, that unlefs England and Holland - will both join in the charge of maintaining Flanders, even - after the peace, the Spaniards will not be in a condition of ' fupporting it alone, and muft fall into other meafures: that - France on the other hand will be left fo great, that nothing - abroad can treat them hereafter upon an equal foot, with' out the hopes of being fupported by this crown: that - though after the fupplies they had given towards a war - they may think the peace an ill bargain; perhaps they ' won't believe it fo, if they confider that by it fo great a - part of Flanders' is likely to be faved; whereas, without ' the paces made towards a war, there is nothing fo certain ' as that the whole of it would have been abfolutely loft that - campaign. And I believe you would, fays the king, give - much greater fums than this will coft you, rather than the - fingle town of Oftend fhould be in the French hands, and ' forty of their men of war in fo good a haven over-againft ' the river's mouth.'
If a nation will ever be allowed to fpeak it's own fenfe, it muft be owned the Englih nation did fo on this occafion; and the reader will obferve, that the king in this fpeech where he opens his heart to them, juftifes their fentiments. Here then is the voice of the nation, declaiing in the fulleft and moft unexceptionable manner, that it is the true intereft of England, that there fhould be preferved a good barrier in the Netherlands; and in order thereunto, that France fhould on that fide be reduced, at leaft, to the terms of the Pyrenean treaty. And, it adds to the weight of this authority, that in this concurrence of prince and people in the fame fentimenis the people don't concur with the prince (in which they might be thought to be influenced or overawed) but the prince with his people; which it is certain could proceed from nothing in this cafe, but that they had moft evident reafon on their fide, which was too manifeft to be denied, however their defires were eluded or refufed. See our article France, Flanders, Netherlands.
Remirks on Holland fince the laft war, and the Definitive Treaty of 1763 .
Since the treaty of Utrecht, the Dutch have declined afing in concert with Great-Britain againft France in the two lafl 12 F
great
great wars, In the year 1742, the court of London fent the earl of Stair to Holland, to influence them to join in Britifh meafures; and afterwards the earl of Chefterfield, then principal fecretary of flate, was fent by his Britannic majefty, with frefh applications to the States General. His firft propofition was, that the republic fhould join with England and her allies in declaring war againft France. The fecond was, that they thould garrifon the ftrong places belonging to the queen of Hungary in Flanders, that fhe might be at liberty to employ her troops in the field. Thirdly, that Great-Britain fhould take into pay 30,000 of the republic's troops, who were to be lent to the queen of Hungary, who was then likely to be greatly diftreffed. The fourth and laft, was an offer of a new Treaty of Commerce between Great-Britain and Holland.
Their High Mightineffes declined all thefe propofitions, and left Great-Britain alone to fuftain the expence of that war againft Spain and France ; yet, at the peace of Aix-lachapelle, all their Barrier Towns were reftored to them by the VIth article of that treaty, at our expence, we giving France up Cape Breton, the only valuable conqueft we then made.
In the laft war, as well as the former, the Dutch reaped the full advantages of a neutrality in trade, and encouraged that of our enemies, to our great difadvantage; whereby their gains became fo extravagantly great, that they were enabled to lend us Millions upon Milinons, to carry on thefe wars; and we are now tributaries to them as our public creditors, for above one fourth part of our whole Public Debts thereby contrafted; which, with what we were before indebted to them by the wars of king William and queen Anne, we now pay them near a million a year intereft money: a prodigious drain from the wealth of this kingdom, and enables them ftill more and more to ruin our trade and navigation, by extending that of our competitors ; for the commodities of France are now become fo much cheaper than ours, that the Dutch give them the preference, and purchafe and carry them to all parts of the world; while they experience Englifh commodities to be fo exceffively DEAR, that foreign nations are not able to purchafe them of the Dutch, who formerly were wont to buy them, and tranfport them to all, parts of the commercial globe. See our articles Duties and Labour. And, Till the Tax-incumbrances of this nation are greatly reduced, and the general prices of our commodities are fo lowered that we fhall be able to fell them as cheap as our rivals in trade, neither Holland nor other nations can, or will be capable of dealing with us at all: and what increales this national evil daily, is, that while we grow more and more unable to vend our own commodities in foreign countries, foreigners will intrude theirs upon us, becaule they here find a better market for them than in any other country; for the magnitude of public debts, and in confequence the increafe of the circulation of paper credit, adds a higher value to foreign commodities as well as our na-tive.-Thus, while we are rendered lefs and lefs able to fell our own wares, traders will deal in foreign, till the nation becomes unable to buy them becaufe they cannot fell their own.
The duchy of HOLSTEIN in Germany. It is the moft northern part of Germany, on the confines of Denmark, being feparated from the duchy of Slefwic by the river Eider. It has the German Ocean on the weft, the Baltic, or the gulph of Lubec, on the eaft, and Lawenburg, with the territory of Hamburgh on the foath.
The country in general is fruitful, abounds with corn, orchards, black cattle, and hogs, and is well feated for trade. Lubec is an imperial city, and chief of the hanle-towns, at the conflux of feveral rivers, the largeft of which is the Trave, which brings fhips of burden into the very heart of the city, 8 or Io miles from the fea. It employs about 150 fail of it's own fhips, for it has a confiderable trade with Riga, Revel, Narva, and Peterburg, and with this laft more immediately than any other country.
As the Lubeckers have fuch an immediate commerce with the ports of Livonia and the Eaff Sea, fo they have always great magazines of the merchandize of thofe countries at Lubec; and large warehoufes again at thofe ports refpectively, with the manufactures and other goods of England, France, Spain, the Eaft and Weft-Indies, \&cc. Here they are able to fupply the neighbouring countries with naval fores, and with iron, copper, beer, and all forts of goods, fupplied by the Baltic trade.
Their chief home commodity, befides corn ${ }_{3}$, is beer, which is highly valued; much of it is tranfported, and ufed medicinally for wounds and bruifes.
Kiel, at the mouth of the river Swentin, on a bay of the Baltic, is the capital of all Holftein. It has a good harbour, well frequented by fhips from Germany, Sweden, \&rc. is populous and wealthy. It is much enriched by it's yearly fair, which is kept for three weeks after Twelfih-day, and frequented by multitudes of all ranks. Vaft fums of money are here negbtiated, and payments made of fums contracted before-hand, as punctually as by an Amiterdam banker up-
on the exchange; infomuch that the man who does not preferve his credit at this fair, is looked upon as a bankrupt, and fubjected to punibment, befide the fcandal.. During this fair Hamburgh looks like a defert, becaufe every body hurries hither to pay their rents, or to renew their leafes, or to let out money, \& c .
Itzeho, on the river Stoer, is a fmall town at the foot of a mountain, and has fome trade by it's river, which falls about 7 miles below it into the Elbe.
HOPS, a plant of the reptile kind, whofe flower is an efientialingredient in the brewing of malt-liquors. See Brewing.

## Of the land fit for the planting of hops.

A rich, deep, mellow, dry foil, more inclining to fand than clay, is in general, the fitteft for hops; and, in particular, a black garden mould is excellent.
The beft fituation for hop-grounds, is fuch as inclines to, or lies open to the fouth, fo that they may have the benefit of the fun the greateft part of the day.
Having pitched upon your ground and fituation; the next bufineff is to prepare it for the planting. In many parts of England, where they break up ground for this purpofe, the plough goes firft, and men follow it with their fpades, and dig one fit in the furrow where the plough has gone, and throw it on the fwerd, and fo plough and dig till the whole be done.-Continue the fame tillage which is practifed on land for corn; or, rather, which is preferable, crofs-plough and harrow it well in fummer; and, in the end of July or beginning of Auguft, fow it with turnip-feed, which being hoed twice; at the diftance of 8 inches from each other, will make the ground fine, deftroy the weeds, and make the turnips large. - When the turnips are off, give it another ploughing, which, with the winter mellowing, will make it fit for hop-planting in the fpring; but, if your ground be rich, mellow, and dry, whether it be lay or fallow, begin to plough it in October as deep as you can, and let it lie all the winter to mellow by the frofts, rains, and fnows; and, in the beginning of fpring, harrow it well and plough it again, and in March harrow it fine, and lay it as even as you can.
When your ground is thus prepared, then on a fraight fide of the field, at 15 or 30 feet diffance from the hedge, ftretch a line parallel to the hedge, with knots or rags tied in it, at fuch diftance as you defign your hills, and flick in the ground a fharp-pointed fick at every knot, as marks where the hills are to be; continue the line in the fame manner the whole length of your ground; and from this firf row you may mark out the reft of the ground either in Squares, chequer-wife, by making parallel lines at the diftance the hills are to be, or in the quincunx form, where the hills of every row lie oppofite to the middle of the firft, in a triangular form.
The diftance of the hills thould be according to the nature and goodnefs of your foil ; if it be dry and hallow, about fix or feven feet will be a convenient diffance; if rich, moift, and fubject to bear large hops and leaves, then eight or nine feet is the proper diftance. But, in old ground, if your hills are too far afunder, that inconveniency may be remedied by enlarging the hills, and increafing the number of roots and poles: if your hills be too near, then leflen the roots and number of poles, for over-poling is more injurious than the contrary. The feafon for planting is from the end of February to the roth of April, at the time when the hop begins to fprout. There are feverals kinds of hops; thofe moft efteemed are, the long white, the oval, and the long fquare garlic hop; which differ from one another in the colour and hape of the bells, or hops, in their degree of bearing, and time of ripen-ing.-The long white is a great bearer; the beauty of hops confilts in their pale bright green colour. The oval hop is beautiful, but does not produce fo great a quantity : there is a fort of this kind of white hop, called the earthy, or rath hop, which is ripe a week or 10 days before the common; but it is more tender, and bears but a thin crop: the chief advan= tage therefore is, that it comes firft to market.-The long and fquare garlic hop is the greater bearer, more hardy, and fomething later ripe than the former; but, by reaton of the rednefs round the ftalk, is not fo beautiful to the eye, and, therefore, not fo much efteemed.
There is a hop called the fernale hop, and, by fome, the wild hop, which puts out a great number of branches of fimall flowers about the beginning of July, not like the true hop 3 but in the latter end of that month, juft before the true hopi begins to flower, they are ripe, and then, with the leaft motion of the wind, they fhed a farina, which difperfes itfelf quite round about, and pofifbly may be of ufe to impregnate other hops; and, therefore, fome advife to leave one or two hills of them fanding in the hop-ground, till farther trial be made whether they are of any, or what ufe; but the ordinary practice is to mark them at their firft appearance, and to root them out afterwards, becaufe they bear no bells or hops, and being conmonly the ftrongef plants, without care in marking them, fetts may by miltake be taken from them.
There is a poor farved hop, called a wild hop; but this is not judged to be a diftinct fort, but a hop which has degenerated for want of culture.

The feveral kinds and goodnefs of hops may be known alfo by the colour of the vines, binds, or ftalks: the whitifh binds produce the white hop, both the long and the oval; the grey or greenifh binds commonly yield the large fquare hop; but the red binds produce the brown hop, which is leaft of all eftermed.
You ought to be very curious in the choice of your plants, or fetts, as to the kind of hop, for it is a great trouble and lofs to the planter when his garden proves a mixture of feveral forts of thops, ripening'at different times. He that plants the three forts of hops before-mentioned, viz. the early, the long white, and fquare hop, in three diftinct parts of his ground, will have the conveniency of picking them fucceffively as they become ripe.
Hop-fetts are cuttings from the roots or branches which grow from the main root or fock.-Procure fetts, if poffible, out of ground, of the fame fort you would propogate; let them te 6,7 , or 8 inches long, with three or more joints, or buds, on them, all the old bind, and hollow partof the fett, being cut off.
The ground being prepared, as obferved, then in the latter The ground being prepared, as oblerved, then in the later
afd February, if your ground be light, or late in March, if the ground be ftrong and moift, in the places where you laid your fticks, make holes, about a foot or 16 inches over, but their depth muft be according to the nature of the ground; 10 or 12 inches depth in general is fufficient.-But, if the ground be fhallow, and you meet with hard clay or gravel, by no means enter into it, for then you make a bafon to retain water; but, in fuch cafe, inftead of going deeper, raife up a fmall hill of good mould. If there is a good depth of rich mellow mould, then dig the hole a foot and a half, or two feet deep, and you will find the hops thrive better, for the top roots naturally run downwards.
When all things are ready for planting, fill up the holes with the mould which you threw out, if the fame be naturally good, having firt broke it fine with a fpade; but, if the fame be not rich enough, then make ufe of fine frefh mould, or compoft provided for that purpofe, about a peck or two to a hill, but by no means put any dung into it.
Then with a dibble make 5 or 6 holes, the depth of your fetts, one in the middle perpendicular, and the reft round about floping, and meeting at the top near the centre; put your fetts therein, and let them ftand even with the furface; prefs the mould clofe to them, and cover them with fine mould, two or three inches thick.
Be careful to fet the ends of every fett upwards which grew fo before, atad let no part of the dead ftalk remain on the upper joint. -If the fetts have begun to fhoot before you have time to plant then, by no means cover the young buds with mould, for that would deftrcy them.
The ground firt planted, the fummer following keep the hills and alleys clear from weeds; in the month of May raife a fmall hill round about the plants, and throw fome fine mould on the roots in the latter end of May, or beginning of June, and twift all the vines or branches together into a bunch, or loofe knot, and lay them thus twifted on the top of the hill.Some chufe to put one or two fticks, of three or four feet long, to each hill, for the vines to twift about, as more agreeable to the hop, efpecially if the vines be vigorous; but care muft be taken to prevent the hop from bearing the firft year, for that would weaken the plant.
The hop-ground being kept clear from weeds in fummer, the Michaelinas following lay on the alleys, between the bills, rotten dung, or that mixed with earth, or other manure, about 60 or 80 cart-loads to an acre, more or lefs, according to the goodnefs of the land. In November or December following plough it in, that it may the better incorporate with the foil.
The latter end of February, in the fecond year, when the weather is kindly, open the hills, and with a harp knife cut off the floots of the firft year to within an inch of the old thock, together with all the young fuckers that have fprung from the letes, and cover the fock with the fine earth.-In the third and fourth years, when you dig your hop-ground in February, let the earth be taken away with a fade, or hoe, round about the hills very near them, that you may the more conveniently come at the fock to cut it. - Then in fair weather, towards the beginning of March, will be the beft time, for late dreffing reftrains their too early fpringing, which is the caure of many injuries to the hop.-If your hops are old, or worn out of heart, in the beginning of winter, or at fartheft in January or February, if the weather be open, dig about them, and take away as much of the old barren earth as you can, and apply good fat mould, or compoft, to their roots; fuch winter-dreffing will recover your hops, and deflroy the weeds.
When you have dreffed your hops, pole them:- In the firft year of planting poles are not required; you need only twift the binds together into a knot on the top of the hill about the end of May, and let them lie fo all the fearon; but fome think it better to give them hort poles or fticks, of four or five feet long.
The fecond year provide poles of 10 or 12 feet long, or more;
the third year they come to their full bearing ftate, and then require poles of full fize, according to the vigour of the ground.
When the poles are fet, and the vines are grown two or three feet high, fuch as have not taken to poles of themfelves thould be guided by hand fo to do; the ftrongeft vines always to the talleft poles: be extremely cautious of breaking the tender fhoots in doing this.
Having drefled and poled your hops judicioully, then fome time in May, efpecially after rain, give the ground the fummer's digging, and throw fome of the fine earth on the hills, and enlarge their breadch, cutting away and burying all fuperfluous roots of hops and weeds you find on the hills or alleys, whereby you will hinder the weeds from impoverifhing your hops, and keep your hills moift: by no means make up and finifh your hills all at once, but by degrees, and at different times.
Hops are greatly checked in growth by a very dry fpring; in fuch cafe, when the hop is branching, or in bloffom, you Mould have the command of a fream, to give them a thorough watering ; flowing the allies will be fufficient, provided you throw the pareings on the hills immediately.-If the weather continues verydry, repeat this watering three or four times in the feafon, and be fure, after each watering, to throw fome of the pareings of your alleys on your hills, to keep them cool and moift.
About the latter end of July hops begin to blofforn; about the beginning of Auguft they bell, and are fometimes ripe, in forward years, at the end of Auguft, or beginining of Sep-tember.-When the hops begin to change colofir, or are eafily pulled to pieces, or fmell fragrantly, and the feeds begin to look brown and grow hard, you may conclude them ripe; then pick them with all expedition, for a ftorm of wind will do them great mifchief at this time; and hops picked green and bright, without bruifing or difcolouring, will fell for a third part more than thofe that are otherwife.
As faft as you pick your hops, dry them on a kiln, or they will change colour ; but, if you cannot thus immediately dry them, fpread them on fome floor, not too thick, and by that means the damage may not be great.
Great care fhould be taken that your hops be thoroughly and evenly dried: this is a great delicacy in the management of hops; for, if they are over-dried, they will change colour, look brown, and be judged to be burned, and fo greatly Jofe in their value; and, if they be under-dricd, they will lofe their colour and flavour.-It has been experienced, that even an handful of under-dried, hops has fpoiled many pounds of others, by depriving them of their plealant fmell and colour. The beft way of drying them is with a charcoal fire, on a kiln covered with hair-cloth, as they dry malt. - Lay the haircloth very even on the floor of the kiln, and fpread the green hops thereon, about fix inches thick, laying them with a rake as fmooth as poffible, not thicker in one place than another.Let the kiln be firft moderately warmed before you lay on the hops; then keep an even and fteady fire under them; let not your heat be too fierce at firft, left you fcorch them; and let not your fire flacken, but rather increafe, till the hops be near dried, left the expelled humidity fhould return, and difcolour the hops.-If they do not dry in one place fo much as in the reft, which may be perceived by touching them with a wand, and obferving whether they rattle or no, then make them thinner in fuch places where they do not rattle fo much.
Hops are fully dried when the inner ftalks become brittle, and break fhort on rubbing, and when the hop-leaves cafily fall off, and feel very crifp: when you find them to crackle and leap a little, as they will do upon burfting of the feeds, then it is time to take them off the kiln.
The fire ought to be gentle, and of a due heat, and, that it may be conftantly the fame, it may be of fervice to make ufe of a thermometer: this inftrument has a long, Ilender, hollow glafs tube, with a round ball at bottom, clofed at both ends, quite empty of air, but partly filled with fpirit of wine tinged; which liquor rifes or falls in the tube in proportion as the outward air is either hot or cold.
When you have once found the degree of heat which is proper for drying of hops, and marked it on the thermometer, you may always after know how to regulate your fire with great exadnefs; for, putting the thermometer within fide the kiln for fome fhort time, you may obferve, by the height of the liquor, when the heat is come to a right pitch, and when it is either too high or low, and fo increafe or flacken the fire accordingly.-Any fervant may, by help of this inftrument, be able to correct the degree of heat with great certainty, and not be liable to commit miftakes, which often prove extremely detrimental to hops.- When you begin drying, lofe no time in that work, but employ prople night and ing, ofe no time in that we tith all be dried.
Hops break all to powder, if they are bagged hot from the kiln; to prevent which, they thould be laid in a beap, to fweat and grow tough.- There is no certain time for their fweating, that varying according to the weather; three of four days are commonly fufficient; but it is a ceriain rule,

## H C $p$

that, when you find the hops feel moift and clammy, and that they can be fqueezed in your hand, or trodden clofe without breaking, then they are fit for bagging; and the harder they are trodden, the better they will keep.
The bags proper for this occafion are made of coarfe linen cloth. They are commonly about 11 feet long, and near two yards and a half round, and contain about $2 \mathrm{C}_{2} \frac{1}{2}$; fmall bags, or pockets, contain about half that weight : the thicker and clofer the bag is, the better it will keep the hops.-When they are bagged, lay them upon a boarded floor, and in a dry place, for dampnefs will injure thens much.- Take alfo care of rats and mice, which are apt to foil them, not by eating them, but by making nefts and lodging in them.
Some, in treading the hops, ufe a 50 pound weight, faftened co a rope, and place it in the middle of the bag; the man in the bag treads about it with his feet, and lifts it up now and then, to prefs them clofer together.
1As foon as the hops are picked, ftrip of the vines from the poles; then take care, as your laft work, to preferve the poles during winter, which is done either by ftacking, pileing, or houfing.
From October to March there is nothing to be done but to provide manure for the hop-ground, and to give the alleys a winter's digging or ploughing.
Ground that is fit for the raifing of hops is generally fo for the raifing of poles. Ground that lies low, 'wet, cold, marhy, boggy, or near rivers, is fit for all the aquatic kind, fuch as poplars, abeles, alders, willows, oziers, and fallows, which will produce hop-poles in four or five years time from their planting, and are raifed in great quantities, at fmall expence.
If your foil be dry, or a ftrong, mellow, rich loam, afh and chefnut, which make the beft poles for hops, will thrive greatly, and be fit for poles, from their firft planting, in about 9 or Io years; and, if they are planted about your hopground, they will both fhelter your ground, and fupply you with poles, without the expence of carriage.-Elms alfo are quick growers, and when planted clofe together, grow tall and Itraight.
The charge of an acre of hop-ground, in fome parts of England, is computed thus: 31. for the hubbandry, 4 I . for the wear of poles, 51 . for picking and drying, r. . Ios. for dung, 11. for rent, and 10 s. for tythe; in all, 151 . a year; and, in fome places, they pay 4 or 5 l. an acre yearly for the rent of the land.
The hop planters in England commonly agree with hop-dreffers, to do all the hufbandry part, for 3 l. to 3 I. Ios. per acre, which takes in the fummer and winter dreffing of the ground, and pruning and dreffing the hops and hills, and poling and tying, feveral hoeings, and making up the hills from time to time; they laying the dung on the ground, and doing all other work, except the bringing the dung to the ground, and the picking and drying the hops, which work is performed by, others.- So that a gentleman has little trouble with his hopground; he need only take care that the undertaker does every part of the work in it's proper feafon; and it is fo much the intereft of the undertaker to do fo, that if be neglects hoeing when the weeds appear, he will, by fuch neglect, greatly multiply his trouble and labour in rooting them out afterwards.

## RemARKs.

An Englifh acre requires about 3000 poles; their price varies according to their fize: it is ufual in feveral places to give as many fhillings for 100 poles as the poles are feet long; fo that, for 100 poles of 20 feet long, they give 20 s . but where poles are in plenty, they give but 15 s . for finch. It is computed that a recruit of 500 poles yearly will keep an Englifh acre of hop-ground in conftant repair: fo that poles are about a third part of the yearly charge, and picking and drying another third, and the reft is laid out in the managing of the ground.
The hop-planters in England reckon that they have but a The hop-planters in England reckon that they have but a
moderate return, when the produce of an Englifh acre of hops fells for no more than 301 . They frequently have 50 , 60,80 , or 1001 . for an acre; nay, fome have got confiderably more for every acre of their hop-ground, at a time when other hops have generally failed, and theirs have fucceeded. Such extraordirrary profit, being very uncertain, is not to be depended on, but may be reckoned to make amends for failing years.
But if the whole charge of an acre is computed as above, at i5l. a year, and it's produce, at an average of years, at 301. only, the clear profit per acre will be 151 . per annum. We muft take notice; that, when we feak of the profic or quantity of hops growing on an acte, we fuppofe all along the hop-graind to be rich, and due care taken both in the culture of the ground and management of the hops; for, if they fhould be mifmanaged or neglected, or the foil be poor, inftead of yielding profit; they will be a certain lofs.
It is requifte here to give this farther caution, that it is not proper for poor farmers, or men of frall fortunes, to engage far in this improvement, for it requires a pretty confiderable flock at firft to cultivate a large plantation, to furnifh poles, and to perform every other neceflary: the expence will be
great, and the undertaker muit expect to lie out of his money for two or three years, before he can have any return of profit: and even when his hops come to their bearing ftate, and he is in hopes of making good the charges he has been at, he may be difappointed by a bad feafon: thefe are rifques and expences which a perfon who has not a tolerable fund hould not in prudence yenture upon.
It is not hercby intended to difcourage any one from planting fmall parcels of hops, fuitable to his abilities; for the pooref farmer may eafily fpare time and labour to plant a few hops in a corner of his garden, and fallows, willows, or afh for poles in his hedges; which will yield him a confiderable profit, without laying out any money for the fame.
A large hop-plantation is an undertaking fit for gentlemen who live upon their eftates, or for rich fubftanital farmers. Where füch are willing to engage herein, and find, upon trial of a fmall plot of ground, that their land is fit for hops, it is advifed that they employ feveral acres of their beft land this way, make early provifion for poles, by planting coppices of trees fit for that purpofe, and making this their chicf care and bufinefs: whereas, if they content themfelves with a frall hop-yard, as it will not be worth their attention, it will foon come to be neglected. A gentleman who fhall lay out io acres on hop-plantations, and employ fkilful hands, and fpare no coft in the right management thereof, may get as much profit by thofe to acres, as by 500 acres, perhaps. otherwife employed.
The hops of 10 acres, rightly managed, may very well be fuppofed to fell for 5001 . and, allowing even 2001 . for all expences, there will remain 300 I . clear profit, which is more than could be got by 500 acres in other ways of ordinary hufbandry.
It is common in England to fee 10, 20, or 30 acres of hops,
or more, in the hands of one man; and fome receive 2000 , or more, in the hands of one man; and fome receive 20001 . a year for their hops, notwithftanding the high price, of labour, manure, and every other article relating to the management of hops; but then no care, induftry, or expence is wanting, to make the plantation flourifh.
It may be urged, as a difcouragement to the hop-planter, that hops are a very tender plant, and an uncertain commodity to deal in; that they are very apt to fuffer by winds, blights, mildews, rains, droughts, and infects; and, when they wholly fail, the lofs is intolerable; and, if there be a general good crop, the price will be fo low that it will hardly anwer the charge.
It mutt be acknowledged, that hops often fail, by fome one or other of the caufes before-mentioned ; yet we find by experience in England, that they are not difcouraged by accidents of thofe kinds from keeping up and inlarging their plantations of hops: though they fail in one place, they may, and do thrive in another; they may fucceed in highergrounds, when they fail in lower; and in failing years, if your quantity be fmall, they are fure to fell at a high price: it may be your good fortune, by careful and judicious management, that, when other hop-grounds generally fail, yours may profper : and, if this thould happen, you may gain more by fuch a crop in one year, than others may in three; and, if we thould fuppofe a general fcarcity, which happens frequently in three or four years time, yet this is frequently a benefit to the planter, becaufe it will ferve to confume the old fock of hops, and keep up the price of new hops for feveral years following, which will make ample compenfation for the failing years; and it muft be obferved, that, in years when hops fail, you avoid a great part of the charge, which is that of picking and drying: but, if they fhould be every-where in plenty, and their price very low, if you can forbear felling, lay up your hops, and you may, in a failing year, which may follow a plentiful one, be well repaid for your forbearance.
HUDSON'S STREIGHTS and BAY. The mouth of the freight, which is in about 6r degrees of north latitude, is fix leagues over, or, according to Mr. Dobbs, 12 of 13 leagues. At the mouth is an inand called Refolution: Charles Inland, Salifbury Hand, and Nottingham, are in thie freights; and Manfeldlliand in the mouth of the bay. The ftreight, from Refolution Mand to Cape Diggs, at the entrance of the bay, is about 140 leagues in length : the land on both fides, namely, Labrador and North Main, are inhabited by favages, of whom we have very little knowledge. The bay is about 300 leagues wide, from fouth to north, or rather above $53^{\circ}$, if we reckon from the cod of James Bay, in about latitude 5 F , to that of Kepulfe Bay, in latitude 67. ©o. but it's breadth is unequal, being 130 leagues where broadeft; but it grows narrower, both to the fouthward and the nerthward, being not above 35 leagues broad in fome places. That part of the bay on the weft fide, in latitude 57 , is called Button's Bay; and the eaftern part, from latitude 55.15. to 5 I , and the moft fouthern part, is called James's Bay. The coaft, from Cape Hentietta Maria, in latitude 55: 15. where James's Bay begins, to the bottom of the bay, is about 100 leagucs, and of much the fane breadth all the way, being $5^{\circ}$ and 60 leagues, over.
On the eaftern fhore or coaft of Labrador, lie feveral iflands; called the North Sleepers, the Weft Sleepers, Bakers Dozen, Belchier's Ines; and, in Janes's Bay, Bear Mand, Viner's's

## H U D

## H U D

Illand, Chailton Illand, Cape Hope Ifland, \&c. All the country from Button's Bay, touthward and caitward, as far as Labrador, is called New South Wales. This country is of very great extent, lying all round the fouthern part of Hud. Gon's Bay, which make above 100 leagues or 300 miles, from the north-weft to the fouth eaft. It has New France, or Canada, on the eaft and fouth; on the weft a vaft track of unknown countries, inhabited by feveral Indian nations, who come and trade here; but how far it may be fuppofed to extend towards thefe feveral countries cannot yet be afcertained; fince the Englifh, who are the only Europeans, at prefent, who trade here, have no plantations or fettlements within land, but live near the coaft, within their forts, in litule huts, wherein the builders confider nothing but how to defend themfelves from the cold and rain, though they are not fo much difturbed by the latter as by the former. The continent at the botton of the bay, is by the French pretended to be part of New France, and, indeed, to crofs the country, from St. Margaret's River, which runs into the river of St. Lawrence, to Rupert's River, at the bottom of Hudfon's Bay, which is not above 150 miles. The country of Labrador is called the Eaft Main, and that of New Wales the Weft Main.
The Hudfon's Bay company have feveral forts and fetclements on the latter, namely, I. At the mouth of Churchill River, in about latitude 59 . and longitude 95 weft from London. 2. York Fort, at the mouth of Nelfon's River. 3. At the New Severn. 4. At Albany River. 5. At Hayes's Illand, And, 6. At Rupert's River
The air, even at the bottom of the bay, though, by the latitude, it is nearer the fun than London, being in 51 degrees latitude, is exceffive cold for nine months, the other three months very hot, except on a north-weft wind. The foil on the Eaft Main, as well as the Weft, bears no manner of grain, according to fome; but others fay the contrary.

## Of the Hudson's Bay Company.

This company was erected in king Charles the IId's time, upon the following occafion : Mr. Radiflon and Mr. Des Grofelliers, two French gentlemen, meeting with fome favages in the lake of Affimponels in Canada, they learned of them that they might go by land to the bottom of the bay, where the Englifh had not yet been; upon which, the Frenchmen defired the Indians to conduct them thither, which the favages accordingly did. The Frenchmen returned to the Upper Lake the fame way they came, and from thence to Quebec, the capital of Canada, where they offered the principal merchants to carry thips to Hudfon's Bay ; but their project was rejected. Hence they went to France, in hopes of a more favourable hearing at court; but, after prefenting feveral memorials, and fpending a great deal of time and money, they were anCwered as they had been at Quebec, and the project was looked upon as chimerical $\dagger$.
$\dagger$ The incfedulity of men in power, in regard to matters of this nature, has been, in many nations, attended with confequences highly difadvantageous: but, although one of many projects of this kind hould prove fucceffful, yet that might very amply compenfate the nation for the expence of thofe which might prove abortive.

The king of England's ambaffador at Paris, hearing what propofal they had made, imagined he thould do his country good fervice, by engaging the above-mentioned Frenchmen to ferve the Englifh, who had already fome claim to the bay. He perfuaded them to go to London, where they met with a favourable reception from fome perfons of quality, merchants and others, who entrufted Mr. Gillam, a perfon long ufed to the Newfoundland trade, to perfect this difcovery.
He failed in the Nonfuch catch, in the year 1667, into Baffin's Bay, to the height of 75 degrees, and from thence fouthwards to 5 I degrees, where he entered a river, to which he gave the name of Prince Rupert River; and, finding the lavages difpofed to a friendly commerce, he erected a fmall fortrefs there, which he called Charles Fort. The fuccefs of this expedition was foremarkable; that the perfons concerned in fitting out the veffel, upon the return of Gillam, applied themfelves to king Charles II. for a patent; who accordingly granted them one, dated the 2d of May, in the 22d year of his reign, A. D. 1670.
The commodities for trade here are gun powder, fhot, cloth, hatchets, kettles, tobacco, \&cc. which the Englifh exchange with the Indians for furrs, beavers, martens, foxes, moofe, and other flkins and furrs. The great profits acquired by this trade, and the profpect of engrofling it wholly, engaged the new company to profecute their meafures vigoroully, to ferthe a good correfpondence with the natives, whom they found very tractable, and willing to traffic with them on reafonable terms: for the Indians about Rupert's River, and other places in the bay, are lefs fubtle than the Canadians, who have had long commerce with the Europeans. They are generally peaceable and rot given to quarrel, either among themfelves or with others, except the Nodways, a wild barbarous nation, on the borders of Hudfon's Streights; who fometimes, in flight parties, make excurfions on the other Indians, and, having murdered 8 or 10 , return in triumph.
Vol. I.

In the year 1670 , the Hudfon's Bay company fent over Cha:les Bailey, Efq; as their governor, who, with Mr. Radifion, fetted at Rupert's River; and another factory was eftabl hed at Fort Nelion. In the year 1683 , Henry Sergeant, Efq; was made governor at Rupert's River, with orders to be very carefut of the French, who began now to fhew themfelves very jealous of the trade carried on by the Englifh company with the natives. At the fame time the company was not a litle perplexed, by fome bad praEtices among their own fervants; who, confidering the hardfhips they erdured in that cold country, thought they might make bold with patt of the profits, wh ch were intirely owing to their labour, and negociations with the natives: for the company, by their governors and agents, made fuch contraets with the captains, or kings of thole people, where they had fettlements, for the freedom of trade there, exclufive of all others, that the Indians could not pretend they had incroached upon them-Thele contracts were as firm as the Indians could make them, by fuch ceremonies as were moft facred and obligatory among them. In the year 1686, we fird the company in poffeftion of five fettlements, viz. Albary River, Hayes's Inand, Ruperr's River, Fort Nelfon, or York, and New Severn
Their trade at each of them was very confiderable. From Albany River they had generally 3500 beavers a year ; and, by governor \$ergeant's great care and fidelity, their commerce increafed fo much, that the French began to be afraid that all the upland Indians might be drawn down to the bay.
They knew they could do any thing with king James II, who then reigned in England; and, therefore, they sefolved to drive the Englifh out of all their places in the bottom of the bay. They firft took Hayes's Ifland, and, after that, the fort on Rupert's River. The French company procured a detachment of foldiers to be fent, under the chevalier de Troyes, who came over-land from Quebec, and, in a time of profound peace, committed thofe acts of hoftility. It is to be obferved, fays our author, that the French have fo good an opinion of the great work of their American colonies, as to take not only all lawful, but even all unlawful meafures, to preferve and enlarge them: whereas, obferves the fame gentleman, the Englifh, who, text to the Spaniaids, have the richeft plantations in that part of the world, have been as negligent of them as if they were not worth keeping. The 8th of July, 1686, the chevalier de Troyes came before the fort at Albany River, where the governor, Mr. Sergeant, then refided. Two Indians having informed him, that the French had furprized the forts at Hayes's Inand and Rupert's River, and had brought' with them the great guns from thefe places, the governor did all that was in his power to defend the fort, but was not able to defend it above a week, as ap pears by the articles of furrender, dated July 16, 1686, which articles were but indifferently kept. In 1693 the Hudfon's Bay company, being affited by the government, retook all the forts and factories of which the French had deprived them in time of peace: but, foon after, they were driven out of them again by the French.
In the year 1696, the company applied to king William, reprefenting their own incapacity to maintain themfelves againft the French, and praying the affiftance of the crown for their fupport, - Upon which, two men of war were ordered for their affiftance, under the command of captain Allen; who, coming to Hayes's IMand, fent to fummon all the forts to urrender. The French governor, finding that he could not defend them againft the Englifh, capitulated ; and, on the 2d of Auguft in the fame year, furrendered Albany. Fort, upon certain articles. The other forts fuffered the tate of Albany. After this time, the trade of the Hudfor's Bay company declined extremely; and, in the next general war, the French renewed their attacks upon the fetrlements of che Hudion's Bay company with fuch fuccefs, that they left them nothing but Fort Albany; which accounts for the low ftate of their trade to the end of the war; and fome time after. At the treaty of Utrecht great care was taken of this company, who, by the roth and 1 th articles, have every thing reftored to them that had been taken from them, and an equitable fatisfaction was flipulated for their loffes; fince which time, the trade of the company has wonderfully increafed; infomuch, that it became, at leaft, treble to what it was at the time that peace was made, and continues fill in a very flourifhing condition. In regard to the product and commerce of this part of the world, the moft authentic account is as follows: The Indians being obliged to go afhore every day to hunt for provifions, delays them very much in their voyazes; for their canoes are fo very fmall, holding only two men, and a pack of 1 co beaver-fkins, that they' can't carry provitions for any time. If they had larger canoes, they would make their voyages fhorter, and carry a greater quantity of beaver fkins to me:ket, befides other fins of value, which are too heavy for their prefent canoes. This, and the high price of European goods, fays Capt. Dobbs, given by the company in exchange, ditcourages the natives to much, that if they were not abfolutely under a neceffity of having guns, powder. and thot, hatchets, and other iron tools for hunting; and tobacco, brandy, and fome paint, for luxury; they woud not go down to the factory with what they now carry. - As

12 G
prefent
prefent they leave great numbers of furrs and hins behind them. A good huinter among the Indans can kill 600 beavers in a fealon, and can carry down but 100 ; the reft he ufes at home, or hargs them upon branches of trees, upon the death of his children, as an offering to them, or ufes them for bedaing and coverinigs. They fometimes burn off the furr, and roalt the beavers like pigs, upon any entertainments; and they often let them rot, having no farther ufe for them. See the atticle Beaver.
The Indians on the weft of the bay, living an erratic life, can have no beneffit by tame fowl or cattle; they feldom fay above a formight at a place, unlefs they find plenty of game. The natives, according to the fame author, are fo difcouraged in their trade with the company, that no fhips are worth the carriage : and the fineft furrs were fold for very little; when they cane to the factory in June 1742 . The prices they took for the European goods, were much higher than the fettled prices fixed by the company, which the governor had thus raifed, to thew the company how zealous they were to improve their trade, and fell their goods to advantage. They gave but a pound of gunpowder tor 4 beavers; a fathom of tobacco for 7 beavess; a pound of fhot for 1 ; an ell of coarfe cloth for 15; a blanket for 12; two filh-hooks, or three flints, for one; a gun for 25 ; a piftol for 10; a common hat, with white lace, for 7 ; an ax for 4 ; and a chequered hirt for 7; a bill-hook for one; a gallon of brandy for 4; all which, fays Mr . Dobbs, are fold at a monftrous profit, even to $2000^{\circ}$ PER CENT. - Notwithftanding this difcouragement, the two fleets went down with Jofeph de la France, from whom Mr. Dobbs had this account, carried back 200 packs, rco in each fack, making in all 20,000 beavers; and the other Indians who arrived that year, carried down 300 packs, of 100 each, making 30,000 beavers, in all 50,000 beavers, and above 9000 martens. The martens are taken in traps, for, if they are fhot, their fkins would be fpolled. They have generally 5 or 6 at a litter.
The furrs there are much more valuable than thole upon the Canada lakes fold at New York; [fee Canada] for thefe will fetch 5 or $6 s$. per pound, when the latter fell at 3 s .6 d . -If a fort was built at the Great Fork, 60 leagues above York fort towards the fouth weft, and a factory, with the European goods fixed there, and a reafonable price put upon them, the trade would be wonderfully increafed. The Great Fork is that part where the rivers Nelfon and Hayes join; and, having run a little way rogether, feparate again, forming an inland, which is called Hayes's INand. The northernmoft branch is fill called Nelfon River, near the mouth of which ftands fort York; the fouthernmoft branch is called Hayes's River by the Englifh, and St. Therefa by the French; who call Nelfon River the river of Bourbon, which name they alfo give to fort York. If fuch' a factory were fettled, as juft mentioned, the natives from the fouth-weft of the lake Pachegoia could make, at leaf, two returns in a fummer; and thofe at greater diftances could make one, who cannot now come at all; and abpove double the number would be employed in hunting, and many more fkins would be brought to market, than they can now afford to bring, for the expence and low price given for them. The fream is fo gentle from the Fork to York fort, on either branch, that large veffels and fhallops may be built there, and carry down the bulky goods, and alfo return againft the fream.
The climate there is good, and fit to produce grain, pulfe, \&ac. and very good grafs for cattle. And if afterwards any fettlements were made upon the lake Pachegoia, which is not more northerly than the latitude of 52 degrees, and velfels built to navigate that lake, the trade would be fill vaftly enlarged and improved: it would fpread not only up the river and lakes, as far as the lakes Du Bois and Du Puis; but alfo among the Affinibouels, and nations beyond them; and the nation Des Vieux Hommes, or old Men, who are 200 leagucs weftward of Pachegoia. The nations who go up the above-mentioned river, with prefents to confirm the peace, are three months in going, and fay they live behind a range of mountains, beyond the Affinibouels.
Mr . Dobbs further obferves, from the account of Mr. Froft, that the factory is built near the mouth of the river, in latitude 51. 28. upon a navigable river, which, at twelve miles diffant from the fort, is divided into twa branches; one comes from the fouthward, the other from the fouth-wefl. Upon the fouthern branch all forts of grain thrive; as barley, beans, and peale do at the factory, though expofed to all the chilling winds which come from the ice in the bay. Upon the fouthern part, above the falls, there grows naturally along the river a kind of wild oats and rye, the bufk being black, but the grain perfectly white and clear, like rice. The Indians beat it off, when ripe, into their canoes, as they pars along the river, it growing in the water, like rice. In the woods, at the bottom of the bay of Moofe and Albany, as well as at Rupers's River, are very large timber-trees of all kinds; oak, afh, $\$ \mathrm{cc}$. as well as pine, cedar, and fpruce. They have exceeding good grafs to make hay, which improves every day as they cut, and feed it; and they may have every-where, within land, all forts of pulfe and grain, and all forts of fruit-trees, as in the
fame climate in Europe, for all forts they have tried thrive very well.
The French have got a fettement for trade, near the fouth. ern branh, about 100 miles above the fattory, where they fell their goods cheaper than the company do; although it be very difficult and expenfive to carry them fo far from Ca nada. They give as much for a maten- k kn, as we do for a beaver, when we infift upon three for one: fo that the French get all the choice fkins, and leave only the refufe for the company. The French have allo got another fertlement pretty high up, upon Rupert's River, by which they have gained all the trade upon the eaft main, except a loyle the company get at Slude River, the mouth of which is abour 30 leagues to the north of Rupert's River.
On the fouth-fide of the great inland fea lately difcovered upon the eaft main, there is an exceeding rich lead mine, from whict the, natives have brought very good ore, which might turn to great advantage, as well as the furs upon that coalt; which might be greatly increafed, if the trade was laid open, and fertlements made in proper places.
When Mr. Froft was at Churchill, he cravelled a confiderable way in the country, north-weft of the iver of Seals. He was acquainted there with an Indian chief, who traded at Churchill, and had often been at a fine copper mine, which they truck off from the rocks with Mharp ftones. He faid it was upon iffands at the mouth of a river, and lay to the northward of that country, where they had no night in fummer.
The thade at Churchill is increafing, being at too great dif. tance from the French for them to interfere therein. In the year 1742 , it amounted to 20,000 beavers. There were about 100 upland Indians, who came in their canoes to trade; and about 200 northern Indians, who brought their furrs and ikins on fledges: fome of them came down the river Seals, 15 leagues northwards of Churchill in canoes, and brought their furrs from thence by jand. They bave no beavers to the northward of Churchill, not having there fuch ponds and woods as thofe animals choofe to live in, or feed upon: but they have great numbers of martens, foxes, bears, reindeer, buffaloes, and other beafts of rich furrs.
There is a great deal of the fpruce, or fir kind of wood, near the old tactory; but the wood improves as it is farther up the tiver from the bay; where they have juniper, birch, and poplar: and more foutherly the timber is larger, and there are great varsety of trees.
They are under grear inconveniencies at the new fort, which is upon an elevated ficuation upon a rock, without fhelter, ciofe by the fhore, furrounded with foow and ice for eight months of the year, expofed to all the winds and ftorms that happen, and is very barren. But, if.a fettlement were made higher up the river, fouthwards, fome leagues from the bay, in Thelter, without the reach of chilling winds, they would have grafs and hay fufficient, and might alfo have gardens and proper greens and roots, propagated there. ${ }^{\prime}$ Tis affirmed, that there is a communication between Churchill and Nelfon's Rivers, at a great diftance within land, or a very fhort land-carriage between them: for the Indians who trade here tell them what chiefs, with their followers, go down to Nellon or Albany River.
We may juftly wonder, that we never had till lately any clear account of thefe maters, confidering how long we have had factories in thefe parts; and that, on the contrary, all the accounts, hitherto given, reprefent the coafts of Hudfon's Bay, as the moft forlorn part of the univerle, hitherto difcovered. But for this the fame gentleman whom we quoted, has fully accounted; and it is requifte that the public Thould be well acquainted with the account that he has given; for, fince the great council of the nation has thought fit to encourage an attempt to difcover a paffage this way into the South Seas, it is reafonable to fuppofe, that endeavours will not be wanting to puith that attempt to the utmoft; to facilitate which, there is nothing of fo great importance, as the proving that the difcouragements which have been hitherto reprefented as infuperable, have been over-rated; and that, notwithftariding all that has been faid of them, it is not only poffible, but probable, that they may be overcome: towards which, nothing can contribute more than the pointing out the motives, upon which they have hitherto been reprefented, in fo ftrong a light, which is very effectually done, in the following paffage from the fame author; who, as he has fludied this point, fo it muft be allowed he has made it as clear as with reafon could woll be expected.
""The company, fays he, avoid all they can making difcoveries * to the northward of Churchill, or extending their trade that - way, for fear they fhould difcover a paffage to the weffern - ocean of America, and tempt, by that means, the reft of - the Englifh merchants to lay open their trade, which they : know they have no legal right to; which, if the paffage - was found, would not only animate the reft of the mer-- chants to purfue the trade through that palfage, but alfo to - find out the great advantages that might be made of the - trade of the rivers and countries adjoining to the bay, by ' which means they would lofe their beloved monopoly. But G the profplet they have of gain to be made by trading with
the Enkimaux Indians, for whale-fin, whate and fea oi], 4 and fea-horfe tecth, induces them to venture a floop annu-- ally, as far as 62 deg. 30 min . to Whale Cove, where - thefe Indians meet them, and truck their fins and oil with - them. But though they are fully informed of a fine copper mine on a navigacle arm of the fea, north-weftwand of Whale Cove, and the Indians have offered to carry - their floops to it; yet their fear of difcovering the paflage puts bounds to their avarice, and prevents their going to the mine, which by all accounts is very rich. Yet thole who bave been at Whale Cove own, that from thence northwards is all broken land; and that, after palfing fome - inlands, they from the hills fee the fea open, leading to the weftward. And the Indians who have been often at the - mine, fay it is upon a navigable arm of the fea, of great - depth, leading to the fouth-weft, where are great num-- bers of large black fifh fouting water, which confirms the opinion that all the whales feen between Whale Cove and - Wager River, all come there from the weftern ocean, fince - none are feen any where elfe in Hudfon's Bay or Streight. All along this coatt from the latitude 62 degrees to 65 de-- grees, a very beneficial fifbery of whales may be carried on 6 with there Eikimaux Indians; who, even without the ufe of iron, can harpoon and kill whales; and if they were - fupplied with iron harpoons, and proper cordage, they * might be brought to kill great numbers of them. At pre-- fent all their nets, lines, and fnares, are made of whale-

- bone, and moft of their boats and other neceffaries of the Ceal-ikins, filh-bones, and fea-horfe teeth, and, in making - all things neceffary for them, they are very neat and inge${ }^{6}$ nious.
The fame judicious perfon, from whom we have borrowed fo much already, has taken the pains to give, from very authentic relations, a very clear, as well as a very copious account, of moft of the' Indian nations that lie at the back of our northern colonies, and between the French fettlements in Canada, and on the Miffiflippi River ; with the countries they inhabited, and the product of thofe countries, which I efteem a thing of very great confequence, and as material a fervice to this nation, as has been rendered for many years; the account is too long for me to infert, but the inferences be draws from it are fo juft, and of fo high confequence, that I think it would be an injury done the reader not to report them, as it would certainly be doing both him and the fubject great wrong, to report them in any other than his own words, which without farther preface I Thall ufe; only it is neceflary to premife, at the time this gentleman publithed his book, the war with France was not actually broke out.
- How glorious, fays he, would it be for us at the fame time - to civilize fo many nations, and improve fo large and fpa-- cious a country, by communicating our conflitution and - liberties, both civil and religious, to fo many numbers, whofe happinefs and pleafure would increafe at the fame time, that an increafe of wealth and power would be added - to Britain!
c There is, at prefent, a beginning of this fcheme, by the - zeal of Mr. Barclay, who is inftructing and civilizing the - Mowhawks, among the Iroquois, who from a warlike na6 tion have embarked in trade, and entered into alliances with all nations round the lakes Huron and Errie, and to 6 the weftward as far as the Mifliflippi, which is firmly efta-- blifhed by the gain they make by the trade. The Englifh from New York have fixed at Ofwego, in their country, 6 upon equitable terms with all the Indians, who come now 6 to trade there, whofe names were never before known to s the Englifh. This therefore feems to be the critical time to begin this fettlement, on the banks of Conde River. If there be a war with France, as we are at a great expence * to fave the liberties of Europe, and fupport the houfe of - Auftria, fince we can have nothing in Europe beneficial - for us, in cafe we are fuccefsful at the conclufion of the - war, we ought to flipulate for fomething advantageous in - America; and the leaft we ought to claim is our right to the American lakes, and fecuring the navigation of them. See the article Canada.
- The French have, at prefent, two little forts, and about c thirty men in each, at Niagara, and the ftreights of St. c Jofeph; and a few men at Miffiliackinac, and at the bottom 6 of the Illinefe lake. Thefe we ought to have from them, - either by force or treaty, which would fecure the inland 6 trade to us, and prevent their future incroachments, either - there or in Hudfon's Bay ; and to do this effectually c would be to make a fettlement near the lake Errie, which - may be done with little or no expence, confidering our - prefent barrier and alliance, and trade with the natives; - and, whenever our troops are difbanded, fome of them may " be tent over upon half pay, to fix in proper places, and - make good our poffeffions; which would be a fine retreat to - our foldiers, who can't fo eafily, after being difbanded, bring - themfelves again to hard labour, being fo long difufed to it. - By thefe fettlements, and thofe adjoining to Hudfon's Bay, - and by opening the trade to the bay, many thoufands more c would be employed in erade, and a much greater vent

6 would be opened to our manufaCtures: whereas all the ' trade we have at prefent; whillt it is thus confined to the - company, is the employment of one hundred and twen:y men in all their factories; and two or three fhips in that trade, manned perhaps with one hundred and twenty men in time of war, to enrich nine or ten merchants at their country's expence, at the fame time betraying the nation, by allowing the French to incroach upon us at the bottom - of the bay, having given up by that means the greate $\{$ part of their trade there to the French. It is therefore bumGly fubmitted to the government, whether it is not juti, 6 as well ás prudent, 10 open the trade to all the Britifh mer-- chants, and refume, at the fame time, the charter, fo far as to take from them all the lands they bave not reclaimed 6 or cccupied, after feventy years polleffion, leaving them 6 only their factories, and fuch lands as they have reclaimed; adjoining to them; and to give grants as ufual; in other colonies, to all who Shall go over to trade, and make fet6 tlements in the country; for no grant was ever intended to 6 be made to them, to enable them to prevent other fubjects of Britain from planting thore colonies, which they them-- felves would not plant or occupy; for fuch a power, in-- Itead of being beneficial, would be the greatelt prejudice to Britain. It is therefore become a general law in all the colonies, that thofe who take grants of land, and - don't plant them in a reafonable limited time, forfeit their 6 right to thofe lands, and a new grant is made out to fuch - others as thall plant and improve them; and, if this grant ' be not immediacely refumed fo far, and the trade laid open, 6 and fome force be not fent to fecure our fouthern planta-- tions in the bay by the government, in cafe there fhould be 6 a French war, we thall fee the French immeliately dif-- poflefs the company of all their factories but Churchill, c and all thefecountries and that trade will be in poffeffion 6 of the Frencl.
6. To the making fuch fettlements fome objections have been ' made' by the friends of the company: as the great difficulty * of getting people to go to fettle and plant in fu cold a coun< try, and the difficulty and danger attending the making fetc tlements higher up upon the rivers, and navigating them, as c they are fo full of falls and rapids, that can only be navi6 gated by the natives in (mall canoes, made of birch-bark, 6 which cannot contain above two men with any cargo; and 6 in thele they ate eften overlet, and are in fuch danger of < being drowned, and of fpoiling their goods, that they are 6 often obliged to carry their canoes and cargo from place to ' place, which obftructs greatly, and delays the navigation; - and that fcarce five men out of 120 , which the company " now have in the bay, will venture themfelves in, or can - conduct fuch canoes, without imminent danger of being 6 drowned $;$ and, confequently, thefe hardhhips and difficul6 ties will counterballance the profit to be made of fettling ' higher up in the country, upon the rivers, in pleafanter 6 and warmer climates.
6 To this I anfwer, That, by the accounts already given 6 here of thefe climates and countries, by impartial perions, ' who do not want to difguife the truth, it appears that the - cold is tolerable, even at thefe difadvantageous fettlements - at prefent in the bay; and that, upon paffing only five or s fix leagues up the rivers into the country, the climate is fo - altered as to be equal to thofe of the fame latitudes in Eu6 rope; and that thefe prodigious accounts of the cffects of - cold are calculated only to ferve the company, in order to 6 prevent people from going there to fettle, and incroach upc on the company's monopoly of trade. And to the dificulty * they make about navigating thefe rivers in thofe fmall ca' noes, and the fmall number employed by the company who ' will venture in them, or can conduct them, I anfwer, 6 That their fervants, being at prefent no gainers by trade, 6 will not endeavour to learn to navigate thefe canoes, where 6 there is any rifque and care neceffary to prevent the danger. - Befides, the company allows them no cime to Jearn, by - confining them to their factories, whilft the Indian trade - continues, and the navigation is open; and at other times s keeps them employed in cutting wood for fring, bringing 6 it home, fhooting, fifhing, and digging in their gardens, - to fupply themfeves with provifions, to leffen the compa-- ny's expence; fo that they are allowed no time to learn to - navigate thefe boats, or to go up the rivers to obferve the c foil and climate, or what improvemens might be made in - the country. But, if they were mafters of their own time, 6 and could advance their wealth by trade, and found a con6 fiderable profit to arife to them by their dexterity in ma-- naging thele canoes, and the great plealure and latistaction 6 they would have by living in a fine climate, among thefe c lakes and rivers, they would be as enterprizing and dextrous c as the Cureur de Bois, and be as able to navigate among 6 thefe water-falls, as the French. Neither is it impractica6 ble to prevent even thofe cances from overfetting, by out-- lagers, or blown bladders, fixed to their fides; or other 6 kind of boats may be ufed, fuch as are made at Torneo in - Sweden, upon the rivers falling into the Bothnic Gulph; c and Laplanders might be prevailed upon to go there to teach - them how to make and manage thele buats, and train up

* rein-deer to draw in fledges in winter, and allo to ufe Lap-- land thoes, which are better than thofe uled in America.
- If the trade was once made free, the protit made upon it - would induce many to go and lettle upon thofe rivers, when - not only horles, and other conveniencies, would be had - near the water-falls, to affit the land-carrage in fummer, - but alfo hortes and rein-deer to draw ther fledges in winter, - as in Ruffia, which is almott as cheap a carrage as by wa-- ter, when the proper roads are made through the woods: - fo that objection mult be of no force to prevent our opening - the trade, and fettling thefe countries. But fuppofing the * worlt, that we could not manage thefe canoes, that could - not prevent our fettling to advantage upon thefe rivers and - lakes above the falls, for the natives might ftill be our car-- riers, in navigating thofe dangerous places, and taking our - grods from one fettlement to another, whilft we thould be - employed in navigation and tuade among the lakes and rivers - where there are no lalls, in larger veliels, and pufh our com-- merce fouthward, into betrer chmates and richer forls, and put * the natives upon improvements in trade, by civilizing and in-- ftructing them in bulding convenient houfes, and alloctating 6 in towns, making gardens, and tiling their lands; providing cthem with horfes and tame cattle, and'fowl, for their ufe, - and proper tonls, which our trade would furnifh them with. - Another sbjection $1 s$, that it is a difficult and dangerous na* vigation into the bay, and the trade is not worth the rifque. - To this I anfwer, That the navigation is not to dangerous 4 as it is appiehended to be, but appears to be more fo by the * infinuations and report of the company, and their friends, 4 who gave it out in order to deter ochers from venturing and - interfering in their trade; and for that reafon they oblige
* their captains, under a penalty, not to publifh any charts c of the bay and Atreight. Captain, Middleton, who was in - their fervice, made above 20 voyages, to different parts of
* the bay, and never loft a $\mathrm{fh} p$, nor had any accident in thefe * voyages; nor have I heard that the company, in about 23 - years, have loft any fhips in that trade but two, and the c men and cargo were faved by captain Middleton. Where - captains are careful in the ice, there is not much danger; c it is of great advantage to them that there is no night at - that fealon they enter the bay, where the quantity of ice is - greateft; and when they return in September, or even in
- October, all the ice is in a manner diffolved, or paffed out
* of the fireight into the ocean, and none feen that can hin-- der their paffage.
c It is probable that, during the whole winter, from October - to March, there is no ice in the ftreight to obftruct their * paffage into or out of the bay; for a fhip which chanced to - be clofed up with ice in an inlet, by breaking of the ice * got out, and came through the ice at Chriftmas, without * finding any ice in the freight to prevent her pallage: for - the ice which is formed in bays and rivers in winter, does - not break up and get into the channel or ftreight until ir - begins to thaw upon the fhore, in March or April; at * which time it is carried by the winds and tide into the
- ftreight, and obftucts the palfage in May or June, until it " is diffolved; yet, even then, good pilots know how to 6 avoid it, and get into the eddy-tide, out of the current, c where the ice is more open, and not drove together by the c winds and current, as it is in the channel. But thefe dif-
- ficulties would leffen every day, if the trade were opened,
* and the voyages more frequent, by the great number of
- Chips, which would make many more experienced pilots.

6 And as there is now a more accurate chart publifhed of the - Areight and bay, by captain Middleton, with the inlands, - foundings, tides, and variation, the navigation will become

- lefs dangerous daily, and coves, and places of thelter for
- Mhips, will be found out, by the number of fhips which c would then pats, and be trading in thofe feas which are c now unknown. I therefore apprehend that the danger of the ice is more in imagination than reality, when care and judgment are emplayed; for fhips are moftly inclofed in 6 ice in calm weather and fogs, when the ice prevents the - motion of the fea; ftormy weather difperfes and breaks the
c ice, unlefs they get under the lee of a large inand of ice, c and then they faften to it, and drive along with it, whillt - the fmaller ice to leeward is drove from them by the wind, c and the large illands, being many fathoms deep in the - water, come on ground before the fhips are in danger of c being forced on thore in fhallow water.
The greateft danger and delay from the ice is in the en6 trance into the freights; for the firft 40 leagues from thence * the quantity is lefs, and they pafs on with lefs difficulty; - and atter getting into the bay, the north-weft fide is the - freeft from ice; the bottom of the bay is full of low flat ice, which is all diffolved in the latter end of fummer. - Upon the whole, except two fhips, which were loft in king William's reign, and a French fhip, after an engagement with our hips, when they attacked fort Nelfon, I have cheard of none, except the fhips already mentioned, which - have been loft in the voyage. The two hips which went - out with Barlow, in 1719 , to find the north-weft palfage, contrary to the inclinations of the company, if they did not * make the paffage, were probably in the winter furprized by
the natives, and were not loft in the ice; for they fay that the natives, in about latitude 63 degrees, where they fuppofe they were loft, are fhier, fince that time, in trading with the company's floops; which they apprehend to be 6 from a confcioufnefs of guilt, fearing that, if it were known, - they fhould ftill be punifhed for it. Since, therefore, the - greateft danger from the ice is in paffing the freight, and fo few accidents have happened in fo many years, the navisation, I think, cannot be called dangerous, though it has been fo apprehended, and not equal to the whale-finhers, " who go annually to Spitiberg and Davis's Streights, to lati-- tudes 78 and 80 degrees, without any objection to that ' navigation, either by the Dutch, Hamburghers, Danes, 'Bifcayners, or Englifh.'
He concludes from thence, that the opening the trade, and lettling in the bay, would prove a great benefit to, and great improvement of, our trade, which might be vaitly increafed, as well in refpect to furrs as to mines, and the whale-fifhery; all which might be carried on with the affitance of the Indians, and would turn to a very high profit, even fuppofing that no paffage to the north-weft fhould-ever be found'; bu; fhould future experience demonftrate that this gentleman's notions are, in this refpect, well founded, and this long-foughtfor paffage fhould actually be difcovered, it would then certainly follow that this country, fo little known, and fo much defpifed till very lately, would become of more confequence to us than almoft any colony in America. Here let me take the liberty of obferving, what hitherto, as far as I know, has never yet been confidered: that, if fuch a paflage to the north-weft fhould be difcovered before thefe countries are tolerably planted, the French would have a fair opportunity of fupplanting us in the advantages expected from that important attempt; and, perhaps, we fhould then be forced to fight for the poffeffion of countries that are now thought not worth the baving.
It may likewife deferve fome thought, whether it be not better to attempt fuch fettlements without lofs of time, as mult at all events be highly ufeful and ferviceable to this nation, by dividing the French fettlements in Canada, and on the Miffiffippi, from each other, than to wait till the importance of fuch fettlements fhall appear in fo glaring a light, as they mutt immediately do, if fuch a paffage fhould be difcovered; for we ought to remember, from the famous inftance of our being difappointed in our defign of fettling the iflands of St. Lucia and.St. Vincent, that it is a very difficult matter, in a time of full peace, for us to acquire any advantage in point of commerce, at the expence of the French, who, in fuch a cafe, would not fail to take the fame vigorous meafures that they did in the cafe before-mentioned. I have taken the more pains to place this matter in a fair and true light, becaufe 1 am perfuaded this is the time in which only it can be confidered to advantage; for if the cafe now in view (I mean the difcovery of a north-weft paifage) thould ever come, as I am convinced, fooner or later, it will come to be the cale in fact, the face of, affairs will be quite changed, and this new rout to the South-Seas and Eaft-Indies will produce fuch an alteration in the whole commercial fyftem of Europe, that things will be feen to be then of the utmoft conlequence, which at prefent moft people look upon as dreams and vifions; notwithftanding the late fanction given them by the wifdom of the parliament.
But it becomes a prudent and fenfible people, and above all it imports a maritime power, to confider things in time, and while what is propoled for their benefit is eaty, or at leaft practicable, and not to defer and delay things, till, from being troublefome and difficult, they come to be abfolutely impoffible. We know what Tharp and cutting remarks have been made on the meannefs of king James's fpirit, in fuffering the Dutch to defpoil us of the fpice trade: we cannot but remember the fevere reflections on queen Anne's miniftry, for not fecuring to us Cape Breton; and, therefore, we fhould be cautious of falling a third time into the fame miftake, and of running the hazard of making a great difoovery, fuch as all the world allows that of the north-weft paffage would be, rather for other people's benefit than our own, fince it muft pafs for a blunder, greater than ever was made by our anceftors, and would render us effectually ridiculous in the eyes of lateft pofterity.

Remarks before the laft war.
The accounts given by the company being repugnant to what has been faid by others in relation to the country in general, and the commerce of the company in particular, we thall conclude with what has lately been publifhed with regard to this matter, by Mr. Jofeph Robfon, in his Account of fix years refidence in Hudfon's Bay, from the year 1733 to 1736 , and from 1744 to 1747, late furveyor and fupervifor of the buildings to the Hudion's Bay company, \&c. and, if there are any falfehoods and mifreprefentations contained therein, only to injure the company, and no way to ferve the public, let the author anfwer for them, for the public can only depend upon the reports of thofe who have been in thefe countries.
6 I fhall now proceed, fays Mr. Robfon, page 62, to fum up - the material' part of the evidence produced againft the comr

- pany Tbefore the committee of the honourable houte of commons] relative to their mifconduct, and to the country, - climate, trade, fifheries, and navigation of the bay.
- Firtt, It appears that the countries about the bay are ca - pable of great improvement ; that the lands fouthward and - weffward of the bay are in good climates, equal, in their - feveral latitudes, to thrie of Afia and Europe, and that the climate improves farther within land, the fipring being - earlier, and the wincer fhorter; that by Kelfey's Journal, - produced by the company, and by Jofeph de la France's, which they have not controverted, the country abounds with woods, champaigns, plains, ponds, rivers and lakes, - feveral hundred leagues weft from the bay, that the land - is covered with beavers, buffaloes, deer, martens, and * other valuable furrs; and the rivers and lakes are full of
- fturgeon, and other excellent fifh.-It appears, alfo, that
thele fine rivers are navigable every-where with canoes, 6 and in moft places with larger veffels, having but inconliderable falls, up which canoes can be towed againt the
- flreams, and that the lakes are navigable by larger veffels.-

That upon thefe rivers, and about the lakes, are many

- nations, or tribes, of docile and humane Indians, willing - to be inftructed, and eager to engage in trade. - That the - lands are capable of tillage, affording good patture for horfes and cattle in the fummer, and good hay for their fubfiftence in winter.-That at Churchill, the moft northerly factory, - liorfes and cows have been kept in wihter, though greatly * expofed to the froft and cold.-That all forts of gaiden-ftuff - flourifh at the fatories; and, where barley and oats have - been fowin, they come to perfection': at Moofe factory, at - the bottom of the bay, fown wheat has ftood the winter - frofts, and grown very well the fummer following', though - the culd and froft is greater, and continues longer here than
- wirhin land: black cherries alfo planted here have grown c and borne fruit, as would other trees, if propagated.-That ' the rivers upon the bay abound with white whales, and other valuable filh; and the fea to the northward with black whales, fea-horles, feals, and white bears, which afford - whale-fin, oil, ivory, and fikins; the weftern coaft being a no way mountainout, as in Davis's and Hudfon's Streights. That the feas and navigation are not dangerous, there being few intances of the lofs of mips in the bay; or in the paflage thither.
Secondly, It appears that, notwithfanding the unfpeakable - advantages to be obtained by planting and fetting thefe countries, the climates of which are not worfe than Sweden, - Denmark, Ruflia, Poland, and North Germany, yet the company have not made, nor encouraged to be made, any - one fettlement or colony, having only four fmall factories, cin which they keep about izo fervants, and two fmall choufes with only eight men in each, which is all the force - they have provided to keep the poffeffion, and protea the - trade of a country, equal to one-third of Europe.-That - they have not, in 50 years, fent above one perfon to make difcoveries within land, which was Norton, who, by - Brown's evidence, had been at the copper mine, though 6 his journal was not produced to the committee; but none to make friendfhips and alliances with the natives, difcourag-- ing even their fcrvants from going up into the inlands to - trade, though for their own bencfit, nor even to prevent
- the natives from trading with the French, though they are - fenfible of their perpetual Incroachments, and that * they daily carry away the richer furrs- - That, not-- withftanding there are inconteftable evidences of rich cop-- per and lead mines, and even of cinnabar, out of which - mercury has been extracted, yet no encouragement has been - given, or attempts made to fearch after them, with a view - to their improvement.- That the annual exports of the - company have not exceeded 4000 l. and, in time of peace, their navigation has been confined to three hips, of 150 or - 200 tons, with two or three fmall floops fationed in the - bay, that fome years are not fent out of harbour.- That no - means have been ufed to civilize or convert the natives, - nor even a clergyman fent over to inftruct and take care of c the fouls of their own fervants; on the contrary, the learnc ing the Indian language, or keeping up any correfpondence - with the people, is feverely prohibited, under penalty of lofs * of wages, and bodily correction.-And that nonc but plau-- ible and infincere attempts have been made to find out a - paffage to the weftern ocean of America, though the pro-- babifity of there being fach a paffage is more and more - ftrengthened from the late difcovery of bays, inlets, and - broken lands, the weftern ends of which are not yet difcor vered, and from there having been no rivers yet .obferved - on the narth-weft cosit.
- And what have the company and it's friends been able to - advance, in oppoftion to thefe accumulated proofs of ne-- glect and folly? Why no more than this,.."' That, if the " country and trade could thave been improved to the degree is that is alledged, merely by making fiefh difcoveries, and "carrying on an induftrous cultivation, it is not to be fup"s carrying on an wint the taking fuch pradicable fleps would have been "poied that the taking fuch prodicable iteps would have been se of men of experience, who are wife enough to purfue their VoL. I.
" own interefts."- This was the fundamental point wioh
regard to which the committee ventured to crofs-examin'e ' the petitioners witneffes againft the company; moft of whom - were men of inferior ftations, unqualified to affign the true - reafon why the company have acted fo manifently againft the
' intereft of the public, and fo apparently againft their own.
"But the true reafon is obvious: "s they bad no legal right
$\because$ to their exclufive trade fince the year 1608 , at which time
"t the act expired that confirmed their charter only for feven "years: if, therefore, at this period the leaft evidence had "" been fuffered to tranfpire that the climate of Hudion's Bay " is very habitable; that the foil is rich and fruitful, fit for "" growing corn, and raifing nocks of cattle, and abounds "s allo with valuable mines; that the filheries are capable of ${ }^{\text {"s }}$ great improvement, and the navigation not more danger" ous than in other countries; that the trade may even be "c extended by means of a navigable paffige, or at leaft by a " Mort land paffage, to the Weftern Ocean; and that the "s company, from thefe difcoveries and improvements, arc "grown immenfely rich and powerful :" "I fay, had fuch " proofs of a fine country and berieficial tradeftolen abroad in ' the world, às they muft unavoidably have done, if proper " experiments had been made, " the company knew that the "" legiflature would have taken the right into its own hands, "s and fettled the country, and laid the trade open, for the "s bencfit of Britain." "They have, therefore, contented 'themfelves with dividing amiong 100 perfons a large profit ' upon a fmall capital ; have not only endeavoured to keep 6 the true ftate of the trade and country an impenetrable fe' cret, but induffrioufly propagated the worft impreffions of - them; and, rather than enjoy the inconceivable advan' tages of a general cultivation, in common with their fel-- low fubjects, have, even to the hazard of their own fepacrate intereft, expofed both country and trade to the incroachments of the French.
6 The French, who are grafping at univerfal dominion, ' watch every opportunity for extending their trade, and re-- curing all thofe countries which we abandon. But tamely ' to fuffer them to difpoffefs us of this important fource of ' wealth and power, is, befides the lofs, a difgrace not to be ' borne by Britain; though borne it muft be, if the com-- pany are permitted any longer to facrifice the good of the ' nation to their private intereft. The legifature only can prevent the one, by putting an immediate flop to the other; ' and the legiflature has but two methods to make chbice of; either
' Firft, To purchafe the company's right to any lands they - have a legal title to ; to lay the trade open, with the cufto" mary privileges and immunities; to fettle the rivers, and ' coalts adjoining, with European Proteftants, who are - now in great numbers feeking for places of fhelter, in which - they may enjoy their civil and religious liberties with fafety; © and, laftly, to civilize the natives, treat them with gentle-- nefs and humanity, inftruct them in the knowledge of ufe6 ful arts, and encourage their induftry, by allowing them an 6 equitable trade, and thus lay a foundation for their conver-- fiòn to Chriftianity: Or,
- Secondly, To confirm the fole property of thefe extenfive 'countries, with all the royalties, powers, and privileges ori-- ginally granted by the charter to the company for ever. For, - As by this they would become lords paramount, like the - Dutch company in the Indies, and but barely fubordinate ' to the crown of Great-Britain ; fo by this, and by this c only, they will be induced to purfue thofe meafures that ' can produce any advantages to the company.'
Remarks on Hudson's Bay fince the laft war, and the Definitive Theaty of Peace 1763.
This company having been deemed a monopoly of an injurious nature to the commerce of this part of the world, and has greatly tended to obftrut the advances that private traders would have made therein, had it been laid entirely open, or been conftituted a well-tegulated company; and as there appears grounds fufficient to induce the leginature tothink of altering the prefent flate of the trade; and more efpecially fó, fince this is fo contiguous to Canada, and may be faid to fall under it's Dependencies; for otherwife this company may fpread itfelf, and prove detrimental to the free trade of our new acquifitions.- And as our Public Debts and Taxes are fwelled to fuch an enormous bulk, fhould we not attempt to open and extend every vein of commerce that promifes any betieft to the kingdom, and bring in riches that will enable us to leffen our commercial incumbrances? HUNGARY, a kingdom fituate between 16 and 23 degrees of eaft longitude from London, and between 45 and 49 degrees of north latitude, bounded by the Carpathian mountains, which divide it from Poland on the nerth, by Tranfilvania and Walachia on the eaft, by the river Drave, which feparates it from Sclavoniá on the fouth, and by Auftria and Moravia on the weft.
The country abounds with mines of gold, fllver, and other metals, as allo pits of falt. No foil is fcarce more fruitful in the general. It produces go od corn in fuch plenty, that it is fix times as cheap as in England. Their grapes are large and
hufious,

## HCN

## H U N

lufcious, and their wines, particularly thofe of Tockay, preferred to any in Europe. They have as great plenty of grafs and cattle, of which latter they fell incredible numbers to Germany, not lefs than 80,000 a year to Auftria alone. Among other medicinal plants, they have rhubatb. Their breed of buffaloes is very good, which ferve them in ploughing and hubandry. Their horfes are fwift, but not large, and therefore more ufed for riding than draught. Thiy have fuch numbers, that their kings have brought 50,000 into the field. Here's abundance of deer, wild fowl, and other game, which every body has the privilege of taking, fo that they ate the common food of the very boors.
They have no great foreign commerce, befides the exportation of their cattle and wines; and no other manufactures of confequence, befides thofe of copper, and other hard wares, though the queen of Hungary at prefent, is greatly encouraging divers capital manufactures, which are likely to prove very profperous. No country produces fo many metals as this, tin excepted; and in fome parts are found even diamonds, and other precious ftones. The pealants, even as they till the ground, fometimes find grains of gold. They have likewife great plenty of white, red, and black marble, and fome fine porphyry.
It's air is temperate, but in the fummer the days are exceffive hot, and the nights as cold. It's many marthes and Iakes render it frequently unwholefome: and it's waters, except thofe of the Danube, are ftinking, but they are all well ftocked with fifh, efpecially the Theyffe, or Tibicus, where 1000 carp have been fold for a crown, and in fome places they throw their fifh to the hogs: which prolific quality of the kivers is afcribed to the hot exhalations that rife everywhere out of the fulphureous foil, efpecially in the fouth part. It's other noted rivers are, the Danube, Drave, Save, Raab, the Vag, or Waag, and the Gran. The Theyffe rifes at the foot of the Carpathian mountains, and, after running weft, and paffing by Tockay, it turns fouth, and falls into the Danube over-againft Salankemen. The Danube, entering Hungary on the weft fide, runs to the fouth-eaft as far as Belgrade, and, in a courfe of near 300 miles through this country, forms feveral iflands. The Drave, which enters Hungary on the weft fide, runs almoft directly eaft, till it falls into the Danube, a little below Effeck. The Raab, rifing in Stiria, enters this country allo on the weft fide, and, running north-eaft, falls into the Danube near the city of it's own name. The Waag rifes alfo in the north of Hungary, and falls into the Danube, a little below Kommora. This country abounds with falutary hot baths and fountains, of vitriolic, petrifying, and other peculiar qualities.
Chremnitz, or Kremnitz, on the frontiers of Nitra, is the chief, and moft ancient of mine-towns. Dr. Brown fays, it's gold mine [fee the article GoLD] has been wrought near 950 years; that 'tis the richeft of the feven mines in thefe parts; that the entrance into it through an horizontal paffage, called the Erbftal, is 170 fathom deep, and that the vein, runs 9 or 10 miles in length. Some of the paffages cut long ago through the rocks are, by difufe, grown up again, and hardly paflable.-It bas 6 perpendicular fhafts or pits, one of them 150 fathom deep, and lined with planks, to prevent the earth from falling in upon the miners, who direct themfelves by a compals to trace the veins, of which moft part run to the north eaft.
The gold ore is of divers colours, of which the white, variegated with black fots, proves the beft. They try or affay the ore [fee the article Assiay] by wafhing it, after 'tis pounded, in a fmall river that runs by the town, and is divided into feveral artificial channels, which pafs continually over the ore, and wafh the earthy parts from the metal.They convey the ore from the places where 'tis dug to that part of the pit, from whence 'tis drawn up in a.four-wheeled cart, with a tongue of iron at the bottom; which, being fitted to a trough of wood cut in the middle of each paffage, cannot alter it's courfe, fo that a boy eafily draws it. Thefe carts carry 3 or 4 hundred weight of ore. -So rich is this mine, that they have fometimes found lumps of pure gold, of which fpecimens are preferved in the emperor's repofitory at Vienna; and even the common earth, on the neighbouring hills, affords gold duft. There is a mint in the town for the coinage of gold ducats, \&c.
Not far from the gold mine is another of vitriol, 80 fathom deep, the earth of which, purified and reduced to a calx, is ufed in making aqua fortis. See the article Aqua Fortis.
Schemnitz, lies 28 miles fouth-eaft of Nitra, io eaft from Koniberg, 2I from the city of Bars, 36 from Newhawfel to the north-eaft, 20 fouth of Chremnitz, and 36 north of the Danube. This is faid to be the larget of all the minetowns. 'Tis famous for fine medicinal baths, but more for Gix rich mines of filver; of which, that, called the Trinity, is 70 fathom deep; and another, called Windfchat, is much deeper. 'Tis in fome places very cold, and in others fo wonderfully hot, that the miners are forced to work naked. -Moft of the ore holds come gold. There are alfo found in thofe mines cryfals, amethyfts, and vitriol, naturally cryftallized. The country being rocky, 'tis difficult to bring provifions to the town; fo that, if it were not for the filver
mincs, it would have but few inhabitants. - Not far from it there is a rock, where is found a red fubftance, which grows to the ore, called cinnabar of filver, which makes as tine a vermition for paint as the cinnabar itfelf.
Dr. Brown went down into one of the filver mines by a ladder of 300 fteps , at the foot of which was an engine that pumped up the water by a wheel, which moved feveral other engines, and carried up the water to a neighbouring valley. Here are 200 men conftantly at work.-This learned ralitt fays, the ore is covered with a white clay, which be calls, according to fome ancient chemifts, lac lunz; and that fome of it yields half filver, though in other parts of it they think it well, if it yields 20 ounces upon the hundred weight.
He fays, that black ore is the richeft, mixed with a mining yellow marcafite [fee the article Marcasite] which makes the ore fluid; but, if it exceeds in quantity, preys upon the filver*. [See the article Silver.] He adds, that near the town there is a bigh perpendicular rock, part of which is, a thining blue, mixed with beautiful green and yellow fpots, fo that it looks like an entire mafs of lapis lazuli, fincly polifhed.

* This is a very ufeful intimation to thofe who may difcover any kind of ores upon their eftates; for they may contain fuch a proportion of the nobler metals, as might well an fwer the extraction; but if the fulphureous, or marcafitical quality of the ore is not duly confidered in the aflay, and he large way of working, it will fo embody and entangle tifelf with the purer metals, as well as the inferior, as to difgule them, and conceal their true value from the artif See the articles Assay, Gold, Silver, Ores, Metal. hurgy, Refining.

Hewsol, the capital of the county of Newfol (whtch lies eaft from thofe of Nitra and Bars, and is about 28 miles each way) is alfo called Biftricia, and ftands on the river Gran, ro. miles north of Novogrod, and 80 north-weft of Hermanftadt. 'Tis reckoned the third of the mine-towns, and is plentifully fupplied with provifions. It has not only filver, but the beft copper mines in Hungary, with convenient furnaces, and other requifites for the extraction of the filver from copper, the ore affording it. The ore is here fo firmly incorporated with it's flone-bed, that the feparation cannot be made without great difficulty, the ore being fometimes melted 14 times, according to Dr. Brown, before it produces copper fit for ufe. [See the article Smelting, where thefe tedious and for ufe. [See the article Smelting, where thefe tedious and
expenfive operations will be hewn to be greatly fhortened.]
Paggantz, Koningsberg, Tillen, and Libeten, havé been capital mine-towns, but what with the incurfions of the Turks, and the failure of the veins, they are pretty much abandoned. But,
Hermgrant, about 7 miles from Newfol, has copper-mines fo rich, that an hundred weight of ore yields from 20 to 60 pounds weight of copper. The ore is either yellow or black; the former of which yields mof metal, but the latter contains fome filver.-There are alfo feveral forts of vitriol found in thefe mines, as white, green, blue, and a tranfparent red, befides a green earth, called Berg-green, ufed in painting. Here are faid alfo to be two fprings of vitriolic water, which in 14 days turn iron into copper. They tell us thefe fountains are highly effeemed, becaufe thereby the worft old iron is made pure copper $t$, more ductile and malleable than the other made of the ore, which muft be often melted, before it can be ufeful. Dr. Brown fays, that this mine, for the number of paffages and workmen, looks like a fubterranean city; and that it yields the emperor 120,000 . fterling per annum.

+ We cannot believe this to be true, but rather judge that the dereption arifes from this; that the vitriolate water, as it is called, is a water fo ftrongly impregnated with the natuis called, is a water fo ftrongly impregnated with be capable ral nitrous and mineral fumes of the earth, as to be copoabua fortis, and of fufpending the copper fo diffolved in it's belly; and, when the iron is applied hereunto, the fame nitrous mineral water lays hold of the iron, diffolves that, and precipitates the copper, according to the ordinary principles of diffolutions with aqua foris. For confirmation hereof, fee the articles Mines and Minerals.

Glashitten, or Teplitz, was, formerly noted for a rich mine of gold. This place, at prefent, is much reforted to for it's hor baths: among which is a fweating-bath, the hot fprings of which drain through a hill, and fall into a bagnio, built on purpofe to receive them, at one end of which there's a noble ftove, heated by the fteams of thofe waters, where the degrees of heat are more or Jefs, according to the higher or lower feats. The fprings of thefe baths, which are 40 or 50 in number, are tranfparent, yield filver, have red and green fediment, and leave a ftrong cruft on the feats under water.
Esperifs, a ftrong town on the river Tarza; 4 miles from the frontiers of Poland, 15 north of Carchaw, 60 north of the Theyfle, and 150 eaft of Prefourg, is capital of the
country of Scaros, and famous for it's fairs and falt-mines, particularly one 180 fathom deep, out of which have been dug pieces of pure falt of 1000 pounds weight. 'T'is of feveral colours, fome greyifh, and of delicate blue, fome of a tranfarent yellow, and fome fo clear and hard, that they cut it into divers fhapes like cryftal. The water of the mine, when boiled, produces a blue falt which they give to the cattle.
Leutsche, the capital of the county of Zips , or Czepus, ftands near the Polinh frontiers, 20 miles weft of Efperies, and 24 north of Torna. 'Tis a handfome large fortified town, with a confiderable annual trading fair, inhabited chiefly by German Lutherans. They trade with all the neighbouring places, and are remarkable for their courtefy and plain dealing.
Tuckay, a ftrong town and citadel, on a marihy plain, formed by the conflux of the Theyffe and the Bodrock, 47 iniles ealt from Agria, 33 fouth from Caichaw, and 60 from Ungwar, 72 north from Zolnock, and 76 from great Woradin, and 90 eaft from Buda. 'Tis famous for it's wine, reckoned the beft in Hungary, much efteemed all over Europe, and fold at a great price; and alfo for a fort of earth found in the neighbourhood, called Bolus Tockavienfis, noted for it's medicinal virtues.
Thefe are the chief places of trade in the Upper Hungary, we proceed now to
Lower Hungary, whofe productions are much the fame as thofe of the Upper Hungary, though of infinitely lefs value in the general.
Buda, and it's adjacent country, is pleafant and fruitful, and produces rich wines, though in fome places they have a fulphureous relifh.
HUNTINGDONSHIRE, has Northamptonthire on the weft and north, Bedfordfinire on the fouth, and CambridgeYhire on the eaft, and is not above 70 miles in circumference. The many meers and fens in it prevent the air's being pleafant or wholefome in general.
'Tis a great corn country, and, though the hilly parts don't produce fo much as the others, yet the goodnefs of the air, and the pafture they afford for fheep, make amends.
Huntingnon, the fhire-town, is a populous trading place, and has feveral good inns.
Ramsey, has one of the beft and cheapeft markets in England for fat cattle, and water-fowl.
HUSBANDRY, is the art of improving lands.
Our late accounts from Italy having informed us, that a public academy is eftablifhed at Florence, for the advancement of the art of agriculture, it may be ufeful to urge a word in favour of the like inftitution in Great-Britain; all improvements of this nature being left wholly, as it were, to the farmer, who rarely has philofophy, leifure, or fortune fufficient for the purpofe.
As there is no fubject of more general advantage than the cultivation of lands, and improvement of the vegetable kingdom; fo there is none which has been more copiounty treated of, nor none wherein the public bave been more difappointed in their expectation. And how hould it be otherwife, when the undertakers have either been covetous and illiterate gardeners and planters; or fuch, that, if they acquired any thing new and curious, have not had public Spirit enough to communicate it: others have jogged on in the old beaten track, without ambition to excel their predeceffors. We have had now and then, indeed, a gentleman fudious and capable of obliging the world, free from thofe narrow felfinterefted views. An Evelyn, a Nourfe, a Lawrence, a interetted views. An Evelyn, a Nourfe, a Lawrence, a
Bradley, a Tull, have given us fomething equally new and juft, founded on experiment; but thefe are few, when compared to that ufelefs tribe of unimproving writers.
In ancient times, nothing was efteemed more honourable than pafturage and tillage, for even princes themfelves did not think them unworthy of their fludy and application. Without entering into any detail of the progrefs this art feems to have made in the different ages of the world, it may be fuffient to obferve, that, in proportion as either private families or nations have applied themfelves to this necellary art, they have accordingly profpered, and increafed in number and power, and made the greateft figure in the world. But,
world. jut, As weedge it needlefs to fay any thing in behalf of what is to generally allowed, we fhall only recommend to the public regard the moft recent improvements that have been made in this important art; which are to be met with in the before mentioned authors, and more particularly in an excellent tract, written by that ingenious gentleman Jethro Tull, Efq; of Shelborne in Berkfhire: intitled, Horfe-Hoeing Hubbandry:' $\mathrm{O}_{\mathrm{r}}$, An Elfay on the Principles of Vegetation and Tillage. Defigned to iatroduce a new method of culture, whereby the produce of land will be increafed, and the ufual expence leffiened.
As this effay bas been publifhed fome years, a pretty good judgment may beformed of the performance. Every man who has conidered the principles upon which our author's method of culture is founded, may difcern how far his theory is confiftent with nature; though few, as yet, have made fuffirient experiments to be fully informed of it's worth.

How it has happened, that what propofes fuch advantages. hath been fo long neglected in this country, may be matter of furprize to thofe only who are acquainted with the characters of the men, on whom the practice thereof depends; but to thofe who know them thoroughly it can be none. For 'tis certain, that very few of them can be prevailed on to alter their ufual methods; though their continuing therein difables them from maintaining their families, and paying their rents. And, what is fill more to be lamented, thofe who are averfe to improvements themfelves, diffuade others allo from thinking of them. .This accounts for Mr. Tull's hufbandry being fo little practifed.
But, as the methods commonly ufed, together with the mean price of grain for fome years paft, have reduced the farmers every-where fo low, that they pay their rents very ill, and in many places have thrown up their farms; the cure of thefe evils is certainly an object worthy of the public attention; for, if the proprietor muft be reduced to cultivate his own land, which cannot be done but by the hands of thefe obfinate and indocile people, it is eafy to difcern on which fide his ballance of proft and lofs will turn*.

* If a public academy was eftablithed by authority, for the improvement of the art of hulbandry, as is faid to be done in Florence; and the general practice of the experimental improvements, made by fuch a body, was inforced by au thority, by fuitable rewards, \&c. this would tend to render the difcoveries of learned and public. Spirited men generally ufeful; which are now too generally neglected, for want of being duly propagated and encouraged among the people. And if the improvements, made from time to time by fuch an academy, were, after divine fervice, obliged to be read in all places of public worfhip, it is humbly fubmitted, whether fuch a general practice may not tend as much to the temporal intereft of all concerned in hulbandry, as public praying and preaching may to their fpiritual?
This confideration, together with many others which might be urged, hath induced us to recommend this treatife to the ferious attention of all who wifh well to their country; in hopes that fome may be prevailed on, from regard either to the public good, or their own intereft, to give the method therein propofed a fair and impartial trial : for, could it be introduced into feveral parts of Great-Britain, by men of generous and benevolent principles, their example might, in time, effablith the practice thereof, and bring it into general ufe; which is fcarce to be expected by any other means, unIefs by fuch as we have humbly fuggefted.
It is therefore to fuch only, as are qualified to judge of a theory from the principles whereon it is founded, that we do ourfelves the honour to addrefs them, to give this eflay an attentive reading, craving leave to remind them, how unqualified the common practifers of hurbandry are to pafs a judgment, either on the theory or practice of this method; for which reafon it is hoped that none will be influenced by fuch, but try the experiments themfelves with proper care.
As a motive to this it is to be obferved, that, although the method of culture propofed by Mr. Tull has made little progrefs in England, it is not like to meet with the fame neglect abroad, efpecially in France; where a tranflation of Mr. Tull's book was undertaken, at one and at the fame time, 'by three different perfons of confideration, without the privity of each other : but, afterwards, two of them put their papers into the hands of the third, Monf. Du Hamel du Monceau, of the Royal Academy of Sciences at Paris, and of the Royal Society at London, who has publifhed a book, intitied a Treatife of tillage, on the principles of Mr. Tull. The ingenious author has, indeed, in fome meafure, altered the method obferved by Mr. Tull in his book, yet has very exactly given his principles and rules: but, as he had only feen the firft edition of the Horfe-Hoeing Hublandry, fo he is very defective in his defcriptions of the ploughs and drills, which in that were very imperfect, and were afterwards amended by Mr. Tull, in his additions to that effay.
One of the principal reafons for taking notice of this book is, to thew the comparifon this author has made between the old method of hubandry and the new. By his calculation, the profits arifing from the new are confiderably more than double thofe of the old. For, according to him, the profirs of 20 acres ofland, for to years, amount, at Io d. $\frac{1}{2}$ per livre,
By the old method, to 3000 livres, or 1. 131: 5:0 fterBy the new method, to 7650 livres, or $334: 13: 9\}$ ling. Which makes a prodigious difference in favour of the latter. As this computation was made by one who cannot he fuppofed to have any prejudice in favour of Mr. Tull's fcheme, it will naturally find more credit with the public than any comparifon made by Mr. Tull himfelf, or by fuch who approve his principles.
There have appeared no objegions againt Mr. Tull's principles or practice, which may not be equally urged againft every fort of improvement. One of the principal, it feems, is it's being impracticable in common fields, which make a great part of this country, without the concurrence of every one who occupies land in the fame field. But doth not this equally affect the old hufbandry? For every fuch perfon is obliged to keep the turns of ploughing, fallowing, \&ic. with
the other occupiers; fo that if any of them were inclimable to improve their lands, by fowing grafs-feed, or any other method of culture, they are now under the fame difficulties as they would be, were they to pradife Mr. Tull's method. This, therefore, is rather to be lamented as a public misfortune, than to be brought as an objection to the practicablenefs of that method. Others object, that the introducing this fort of hufbandry is unneceflary, feeing the improvements which are made by grafs feeds are fo confiderable: befides that the returns made by the fold and dairy, being much quicker than by grain, engage the farmer to mix ploughing and grazing together. But,
When this is, confidered, it can have no fort of weight: for is it not well known, that, in thofe farms where the greateft improvements have been made by grafs-feeds, the quantity of dreffing, required for the'arable land often runs away with moft of the profit of the whole farm? efperially when the price of grain is low. If this be the fituation of the moft improved farms, what muft be the cafe of thofe which chiefly confilt of arable land; where molt of the dreffing mult be purchafed at a great price, and often fetched from a confiderable diftance? Add to this the great expence of fervants and horfes, unavoidable in arable farms; and it will appear, how great the advantages are, which the grazier hath over the ploughing farmer. Wherefore it is much to be wifhed, that the practice of mixing the two forts of hufbandrywere more generally ufed in every part of the kingdom; which would be far from rendering Mr. Tull's method of culture ufelefs, feeing that, when it is well underftood, it will be found, we apprehend, the fureft method to improve both. For,
Although Mr. Tull chiefly confined the practice of his method to the production of grain, which is a pity, yet it may be extended to every vegetable which is the object of culture in the fields, gardens, woods, \&c. and, perhaps, may be applied to many other crops, to equal, if not greater advantage, than to corn.
In the vineyard it hath been long practifed with fuccefs, and may be ufed in the hop ground with no lefs advantage. For the culture of beans, peafe, woad, madder, and other largegrowing vegetables, as alfo for lucern, faint-foin, and the larger graffes, we conceive it the only method of culture for profit to the farmer, feeing that, in all thefe crops, one fixth part of the feeds now commonly fown will be fufficient for the fame quantity of land, and the crop, in return, will be much greater; which, when the expence of feeds is duly confidered, will be found no fmall faving to the farmer.
Nor hould this method of culture be confined to England, Scotland, and Ireland: for it may be practifed to as great advantage in the Britifh colonies in America, where, in the culture of fugar-canes, indigo, cotton, rice, and almoft all the crops of that country, it will certainly fave a great expence of labour, and improve the growth of every plant more phan of labour, and improve the growth of every plant more arifing from this culcure. And, fhould the fubjects of GreatBritain neglect to introduce this method into the colonies, it may be prefumed our neighbours will take care not to be blameable on this head; for they feem to be as intent upon extending every branch of trade, and making the greateft improvements of their lands, as we are indifferent to both: fe that, unilefs a contrary fpirit be foon exerted in this nation the ballance of trade, power, and every other advantage, mult be againft us.
There have been objections made by fome to Mr. Tull's method, as if it were practicable only on fuch lands as are foft and light, and not at all on ftiff or ftony ground. We have not learned that it has, as yet, been practifed on either of thefe lands in England; but the impoffibility thereof muft not from-thence be inferred: for the hoe-plough has been very long ufed in the vineyards in many countries, where the foil is ftronger, and abounds with fones full as much as'any part of this country. Though the ufe, however, of this plough may be attended with fome difficulties upon fuch land, for wheat, or plants of low growth, whofe roots may be in danger of being turned out of the ground, or their tops buried by the clods or ftones; yet none of the larger-growing plants are fubject to the like inconveniencies. Befide, the ftronger the foil is, the more benefit will it receive from this method of culture, if the land be thereby more pulverized; which will certainly be the confequence where the method laid down by Mr . Tull is duly obferved.
But as moft inftruments, in their firft ufe, are attended with fome difficulty, efpecially in the hands of fuch as are indocile, the hoe plough has been complained of, as cumberfome and unweitdy to the horfe and ploughman. But, perhaps, this arifes chiefly from the unwillingnefs of the workmen to introduce any new inftrument. It is proper to obferve here, that the fwing-plough, which is commonly ufed in the land about London, will do the bufinefs of the hoe-plough in all ground that is not very ftrong or very fony; and that, where it is fo, the foot-plough, made proportionably frong, will completely anfwer all purpofes. But it muft be remembered, that, when thefe are ufed to hoe corn, the board on the leftthand of the plough, anfwering the mould-board, muft be
taken off r othervile fo much earth will run to the left fide as to injure the crop, when it is low.
The drills are exccllent inftruments; yet we imagine them capable of further inprovement, Parallel grooves, at about an inch afunder, round the infide of the hopper, would flew the man who follows the drill whether or no both boxes vent the feed equally. - By an hitch fiom the plank to the harrow, the latter may be lifted to a proper height, fo as not to be in the way when the ploughmanturns at the head-land. Two hight handles on the plank, like thofe of the common plough, would enable the perfon who follows the drill to keep it from falling off the middle of the ridge; it may allo be ufeful, in we: weather, to double the drill; by which means two ridges may be fown at the fame time, the horfe going betweea them: for the planks of two drills, each plank havingone of the fhafts fixed to it, may be joined end for end, by twe flat bars of iron, one on each fide, well fecured by iron pins and fcrews; and, by correfponding holes in the planks and bars, the diffance between the drills may be altered, according to the different fpaces between the ridges.
As Mr. Tull has endeavoured to recommend his theory, by making a comparifon between the old method of culture and the new, fo we thall annex a computation of the expence and profit of each; both of which, it feems, hath been experimentally tried, by a gentleman of veracity, in a country where the foil was of the fame nature with that from whence Mr. Tull drew his obfervations, viz. light and chalky; and we chufe to give this the rather, as it comes from one who has no attachment to Mr. Tull's method, farther than that he found it fuccefsful by his own experience: and experience may be appealed to, whether every article in this calculation is not eftimated in favour of the common huibandry; whether the expence be not rated lower than moft farners find it, and the crop fuch as they would rejoice to fee, but feldom do, in the country where this computation was made.
In the new hubandry, every article is put at it's full value, and the crop of each year is four bufhels Chort of the other; though, in feveral years experience, it has equalled, and generatly exceeded, thofe of the neighbourhood in the old way.
An eflimate of the expence and profit of 10 acres of land $i_{n}$

Therefore all things paid, there remains clear profit on 10 acres, in 20 years, by the new way
So that the profit on 10 acres of land, in 20 years, in the new way, exceeds that in the old way by $1.135: 1: 8$, and, confequently, is confiderably more that double thereof: an ample encouragement to practife a cheme, whereby fo great advantage will arife from fo fmall a quantity of land, in the compafs of a 21 years leafe, one year being allowed, both in the old and new way, for preparing the ground. It ought withal to be obferved, that Mr. Tull's hußandry requires no manure at all, though we have hete, to prevent objections, allowed the charge thereof for the firt year; and moreover, that, though the crop of wheat from the drillingplough is here put only at two quarters on an acre, yet Mir. Tull himfelf, by actual experiment and meafure, found the produce of this drilled wheat-crop amounted to almoft four quarters on an acre: and, as he has delivered this fact upon his own knowledge, fo there is no reafon to doubt his veracity, which has never yet been called in queftion.- Bur, that we might not be fuppofed to have any prejudice in favour of this practice, we have chofen to take the calculations of others rather than his, having no other view in what we have faid than to promote the caufe of truth, and the public welfare. For mote matter on this fubject, fee the articles Land, Soil.

Remarks.
We would not be thought, by recommending Mr. Tull's theory of hulbandry to trial, as if it contained the greateff advance that might be made in the art of hufbandry; there are various other particulars requifite to be taken irto confideration, in a matter of this importance, by thofe who would excel herein; a variety of which have been fhewn in this work already, with regard to many of the capital productions of nature, which are the foundation of commerce; and the fame will likewife appear in the future part of this work, we having endeavoured to reduce the principles and experiments of the greateft philofophers into the narroweft compars, and in the plaineft language, in order to render them intelligible to ordiainary practifers. See Farming, Manure.
HYPOTHECATION of fhips and falvage. To hypo-

* thecate a chip, is to pawn or pledge the fame for neceffaries: and into whofe hands foever the fhip comes it is liable, 'tis the fame if goods be hypothecated.

R E M A RK.
By the common law of England, a mafter could not impawn ship or goods; for no fuch authority, general or fpecial, is given to him by appointing him matter: but, by the civillaw, in cafes of neceffity he may, that the voyage be not loft: and the common law hath held the law of Oleron reafonable, that, in extreme ncceffity, the mafter may impawn for moncy, or other things.
But, for any debt of his own, he may not pawn the hip, nor Fell or difpofe of her, without fpecial licence from the owners; and, when he doth, fhould have confent and advice of his mariners; but, when the hip is well engaged, the's for ever obliged, and the owners concluded till redemption. But the mafter may not impawn in every cafe of neceffity. If a veffel in her voyage be caft away, and the mariners by great pains recover fome of the wreck and lading, the mafter in that cafe may pledge the farme, and diftribute the pro. duce amongft his diftreffed crew, to carry them home: but, if they no way contributed to the falvage, their reward is loft. And, if confiderable part of the lading be faved, the

Vol. I.

## H Y P

mafter Chould not difmifs his men, till he knows the owners or freighters will, or he may be liable to damage.
Merchants freighting a fhip at their own charges, which entering fome harbour is there wind-bound, and the mafter detained till he wants neceffaries, he is not only to write home for fupplies, but may impawn the fhip or lading at pleafure, or at leaft what he can moft conveniently raife money on: or at eait what he can mont conveniently raine money on:
and, if he cannot pawn the lading, he may fell what's neceffary. However, orders and inftructions are carefully to be followed.
A hip being greatly diftrefled at fea, and wanting a cable, the maxter contracted for one, which was delivered to him, \&c. In an action for the money it was held, that, by maritime law, every contrad of the malte. implies an byporhecation; but it is not fo at common law, unlefs expretly agreed.
In the cafe of Johnfon againft Shippen, a Mip in diftrefs on the high fea put into Boiton in New England, where the mafter took up neceflaries, and, by bill of fale, hypothecated the fhip: fuit being in the admirally againft fhip and owners for repayment, on a motion for prohitition, the court held, that the mafter's contract could not make the owners perfonally liable, but the fuit againat the fhip was good; and to hypothecate is neceffary to preferve navigation, for the mafter can have no other credit. If a fhip in harbour in England be pawned, the party hall not fue for it in the admiralty.
A mahter may alio fubject part of the thip and cargo, to fave the whole, and redemption is a kind of falvage: the mafter reprefents the owners and freighterc, and may detain the goods for freight; and it is reaionable that a mafter compounding for goods, under the circumftances of a capture, fhould be fatisfied by the owners.
By the naval laws of Oleron, if a ftip laden be in the courfe of ber voyage rendered unft to proceed, and the feamen fave what they can of the lading, the mafer may deliver the goods to the merchants requiring them, if he pleafes, they paying freight in proportion to the part of the voyage performed, and cofts of the falvage; but, if the mafter can readily refit, he may; and, though he has promifed thofe who helped to fave the fhip the third or half of the goods faved; for their hazard, in a court of judicature their pains will be confidered, and the reward be accordingly, without regard to the promifes made them by the parties concerned, in their diftrefs.
If a laden fhip put to fea, and there perifh, through the fault of the mafter or his men, the goods faved flall be fecured: but, if it be proved the misfortune was caufed by tempeft, the remainder of Thip and goods hall be brought to contribution, and the mafter retain half the value of freight, by the * laws of Rhodes ; which alfo ordain, to any perfon faving any part of a wreck, one fifth part of what he faves.
And for charges of falvage very great allowances have been made; as to the divers and falvers, the half, third, or tenth of the things faved, according to the depth of water, whether I5, 8, or I fathom; alfo a tenth for falvage on the coaf, and the fifth to him, who, faving himfelf, carries fomething with him. If the fhip only periftes, and the goods be faved, then they to pay the tenth or fifth, as the difficulty of faving requires; and gold, filver, filk, and the like, fhall pay leis than heavier and more burthenfome goods, which are in greater danger.
In France they allow one third part for falvage; but, by the common cuftom of countries, every lord of the manor, \&c. claims all his own, if it comes upon his land; contraty to fome fea laws, which give it to the fuder; though, by the opinion of lawyers, the finders fhould do as with other goods found on land; they fhould proclaim the things to be forthcoming to the true owner, and, none claiming, the finder to keep them to himfelf.
By ftat. 12 Ann. cap. 18. All perions required by conttables, \&c. who fhall act in faving any hip in diftrefs on our feacoafts, or the cargocs, fhall, within 30 days, be paid a reafonable reward by the mafter or merchant; in default, the thip and goods to remain in cuftody of the offcers of the cuftoms, till payment be made; and, if any difference arife about falvage, three juftices of the peace fhall adjuft the quantum, which thall be binding to all parties, and recoverable in an action at law.
And, if goods thus laved are not claimed in 12 months, they fhall be fold, the juftices taking an account in writing, figned by the officer to whom they are intrufted; and, if perifhable, mult be forthwich fold, and, after charges deducted, the money arifing to be tranfmitted to the Exchequer, with a fair account of the whole, for the ufe of the owner, who on proof of his property before one of the barons of Exchequer, fhall, upon his order, receive the fame.
If any perfons flall moleft any one in faving the fhip ot goods; or, when faved, thall deface the marks of any, before they are entered in a book for that purpofe, fuch perfons hall, in twenty days, make double fatsfaction to the party grieved, at the difcretion of the two next juftices; or, in default thereof, fhall be fent to the houle of correction for twelve months.

The

# The PRACTICALBUSINESS of the CUSTOM-HOUSE continued from the end of letter $G$. 

Bounty for the Encouragement of the British WhiteHerring Fishery.
$\mathrm{B}^{\mathrm{Y}}{ }_{23}$ Geo. II. cap. 24. §.6. was granted to the fociety of the Free Britifh FiChery, for fourteen years, from the IIth of Otaber 1750, the date of their charter.
And by 28 Geo. II. cap. 14. §. 4. was further continued for three years; and is,
For every bundred pounds actually employed in the faid fifhery, 3l. per ann. to be paid to the proprietors of the fock out of the cuftoms, by the receiver-general of the cuftoms, by equal halfyearly payments; provided the foeiety fhall employ $100,000 \mathrm{l}$. at leaft in the faid fifhery, within eighteen months after the date of their fubfcription. 23 Geo. II. cap. 24. §. 6, 7.

In order to afcertain the fums from time to time actually expended and employed by the fociety in the faid fifhery, the account thereof muft be delivered to the commiffioners of the cuftoms, figned by three, at leaft, of the council of the fociety, as an atteftation that they have examined it, and belieye it to be juft, and attefted by the oath of the accountant of the fociety at the foot of the account; upon which, the commiffioners are to order payment accordingly, 23 Geo . II. cap. 24. §. 6.

The fociety are alfo to lay their accounts annually before parliament; and if lofs fhould arife by one year's adventure, and there fhould be gain by fucceeding years, the gain mult be applied to make good the original ftock of 100,0001 . before any dividend is made. 23 Geo. II. cap. 24. §. 7.

By 28 Geo. II. eap. I4. §. 1, 2. this bounty is allowed to the fociety on the fum of $104,509 \mathrm{l}$. for two years, to October 22,1752 , and all future intereft on that fum is to be computed from that day; and all future computations of intereft on any additional fum paid in by the fociety, in order to be employed in the faid filhery, are to be made from the day on which cach fum refpectively is paid into the bank of England.
Any number of perfons fubfcribing $10,000 \mathrm{l}$. or upwards, into the ftock of the faid fociety, and carrying on the faid finhery under their own management, and on their own account, from the port named by them; conformably, neverthelefs, to this act and the charter (except as to being obliged to ufe the marks of the faid fociety) and fubfrribing under the name of the fifhing-chamber of fuch city, port, or town, are entitled to the fame bounty. But their account of expences, attefted by three of their committee, figned by their accountant, and verified by his oath, and alfo the vouchers, if required, is to be tranfmitted to the fociety in London, whofe accountant is to enter it in their account, delivered to the commiffioners of the cuftoms, as a fum expended in the faid fifhery by the faid fociety. The bounty is to be paid to the fociety in London, and by them paid over to the fifhing-chamber, after deducting the neceffary charges of receiving. 23 Geo . II. cap. 24. §. 18, 20.
Bounty on Ships built for, and employed in the British
White-Herring Fishery.
By 23 Geo. II. cap. 24. §. 11, 12, 16. was granted for fourteen years, from the commencement of this act.
By 28 Geo. II. cap. 14. §. 4. further continued for three years; and is, for
Every decked bufs or veffel, from 20 to 80 tons burthen, built in Great-Britain after the commencement of this act, for the ufe of the faid fifhery, and proceeding thereon from fome port of Great-Britain, and fitted out and employed therein by the fociety of the Free Britifh Fifhery, or any other perfon, manned and navigated according to law, for every ton burthen I 1. 10 s . Bounty, to be paid annualiy to the owncrs thereof, out of the produce of the cuftoms, fubject to the following regulations.

Every fuch veffel mut have on board twelve Winchefterbuthels of falt for every laft of fifh fhe is capable of holding, barrelled up in new barrels, and as many more new barrels as fhe can carry, and two fleets of tanned nets, viz. for a veffel of 70 tons, one fleet of 50 nets on board, each 30 yards upon the rope, and feven fathoms deep; and another feet of 50 nets in a tender, or proper place on fhore, each 30 yards upon the rope, and not under 5 fathoms deep, and fo in proportion. And mult have on board at the rendezvous fix men for a veffel of 20 tons, and one man more for every five tons above 20 ; and muft return into port with the fame number, unlefs reduced by death, ficknefs, or defertion, without fraud or collufion. 23 Geo. II. cap. 24. §. 13, 14. 26 Geo. Il. cap. 9. §. 3,4 .

Before fhe proceeds on fuch voyage, the muft be vifited by the proper officer of the cuftoms, who is to examine if the is qualified as above, and take account of her tonnage by admeafurement, and certify the fame to the commifioners of the
cuftoms, and whether the is a proper velfel to be employed in the finery.
And further, upon one of the owners, or their ayents, or a proper officer or agents of the fociety, and the mafter of the vellel making oath at the foot of the certificate, before the collector and comptroller of the port, that it is their firm par pofe, and determined refolution, that veffel fhall procted, fo manned, furnifhed, and accoutered, either to Braffey's found in Shetland, and be at the rendezvous on or before the $22 d$ of June, and not thoot or wet their nets before the 24 th of June, and fhall continue fifhing among the fhoals of herrings as they move fouthward, unlefs prevented by lofs of mafts, or other unavoidable accidents, to the 12th of October; or fhall proceed to Campleell-town in Argylefhire, or Kirkwall in the Orkney Inlands, and be at the rendezvous on or before the 12th of September, and continue filhing among the fhoals of herrings as they move to the 1 ith day of January, unlefs they fhall fooner have compleated their loading*; and fin in an orderly manner, without obftructing others; and fhall keep a journal of their proceedings, and an account of the quantities of fifh difpatched to foreign markets, before they came into port, and the quantity they hall bring into port with them; and upon the fame perfons giving fecurity, in treble the value of the bounty, for the faithful dealings of the mafter and fhip's company, the collector and comptroller of the port are $t o$ give them a licence to proceed on the voyage. 23 Geo . II. cap. 24. §. 12. and 26 Geo. II. cap. g. §. 2,7 .

* By 28 Geo. II. cap. 14. §. 5, 6. the fociety may follow the White. Herring Fihhery in any part of the Britifh feas and are not to forfeit this bounty, though the buffes thould not arrive at one of thefe places of their rendezvous on the refpective days appointed, provided fhe took her departure from one of thofe at leaft five days before the day appointed for their being there.

But in the interval, between the Shetland and Yarmouth Fisheries, the veffels may put into any port of GreatBritain, or Ireland, to change their nets, or otherwife prepare for the Yarmouth Fishery; and are not obliged to carry more than one fleet of nets to the latter fifhing. 26 Geo . II. cap. 9. §. 3, 8 .
Upon the return of the veffel to her port of difcharge, the chief officer of the cuftoms, or one appointed by him, muft go on board and examine her condition and lading, and certify the fame, with their obfervations thereon, and alfo the tonnage and names of the matter, and other perfons on board *; and the mafter muft make oath, before the collector and comptroller of the port, on the back of the licence, or to be annexed to it, that the veffel was at one of the places before-mentioned at the time appointed, and has not fince been on any other voyage, or purfued any other defign, or view of profit; and that they did remain fifhing according to the directions of this act, and had at the time of their rendezvous, the quantity of nets and other fores, and number of men, as above directed $\dagger$. The licence is to be delivered up, with an account of what was done in purfuance of it; and the certificate, fchedule, licence, and oath, together with the account of the finh taken, are to be tranfmitted, by the collector and comptroller of the port, to the commiffioners of the cuftoms for that part of Great-Britain, from whence fhe is departed with her licence ; who, being fatisfied of their faithful dealings, are (upon the owners producing a proper certificate, from the receiver of the duty of fix-pence per month from all feamen, for the ufe of Greenwich-hofpital, that all money due on that account for every feamen on board fuch vefiel has been paid) to caufe payment of the bounty to be made by the receiver-general of the cuftoms. 23 Geo. II. cap. 24. §. 15 .

* A true cony of this certificate mult be tranfinitted by the commiffioners of the cufloms wish all convenient fpeed, to the receiver of the duty of fix-pence per month from all feamen for the ufe of Greenwich hofpital, in London. 28 Geo. 11 . cap. 14 . \$. 10 .
$\dagger$ Jf, by virtue of the liberty granted, any bufs quits her ftation, appointed by 26 Geo. II. cap. 9. in order for filhing at other ftations, or does not arrive as one of the flations there mentioncd on the day appointed, this oath is to be varied, and made conformable to the circumfances attending fuch refpettive bufs. 28 Geo . II. cap. 14. §. 7.

The fociety may lett out to hire any of their buffes to be ufed and employed in the faid finhery only, and fubject to the fame regulations and reftrictions as if employed by the fociety. 28 Geo. II. cap, 14. §. 5 .

## I.

## J A P

JAPON, or JAPAN. This great country conlifts of feveral large inlands, befides a great number of fmall ones, all making but one empire, called by the name of the largeft in it, and which, exclufive of the fmall inlands, that lie fcattered at a diftance, confifts of the three principal ones, viz. Japon, or, as the inhabitants call it, Niphon, Ximo, the next in bignefs, and Xi-Coco.
The foil produces great plenty of the fineft and whiteft fort of rice, yearly exported hence in vaft quantities by the Dutch. It produces a great variety of other fruits, and breeds vaft numbers of cattle of all forts. It's mountains are enriched with mines of gold and filver, copper, tin, lead, and iron. The commodities they export are chiefly rice, filks, cotton, \&c. the fineft of porcelane, varnifh, gold and filver, copper and feel, both excellent in their kinds, elephant's-teeth, and very rich furrs; tea of all forts, fome kinds of fuch excellent flavour and tafte, that it is fold at a prodigious rate, even above that of gold, weight for weight; a great variety of medicinal herbs, roots, gums, \&\&c. all of which, as well as the tea, are fold genuine, without the adulterations committed by the Chinefe in theirs: ambergreafe, pearls, coral, \&c. In exchange for which, the Dutch bring them not only glaffes of all forts, woollen and linen cloths, \&c. from Holland, but furnih them likewife with many other commodities from Siam, China, and other parts of India. In the carrying on which commerce is this further encouragement, that no cuf. tom is paid for goods, either imported or exported; only care muft be taken to deal with the fame fairnefs and honefty that mutt be taken to deal with the fame fairness and honety that
the J'aponefe ufe, for thofe who trefpafs herein are fure to be punifhed with the utmoft feverity. See Dutch East-India Company.
In the ifland of Niphon is
Meaco, once the metropolis of the whole empire. It is fituated near the middle of the fouth coalt, in a fpacious and fertile plain. It is ftill the grand ftorehoufe of all the manufactures of the empire, and a place of the greateft commerce for all forts of merchandize that come from abroad. But the moft valuable wares in it are either thofe which are wrought in gold and filver, the fineft of filk, Japon cabinets, \&c. the richelt porcelane, and the beft fteel blades of all forts; all of them, efpecially the laft, greatly exceeding thofe wrought in China.
JeDDo, the other, or new metropolis, flands at the end of a bay, famed for it's great plenty of fifh, but fo fhallow as not to admit fhips of bulk, which they are forced to unload about a league below the city.
Osacca and Saccar are fituate on each fide of a large river, near the mouth of it. The former is reckoned one of the chief fea-ports in the whole empire. It fwarms with artificers of all kinds, befides rich merchants, and much nobility and gentry.
Surunga is another maritime city, but it is at prefent in a great meafure abandoned. The Englifh were once allowed to trade here.
In the ifland of Ximo, are Cangoxuma, fituate on the fouthern coaft of the ifland, and which was made the center of commerce by the Portugueze, on account of it's commodious fituation and harbour, though the entrance be fomewhat dangerous, on account of the many rocks near it.
Nangazaki is fituate on the weftern coaft, at the end of a deep convenient bay. The Dutch are lodged on a fimall inand, facing the town, where they are confined and watched all the time they flay.
The town is well filled with merchants, and artifts in all trades and manufactures, which bear here a greater price than in other parts of Japan. The haven, which is long, deep, and commodious, is feldom without 50 or 60 merchant-hips, befides fmaller veffels, and a great number of firhing-boats.
The laft confiderable inand in the whole empire is
Xicoko, lying between Ximo on the weft, and Niphoh on the eaft and north.
It hath fevetal good ports round it; Awa is the principal city. Round about the coafts of thefe three principal illands are a vait number of fmaller ones, of different fizes and natures, fome inhabised, others defert. Some few of them are large,

## J A $V$

and fertile enough to máintain a governor, and produce not only com, cattle, fugar, and other fuch commodities, but likewife, variety of metals and minerals, and, among them, gold and filver, befides feveral of precious ftones, quarries of marble, \&sc.
One of them, called Firando, was the firft on which the Dutch chofe to make their head fettlement.
JA V A, an inand in the Eait-Indies, in Afia, the greateft part of it under the dominion of the Dutch. It extends from longitude $105 \frac{1}{4}$ to 116 ; and from fouth latitude 5 to $8 \frac{1}{2}$. It is feparated from the fouth eaft part of Sumatra by the ftreights of Sunda, where they are not above five or fix leagues over; is about 120 miles off Borneo, to which there is a convenient paffage for fmall veffels; and has the ocean on the fouth: it fretches almoft due eaft and weft, only the eaft end declines a little to the fouth.
The air is not very hot, and about Batavia efpecially it is temperate and healthy. The eaft and weft winds blow all the year along the Chore, befides the ordinary land and fea winds. Their fummer begins in May, but June is reckoned the pleafanteft month; and here is a continual clear fky till November, when the winter comes on with hard rains, that hold fometimes three or four days together, without intermifion. In December the winds are fo, violent, that there is no paffing by fea. In February it is changeable weather, with fudden thunder-ftorms. In March they begin to fow; in July the fugar and rice begin to ripen ; in September they gather them; and in October they have plenty of all forts of fruits, flowers, and herbs. Thelow lands near the thore are generally marny, and over-run with reeds and bamboes, except about Batavia and Bantam, and a few other towns, where the meadows, being drained, are fitted for tillage; and their rice-felds and kitchen-gardens are well fupplied with water, from the numerous rivulets which run through the country.
Great part of the ifland, indeed, is ftill unknown, by reafon of the feveral high mountains and unpaffable forefts. The north part, between Bantam and Batavia, is populous; and, befides the Indian fruits and rice (the only corn that grows here) produces pulfe, and all forts of European garden-ffuff, with fome tobacco, falt and pepper ; the laft of which, though by fome reckoned the beft, is not fo good as that of Malabar. The inland people, being fuffered to traffic with no other nation, are forced to fell this, and their other merchandize, to the Dutch, at their own price. It abounds fo greatly with pepper, that it can export 10,000 tons a year. It alfo produces bees-wax and benzoin, and has mines of gold and filver, copper and iron, and fome diamonds, rubies, emeralds, \&cc. befides fone-quarries near Batavia, and good earth for bricks.
Their pafture is rank and four, and, confequently, the feif of their cattle is coarfe. The Dutch bave introduced vines about Batavia, which will bear feven times within two years, yet they can make no wine, and have none but what comes from Europe or Perfia, which is valued at four or five flitlings a bottle.
The Javans on the coaft drive a confiderable trade from port to port, and from one illand to another in this Indian Archipelago, and particularly to Borneo, exchanging goods in one place for fuch as they can fell in another; but they are fuch a cheating people that no body cares to deal with them, except in public. They carry with them ftrings of ecral, and co-ral-beads; and fometimes the Dutch buy diamonds of them, which they get at Borneo.
The trade being here wholly in the hands of the Dutch, and, indeed, fo much of the inland itfelf as they require, they have the benefit of the product, $\& c$. as much as if the natives were their fubjects: for they not only fubmit to trade with them, but come freely with their comnondities, efpecially pepper, to Batayia, where the Dutch buy it ready cured, fo that they are at no trouble to make it marketable.
The Dutch have planted fo many fugar-canes in the country, efpecially about Batavia, that, befides fupplying that large and populous colony, and their faciories in the Spice Iflands, \&r. we fee large entries of fugar in Holland by all their fleets frow Batavia.

Coffee is another addition which the Dutch have thade to the produce of Java, the quality of which is faid to improve as the quantity increafes; fo that, though it be not altogether fo good as that of Mocha, they fend confiderable quantities of it every year to Europe.
As for their rice, they fell it to the Chinefe and Malayan merchants, who export it. They have alfo a very great trade among themfelves, in the confumption of European commodities, of which they bring greater quantities to the Indies than the Englifh, it being computed that, fince the vaft conAux of ftrangers to Batavia, the Dutch have not lefs than half a million of people under their government, here and in the Spice Illands.
They have naval ftores, partly the product and manufacture of this inland, and partly imported as copper from China and Japan; iron from Pegu; damer, or pitch from Malacca; brimftone from Formofa; falt-petre from Surat, and that coaft of India; and wheat from Bengal, though the Europeans, \&cc. prefer boiled rice to bread.
They have timber of their own fufficient for building, particularly good oak, and a red wood like cedar, befide cacao's and bamboo's; and the only military fores they can want is fmall arms, of which they bring great quantities from Europe; though, as they have very good iron enough, they might make them on the fpot.
Bantam, is the firft place of commerce, at the weft end of Java, and was the metropolis of a great kingdom, till the Dutch deftroyed it, and depoled the king. It ftands in a plain at the foot of a mountain, from whence iffues a river that divides itfelf into three freams, two of which furround the town, and the third paffes through it. When in it's glory, it was reckoned 12 miles in compafs, very populous, well fortified and adorned with feveral grand buildings and palaces ; one of the greateft ports in thefe feas, to which all nations teforted, and where the Englifh and Danes alfo had flourifh ing factories, till the Dutch, by a pretended authority from the new king, whom they had affifted the rebel natives in placing on the throne, after they had taken his father prifoner, and fent him to Batavia, obliged them both to quit the place, which they afterwards fortified for their own intereft. But the natives and the king too, who was in his turn fripped of all regal power, by his ally the Dutch, have ever fince lamented the lofs of the Englifh trade in particular, and, how well they like the Dutch, may be learnt from Capt. Hamilton, who fays, that, if a Hollander ftrays but a mufket-fhot from their fort, 'tis five to one if ever he returns, the natives being fo dextrous at throwing a lance, or hooting a poifoned arrow from a trunk unknown. Bantam, in fhort, is become a ruinous place, being without trade, and therefore without gentry, which are both engroffed by Batavia; yet Bantam has a good fafe road and a pleafant bay, where are feverallittle iflands that ftill retain their Englifh names. But,
Batavia is the glory of this ifland, and of all the European fettlements in thefe Indies. This city is the center of all the ftrength and commerce of the Dutch in this part of the world, and the feat of their governor-general and council of the Indies; where they are oo powerful, and have fo many fubjects, fo many dominions dependent on them, and are fo able to fupport, protect, and employ them, that fome think it a wonder, they do not fupplant or drive all the other European factories out of the country; for they can fit out fo many fhips, and raife fo many feamen, that no European nation can produce a force at a diftance, able to cope with them.
When the Dutch firft came to it, which was in the year 1619, it was but a village, furrounded with a kind of pallifade of bamboo-canes, in a flat country, encompaffed with fenny grounds, and liable to inundations; a fituation which might have difcouraged the Europeans from making a fettlement on it, but the Dutch, being accuftomed to provide againt the like inconveniencies in their own country, demolifhed the old place, and built a new one by the name of Batavia.-For this purpofe, they cut canals and drains to carry off the water upon any land floods, fo that they can turn the currents which way they will : and, as to forms from the fea there are I7 or 18 fmall iflands in the offing, which fo break the violence of the winds and waves, that 1000 fail of fhips may ride fafe in it at a time, beffdes fmall craft, which go into the river, and lie with their heads clofe under the fhore, faftened to piles. Two large piers run out half a mile into the fea, between which 100 flaves are conftantly employed in taking up the foil, which is wafhed out of the town, or the mouth of the river would foon be choaked up. Here all veffels pay toll. A fea-gale rifes every morning at ten o'clock, to bring veffels into the bar, and a land one at 10 at night, to carry them out: the one comes from the north, the other from the fouth.
The Dutch have erected fo many works for the fervice of their factory, that they have rendered themfelves able to fubfift, though their communication with Europe hould, for a time, be cut off, and even to carry on not only trade, but war; for in the iflands of Ormus and Onroft, in the bay, two leagues from Batavia, where feveral good platforms of guns lie level with the water, they have yards and docks
for fhips, with plenty of timber, and all other materials; large rope-walks, forges for anchors, \&c. and founderies for iron and brafs cannon, mortars, bombs, thelis bullets, \&c And this city is faid to be the beft fupplied with flefh meat of any European factory in all the Indies, though the becf is generally lean, and the mutton dear, becaufe it is hard to raire it, and it foon rots. The regular troops with which this city and neighbouring forts are garrifoned, are 10 or 12 city about 1000 of which are upon guard every day, and they are formed out of the native Javans, the Chitfefe, Malayans, Amboyneffes, Topaffes, Bugaffes, Tymoreans, and many other people, who have been brought from many diftant countries and iflands by the Dutch, belides their European forces to keep their fubjects in awe.
This city being the great magazine of the Dutch Eaf India company, they import hither not only what Europe affords, but the merchandizes of Japan, the Spice Mands, Perfia, Surat, Bengal, the coaffs of Malabar and Coromandel, \& \&c. Though the Dutch fuffer no Europeans to trade hither, yet 15 or 20 fail of Chinefe junks comp hither every November or December, from 3 to 500 tons each, and return the beginning of June; by which means the Dutch are furnifled with the goods of China, much cheaper than if they fent their fleets thither.
Madura island, is oppofite to the eaftermoft point of Java, and produces nothing for a foreign market but deer. hins, which may be had here very cheap.
Patamboan, the capital of a kingdom or principality, independent of the Dutch, ftands on a bay at the fouth- eaft crid of Java, in a pleafant country, watered with feveral rivulets, which fall on each fide of the town into the neighbouring ftreights of Bally. This part produces gold, pepper, and cotton in abundance, rice, Indian corn, roots and gardenftuff.
Timor, is another place of fome account for trade. It is an ifland which produces fandal wood, the beft and largeft in the world, which is a valuable commodity in China; alfo gold and bees-wax, and plenty of all kinds of provifions, but the coaft is fubject to frequent thunder and tormadoes. This inland lies almoft north-eaft and fouth-weft, betwixt 124 and 128 degrees of longitude eaft from London, and the middle of it is 9 degrees of fouth latitude. It has no navigable rivers or harbours, but feveral bays, where flips may ride fate at fome feafons of the year, it being a bold fhore, free from rocks and hoals.

## REMARKs.

From the ftate of the Dutch affairs at Batavia, they have fuch a fleet of men of war in their ports, that they can command all the coaft of Afia, and give law to the Europeans, who have any thare in the commerce of thofe feas, as well as to the na-tives.-They have abfolutely excluded the Englifh, and all other Europeans, from the commerce of the Spice Inlands, which is one of the moft eftimable branches of the trade of the Indies, and from that of the iflands of Java and Maccaflar, or Celebes, and Malacca : and, by their fleets and garrifons near the ftreights of Malacca and Sunda, they can exclude all countries from the traffic of China.-They levy what taxes they pleafe on the inhabitants; the Chinefe, who were the moft expert merchants in thefe parts, brought them in the moft confiderable revenues, by the duties and cuftoms they paid, and yet grew very rich and powerful.-The Dutch propagated, that they entered into confpiracies to difpoffers them of the ifland, and pretend they had no way to fecure themfelves, but by a general maflacre of the Chinefe, which they put in execution in the year 1740, when 30,000 Chinefe were murdered at Batavia.
The whole commerce of the Dutch in India is divided into governments and directions, viz.
. Batavia is the chief and capital place, where refide the governor-general, and council in ordinary of India, to whom all other governments and directions are fubordinate, tranfmitting their accounts to them; the ballance whereof is entered into the accounts general of India, and kept there. Befides which, there are feveral places immediately under the government and direction of the governor and council of Batavia, viz.
r. Japan, a chief-fhip.
2. Tonqueen, a chiff. fhip.
3. Maccaffar, a commandant
4. Siam, a chief-fhip.
5. Bantam, a factory.
6. Japera, a factory.
7. Jambee, a chief-fhip
7. Pambee, a chief-inip.
9. Arrakan, a chief-thip.
II. Amboyna, a government, under which are certain illands, where they pay a yearly rent, not to fuffer cloves or other fpices to grow.
III. Banda, is a government, and under it are feveral iflands; to the natives of which, they pay money yearly to deftroy the fpice.
IV. Ternat, is a government.
V. Malacca, is a government.

## J A V

VI. Ceylon, a government, where they have many faclaries, whole accounts are fent to Columbo, the principal place.
VII. Cocheen,' is a government, and under it is the Malabar coalt.
VIII. Policat, a government, under which are the coalt of Coromandel and Pegu.
IX. Bengal is a direction, andunder it are all the Dutch factores in that bay: Hugly is the chief, from whence they fend their accounts to Batavia.
X. Surat, another direction, under which are many factories. XI. Persia, a direction, the chief refidence Gumbroon, and under it are Ifyahan and Baffora.
XII. Cape of Good Hope, a government, and under it the Mauritas.
N. B. Governments are, when the places are their own

Directions are, when they are under a foreign prince, and have no garrifons.
Batīvia excepted, no government, direction, or command, hath precedence of place; but the perfons in thofe places, and all orher degrees and qualites, take place according to their fenority in fanding. See Dutch East-Indra Company.

The manner of flating and keeping their accounts.
In all governments and directions of great bufinefs, as at Batavia, Columbo, Policat, Hugly, \&c. they keep three fetts of books, jourinal and ledger, with all the auxiliaries.
The firf lett contains the general accounts, wherein is entered the ballance of all books of accounts under the place; and thofe at Batavia, are called accounts general of India; at Columbo, accounts general of Ceylon; at Policat, of Coromandel; at Hugly, of Bengal, \&c.
The fecond fett, commonly called the negotia books, contains the particular traffic of buying and felling, and thefe are called accounts of the place where they are kept.
The third fett only contains the wages, paid and due to their fervants. Accounts in all parts of India, are generally kept in guilders, ftivers, and pennings, as in moft part of the United Provinces in Europe; and, in an inward column, the coins of each place: for inftance, Policat, viz.
In the firft fett of books, called accounts Coromandel; if any goods be fent to, or received from Batavia, they Dr. to C. account general of India to, or by account gildria for it, if the goods be direclly to or from Policat; if not, Metchelpatan, or fuch other place to, or from which the goods are fent or received.
In the fecond fett, or negotia books, called accounts geldria: if any goods be fent to, or received from Batavia, or other $\mathrm{p}^{\text {faces, }}$, they $\mathrm{D}^{\mathrm{r}}$. and $\mathrm{C}^{\mathrm{r}}$. account Coromandel for the fame. And, when fuch entries and invoices are made in the general books, called account Coromandel, they mult feecify the particulars of each feccies of goods in the journal, but not give every particular fort of goods in the ledger.-When the books of accounts of fubordinate factories are entered into the general books, they mention the letter and mark of fuch fubordinate books, the debts of their ballance, and the debts upon ballance amounting in guilders, \&c.-That the $\mathrm{C}^{\text {r }}$. upon bal lance amounts to guilders-And that the reft upon ballance amount to guilders.
The books fitiled accounts geidria, are cleared and entered into the books fliled accounts Coromandel, as the books of fubordinate factories are.
The fubordinate factories are obliged, every three months, to rend a copy of their journal to Policat, and a copy of their account Coromandel out of their ledger.
The general books, or thofe filed accounts Coromandel, are always kept by the fecond, at Policat, and an under-copeman, in fubordination to him, to poft the journal into the ledger, according to the principle of $D^{r}$. and $C^{5}$. by double entry. See the article Accountantship. The like is done at Bengal, Surat, \&tc.
'The accounts geldria, are kept by a coperian, or undercopeman, at Policat.
The accounts of their lervants wages are kept in two or three fetts of books for that purpofe, at Batavia; thole at Policat are kept by an under-copeman.
At Batavia, the books of accounts of India are feverally audited; and, if any errors be difcovered, the perfon who kept them is fined for every error a certain fum of money, which is accordingly deducted out of his falary.
The accounts general of India, are kept by an upper-copeman. And the negotia books, ftled accounts cafle of Batavia, are kept by the firft upper-copernan of the two that are under the director-general; and they have the affiftance of able copeman, under-copemen and book-keepers, to ex amine, infpect, and copy under them.
The books of accounts at Policat and Hugly are ballanced the laft of July, thofe at Surat the laft of May, and at Batavia the lalt of Oetober.

The government, order, and provifion, for the Dutch EaftIndia company's thips and fleet., viz.
All their fhips are the company's own, and the men belonging to them are all in their pay, fworn to ferve them, ether by fea or land, as occaficn thall require.

Vol. I.

They have two perfons who have the fille of adminds, and are of the ordinary council of India.
For the care of their fhipping at Batavia, they have ons called equepage-mafter, who is of the quality and pay of an under-copeman, and vulgarly called a commandore: he hath the care of fiting all their hips, and is contantly vifiting them in the road, and fupplying them with all requifites.
There is a fmall inand about three miles from Batavia, where they have a fort, which ferves them as a ftorehoufe for it manner of necellaries for thips, under the charge of a mafter thipwright, who has alfo command of the fort and ifland: he is of the quality of upper-coperman, and has large pay
and allowances.
When they fend out a fleet for war, they make a Merchant of the quality of upper-copeman, and fometimes of the extraordinary council, admiral or meneral, who has a council of merchants, and military officers to alfift him as occafion requires.
The admirals of the fleet that go from Batavia to Europe, are fuch as have ferved the company as governors', directors, conmandores, or upper-copemen.-As to their admirals ous of Europe, the llag is worn by turns. Amfterdam Iquadion carries it three years, and the Zealand fquadron every fourth year. The Amfterdamers having two parts of the fock, the other leffer chambers add theirs to it, and the Zealanders have one quarter of their own.: The Merchant, who is fent admiral, mult either take his paffage on the Amlterdam, or Zealand fquadron.
If a coperman, or under-copeman, goes from port to port on any fhip, they have the command of her, and alfo of the whole fleet in company.
When there is a fleet under the command of a commandore, the council is to confilt of copemen and fikppers. When a thip is fingle, the council is to be a copeman, ikipper, undercopeman, book-keeper, and fteerfman; and they are always to fteer their courfe by the printed directions, and to fet off their work every day upon charts, which are delivered up, when they come to Batavia or Holland. For inore matter relating to this great trading company, fee che article Durch East-India Company.

## The Coins of Batavia.

8 Doits make - - I Cah, or double kye.
${ }_{6} 6 \mathrm{Cah}$ - - fatallies) -I Satallie.
6 Cafh (or 2 fatallies) - i Sooka.
9 Cafh - - I Sooka fatallie.
15 Ditto - - - I Rupee.
24 Ditto (or 48 ftivers) - : Pardáo, or rixdollar.
39 Ditto (or 13 fatallies) - I Ducatoon.
Accounts are kept as well in rixdollars and ftivers, as in guilders, fitivers, \&c.

Of the Coins, Weights, and Measures, of the chief factories and governments belonging to the Dutch, under the government of Batavia.
Variety of coins are current here; that in which accounts are kept, is rixdollars, an imaginary coin; but the money moft current in the fhops and bazaars, are rupees, ikillings, double keys, and doits.
$\begin{array}{lll}4 \text { Doits make } & - & \begin{array}{l}\text { I Stiver. } \\ 6 \text { Stivers }\end{array} \\ 8 \text { Skillings }\end{array} \quad-\quad \begin{aligned} & \text { I Skilling. } \\ & \text { I Rixdilar. }\end{aligned}$
1 Ducatoon in curr. for 13 Skillings.
I Englifh crown-piece 10 Ditto.
I Bombay or Surat rupee 5 Ditto.
1 Madras rupee (though
of the value with Bom-
bay) -
I Arcat rupee (tho' but
I per cent. worfe than
that of Surat) - 4 Ditto.
Becaufe they are not fo broad as the Bonibay, or Surat rupees.

Weights.
16 Tales make 1 Catty.
100 Cattys 1 Pecul, equal to 135 lb . avoirdupoife. 3 Pecul - 1 Baaker.
All goods are weighed by the company's dotchin, for which you pay the captain of the Chinefe, who is the dotch:4* keeper, 1 per cent.

## Gold Weights.

oz. dwt. grs,
16 Miams $=\mathrm{I}$ Boncal, equal to Troy weight $\mathrm{I}: \cdot 9: 18-7$ 20 Boncals = 1 Catty $+\quad$ 29:16

## Measures.

A Malacca quoing is 3200 chupas, or 8 eo cantins, equal to 5000 Dutch lb. or 5475 lb . Englih ; or Canton peculs (according to the Dutch calculation of 125 lb . to a pecul) 40 peculs.
A laft is 2000 chupas; 500 cantins, 3000 Dutch 1b: 24 peculs, 3285 lb . Englinh.

## I C E

## J E R

Of the Coins, Weights, and Measurè of Siam.
Their coins are tuals, miams, tuangs, and famporf.

4 Miams
Their accounts are kept in cattys, tales, tuals, miams, tuangs, and cowries.
8oo Cowries make
2 Tuangs
4 Miams
4 Tuals
20 Tales
10 Miams pafs for a tale China, and 85 tales Siam make
always 8 tale China.

## Gold and Silver Weights

Are by tual, which weighs neareft 9 d wts. 10 grs. and is $9^{\frac{1}{2}} \mathrm{dwts}$. better than ftandard filver.

## Great Weichts.

Are from their coins likewife, as 1b. oz. dr.
80 Tuats $\rightarrow$ make I Catty, or $2: 9: 4^{\frac{3}{4}}$ Avoir. 50 Catty - $\quad 1$ Pecul, or $129: 0: 13$ ditto.
But 50 cattys Siam Mould make 1 pecul China of 132 lb . for they weigh all their goods by the China dotchin ; but it is never found that the king's dotchin at Spiam gives more than 129 lb . which hould be 132 lb .

## Customs.

The Chinefe, Moars, and Banians, pay 8 per cent. cuftoms. The Englih, at prefent, pay only mealurage for their fhips; Thip of 200 tons pay from 1150 to 1200 rupees meafurage; and io for other veffels in proportion to their burden.

Of the Cons, Weights, and Customs of Tonquin. They have no other coin than copper cailh, accounting 600 great, $\left._{1000 \text { fimall }}\right\}$ Cafh to one maradoc..$~$

The price of filver is always variable here, which they rife and fall according to the quantity brought in, by which the Chinefe make great advantage.
In the year 1739 they allowed $28 \frac{2}{2}$ maradoes for one barry, or 10 tale filver: and, in 1748 , but 21 -maradoes. They run all the Mexico and pillar dollars, without diftinction, into bar-filver, which ought to weigh 10 tale each, and into which they frequently put alloy ; fo that they are feldom fo good as the dollar filver, though in payments you are obliged to allow them 3 per cent. to make it their Itandard.
oz. dwt. gr.
ro Tale weigh, with the 3 per cent. included $126{ }_{2}{ }^{\text {oz. }} \frac{8}{24}$. Troy I Ditto, ditto - $\quad$ - $\quad$ - $\quad \begin{array}{llll}1 & 4 & 14 \frac{1}{24}\end{array}$
Their accounts are kept in tales, mace, and candarines, which are regulated according to the price of their maradoes and copper calh.

WeIGTTS.
Their weights are by the Chinefe dotchin, and the king's weight holds out full 132 lb . to the pecul; however, it is neceflary to have a true dotchin of one's own.

C U.s T o ms.
The Englih pay no cuftoms inwards; but the prefents they are obliged to make to the king and his officers are very confiderable.
Upon goods exported, as filk and lacquered wares, the Englinh pay 5 per cent. 'See the articles East-India Trade in general, East. India Company, and Dutch EastIndia Company.
ICELAND, an ifland belonging to Denmark, fituate between 10 and 26 degrees weft longitude, and between 64 and 67 degrees of north latitude, about 480 miles diftant from the coalt of Norway to the weft, and 400 from Scotland to the north. It was formerly reputed fruifful in wheat, and covered with large forefts, of the timber whereof the Icelanders built fine and large veffels. The country at prefent is now fo barren, that wheat will not grow there, and they have no trees but a few indiferent birch and thrubs. Their fuel is turf. Befides which; vaft trunks of trees are frequently brought thither on choals of ice, from countries which ftill lie nearer to the pole. Thefe alfo ferve them not only for firing, but for building their huts. At this feafon, about $\mathrm{M}_{a y}$, the inhabitants fock to the fhore, in quelt of thefe fhoals, which bring then not only trees, but alfo ftags, foxes of feveral forts, bears, wolves, and what they call unicorns: thefe animals, being too far advanced upon the ice, are drove away with it, when it comes to be loofened from the thore by the thaw.

This country is fony and mountainous; but their paftures are fo excellent, that they are obliged to drive their cattle out of them after they have fed fufficient, atherwife they would eat till they are burfted; and the grafs is of fuch an agreeable fcent, that foreigners tranfport and dry it, to put among their cloaths * : yet their beef is not good, and their mutton is rankifh, but they dry their meat in the fun and wind, which takes off the ill tafe.
*'This may be worth the confideration of philofophers; and the truth hereof may feem to be confirmed from the following experiment : the frow that falls in hard frofts which being taken up, while it is freih, and digeled in blind glafs in athes, for 24 hours, if then you open the glafs, whill the folution is warm, you fhall perceive in the breath of the water all the odours in the world, and certainly far more pleafant than they are in the flowers at May.

They make great quantities of butter, which they lay up in caiks, or, for want of them, they pile it up in their huts, like heaps of mortar. Their ordinary drink is milk and whey, which they mix with water. They have pretty good horfes, which, in winter, they feed with dried fifh, when the hay fails them, as they alfo do their other cattle. Foreigners bring them meal; and when that is gone, and the-rigour of the reafon prevents veffels from coming to their ifland, they make meal and bread of their dried fifh.
They have abundance of cold fprings, the water whereof is very clear and palatable, and fome as nourifhing as beer *. Here are alfo feveral hot fprings, very wholfome to bathe in; divers ponds and lakes full of fin, and various large and navigable rivers.
*This alfo may deferve ferious confideration; but in my Experimental Philofophy I fhall demonftrate the reafons hereof, where will be fhewn how nature ditates to expeperiment, and experiment confirms the truth of nature.

As the Icelanders have no fort of moncy, their trade cenfiffs only in bartering one commodity for another; namely, their own product, which is dried fifh, butter, tallow, brimftone in very large quantities, foxes, bears, ftags, and wolvesfkins, for flour, beer, wine, ftrong waters, iron, w'oollen, and linen cloths, \&c. The Germans, when they arrive, fet up their tents near the harbours, where they exchange cloaks, fhoes, looking-glaffes, knives, and feveral toys, for the Iceland commodities.
Skalholt is a good town or port, on the fouth of the illand. The town is populous, and the port well frequenred with fhips; for the produce of both the land and the fea is confiderable, and, confequently, the confumption of other merchandizes here brings many fhips and merchants to the place. The whole fhore of the inland, except on the fide of Mount Heckela *, is full of very deep inlets and bays, affording good ports and harbours. The king of Denmark maintains a governor and a garrifon always here, to defend the place againft ftrangers. His Danifh majefty is fo far a merchant, that he receives yearly a quantity of brimfone from hence, for the fupply of his magazines of gunpowder.

* Of all parts of the globe fome would not expect to find fubterranean fires here, and yet Iceland is famous for the vulcano, or burning mountain, called Heckela, or Heckla, the largeft and mott furious one in Europe, except Etna, and far exceeding Vefuvius. Upon what principles of reafon and philofophy this may feem to be accounted for, fee the article Sulphur.

The chief employment of the inhabitants is firhing, and making a coarre fort of cloth of their fheep's-wool, or rather hair. They make their breeches, boots, and ftockings, of fheepfkins, and their hoos of feal-fkins.
The king's revenue is raifed in flefh, oil, fifh, coarfe cloth, and brimftone; for which he fends about eight fhips every year, who carry them neceflaries in exchange for their commodities.
The Icelanders are expert harponiers in the open fea, and dextrous in catching the fmaller fifh about the American fhores, where they go as far as Davis's Streights; but they rarely venture in among the ice, or meddle with the whale-fifhery, which they leave to the Dutch.
As they are a Danifh colony, fo their trade is confined chiefly to Denmark, from whence they receive back all the neceffa ries of life which their own country does not produce. See Denmark.
JERQUE. After a fhip is unloaded, the furveyor, or fome other officer of the cuftoms, goes on board, and fearches to fee if there be no unentered goods concealed: this is called jerquing the fhip.

The form of the Cuftom-Houfe account relating thereto.
A Jerque Account of the Coasting Vessels entered inwards, in the quarter ending at Lady-Day, i73I, where there is any variation in the quantities or qualities of the goods from what is mentioned in the cockets.

And, befides the before-mentioned quarterly accounts of coals, culm, and cinders, there muft be likewife fent to the regiftergeneral * monthly accounts of all dhips entering inwards, and clearing outwards coaftwife, with the particulars of their cargoes.

* Though it is the practice of mof ports to tranimit thefe accounts for each calendar month, yet from Brifol they are fent weekly , and trom fome ports tvéry fortnight.

The Form of a ${ }^{\text {Ferque }}$ Account outwards, by the proper officers of the cuftoms.

N. B. Befides the aforefaid accountiof goods exported, which is to be tranfmitted by the collector, cuftomer, and comptroller of the cuftoms, there mult be likewife an account fent by the furveyor, to the regifter-general of all fhips belonging to GreatBritain, in the following form:

5

N. B. As we thought the lading of two fhips fufficient fully to exemplify the method of a jerque account, we have purpoiely omitted the other fhips whereon goods have been laden, and which have been cleared in the aforefaid quarter; but to make the total of the duties agree-with the collector's quarter-book (which in practice muft be carefully obferved) we have added the amount of the daties of the remaining hips, not exemplified.
D. E. Surveyor.
E. F. Suarcher.
G. G. $\}$ Land-waiters

I N W A R D. S .
A Jerque Account of all hips and veffels difcharged in the quarter ending at Lady-day, r73r.

Remarks.
The merchandizes imported bv each fhip, having been duly delvered, and all requifites relating thereto pertormed, and the fhips having been cleared, and all port-entries duly made, the land-waters are to make up the accounts in their books, [fee the article Land-Wairfr] and the feveral warrants granted for the delivery of the goods are to be filed together, and a paper prefixed to them with a tide, after the following manner:

The Providence of London, James Bell, mafter, from Rotterdam.

Reported the 8th day of January, 1730 . $\left.\begin{array}{l}\text { A. B. } \\ \text { B. C. }\end{array}\right\}$ Land-waiters.
And the faid warrants are to be carried to the warehoufekeeper, who muft, on the title-page, certify if any goods, landed out of fuch thip, are remaining in his cuftody unentered, thus:
$4^{\text {th }}$ of March, 1730.
There are * not any goods, landed out of the above fhip, remaining in the king's warehoufe.
C. D. Warehoufe-keeper.

* But, if there are any goods remaining in the warehoufe unentered, the marks, numbers, and package, mutt be fpecified.

Which being performed, the faid books and warrants are to be delivered to the furveyor or jerquer, within three days after the clearing of the fhip: and, in order to keep the landwaiters punctually to the delivery of their books, the furveyor muft lay before the collector, the firt cuftom-houfe day of every month, a lift of all books then ftanding out, for fuch fhips as are then cleared, with the reafons from the land-waiters, why they are not delivered in : and, if the furveyor neglects to deliver in fuch lift, the collector is to call upon him for the fame.
The land-waiters books, and the feveral warrants, being delivered to the furveyor or jerquer, he is firft of all carefully to examine the feveral operations, as the additions of the feveral weights, meafures, and gauges, the computation and fubtraction of all draughts and tares, and likewife the computations of the contents of the goods paying duty, either by running, \{quare, or folid meafure, and the contents of every cafk, according to the dimenfions inferted in the books: and he is alfo to obferve, that there are proper warrants for the delivery of all goods, and that fuch warrants are duly entered in each book before the execution; and that, where goods have been fhort-entered, there be likewife polt or additional entries for fuch deficiency; and that the land-waiters books do exactly agree with each other, and that all other requifites, relating to the landing and delivering of the goods, are punctually performed. See Land-Waiter.
The execution of the land-waiters duty being carefully examined into, the furveyor or jerquer is next to compare the faid land-waiter's accounts of the landing and delivering, with the tidermen's account of the unlading of the goods [fee the article Tidesman] to fee that they have been all duly accounted for; and, in cafe of any difference, to acquaint the collector therewith; who, after examination, is to lay the cafe before the commiffoners, provided there be any appearance of fraud or wilful negligence: and laftly, the faid land-waiter's and tidefmen's accounts are to be compared with the mafter's report of his cargo, in order to difcover whether the fame be juft, fo as to intitle him to the allowance of portage [fee the article Portage] (which in cafe of any variation is not to be allowed) as that he may be profecuted for a falfe report, and for that purpofe the commiffioners muft have fpeedy notice: and, in order thus to compare and, adjuft the officers accounts, and the mafter's report, the faid furveyor or jerquer mult keep a particular book, wherein every thip muft be feparately entered.
JERSEY, an illand in the Englifh channel.- See the article Hampshire, where this inand, Guernsey, Alderney, and Sark, are taken notice of. To which we thall here add what is neceffary to be done at the cuftom-houfe of England, in regard to the importation of goods from Jerfey, Guernfey, Sark, and Alderney.
Goods of the growth, product, or manufacture of the above-faid places, may be imported from thence free of all duties * (except fuch as are due for the like goods of the growth, \&c. of Great-Britain, and except $\dagger$ falt, and $\pm$ brandy, aqua vitæ, ftrong waters, or jpirits, vinegar, cyder, perry, beer, ale, and mum) upon producing a proper certificate from the governor, lieutenant, or deputygovernor, or commander in chicf: the tenor of which certificate is ufually as follows:

* 3 Geo. I. cap. 4 . §. 5.0

5 Geo. I. cap. 18. §. 11 .
$\ddagger 3$ Geo. II. cap. 20. 5. 10

Guernfey. By the Hon. A. E. Eiq; licutenant-goverton and commander in chief of his majetty's caflite and ifland of Guernfey, \& 8 c

Thefe are to certifv, That B. C. hath here hipped and laden on board the Dulight of Newcafle, wherenf Mark Low is mafter, for Southanpton, two bales, containing 50 dozen pair of hofe, and $3=$ waiftorats, and 20 ten, of pebbleftones, of the product and manufacture of this ifiand, as per oath made before the royai court: thatefore are to pafs cuftom-free.

Given under may hand and ienl at S:. Peere's port, this 2d
of March ${ }^{7} 730$.
Jurat coram nobis A. B.
C. D. Judge-delegate.
A. B.

Which certificate mult be produced to the principal officers of the cuftoms at the port of importation ; and the truth thereof confirmed by oath, made on the warrant, to which it muft be annexed: the form of which oath may be as follows :

12th of March $1730 .-$ No. 68.
In the Delight of Newcaftle, Mark Low from Guernfey.
William Fell.
Twenty tons of pebble-ftones, 50 dozen pair of hore, 30 waiftcoats, of the product and manufacture of Guernfey, as per certificate from thence dated the fecond inftant, and hereunto annexed.
Mark Low, mafter of the abnve fhip, maketh oath, That the goods above-mentioned were actually laden on board his faid fhip in the ifland of Guernfey; and that they are the fame which are mentioned in, and for which the annexed certificate from thence, bearing date the fecond inftant, was granted; and that he verily believes and knows nothing to the contrary, but that the faid goods are of the product and manufacture of the ifland of Guernfey. Signed

Mark Low.
Jurat 12 die Martii 1730 , coram me
A. B. Collector.

IMPORTATION; the bringing into a kingdom merchandizes from foreign countries, and is ufed in oppofition to exportation.

## Remarks.

The true intereft of trading nations depends upon having a vigilant eye over their imports and exports, that their foreign traffic may not drain them of their treafure, inftead of enriching them. That our readers may make a good judgment, whether our own nation gains or lofes by it's commerce with other countries; or in other words, whether our imports of merchandize exceed our exports; we have already confidered this matter very fully, under the three following articles, to which we refer.
I. Under that of Ballance of Trade.
2. Under that of Britain [Great-Britain.]
3. Under that of Exchange.

The principal points taken into confideration under the preceding heads are, viz.

1. That the price of exchange between one nation and another which has commercial dealings together, is a more certain characteriftic to know whether the ballance of trade, and money tranfactions of all kinds included, is for or againit the nation than any other. And,
$\%$. That it is the fhorteft and eafief way of determining a point of this confequence at all times.
2. That, if a nation has no eftabliflued courfes of exchange with another wherewith it trades, the fhorteft way to determine whether the ballance of trade is in favour or otherwife of the nation, is to compute the exchanges according to the mercantile principles of arbitrating the exchanges. See the article Arbitration of Exchanges.
3. In confequence of what has been faid under the feveral before-mentioned heads, we have fhewn with what principal countries the ballance of trade is either for or againft GreatBritain; and alfo how to judge and determine the general ballance with all, as well as the particular ballance with any diftinct fate. And laftly,
4. It is alfo fhewn how, and by what means, this ballance may be preferved in equilibrio, if nor turned to our advantage with fuch nations, where it is at prefent againft us; which in the general, is by leffening thofe Imports from foreign countrics, with which we can the beft do without, and increafing our Exports that we can the beff fpare. To accomplifh which great ends we have further endeavoured to fhew,

## I M P

1. That it depends upon improvements made on our land, either at home or in our plantations, in all the arts of hubbandiy and agriculture; and more elpecially in fuch productions as we are under the necefity of importing from other nations, fuch as Flax, Hemp, Pitch and Tar, Pot-Ash, Indico, Silk, \&c. \&c.
And, how thefe things may, in all probability, be brought about and effectuated, we have endeavoured to point out, under thofe refpective articles, and in divers other parts of our work.
2. That it depends likewife upon improvements made by our artificers, mechanics, and manufacturers in every branch of traffic whatfoever: upon the invention of new arts and manufactures, as well as the improvement of the old.
3. That thefe great things depend as much upon the application and fagacity of thinking ftudious men, who delight in the contemplations of nature and philofophy, as upon the judgment and dexterity of the artificers and manufacturers themfelves. That therefore,
4. All reafonable public encouragement ought to be given to both, that the one may be always upon the wing of invention, and the other advancing in the delicacy of execution; and delighting in the refidence of our own country, from the encouragement they meet with, inftead of fuftering themfelves to be decoyed into other nations, to the ruin of our trade, and the advancement of theirs. See the articles Artificers, Mechanics, Manufacturers, Royal Society of London.
Thefe are the outlines of what we have particularly fuggefted throughout this whole work, in order to increafe our exports, employ our people, and diminifh our foreign imports. For, all countries thrive or decline by trade, as they well or ill manage their product and manufactures: and wife nations obferve carefully every part, where they think to have any probable advantage. If they excel in product and manufacture, wife governments will bend themfelves to encourage the people in the purfuit of what is beneficial to the public in there refpects.-If they have little product of their own, as in Holland, they turn carriers of the world, and buy goods in one place to vend to advantage in others, whereby the bulk of their riches has been gained. See the article Freight. Great-Britain has excellent products of her own, wherewith to futtain it's inhabitants; the woollen manufacture, if accommodated to the tafte of foreign nations, and can be afforded as cheap as any rivals therein can do, is a wealth, in fome meafure, peculiar to ourfelves. We have befides the product of other countries fubject to our dominion, the WeftIndies. The Eaft-Indies are an inexhauftible mine of vanities, to barter for the vanities of other countries, which a rich nation will always covet, and whofe export and import improve our navigation and breed experienced feamen.-See East-India Trade and Company. We have ports and fituation, andevery thing that can contribute to make us the greateft people in the commercial world; and, if public encouragement is not wanting, there is not likely to be want of induftry and ingenuity on the fide of the people.

## Remarks fince the laft $W_{a r}$, and the Definitive

 Treaty of Peace of 1763.By the Definitive Treaty, and the extenfive poffeflions thereby ceded to the crown of Great-Britain, it is to be hoped, that we fhall be able in the moft effectual manner to leffen our Imports from foreign nations. For certainly North America will now be able to furnifh us with all the Timber we have hitherto taken from Norway, and every fpecies of Naval Scones we have taken from the eaff countries. Can we, at prefent, want competent territories, in their variety of climates, to fupply us amply with Hemp and Filax in abundance, or pitch and tar, or every fpecies of timber for Ship-Building? Can we now fand in need of Indico or Cocheneal, or Shek, or even Wine and Рот-Ash, from our colonies, if we confider them in their extent from fouth to north ? Now, all Canada and it's Dependencies are become British, we certainly can never have occafion to import Furrs or Peltry of any kind, except from our own continent plantations.
We affuredly can never want longer to puirchafe from other nations, what our colonies will moft amply fupply us with; provided right, vigorous, and effectual meafures. are taken by Great Britain io people thefe prodigious territories with plenty of induftiou's foreign proteftants, duly encouraged for thofe purpofes. For it cannot be imagined, that it will be thought better policy to drain the mother-kingdom of people.
For the encouragement hitherto given fince the Definitive Treaty of Peace, fee his majefy's proclamation under our article British America.

Some of the principal Laws of Encrand, with regard to the importation of merchandizes.
If gonds imported are conveyed away without entry, and paying cuftoms, or fecuring the fame to be paid,' the lord
treafurer, barons of the Exchequer, or chief magiftrates of the place where the offence was committed, or next adjoining thereunto, may grant a warrant to any perfon, who, with the affiftance of a conftable, may break open any houfe in the day-time, in cale of a refiftance; and may break open doors, chefts, trunks, or other package, and take thence any prohibited or unaccuftomed goods, to which all officers are to be aiding and affifting : but no proceeding fhall be upon this act, unlefs within one month after the offence is committed.-And, if falfe information is given, the perfon wrongfully accufed may recover coft and damages, 12 Car. II. cap. 19. 14 Car. II. cap. 11. Sect. 5. revived, 6 Will. and Mary, cap. I.
No thip, or velfel arriving from beyond feá, thall be above three days failing, from Gravefend to the place of difcharge, in the river of Thames, unlefs apparently hindered by contrary wind, or other juft impediment, by 14 Car. II. cap. II. revived 6 Will. and Mary, cap. r.
No fhip, bound for the port of London, fhall touch or ftay at any place, adjoining to any thore, between Gravefend and Chefter kay; and true entries fhall be made of all fuch Bip's lading, upon oach of the mafter or purfer, for that voyage, to the beft of their knowledge: alfo, where the took in her lading, of what country built, how manned, who was mafter during the voyage, and who were owners thereof. And in all out-ports, to come directly to the place of unlading, and make true entries as aforefaid, upon penalty of forfeiture of 1001.14 Car. II. cap. nr, revived 6 Will. and Mary, cap. I.
After any Thip is cleared, and the watchmen and tidefmen difcharged from their attendance, if there be found on board fuch ihip any goods which have been concealed, and not paid duty inward, then the mafter, or other perfon taking charge of fuch fhip, fhall forfeit 1001.14 Car. II. cap. In. revived 6 Will. and Mary, cap. 1.
Porters, carmen, watermen, \&c. affifting in carrying on board, or landing uncuftomed or prohibited goods, being convicted by the oath of two witneffes, hall, for the firft offence be committed to the next gaol, until be find fecurity for his good behaviour; and for his fecond offence to be committed for two months, without bail or mainprize, or until he be difcharged by the court of Exchequer, or pays to the fheriff of the county $5^{1}$. Stat. 14 Car. II. cap. II. revived 6 Will. and Mary.
No merchant denizen fhall cover a ftranger's goods, but fhall by himfelf, or known agent, fign one of his bills of every entry, with the mark, number, and contents, of every parcel of goods, as are rated to pay by the piece, meafure, or weight, of fuch as are rated duty by weight, without which no entry fhall pafs. And no children of aliens, under 21 years, thall have entry made in their names, nor be permitted to trade. Stat. I4 Car, II. cap. iI. revived 6 Will. and Mary, cap. I.
Merchants, trading into the port of London, fhall have free liberty to lade and unlade their goods at any of the lawful kays, between the Tower and London-Bridge, fun-rifing and fun-fetting, from the roth of September to the roth of March; and between 6 o'clock in the morning and 6 in the evening, from the roth of March to the 10 th of September: giving notice thereof to the refpective officers, appointed to attend the lading and unlading of goods. And fuch officers as thall refufe, upon due calling, to be prefent, fhall forfeit 5l. for every default: half to the king, and half to the informer or profecutor; by the thirteenth article of the book of rates, made 12 Car. II. cap. 4. revived 6 Will. and Mary, cap. 1.
No goods (fifh taken by his majefty's fubjects, fea-coal, ftone and beftial excepted) fhall be landed or laden on board, but at lawful kays and places (except Hull, 2 Eliz. cap. Ir.) or fuch other places as his majefty thall appoint, by conmiffioners out of the court of Exchequer, upon forfeiture of fuch goods. Stat. 14 Car. II. cap. II. revived 6 Will. and Mary, cap. I.
To prevent combination between importers and feizers of goods, unlawfully imported or exported, none fhall feize the fame but the officers of the cuftoms, or fuch as fhall be authorized fo to do, by the lord-treafurer, under-treafurer, or a feecial commiffion from his majefty, under the great or privy-feal, notwithftanding any law to the contrary. Stat. 14 Car. II. cap. 11 .
If any feizer of prohibitted or uncuftomed goods hall not make due profecution thereof, it is lawful for the cuftomhoufe officers, or others deputed thereto, to make feizure of fuch goods, and bring his action by way of devenerunt; and they fhall be in law adjudged the firft true informers and feizers, and have the benefit thereof, notwithftanding any law and itature, $\& \mathrm{sc}$. to the contrary.
All foreign goods permitted to be landed, by bills at fight, bills at view or fufferance, thall be landed at the moft convenient kays and wharfs, as the officers of the cuftoms fhall direct; and there, or at the king's floreboufe of the refpective ports, fhall be meafured, weighed, numbered, \&c. by the officers appointed, who thall perfect the entry, and thereunto fubfcribe their names; and the next day make their re-
port to the cuftomer, collector, or comptroller; or, in default thereof, thall forfoit 100 I.
No fort of wine (except Rhenifh) ficery, grocery, tobacco, pitch, tar, pot-afhes, falt, rofin, deal-boards, fir, timber, or olive oil, fhall be imported into England, Wales, or town of Berwick, from the Necherlands, or Germany, upon the penalty of forfeiting fhip and goods.
Any merchant who fhall import goods, hall have liberty to break bulk in any lawful port or kay; the mafter or purfer firft making oath of the true contents of the thip's lading, as by the firft article of the book of rates.
Brandy in any vefiel lefs than fixty gallons, or in thips lefs Brandy ifteen tons burthen, is forfeited by 4 and 5 Will. and Mary, cap. 5.
After December the if 1696 , no one thall put on fhore, in Scotland or Ireland, any merchandize of the growth or product of any of his majefty's plantations, unlefs the fame have been firft landed in England, Wales, or Berwick, and paid the duties wherewith the fame be chargeable, under penalty of forfeiting fhip and goods: three-fourths to the king, and one fourch to the informer, or him that fhall fue for the fame except fhips being difabled or driven into any part of Ireland, and unable to proceed on her voyage, her goods may be put on thore under the hands of the principal officers of the cuftoms there refiding, until the goods can be put on board fome other veflel or fhip, to be tranfported to fome part of England, Wales, or Berwick.
After the ift of Auguft 16g6, natives of England or Ireland may import into England, directly from Ireland, any hemp, flax, thread, yarn, and linen, of the growth and manufacture of Ireland, cuftom-free, the chief officer foimporting, bringing a certificate from the chief officer in Ireland, expreffing the particulars of the goods, with the names and places of abode of the exporters thence, and of fuch as have fworn the faid goods to be bona fide of the growth and manufacture of that kingdom, and who they are configned to in England: and the chief officer of the faid veffel fhall make oath, that the faid goods are the fame that are on board, by virtue of that certificate.
Wool may be imported from Ireland to the ports of Whitehaven, Liverpool, Chefter, Briftol, Bridgewater, Minehead, Barnftaple, and Biddeford, and no other, 7 and 8 Will. III. cap, 28.

## Of goods prohibited importation.

No cloths, made beyond fea, fhall be brought into England, Ireland, Wales, or Scotland, upon penalty of forfeiture, and further punifhment at the king's pleafure.
No woollen cloths, woollen caps, laces, croffes, ribbands, fringes of filk or thread, thread-laces, filk twined, filk any wife embroidered, or gold-laces, faddles, ftirrups, or any harnefs pertaining to faddles; fpurs, boffes for bridles, hand irons, grid-irons, no manner of locks, hammers, pincers, fire-tongs, dripping-pans, dice, tennis-balls, purfes, gloves, girdles, harneffes for girdles of iron, lattin, fleel, tin or al camine: nothing that is wrought of any tanned leather; corks, knives, daggers, fword-blades, bodkins, fheers, razors, fciffars, cheflimen, playing-cards, combs, pattins, packneedles; no painted wares, forcers, cafkets, rings of copper, or lattin gilt, chafing-difhes, chafing balls, hanging-candleficks, curtain-rings, ladles, fcummers, counterfeit bafons, ewers, hats, bruthes, wool cards: nor any of thefe wares or chaffers thail be imported, uttered, and fold within England or Wales, upon penalty of forfeiting half to the king, and half to the informer; excepting wares taken in the fea by a wreck. 3 Edw. IV. cap. 4 .
No girdlers, point-makers, purfers, glovers, joiners, cardmakers, wire-mongers, weavers, bottle makers, or copperfmiths wares, thall be imported by merchants or ftrangers, 1 Rich. III. cap. 12.
No great cattle, theep, or fwine, or any beef, pork, or bacon, hhall be imported into England, or town of Berwick (except for the neceffary provifion of the fhips in which they are imported, and except from the inle of Man) nor any are imported, and exce or pilchards, frefh or falted, dried or bloated; nor any falmon, eel or conger, taken by any foreïgners, thall be imported, upon penalty of forfeiting the fame, one half to the poor of the parifh where the fame fhall be found, and half to the feizer: but that part relating to bacon is rep aled, 18 Car. II. cap. 32.
P paled, 18 Car. 11 . cap. ${ }^{32}$. card, ihall be imported into England or Wales under the penalty of forfeiture; one half to the king, and half to the informer. No foreign bone-lace, cut-work, embroidery, fringe, button, or needle-work, flall be imported into England or Wales, upon the penaliy of forfeiting the goods, and 1001 . one half to the king, and the other to the inforand 1001 . one hatr, or profecutor, 14 Car . Il. cap. 13 .
No foreign hair-buttons, or other buttons whatfoever, Ghall be imported into England or Wales, or town of Berwick, under penalty of forfeiting the fame, one half to the king, and the other to the profecutor, 13 and 14 Car. II. cap. 13 . No thrown filk of the product or manufacture of Italy, Sicily, Naples, that is to fay, Italian, coarfer than third; Bo-
lognia, Sicilian, coarfer than fecond orny, except as in 3 Amm, until the 29th of September, 1705 , nor thrames, or thrown filk, of the production of Turkey, Chiua, Perfia, or the Eaft-Indies, thall be imported under the penalty of forfeiture.
No whale-fins, cut into chort lengths, fhall be imported, under the penalty of forfeiture, and double the value thereof, 9 and ro Will. III.
An additional duty of one flilling in the pound is laid on all goods and merchandize imported, except goods allowed by former acts to be imported duty-free, and goods imported by the Eaft-India company. And a drawback of this duty fhall be allowed on re-exportation of them within three years, except fuch goods on which no drawback is allowed by former acts, 21 Geo. II.
A drawback of three fhillings in the hundred weight fhall be allowed on all fugars refined and exported.
Any perfon refiding in his majefty's dominions may import thrown filk of the growth of Italy or Sicily, as Mall be the produce of the effects of Englifh merchants trading thither, in Englifh fhipping for Leghorn, i Annæ, cap. 27.
IMPOST, fignifies a tax, or duty, laid by the fovereign authority upon fuch merchandizes as are brought from foreign countries: it is fometimes applied to a tax impoled upon domeftic productions and manufactures. See the articles Customs, Duties, Excises.

INDIA TRADE. See East-India Trade, EastIndia Company, Dutch East-India Company, Jaya, and fuch other heads as we from thofe refer to.
INDIA-HOUSE of Spain, for the management of the Spanifh Weft-India trade and navigation of that kingdom. Upon the difcovery of the Spanifh Weft-Indies, the affairs and tranfactions that occurred in thofe countries and inands, as they became known, were adminiftred by feveral commiffions, which their Catholic majefty's directed, from time to time, to private perfons fucceffively.
In the firft Weft-India fleet that was difpatched by queen Joanna of Spain, in the year 150r, fhe gives commiffioners appointed to manage the fame to underftand, that, with the concurrence of the king, fhe had ordered a houfe to be built in the fhip-yards of the city of Seville, for the conduct of the trade and commerce of the Weft-Indies, Canaries, and other ifliands, which were already, or thould be for the future difcovered. To which houle were to be brought all merchandizes, and other things neceffary for the trade, and fuch as were carried to the faid inlands, and brought from them. That in the faid houfe there was to be appointed a factor, a treafurer, and an efcrivano, regifter, or clerk, who were to take charge of all the faid trade, as would appear to them more fully, by an inftruction their majefty's had ordered to be drawn up to that purpofe, figned with their names, and fuperfcribed by their chief contadores and comptrollers, \&c.-That their majefties, relying on the great abilities and integrity of the perfons mentioned in the faid commiffion, had thought fit to name and appoint them for that fervice; that is to fay, \&c.-Charging and commanding them to accept of the faid employments, and to execute them with all poffible care and diligence, according to the aforefaid inftruc-tion.- That they fhould, from time to time, write their majefties an account of all fuch things as they thought convenient for the execution of the faid inftruction, or otherwife, that they might give the neceffary orders, as were moft for their fervice, and the advancement of the faid trade.
To which effect fhe gave them full powers, during their majefties will and pleafure, and that fhe would order their falaries to be appointed.
This was the foundation of inflituting the firt judges, or commiffioners, in Spain, whofe power was expreffed in the inftruction therein mentioned, which contains in fubftance as follows:
In regard that the employment of efcrivano was not inftituted only for keeping and ftating of accounts, but alfo to fecure and preferve the books, papers, and records of the houre (as is done to this day) therefore he was called efcrivano, or regifter, and is fo named in the firft warrant, but ever after contador or comptroller.
From the firf inflitution of the commiffioners it feems to have been her Catholic majefty's will, that the three judges, or commiffoners, thould live in the India-Houfe, as appears by the order of the 14th of February, 1503; till afterwards, in the year 1518, the emperor Charles $V$. fent orders that none of them fhould live there, but leave it all for the buffnefs of trade, and to hold their meetings as the hiftorigrapher Anthony de Herrera mentions; and this was the occafion of a new ordinance, by which the comptroller, treafurer, and factor are, for the future, obliged to live in the India-Houfe, in which, as appears, the treafurer's deputy had an apartment, and afterwards it was given to the eldeft judge that was a lawyer, when the chamber of juftice was eregled. The Spanifh hiftorian, Anthony de Herrera, fays alfo, that, in the year 15 Io, the bufinefs relating to the Weft-Indies daily increafing, and the king conceiving the good management of it depended on the India-Houle at Seville, he re-
folved
folved to honour it, and therefore commanded the admiral to fend an account to thofe officers of all things he thought fit to acquaint his majefty with, and to keep conftant correfpondence with them: and, at the fame time, he ordered the officers of the houfe, that, whenfoever they iflued any orders for the Weft-Indies, they fhould confult with, and receive information from fuch perfons as were acquainted with the countries difcovered, for the better giving fuch directions as were proper, and for difcovering the fecrets of thofe parts. He charged alfo the judges of the court of Grados not to intrench upon the juriddiction of the faid houfe. To fhew how much their Catholic majefties, and the emperor Charles $V$. relied upon the commiffioners of the IndiaHoufe at Seville, for what related to the improvement of the Weft-India commerce, it is material toobferve what Anthony de Herrera writes, when mentioning his imperial majefty's care about building of fhips for thofe parts, and having fhipwrights to go over to Hifpaniola, to flay there fome time, and thence pals over to the continent, and other parts; and that this method fhould be obferved for the future, not only as to hip-wrights, but all other perfons that were to goover into thofe countries, becaufe at Hifpaniola they would become acquainted with the food, air, and other things of that country, and would then go with more fafety into any other parts of the Weft-Indies: he fays his majelty writ then to the commiffioners, telling them, He wondered they had not thought of this particular, fince they had nothing elfe to mind but the trade of the Indies; that, for the future, they ought to be more attentive to it, and take care to find out methods to advance thofe parts, fince he relied on them, as he had at other times given them to.underftand, becaufe the minifters about him had multiplicity of bufinefs to attend, whereas they had none but that, and were always fettled, which the court was not.
The hiftorian tells us further, That his majefty faid fo in regard that, till then, there was no particular council appointed for the affairs of the Indies: for, though, as he fays, there had been one during a fhort time;' his majetty had fufpended it on account of the bifhop of Burgos's difguit, who by means of his friendfhip with the commendary Francis de los Cobos, in the year 1517, obtained of the king the reeftablifhment of the council of the Indies, where he mentions the perfons then admitted to it; though D. John de Solorçano does not affign the inftitution of it till 1524 , becaufe it was then the'emperor named a prefident and counfellors for that fupreme royal council, and looks upon thofe which Anthony de Herrera took for a council only as particular affemblies, to confult upon occafion. And thus we hence infer, in honour of the Spanifh India-Houfe, that, in a great meafure, it fupplied the defect of that council during that interim, and has ever fince continued a fovereign court, às erected by that great emperor.
The more the wealth, bufinefs, and authority of the India. Houfe increafed, the more it was attacked by the civil magiftrate, who took it ill that affairs of fuch confequence fhould run through other hands; but their Catholic majefties judged that the affairs of a new world, of fuch vaft extent and confequence, fhould run through a particular channel of their own eftablifhment. In fhort, it feems from Herrera, that, in the year 1518 , there had happened fome difputes at Seville about jurifdiction, and the king ordered D. Francis Fernandes de Quinones, earl of Luna, then fupreme magittrate of Seville, not to intermeddle, on any account, with what concerned the jurifdiction of the India-Houfe, but sather diligently to fupport and maintain it in the privileges granted by his majefty.
The fame order was given to Sancho Martinez, who fucceeded the earl, for that the king did not only defign to fupport what he bad done, but even to add other authorities to it, if neceflary. The fame hiftorian, in another place, acquaints us, that the fupreme magiftrates of Seville received a fevere reprimand, becaufe they refufed to aid and affift the treafurer of the India-Houfe, Sancho de Martinez, who demanded their affiftance againft an alcaide beloning to the admiral of Caftille's deputy, who hindered Ferdinand Magallanes from fetting up his colours where other captains ufed to do; and the king commifioned the judges of the houfe to make inquiry into the matter, in order to punifh thofe feverely who were found guilty.
Herrera further tells us, That, the contador, or comptroller, John Lopez de Recalde, who was a commiffioner, or judgeofficer, being fufpended in the year 1523 , that bufinefs might not be obftructed, whilft his caufe was in debate, his majefty ordered the earl of Oforno, then chief magiftrate of Seville, to adt in conjunction with the treafurer and factor: but, it being hard to reconcile different jurifdictions, there happened feveral contefts.
King Philip II. made fuch account of this India-Houfe, that he would not only have it be the repofitory of all his treafures brought from the Weft-Indies, but the treafury of all his revenues arifing by tolls, cuftoms, falt pits, and cards, in A dalufia, which was begun in 1579 ; and in 1580 , it feems his majefty ordered the revenue fhould run through the hands of the prefident of the houfe, then the licentiate, James Gafca
de Salazar, the eatl of Villar, chief magiftrate of Seatir and the treafurer, D. rrancis lello; and it appears, that the prefident of the india Huqfe toak place of the chef nod giltrate, and figned before him
King Ptrilip II. did not only make ufe of the prefident and commiffioners of the India-Houfe, in what directty belonged to their employment, but in things remore, and of valt cuin fequence; and they, together with the duke of Medina $\operatorname{si}$ donia, who commanded it, had the care of fitting out that grand armada againtt England in 1588: and, in 1582, the fame king appointed them to chufe a founder for the mint, thas place being then vacant.
And here it may not be amifs to mention an occurrence, which fhews the thate of his Catholic majefly's finances at that time, and how ready the India-Houfe was to ferve the city of Seville. In the year 1590, that city begged of king Philip II. that he would lend them 150,000 ducats out of his returns in the laft fleet, till they could raife that fum at intereft. His majefty ordered the commiffioners of the IndiaHoufe to inform bim whether he might grane that favour without prefent mifs of the money. They anfwered, That, the city of Seville having of late fallen under many difappointments, and being always ready to ferve his majefty, they thought it expedient he fhould lend them as far IOO,000 ducats, of which fum there would be no great want.
There was then not only a confiderable bank in fpecie, but the public credit was good; for, in the year 1611 , we find a letter fent to his majefty, wherein the commifioners of the fin-dia-Houfe acquaint him, that his punctual payments had io advanced his credit, that he might take up as much money as he pleafed, at eafier intereft than private perfons. And, in the year 1629, another letter, acquainting the council, that, for fitting out of galleons, it would be eafier to take up money on his majefy's credit, and by his commiffioners, in his name, than on the fund of haberias, or duty of convoys.
It will not therefore be improper, in this place, to obferve the greatnefs of this court, whofe jurifdiction is as large as it's territory is boundlefs; whofe authority is fo extraordinary, that it has fupplied the place of a council, and acted as fuch, not only in reference to the Indies, but to the public revenue and military affairs of the kingdom, when orders paffed immediately from the king to it; whofe wealth is fuch, that none in Europe can compare with it ; whofe credit is fo tigh, that no private perfon could equal it; whofe preheminences were fuch, that they had the appointing of all officers, even to the admirals of fleets, and civil magiftrates; the giving paffes to fhips to all parts, and fending advice-boats with only their own orders; one of whofe judges, or commiffioners, being wanting at the board, the place has been fupplied by the chief magiftrate of Seville, being a nobleman of Caftille the appointing of whofe officers the emperor Charles $V$. referved to himfelf, together with viceroys and archbifhops, when he went into Flanders, leaving the difpofal of all other places to the prince his fon, afterwards king Philip II. though the viciffitude of times has of late deprived it of the privilege of choofing officers, thofe places being fince fold. Notwithftanding the decay which time, and feveral accidents, have occafioned in the greatnefs of this India-Houfe, there is not in all the Spanifh monarchy a nobler court, next to the king's council; for the commiffioners of both the chambers of direction and juftice enjoy all the fame privileges and immunities with the judges in chancery, and other courts, and may be termed a council, inafmuch as their advice is afked upon feveral occafions by his majefty.
The licentiate Alonzo Morgado fays, that the treafure of the India-Houfe has been fo great, as would fuffice to pave the ftreets of Seville with tiles of filver and gold. Roderick Caro alfo fays, that it was part of the palace and royal apartmients, and it's authority is fo great, that no fhip can fail to the WeflIndies without it's leave. And again, that, for this reafon, authors juftly called Seville queen of the ocean. And D. John de Solorcano and Anthony de Herrera fay, that it is a tribunal of great power, having to do with all bufinefs concerning the commerce and trade of the Spanifh Indies, and whatever arifes confequentially therefrom, and no magiftrate can intermeddle in what concerns it.
From what has heen faid, we find that queen Joanna, at the time fhe appointed the three firf commiffioners, or judges, affigned the jurifdiction, but how far it extended, or under what laws and ordinances, is not extant; only we find the rules then prefribed were given in two heets of parchment, hung up in frames.
This is further to be made out, by feveral orders from the emperor Charles $V$. wherein mention is made of thofe ordinances; and more lately, in the year 1539, by an order of council, which allows them privative juridiction, civil and criminal, in all caufes belonging to owners and mafters of fhips, feafaring people, and fuch as lofe fhips, or are the caule of lofing them; to factors and merchants; to them that in tercept, and open letters or inftructions, relating to the WeftIndies: and to the oblervation of all laus and ordinances made for regulating the trade and commerce of thofe parts.

And they are hereby authorized to take cagnizance of all crimes, thefts, or other offences, coupmitted in failing to or from the Weft-Indics; and, after that, till the gold and filver, or merchandizes, are delivered at Seville; and to enquire into, and punifh the tranigrefors they fhall find, fo that no other judge thall intermeddle therein; and therr fenterces Thall be executed in the ufual places for that purpofe; and, though the prohibition to other judges to intermeddle be general, yet thofe of Cadiz, St. Lucar, and other perts, are parricularly named, and the captains-general of the coafts of Andalulia, thole being the places where this juridiction is ulually exercifed.
By an order figned at Valladolid, the 14 th of June, 1558 , it is appointed that the fame method be practifed in trying of caules in the India-Houfe, as is ufed in the royal courts of Valladolid and Granada; and, befides this, in feveral other warran's, it is ftiled his majefty's court, even before there was a chamber of juftice.
The trade of the Weft Indies increafing, this, like obher courts, received feveral new laws and ordinances, for the better management therrof; and the exeçution of juftice; and to the three commiffioners and judges, by their offices, there were added a prefident, three oydores, that is, lawyerjudges, fo called from the word oyr, to hear; an alcaide, a head alguazile, much like our judges tiptaff; a fircal, or folicitor, and feveral other officers. To this court are fubordinate thofe of the prior and confuls of the trade of Seville and it's territory, of the contadores, or auditors of haberias, or the duty for convoys, the tribunal for affairs of India at Cadiz, the judges of regifters in the Canary Illands, and many others.
This court, befides the privative, enjoys an ordinary jurifdiction, with all the preheminences annexed to it. Now to leave the canvaffing of there two jurifdictions to the learned, the laws of Spain informing us, that jurifdiction may be called ordinary which is immedrately granted by the prince, or by the law ; befides the perpetuity of the offices in a tribunal that has juridiction, renders them ordinary. This court, being eftablifhed by the prince, cannot be denied to be thus qualified; and it is privative, by reafon of it's jurifdiation without any particular territory, which yet does not obffruct it's being ordinary: for though, by it's ordinances, it feems confined only to perfons and caufes, yet the perfons offending being ordered to be brought to it from any parts, tho at never fo great a diftance, it appears that it's territory is as large as his majefty's dominions.
It further appears to have full jurifdiction and authority over it's own officers, as has been evident from feveral cafes, and particularly in the conteft that arofe in the year 1655 , when I homas de Arenas killed D. Alonfo de Villa Corta, both of them beng contadures of haberias, that is, comptrollers of the duty for convoys; which murder, though committed in a ftreet at Seville, and far from the India-Houfe, yet the city judges infinting that the cognizance of that affair belonged to them, and the determination being remitted to Madrid, it was given in favour of this court.
By an order from the emperor Charles $V$. whereof mention has been made before, it appears his majelty's defign was not only to maintain the India-Houfe in it's original privileges and jurifdiction, but to increafe them, as was afterwards done upon feveral occafions, by deciding fundry difputes and controverfies in favour of it, whereof $I$ will give forne inftances. And bere we thall oblerve, that the method practifed by this court for preferving it's authority, before thefe contefts were regulated, was to lummon the plaintiff, who had entered his action in another court, againft any perfon fubject to the juridiction of the India-Houfe, to appear there, and make good his affertions, and this upon pain of imprifonment and forfeiture of goods; which was the occafion of erecting the chamber of competition, in the year 162I; and this form has been followed ever fince.
At other times the efcrivanos, or regifters, were fummoned to lay before the court the proceedings of the parties; if they refufed, they were proceeded againft upon contempt, and if, upon complying, the caule was found to belong to the India-Houfe, they were obliged to leave all the original procefs, and the parties were ordered to follow their fuit in that court.
The kings of Spain have not only fupperted the authority of this court, by exempting it from any fubordination to others, but have allo made it independent of all other councils, except that of the Indies, as appears by feveral grants and orders; and, laftly, by one of king Philip IV, in the year 1647 , forbidding the prefident and commiffoners to obey any orders fent them by any court or council, except only that of the lodies.
The commifary-general, under commiffary, and fub-dele. gates of the croifade, have often attempted to intermeddle with merchandizes coming from the Weft-Indies, but the prefident and commifitoners ever carried it againft them, as they have done againft all other magiftrates; inftances whereof are too tedious to infert, and not material, it being our bufinefs only to reprefient how far the authority of the court extends. Nor has this court been lefs peremptory in re-
Vol. I.
fufing to obey orders fent down from ary councils, except that of the Weft-Indies, only in particular cafes, fuch as delivering of the revenue, by order of the council de Hazienda, or of the revenue, and the money arifing by the croifade, b; order from the commiffary, and council belonging to it; but, in other cafes, only his majefty's order, and that of the council of the Weft-Indies, were obeyed. Yet the council de Hazienda, or of the revenue, cannot draw bilts upon the plate that is aboard the galleons, flota, or other veffels coming up the river, nor upon plate-mafters, they having no command over any but what is actually brought into the treafury of the India-Houie, becaufe the council of the Indies is firt to declare what part falls to their difpofal. The judges $\stackrel{\text { or commifioners for contraband goods, pretending to feize }}{ }$ Weft India Weft-India goods, upon any account whatroever, have been ordered to defint ; and the governors of St. Lucar and Cadiz, endeavouring to incroach upon the juridiction of the fupreme court of the India-Houfe, have been feverely reprimanded.
This court of the India-trade has not only power to infpect the gold and filver brought from the Weft-Indics, and to take care it be effectually delivered in the kingdom of Spain, but to provide and fee it be not carried out to other nations; for, though this feems to be the charge of the ordinary magiltrates, or commiffioners for the export, when once the plate is delivered out of the mints, yet this court has an accumulative power in this particular, granted by the council of ftate the $3^{\text {d of April, } 1608 \text {. In relation to the inquifition }}$ at Seville in the year 1663, it was refolved, that, when the faid tribunal required any papers to be delivered, or certificate to be made, a fecretary be fent with the meflage, who comes into court with his fword and hat on, fits down on one of the fide-benches, and, having delivered his meffage, the prefident anfwers, They will take the demands of the inquiftion into confideration, and, in the mean while, he may wait without. When they are come to a refolution, he is called in, and orders are given for putting their decree in execution.
To conclude, this court, by an order of the 2ift of June, 1574, is authorized to take cognizance, independent of any other court, of all caufes mentioned in the ordinances, and to proceed againf all perfons that fhall any way contradict them; to fee them obferved and kept, and to perform all things relating to, and depending on them. And this court accordingly has proceeded to give judgment, independent of all other courts, in criminal matters, to imprifonment, fending to the gallies, banifhment, and hanging; of which nature many inflances might be mentioned, as alfo of the imprifonment of generals, and other perfons in high pofts, for offences within it's juriddiction. It is but reafonable, fays our author, that this court of trade fhould exercife jurifdiction over it's own officers, it being a curb and check upon them, to know their own tribunal will punifh the crimes they fhall commit, without being neceffitated to carry them before any other magiftrate. In Seville, befides the officers of the In-dia-Houfe, all thofe belonging to the artillery, gunners, pilots, owners of thips, and fallors, are independent of the civil magiftrate, and only fubordinate to the court of the India-Houfe, called in Spanih, Cafa de la Contratracion; that is, The Houfe of trade. See the articles Andalusia, Flota, Galleons, Spanish America.

## Remarks.

We have feen, from the foregoing narrative, with what great power and authority the India-Houfe of Spain is inveffed, in order to preferve and maintain the commerce of the Spa-nifh-Indies. The immenfe treafures which have been drawn from Spanifh America are too well known to need intimation ; [fee our article America, Acapulco] but the Spaniards experiencing that thefe treafures have been chiefly diffeminated among the European nations, and but a fmall proportion of the whole has remained in Spain, they have, for above thefe 30 years paft, fet about a reform of the manner of carrying on this trade. [See the articles Flota, Galeeons, Register-Ships, and Spanish America.] That the trade of England, as well as France and Holland, has, for many years paft, depended greatly on our exports to Spanifh America, by the way of Old Spain, is certain : that the dominions, of the new world which are fubjett to his Catholic majefty may no longer depend upon being fupplied with the fabrics of other European nations, the Spaniards have been many years endeavouring, and ftill zealoully continue to endeavour to raife, within themfelves, whatever produce, and to manufacture whatever fabrics they can, in order to fupply their own American colonies therewith, that other nations may not ingrofs the greatelt thare of thofe advantages. - This is the commercial fyfem which, at prefent, prevalls at the court of Madrid, and is founded on the fame principles as that of other nations is, to the end that tbe mother kingdom may reap all advantages fhe can by their colonies and plantations.
That Spain is really making thefe cforts in her commerce, we have already fhewn in great yarist, of inftances through-

12 M

## I N D

## I N D

out this work, and fhall further fhew the fame in the fequel and whether this ought not fo to alarm this nation as to excite 4 refolution to compenfate ourfelves for thofe evils we muft certainly hereby fuitain, is fubmitted to thofe who have candidly attended to what we have hitherto urged, and fhall continue to do through the whole of our public fervice.
But, as the court of Spain could never effectuate thefe great things without the aid of artificers and manufacturers, they are daily decoying them from all nations whence they are to be had; and many more perbaps, are gone from this nation in paiticular, within a few years, than we are apprized of.
That this may appedr to our traders from the actual meafures which have been fome yeats fince taken by Spain, we judge it moft fatisfactory to produce our teftimonials, which we fhall do from

Copies of letters, fent by order of his late Catholic majelty, December 12, 1718, to the captain-general and intendants of the Spanill provinces, charging them with the kind treatment of foreigners, and other inftructions in favour of thofe that hall come into Spain, either to work or ferve in the army.

The following order has been fent by the captain-general, and commanding officers on the frontiers.

- Complaints being made that there has not been fhewn to - foreigners, who have come into Spain by fea or land, that
' kind treatment which his majefty defires, and is fitting,
' he has refolved that orders be fent by the captain-general,
to the governors of the fortreffes on the frontiers, or fea-
- ports, that kind reception fhould be given to the foreigners that fhall come thither; and that, if any of them pleafe to go into the inland parts of thefe kingdoms, either to ferve in the army, or exercife any Mechanic Trade, or other occupation whatfoever, according as it fhall be the inclination or ability of each perfon, that they be al( lowed to pals frecly, and without interruption; and that, ' to all fuch as fhall come on foot, be granted paffports for - the inland parts, for fuch term of time as fhall be lufficient - for their arrival at the place defired, ufing fuch precaution, - that the faid term inferted in the pais may not ferve them
- for a return back to their own country; and the faid travelling paffes are to have the following general claufes,
- that no obftruction be given them, but all the relief that fhall be neceflary in their journey, and an efpecial charge, 6 that, in all places they fhall pafs through in the direct road, there be provided for each perion a lodging and bed, for ' one night only, at the expence of the faid places, and all other neceflaries for money at the cuflomary prices, with© out any exceeding whatfoever: and in order that ftrangers, who thall come into thefe dominions, may find fuch favourable treatment and kind reception, the governors of ' the fortreffes and ports thall inform themfelves of all fuch ' as thall arrive there, and be inclined to fettle in Spain, and ufe all their addrefs to prevail with thofe that under' ftand any Mechanic Arts, to be fent to the places where the Fabrics, Manufactures, or other Crafts ' are carried on, according to the inclination and abilities of ' each perfon, more efpecially to the chief town of the dif' trict, where the intendants refide : and that all fuch as be ' willing to ferve in the army, \&c. \&cc.-All thefe things I ' communicate to your excellency, by his majefty's com' mand, that you may difpatch the neceflary inftructions for
© the execution and oblervation of them, as far as hall concern you; your excellency, giving alfo an efpecial charge ' to the governors not to fuffer their fecretaries to demand ' any fee for fuch travelling paffports, or upon any other - pretence, God preferve, \&c.

6 And his majefty orders, that, as foon as the intendants are - made acquainted with this refolution, that they ufe alfo the ' utmoft of their power to procure kind treatment for foreign\& ers that fhall come into the kingdom ; and direct, in thofe - provinces where there fhall be no military commanding of-

- ficers, that lodging be found them, in the fame manner as
- has been already provided for fuch as thall come on foot, c it being underftood only when they are travelling into the ‘ inland parts of Spain, but not when they fhall be returning - towards their own, or other foreign countries, for at that < time they thall bear their own charges; and, in cafe of ' their labouring under any infirmity or ficknefs, that they
' take care to fee them cured in the hofpitals of that jurif'diction, and, upon their recovery, to furnifh them with - fuch travelling paffes as are already directed, for the profe-- cuting of their journey, if it be not to ga out of the kingdom: - moreover, it is his majefty's pleafure, that the intendants ufe 's their influence to prevail upon them to ferve in the army; 's and that fuch as fhall be Manufacturers, be directed 6 and fettled in the places of their refpective fabrics, letters - being fent along with them to the corregidors and juftices, 6 to receive and introduce them into the Cad fabrics, the cul-- tivation of lands, or other occupations advantageous to the
- community; but without any viulence, or fuffering them
- to be diftreffed, and raiher diffting and favouring of them
- to the utmoft of their power; and, in cafe of it's being - difcovered that there are amongft them any fkilful Mas ters or Workmen for the Manufactories, and other occupations ufeful to the public, and they fhall be de-- firous of fettling in any city, or other place, it is his ma-- jefty's intention, that the intendants, their deputies, the cor-- regidors, and other juftices be diligent in fettling and procuring them a convenient Habitation, at the charge of the fame places, together with an exemption from the Excises and other Taxes, that fhall be the property of - the faid towns, equivalent to what THEy or their WORK-- men can confume, but both of them for a limited number - of years, while they fhall labour at their fabrics, or other 6 occupations, which fhall be amicably adjufted between the parties concerned; it being underftood, that, for what concerns the royal duties, or revenues, there be no immunity granted them, without a previous order from his majefty; ' for the obtaining of which, the intendant fhall prefent a - memorial, at fuch times as there fhall be any inducement ' to fuch an indulgence : it is alfo his majefty's pleafure, for the better fecuring this important purpofe, that the inten-- dants, and their deputies, be vigilant in the execution of every thing, provided with this intent in the inflructions ${ }_{6}^{6}$ to the intendants, and particularly in the 43 d article, and ' that they regularly tranfmit an account of the progrefs that ' has been made therein: all which I communicate to, your ' lordMip by his majefty's command, for your obfervance of ' that part which concerns, \&ic. God preferve, \&c. The - Pardo, December 12, 1718.

Don Miguel Fernandes Duran.'

## Again:

Certain articles in the inftruetions to the intendants, that are calculated to cherifh trade and manufactures, iffaed by the late king, the 4 th of July, $1718, \& \%$.

## Article XLII.

- As to the vagabonds and poor, that fhall not be fit to bear - arms, or for the culture of lands, or other forts of hard - labour, you fhall fee that houfes be provitid for them in cities and villages, at their charge, where they fhall be cof-- lected together, and made to work, either in fpinning or - preparing wool, filk, and other materials for the fabrics, and mechanic trades, each of them employed in that fort of labour that fhall beft fuit bis age, health, and genius: fo that by thefe, and other provifions which you fhall judge - proper to make, no perfon may be idle, and every one gain 6 alivelihood without begging, or ufing other unlawful means; - and that only thofe that by their age and infirmities fball be ' unable to work, fhall be maintained by the alms that thall - be collected, and other reliefs which the community fhall 6 provide: and becaufe there are many that work only on - certain days of the week, and are idle the reft, though there © be no want of work, ye thall alfo take care to correct this - middemeanour, by caufing them to be mortified by confine-- ment, and other means prudence fhall diefate, and their - feveral cafes require, and alfo forbid their affembling in ta-- verns, or entertaining themfelves with unlawful fports, efpe-- cially on Working Days.
XLIII.
- To the fame end it fhall be your efpecial charge to encourage, - in all towns fit and qualified for them, all Fabrics of - Cloth, Stuffs, Paper, Glass, Soap, any fort of - woyen Goods, the growth of Silik, Looms, and all - other Mechanic Arts, Trades, and Crafts what-- foever, which can with moft eafe be fet on foot; for, be-
- fides the numbers maintained by the labour of the Manu-
- factories, and employed in the conduct of them, com' merce is by this means promoted, and the provinces in-- riched, fince the exporting of any fort of goods whatever, - Manufactured, will yield a far greater advantage than ' that of the materials or fimple commodities of our own - growth, fuch as wool, filk, flax, wood, fofa, barilla, - ore, \&c.
- Ye fhall alfo lay before me the moft practicable and likely ' means to gain this end of inducing the common people to
- labour and induftry, on which depend their own eale and - the public intereft. And fhould it be neceffary to affift them - in any fhape, or to grant them Sums of Money, not too - large, it thall be freely difpenfed to them as the advantage - refulting from it is manifeft; and, in cafe private perfons - fhall not have fufficient means to fet them on foot, by form6 ing an affociation, or company, of fome of the moft pro-- per perfons, or when the public cheft fails; and the want ( of Masters, owing to the ruin of fo many manufactories, ' mechanic trades and crafts, fhould clog it ; you fhall confider - of methods to draw them from other parts of the kingdom, - or from Abroad, into the places under your jurifdiftion; or, according tonthe forts of fabrics to be eftablifhed, you - hall fend youth and children to the places where they are, - to learn, and by this means, in time, accomplifh a feheme - fo importans and interesting: and as we are fen-

## I N D

fible that one great caufe of the ruin of the Spanifh manufactures, is the vaft improvement foreigners have made in - theirs, whofe cloths, ftuffs, \&cc. are finer and more beautiful, made with fewer materials, and with lefs charge, and - yet have fufficient ftrength, I thall order a ftandard for the - Measure, Number of Threads, form of the Combs, - Presses, Fulling-Mills, and other Rules to be ob-- ferved by the Manufacturers of Wool, Sile*, \&a. 6 that, having the fubitance and prime quality which is pro-- per, they may rife in efteem, and their vent and confump-- tion be facilitated both at home and abroad. To this end, - I íball caufe to be reduced, or taken off, all the Duties - now charged at their exportation out of my dominions, as - alfo the Inland Duty at the fale of them, \&c.-You - Chall alfo take care that the colours for dyeing cloths and 4 filks be good and latiting, and punifh all fuch as offend in
c this way: and I order, that, in all thefe and other cafes which - may occur, you encourage and favour Trade, and, con-- quenty, the Traders, Manufacturers, their Work-- men, and other Depeindents, as it is my intention, - that they be all fupported and affifted by my Tribu-- nals, Ministers, Captains-General, and other comc manders and perfons whom it fhall concern, as it has c been directed and given them in charge, more efpecially - takins care that they be involved in no vexatious affairs c and if any Law-Surts of their own, or their fami-- lies, fhould happen, that they be Dispatched quickly, 6 and in Preference to all others, doing them juf-- tice, and fhewing all the favour that can be, without in-- convenience.'

- The utmoft care has lately been taken that thefe ordinances fhould be duly regarded.

## Remarks before the laft war

This is the grand fyftem that at prefent prevails in Spain, with regard to the intereft of commerce, and which mult in cvitably, in a few years, enable them to fupply the Spanifh Weft-Indies with their own manufactures, which they at prefent export thither in greater abundance than they ever did: and, how the trade of Great-Britain mult be affected thereby, we leave every man of fenfe to judge. For further confirmation hercof, fee the articles America, Acapulco, Biscayanerrs, Castile, Catalonia, Cunsuls, Factors, Spain.

Remarks fince the laft war, and the Definitive Treaty of Peace 1763.
In what manner our late conqueft of the Havanna, and the celfion of Florida, in confequence of our reftoring the fame to the king of Spain again may operate at the court of Madrid, with refpect to the increafe of British Exports to Old Spain, and from thence to the Spanifh-Indies, may be rather too early for us to make any pre-judgment of. Should the peace have an effect rather to diminifh than augment our Exports to Spain, and they thould exercife every politic art to fhew their refentment, 'tis to be hoped, that we fhall retaliate the treatment in a commercial way, by Jeflening our importations from Spain, in return for their civility; and take lefs of their wines and other fruit, with which we may be able, perhaps, foon to do without, by means of the new acquifitions we have obtained from them and France together, in America. Sce America, British America, Colonies, French America, Spanish America, Spain.

Indian Affairs in North America.
The furr and peltry trade of our North American colonies depending upons the Indians on this continent, it has always made an effential part in the government of thofe colonies, to cultivate an amicable underftanding with thefe people, who look upon themfelves as the aborigines. In effecting this, and keeping thofe Indians fteady in their friendfhip and alliances with us, has been a matter of difficulty, and attended with a conftant expence in prefents to thofe people, which are frequently no fooner received than forgot. This has been at tributed to various caufes. One of which the Indians themfeves have often complained, that is to fay, their fachems, or their wifeft men among them have complained, has been, that our traders in their dealings with them, take opportunities to intoxicate them with firituous liquors, and then to impofe upon and over-reach them in their comnercial barters.
That this charge brought againft our people is not groundlefs, has been too notorious to be gainfaid. To remedy practices of this nature, effectual meafures muft be taken by every diftinct provincial government; and every wife regulation for the purpofe, fhould be fo enforced as to execute itfilf, by proper rewards and punifhments.
Another caufe has been the intrigues and machinations of the French to poifon and irritate the favages againt us, by reprefenting thofe trafficable impofitions upon them on our
I. N D
fide, in the moft aggravated and enormous light, the more effectually to alienate their attachment for us, and engrofs their good-will and friendhip wholly to themfelves. To this end, the French have practifed every cunning, every artifice and policy they could devife; and particularly by acting by them in their dealings, exchange, and barters; with ftrict juftice; and never fo impofing on them, as to make an impreffion to their difadvantage: and to ftrengthen them in their good opinion of the French, and the contraty of our people, they have encouraged intermarriages among them with their people, and fent numbers of artful mifionaries among them, who enter into all their cuftoms and manners, and become refident always with them, to footh them in their regard for our enemies, and influence them to our detriment.
Meafures of this kind having been unpractifed on our fide, it has been no wonder that we have had, and fill continue to have, broils and mifunderfandings with thefe favages; and we muft reafonably expect, that the notions the French have, for many years, endeavoured to inftil into them againft us, cannot fuddenly be obliterated. But fince the Definitive Treaty of 1763, has afcertained the boundaries of territory between Great-Britain and France, and given us fo great advantages over the French to what we before had, it will be our own faults, if we do not gain the afcendancy over the affections of the Indians, and attach all thofe tribes, within the Britifh limits, to the Britilh intereft for the future. For now we have Canada and it's dependencies annexed to the crown of England, and thereby obtained the navigation of the gulph and river of St . Lawrence, it is in our power to cut off all fupplies by the French, of arms and ammunition to the Indian nations, fettled any way contiguous to our new acquifitions in thofe parts. If wee cannot obtain their friendfhip, by all fair, upright, amicable, and humane meafures, which mult be effectually tried, we mult over-awe them, and make them our friends by force and compulfion; we mult be at length obliged to ereet fuch a chain of forts as the French have been many years devifing, from the north to the fouth of that continent, at the proper places, which will contribute greatly to compel them to adhere to the treaties and alliances which they fhall make with us. And as we are intited to the navigation of the Miffifippi, while we preferve a maritime force able to cope with our enemies there, we fhall by that means be able to ditrefs the refraftory Indians; and by our fettlements in Eaft and Weft Florida and Georgia, and by our ports of Mobille, Penfacola, and St. Auguftine, and all the aid and affitance that can be brought by means of a happy union of our colonies, which we hope will take place now, from the eaft, weft, north and fouth of the whole continent to the Miffiflippi, we fhall be able to fecure the lafting friendihip of the Indians, and for evermore defeat the machinations of enemies to annoy us; which we, perhaps, fhould never have been able to have done, had not the laft defnitive treaty taken place. See our article Mississippi, America, British America, French America.
IN D IAN ISLANDS. Although we have been obliged to take notice already of thefe iflands, as particularly under the Dutch East-India Company, \&ci. and under the diftinct head of Java, in order to fhew more fully the nature of the Dutch commerce in Afia; yet having occafion to refer to thefe illands, as confidered united, we have judged proper to give a fummary view of their commerce all together. And firf,
Of Ceylon Island, which is about 62 leagues from Cape Comorin, is nearly 300 miles in circumference. The air is temperate, and the foil fruitful. It fupplies Coromandel with rice, has all the fruits of the Indies, and produces grapes all the year, except in the three rainy months of the winter; has plenty of ginger, pepper, cardamum, fugar-cane, mulberry-trees, palm, calabaffes, cotton, and arch-trees, \&ic. but it's moft valuable produce, and flaplecommodity, for which the Dutch have been fo careful to exclude all other Europeans, is a particular fort of Cinnamon, that grows here and no where elfe. Here are mines of gold, filver, and ocher metals; but it does not appear that they work any except thofe of iron, of which they have great plenty, and make pretty good fteel. Belides the Dutch, who poffefs the coaft, at leaft all the havens of this ifland, there are great numbers of Moors; Portugueze, and Malabars, but are tributary to the Dutch.
The natives fell for exportation cardamum, jaggory, oil, blacklead, turmeric, falt, rice, betel-nuts, mufk, wax, pepper, black coral, and amber: The commodities they import are velvets, filks, red caps, porcelane, fipices, opium, Chinaroots, camphire, fandal-wood, lead, copper, tin, gilt lookingglaftes, glafs-bottles, and printed callicoes. They make brals, copper, and earthen veffels, fwords, knives, and other manufactures of iron and fteel, in which they work very well, as they do alfo in goldfmiths wares, painting and carving; but moft of the people are employed in hufbandry.
The coafts, generally poffefied by the Dutch, being moft known, we fhall take notice of the moft remarkable places round it.

Misiaser,

## I N D

Manaar, is a fruitful ifland, feven miles in compals. The Dutch took it from the Portugueze in 1658.
Columbo, is the capital of the Dutch fettlements in the infe of Ceylon, and which they took alfo from the Portugueze in 1656. The town being too large to be defended with a few forces, the Dutch have contracted it to a fourth of it's ancient bounds, and have ftrongly fortified it.
The Dutch have a fort alfo at Galture, 8 leagues from Columbo.
Point de Galle, is a fort and harbour on the fouth-weft point of the inland, 20 leagues from Columbo. The Dutch company have 15,000 crowns a year from the jurifdiction of this town.
Jafrnapatam, is a town in the north part of Ceylon, taken by the Dutch from the Portugueze by capitulation, in 1658 , after they had kept it forty years. It exports great quantities of tobacco, and fome elephants; and, when the Dutch took it, they difcharged the duties on tobacco, to encourage the country to fettle in it.
Here are two markets, one for fin, the other for filks, lihen, pearls, gold, filver, fpices, falt, butter, allum, tobacco, herbs, \&c.
The Macdive Islands, lie 200 leagues in length, and are faid to be above' 1000 in number, each of a circular form, and about 80 leagues in circumference. They are generally flat low land, fo that fome of them are overflowed at high water: they are faid to produce cacaos, and all the ufual I dian fruits, and now and then fome'ambergreafe. There are only four channels betwixt thefe inlands navigable by large thips, and hofe not without danger, unlefs they have hatives for their pilots. The inhabitants are ingenious in manufactures, efpecially of filk and cotton.
Above a hundred fhip-loads of cacao are exported hence in a year. The natives make oil, cordage and fails. Their other manufactures are fine reed mats, and cloths of cotton and filk. The goods imported hither, are fome cotton and filk, iron, fteel, fpices, China ware, rice, \&c. all which are engroffed by the king, who fells them to his fubjects at his own price, for what he wants.
The ifland of Sumatra, is about 480 leagues in compafs, and confequently one of the greateft iflands in the world. 'Tis the firft of the noted inands, which form the great Archipelago of the eaft; the entrance whereof is, as it were, blocked up by this and the ine of Java, the opening between which two inlands is called the Streight of Sunda, and is abour fix leagues over. Through this itreight pafs the European fhips bound to Batavia or Chinà, without touching in the Indies, ftretching away at once eaft from the Cape of Good Hope, and making no land, till, having traverfed the whole Indian Ocean, they make the point called Java-Head.
The air of Sumatra is reckoned very uhwholefome. Yet 'tis very populous, efpecially in the north parts, where they have all neceflaries.
Gold they have in gbod quaritities out of the rivers and mountains in the north part of the illand, and the trade of Achem depends on that valuable commodity; which brings them fupplies of fhips and merchandize from all parts of Afra, and fome from Europe. There are alfo mines of filver, tin, iron, brafs, copper, \&c. and fulphur. It has no wheat or rye, but vaft quantities of barley, horiey, wax, fugar, ginger, pepper, with which they load many veffels every year; and fend their pepper and gold in exchange for rice and opium, which is jent them from Bengal and other parts.
Achem, the capital, is a large populous city, on the northweft point of the ifland. The harbour is good and capacious. 'Tis a very confiderable port, for the great quantities of goods fent yearly to it from all parts of India, for which returns are chiefly made in gold duft. The commodities imported, are opium, faltpetre, rice, gee, i. e. buffaloes butter turned to oil ; all forts of cotton and filk manufactures from Bengal ; tobacco, onions, callico and mullin, efpecially brown and blue long cloths and fallampores, with feveral forts of chints for clothes, and fometimes gunpowder from Madrafs. The Moors employ two large hips a year, to fetch the product of Cambaya from Surat, whofe merchants buy up elephants teeth here. The Chinefe alfo glut the markets with their commodities, and the Malayans here trade with large prows to Pegu, Quedah, Jehore, and all their own coafts; from whence they are fupplicd with ivory, bees-wax, mortivan, and fmall jars; as allo with pepper, which grows, indeed, in this ifland, but not in this part of it.
Bencoolen, is an Englifh colony and factory for pepper, but the European inhabitants are not very numerous.
The ifland of Java lies fouth-eaft of Sumatra, and is computed to be about 300 leagues in compafs. It has abundance of commodious creeks, bays, harbours, and good towns, on the north coaft, with many fmall iflands near the fhore. The air is faid to be not very hot, and, about Batavia efpecially, it is temperate and healthy. Great part of the inand is ftill unknown, for it does not appear that the Dutch have any towns or forts above 20 miles from the coaft ; but the north part, betwixt Bantam and Batavia, is populous; and, befides the Indian fruits and rice (the only corn that grows here) produces pulie, and all forts of European garden-ftuff, with
fome tebacco, falt, and pepper, bees-wax and benzoin, and has mines of gold, filver, copper, and iron, and iome diamonds, rubies, \&c:
The Javans on the coaft drive a confiderable trade from port to port, and from one ifland to another; paticuilarly to Borneo, exchanging goods in one place, for fuch as they know they can fell in another. . But they are fuch a theiving, cheating, murdering race, that nobody cares to deal with thet. but in public, and in company with others.
The trade here being wholly in the hands of the Dutch, and indeed fo much of the illand itfelf as they require, they have the benefit of the product, $\& \mathrm{ic}$. as much as if the natives wer their fubjects: for they not only fubmit to trade with them, but come freely with their commodities, efpecially pepyer, to Batavia, where the Dutch buy it ready cured, fothat they are at no trouble to make it marketable. The Dutch have planted fo many fugar-canes, efpecially about Batavia, that, befides fupplying that large and populous colony, and their factories in the Spice llands, \&ac. we fee large entries of fugar in Holland, by all their fleets from Batavia. Coffee is another addition they have mede to the produce of Java, the quality of which is faid to improve as the quantity increafes; fo that, though it be not altogether fo good as tbat of Mocha, they fend confiderable quantities of it every year to Europe. As for their rice, they fell 'it to the Chinefe and Malayan merchants, who export it. They have alfo a very great trade among themfelves in the confumption of European goods, whereof they bring much more to the Indies than the Englifh; it being computed, that, fince the vaft conflux of ftrangers to Batavia, the Dutch have not lefs than half a million of people under their government, here and in the Spice Iflands. They have naval Itores, partly the produci and manufacture of this illand, and partly imported; as copper from China and Japan, iron from Pegu, damer, or pitch from Malacca, sc. They have timber of their own fufficient for building, par ticularly good oak, and a red wood like cedar, beffdes cacaos and bamboos.
Bantam, is the firft place of commerce at the weft end of Java, and was the metropolis of a great kingdom till the Dutch deftroyed it, and depofed the king. The Englifh and Danes had flourifhing factories here, till difpoffefled by the Dutch. It is now become a poor ruinous place, without trade or gentry, which are boch engroffed by
Batavia, the glory of this illand, and of all the European fettlements in the Indies. A city which is the center of aill the ftrength and commerce of the Dutch in this part of the world, and the feat of their governor general ard council of the Indies, where they are fo powerful, and have fo many fubjects and dominions dependent on them, that iome think it a wonder they do not fupplant or drive all the European factories out of the country.
This city being the great magazine of the Dutch Eaf- India company, they import hither not only what Euiope affords,' but the merchandize of Japan, the Spice Inands, Perfia, Surat, Bengal, the coafts of Malabar and Coromendel, \&c. Though they fuffer no Europeans to trade hither, yet 15 or 20 fail of Chinefe junks come hither every November or December, from 3 to 500 tons each, and return the begiming of June; by which means the Dutch are furnithed with the goods much cheaper, than if they fent their fleets thither.
The other Dutch forts and factories on the north fide of th:s inland, which is both pleafant and fruifful all the"way along fhore, are Cheriboa, Toagal, Samarang, Japara, where was once an Englifh factory, Tampeira, and Rambang.
The ifland of Madura, oppofite to the eaftermoft point of Java, produces nothing for a foreign market but deer. fkins, which are very cheap.
Borneo, is a pretty round ifland, the laft of thofe called the Sunda Iflands, and is in compai's about 250 leagues. It produces many forts of fruits in great plenty, excellent maltic, and other gums, wax, rice, caffia, honey, cotton, the beft camphire in the world, frankincenfe, mufk, aloes, agaic, brafil wood, fapan, pepper, cinnamon, and nther fice; exceflent diamonds are found in the rivers, and gold duft in their fands, and the richeft bezoar ftones in the ftumath of the wild ape. Here are alfo mines of iron, tin, and very good load- - tone.
The towns and factories here, are built for the moft part on floats of timber in their rivers, forming one tong freet, and faftened to trees near the fhore, by cables made of rattans.
The trading nations here befides the Dutch, are the Chinefe, Malayans, Japonefe, Siamefe, Macaflars, Javans, and fome from Mogul, Portugal, and England, who all have their different views in trade. The Chinefe and Japonsie buy fpicee, the Malayans gold, and fo of otheis. There are pepper, cloves, and cinnamon, fold at Bendermafin, without interruption from the Dutch, becaufe they reckon them inferior to the product of their Spice Iflands. The Dutch fupply the natives with the manufactures of India and of Europe, particularly cloth of cotton and flax, for which trifes they receive in return diamonds, gold, and other the mort valuable goods of the place. The chief articles our merchants import hence, are pepper, gold, and precious ftones. The goods proper for exportation to it are, befues dollars, fmall.
cannon, blunderbuffes, fmall arms with brafs mountings, gunpowder, fheet lead, hangers, and knives, and other cutler's wares, iron and fteel bars, nails, red leather boots, fpectacles, \&cc. The purchafing of gold here, which is giving a certain number of filver dollars for the weight of one dollar in gold, turns to the beft account next to pepper; and diamonds may be bought to advantage, though there's feldom any to be had at Banjar of above three carats. Some think the trade to Borneo might, with good management, be rendered as beneficial to the Englifh as any, becaufe here they meet the Chiva fhips, and ninght be fupplied here with China goods very near as cheap, and perhaps at a better hand than in the country itfelf, all circumftances confidered. Befides, about Michaclmas, the Macaflar prows come hither, which, in fpite of the Dutch, will bring cloves, nutmegs, mace, gamboge, lignum aloes, caffia, and other rich merchandize. The dragon's-blood, produced here, is reckoned the fineft in the world ; the beft is fold at about forty dollars the pecul, which is 132 lb . Jambec canes are fold for about four dollars a hundred, and their fine monkey bezoar for about five times the weight in filver. The beft are of a greenifh colour, and are from a pennyweight to an ounce; but, if larger, they are thought to be goat bezoar. The pepper is commonly fold at the rate of 4 or 5 dollars the pecul. There are three forts of black pepper here: i. The Molucca, or Lout pepper, which is the beft. 2. The Caytongee pepper, which is a middling fort. 3. Negaree pepper, of which they have the greateft quantity. This is a fmall, hollow, light pepper, and ufually very full of duft. The white pepper, brought from this country, is twice as clear as the black, though faid to be the produce of the fame tree, and to acquire that colour by dropping from it, and lying for fome time on the ground, from whence 'ris gathered by the poor people, and carried to the merchants: 'tis fo much dearer, not only becaufe there's fo little of it to be had, but becaufe 'tis really the beft fruit, having the fire taken out by lying on the ground.
They have no coin but dollars, half dollars, and quarter dollars, except their calh, which are rings of bafe metal ftrung, that ferve for fmall matters. The Benjareens will fcarce take any dollars under 17 pennyweights 9 gains.
On the fouth fide of Borneo, lies an ifland called PulloLour, about 20 leagues in length, and 12 where broadeft; it has an excellent harbour, but is not very populous, and produces nothing but rice. The north end lies near many yivers, that come out of the pepper country.
We enter Borneo on this fide more to the wefl by the river Benjar, towards the fource of which grows the greateft quantity of pepper: twelve miles up this river was formerly an Englifh factory, called Benjar-maffem, as alfo another at a place called Succadaana, but they have quitted both. There are found fmall diamonds hereabouts, but, their water being of a yellowifh caft, they are not fo much efteemed as thofe of Golconda [fee Diamonds.] The fineft in this country are found at the port of Landa, in the fouth part, and therefore is frequented by lapidaries and jewellers of feveral nations, as Golconda is, and who often get a prize, which they endeavour to conceal and make off with.
Borneo city fands among fens, near a great falt-water lake, at the north-weft corner of the inland, and is fituate upon fmall ifles like Venice. There is a fafe deep harbour on the eaft fide of it, at the mouth of a great river, capable of the biggeft flips. It is the chief mart or feat of commerce for the ifland, and fometimes the port is thronged with thips and floops of all forts, from China, Cambodia, Siam, and Malacca, and boats of fundry kinds from the Philippine, and other iflands; fo that here are Dutch, Spaniards, Portugueze, and Englifh, all at a time loading and umloading. The Dutch impore hither glafs, cinnabar, cloths, wooller fuffs, and iron, which is much valued here, befides other European and Indian goods, and have camphire, gold, diamonds, and pepper, in exchange. The Portugueze and Englifh alro bave fome trade here, though no fettled factory; but there are merchants of both nations who correfpond with the companies factors on the coaft of Coromandel and elfewhere, and have fomstrimes thips running between.
The illand of Celebes is a large populous country, divided by the ftreights of Macafliar from Borneo, 30 leagues to the weft, as it is by the ocean from the Molucca Ilands on the ealt, and the Philippines on the north.
The air is hot and moift, and fubject to great rains during the north-weft winds, that blow from November to March, when the coaft is very unfafe, and the country overflowed.
The chief vegetables of this, and indeed all the eaitern inlands, are rice and cacaos, but they have ebony, Calambac fanders, and other dyeing woods. They have pepper, fugar, bete, and arac, the fineft cotton and opiam, and very delicious fruits.
The only towns of any note here, are, i. Jampandam, where is as commodious a harbour as any in the Indian tea. This was the filf place of confequence taken here by the Dutch, who have a fort here, whence they expelied the Portugueze.
Macassar, is a city near the fouth-weft corner of the inand,
where the Dutch have a fort alfo, mounted with 70 gunc and garrifoned by 700 men , to awe the king of the country, and have made it a place of good trade.
The Moluccas, are a clufter of iflands, betwixt Celebes on the weft, and New Guinea on the eatt. They are called alfo the Spice Iflands, from the fpices they abound with, and which grow no where elfe in the known world. The Banda Inands alone produce nutmegs: and Ternate, Tidor, Amboyna, Ceram, and a few cother fmall iflands, furnifh the whole world with cloves; which they produce in fuch abundance, that great quantities drop fiom the trees ungathered, and are fuffered to rot on the ground; and, of nutinegs, millions are often deftroyed on the foot by the Dutch, who are the engroflers of thefe commodities, to prevent the markers being overfocked, and to keep up the price of them.
Banda, the principal and largelt of the Nutmeg Inands, is a imall ifland, not above 20 miles long and 10 broad, but is exceeding fertile, yielding oranges, and other fruits, befides whole forefts of nutmeg-trees and cloves, without cultivation. The commodities chicfly imported bere are rice, cloths of Coromandel, Cambaya, and Malacca; broad cloth, flannel, damafks, taffaties, velvets, gold chains, and coins, filver cups gilt, China boxes, bafons, head-pieces, guns, and damafked fword-blades.
There are 5 or 6 other very fmall illands, which produce nutmegs, and lie all round about Banda, at a few leagues dif tance, all which the Dutch have in fubjection. They lie 30 leagues fouth-eaft of Amboyna.
Ternate, Tidore, Motir, Machiam, and Bachian Inlands, are of as much note for the clove-tiade, as the Banda Iflands are for the nutmeg.
Ternate, the chief, though not the biggeft of them, is not above 8 leagues in extent, and affords but little provifions, except goats and fome poultry: but it's chief product is the clove-tree, which grows fpontaneous, and bears fruit the eighth year to fo great increafe, that the Dutch have cut down whole woods of them.
Though thefe only be the real or proper Molucca Iflands, and produce both cloves and nutmegs in the greatelt quantities, there are fome others, the largeft and moft noted of which are,
I. Bouro, about 50 leagues in compafs. The blacks, belonging to the Dutch company, have fine plantations here. The prodult is cacaos and other Indian fruits, rice, millet, barley, beans, pot-herbs, and tobacco.
2. Amboyna, 25 leagues weft, 6 north from Banda, is about 24 leagues in circumference, producing nutmegs, cloves, oranges, lemons, citrons, fugar-canes, cacao, potatoes, millet, tobacco, bamboes, \&c. The chief town has to the weft of it a very fair bay, where is good anchorage and thelter for thips. This bay enters deep, fo as almuft to divide the country in two. The caftle or fort of Victory, built by the Dutch, and made the faple of the company, 1tands about 2 leagues up in the bay eaft from the barbour, and is defended by 4 bulwarks, and a confiderable garrifon. This caftle was the fcene of the mafidicre of the Englinh factory by the Dutch in 1623. The Dutch have feveral other forts in this tliand, which are reckoned their beft fettlements in the Eaft-Indies next to Batavia.
Ceram Island, a little to the noth of Amboyna, bears both cloves and nutmegs.' The Dutch factory nere is called Ambay.
The Philippine Islands, are computed at 1200 in number, of which 5 or 600 are pretty confiderable.
The Spaniards made ther firft fettlement in them in the reign of Philp If. in honour of whom they are to called.
The air is very hot, with hattle difference of feafons. Their chief product is gold, rice, the ufual Indian fruits, beafts, fowl, fifh, and infects, with good large nutmegs, which they don't cultivate however, left it fhould tempt the Duich to attack them. They neither allow the Englifh nor Dutch to trade here, left they fhould difover their riches and weaknefs.
Their chief iflands are, i. Mindanao. It has many deep bays, affording good harbours for fhipping.
It's chief trade is with the illand Manilla, but partly with Borneo. The Dutch come hither in floops from Ternate and Tidor, for rice, bees-wax, and tobacco, which laft grows plentifully here, and is of an excellent fort.
Several other iflands lie about this, with good harbours.
Boriol, about 40 leagues in compafs, lies north of Mindanao. The foil yiclds cacaos, and divers roots, much catte and fifh, and is rich in gold mines.
Layte, is above go leagues in compafs. It's plains are very fruitful, and yield plenaful crops of rice, gram, cacao trees, and good timber for ihipping. The commodities for trade are, rice, bees-wax, and coton quilts.
Xolo is an illand where all the hips of Borneo touch, and may be called the mart of all the Moorfh kingdoms in the eaft. It abounds with rice, and the fea throws aburdance of an:bergreafe on it's thore, and yitlds pearl as well as amber.
But the bigreft and richeft of all the Pisilippine Illands, is
Luconia, which the Portugueze call Manilla from it's chief town, and the Spaniards Rew Corilie. It is a

12 N
pherefu!
plentiful ifland, and able to furnifh good matenials for carrying on a confiderable commerce, only the Spanifh intabitants are fo rich, lazy, and proud, that they rather difcourage than improve it.
Manila, or Manilla, the chief city, is the feat of the Spanifh viceroy. The Chinefe, who ishabit the fuburbs, are the only mechanics among them, the Spaniards and Indians feldom applying to any bufinefs, unleis compelled by neceffity.
This ifland has the liberty of fending two thips every year to New Spain, but, being limited to that number, they build them very large. Thefe carry the ficices and rich commodities of India to Acapulco, a port in the Sourh Sea, in the kingdom of Mexico, and bring back the valuable commodities of America and Europe, by which trade the gain is faid to be 400 per cent.
The harbour of Manilla is fpacious, fafe, and commodious; and they admit of trade to it from India and China, but not with any European nation. See our article Acapulcu.
The tobacco of this illand is very pleafant to fmoke. The people fell it all over India at a great price, while that of Mindanao, which is really as good, if it were as well managed, is fold fo cheap, that a rial will purchafe so or 12 pounds of it.
The Spaniards build very good Chips here, at leaft the Portugueze do for them, with which they trade to China, Siam, Sumatra, and all parts of the country round; befides the junks which are built for the Chinefe traders, who employ abundance of thips of all thapes and fizes.
The Ladrones Islands belong alfo to Spain, and were difcovered in 1565 . They are about 20 in number.
The foil of Guam, or Guana, the chief of them, yields pine-apples, melons, oranges, limes, \&c. They have excellent pork, their hogs being fed with cacao-nuts, of which here are large groves.
The Acapulco fhip which touches here, both outward and homeward bound, feldom carries lefs than 1100 people from Old Spain (befides her crew of 400) whom the leaves at the Philippine Illands, to recruit the Spanifh plantations there: The has no lefs than feven decks, and carries the cargo of feven hips from Manilla to Acapulco, and in return brings abundance of filver from the Philippine Inlands.
The Spaniards have a fmall fort at Guam.
INDICO, is a plant which grows about two feet high, with round leaves, of a green, inclining towards brown on the upper fide of the leaf, and filver-coloured underneath, and pretty thick; after which come flowers, almoft like thofe of peafe, of a reddifh colour, from whence come long crooked pods, refembling a fickle, which inclofe a little feed in them, like radifh-feed, of an olive colour.

## Of the method of cultivating indico in America.

When the Americans fow this plant, they firft drefs the ground, and afterwards make holes in it, about a foot diftance one from another, and into each hole they throw ten or twelve of thefe feeds, which they cover lightly with earth, and in three or four days time, this little feed will be fure to appear, efpecially in a wet feafon; and in two months, or fix weeks fometimes, this plant will be ready to cut and make indico, as the fequel will hew ; and, if it is left in the ground, in three months time it will yield both the flower and the feed: what they fear moft, upon account of this plant, is a kind of caterpillar, which in St. Chriftopher's they find fometimes to breed in a night, and ruin all the promifing hopes of the inhabitants: the way they have to remedy this is, immediately to cut down all the plant, and throw it into a vat, or tub, with the caterpillars and all, which alfo are of fome fervice. The other way to remedy this misfortune is, to clear a large place betwixt what they have eat, and what they have not touched: this havock is not feen in Martinico. Indico is a fecula, or fettling, made by means of water and oil-olive, out of the leaves of the anil, or indico plant: there is a difference between that made of the leaves only, and that which is made of the leaves and fmall branches, The choiceft of the former fort, is that which bears the furname of Serquiffe, from a village of that name, which is 24 leagues from Surat, and near Amadabat in the EaftIndies. It is made likewife about Biana and Coffa near Agra, alfo in the kingdom of Golconda: the Dutch bring fome of it from Brampour and Bengal, but that is the leaft valuable of all.
When the inhabitants of the places above-named would make the fecula of anil, in order to make indico of it, they cur the faid herb with a fickle, when the leaves begin to fall upon touching them; and, after they have ftripped them from the branches, they put them into a fufficient quantity of water, which is in a veffel called the fleeping-vat, there letting them infufe thirty or thirty-five hours; atter which they turn the cock, in order to let the water tun off, which is become of a green colour, inclining towards blue, into 2 veffel of the nature of a churn, where it is worked by a negro, by means of a roller, or turner of wood, the ends of which are pointed and faced with iron: this they work
till the water abounds with a lather, then they caft imo it a little oul olive ; to wit, one pound into liach a guantity of the liquor as will yield feventy pounds of indico, fuch as is faleable; and, as foon as the faid oil is thrown in, the lather feparates into two parts, fo that you may oblerve a quatntity curdled, as milk is when ready to break; then they ceafe working, and let it ftand to fettle; which, when it has done fome time, they cpen the pipe or cock of the $v \in f f e l$, in order to let the water clear off, that the fecula which is fub fided may remaia bebind, at the bottom of the veffel, like the lees of wine: then takug it out, they put it into ftraining bags of cloth, to feparate what water was left; after which they convey it into chefts or boxes that are fhallow, to diy it; and, being dried, it is what we call indico; and that name is given to this, in all appearance, becaufe it comes from India. Sometimes the Indians make their indico in a fort of ponds, in form of a bafon, which they prepare with lime, that becomes of an equal hardnefs almoit to marble. Chufe the indico of Serquifie, in flat cakes, of a moderate thicknefs, neither too foft nor too hard, of a deep violet colour, light, and fuch as fwims on water, and, when broken, has no white fpots in it; and lafly, fuch as is copperich or reddilh, on being rubbed with one's nail, and has the leaft duft or broken pieces among it.

## Of the adulteration of indico.

We have no fort of commodity liable to more various ways of being fophifticated or counterfeited, than indico, when it bears a good price; which, if we fhould attempt to reJate, it would muke a fmall volume of itfelf; but we do not think it neceffary, fince it is eafy to diftinguifh that which is good from the bad, from what has been taid in relation to the cboice of it.
There is another fort called chefnut indico, or Agra indico, which is almoft as good as the Serquiffe; but, as the form does not recommend it to all the world, it is only in ufe with the dyers. There come to us, befides this, feveral other forts of indico, which have no other difference, than what arifes from the places where they are made, and the different feafons and age of the herb from which they are made; for the indico made of the plaut of the firf gathering, is better than that of the fecond, and the fecond better than the third; the younger the leaf is which is ufed, the finer the indico is, being of a more lively, fhining, violet colour.

Of the ufe of indico.
The ufe of the indico is for the dyers and laundreffes, ferving the laft to put among their linen. The painters ufe it to grind with white, for painting in blue; for, if it is ufed alone and neat, it turns black; ground with yellow, it makes a green. Some confectioners and apothecaries very prepofteroufly employ this to colour fugars to make conferves with, and fyrup of violets, by adding fome orrice.

Of the other fort thereof.
This indico is alfo the feculæ, made from the anil, which differs not from the former, but as it is made of the whole plant, ftalk and leaf; the beft of which kind is that which bears the name of Guatimala, which comes from the WeftIndies. It ought to be light, moderately hard, reddifh upon one's nail, fuch as will fwim upon water; and, in fhort, to come as near the other kind as may be. The fureft proot of it's goodnefs is, it's burning upon the fire like wax, and leaving only a little athes behind.
The fecond fort of this indico is that of St. Domingo, which differs not from the Guatimala, only that it is not of folively a colour. The third is the Jamaica indico, that is brought to England. , The fourth is that of the Leeward Mies ; all the forts are better or worfe, according as they are more or lefs neat and pure; for thole who make this, mix it fometimes with fand or dirt; but the cheat is eafy to difcover, in that the indico, which is fine and neat, will burn like wax; and, when this is burnt, the earth or fand will be left behind. Monf. Tavernier obferves in his book, page 242, that the indico-duft is fo fubtle and fo penetrating, that thole who fift it are obliged to have their face covered, and drink whey very often: and to confirm this, and make good the penetration of the indico-powder, he fays, having put feveral times an egg in the morning, near the fifters of indico, and at night breaking it, the infide has been all fained through with a blue colour. 'This is ufed only by the djers.

The laws of England, in order to encourage the growth and manufacture of indico in the Butilh plantations.

From and after the 25 th of March 1749, all perf ns who fhall import into this kingdom, directly from any of the Britifh colonies in America, in veffels that may legally trade, and are manned as by law required, any good and merchantable indico, free from any falle mixtures, and fir for dyens ule; being the product of the colony from whence the fame is in:ported, fhall be intitled to fix-pence for every pound thereot, to be pard out of the cuftoms, upon demand, by the col-
lector of the port where the fame fhall be importeid ; and, for want of fufficient money in has hands, he thall certify the fame to the commmiffioners of the cuftoms, who fhall caufe the bounty of the indico imported into England, to be pard by the receiver-general of the culloms in England; and of that imported into Scotland by the receiver-general there, If any perfon hall make entry of foreign made indico, un der the name of Britifh plantation made, or thall mix any foreign indico, or other falfe mixture with that made in the Britifh plantations, in order to claim the premium, he fhatl forfeit all fuch indico, and, in cafe of fuch mixeure, the quantity fo mixed, both foreign and Britifh plantation made, and double the value thereof, thall be forferted by the perfon making fuch mixture.

An Act concerning Indico, anno tertio Georgii III. regis.
An aet to continue and amend two acts made in the twentyfirt and twenty-eighth years of his late majeft's reign, for encouraging the making of Indico in the Britifh plantations in America; and for extending the provifions of an act of the thirteenth year of his late majefty's reign, with refpect to bringing prize goods into this kingdom, to Spanih prize goods taken fince the late declaration of war with Spain.
Whereas the law for encouraging the making of indico in the Britifh plantations in America, has been found to be very ufeful and beneficial to the public, and fo near expiring, that it is fit it hould be continued; be it therefore enacted, by the king's moft excellent majefty, by and with the advice and confent of the lords fpiritual and temporal, and commons, in this prefent parliament affembled, and by the auchonty of the fame, That an aft made in the twenty-firf year of the reign of his late majefty king George the Second, intituled, An act for encouraging the making of indico in the Britilh plantations in America, which was to continue in force for feven years, from the twenty-fifth day of March, one thoufand leven hundred and forty-nine, and from thence to the end of the then next feffion of parliament; and which, by another act of the twenty-eighth year of his faid late majefty's reign, is further continued, from the twenty-fifth day of March, one thoufand feven hundred and fify-fix, uncil the twenty-fifth day of March one thoufand feven hundred and fixty-three, and from thence to the end of the then next feffion of parliament; thall be, and the fame is hereby further continued, from the expiration thereof, until the twenty-fifth day of March, one thoufand feven hundred and feventy, and from thence to the end of the then next feffion of parliament.
Provided always, and be it enacted by the authority aforefaid, That from and after the time limited by the faid act, of the twenty-eighth year of his late majefty's reign, no more than four-pence on the pound weight thall be paid and allowed as a bounty on indico imported from his majelty's colonies, under the regulations and reftrictions mentioned in the faid act of the twenty firft year of the reign of king George the Second; and that no part of the faid bounty of four-pence on the pound weight fhall be repaid upon the exportation of fuch indico.
Provided alfo, and be it enacted, That in cafe any doubt or difpute Thall arife between the furveyors or officers of the cuftoms, and the owners or importers of indizo imported into any of the out-ports of Great-Britain, as to the quality of the fame, it fhall and may be lawful for the collector of his majefly's cuftoms in any fuch out port, to call two or more dyers, dry falters, brokers, or others, well killed in that commodity, who fhall declare upon oath, if required, their opinion as to the quality of the fame; and, according to the beft of their judgment, determine whether the faid indico is or is not intitled to the premium granted by the above recited act.
Provided neverthelefs, That if a competent number of perfons, well fkilled in that commodity, to be approved of by the collector of the cuftoms in any out-port where indico is imported, cannot be found in fuch out-port, then, and in fuch cale only, where any doubt or difpute fhall arile as aforefaid, famples of fuch indico, if imported into any outport in England, fhall be taken and fent to the commiffioners of the cuftoms of London: and if imported into any out-port at Scotland, to the commifioners of the cuftoms at Edinburgh, in fuch manner as the refpective commiffioners fhall direct, in order to be infpected and adjudged by fuch perfons, and in fuch manner as are preferibed by law for indico imparted into the port of London.
And be it enacted by the authority aforefaid, That all the provifions of an act paffed in the thirteenth year of his late majefty's reign, intituled, An act for the relief and encouragement of the captors of prizes, with refpect to the bringing and landing prize goods in this kingdom, be extended to Spanif prize goods taken fince the late declaration of war with Spain
INDOSTAN, or the EMPIRE of the GREAT MOGUL It's bounds are Tartary on the north, the peninfula of Indià within Ganges, and the bay of Benzal on the fouth, India beyond Ganges on the eaft, and Peifia on the weft. The
greateit oreade eaft and weft, from the frontier of Perfia to the kingdom of $A v a$, is 1400 miles; but 'tis much contracted towards the fouth, and much indented by Tartary towards the fouth-weft. Excepting fome Indian fovereigns on the Malabar coaft, and others in the heare of Intia, the Mogtol may be faid to be mafter of all the open councy as lar as it's fouthern extromty Cape Comoff; but, as furce ary geographers have extenced his dominions farther fouth than latitude 20, we thall conform to the tables of the Sanions and Luyts, and reftrain Incoffan to it's :orty kingdums.
The tropic of Cancer runs through the middle of it. The longefl day in the north is about 14 hours and $\frac{1}{2}$, and in the fouth about $12 \frac{x}{2}$; the fouth patt lies within the tornd zune, and is generally very hot, but, in the hoteft patt of the year, the rains refrelh the eath and cool the arr. The beft account of the winds which blow in thofe leas, as well the ceniftant trade winds as the monfuons, has been publifhed by Dr. Halley to whom we reler the curious.
The rains keep the earth in fo due a temperament, that vegetables foring with incredible fpeed. Kice, being the corn of moft general ufe, is the chief grain cultivated; they have wheat alfo, which is finer than any m Europe; efpectaliy in Bengal, [fee Bengal] and in the north part of this country In this part alfo, are variety of the European fruics.-Their chief Afiatic fruits are dates, figs, prunelloes, pumegranates, plantains, tamarinds, guavas, jaccas, ananas, brindoins, jambos, cayans, mirabolans, mangoes, almonds, cacaos, limes, oranges, and lemons; and the pepper-plant, fugar-cales, indico, cotton, the arac and betel-trees, melons, cardamums, faffron, turmeric, opium, ginger.-T he foil in general is fat and rich, yet light: it alfo produces all the beautiful flowers that can be expected in the climate: and, as for it's fundry barren mountains, thefe produce jafper, agate, granates, chryfolites, amethyfts, rubies, and diamonds.
Of the cotton-hrub, whereof they make their callicoes, mullins, ginghams, \&ic. they plant large fields with the feed, which grows up as high as a rofe-bufh. See Cotton. The valuable plant of indico, alfo, is a fhrub that grows here to the fize of a goofeberry-bufh. See Indico. Abundance of thefe fhrubs are planted about Amadabat and Agra, but the beft fort comes from Biana near Agra. They have great quantities of fine woods and groves, which afford timber for building, either houfes or Chipping, and good quantities of red-wood for dyeing ; but therr moll remarkable trees are the banyan, palm, and toddy-trees. As for their mulberrytrees and their filk-worms, they are as fine as in any part of the world.
Here is plenty both of wild and tame beafts. They have oxen, camels, dromedaries, affes, mules, but their oxen are the moft ferviceable, either for draught or carriage. 'Tis common to meet a caravan [fee the article CARAVAN] of 8 or 10,000 of them, employed in the carrying lalt, rice, and other grain. Their drivers have no other employment, nor any fixed abode, fo that they carry their families with them. There is a captain of every caravan, who carries a ltring of pearl about his neck, and affects the fate of a prince. - Thefe carriers are divided into four tribes, of about 100,000 fouls each, and live always in tents. The firf carries only corn, the fecond rice, the third peafe and beans, and the fourth falt, and are diftinguifhed by certain marks made in the foreheads of every tribe.
The fefh of the Indian hogs is reckoned the beft butcher's meat in this country, of which there is great plenty; thefe, together with the antelopes, not being the property of any particular perfon, all are at liberty to bunt and kill them; fo that, though the people have no lands which they can call their own, yet the privileges they enjoy are almoft an equivalent, the lion being the only beaft of the foreft, the hunting of which the Mogul referves to himfelf.
Towards Perfia and Tartary they have fine large fheep, whereas thofe in the fouth are thin and long-thanked; with red hair on their backs inftead of wool, and their flifh is lean and dry. They have great variety of tame and wild fowl, as well as plenty of poulty, whofe flefh is generally lean and dry.
They have great plenty of excellent fin in their rivers and feas, both fcale and Mhell filh; and of the latter there are as good at Fort St. George as we have in England.
Befides cotton, which is the prime and faple commodity of this country, it yields alfo for exportation indico, fugar, opium, affa foerida, cardamums, ahes, borax, faltpetre, fulphur, allum, lacque, and other gums; caffin, camphor, fan-dal-wood; and befides diamonds and other preciuns ftones, as the bezoar, the ferpentine ftone, as alfo civet, ginger, Malabar pepper, and a great varitty of druys.
The manutaclures which are therewith exporied to Europe, are callicees and munns of ail the fineft forts and ftains; raw and wrought filks of many kinds; cabiners, efcrutores, and other curious wood works, veiy finely lacquered; the fineft canes, of whech many are moft curroully cafed with tortoife-fhell, and abundance of ether toys.
The merchandizes brought hitherto from Euroje, are Englith cloch ard ftuffs, of which our meribants fend fiv al bales up to the great Mogul's court, to Agra, Lakci, and other
places; likewife lead, looking-glaffes, fword-blades, ktives, haberdathery wares, gold and filver lace, tin-wares, wine, brandy, beer, and fome other provifions, taken off chiefly by our own factories.
Upon the whole, it has been faid, that there are not greater merchants in the world than the Mogul's fubjects: for though their fhipping never paffes the Cape of Good Hope, they drive a very great trade to Perfia and Turkey, with all the rich merchandizes of India: in return for which, they bring back carpets, pearl, and other Perfian commodities; but chiefly treafure, which they often put on board Englifh and Dutch veffels. And the freight hereof is obferved by Mr. Lockyer to be one great branch of our Eaft-India company's profit, and is all clear gain to this nation; for a thip feldom comes to Surat from Perfia, but fhe is as deeply loaded as the can fwim with paffengers, and valt quantities of pearl and treafure on board, to the amount fometimes of 2 or $3,000,0001$. fterling.
The Mogul's fubjects, indeed, have आhips of their own of 4 or 500 tons burden, built after the Engluh model; but they judge it fafer to make ufe of the European fhips and commanders againf the dangers of the prates, with which thofe feas are often infefted, their own natives being but very indifferent foldiers or fallors. There is not a man of war, or any hip of force belonging to the Mogul, in all India.
They build their merchant-fhips with teak, a firm lafting timber; and, inftead of caulking the feams, the planks are rabbeted, and let one into the other; which with oakham, and a fort of pitch called dammer, brought from the Maldive Inands, make them very tight.
Their cables and other cordage, are made of the cacao-tree, and they have their anchors and guns from Europe: they have flat-botomed veffels, whole fides are five or fix feet high ; the planks of which are very thin, and fewed together with their cordage, fo that they will yield like pafteboard, and are in no danger of fiplitting when they ftrike, as they muft do feveral times on many parts of their fhores; for which reafon, the Englifh feldom attempt to fend any thing afhore in their own boats.

## Of the chief provinces or kingdoms for trade.

Kakares; the country in the general is barren; but has a good trade from Tartary and China.
Siba, it's country is pretty fertile, and it enjoys a pretty good trade.
Naugracut, or Nagracat, is a mountainous kingdom. The chief city of the fame name, is a place of good trade for drugs, and other commodities brought from Tartary.
Cassimere, enjoys a clear healthy air, as temperate as any in Europe, and a foil well cultivated, abounding with all the, conveniencies of life, and fo far exceeding all the neighibouring fun-burnt provinces, that Catrou fays, 'tis ftiled the paradife of India.
It is furrounded by mountains, rifing one above another, the lower covered with cattle, and all kind of game creatures, without any noxious animals; and the higher covered with fnow, which, melting, forms the many rivulets that water the country, befides feveral fmall lakes, and render it fo fruitful, that it looks like a large garden of ever-greens, cut through with canals, and abounding with all forts of pulfe, rice, com, faffion, hemp, apricots, peaches, apples, pears, plums, vines, \&cc. and the fame pot-herbs as the Europeans, but not fo good, for want of ikilful gardeners. The woods allo abound with bees; fo that it may be truly called a land flowing with milk and honcy: The waters of it's pleafant ftreams join, and form the river Tehenas, which breaks through a mountain, and carries goods through the greateft part of the kingdom, into the Indus, or Sinde, at Attock.
The people in this country make houhold furniture, which they fend over all the Indies, and they excel in the delicacy of their varnifh ; but their chief trade is in the ftuffs called chales, wherein they employ their children. Both fexes wear them in winter, on their heads, and throw one end over their choulders. They make one fort of their own wool, which is finer than Spanifh; and another of wild goats-hair, which they have from Tibet: they are finer and fofter than caftor, and more valued than the former, but muft be often aired, to prevent their being worm-eaten.
Some of the le coft 150 roupies, but the others not above 50 . They are about an ell and a haif long, and an ell broad, and are embroidered about a foot at the ends. They are made in other parts of the Indies, but not fo fine as here, which is alcribed to their water.
The Cafimere mercbants, that go every year from one mountain to another, to gather wool, fay, that, between thofe mountains which are independent on this province, there are feveral vallies of good land, which pay annual tribute to the government in leather and wool, and abound with corn, rice, apricots, melons, and grapes that afford very good wine.
Cabul, or Cabculistan, a province abounding with plenty of provifions, a good trade with Perfia, Tartary, China, and the Indies, buy 60,000 horfes annually of the Ulbec Tartars, which they fend to the greateft part of India, and deal much in drugs that grow in the mountains, where they have ifon-
mines and canes, which fupply their manufacture for halberds and lances.
Hachacan : the people of this province fubfift chiefly by letting out camels, and conducting the caravans laden with merchandize. See the article Caravans.
Multin, a province that produces vaft quantities of fugar, of which they fend a great deal to Tatty and Lahor; galls, opium, brimftone, and fome fpices.
Their manulactures are good white cloths and napkins, cotton, thread, filk of Bengal, [fee the article Bengal] panted callicoes, which they fell to Agra, Tatta, \&c. with red ftuffs and turbands. They vend alfo great numbers of camels into Perfia, and divers parts of the Indies.
It once had a great trade, when they fend merchandizes at an eafy rate to Tatta, by the Indus, as well as other rivers from the mountains of Caffimere; but, fince the mouth of the Indus has been flopped up with fand, they fend their goods by land-carriage to Agra, and thence to Surat, which has leffened their trade and number of people. It has many good towns in it's dependence, and is the chief rendezvous of weathy Banians that trade into Perfia.
Buckor, a province through which the river Indus runs, and, dividing it into two parts, renders it both rich and fruitful: fo that it's banks abound with corn and cattle; but the weft part is defert.
Buckor Town, which lies on an ifland of the Indus, has a confiderable traffic in Indian cloths, and other commodities. SUCKER, is another town of fome note for it's trade and agriculture on the river Damiad, or Dimtudee; and Rawree, on the fame river, near it's mouth, is a place likewife of good trade, and fends barks down the river; which trade as far as Mozambique, and other parts of Africa.
Tatta, or Sindi. - This province, which is the weftern boundary of the Mogul empire, is very conveniently fituated for trade, and was very much inriched by it, before fo great a Mhare thereof was drawn away by Surat.
The river Indus fuppliès it with great variety and plenty of fifh. Here are allo ftore of peacocks, pidgeons, partridges, plovers, wild geefe, ducks, and other wild fowl, which are free to every body. The country abounds with wheat, rice, pulfe, and with provender for cattle. They never have a dearth of provifions, becaufe the Indus overflows all the low grounds, and leaves a fat flime, which never fails so produce a good crop. It's other productions are faltpetre, fal ammoniac, borax, opopanax, affa foetida, bezoar, lapis-tutiz, lapislazull, and raw filk, but not fine. The wood lignum-dulce grows only in this country; the root is chiefly uleful, called putchcock, or radix-dulcis, which is a good ingredient in perfumes; fo that great quantities of it are exported to Sufat, and from thence to China, where it bears a good price, it being burned in their incenfe-pots before their images,
They manufacture both cotton and filks, make chints, very fine and cheap, alfo beautiful covellets for beds, fine cabinets, both lacquered, and inlaid with ivory, and japanned wooden difhes and tables. They export great quantities of butter, which they melt and put in jars, made of the hides of cattle, in the form of a globe, with a neck and mouth on one fide, The capital, of the fame name, and the chief trading town of the province, ftands in an inland formed by the Indus. The chief commodities here are fine cotton, linen, turbands, carpets, leather-work, boxes, cabinets, and other curious utenfils of wood, inlaid with mother of pearl. Here is allt oil of cacao-nuts, butter, fugar, pitch, roffi, ftuffs of all forts, annifeed, \&cc. which are brought down the Indus in veffels from the other provinces.
Larribandar, at the mouth of the river, is the port of the city, and will receive fhips of 200 tons.
Diul, or Dobil, is another port, and is the moft commodious and celebrated harbour in the kingdom, and is the place where flips ufually touch that fail from India to Ormus.
Jesselmere Province. The north parts are mountainous, but the fouth are watered by the river Padder, and the greateft part of the country is fruitful in corn and cattle, efpecially fheep.
Jesselmere Town, it's capital ftands on the north part, within land, but has a very good trade for indico, cotton, and woollen cloths.
Soret Province, the laft on the weftern clafs, is a very rich and fruifful province, well furnifhed with all the neceflarits of life.
Janagat, it's chief city, is populous and rich, by reafon of it's commodious fituation near the river Padder, which falls, a litle below it, into the gulph of Indus, and renders it a place of good trade.

The chief midland provinces for trade are,
Chitor : the chief product for which it is noted is ftone, falt, and affa feetida, which grows on mountains and barrenplaces. The Banians mix affa foetida with their fauces, reckoning no difh good without it.
Chetipore, or Chitpour, is the only place of note here. It flands on the banks of a river, and is inhabited by Banians, who make cotton-yarn, and weave great quantities of thole callicoes called chints.

Malyax

Malvay Province, produces all that grows in the other provinces, and has a great many trading towns, of which the capital, and that of the greaçeft traffic, is
Ratispore, or Rantipore, or Ratibor; and alfo
Serog, which lies between Surat and Agra. This is a great city, chiefly inhabited by Banian merchants and handicraftfmen, who drive a great trade in callicoes, both white and painted, called chites, which, the more they are walhed, the brighter are the colours. They are worn by the common people of Perfia and Turkey, and are ufed in other countries for bed quilts and napkins. They make another fort of linenhere, fo very fine that the body is plainly feen through it. This the merchants are not allowed to export; for the government fends it all to the Mogul's court, for the fultaneifes of the feraglio, and the ladies of quality, who dance in the very hot weather with nothing on them but fhifts, or robes, made of this linen. It is computed to be about 100 leagues of this country from herce to Brampour, through fine fields of corn and rice; the foil is of much the fame nature from hence to Agra, and the villages are very thick all the way.
Nader is a great city here: the inhabitants make great quantities of quilted coverlets, fome white, others embroidered with gold, filk, and fattin flowers.
Narvar, a province abounding with wool and cotton, and with fuch quantities of fugar-canes and mangoes, that they feed their horles with them. Here are vaft flocks of fheep, whofe wool is efteemed no way inferior to that of Spain.
The chief towns of any trade are Handee, remarkable for rhinoceros's-horns, which are much valued in India.
Sandaye, or Sandage, noted for manufactures of wool, cotton, and fire-arms, and much frequented by merchants.
Barandon, a thoroughfare for caravans, and remarkable for a great trade in arms, hart's and elephant's-teeth.
Gualgor Province. It's capital of the fame name is a large city, but not diftinguifable for any fort of commerce. Agra, or Indostan Proper, is called fo from being the principal kingdom of the Mogul empire. It is a plain country, and, though not fo fruitful of wheat and other corn as Dely, abounds with oranges, lemons, and many other fruits, befides rice, indico, and cotton; and it's manufactures of white cloth, ftuffs of filk, filver and gold lace, \&ac. render it one of the richeft countries in the Indies. It is one of the largef provinces in the Mogul's dominions, according to Thevenot, though it does not appear fo by the ordinary maps.
Agra, it's capital city, whither a great number of Popifh merchants refort, becaufe Eckbar, the emperor who founded it, in 1566, allowed the Jefuits a fettlement and penfion bere, which they enjoy to this day ${ }^{*}$. This is a place of great traffic, being relorted to by merchants from China, Perfia, all parts of India, and by the Englifh and Dutch. Our nation once had a factory here; but the long diftance from Surat, and the hazards and difficulties they fuftained in paffing thro' the countries of many rajas and rafboutes, made them withdraw it, though they fill continue to trade here.

* It is remarkable, that the religious miffionaries of Popif countries bave been greatly infrumental to promote the trade of their countries, efpecially thofe of France; which being done under the difguife of religion, it is the lefs perceptible. The religious have been remarkably bufy on thefe occafions among the Indians of North America, and have anfwer the interefts of commerce, and to make fuch alliances with the French as may the better enable them to advance their trade, and increafe their poffeffions at the expence of thofe of Great-Britain; but what Trading Mis-
 sionarie
vigation?

The Dutch have flill a factory in this city, and trade chiefly in fcarlet cloth, looking-glaffes, filver, gold, and white lace, hard-ware, indico, cloth of Jelapour, and fpices. They have houfes at feveral other towns, to which they fend factors annually, and bave always fome perfons near the court, to prevent being impofed on by the covetous tyrannical governors at the fettlements on the coaft of Bengat.
Hicre are above 60 very large caravanfera's, nobly built [fee Caravansera] fome of which have fix large courts, with their portico's, and moft commodious apartments for the merchants.
Fettipore, or Fatapour, a town about if miles weft of Agra. The emperor Eckbar, before-mentioned, built here a ftately palace, and a noble bazar for trade [fee Bazar:] they have here a grand manufacture for taffata's. The bazar, whofe top is full of little pyramids, is 500 paces in length, well built, and neatly paved. The court within is fix times larger than the Royal Exchange of London, and the whole fupported with beautiful columns, each of one ftone.
Brana, another town about 35 miles weft of the former: they have here, and at Scanderbad, the beft indico in the whole country. See Indico.
There are many other towns in this province, where they have manufactures of painted callicoes, chints, \&c. but they do not merit a particular defcription.
Vol.I.

Bando, a province, which produces opium, azure, falt petre, and mufk.
Godah, a town, ftands in the mof fruitful part of this province for cotton, corn, pafure, and in a great plain, where there is a village almoft at every mile's end, with gardens of mangoes, tamarinds, and other fruit-trees. The ftreets are full of rich tradefmen's fhops.

## Hendowns Province st

is large, populous, and opulent, with a confiderable name, cotton and callicoes they make far better, and in flatting the round indico, which money.
Mearta, another town in this province, has a great trade in indico, callico, and woollen cloth.
Lahor Province, produces rice, corn, pulfe of all forts, fruit, fugar, wine; and in their towns are manufactures of every thing made in the empire, particularly fine linen, filks of all colours, embroideries, tapettry, plain and flowered, and coarfe woollen fuffs.
LaHor, it's chief town, was formerly very fplendid and opulent, and the chief of all Indoftan for trade, when the Armenians and Indians traded from the Indies by land to Alep. po, and was the faple for indico, which was formerly called the indico of Lahor, till the Europeans found out a way by fea to the Eaft-Indies; fince which the trade is fo fallen off, that the place could farce fubfift $*$, were it not for the refidence of the court here for five or fix months in the year, during the cold feafon, the air being pure and reftorative. The inhabitants here fill make the coarfeft and cheapeft fort of painted callicoes.

* This is the fate of all great towns and cities, when once they lofe their trade; which ought to convince every one, from fact and experience, of the unfpeakable benefits of commerce to a nation, and to peculiar towns and cities. .
Dehli Province, lies in the heart of the whole empire. Though cultivation of the land is neglected in many parts, yet in others it produces plenty of wheat, rice, millet, excellent fugar, good indico, pulfe, and fruitsof all forts, efpecially extraordinary anana's [fee Anana's.] They have melons cheap enough in fummer, but not very good, except they have the feed from Perfia, which none but the quality are able to purchare. .They have pretty good fefh-meat, though it will not keep above a day. They have good fifh, but in no great plenty, becaufe none bui the omiahs may catch them, when they pleafe. They have no wine but what is imported from Perfia, or the Canary Illands, for ftrangers, the Mahometans and Gentiles too, in this country, not being atlowed to drink either that or arac. See the article Arac.
Dehli Ciry. The rich goods here are fold in the warehoufes, fo that in the common ihops there is little befides provifions, fuch as rice, barley, wheat, oil, butter, \&xc. Many of the inhabitants, efpecially the raja's, are very rich, particularly in jewels, which they preferve from father to fon. There are no handicraftimen in this city; not that they want fkill, but becaule they are maltreated by the omrahs and manfederars; who compel them to work for them, and pay them as they pleafe.
The caravanfera here is a magnificent fructure, in a very large fquare, furrounded with arches that fupport open galleries, where the Perfian, Ufoc, and other fore1gn merchants, lodge in very commodious apartments, which are allo ware houfes for their merchandizes.

## Of the eaftern provinces.

Patna Province is very fruifful. - It's chief city, of the fame name, Atands on the river Perfely, but fo far inland, that it is never reforted to by foreigners, fo that we have no account of it; though fonse geographers have confounded this with Patna, on the weft fide of the Ganges, in the kingdom of Bengal [fee Bengal;] nor is there any conliderable place of trade in this eaftern divifion.

In regard to the fouthern divifion,
Having already taken notice of Bengal, under the article BerGAL, by reafon of the trade that our Eaft-India company has there, we fhall pafs that over here, and refer to Bengal. The next' province in this divifion is that of
Orixa, or Oristan, a province feparated from Bengal, on the north, by the river Guenga; has the bay on the eaft; the mountains of Ballagate and Berar on the weft, and Golconda on the fouth. 'The foil is fruitful in rice. It's other commodities are white cloth, bengals, oil, butter, mirabolans, bees-wax, lacque, ginger, and pepper, annife and cum-min-feeds; of which commodities, when it was governed by it's own king, Mr. Frederick favs they ufed to export 25 or 30 thip-loads a year ; but fuch impoits have been laid on them by the Mogul, as have much leffened the trade. Iron bere is very plentiful, and they caft anchors in moulds; but thole made of their caft iron are not near fo sood as thofe made in Europe of hammered bar-iron.

120
The

The places on this coaft which travellers and navigators have moft noted are,
CunNaca River, capable of receiving a thip of 200 tons. The north fide of this river is fubject to the nabob of Cattack, and the fouth frde to a rajah, which makes them both court the merchants that come hither, for the fake of the cuftom which is paid only to that fovereign on whofe fide of the river the veffels lie.
Raypore, on the banks of the river Cattack. It bas a fine bay, which, at fring-tides, has feven fathom water, but is little frequented by traders at prefent, though otherwife formerly, and fill abounds with corn, butter, oil, and fine clorh. The harbour though convenient, is the lefs frequented, becaufe many rajahs, of different interefts, have their countries on the fides of the river, who overburthen the trade with impolts, which ever ruins commerce.
Cattack Town flands on an ifland of this river. The Englifh Eaft-India company had once a fine factory here. It's manufactory is cotton cloths of all forts, very cheap.
Badneck, about 50 miles from Cattack. The chief employment of it's inhabitants is hufbandry, fpinning, weaving, and churning; and butter is fo cheap, that a penny per pound is reckoned dear.
Astrore has a fine river, which invites foreigners to frequent it for cotton, cloth, and rice, which this country affords in great plenty. At
Orixa Town, they make a great deal of cotton cloth, and of the herb or grafs of Bengal.
Bezar is one of the moft fruitful provinces of the Mogul empire, in corn, rice, pulfe, and poppy, from which opium is extracted; and fugar-canes thrive here almoft without cultivation.
Candisfi Province is mighty populous, and has not only plenty of rice and indico, but abounds more with cotton than any of the provinces of the Indies, and drives a great trade in cotton-cloth; and they manufacture callicoes, both white and painted; the former of which are much efteemed for their ftripes of gold, filver, and filk, intermixed with flowers, which render them tery dear: and, indeed, they are only ufed by the richer fort, for veils, fcarves, handkerchiefs, and coverlets. They are tranfported to Perfia, Turkey, Mufcovy, Poland, Arabia, Grand Cairo, \&c. It's chief towns are,
Brampour, the capital. Here is a large caravanfera. The Dutch, who have a factory here, barter pepper for opium. The Englifh, who alfo had a factory here once, fold cloths, lead, quickfilver, fabres, fattins, velvets, and gold ftuffs; for which they returned money, by bills of exchange, to Agra and Surat.
Canow, is a large city, which drives a great trade in cloth, fwords, mufkets, and a certain fruit for dyeing.
Cambaya, or Guzuratte Kingdom. Sée Cambaya.
The Peninsula of the Indies within Ganges, has the two coafts of Malabar and Coromandel, where the Englifh, Dutch, French, Portugueze, and Danes, have forts and factories, the former on the weft fide of it, and the latter on the eaft
Decan Province, in general, bears many excellent fruits, and much cotton, of which the inhabitants make very fine cloth; and fome parts of it yield diamonds, and other precious ftones, befide an excellent pafture for variety of cattle, which are fold at Goa, and other places. The inhabitants of Decan Proper are chiefly employed in carrying wheat and rice, in caravans of 1000 beafts at a time, into the neighbouring countries. The moft remarkable places on the coaft, are the iflands of Salfet and Bombay.
Salset Island abounds with game of all kinds, and has herbage and fruit in great plenty, and a manufacture offtuffs of filk and cotton. The Portugueze have no trade here, becaufe the channel belongs to the Engliih, and all cuftoms of goods imported and exported are paid to the cuftom-houfe of Mahim. Trombay is a fmall inland here, which pays cuftom to the Englifh.
Bombay is an iffand to the fouth of Salfet. It's harbour is capable of containing 1000 fhips. The ifland is about eight miles long, and 20 in circumference. The foil is barren, and the climate unhealthful, but it lies convenient for trade. The government here is fubject to the prefident and council of Surat, who have a jufticiary, with a court of pleas, and a committee for regulating affairs, and prefenting complaints, all which are determined by the laws of England.
Cúncan Province is, in general, fertile, rich, and plain, except towards the fea, where it is mountainous, and covered with woods, but the latter abound in cattle. The vallies yield plenty of rice and cocoa-nuts, and they have many rivers, both frefh and falt.
Dundee Rajaporf, the firft town on the coaft belonging to the Mogul, has a good harbour, and the adjacent country feeds great numbers of black catcle, with which the factory at Bombay is moftly fupplied, when they keep on good terms with the Mogul general; otherwife they are obliged to fubfift on their fifh alone, wherewith that inand is plentifully fored.
Goa is the metropolis of India under the dominion of the crown of Portugal, the feat of it's viceroy, the fee of an archbifhop, who is primate of all the Eaft, and the fupreme court of ju.
dicature for all the Portugueze in Afra, as well as the ftapie of their trade. The banks of the river are capable of recciving the larget thips within a mile of the town.
The chief trade of the city of Goa is in arac [fee Arac.] This liquor is made in fuch quantities, that though the Englifh are fuppofed to be the beft cuftomers for it of any onenation of Europe, yet all India is fupplied with it as far as the ftreights of Malacca. The double-diffilled, which is commonly fent abroad, is but a weak fpirit, in comparifon of Ba . tavia arac, yet it has a flavour fo peculiar to infelf, that it is with juftice preferred to all other aracs in India. The treblediflilled is worth about 21.5 s a hoghead.
Carwar, or Coroual, 36 miles fouth from Goa, where the Englifh have a factory and fmall fort. The factory fands on the fouth fide of a bay, and a river capable of receiving thips of 300 tons, overagainft a pleafant inland, full of game. Here is a chief and council, to manage the trade for the company. Mr. Lockyer fays, the beft pepper in the world grows hereabouts, for which alone the Eaft-India company are at the charge of the factory. In the neighbourhood there is abundance of caffia-lignum, or baflard cinnamon, and nux. Carwar is faid to be the moft healthful and pleafant place on the Malabar coaft. Ships ride about two miles from the factory, in Battee Cove, fafe from the fouth-weft wind, and the river is navigable by the largeft veffels, but the entry difficult. Here is abundance of red deer, and other game.
The rajah has one half per cent. for goods imported by the Englifh, which is feldom demanded, however, for fmall parcels, and they account with him only once a year. They have confiderable markets for diamonds, rubies, and other precious ftones.
Golconda Kingdom abounds with black cattle, theep, poultry, and all forts of provifions, and has many lakes, full of fifh: it has plenty of grapes, of which they make whitewine. The country produces indico, bezoar, two crops of rice a year, and other grain; and, in hort, all neceffaries of life. Here are no mines of gold, filver, or copper, but many of falt, iron, and feveral of diamonds, and other precions ftones. See the article Diamond, where the diamondmines of Golconda are delcribed.
Bagnagar. The Englifh and Dutch have factories here only for the fake of the diamond-trade, it being too far inland to be engaged in maritime traffic. It has whole ftreets of gold-fmiths, as the jewellers and bankers of Europe are here termed, as allo of Jews, Armenians, and Greeks, who are the moft expert cutters of diamonds, and the beft judges if their worth.
Ganjam, an Englifh factory on this coaft, and the mofteaftern town in the province, abounding with rice and fugarcanes, where they make good fugar, both white and brown. The woods produce timber for building, together with beeswax, ftick-lack, and pretty good iron.-The inland country manufactures cotton cloth for exportation.
There are feveral places on the coaft which drive a pretty good trade in corn.
Binlipatan is where the Dutch have a fmall factory, and a trade in rice, cloth, iron, wax, lacque, as they have alfo at Paticole and Dacheron, on the fame coaft ; as they import copper, tin, lead, and pepper. The country people manufacture cloth, both coarfe and fine, which the Dutch buy up for Batavia.
Vizagapatam is a factory belonging to the Englifh. The adjacent country affords cotton-cloth, both coarfe and fine, and the beft dureas, or friped muflins, in India.
Narsipore Narapour, is a place where the Dutch have, and the Englim had, a factory for long cloth, for the ufe of their factory at Mafulipatan, when they manufacuured chints there.
Angerang, a little way up Carrengo-Bay, has the beft and fineft cloth in India, and is fold cheap; but fuch are the impofitions and exactions on all cloth, which comes down the river, by the rajahs of the feveral inland countries laying near it, that they ruin that beneficial trade, and make the harbour little frequented.
Masulipatan. Here the Dutch have a factory for carrying on the chints trade.
The adjacent country and iflands are fruitful in grain, timber for building, and the beft tobacco in India: and the iflands of Diu produce not only the beft of butter, but the famous dye called thaii, a flrub growing in grounds that are over. flown with the fpring-tides, which ftains their callicoes with the moft beautiful and lively colours in the world. They paint callicoes here the beft of any in the Indies; and the very children of the pagans do it nicely with their pencils.
Malabar. The inland part of this country not being much known, we thall defcribe the coaft chiefly, which has many commodious bays and harbours, abounding with filh, and mountains that produce iron. It affords timber for matts, as good as that of Norway; alfo pepper, cardamums, borboris, canders, wild cinnamon, nux-vomica, ginger, aloes, bezoarftones, guin-lacque, caffia-fiftula, oculus Indiæ, faltpetre, wax and honey, areka, cotton and cocoa-trees; with the oil and bark of which they carry on a confiderable commerce. They have little wheat, but plenty of maize, and other grain, and

## I N D

precious ftones. The natural produce of this country is fo rich and profitable to the merchants, that the Englifh, Duich, Frerch, Portugueze, Danes, \&c. have made large fettlements on thefe coafts, fince the difcovery of the paffage to the EaltIndics by the Cape of Good Hope.
Canara, or the kingdom of the Chatins. Dr. Fryer calls all the track from Guzuratte to Malabar by the name of the Canatic country; but fays, that Proper Canara begins at the town of Gongola, from whence it extends along the fea to Malabar, and within land as far as the Sunda rajah's Pepper Mountains.
Baldæus fays, the country is very fertile in rice, and other neceflaries, and produces wild nutmegs, ufed in dyeing, be-tel-nuts, and pepper, which is called Carwar pepper. The plains bear two crops of corn in a year, and the higher grounds produce fandal-wood and iron.
Barceloar, or Basselore. There are two crops of rice here, owing to the advantages of fome lakes at the feet of the mountains Gatti, whofe waters, being confined by fluices, are let out frequently to water the fields. The Dutch have a factory here, to buy up rice for their factories on the Malabar coalt. The Portugueze alio get fupplies of it for Goa; and they have fix or eight fhips belonging to Barceloar, which carry their cargoes of rice to Mulkat, and bring back horfes, dates, pearl, and other Arabian products. Here is a confiderable trade likewife, for pepper, ginger, and drugs. The Englifh have a fort here, calfed Moor's Fort, to the fouth-eaft of the Dutch fort; and the Danes have a factory on the fame river.
Mangulor, or Mangalor, a fmall town, faid to be the greateft mart for trade in all this country. The Portugueze have a factory here for rice, and the French and Dutch have factories here.
Raolconda, 50 leagues eaft of Goa, is noted for a diamondmine. Tavernier places it five days journey from Golconda, and eight or nine from Vifapour, and in the kingdom of that name; be fays, the diamonds found here are the cleareft, and of the whiteft water. The king has 2 per cent. for all that are fold, befides a duty from the merchants, according to the number of hands employed in digging. The miners have fo little pay, that they fometimes hide a ftone, notwithfanding all the care to prevent it, they being quite naked, with only a rag about their privities; fo that they often fwallow them: and our author fays, he faw one detected, who had put a fone into the corner of his eye; but he obferves, that, if they meet with a flone of 15 or 16 carats, they are allowed a reward.
The merchants, who are Moors, have lodgings about the mines, and every morning the mafters of the miners, who are Pagans, bring their diamonds, which are bargained for by figns, without one word fpoke. The buyer and feller fitting crofs-legged, facing one another, the feller takes hold of the buyer's right-hand, and covers them both with his girdle, under which they fecretly agree, without difcovering what it is to the merchants, who are at the fame time in the hall, for the buyer and feller underftand each other by the motion of the fingers only; and the perfon who weighs the fones is appointed by the king.
The chief provinces on the Malabar coaft are,
Cananor, or Cononar, province and town. It abounds with elephants, camels, buffaloes, lions, tygers, wolves, black cattle, heep, antelopes, civet-cats, large partridges, \&c. There is a mine of fone in this country, called azazimit, of the fame virtue as the terra figillata, valued all over the Indies for being an antidote againft poifon, and for the cure of fevers, bloody fluxes, and indigeftions. Here are good trees for mafts; choice fruits, fuch as the anana's, banana's, 8 ic . and fuch plenty' of cocoa-trees, that they ferve for fuel. The town of the fame name lies on the coaft, about 240 miles fouth eaft of Goa, and 540 north of Cochin. The Dutch have a fort here, which they took from the Portugueze in 1663 ; but their trade is very fmall. The town is populous, and chiefly inhabitted by Mahometan merchants. It has a fpacious lafe harbour. The commodities here are pepper, cardamums, ginger, mirobolans, tamarinds, caffia, ambergreafe, hyacinths, granates, fapphires, and rubies. The inhabitants drove a great trade formerly to Surat, Cambaya, and even to the Red Sea; butit is much decayed.
Tillichery is an Englifh factory, 10 miles fouth from Cananor. The Englifh Eaft-India company have a fort here, to defend their trade, which is chiefly in pepper and cardamums; fometimes they have ambergreafe, coire, cowries, and chank from the Maldive Inlands: the beft opium of a deep purple colour, is made hereabouts.
Panola, five miles fouth of Tillichery, is a French factory for pepper.
Burgara, three miles fouth of Cananor. The country produces pepper, and the beft cardamums in the world.
Callicut, the next country towards the fourb. It abounds with pepper, betel, and cacao-trees, fandal-wood, iron, caffialignum, and timber for building. They have much cotton, plenty of precious ftones, and make cotton-cloth and tapeftry. This place is as confiderable for trade as any port between Surat and Cape Comorin.
The goods that turn to account here from other parts of In-
dia, are hugar, furar-candy, Chira fiks, lacquered wats, Bengat calicoes, white and blue, rofe-water, and all foriser fruit from Pe:Sa cotion-wool, \&c. from Sufat, broadiwoncblades, and necefinies for Europeans from England. Ail goods are rated for cuftom according to the forts, not ad valoren, as at Surat and Carwar; but ftrangers who deal with the Englifh and French faetories are never charged with it. Cochin Kingdom, produces coarfe cinnamon, good flure of cacao, and great quantities of pepper. The woods afford good teak for building, and pawheat and angelique, or angeline, a timber harder and more durable than iron; of this, and the pawheat, they make large chefts and cabinets, and fmall veifels, that will carry 20 or 30 pipes of wine. It abounds alfo with great quantities of black cattle; and the great number of it's canals afford plenty of fin, and the mountains are well ftored with wild game.-Here are alfo fugar-canes, and bamboes, with iron in plenty, and bees-wax for exportation.
Cochin City bas a Dutch factory; it is a place of great trade, ' and the beft of the fettlements the Dutch have on the Malabar coaft.
Porca Kingnom.-At the town of it's name, the Dutch have a fmall factory here for rice and pepper chiefly.
Marta Kingdom abounds with pepper, peaif, beans, rice, and falt finh - The Dutch have a large factory bere. And at Cernopolv, where the king refides, and exacts cuftoms for all forts of goods exported, they have another fmall faciory.
Alfo at Penderaroute and Pesse, further fouth, near' the Ihore, the Dutch have a factory for weighing their pepper.
Conlcolloan, or Calecoulan, another fmall kingdom, nith a town a little to the fouth of Porea, where the Dutch have another factory, that buys a great quantity of pepper, which they carry to Surat and the Red Sea, and make their return to Batavia in the product of thofe places.
Coloan, a fmall principality; and a pleafant and fruifful country, fubject to the Dutch; and the Danes have a fmall factory here.
Travancour, the moft fouthern province of Malabar, abounds with pepper, rice, and other grain, and the beft cinnamon; it affords as fine long cloth as any made in India. The chief places of trade on the coaft are,
Anjengo, which is the moft foutherly fettlement that belongs to the Englifh on the Malabar coalt. The chief trade is in pepper, though not fo good in quality as that about Carwar, more to the north. Here is a manufacture of feveral forts of cotton, of which great quantities are fent to Madrafpatan.
Tegnapatam, where the Dutch have a fmall fort and factory. The chief trade here is in cordage of cocoas, and brown fugar-candy, which they fend to Cochin; yet the country produces pepper; and a coarfe cloth called catches.
On the eaft fide of the peninfula is Bisnagar Kingdom:
Bisnagar Proper. The foil is fruitful, well watered, and abounds in cattle and wild beafts. The inhabitants are ingenious in watering and painting callicoes, which is the chief trade of the country.
Bisnagar City is the fecond in the kingdom for grandeur,
wealth, wealth, and it's trade, which is in Arabian horfes, velvets, damafks, fattins, chints, faffion, fcarlets, Turkey jewels, and gold ducats.
Coromandel Coast ftretches fouth-weff from the bay of Bengal, or the limits of Golconda, to thofe of Madura. This country is very fruitful in rice. They have here multitudes of heep, with no wool, but a little hair: their cotton cloth is the fineft in the Indies. Not only European goods are in requeft here, but all forts of fice, and gold, which they underftand very well.
The Englifh and Dutch have fo many forts and factories, and other fettiements, on the coaft, that they may be faid truly enough to poffefs the whole; yet they are under fubjection to the Mogul, who bas numbers of his fubjects alfo in all the places they poffers; whereas the Portugueze at Goa have poffeffion thereof in fovereignity.
Poliacate, or Policat: at the mouth of a river of that name, $\dot{g}$ leagues from Fort St. George, and 140 miles fouth from Pettipoly, Jies the chief factory on this coaft belonging to the Dutch Eaft-India company, to which all their others on this coaft, and in the dominion of Golconda, are fubordinate. The Pagans here trade in painted and white callicoes, and other linens. The market is well fored with rice, and other grain; and a caravan comes hither every month from Agra. The Banians and Jews are the chief traders. Here the Dutch refine what faltpetre they bring from Bengal, and make gunpowder for their other factories; they have great warehoufes for cotton-cloth. The gold pagodas, coined here by the Dutch, pafs beft at the diamond-mines of Golconda. Great quantities of cotton flockings are knit here, and exported to all the European factories in India.
Fort St. Gborge, or Madraspatan, which fignifes the town of Madras.
The Englifh Eaft-India compary were put in poffefion hereof by one of the Pagan princes above 120 years ago, and hed it ratified by the king of Golconda, to whom the company pays 7000 -pagodas (worth about 9 hillings a piece) per ann. for the royalties and cuftoms; but they gain four times that
fum by them. This is a place of the utmoft importance to the company for it's frrength, wealth, and the great annual returns it makes in callicoes and mulfins. The governor is not only fo of Fort St. George, but of all the fettlements on the Coromandel coaft, and the weft coaft of sumatra, the perfon who is fent to Bencoolen being but a deputy-governor there. The chief revenues of the company arife from cuftoms of 5 per cent. on goods imported and exported by fea; choultry, or land-cuftom, of $2 \frac{1}{2}$ per cent. on cloth, provifions, \&c. brought in from the country, which, when exported, pay $2 \frac{3}{2}$ per cent. more ; anchorage-duty, pafles, coinage; which all together are very conliderable, for the mint alone brings above 1000 pagodas a month into the company's coffers, at $\frac{1}{2}$ per cent. for coinage of gold, and 2 per cent. for filver. The bullion that comes from Europe, \&c is coined into roupees, which are ftamped with Perfian characters, declaring the Mogul's name, year of his reign, and fome of his epithets. They alfo coin gold into pagodas of different denominations and value. Mr. Lockyer fays, the Moors have alfo feveral toll-houfes round the city, where they receive about 7 per cent. cuftom on all goods that pafs by them, except what is for the Englifh, who pay no other than the choultry. Befides the neighbouring villages, which the merchants or others farm of the company, at certain rents, the fcavenger, fifhing farm, wine-licence, \&c. are equally advantageous to it.-A nother confiderable brauch of the company's profit is the tobacco and betel-farm, which is a fmall duty laid on thofe commodities, and leafed out to the Black merchants for 8000 pagodas per annum. Another branch is the arac farm, or the fole ligence of making pariar arac, for which they are paid 3600 pagodas a year. The common people prefer this to the beft Batavia or Goa arac, only becaufe it is more heating. Thefe three laft mentioned commodities, from whence fuch confiderable profit arifes, are all confumed by the inhabitants, who were not lefs, according to Mr. Lockyer, than 300,000 fouls; but Capt. Hamilton makes the inhabitants in the town and villages to be but 80,000 , and of them no more than 500 Europeans.
They trade from hence to all parts eaft of the Cape of Good Hope ; but the greateft Chips ufe the Mocha, Perfia, and Surat market, with Bengal and China commodities; and touch, by the way, on the Malabar coaft, for pepper, ca-cao-nuts, coire, and feveral drugs, the produce of that coaft. As there are partners in almoft every flip and ftock, both veffel and cargo are fold at her return from a voyage, either by outcry or auction. Merchants, acquainted with the place, have their goods difpofed of by the inhabitants, at 2, and fometimes I per cent. difcount ; 5 per cent. is allowed to fupercargoes, and married women trade as well as the men. Land-intereft is fettled by order of council, at 10 per cent. but money may be had of the church at 8 or 9 . Money is alfo lent here on bottomree, from 16 to 45 per cent. according to the length of the voyage.
The bullion here that is not coined into roupees, is bought up for the China market, where pillar dollars are moft efteemed, and therefore bear the higheft price here. See the article East-India Trade, and East-India Company.
Mr. Lockyer fays, that, as the Englifh company's fettlements bere furpafs all their others in grandeur, fo the orders and members of the council are more regarded.
The European goods that fell beft here, are lead, wine, beer in caiks or bottles, ale, cyder, cheefe, cloth-hats, fine ribbands, gold and filver lace, thread and worfted ftockings, flint ware, looking-glaffes light coloured wigs, ftuffs for coats, with trimmings, cafes of fpirits, cherry brandy, cafeknives, tin-ware, tobacco-pipes, and all other forts of haberdafhery.
Returns are made to Europe in all the product of the Indies, particularly cotton cloth and muflins, which are cheaper here than at Surat, but dearer than in Bengal.
The colony produces very little of it's own growth or manufacture for foreign markets; the good trade which it formerly had to Pegu, is now removed into the hands of the Armenians, Moors, and Pagans; the Englifh trade to China is divided betwixt them and Surat; the gold and fome copper being for their own markets, and the grofs of their own cargo, which confifts in fugar, fugar-candy, alum, China ware, and fome drugs, as China root, galengal, \&c. being all for the Surat market. As the trading articles from hence to Perfia mult firt be brought down the Ganges before they come hither; and as Fort St. David fupplies the product and manufactures of Coromandel, which are fent from hence to Mocha; Fort St. George is, therefore, an emblem of Holland, in fupplying foreign markets with foreign goods. Their rice is brought by fea from Ganjain and Orixa, their wheat from Surat and Bengal, and their fire-wood from the inlands of Diu near Mafulipatan.
Cobelon, or Coblon, 6 leagues fouth of Fort St. George, is the place where the ORend company fettled their factory in a fruitful foil with good water, and the conveniency of a point of rocks, to facilitate the landing of boats. See Ostend East-India Company.
Sadraspatan, 30 miles fouth of Fort St. George, and 8
leagues north of Pondicherry, is a fmall factory belonging to the Dutch to buy up long cloths.
Canymere was of note many years for an Englifh factory, 'till, on their purchafing Fort St. David, they transferred it thither.
Pondicherry is 5 leagues north of St. David, is one of the eminent factories belonging to the French Eaft-India com pany. See the article France, of the East-India Trade of France.
Ginge principally abounds in rice, falt, and fruits, but is fo ftocked with people, that they are forced to have provifion from other countries. It's chief manufactures are linen and woollen ftuffs, which it exports to other parts of the Indies; and the chief goods which it imports are fices, fandal-wood Chinefe filks, velvets, fattins, embroidered carpets, raw filk Patana girdles, mufk, quickfilver, brafs, tin, lead, and copper. It's fovereign is tributary to the Great Mogul.
Tanjacer principality. This kingdori is enriched by it' great trade with the Europeans in rice, painted callico, dyewood, and other commodities, for which they have bars of filver in exchange.
Fort Str. Davin, called by the Indians Tegapatan, is a Atrong fort and factory of the Englifh. Mr. Yale, governor of Fort St. George, having bought it of a prince of the royal family here, in 1686, for go,000 pagodas, for the Eaft-India company. This is of great advantage to the company, becaufe of the ients they have here, and the great quantities of callicoes and mullins that are carried home to Europe.
When the Englifh bought this fort, the Dutch had a little factory about a mile from it, where the Englifh, whofe bounds reach above 8 miles along the fhore, and 4 miles within land permit them fill to trade, on paying cuftoms to the company. This colony produces large quantities of good long cloths, brown, white, or blue dyed; alfo falampores, morees, dimitties, ginghams, fuccatoons, \&c. And Capt, Hamilton gives it as his opinion, that, were it not for this cotrny, Fort St. George would not make near fo good a figure as it does in trade.
Porto Novio, 18 miles fouth of Fort. St David. The country is fertile, pleafant, and healthful, and produces good cotton cloth, which is cither fold at home, or exported to Pegu, Tanaceifm, Queda, Jehore, and Atcheen, or Sumatra.
Traneuebar, a fortrefs and colony belonging to the Dane in a country whofe produce is cloth, both white and dyed. The Danilh miffionaries, who arrived here about 1706, fay 'tis 36 German miles from Fort St. George; and that, next to Batavia, 'tis one of the largeft towns in the Indies. The chief fupport of this place, according to Capt. Hamilton, is the hire for which they freight their fhips to Achem, Malacca, and Jehore; and fometimes, though rarely, to Perfia.
NEgapatan. The adjacent country abounds with rice; it affords alio fome tobacco, and long cloth. There is good anchoring in the road before the town, but no haven.
Madura extends from Cape Callimere to Cape Comorin. 'Tis commonly called the Fihing-Coaft, becaufe of the oyfter-fifhery here, which produces great quantities of pearl but they are fmall, not comparable to the true original pearl at Baharan, in the gulph of Perfia; and 'tis alfo called the Pearl-Coaft, from the pearl-banks, as they call them, which lie off at fome diftance, almoft all along the fhore, betwixt that and the ifle of Ceylon. They are certain rocks of white coral ftone, to which the oyfters are found fticking or growing, nobody knows which. 'Tis faid, that no lefs than 60,000 people are employed in this fithery, and guarding the veffels.
The banks are fearched every year in October, when the weather is calmeft, to fee whether the fhells are come to maturity, of which proclamation is made through the country immediately; when the merchants, who refort from all parts, even from Arabia and Turkey itfelf, fet up tents on the flore, and hire boats and divers.
When the fifhery is ended, the oyfters are opened before commiffioners, that come from the inand of Ceylon to prefide over'it. [See Fisheries and Indian Islands.]
Tututcorin. The Dutch have a factory here, whofe jurif diction extends over fix villages on the ealt. A great quantity of cloth is woye in this town, which has the betrer trade, becaufe it furnithes the inhatitants along the coaft with foreign commodities. Provifions are fuld bere, to the great ad vantage of the Dutch. Capt. Hamilton fays, this country produces much cotton cloth, though not fine, but they both ftain and dye it for exportation; and the Dutch colony here fuperintends the peari-filhery, which is faid to bring their company 20,0001 . a year.
Marafaar has another Dutch factory.
Marava kingdom. The greateft trade they have bere is in fifh, which they carry up the country, to exchange for rice and other neceflary provifions, of which the filhing-toaft is quite deftitute. See our New Maps of Asia.
INDULTO, a term ufed in the Spanifh commerce.
As foon as the galleons [fee Gaxleons] and merchant, Thips in Spain come to an anchor, a waiter is fent aboard each of
them, though the plate and merchandize be upon indulto, that is, compolition, that none may be carried alhore, but in the boats appointed for unloading, or with fpecial licence, and guide affigned to bring it up to Seville. This is to be punctually oblerved as to gold and plate uncoined, for, fince the new way of contribution, the pleces of eight are allowed to be left at the ports, and the fame is practifed with fuch commodities as are not exported.
The deducting of as much money as will fuffice to pay the foldiers and fallors aboard the galleons, belongs to the admiral, but, if he be dead, the vice aumiral, unlefs he have the title of royal, or particular comnifion from the king to command the galleons, has no tight to it. But this, and all things elfe, are to be managed by the commiffioner of the India-Houfe [fee India-House of Spain;] but the admiral of the fluta [lee Flota] cannot take up any fum of money, either at fea or in the port, to pay the men. Before any payments are mad, the admirals, vice-admirals, and other commanders of armada's and flota's, are to take care that no failors or foldiers go alhore (if the plate be unloaden in the bay of Cadrz) 'till all the plate is unfhipped, and the boats are out of that port; that the foldiers ftay aboard 'ull their colours are cartied ahhore, and the fallors 'till the thips be moored at the dock. But the gunners may be allowed to go athore, as foon as the guns and gunners ftores are landed, to fave the charge of unrigging; and, if any be, the captains pay it, fince it muft be tnrough their neglect that the fallors go off.
Since the new method of contribution has been brought into practice, which has taken off the duty of convoys from plate and gold, and all other commodities, and all other cuftoms formeriy paid for bringing them into the kingdoms of Spain, very little of what comes over is entered; ;and, therefore, the better to difcover what parcels are to have the benefit of the indulio, or compofition, it is convenient, that, when the vifiration is made, the mafters give an account, upon oath, of the quantity of goods they have aboard, fpecifying the feveral forts, but without mentioning who are the owners, that they may have guides for as much as they have given an account of. The main end of bringing the galleons and flotas back to St. Lucar, being to prevent the exportation of plate, and other precious commodities, it will be of good confeguence to appoint men of note and reputation, fays our Spanifh author, to command the boats that go round to obferve the veffels, that they may do it very ftrietly: and it will not be againft the indulto, to oblige the mafters of plate, upon oath to declare, what quantity of bars of filver and gold each of them brings for private perfons, without declaring their names, that they may have guides to conduct them up to Seville; and that proclamation be made aboard every galleon, for thofe who bring any gold, or filver, in ingots, that is not in the cuflody of the mafters, to make it known, without telling whofe it is, that it may be brought to Seville, upon penalty, that, if they fail, within a fhort limited time, it thall be taken as forfeited. Sec the article Mexico, Peru, Flota, Galleons.
INSOLVENT. See the article BANKRUPT, where the laws of England, with great variety of cafes adjudged in our courts of law, are briefly ftated: alfo the laws and regulations of other nations, in relation to bankruptcy.
IN SURANCE. See the article Assurance of fhipping and merchandizes, where this matter is treated of in a very copious manner.
INTEREST, of money, is the ufe paid for the loan thereof, and is either fimple or compound.
Simple intereft is that which is paid for the loan of any principal or fum of money, lent out for fome time, at any rate per cent. agreed on between the borrower and the lender; which, according to 12 Ann. feff. 2. c. 6. no perfon is to take for loan of monies, $8 \%$ c. above 51 . for the forbearance of 1001 , a year. Bonds, contracts, \&c. made for money, let at a greater intereft, to be void, and the offender to foreit treble value.
Thofe who are any thing fkilled in common arithmetic, do not require to be Chewn the ordinary method of computing the intereft of money. See, however, our article Arithmetic.
It may be ufeful, neverthelefs, to lay down the feveral theorems algebraically, relating to fimple intereft, from whence the reafon of the rules ufually given are deducible.
All computations which relate to fimple intereft, are grounded upon arithmetic progreffion; from whence are raifed fuch general theorems, as will fuit with all cafes. In order to
Let $\left\{\begin{array}{l}P=\text { any principal fum put to intereff. } \\ R=\text { the rate of intereft per cent. per ann. } \\ t=\text { the time of the principal's continuance at interefl. }\end{array}\right.$
$\left\{\begin{array}{l}\mathrm{t}=\text { the } \\ \mathrm{A}=\text { the amount of the principal, and it's intereft. }\end{array}\right.$
N. B. The rate, above fignified, is only the fimple intereft of 1 l. for one year, at any given rate, which is thus found, in. $100: 5:: 1: 0,05$, the rate decimally expreffed at 5 per cent. per ann.
And, if the given time be whole years, then $t=$ the number of whole years: but, if the time given be either pure parts of Vol. I

## I N T

a year, or parts of a year mixed with years, thefe parts mult The turned into decimals: and then $t=$ thofe decimals, \& c . The common parts of a year may be cafily reduced into de cimal parts, if it be confidered,
 $\left\{\begin{array}{l}\text { Month is the } \frac{1}{1} \text { part of a year }=.08 \\ \text { Quarter is the } \frac{-2}{4} \text { part of a year }=.25\end{array}\right.$
Thefe particulars premifed, the theorems may be eafily raifed.
Let $R=$ the intereft of 1 l. for one year, as before.
Then $2 R=$ the intereft of $I$ l. for two years.
And $3 R=$ the intereft of $x 1$. for three years
$4 \mathrm{R}=$ the intereft of 1 l . for four years, and fo on for any number of years propofed.
Hence 'tis obvious, that the fimple intereft of one pourd is a feries of terms in arithmetic progreffion increafing; wisofe frift term and common difference is R , and the number of all the terms is $t$; therefore the laft term will always be $t R$ all the terms is $t$; therefore the latt term will always be $t R=$ the intereft of pounds for any given term fignified by $t$
Then, As one pound : is to the intereft of $1 . I::$ fo is any principal or given fum : to it's intereft.
That $1 s, 1 . I: t R:: P: t R P=$ the intereft of $P$.- Then, the principal being added to the intereft, their fum will be $=A$, the amount required: which gives this general theorem.
(I.) Theorem $t R P=A$.

From whence the three following theorems are eafily deducible.
Theorem (2.) $\frac{A}{t R+I}=P$. Theorem (3.) $\frac{A-P}{t P}=R$.
Theorem (4.) $\frac{A-P}{R P}=\mathbf{t}$.
Thefe four theorems refolve all queftions about fimple intereff, which any one may apply, who is acquainted with the reduction of fimple equations algebraically.

## Of Simple Interest.

The annual intereft of any fum of money is found, by multiplying the principal fum decimally, by the hundredth part of the rate of intereft, the product being the anfwer. If the rate of intereft be 2 per cent. the hundredth part is .02 ; if $2 \frac{x}{2}$ per cent. . 025 ; if 3 per cent. . 03 ; if $3^{\frac{1}{2}}$ per cent. $.035^{2}, \& c$.

## EXAMPles.

What is the intereft of 75 I. for one year, at 3 per cent. $?$
75

### 2.25 Anfwer, 21.59.

What is the intereft of $1571.17 \mathrm{s.6d}$. at 5 per cent.? 157.875 .05
7.89375 Anfwer, 71.17 s. 10 d. $\frac{1}{2}$

What is the intereft of 3635 l. at 4 per cent. ?
3635.

145.40 Anfwer, 145 1. 8 s.

Thus the yearly intereft of any fum is found by one multiplication.
Daily intereft is found, by dividing the annual intereft by 365 , the quotient being the anfwer.
Thus . 05 being the intereft of I pound for I year at 5 per cent. divided by 365 , the quotient will be, .0001, 3698,6301 , \&c. which is the intereft of one pound for one day at the fame rate.
The intereft for one day being thus found, that intereft mul-* tiplied by $x, 3,4,5,6,8 x$. gives the intereft of one pound for any number of days.

Example, at the faid rate of 5 per cent.
The intereft of I pound for I day, is - .0001, 3699 *
Which mult. by 2. gives the int. for 2 days $.0002,7397$

And thus the following table of fimple intereft is made.
Note, That in contracting a decimal fraction, from many to fewer places, it is proper to add one to the laft figure retained, if the next figure omitted exceed 5. This is oblerved in all the following tables, as it is above, where marked *. 12 P

The Use of the preceding Table．
When the intereft of any fum of money is required for any number of days，look in the tables for the number of days， and even with that number，under the given rate of intereft， will be found the intereft of one pound，for that time，and at that rate ；which intereft，fo found，being multiplied by the principal fum，the product anfwers the queftion．

## Example．

What is the intereft of 4621 ．for 85 days，at 5 per cent．per annum？
In the table，even with 85 days，and under 5 per cent．you find the intereft of 11 ．to be－．OI16，438
Which multiplied by the principal 462，the product will be J． $5: 7: 7$.
N．B．If the principal fums contains hillings and pence，you muft reduce them into decimal parts．－［See Arithmetric，］ and multiply accordingly．
When the intereft of any fum is required for a number of years and days together，as it frequently happens upon pay－ ing off a bond or mortgage，add the intereft of one pound for the years at the end of the foregoing tables，to the intereft of one pound for the odd days；multiply that by the principal fum，and the product will anfwer the queftion．
For the method of calculating annuities，fee Annuities．
Compound Interest is that which arifes from any prine cipal fum，and it＇s intereft added together，as the irtereft becomes due；fo that at every payment，or at the time when the payment becomes due，there is created a new principal， and for that reafon it is called intereft upon intereft，or coma pound intereft．
And，although it be not lawful to let out money at compound intereft，yet in purchafing annuities or penfions，\＆c．and taking leafes in reverfion，it is very ofual to allow compound intereft to the purchafer for his ready money，and therefore it is requifite to underltand it．
In order，therefore，to raife the theorems algebraically，which are neceffary in all cafes relating to compouind intereff，
Let $\left\{\begin{array}{l}P=\text { the principal put＇to intereft }, \\ \mathrm{t}=\text { the time of it＇s contimance，},\end{array}\right\} \begin{aligned} & \text { as in the } \\ & \text { cafe of }\end{aligned}$
LA $=$ the amount of the princ．and inter． $\int$ fimp．int． $R \quad\left\{\begin{array}{c}\text { the amount of } 1 \text { ．and it＇s intereft for } x \text { year，} \\ \text { at any given rate．}\end{array}\right.$
viz． $100: 105:: 1: 1.05$ ，the amount of I ．at 5 per cent． and fo for any other affigned rate of interef．
Then if $R=$ the amount of $I$ l．for one year，at any rate．
$R R \doteq$ the amount of 11 ．for two years．
RRR＝the amount of 1 I．for three years．
$R^{4}$＝the amount of il．for four years．
$R^{5}=$ the amount of 1 l．for five years．- Here $t=5$ ． For $1: R:: R: R R: R:: R R: R R R:$ RRR：$R^{4}:$ $R^{s}: R^{6}: \& x$ in -
That is，to read the fame verbailv，as one pound ：is to the amount of one pound，at one year＇s end ：：fo is that amount： to the amount of one pound at two years end，\＆c．
Whence it is plain，that compound intereft is grounded up－ on a feries of geometrical proportions continued；wherein t （viz．the number of years）always affigns the index of the laft and higheft term of the feries，viz．the power of $R$ ， which is R t．
Again，as $I: R_{t}:: P: R R_{t}=A$ the amount of $P$ for the time，that Rt 三 the amounc of l ．
That is，as one pound ：is to the amnunt of one pound for any＇given time ：：fo is any propoled principal furn to in＇s mount for the lame time
Hence the teafon of the following theorem will be very eafly underftood by a tolerable alyebraift．

## I N T

Theorem (1.) R R $t=A$, as above.
Whence the following theorems are eafily deduced.
$\because$ Theorem (2.) $\frac{\dot{A}}{R t}=P . \because$ Theorem (3.) $\frac{A}{F}=R$ t.
By thefe three theorems, fome of the principal queflions, about compound intereft, may be truly refolved by the pen only, without tables, though not fo readily as by the help of tables calculated on purpofe.
But all the variety of cafes in compound intereft, if for any confiderable number of years, being anfwered with great difficulty, by thofe who are ftrangers to algebra and the ufe of logarithms, by reafon of the continued multiplications or divifions, which in many refpects muft be performed : therefore, the following tables will anfwer all queftions relating to compound intereft, provided the rate of intereft, either given or fought for, be any of the feveral rates mentioned at the head of the tables, and the time given, or fought, be any of thofe times for which the tables are made.

Of the conftruction of thefe tables.
The firft table thews the amount of one pound in atty number of years, \&c. and is made by the continued multiplication of the amount in half a year, and in one year by 1.03 , if 3 per cent. by I .05 , if 5 per eent, \&c.

## Example at 5 per cent.

Note, The amount of one pound, in half a year, is known by extracting the fquare root of the amount of one pound in one year, at a given rate; which root, when found, will be the amount in half a year at the fame rate: fo, in the foregoing example, the fquare root of 1.05 is found to be $1.0246,9508$, and is the amount of one pound in half a year at 5 per cent.
$1.0246,9508$ the amount in $\frac{1}{2}$ a year.
Being multiplied by I.0246,9508
The product will be $1.0500,0000$ the amount in 1 year. Which multiplied by $1.0246,9508$

The product will be $1.0759,2983$ the amount in $\frac{x}{2}$ year. Which multiplied by $1.0245,9508$
The product will be r. 1025,0000 the amount in 2 years, 8 cc . This is another way of confruaing the firft table.

## Remarks.

It may not be improper here to obferve, That as compound intereft, as before intimated, is a feries of geometrical proportions, and the ratio given being always fo much per cent. per ann. the intereft or amount, therefore, of any fum of money, for any time lefs than a year, will not come to fo much at compound, as it doth at fimple intereft. For, If l. 100. at compound intereft were to amount to $1.102: 10$ in half a year, then the ratio would not be at 5 per cent. but

## $I \mathrm{~N}^{\mathrm{T}}$

at $1.5: 1: 3$ per cent. per ann. and, it l. 100 weie to amount to l. ror: $g$ in a quarter of a year, then the ratio would be very near $1.5: 1: 10 \frac{3}{4}$ per cent. per ann.
The fecond table thews the prefent value of one pound, ac and may be made after this manner. Find the amount of one pound in the firt table, at any given rate, and for any given time; then divide unity by the amount fo found, and the quotient will be the prefent value of one pound, at the fame rate; for the fame time.

Example at 5 per cent.

|  | [ $1.0246,95087$ |  | 「.9759,0007 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1.05 | $\stackrel{\sim}{8}$ | .9523,8095 |  |
| Unity, or i. di- | 1.0759,2983 | 들 | -9294,2864 | ${ }^{1} \frac{1}{2}$ |
| vided by the fe- | 1.1025, I.1297,2632 | 3 | . 9070,2948 |  |
| veral amounts | 1.1297,2632 $1.1576,25$ |  | .8851,7013 |  |
| in the frft table, | 1.1576,25 1.1862,1264 21 | 苞 | .8638,3760 | $3{ }^{\text {3 }}$ |
|  | 1.2155,0625 | $\stackrel{\square}{\circ}$ | . 8227,0247 |  |
|  | 1.2455,2327 | $\stackrel{5}{\text { f }}$ | .8028,7540 | $4^{\frac{1}{2}}$ |
|  | (1.2762,8156) |  | [.7835,26i6 |  |

The third table fhews the amount of orie pound per annum, \&c. and is eafily made from the firf table, thus: to I 1. being the firft year of the third table, add the firft year of the firtt table, the amount will be the fecond year of the third table; to which add the fecond year of the firf table, the amount will be the third year of the third table, \&c.
The fourth table thews the prefent value of one pound pet annum, $\& \mathrm{cc}$. and is eafily made from the fecond, thus,
The prefent value of the firft year, in the fecond table, is the fame in the fourth table; the firft and fecond years in the fecond table, added together, make the fecond year in the fourth table; and the third year in the fecond table, added to the fecond year in the fouth table, make the third year in the fourth, \&c.
The fifth table fhews the annuity which one pound will purchafe, \&c. and is made in this manner. Find the prefent value of one pound per ann. in the fourth table, at any given rate, and for any given time; then divide unity by the prefent value fo found, and the quotient will be the annuity which one pound will purchafe at the fame rate, for the fame time.

## Remarks.

The reader is delired to take notice, that principal and prefent value are fynonymous terms; and, therefore, by prefent value in the fecond table, is to be underftood a certain principal fum, of which one pound is the amount, at the rate, and in thie time given; and that by prefent value in the fourth table, is to be underfood fuch a principal fum as will purchafe an annuity of one pound per ann. at the rates and for the time given.
Although thefe tables feem to be calculated only to anfwer fuch cafes as relate to fterling money, yet they are of equal ufe in calculations refpecting any other fpecies of money whatever; and, therefore, if a queftion is put, to know the amount, prefent value, \&c. of any principal fum, or of any annuity in crowns, guilders, florins, livres, \&c. the anfwer will be the fame as if the queftion had been put in pounds fterling; obferving only that the fraction, if any, will not be the decimal part of a pound, but the decimal part of that particular fecies mentioned in the queftion.

The FIRST TABLE of COMPOUND INTEREST. The amount of one pound in any number of years, \&c.

$\stackrel{\square}{4}$
$\stackrel{\square}{4}$ .I N T

The U'SE of the preceding TAbles.
The amount, or prefent value of any fum of money, for any number of years, not exceeding 50, at any of the rates of intereft in the tables, is thus found:
Look in the firft and fecond table for the given number of years, and even with that number, under the given rate of interett, is the amount or prefent value of ohe pound; which amuunt or prefent value, fo found, being multiplied by any given principal fum, the product will be the amount or prefent value required.
After the fame manner, the amount, or prefent value of any annuity, or yearly payment, is found, by the third or fourch table.
And the antuity, which any fum of money will purchare, by the fifth table.
So that moft ufful queftions in compound intereft are aniwered by one multiplication.

The variety of Cases refolvable by there Tables.
CASEI.
Any principal rate, and time being given, to find the amount.
The Rule. Find in the firf table the amount of il. at the rate and for the time given; which being multiplied by the principal, the product anfwers the queftion.
Example. What will 523 l. amount to in 15 years, at the rate of 5 per cent. per ann.?
The amount of 1 l. in 15 years at 5 per cent. is found in the firft table to be 2.0789 , \&c. which being multiplied by 523 , the product will be $1087.2794, \& \mathrm{c} .=1.1087: 5: 7$.

## Case II.

Any principal, rate, and amount being given, to find the time.
The Rule. Divide the amount by the principal, and the quotient will be the amount of il. at the given rate; which look for in the firft table under that rate, and it will be found even with the time required.
Example. In what time will 523 l. amount to $1.1087: 5: 7$, at the rate of 3 per cent per ann.?
Divide 1087.2794 , \&c. by 523 , the quotient will be 2.0789 , \&c. which under 5 per cent. in the firft table, is found to be even with 15 years, and anfwers the queftion.

## Case III.

Any principal, time, and amount being given, to find the rate of intereft.
The Rule. Divide the amount by the principal, and the quotient will be the amount of 11 . in the given time; which look for in the firft table, even with that time, and it will be found under the rate required.
Example. At what rate per cent. per ann. will 5231 . amount to 1. 1087:5:7 in 15 years?
Divide 1087.2794 , \&c. by 523 , the quotient will be 2.0789 , \&c. which, even with 15 years in the firft table, is found to be under 5 per cent. and anfwers the queftion.

## Case IV.

Any amount, rate, and time being given, to find the principal.
The Rule. Divide the amount, by the amount of r 1 . in the firft table, at the rate and for the time given, and the quotient will be the principal required.
Example. What principal fum will amount to 1. 1087:5:7 in 15 years, at the rate of 5 per cent. per ann.?
Divide 1087.2794 , \&c. by 2.0789 , \&xc. being the amount of il. at the rate, and in the time given, the quotient will be 523 .
N. B. This queftion is eafier anfwered by the fecond table, as jou will find by cafe 13 .

## Case V.

Any principal, rate, and time being given, to find the annuity.
The Rule. Find in the fifth table, the annuity which 11 . will purchafe, at the rate, and for the time given; multiply the annuity fo found by the principal, and the product wil be the annuity required.
Example. What annuity, to continue 15 years, will 523 l. purchafe, computing at the rate of 5 per cent. per ann.?
The annuity which 1 . will purchale for 15 years at 5 per cent. is found in the fifth table to be .0963 , $\& \mathrm{cc}$. which multiplied by 523 , the product will be 50.3870 , \&c. or $1.50: 7: 9$ per ann.
If the queftion bad been, What annuity, to continue 15 years, will gay off a debr of 523 l . computing at the rate of 5 per cent. per ann. the anfwer had been the fame.

Case VI.
Any principal, annuity, and rate being given, to find the time.
The Rule. Divide the annuity by the principal, and the quorient will be the annuity which 11. will purchare at the given rate; which look for in the fith table under that rate, and it will be found even with the time required.
Example. An annuity of $1.50: 7: 9$, is purchafed with 5231. at the rate of 5 l. per cent. per ann. what time ought that annuity to continue?

## I N T

Divide 50.3870 , ke. by 523 , the quotient will be .0953, \&c. which, under 5 per cent. in the fifth table, is found to be even with 15 years, and anfwers the queftion.
Note, If the queftion had been, in what time will an annuity of $1.50: 7: 9$ pay off a debt of 5231 . computing at the rate of 5 per cent. per ann. the anfwer had been the fame.

> CAse VII.

Any principal, annuity, and time being given, to find the rate.
The Rule. Divide the annuity by the principal, and the quotient will be the annuity, that II. will purchafe for the given time ; which look for in the fifth table, even with that time, and it will be found under the rate required.
Example. If an annuity of $1.50: 7: 9$, to continue 15 years, is purchafed with 5231 . what rate of intereft per cent. per ann, is made of the purchafe money?
Divide 50.3870 , \&c. by 523 , the quotient will be .0963 , \&c. which, even with I5 yedrs in the fifth table, is found to be under 5 per cent. and anfwers the queftion.

## Case VIII.

Note, This queftion is eafier anfwered by the fourth table, thus : multiply 50.3870 , \& c . the annuity, by $10.3796,8 \mathrm{cc}$. the prefent value of Il. per ann. in the fourth table, at the rate and for the time given, the product will be 523 .

$$
\mathbf{C}_{\text {ase }} \text { IX. }
$$

Any annuity, rate, and time being given, to find the amount. The Rule. Find in the, third table, the amount of xl. per ann. at the rate and for the time given; by which multiply the annuity, and the product will be the amount required. Example. What will an annuity of $1.50: 7: 9$, being forborne 15 years, amount unto at the rate of 5 per cent: per ann.?
The amount of $I 1$. per ann. in 15 years at 5 per cent. is found in the third table to be 21.5785 , \&c. which being multiplied by 50.3870 , \& c. the product will be 1087.2794 , $8 \mathrm{cc},=1.1087: 5: 7$.

## Case X.

Any annuity, rate, and amount being given, to find the time. The Rule. Divide the amount by the annuity, and the quotient will be the amount of I l. per ann. at the given rate; which look for in the third table under that rate, and it will be found even with the time required.
Example. In what time will an annuity of $1.50: 7: 9$ amount to l. 1087:5:7, at the rate of 5 per cent. per ann.?
Divide 1087.2794 , \&c. by 50.3870 , \&c. the quotient will be 21.5785 , \&c. which, under 5 per cent. in the third table, is found to be even with 15 years, and anfwers the queftion.

## Case XI.

Any annuity, time, and amount being given, to find the rate. The Rule. Divide the amount by the annuity, and the quotient will be the amount of I I. per ann. for the given time; which look for in the third table even with the time, and it will be found under the rate required.
Example. At what rate per cent. per ann. will an annuity of 1. $50: 7: 9$ amount to $\mathrm{l}: 1087: 5: 7$, in 15 years?

Divide 1087.2794 , \&ic. by 50.387 O , \&c. the quotient will be 21.5785 , \&c. which, even with 15 years in the third table, is found to be under 5 per cent. and anfwers the queftion.

## Case XII.

Any amount, rate, and time being given, to find the annuity. The Rule. Divide the amount by the amount of il. per ann. in the third table, at the rate and for the time given, and the quotient will be the annuity required.
Example. What annuity will amount to $1.1 \mathrm{c} 87: 5: 7$ in 15 years, at the rate of 5 per cent. per ann.?
Divide 1087.2794 , \&cc. by 21.5785 , \&c. being the amount of I l. per ann. in the time, and at the rate given, the quotient will be $50.3^{8} 70,8 \mathrm{c} .=1.50: 7: 9$.

$$
\mathrm{C}_{\text {ase }} \mathrm{XIII} \text {. }
$$

Any principal fum in reverfion, rate, and time being given, to find the prefent value.
The Rule. Find in the fecond table the prefent value of 1 l. at the rate and for the time given, which being multiplied by the principal, the product anfwers the queftion.
Example. What is the prefent value of $1.1087: 5: 7$, payable at the end of 15 years, at the rate of 5 per cent. per annum ?
The prefent value of II. payable at the end of 15 years, at 5 per cent. is found in the fecond table to be 4810 , 8 cc . which being multiplied by 1087.2794 , \&cc. the product will be 523 , the anfwer.
Note, This is the fame with cafe the $4^{\text {th }}$, only the queftion is put in different terms, and the anfwer given by a different table.

## 1 NT

## Case XIV.

Any annuity, time in reverfion, and rate being given, to find the prefent value.
The Rule. Find in the fourth table the prefent value of 11 . per ann. at the given rate, both for the time in being, and the time in being and time in reverfion added together; fubtract the one fiom the other, and multiply the remander by the annuity, the product anfwers the queftion.
Example. What is it worth in preient money to add 14 years to a term of 7 years in being, and thereby make $u_{p}$ the term 21 years, the annuity or reat being 351 . per ann: computing at the rate of 5 per cent. per ann.?
The prefent value of il. per ann. in the 4 th $\}$
table, for 2 years, is - - $\quad 12.8211,527$
For 7 years, is $\quad 5.7863,734$
Remainder - 7.0347,793
Multiplied by - $\quad 35$
\&ic. or 1. $246: 4: 4$.
The product - 246.2172
Case XV.

Any annuity, feveral times in reverfion, and rate being given, to find the feveral prefent values.
The Rule. Find the prefent value of 11 . per ann. in the fourth table, at the given rate, and for the feveral given times; which being feverally multiplied by the annuity, the products will be the feveral prefent values of that annuty for thefe feveral times: fubtract the feveral prefent values the one from the other, and the feveral remainders antwer the queftion.
Example. A has a term of 7 years in an effate of 35 1. per annum; $B$ has a term of 14 years in the fame eftate in reverfion, after the expiration of 7 years; and $C$ has a farther term of 20 years in reverfion after the 21 years; it is tequired to know, what is the prefent value of the feveral terms, computing at the rate of 5 per cent. per ann.?
The prefent value of $\}$
35 1. per ann. for $\} 4 \mathrm{I}$ years will be found $1.605: 6: 0 \frac{\mathrm{f}}{2}$
See cafe 8.

$44^{8:} 14 \cdot 9^{\frac{1}{2}}$
202: $10: 5^{\frac{x}{2}}$
Which being fubtracted one from the other, it will appear,
That the prefent vaiue of A's term is $202: 10: 5^{\frac{1}{2}}$
B's - 246: 4:4
C's - 156: 113
Which anfwers the queftion 605: 6:0 $\frac{1}{2}$

## Case XVI。

Any annuity in fee fimple, fee cafe 20, and rate being given, to find the prefent value.
The Rule. Find the prefent value of il. per ann. in fee fimple by means of the fourth table at the given rate; which multiplied by the annuity, the product anfwers the queftion. Example. What is the value of an eftate of 35 l. per ann. in fee fimple, computing at the rate of 5 per cent. pet ann.? The prefent value of Il. per ann. in fee fimple, is found to be 20; which multiplied by 35 , the product will be 7001 . the anfwer.

## CASE XVIII.

Any prefent value, time in reverfion, and rate being given, to find the annuity.
The Rule. Find by cafe the 1ft, what the prefent value will amount to, in the tume preceding the commencement of the annuity; then find by cafe the 5 th what annuity that amount will purchafe, which anfwers the queftion.
Example. What annuity to continue is years, after the expiration of 7 years, will 2461.4 s. 4 d . purchafe, computing at the rate of 5 per cent. per annum?
By cafe the Iff I find 1. $246: 4: 4$ will, at that rate in 7 years, amount to $1.346: 9: 0 \frac{1}{2}$; and by cafe the 5 th $I$ find, that 1.346:9:0 $\frac{1}{2}$ will, at the rame rate, purchafe an annuity of 35l. per ana. to continue 14 years.

Case XVIII.
An annuity in reverfion, prefent value, and rate being given, to find the time.
The Rule. Find the amount of the prefent value as above, by cafe the Ift; then, by cale the 6 th , find the time the annuity ought to continue.
Example. An annuity of 351 per ann. to commence after the expiration of 7 years, is purchafed with $1.246: 4: 4$, what time ought that annuity to continue, computing at the rate of 5 per cent. per annum?
I find by cafe the ift, that $1.246: 4: 4$ will, in 7 years, amount to $1.346: 9: 0^{\frac{x}{2}}$ as above; by which divide the an--nuity, the quotient will be . IOIO.2397, which in the fifth table under 5 per cent. will be found even with 14 years, as by cafe the 6th, and anfwers the queftion.

Case

## I N T

## Case XIX.

Any anhuity in reverfion, prefent value, and time being given, to find the rate.
The Rule. Find the amount of the prefent value as above, by cafe I; then, by cale the 7 th, find the rate of intereft. Example. An annuity of 35 l. per ann. to continue 14 years, after the expiration of 7 years, is purchafed with $1.246: 4: 4$. What rate of intereft per cent. per ann. is made ot the purchafe money?
I fud by cafe the ift, that $1.246: 4: 4$ will, in 7 years, amount to $1.346: 9: 0 \frac{1}{2}$ as above; by which divide the annuity, the quotient will be.1010,2397, which in the firth table, even with 14 years, will be found under 5 per cent. as by cafe the 7 th, and anfwers the queftion.

## Case XX.

Any principal and rate being given, to find the annuity in fee fimple.
The Rule. Divide the principal by the prefent value of 11 . per ann. in fee fimple *, and the quotient anfwers the queftion.

- Compound interen is a feries of geometrical proportions, as was before obferved; and, therefore, the amount in any one time given, being multiplied into itfelf, the product will be the amount in double that time; and the atnount of any two feveral times given, multiplied one into the other, the product will be the amount in thofe two feveral times added together.
This the reader may eafily prove: for if he multiplies the amount of il. in 50 years, at any given rate, into itfelf, he will find the product to be the amount of il in 100 years at the fame rate, \&c. fo that the fee fimple being reckoned at 100 years, you may eafily calculate it's value, by the tables of 50 years only.
Example. What annuity in fee fimple will 700 l . purchafe, at the rate of 5 1. per cent. per annum?
7001 . the principal, divided by 20 , the prefent value of 11 . per ann. in fee fimple, the quotient will be 35 l .

## Case XXI.

Any principal, annuity, and rate being given, to find the amount.
The Rule. Find the time by cafe 6, then having principal, annuity, rate, and time, find the amount as before, either by cafe the ift or 9 th.

## Case XXII.

Any principal, annuity, and time being given, to find the amount.
The Rule. Find the rate by cafe 7 , then having principal, annuity, rate, and time, find the amount as before, either by cale the 1 if or 9 th.

Case XXIII.
Any annuity, amount, and time being given, to find the principal.
The Rule. Find the rate by cafe the inth, then having annuity, amount, rate, and time, find the principal, either by care the $4^{\text {th }}$ or 8 th.

Case XXIV.
Any annuity, amount, and rate, being given, to find the principal.
The Rule. Find the time by cafe the 10 th, then having annuity, amount, rate, and time, find the principal as before, either by cafe the 4 th or 8 th.

## Case XXV.

Any amount, principal, and time being given, to find the annuity.
The Rule. Find the rate by cafe the $3^{\mathrm{d}}$, then having amount, principal, rate, and time, find the annuity either by cafe the 5 th or 12 th.
Case XXVI.

Any amount, principal, and rate being given, to find the annuity.
The Rule. Find the time by care the 2d, then having amount, principal, rate, and time, find the annurity as before, either by cafe the 5 th or 12 th.

Case XXVII.
Any amount, principal, and annuity being given, to find the time.
The Rule. This is found, either by dividing the amount by the principal, as in cafe the ad, or by dividing the annuity by the principal, as in cafe the 6th.
Case XXVIII.

Any amount, principal, and annuity being given, to find the rate
The Rule. This is likewife found, either by dividing the

## I N T

amount by the principal, as in cafe the 3 , or by dividing the annuity by the principal, as in cafe the 7 th.
Note, In thele tables we have carried the decimal fractions to feven places, though four or five would have been fufficient to have anfwered moft queftions: and millions may be computed by them with exactnefs, of which we will give an ex. ample by cafe the 5 th.

Thefe Tables applied to the National Debts.
What annual fum is fufficient to pay off a national debt of 50 millions in 30 years, computing at the rate of 4 per cent. per annum?
By the fifth table, the annuity, which will difcharge a debt of 1 l. in 30 years at 4 per cent. is found to be $.05 \% 8,301$ Which being multiplied by
50.000,000

The product will be
$2.891,505$
Or 2,891,5051. per ann.
ann. So that fuppofe a national debt to be 50 millions, and the intereft paid 2 millions per ann. or 4 per cent. then will a finking fund of $89 \mathrm{I}, 505 \mathrm{l}$. per ann, difcharge the whole debt in 30 years.
Another example by Case the 8 th , in proof of the preceding. What is the prefent value of $2,891,5051$. per ann. for 30 years to come, at the rate of 4 l. per cent. per annum?
By the $4^{\text {th }}$ table, Il. per ann. 30 years to
come, at 4 per cent. is found to be worth $\} 17.2920,333$
Which being multiplied by
$2.891,505$
The product will be
50,000,000
In like manner it will be found, that a finking fund of $\mathrm{r}, 200,598 \mathrm{l}$. per ann. will pay off a debt of 50 millions in 25 years; that $1,679,087: 10$ per ann. will do the fame in 20 years, \&c.

## Another Example, by Case VI.

Suppofe ten millions were borrowed, at the rate of 61 . per cent. per annum, then the fund for payment of the intereft muft be 600,000 l. per annum. Suppofe, after fome time, by agreement, the intereft hould be reduced to 4 l . per cent. per annum,
Quere, In what time will the faid fund of 600,000 . per annum pay off the faid debt of ten millions, after the intereft is fo reduced?
The annuity of 600,0001 , being divided by the principals $10,000,000$, the quotient will be $.0600,000$, which look for in the Fifth Table, under 4 per cent. and you will find $.0600,1298$, which is very near what was looked for, even with 28 years.
By the Fourth Table, il. per annum, 28 \}
years to come, at 4 per cent. is found to $\}$ r.6630,632: be wort
Which being multiplied by the annuity of . - 600,000
The product will be the exact principal, which \} $9.999,83^{8}$ will be paid off in that time
Which wants about 21621 . of the ten millions.
And, therefore, two days more than the 28 years will be fufficient to overpay the whole debt.
This thews the great difference between paying a large or a moderate intereft for money, fince by finking only 2 per cent. as you find by this example, ten millions are paid off in 28 years, which otherwife would have remained a debt for ever.
N. B. The greater the rate of intereft, the, fooner, by fuch reduction, will the debt be paid off: for inftance, reducing the intereft from to to 8 per cent. will difcharge a debt in lefs than 21 years; from 8 to 6 , in lefs than 24 years; whereas, if it be from 6 to 4 , it will require fomething more than 28 years, as above.
For the further application of the tables, and the prineiples here laid down, fee the articles Credit [Public Credit], Debts [National Debts], Funds.

## Remarks.

This article being pretty large already, and yet containing nothing but what is abrolutely neceffary, I mult defer making fuch obfervations on the ordinary methods of computation of Interest, which I intended to have done 'till I come to the article Money, where we fhall endeavour to point out fome vulgar errors practifed upon thefe occafions. See alfo the articles Annuity, Lease, Lottery.

Of the Interest of Money, confidered in a national and political view.
Under the article Barter we have, from the plaineft principles of reafon, thewed the nature of money and commodities, confidered by way of exchange for each other; alfo under the articles Cash and Circulation of Money, as well as the article Silver, we have purfued this point, upon one confiftent plap of reafoning, we apprehend. And,

Agreeably to the farme principles, we thall now inquire into the intereft of money.
Under the preceding articles, we have fuppofed a fixed quanUnder the preceding articles, we have fuppored a fixed quan-
tity of money, and confidered the nature of it's circulation, as it is given and received in pledge and barter for all other comnodites, bitween which it fixes a par and proportion ot value.

## Of the Interest of Money.

Ir does not appear that money begets an intereft by pafing for a pledge in barter, nor that it's exchange tor other commodities produces a great quantity of it in a fate.
If we confider a proprietor, who keeps his land in his own hands, and employs flaves to procure him the neceffaries and conveniencies of life, and fets overfeers to infpect them, it does not appear, in that ceconomy, that money is neceffary to carry it on, fince he can attribute fo much meat, drink, and cloaths, to maintain them and their children, as he thinks fit, out of the produce of the land and their own labour; as alfo what he pleafes to the overfeers, to maintain them on a better foot than the flaves.
But, if the bufinefs be carried on by undertakers, money feems abfolutely neceffary to fix the par and proportion of values $;$ fince, in that cale, they mult barter abfolutely their commodities one with another: and it appears, from the inductions made under the foregoing articles, that money, and it's circulation, is only neceflary for barters with undertakers.
Now it is plain that the undertakers get a fubfiftence and profit by the bufinef they undertake (whereby they correfpond to the overfeers of flaves) and that the faid profit is naturally proportionable to the quantity of the bufiness that is carried on u:mer their infpection, and the number of workmen and journcymen they employ; and, fince they carry on their bufinefs by advances of money for the materials they purchafe to work upon, and for the maintenance of their fervants, their profits are naturally proportionable to the quantities of money they advance in their bufinets.
A mafter hatter, who fetts up for an undertaker, hires a workkoufe of a proprietor for his work, buys wool, poil de caftor, \&c. buys utenfils and inftruments fit for the work, hires feveral journeymen for daily wages, and makes all advances of money neceflary in that buffinefs: as he correfponds to the overfeer of flaves, and is the mafter and infpector of his journeymen; as he lays out his money at an uncertainty, and runs the hazard of lofing it; he muft get, in the price of his hats, a profit proportionable to his rifque, expence, and fituation; and fo he commonly does, lives pretty well, and maintains a family, and breeds up children; and, if he computes what his advances of money amount to, and what money he has by his profits, which he fpends in his family, he will find that he has made 30 or 40 per cent. of his money; he will have fold 10,000 hats, or more, in a year, to a baberdafher of hats, who has paid him money for them, which reimburfes his advance, and leaves the faid profit, and enables him to go on with his employment, and advance for the enfuing year. The haberdafher of hats hires a flop from the proprietor of land, advances to the hatter, at one or different times, the value of 10,000 hats, hires fervants to attend the fale by retail, and fells his hats gradually to 10,000 different perfons: he is alfo an undertarker, who advances his money at an uncertainty, depends on his cuftomers, pays his fervants, and maintains his family, by felling his hats at an advanced price, which alfo may anfwer from 10 to 20 per cent. advantage on the money be advances in his undertaking: fo that the profits of the hatter, as well as of the haberdafher, are found in the price the confumers give for the hats. Other petty undertakers make cent. per cent. of their money, otherwife they cannot fubfift ; and, if cuftomers will employ them, they muft give them fuch advanced prices as will enable them to fublift.
Now, if any one who has faved a fum of money, offers to lend it to a journeyman hatter, who earns but his fmall daily wages, by which the faid journeyman may be enabled to fet up for a mafter hatter, and turn undertaker, he would gladly promife him a fhare of his profits; for, though he were not to clear fo much as the mafter hatter above-mentioned, who had money of his own to fet up with yet it would mend his condition to be an undercaker; and a little experience would determine how much this journeyman, now mafter hatter, might well allow out of his profits to the perfon who lends the money, and enables him to fet up; and his fhare of profit would be proportionable to the fum lent, and be called INterest of the money.
If this new mafter hatter, by his Ekill, induftry, and affiduity, works himfelf into good bulinefs, and has many cuftomers, he will beable to increafe and augment his undertakings; he will borrow more money to carry them on, out of which he will give a fhare of profit or an intereft; or, if he can buy wool and other materials, payable at a long term, he will give a higher price for them than the current, which is in effect, to give a fhare of his profit, or an intereft.
This feems to be the fource and original caufe of intereft in a ftate. The wool merchant, or undertaker, gets an intereft
Vol. I.
for the price of his wool from the batter, in the term he cive? him for payment; he himfelf bor:ows muncy, is a frimiter intertht, foom fome richer undertaket, and takes alo time for payment; and this undertaker again gives a trnaller inteicf to the monied man, who commonly lends is to the mot folvatie and confiderable undertakers.
The monied man, who has no hire to pay for workhoules, nor theps, nor no care of the labour, which originally produces intereft or profir, gers lets for lending, or advancing his moncy.
As the proprietor of land fets and farms out his land, fo the proprietor of money farms our his money, to and thetrouble of managing it himfelf, and turning undertaker.
Fromi thefe confiderations it may be inferred, that all commodities which have gone through the hands of undertakers, include in their price an Interest of money. That all bills, bonds, and notes, payable at a remote term, fuppofe an intereft, and the proportion of intereft is grounded upon the fhare of profit given by undertakers, and that all intereft falls ultimately upon the confumers.
The quantity of money which circulates in a flate (regard being always had to the quicknefs of it's circulation) fixes the price of commodities; and, where there is moft money in circulation, or paper that anfwers the end of money, commodities are deareft, and vice verfa; but the quantity of money does not fix the price of intereft, which is often higher in countries where commodities are dear, and lower in others where they are cheap: higher in London, and lower in Genioa. In the South-Sea time, all the ready money almoft in England was brought to London, and the paper credit vaftly accelerated in motion and circulation. Commodities were Indeed grown dearer, fo far as more money was brought into that channel of barter; yet the intereft of money arofe to 50 per cent. per annum, initead of falling; the reafon was, that almoft every body turned undertaker in the South-Sea fock and bubbles; there were more borrowers than lenders. Thofe undertakers offered a fhare of the profits they expected to make, to the lenders, juft as the journeyman hatter to him who fets him up. This thews, that the greater or leffer quantity of money is not the effential caufe of the fall or rife of intereft, according to the notion commonly received.
There are two circumftances which feem mofly to contribute to the keeping intereft high in a ftate : the firft and principal one is, where noblemen and wealthy proprietors fpend their incomes upon tick, and pay the butcher, baker, wine-merchant, \&c. flowly. In this circumflance, thefe undertakers and tradefmen fell their commodities at an advanced price, and get commonly 20 per cent. more than if they fold for ready money: fo they not only can afford to pay a good intereft, but they want alfo to borrow money to go on with their undertakings, 'till they are paid by the proprietors. The fecond circumftance is, when the proprietors run out; and pay a great intereft to fupply their extravagancies; this is the fource of mortgages; but the price they give undertakers for what they confume upon credit, is the fource of higher intereft; but, where the ftate itfelf anticipates it's revenues, as in cafes of war, then intereft will naturally rife ftill higher: and this is the fource of public debts.
The contrary reafons fall intereft; as when a ftate is fmall and frugal, and has but few proprietors in it who are expenfive, and where every undertaker has money enough of his own to carry on his bufinefs, as in Genoa, Holland, \&cc. It feems pretty extraordinary that the intereft of money is commonly in China at 30 per cent. It is allowed, that the workmen and labourers in China are fatisfied to work for what barely fubfifts them, at the loweft expence. It is probable that the farmer in China gives the landlord, or proprictor there, five parts in fix of the produce of his land: the Chinefe are fo hardy and filiful naturally, that the learning of trades is little or no expence, and the undertakers and eradefmen, if they get but little more than common labourers, are contented; fo that they probably allow the proprietors of the land, and the proprietors of money the moft part of their gains ; and, as they are all very induftrious and intelligent, they are all able and ready to turn undertakers, and the number of borrowers to lenders is probably fo great, as to keep up that high intereft. It is allowed that almoft every thing in China is carried on by undertakers; the very labotrers dinners are carried to them by undertakers, into the ftreets and the fields where they work. But to return to the Europeans. When the wealthy expenfive proprietors of land do not buy every thing of the butcher, baker, \&c. for ready money, though they be punctual in paying them afterwards, yet it is eafy to conceive they lofe 20 per cent. more or lefs of their revenues, by that method of Jiving upon credit ; and this fum naturally goes to the undertakers and money-lenders, who have each their thare of it.
But, when the proprietors exceed their income, they fpend their eftates, and the money-lenders, or undertakers, get them.
them.
From whence it is apparent, that, though there be a fixed From whence it is apparent, that, though there be a fixed
quantity of money in a ftate, yet the intereft of it, which is accumulated conftantly, will be found real by mortgages on the faid eftates, of the abfolute poffeffion or property of them

13 R
Aod

## I N T

And fo it may happen that particular people may be proprietors of more money than there is aclually in the ftate; but, in that cale, they may be confidered as fubaltern proprietors of a proportionable quantity of the Land, or of the Goods and Commodities that are in the fate; otherwife their pretentions will end inbankruptcies. The proprietors alfo of the public debts may be efteemed fubaltern proprietors of fuch part of the public revenues as are appropriated for the payment of their intereft; and if thefe revenues were, through any exigencies of that fate, to be applied to other ufes, they would find that their money was loft, though, in reality, the money of the nation was not diminifhed one farthing. It may be further obferved, that the higheft price of intereft is offered by the loweft undertakers and tradefmen, whofe bufinefs and payment is moft uncertain; and this high intereft commonly comes out of the extravagant price they gave for commodities, payable at time; but, where the undertakers are men of fubftance, the lenders let them have money at lefs intereft, in regard to the greater confidence in the payment ; and where the payment is certain, by mortgages in land, or fecurity in goods and effects, the intereft is loweft and it is this intereft is called common intereft, and it rifes and falls in fome proportion with that of money lent upon uncertainty; and, in thefe feveral channels of loans upon intereft, the price of it always rifes or falls in proportion to the number of lenders and borrowers.
The undertakings in a ftate which are concerned in fupplying meat, drink, and cloaths, and other conveniencies of life, are the principal channels of the circulation of hard money; as they are all branched into as many minute parts of confumption as there are inhabitants to maintain, they require hard money to circulate them.
'There feems no more hard money neceffary for the circulation of the fales and purchafes of funds, than what pays the intereft of them, which commonly goes to the fubfintence of the proprietors of them; the reft may be carried on by evaluation and paper credit. See the articles Credit [Paper Credit] Currency [Paper Currency; fee alfo the article MoNEY , and thofe others to which we have before referred.

Of Legal Interest.
After the banifhment of the Jews there were, from time to time, many laws and ordinances made in this kingdom, as well by the church as ftate, againft ufary ; but all to little purpofe; for perfons who wanted money, and were willing to give great intereft, always found thofe who would lend enough to fupply their wants, upon good fecurity.
Wherefore, as the practice could not be prevented, the parliament, anno 37 Hen. VIII. cap. 9. made an adt to prohibit the taking more than ro per cent. and great penalties were to be inficted on thole who thould take above that rate. This act commenced from the zrift of Jarnary, 1545 , and is the firt act of parliament in which we find any rate of intereft mentioned. In this act, Usury was declared to be a thing unlawful.
In lefs than feven years, anno 5 Edw. VI. cap. 20. the foregoing fatute was repealed; and it was enacted, That no perfon, by any means, fhould lend or forbear any fum of money, for any manner of ufury or increafe, or to be received or hoped for, above the fum lent, and this under fevere penalties.
Anno ${ }_{3}{ }_{3}$ Eliz. cap. 8. the flatute of Edw. VI. was repealed, and that of Henry VIII. was revived, with additional claufes, ftill prohibiting the taking above 10 per cent. This act commenced from the $25^{\text {th }}$ of June, 157 P , and in it are thefe words, That all ufury, being forbideen by the law of God, is fin, and deteftable.
When this act was depending in the houfe of commons, there were warm debates about it, in which ufury had a great many hard names given it. It was faid to be proter naturam, idem ac hominem occidere, proxima homicidio, malum in fe, and damnable; as may be feen at large in D'Ewe's journal of queen Elizabeth's parliaments, p. 771 , \& feq.
Anno 21 Jac. I. cap. 17. it was made penal to take above 8 per cent. This act commenced from the $24^{\text {th }}$ of June, 1625 , and concludes thus: Provided that no words in this Jaw contained fhall be conftrued or expounded to allow the practice of ufury in point of religion or confcience.
Anno 12 Car. II. cap. 13. it was made penal to take above 6 per cent. This aft commenced from the 2 gth of September, 1660 . Note, the intereft of money was reduced from 8 to 6 per cent. nine years before, by an ordinance paffed the 8th of Auguft, 1651 , and which commenced the 29th of September following; but this, being made in the time of the ufurpation, could be of no force after the reftoration of king Charles II.
Anno 12 Annx, cap. 16. it was made penal to take above 5 per cent. as before oblerved. This act commenced from the 29 th of September, 1714, and remains in force at this time.

## REMARKS.

From this thort account of legal intereft, it will not be improper to add, that there is likewife a natural intereft of money which may be compared to the market price of other commodities; for money itfelf may be looked upon as a commodity which, like others, rifes and falls, as there is a demand
or it; and, therefore, when the legal intereft has been 6 per cent. money enough might be had at 5 or $4 \frac{1}{2}$ per cent. on the contrary, fince the legal intereft has been 5 per cent. to per cent. and more, has been given for the loan of money, not for a year, but for a very few days. This, feems to fhew, that no law can abfolutely fix the intereft of money.
It is to be obferved, that, till the year 1625 , the legal intereft of money was never under 10 per cent. and that, within the fpace of ninety years after that time, it was reduced to 5 per ent.
Of the Rfduction of the Interest of Money in the Public Funds, made before the laft war.
Though we have treated pretty amply of this matter under the heads of Credit [Public Credit] Debts [National Debts] Funds, and Money; yet, as this is a point of great concernment to the intereft of the nation in general, nothing thould be omitted that tends to elucidate the fame more fully: and what we have further to urge, fhall be only by way of quere, which, we apprehend, can give offence to none.
Quere I. Whether the great plea for the reduations of the intereft of the public creditors from 6 per cent to 5 , and frem 5 to 4 per cent. has not been in order to eftablifh a Sinkinc Fund, for the fure and certain payment, or redemption, of the principal debt; and whether this is not the obvious meaning of thofe acts of parliament, as well as the fenfe and firit of all the debates within doors and without, which relate thereunto, till the alineation of the Sinking Funds took place?
2. Whether this fund for the fecurity of payment of the principal debt, was not many years the fupport of the public credit of the kingdom?
3. Whet her the inviolable application of the finking fund to the primary purpofe for which it was intended by parliament, would not, from what has been faid under the preceding articles, have put the national debt in a certain way of redemption; and if we had occafion to have contracted fome proportion of New Debts while the Old was difcharging, would it nothave proved far more to the intereft of the nation to have provided for fuch proportion of new debt, by new funds, rather than to have alienated the finking fund, as has been the cafe?
4. Whether the contrary conduct, according to the fentiments of that ingenious gentleman, the late Archibald Hutchefon, Efq; member of parliament for Haftings in Suffex, does not give juft reafon to fufpect, that there is nothing lefs in view than the difcharge of the public debts? And that all that is in tended byteffening of intereft, is only to provide New. Funds for fuch New Debts as the ill management of the public affairs fhall require? And fo a fund of three millions, which, at the rate of 61. per cent. per annum, is fufficient to anfwer the intereft of a debt of fifty millions, at the rate of 5 per cent. per annum, will be fufficient to anfwer the interelt of a debt of fixty millions; and at the rate of 4 l . per cent. per annum, to anfwer a debt of feventy-five millions, \&c.And may not, adds this gentleman, the national debt be increafed to a moiety ${ }^{*}$ morethan it at prefont is, without raifing any new taxes on the people? But, if the debt fhould once increafe to fo moniftrous a bulk, by reduction only of intereft to fo low a rate, and without any new provifion of funds, will there be afterwards a poffibility for the difcharge thereof? And it is very eafy to guefs what the confequence would be, if the nation once faw that they were to groan, not for a Few Years, but for Ever, under fo infupportable a load: therefore it is impoffible to hope, that the proprietors of the funds would concur in the leffening their prefent income, if they have any grounds left them to furpect that this will be fo far from fecuring to them the repayment of their principal, that, inftead thereof, it may be a moft effectual method intirely to defeat the fame?

* What the national debt was at the time when Mr. Hutche fon wrote, appears by the following letter, which he addrefled to his late majefty, January the 14th, 1714.
- May it pleafe your Majesty,
- The ftate of the nation with relation to the public debts and funds, is a fubject of great mportance to yourma - jefty and your people, and in the very firt rank of things - which claim a hare in your royal majefty's thoughts.
- From the revolution to this time, the public debts have
' been continually increafing, and now amount to upwards - of forty-five millions: and the funds appropriated for pay-- ment of the fame do little, if any thing, exceed the yearly - intereft ; and thereby there is a neceffity, even in time of - peace, of providing yearly for the fleet, guards, and gar - rifons, by a a tax on land and malt; the revenues formerly
- applicable to thofe purpofes being in mortgage for the - aforefaid debt.
- Had the nation at firlt raifed, within the year, thofe fums - which they afterwards did, the expence of the laft two - wars had been annually difcharged; ho debt had ever - been contracted; all the grievous new impofitions might ther of land or malt-tax, the revenue only exifting at the - revolution being fully fufficient for all the fervices of the - government in a time of peace.

Thefe, and many other, had been the happy effects of - fuch a management; and no lefs fatal has the contrary conduct been; for we run in debt to fubfit, even in a - tume of peace, and, by any future war muft become in - tirely bankrupt : and, to prevent this, it feems abfolutely - necellary to raife, for the future, within the year, the - fapplies which are wanted in it, and to repair, with all - poffible difpatch, the misfortunes which are brought upon - us by the unhappy expedient of mortgaging, which bas - been fo much reforted to for thefe laft twenty years.

- In the laft parliament I expreffed myfelf fully on this im. - portant futject; and do moft humbly beg leave to lay - before your majefy the thoughts I have had thereon. I - am fenfible that in this, and all other weighty affairs, - your majefy will have the mof proper intimations, from 'thofe who have fo jufly the honour to ferve your majetty - in the chief parts of the adminiftration : but, although the - grear and rich, out of the abundance of their knowledge - and experience, will bring into your treafury prefents - worthy of themfelves, and fuch as fuperfede the need of " any other, yer I perfuade myfelf, from your majefty's - goodnefs, that this poor mite of mine, being offered with - a heart full of loyalty, will allo meet with your majefty's - gracious acceptance.
- May the accomplifiment of this great work lay a folid - fourdation for the future glories of your majefty's moft - happy reign; a foundation, and the only one, on which - the wealth and honour of the nation can be firmly built, - and raifed to the higheft pinnacle of perfection, and where-- by your majetty will be enabled to give laws to Europe, - and to make fuch a figure therein as no Britifh monarch - ever did.
- These, great Sir, are the molt pafionate wilhes of my - foul, having the welfare of my country nearly at heart, - and being, as I am obliged to be by the ftrongelt ties of * duty, gratitude, and inclination,

May it pleafe your Majesty,
Your Majesty's
Mot loyal, mof obedient, and
Moft devoted fubject and fervant.
5. Whether the reductions of intereft on the public debts bave not tended to bave the effect this gentleman folong fince has foretold, is notorious enough?
6. Whether future reductions, even below 3 per cent. which fome people affect to give out, may not, if procured upon the like principles as the former, tend more and more to the increafe, rather than the difcharge of the national debts, is fubmitted to every man of common lenfe in the kingdom, who takes experience for his guide?
7. Whether the alienation and anticipation of the finking fund to other purpofes than thofe originally intended by parliament, has not proved very detrimental to the Public Credit, and contributed to intail fuch taxes upon our trade and, navigation as we are never likely to get rid of, unlefs that finking fund, which was propofed to have been the redemption of the nation, is fome how fpeedily redeemed itfelf, and applied to the primary intention of the legillature?
8. Whether one general equal tipx, or duty, laid fomething in the nature of that fo zealoully propqifed by the late ; Sir Matthew Decker, Bart. might not be inftrumental gradually to redeem all other funds and taxes, may deferve the public confideration? For, if the Funds are suffered ;oo continue in the state and condition they at present are, and no salutary and effectual measures are taken to make provision against our running further in debt on future Exigencies of the State, may not the Consequence be more fatal and calamitous than any Friend to his Country will care to reflect on?
9. Will not further reduction of intereft take away fo much of the spending Money of the nation; and may not thefe funds, which conftitute the finking fund, be annibilated? What a blow this might give to the public credit we leave others to confider.
10. Whether, before farther reductions of the intereft-money of the public funds are thought of, in order to force people more into trade, as is pretended by fome, it does not become the wifdom of the nation fo to advance and encourage it's commerce and navigation, as to admit of the beneficial employment thercin of many more Millions of the national Capital?
11. Why have we not public colleges for the improvement of all the commercial arts and fciences, as long fince pointed out by the great lord Bacon? Why are private perfons left to themfelves to advance trade, at their private expence, unaided and unencouraged by the public in numberlefs refpects? Why have we not well-encouraged eftablithments for the promotion of new mechanical and manufactural arts, which are one great fource ef commerce?
It is the old thread-bare argument, indeed, that low intereft raifes the price of lands; but Mr. Lockehas folong fince fhewed the fallacy of chis fuagefion, that it is needlefs to repeat it here but briefly: for, when the landiolder has transformed himfelf into the monied-man, and he finds that a large fum at alower intereft is really of no more advantage to him than a fmaller fum at a greater intereft, where will be his benefit? If lands
will fell for 20 years purchafe, when intereft is at 5 per cent. can it be fuppofed, was intereft reduced to i per cent. or ${ }_{\frac{1}{2}}^{1}$ per cent. that the price of land would rife to yoo or 200 years purchafe? However the value of land might rife upon the NATURAL reduction of intereft, the increafe of money, and high price of commodities, and without the reduction of their confumption, does it follow that lands will rife at all from the UnNat URal reduction of all thefe particulars? Nay, unlefs it can be proved that diminighing the confumption will make the farmer fell more of the produce of his lands, and forcing down the intereft of money, by compulfive meafures, will produce greater plenty of money, and lowering the price of our goods will turn the ballance of commerce more in our favour; unlefs, I fay, thefe can be demonftratively proved, lands muft neceflarily fall, and the landholder experience a real lofs for his imaginary gain. Provided money thould become fo plenty as to yield but 1 or $\frac{x}{2}$ per cent. intereft, will not the price of labour, and all forts of materials neceffary for land improvements, rife in proportion? So that any improvement of an eftate would thencoft five or ten times as much as when the money was at 5 per cent. and if, in conformity to the fcheme of further reduction, the landholder muft reduce the price of his commodities as the expence of his produce increafed, will this be any encouragement to the culture and melioration of land? To fuch land proprietors, indeed, who have contracted debts, the lowering of intereft feems to be fome advantage; but is not this advantage exactly ballanced in the public accounts, by an equal lofs to the mortgagees? And, if one fourth part of the ufual profits of the perfonal cffates, lent upon mortgages, be deducted from the whole of their ordinary annual expence, muft not this occafion a confiderable diminution in the confumption and value of the mortgager's commodities? And will not the public lofe as much, or more, in their revenues arifing from the confumption of commodities among us, as may be faved by the reduction of intereft ? may not likewife the proprietors of lands beobliged to furnifh from their own revenues thofe fupplies for the fervice of the government which they hitherto have been furnifhed by our expences?
Suppofe this wonderful expedient of reduction of intereft would really help the landholder the more eafily to get rid of his debts, which does not appear to be the cafe; for what he gained on the one hand he mult lofe on the other: fuppofe, however, that the landholder, from fuch a motive, fhould be decoyed into further projects of this nature, how would it encourage him to induftry, and the improvement of his lands? A palitic project to belp him off with his debts may rather make him indolent and fupine than induftrious; for, the eafier men pay their debts, the eafier they contract freh; and, therefore, this may be a good expedient to run the landholder further in debt, but can have no tendency to encourage him to improve his eftate.
That this falhionable doctrine of plundering the public creditors, to eafe the landholder, is a miftake in our politics, hence further appears. I will fuppofe myfelf to have lent the public a fum of money, when interelt was at 6 per cent. which brought me an annualincome of 500 pounds, and now I am reduced to 3 per cent. and receive but 2501. a year, inftead of 500 l . and the other 2501 . goes to pay myfelf my principal. In this cafe, it will be allowed that I muft fpend 2501. a year lefs, or be ruined by breaking into my capital; and, if fo, I can take but one half of what I could have done before, of the butcher, baker, brewer, clothier, and all thofe who take of the farmer the produce of his land could do no more: if fo, the farmer cannot poffibly fell the fame quantity of his produce as before, confequently his profit cannot be fo much upon that leffer, as it would have been upon a greater quantity; whereby he becomes incapable of paying the fame rent to his landlord.
But money and goods muft always meet, otherwife dealings of all. kinds muit ceafe; and this is the reafon why markets rife and fall. A fhort inftance will illuffrate my meaning : fuppofe that two bufhels of corn are brought to market to be fold, and there come ten fhillings in money to buy corn, it will there fell for five fhillings a bufhel; but, if there come but five fhillings to macket, corn mult fell for half a crown a bufbel, or the farmer carry home his corn, and the other his money, , But this ceffation of dealing cannot be of continuance: for the farmer will foon find himfelf under a necelfity of complying, when he wants thofe other neceffaries of life his-farm will not afford bim, nor can be had without money, or when his landlord's preffing occafions will not admit longer forbearance of rent.
Experience evinces that the reductions hitherto made have Experience evinces affected land; and, if we carry them further, we fhall certainly repent of our policy.
This.leffening the circulating money of the nation will foon bring down the price of all commodities; for, according to the confumption of all goods, and the occafion there is for them, the price will rife. When money is wanting, men confume lefs; they are better œconomifts, and make every thing laft longer, which leffens the confumption of the native commodities, and makes the price of them to fall; and, if the price of native commodities fall, the rents of the lands will fink: for the tenants cannot pay the fame rent when the
corn and wool, and other commodicies which are the produce of land, fall to half the value.
As the wealth and power of a nation depend on trade, and trade on money, fo, to be powerful and wealthy in proportion to other nations, we muil have money in proportion to them; for the beft laws, without money, can neither employ the people, improve the product, or advance trade and manufactures. The fpecie of this kingdom bearing little proportion to the magnitude of our commerce, we have been obliged to have recoulfe to it's reprefencative, credit, whech fecures the payment of money. Had we therefore, no paper effects in croculation, we must ave more money, or trade mult be crumped for want of it. If credit in all refpects anfwers the purpules of money, it cannot be of unequal eftimation, and lands and trade muft be equally advantaged by it.
Many have fuggefted that focks are chimerical riches, becaufe of an equivalent of real fpecie, to anfwer them, not exifting in the fate. To this it may be andwered, the value of all the houles in London, put together in one aggregate total, exceeds, perhaps, the value of all the \{pecre in the kingdom: and all the grold which fill hies hid in Peru would not be fuftierent to anfwer the value of all the lands in England: yet dues it follow from thence that the value of houfes and lands is chimerical ? It may with equal reaton be urged, that houles, Jands, and commodities, are imaginary riches, as ftocks are, becaule they can never be realized and converted into money. What is it keeps up lands to their juft value, be they ever fo high, but becaufe people never fell them, in order to realize or hoard up, but only to make fettlements? They generally content themfelves with enjoying the income of their lands, which, therefore, are fo rarely put to fale, that there are always as many bujers as fellers. Wherefore ought we not to entertain the fame notion of ftocks and annuities as we do about other elfates? Nay, thofe who are proprietors of more money than there is actually in the flate, may juftly be confidered as fubaltern proprietors of a proportionate quantity of the lands, their produce, and all commodities in the nation, as before intimated.
And the proprietors of the public debts may be juftly efteemed as fubaltern proprietors of fuch parts of the public revenues, as are appropriated for the payment of their interelt ; and, therefore, both principal and annuity of the national creditors are as real riches to the individuals, and confequently to the nation, as it's lands and houfes, and their annual produce, and the value of all commodities are. For thefe are abfolutely mortgaged by the public for their intereft, till the redemption of the principal. Miftake me not, that I would infinuate that our national debts are fo much additional wealth to the nation ; for, then, the more we increafed our debts, the more we increafed our riches: no, what I would be underfood to mean is no more, than that, as the whole property of land and commodities of the public are abfolutely engaged for the principal and intereft of our debts, fo, in the eftimate of national wealth, the value of the former muft be diminifhed by that of the latter : but fo far as thefe riches are due from the public to the creditors of the public, and the creditors, as members of the public, are alfo indebted to themfelves as creditors of the public, this debt is no diminution of the wealth of the nation: what indeed is due to foreigners, mut be deducted to find the net ballance of our riches. Whence it follows, that the properties of our fockhoiders ought to be confidered as fo much real property as well as that of the landholders; and, therefore, they are intitied to an equal regard from the legiflature.

Remarks fince the laft war, and the Definitive Treaty of Peace in 1763.

Every one will difcern, who attends to what he reads, that all we have urged under this article of intereft, in relation to the neceffity of leffening the public debis and taxes before the commencement of the lalt war, will hold good ftill far more ftrongly at prefent, feeing that war has fo greatly increafed them. And if any thing fhould induce Spain and France to a contravention of the peace, fo fuddenly as fome are inclined to believe, muft not the motive be, the conception which thofe potentates entertain of the bad fate of our finances? If they were convinced that this kingdom was in a condition to enter into a frefh war with them fo foon after the peace, they would hardly be fo much their own enemy, as to provoke us to another rupture. But their conduct, if it has not been mifreprefented, feeming to fignify, that they do not think us in a capacity to refume the war, it is no way imponible but they might be tempted to draw the foord foon again: and as fure as they do, I will prefume to fay, fo fure will they again experience themfelves miftaken. When we made the peace of Aix-la-Chapelle, it was faid to be, becaufe that we were unable to carry on the war longer; and had not this were unable to carry on the war longer; and had not this
been credited by France and Spain, they would hardly have fo foon again prepared for, and forced us into another. What deceived them then was, their ignorance of the refources of
this nation, wherein all their fpies and emiffaries were not able to give them right information: and I will venture now to declare, and inform France and Spain, that such a Change may bein the Constitution of the Refenues of England, and her past Conduct, and thosevery soon and easily accomplished, as will put this nation into a capacity to enter into another war ; a war that will prove more fatal to them than the laft; for I will venture to foretel, that whatever Conquests we shall make from Spain and France, they will for ever more be dffrived of, and the practice of Restoration WILL. END WITH another War. - Whether we are credited in this or no, let it be remembered, that our prejudgment, with relation to what has happened, ought to give them no mean opinion of our prefent pre cognition, and the warning we have bereby given.
1 NVERNESSHIRE in Scotland. It contains that part of Murray-Land which lies near the town of Invernefs, together with Badenoch, Lochaber, and the fourth part of Rofs: fo that 'tis bounded with Rofs and Cromarty on the north, Murray Land on the eaft, the Weftern Sea on the weft, and Lorn, Broadalbin, and Athol on the fouth. It has plenty of iron ore, fome woods of fir ten miles long, and large woods of oak.
The country of Badenoch has part of Murray-Land on the north, Lochaber on the weft, Athol on the fouth, and part of Murray-Land and the Braes of Mar on the eaft.
This tract abounds with deer.
That part of the fhire, called Lochaber, has Badenoch on the north, Athol and part of Badenoch on the fouth, and a mountainous tract on the weft towards the coaft. It abounds with pafturage, woods, goats and decr; and has fome veins of iron, but not much corn, being reckoned one of the moft barren countries in Scotland, yet 'tis very pleafant; and for multitudes of fifh, both falt and frefh, fcarce any country in Scotland can eompare with it.
Inverness, the fhire town, is feated at the bottom of the Frith of Murray, where it receives the river Nefs from Lochnefs. It lies conveniently for trade, of which it has a confiderable thare, with a inarbour for fmall thips open to the Frith. It is a clean, well built, and pleafant town, has two very good freets, with coffee-houfes and taverns, and the people are more polite than in moft towns of Scotland.
INVOICE, or INV OYCE, an account of merchandizes, with their value, cuftoms, provifions, charges, \&cc. fent by one merchant to another in foreign countries. See the article Books [Merchants Books.]

## REMARKs.

The goods, for which an invoice is made, are cither for the fender's own account, and the account of the perfon to whom they are fent and configned, or for his account in company. In which ever cafe it happens to be, all care thould be taken to purchafe fuch goods at the beft hand; and the nearer that is done to the maker or the manufacturer, the cheaper they are bought; by reafon that every one through whofe hands fuch commodities pafs, will have a profit upon them; which enhances the price, and brings them dearer to foreign markets.
The lefs time of credit alfo, for which they are bought, or, if for ready money, at proper feafons, they are generally bought at a cheaper rate, and are more likely to turn to a better account.
The invoice is made out in the money of the country where the merchandizes are purchafed, or from what country they are fent.
This account is intended for the government of the feller, that he may fo difpofe of fuch commodities as to leave a reafonable profit, fuitably to the time that principals for whofe account they are, may be out of their money.
'Tis cuftomary, however, for an additional charge to be made upon invoices, in order to procure a larger profit upon their fales.
If they are for the perfons own account, who fends thefe goods to foreign countries to be fold by commiffion; this goods to foreign countries to be fold by commiffion; this
fometimes has a good effect, efpecially if the goods are well bought at firft hand, and for ready money, or for fmall credit, and of the maker, \&c. And on the other hand,
If this is done injudiciounly, it fometimes retards the fales of fuch goods, becaufe the factor, not being able to make fuch a profit as his principal may expect from the face of the invoice, he lets them lie by frequently till he can; which is too often rather attended with lofs than gain: for fonall profits and quick returns, fay the moft experienced traders, is the life of commerce, and the fupport of a trader's credit, let him deal at home either for time or otherwife.
And if fuch merchandizes be bought, by commiffion, for the account of a foreign correfpondent, the cheaper they are bought, and the more moderate the invoice appears, the more commiffions fuch a factor is likely to obtain; for, by not attempting to grow rich too foon, he is the more certain to become fo. Or, if fuch goods be for account in company,

## IRE

the better they are bought, and the nearer the invoice is made out to the truth, the greater credit, and confequently the greater dain, in time is brought to the agent.
If a merchant buys goods for his own account and rifque, and configns them to foreign correfpodents for fales, he fhould likewife confider, when he may certainly expect his returns of the net proceeds. And, unlels a trader thoroughly knows his correfpondent, and can abfolutely depend upon bis honour and punctuality in bufinefs, he runs great hazards; he may irrecoverably ftrain his credit; for one of the greateft delicacies, in conducting foreign traffic, is to make a proper choice of your correfpondents : and this is no eafy matter.
The young and unexperienced trader, by over confidence, may foon be undone. During the time of his clerkhip or apprenticenip, a young man cannot be too attentive to the conduct of his malter's correfpondents; to difcern whether they are men of punctuality, and take wife meafures to uphold their commercial honour and credit, for fuch are fit for them to have dealings with, after the expiration of their fervitude.
Skilful traders, who have large concerns in the fame way, with divers correfpondents, will eafily difcover whether they are impofed upon by an invoice; and thofe who promote their intereft the moft, may be fure to have the greater hare of their commiffion-bufinefs.
For more matter on this effential particular, fee the articles Accountant, Account of Sales, Apprenticeship, Book-Keeper, Mercantile College, where abundance of matter very interefting both to the foreign and inland trader will be found; and more, in this work in general, than is to be met with, we will humbly prefume to fay, in any other whatloever: for we have endeavoured to reduce the doctrine of commercial bufinefs to a regular fcience; and as fuch it ought to be fudied, before young gentlemen hazard their fortunes therein.
I have now before me a furprizing varicty of invoices and accounts of fales, from the greatef houfes of trade throughout Europe; together allo with an extraordinary variety of real mercantile letters, wrote to and from the moft judicious and experienced merchants in the world: I have likewife before me the Journal and the Ledger of the mof univerfal merchants, that this, or perhaps any other, nation ever produced: they are the books of feveral of the mof eminently diftinguifhed merchants; and thofe in particular of old Sir John Lambert, Bart. whofe mercantile negotiations are alnoof beyond the pitch of credit: he had allo the remittances of a confiderable proportion of the money expended by this kingdom, in the wars of queen Anne. Nor was there farce a merchant in all Europe, any thing confpicuous for his dealings, who was contemporary with him, that he had not accounts with. And this great merchant feems to have excelled in one art above all the reft, which is the art of inventing, contriving, and forming advantageous bufinefs for himfelf, when others, lefs profound in mercantile negotiations, could farce find any thing to do. This appears as well from his invoices, as other parts of bis accounts. See allo the Contents of our Dictionary, printed at the beginning of the firft volume, and our General Preface to the fecond volume.
IRELAND, lies between longitude 5. 40, and 10. 37 weft from London; and betwixt north latitude 5 x .16 , and 55. 20. 'Tis an inland, feparated from part of England and Scotland, by St. George's, or the Irifh channel on the eaft; has the Scots Weftern Iflands on the north and north-eaft, the mouth of St. George's channel on the fouth, and the Atlantic ocean on the welt.
Mr. Templeman, who makes the length 275 , and the breadth but 159 , gives it an area of 27,457 fquare miles. Sir James Ware makes it above 200 from north to routh, and 120 Irom eaft to weft. 'Tis of an oblong form, fomewhat oval, and near as long as 'tis broad; but, if we confider all the various windings and turnings, farce any thing can be magined to be more irregular 'Tis reckoned to be about half as large as England.
The air is much the fame with thofe parts of Britain that lie under the fame parallel, only in reveral parts of this kingdom 'tis more grols and impure, by reafon of the many lakes and mathes; yet 'tis faid that no frogs, moles, fnakes, nor any venomous anima, can live in it, and that the wood of it's forefts breeds neither worms nor fpiders. 'Tis, however, generally fpeaking, fo temperate a climate, that the inhabitants are not forced to fly to the Ghade in the fummer, or to the fire in the winter; but being fo much cooler in the fummer, and warmer in the winter than England, 'tis therefore judged not fo proper for ripening the corn and fruits.
The foil, according to Dr. Beale, phyfician to the ftate, who publifhed his account in 1657, is naturally fitter for pafturage than tillage, the grafs in fome places being fo long and fweet withat, as would furfeit their catte, if they were not refrained; and in other places their foil is fo very far, as not to admit of being dunged. Though a great deal of wood has been cut down to make charcoal for the iron works, and many hundred acres of bogs diained of late years, yet feveral large woods are fill remaining in Uliter, \&ic. and other
$Y_{Q L} I$.
parts are Athlincumbered with various bogs of dfferent forts, he deepeft of which are not paffable in fummer, except fuch as have fome paths of firm ground, which are known only o the natives.
Here are a great many iron mines, but they have been chiefly worked by the Englifh, who have been great gainers by them fince the reign of queen Elizabeth. Of thefe there are three forts, the rock mine, the bog mine, and the moun ain mine. The firft, lying near the furface, is dug out with little charge; the ore is full of good tough metal, but in meling 'tus mixed with other forts of ore, becaufe 'tis too harh of itfelf, melts too fuddenly, and choaks the furnace The fecond fort is hewn with little trouble from the rocks 'tis not forich as the former, and the iron is fo brittle, that 'tis farce fit for any thing but plough-fhares, unlefs it be mixed with other forts. The mountain ore is tough, of a middle fubftance between the other two, and, when the iron is well fmelted and refined, 'tis frequently as good as Spanifh ron.
Here are many quarries of free-ftone, marble, flates, flint, and fea-coal, but their principal fuel is turf; in towns near the coait, indeed, they are fupplied with coal from England and Scotland. Their chief commodities for export are cattle, hides, furrs, tallow, butter, cheefe, honey, wax, falt, linen cloth, timber, pipe-ftaves, wool, and woollen cloth, coarfe rugs, and fhag mantles, freezes, ratteens, camblets, fowl, variety of filh, as falmon, herring, \&cc. fome lead, tin, and iron. Here are alfo fome glals-works, but they have their fand for making it from England.
There are many medicinal fprings near Dublin, of the nature of fpaws. There are others, which the fuperftitious vulgar call holy-wells, and afcribe great cures to them, becaule dedicated to their Romifh faints.
The chief of their rivers are, I. The noble Shannon, which rifes in the province of Connaught, divides it from Leiniter and Munfter, and, after running through various lakes, falls into the fea betwixt Kerry-Point and Loch-Head, after a courfe of 145 miles, befides turnings. The bay, at it's mouth, is about io miles broad. The river is in moft parts wide and deep, but not navigable by thips above 50 miles, by reafon of a cataract 6 miles above Limerick. It has feveral fruitful pleafant inands in it, a fertule foil on both banks, and receives feveral leffer rivers.
The Liffie, though not near fo confiderable as the former, yet, becaufe it graces the capital city of the kingdom, it is called the princefs of the Irifh rivers. It rifes in mountains about Io miles fouth of Dublin, but has fo many windings, that the courfe of it is betwixt 40 and 50 miles before it falls into the bay of Ringfend.
The next river that deferves mention is the Boyne, celebrated for the victory gained on it's bank by king William III. of immortal remembrance. It rifes in King's County, not far from the fountains of the Barrow; falls into the fea at Drogheda Bay, but it's navigation far into the country is ftopped by wears.
The Barrow and Ouze, two rivers in the province of Leinfter; the former navigable by large boats, the latter by fmall ones, join a little above the town of Rofs, and afterwards mixing with the Sure, fall into Waterford-Haven. The Slane falls into the harbour of Wexford. The principal river in Ulfter that falls into the fea, is the Band or Bafin, which is not navigable many miles, becaufe of a catarad within three miles of Loughneagh, from whence this river falls into the fea a little below Coleraine.
There are alfo numerous loughs in Ireland, both of falt and frefin water, of which the latter are properly inlets of the fea at the mouths of rivers. The chief of thefe are, (r.) LoughErn, in the province of UJfter, which is formed of two fpacious loughs, with a channel or river betwixt them, and runs into Donnegal-Bay, below Bailly-Shannon. In this lough there are feveral iflands that are inhabited, and con rain eight or nine hundred acres of land, where is good fowling and fifhing, and others are left for pafture.
2.) Loughneagh in the north-eaft part of Ulfter, falls into the feas by the river Bann below Coleraine.
Munster, is in form of a long fquare, extending 130 miles in length from Waterford-Haven in St. George's channel, to the weft point in Kerry near Dingle; and 120 in breadth from the north of Tipperary to Baltimore in Cork, but, from Baltimore to the north of Kerry, 'tis but 68 miles.
It enjoys a mild temperate air, has many excellent bays and havens, and opulent towns, and the foil in fome parts hilly and woody, but the vallies are adorned with pleafant meadows and fruitful fields of corn. The molt plentiful commodities are cattle, wood, wool, and filh.
It is divided into 5 counties, which are fubdivided into 52 baronies.
Waterford County, is 40 miles in length, and 24 in breadth; and, though in fome parts 'tis pleafant and fruitful, yet 'is for the moft part mountainous.
Waterford, the only city of the county, was reckoned the fecond in the kingdom before Cork outvied it. 'Tis as conveniently fituated for trade as moft ports; it has a good harbour, and Khips of burden come clofe to it's kay. Galway
contends
contends with this city for it's priority, and claims the preference in point of trade, though others think Waterford exceeds it, as driving a confiderable trade with England, which Galway cannot have, by reafon of it's fituation.
Tallagh, or Talloo, near the borders of Cork, fituate in a fruitful vale, near the river Bride, which, being navigable from hence to Youghall, renders this a place of good trade.
Cork County, has Waterford on the eaft, Kerry on the weft, Limerick on the north, and the Vergivian Ocean fouth and fouth-eaf. 'Tis divided into I 5 baronies, and is partly woody, mountainous, and fenny; yet it has many good towns, abounds in fine rivers and good harbours, is both rich and populous, and the inhabitants induftrious. A copper mine has lately been difcovered near Cork, which is likely to turn to very good account.
Youghall, or Youghill, is the firf confiderable fea-port next to Waterford, lies at the mouth of the Broadwater, and is a place of good trade. The convenience of the harbour, which has a good well-fenced kay, and the fertility of the adjacent country, draws to many merchants hither, that the town is well inhabited and rich.
Cork City, is large, populous, and wealthy. The river Lee paffes by it. The people here have fo greatly improved their eftates by trade, fince the former troubles to which this place was liable, that it is judged to be the richeft city in Ireland, except Dublin. 'Tis the, chief port for mercantile bufinefs in the kingdom; there being nore beef, butter, and tallow, fhipped off here, perhaps, than in all the other ports of the kingdom put together, as well for France as the Britifh colonies, and butter in particular for Flanders and Holland. This commerce occafions a great refort of thipping always to this port, particularly thofe bound from England to Jamaica, Barbadoes, and all the Caribbee Illands, which put in here to complete their lading.
Kinsale, is a neat, handlome; and wealthy town, in a fruitful foil, near the mouth of the river Bandon, with a trade the moft confiderable of any on this fide of the ifland, next to Cork. Many good fhips belong to it, and a great quantity of provifions is exported from hence to Flanders, Holland, France, and the Britigh Mlands in the Weft-Indies, It has an admirable harbour, and a good bay, with a lighthoufe that guides the fhips in the night to the mouth of the river.
Cape Clear is an illand, where a cafle is kept for the fecurity of hips, which fhelter themfelves under it's cannon, with there peculiar advantages, becaufe of it's being far advanced into the fea, and becaufe 'tis alfo. an opening to the fouth coaft, from whence the principal trade of Ireland by Cea is carried on.
Downham's, or Dunmanus-Bay, is a large and commodious retreat for hips in a form. So likewife is Bantry-Bay.
Kerry County, has that of Cork on the fouth and eaft, Limerick on the north, and the Atlantic Ocean on the wef. Though in many places there is good corn and grass, 'tis in general a woody and mountainous county: 'Tis divided into eight baronies.
Dinghe ftands near the end of a peninfula, near a bay of it's own name, with feveral good harbours, very convenient for trade.
Smerwic, or St. Mary-wic, has a fafe road for Alips. So alfo has
Castlemain, a town with a tolerable harbour on the river Mana.
Mair, or Kilmaire River, is a bay on the fouth-eaft corner of the county, and has a fafe harbour for the greateft fhips.
Limerick County, has that of Tipperary on the eaft, Cork on the fouth, a part of Tipperary and the Shannon river, which parts it from Clare at Thomond, on the north; and Kerry on the weft: 'Tis fruitful, even without the charge of manure, in all forts of corn and rape, has a large breed of cattle, and is well inhabited, but has few remarkable towns. 'Tis divided into II baronies.
Limerick City, is elegant, rich, and populous. Though here are forne merchants to whom hipping belongs, yet 'tis not fo famous for it's wealth as it's frength. The chief trade it ufed to drive was to France; but a pernicious one to the fair trader, is the carrying out wool to be manufactured in France, and importing wine and brandy by ftealth.,
Tipperary Countr, is bounded on the weft with that of Limerick and the river Shannon, on the eaft with the Queen's County and that of Kilkenny, on the fouth with thofe of Cork and Waterford, and on the north and northeaft with King's County, and the territory of the O-Carols. The fouth part is very fruitfut, produces much corn, and is well inhabited. The weft part is watered by the long courfe of the river Glafon. Thefe two parts abound in good paftures and fine fheep-walks, and are furnifhed with the largeft and beft focks in Ineland. The north part is but barren and mountainous.
Cassil, or Cashel, is the chief town or city of this county.
Connaught Province, is feparated from that of Leinfter on the eaft by the Shannon, which alfo parts it from Mun-
fter on the fouth and fouth-eaft, has the province of Uliter, and a part of the Weftern Ocean on the north and northweft, and the main ocean on the welt. In fome places 'tis verdant and pleafant, in others gloomy and dangerous, being pretty thick fet with bogs and woods. 'The foll, however, is fruitful enough, and abounds with catle, deer, hawks, and honey. It has many convenient bays and creeks for navigation, but few rivers of confiderable note, befides the Shannon. 'Tis divided into fix counties, and fubdivided into 5 I baronies.
THOMOND, or the county of Clare, is one of the fix. 'Tis hilly and irregular, but not deficient in good pafture, either for feeding or breeding, and produces the beft horfes in the kingdom. The foil is likewife good in tillage for com and rape. It's trade is much promoted by the river Shannon.
Gallway County, has part of Rofcommon, King's County, and Tipperary on the eaft and fouth-eaft, the main ocean on, the weff, Mayo, Meath, and Rofcommon on the north and north-eaft, and Thomond on the fouth. 'Tis the larget county but one in Ireland, It is divided into 17 barones. It being much of a warm limeftone foil, it abounds in gene. ral with corn, pafture, and cattle:
Galliway Town, or Clty, ftands on an inand by the fall of the Lough Corbes, into a bay of it's own name, 'Ti's a ftrong, elegant, and opulent city, the capital of the weft part of Ireland; 'tis not inferior to any of the reft in wealth, it being fo well fituated for commerce, not only to France and Spain, but to the Weft-Indies, on a large, fafe, and delicate harbour, called the Bay of Gallway, capable of containing a large fleet of thipping, that it has been efteemed as the greateft place of trade in all the kingdom. Gallway Bay has numberlefs harbours and roads on every fide, and is one of the nobleft entrances in the world, were there a fuitable conflux of hips and trading towns; but there feems no occafion for more than what belongs to Gallway itfelf. 'Tis fheltered at the mouth of the fouth ifles of Arran, through which there are three paffages for hips, befides the north paflage at the mouth of the bay. In the feafon here is a very confiderable herring-filhery.
Batterbay Harbour, is as fine a one as moft in Europe for it's extent, and has good anchorage without rock or thoal; but here are no towns, fhips, or commerce, which is the fate of all this coaft.
Etre's Court, is a pretty thriving Englifh plantation.
Mayo County, has the fea upon the weft and north, is bounded on the fouth and fouth-eaft by the county of Gallway, by Rofcommon on the eaft, and on the north-eaft by Slego. On the fide next the fea 'tis mountainous and rough, but on other parts has pafturage, and is well ftocked with cattle, deér, honey, and watered with variety of large and delightful lakes.
In the north-weft corner of the county, there's a good fal-mon-fifhery.
Roscommon County, has Mayo and Gallway with the river Sue betwixt them on the weft, King's County and part of Gallway on the fouth and fouth-eaft, Slego and Leitrim on the north and north-eaft, and Longford, Eaft Meath, and part of King's County on the eaft, with part of Leitrim, from which it is feparated by the Shannon. 'Tis for the moft part a champaign and fruitful country, which, with little cultivation, yields plenty of corn, grafs, and is well ftocked with cattle. It is divided into 6 baronies.
Castlereagh is a very improving plantation, and a good marker town.
Slego, or Sligo, lies full upon the fea to the riorth and north-weit, where it is alfo bounded by the river Trobis, which fprings from the Lough-Ern in Uliter. It has Mayo on the weft, part of that county and Rofcommon on the fouth, and the county of Leitrim on the eaft. Great part of this county is mountainous and boggy, but it's lower grounds and vallies have a good foil, both for the ploughman and grazier.
Slego, a borough and market-town, lies on a bay of the fame name, and is the only town of note in the county. It has a very commodious hal bour, and fhips of 200 tons may come up to the town-kay. The trade here is not confiderable, though much better than in any of the other places beyond it.
Leitrin County, has Slego and part of Rofcommon on the weft and fouth-weft, Donnegal-Bay on the north, Longford in Leinfter on the fouth-eaft, and the counties of Fermannagh and Caven in Ulfter, on the eaft and north-eaft. 'Tis a wild mountainous country, and full of rank grafs, which feeds an infinte number of cattle: Camden fays, that above 120,000 have been grazing in this narrow county at one time. 'Tis divided into 5 baronies.
LEITRIM, reckoned the chief town, ftands near the Shannon, which has it's head in this county, but 'tis decayed.
Ulster Provinc. , is encompaffed on three fides with the rea, having St. George's Channel and the Irifh Sea on the eaft, the main Atlantic on the weft, and the Deucalidonian Ocean on the north : on the fouth it is bounded by the province of Leinfter, and on the fouth-weft with that of Connaught.

It's air is healthful and temperate, being cooled with various winds in fummer, and qualifed by moderate rains in winter. It has many lakes and rivers that abound with finh, many thick woods, plenty of corn and grafs, and ftore of theep and black cattle. Here are more falmon in fome rivers of this province, than in any other in Europe.
It's principal counties, remarkable for any thing of trade, are,
Donnegal, which has fome mountains, and a coare foil, but is generally plain and fertile. It abounds with harbours, and has 5 barontes.
Lovgh-Swilly, has an ifland called Inch, and abounds with finh.-Here 1000 fail of good fhips may ride fafe for 20 miles together, yet here is no trade; they have, indeed, a few filhing boats, fon catching herrings and falmon, of which they have great plenty.
Sheep-Haven, is alfo a bay with a very good harbour to the wift. All the north-weft part of Ireland is full of excellent bays, roads, and harbours, but yet have little commerce.
Londonderry County, is a pretty champaign country, and very fruitful. It has the river Bann, famous for it's farmon.
Londonderry, the capital of the county, is the center of trade for this pait of the country, and is a good port; for dhips of the greateft burden go up without interruption, which renders it one of the moft commodious harbours in Ireland. There is abundance of fhipping belonging to this city, whofe merchants not only drive a great trade in the herring-filhery, but bave a confiderable fhare in many other branches of foreign trade, efpecially to the Weft-Indies, for which they are very advantageoully fituated, being open to the Northern and Weftern Ocean: and with regard to the city of London itfelf, 'tis judged, that Londonderry is more than half way on the voyage to the Weft-Indies, but efpecially to Newfoundland or New-England, confidering the difficulty of the pailage, the uncertainty of winds, the hazards of fhoals and hores, the danger from enemies in time of.war, the waiting for convoys, and other accidents; fo that, confidering fuch almoft unavoidable remoras, a fhip from Londonderry bound to America, fuppofing it to fet out exactly at the lame time as another bound from London, inail often arrive there before the London thip is got clear of the foundings, and arrive in the latitude of Londonderry: for from hence a fhip is no fooner out of the river, but the is immediately in the open lea, and has but one courfe to the banks of Newfoundland, or to New-England, and fo to any other part of North America, with very little variation.
Lough-Foyl, which ferves it inftead of a road, is a bay of the fea 14 miles long, and 7 where broadeft. There is a channel broad enough for hhips to pals in 14 or 15 fathom water, and it has 8 or so fathom at the mouth.
Colerain, on the eaft fide of the mouth of the river called the Great Bann, near the borders of Antrim. It has very little trade, except for it's falmon-fifhery, which is very beneficial.
Antrim County, has that of Londondery on the weft, part of Armagh on the fouth, the county of Down on the foutheaft, the Deucaledonian Ocean on the north, and St. George's Channel on the eaft. 'Tis pretty fruifful and populous, though incumbered to the north with bogs and marfies. 'Tis divided into 9 baronies.
Belfast, is the chief town and port of all this part of Ireland, as well for the elegancy of the place and number of it's inhabitants, as for it's, wealth, trade, and fhipping. Ships comre up to Comoyl. Road, which is a fafe commodious harbour, below the town, with a good depth of water. There is a very confiderable trade from this port to Scotland, particularly to Glafgow.
Tyrone, or Tir-Ofn County, has Londondery on the north, the river Liffer and part of Fermannah on the weft, part of Antrim and part of Fermannah and Armagh on the fouth and fouth-weft. Though great' part of it is rough and mountainous, yet in other parts 'tis not inferior to many counties in the kingdom for richnels of foil and good paftures. 'Tis divided into 4 baronies.
Lough-Eaugh; is a beautiful place in this county. 'Tis about 30 miles in extent, and full of fifh, and the banks are valiegated with flady groves, meadows always verdant, and rich corn fields adorned with gentle hills and pleafant brooks.
Fermannagh County, has Leitrim on the fouth-weit, Donnegal on the north-weft, Tir-Oen on the north and northcalt, Monaghan on the eaft, and Cavan on the fouth. 'Tis full of large weil inhabited iflands, fladed with thick woods, and fo abounds wihh falmon, trout, and pike, of a fize in. credibly large, that the fifhermen's nets are not able to hold the draught which they fometimes take.
Caven Countr, has Fermannagh on the north, Longford and Weft Meath on the fouth, Leitrim on the weft, part of Monaghan, Meath, and Louth on the eaft. 'Tis divided into 7 baronies. It has feveral pleafant lakes, and though much fenny pature and coarfe land, yet has a rich fertile foil in other parts, well planted and improved.
Armagh Countr, is teparated in part from that of Dawn, on the ealt by the river Newry, has Tyrone and Munaghan on the wett, the Lough-Neath on the north, and Louth on the fouth, It's foil is laid to be vicher and more fruitful than
any in Ireland, and as well improved in all parts, except a ridge of coarfe mountains, called the Fews
Surgan, has a thriving plantation, noted for a linen manu-
facture facture.
Down County, is bounded on the eaft and fouth by St. George's Channel, on the weft by the county of Armagh, and on the north by that of Antrim.
Newry, a borough and market-town. Since the fettlement of the kingdom of Ireland, it is fo improved in trade, and confequently wealch and buildings, that'tis the largeft and moftriading town in the county, to which the increafe of the linen manufacture hath greatly contributed; and it is dikely to receive additional advantages, by means of the new navigable canal, lately promoted by parliamentary encouragement, for the benefit of the inland navigation.
Ross Trevor, a village on the north fide of CarlingfordHarbour, has a kay for fhips, which fafely ride at anchor near the thore, a falt-houfe, and a pottery for white earthenware, made of the noted fine potter's clay found near Carrickfergus, and exported from thence to foreign parts.
Kirkeel, a village extending fome miles alung the coaft, has a good foil, the country well inhabited, and fhoals of her rings.
Rathfryland, is one of the greatelt marts for linen in this county.
Killogh, or Port St. Anne, on the north fide of St. John's Point. There is a fecure paffage either to the eaft or weft of it. Oppofite to Coney Illand, the harbour on both fides affords good lying for hipping of 150 tons or under. Here is a charter-fchool for the advancement of the linen manufacture and falt-works: but it's principal traffic is, at prefent, in the exportation of barley, and importation of moft forts of commodities confumed in the adjacent country.
At Inch Island, the linen manufacture fpreads, as it does in moft other principal places of this county.
Strangrord, an ancient town. Though, for the conveniency of trade, the collector of the cuftoms is removed to Down, yet he is obliged to keep a clerk here, who makes entries of all fhips that do not proceed to Down. The lake here abounds with various kinds of excellent fifh, as bafs, mullet, whiteing, large fea-trout, oyfters, lobfters, harimps, \&c. and there are great quantities of kelp burnt on the iffands in the lakes, and on the ftony flat coafts.
Castleward-Bay, is particularly famous for the difcovery of the firft marle in the county, which hath proved of extraordinary benefit in the cultivation of their lands here.
Portaferry, is a town of fome trade, and abounds with excellent fifh.
Donaghadee, is the port where the Scotch packets land. By the confluence of paffengers, it hath obtained fome fhare of trade, and has a collector of the cuftoms and excife.
BANGOR, fpins confiderable quantities of fine linen yarn.
New-Town, pleafantly fituated at the north-end of the lake Strangford. 'Tis famous for it's fine diaper, and has a tolerable harbour.
Killeleagh, a town fituate over an arm of the lake of Strangford. Here the linen manufacture has fpread to advantage, and the delicate white thread made in it is remarkable.
Ballynahinch, ftands on a fmall river, near the center of the county. The papifts, being numerous here, induced the incorporated fociety for promoting Englifh Proteftant fchools to fettle a charter working-fchool at this place, for the education of poor Popifh children of both fexes in the Proteftant religion, who are conftantly employed in labour, chiefly in the linen manufacture.
Maralin, a town, part of the land whereof, and of the foil leading to the county of Antrim, abounds with a Alinty white lime-flone, with a mixture of chalk; and the fprings which burft from the rifing grounds are extremely foft and well tafted, and particularly noted for whitening linen. Marle-pits are opening in this neighbourhood, and in molt other places of this county: here are linen-weavers and bleach-yards, and fcarce a farmer but carries on fome branch of the linen bufinefs.
Warinestown, a neat village, where the linen manufacture has fpread fo confiderably, that a colony of weavers have gone from hence and fettled at Dundalk.
Gilford and Bann-Bridge, abound with bleach-yards, for carrying on the linen manufacture, the Bann-water being proper for that ufe.-The greateft fairs for linen cloth in the kingdom are held here.
Loughbrikland. Marle has been lately difcovered here, which has greatly inriched the farmer's lands; and the linen manufakture enables them to pay their rents well.-In thort, the ftaple commodity of this county is the linen cloth, of which the northern commonalty already experience the benefit; being freed from much of that wretchednefs, too vifible among the lower fort in other parts of the kingdom, where this branch of trade has not yet been improved to purpole. The county in general is populous and flouriming, and daily increafes in wealth , and inhabitants.
Leinster, or Lemster Province, is wafhed on the fouth and eaft by the fea, and is indented by thofe of Munter,

Congiaught, and Uffter, the two former bounding it on the weit and fouch-weft, the later on the north. 'Tis feparated from Connaught by the Shannon, and from a part of Muniter by the Shure. It has a temperate clear air, a foil fruitful in corn aind pafture; and, although fome parts are woody, it abounds in general with cattle, fowl, milk, butter, cheele, fifh, 8 ic . and alfo thofe finall ambling horfes, called hobbies. The principal counties, which have any trade delerving our notice, ate as follow:
Lourks County, which, though the leaft in the kingdom; is fruitfal in corn, and a fweet herbage.
Carlington, is one of the beft harbours in Ireland, at the mouth of the river Newry; bur, the town lying a little out of the way, the commerce is not equal to the goodnefs of the harbour. Yet it has a well-frequented market, and is far from a defpicable place, there being fome merchants who have good chips built here, and which ufe the coal trade to Whitehaven; as alfo the fifhing in the featon, which is the life of trade on all this fide of Iteland, efpecially north.
Drogheda, is the chief town of the county, on a bay of it's owh name. They have a tolerable trade here to the north parts of Eyqland, and are fupplied with large quantities of coals from Whitehaven, which they again fend by land to all the country rou'nd, as well as up the Boyn.
East Meath County, is a plain, fruifful, and populous country, feeding many herd of cattle, and abounding in corn.
West Meath County, fo called, in refpect of it's fituation from the former, runs weft to the Shannon, and lies betwixt King's County on the fouth, and Longford on the north, to neither of which it is inferior in fertility, number of inhabitants, or any other advantage.
Longford County, though fmall, and has fome bogs and fenny places, yet, in the main, 'tis a rich pleafant county.
Dublin, or Develin County. The fouth parts are but little cultivated, being fomewhat mountainous; but the reft is level and fruitful in grals, corn, and abounds with fifh, tane and wild fowl; but the wood is fo cut down, that their fuel is turf or fea-coal. Thefe parts are alfo well inhabited and diffinguifhed for a peculiar neatnefs and elegance, and, indeed, improvements of all kinds; beyond the other provinces. 'Tis divided into 6 baronies.
This is truly, what the learned Camden juftly calls itg à royal city, and a moft noble emporium, it being, without difpute, the largeft, the beft built, and the moft populous of all the cities in the king's dominions, London only excepted; the fuburbs are to this day fo increafing on every fide in additional buildings, befides alterations, that like London, which it refembles alfo in the manner of building, and names of ftreets, \&c. it would require a new defeription every year.
It is the grand mart, and the center of comimerce for the whole kingdom, efpecially for the communication of trade with England; and though Cork, as before obferved, is the chief port for the trade to foreign parts, and for the exportation of provifions to the Weft-Indies, a trade of great importance to Ireland, yet the trade of Dublin is unfpeakably beyond that of Cork in this particular, viz. that, by it's great import of all kinds of merchandize from all the countries in the world, either directly, or by the way of England, it has the chief part of the inland trade; and from hence thofe goods are again conveyed, in the ordinary method of trade, to all the inland citics and towns of the kingdom; by which means Dublin is the mart, or center, of the whole trade of the kingdom, with exception to thofe parts only which we have obferved to be eminent for this or that peculiar branch of commerce, as Cork or Kinfale for the Weft-India trade, Limerick and Gallway for that to France and Spain, and Londonderry and Belfaft for the fifhery and trade to Scotland.
The only misfortune of this city is the deficiency of it's harbour, occafioned by the bar at the mouth of the river Liffy, where there are fuch heaps of fand brought in by the tides, that it is difficult for loaden fhips to come in, except at fpringtides; and even then fhips of great burden dare not venture in, the bar being fo fhoal, that, at low water, it is but fix feet, and at high water not above 16 or 18 feet deep, except in extraordinaty high tides; nor when they are in the haven, can any fhip come to the kay, if they draw above feven or eight feet of water, all the reft being obliged to the below in the river, and deliver their goods by lighters, and other veffels, at Ringfend, about three miles from the bar. There is, however, very good riding in all parts of the bay, on the north fide for fome winds, and on the fouth for others; alfo on the north fide of the Hoath, a promontory of land that forms the north point of the bay, there is a very convenient road for large hips, near an ifland called Ireland's-Eye; fo that the merchants of Dublin are not without a convenient fecure retreat for their great hips on all occafions, unlefs in violent florms of wind from the fouth-weft, which often drive them from their anchors out at fea,
The city is fupplied with coals by thipping from Whitehaven in Cumberiand, and Swanfey in Wales, in fuch large feets, that it is common to fee 200 fail of colliers in the road at a time

Kilidare Coumity is an open, pleafant, and plentiful county, abounds in corn and pafturage, and is well watered with the Barrow, Liffy, and other rivers. It is divided into ten baronies.
King's County was formerly boggy, but is now a populous well-improved county.-It has feveral good market-towns; and at Bally-Bay is a well-fituate thriving plantation, near the center of the county.
Queen's County has alfo feveral good market-towns, and flourifhing plantations.
Wicklow County is pretty mountainous, but fruitful in the low lands, and has been fo much improved fince the fuffering by the Popifh maflacre, that it is inferior to few counties in lreland. A copper-mine was a few years fince difcovered here, which is likely to turn to very good account.
WIcklow, the chief, or thire town, has a narrow haven at the mouth of the river Leitrim. It has no great trade, unlefs in carrying provifions to the city of Dublin, for the haven is good for little. This place is remarkable for the beft ale in Ireland.-At Dunlavin is a fine Englifh plantation, and a good market.
Catherlagh County is very fruitful and woody, and divided into g baronies.
Kilkenny County is a plentiful country, fo populous as to be adorned with more towns and caftles than any county in the kingdom ; and, though it is mountainous in the fouth part, yet it is faid to have fire without fmoke, earth without bog, water without mud, and air without fog; fo that, having all the four elements in fuch perfection, it is juffly reputed a healthful, as well as a pleafant county. It comprebends 10 baronies.
Kilkenny Town is a large, populous; neat, well-built, wealthy city, with as good a trade as any inland town of that kingdom.
Wexford County is, in fome places, very fruitful in corn and pafture, though in others it has a coarfe and barren foil.
Ross is a town of good trade, by means of it's own river; formed by the conjunction of the Nure and Barrow, which brings up thips of very confiderable burden to it's kay.
Wexford Town fands at the mouth of the river Slane. It is a large corporation, as well as fhire-town, and has a very goad harbour for veffels that draw about 12 or 15 feet water; and all which draw more water are obliged to lade and unlade in a creek, near the mouth of the haven on the fouth fide three miles from the town, where is water enough; but no fhelter from the fouth-weft winds that come overland.

## Remarks.

If the reader will pleafe to confult the article Britain [Great-Britain] he will there find the commercial ftate of England comparatively confidered with that of Ireland and Scotland; with an impartial view to the mutual intereft of the three kingdoms, and not to the diftinct and feparate interef of either, independent of the other two. See alfo the articles Linen and Wool.
In addition to what we have there urged, we fhall further oblerve,
That if the linen trade of Ireland had not fuffered fome checks from the jealoufy of England, Ireland might have anfwered every end of a beneficial colony to the kingdom, by making this branch it's peculiar or local manufacture, and reftraining their attempts in fuch other branches as are more injurious to England. The difcouragement on their linens hras compelled them to take up other manufactures, as well as to return to their old bufinefs of victualling, in which their fale being chiefly to France, or the Streights, and all merchants being apt to buy where they fell, they are induced to bring back many commodities fimilar to thofe they would receive from hence, if their linen-trade was greater, and their others lefs.
Laws to prevent the importation of cattle, butter, \&c. from Ireland into England, feem to give a monopoly, to a few breeding counties to impofe upon the reft of the people high prices for cattle, \&s. to the ruin of our manufactures, and force the labourer to live dear, and of courfe to raife wages. This is greatly detrimental to our navigation; for whatever enhances the expences of a thip, enhances it's freight and gives opportunity to foreigners to viCtual cheaper in -Ireland than we can do at home.
To this it has been objected, That this is done to keep up or raife the value of our lands.-To which it has been anfwered,
That there is always a great clamour about encouraging the domeftic confumption, which, making neceffaries bear a great price, can arife only from a miftake in the knowledge of trade; for this is fo far from beneficial, that it has the contrary effect, becaufe, the lefs is confumed within, the more will be left to export; the cheaper things are, the more of them will be exported, and it is exportation only that makes a nation rich,

## I R E

This monopoly, with refpect to the people, is unjuft, and the beneft to the landholders only imaginary: for inftance, A hath a grazing eftate, to rafe the value of which, all cattle from ireland ate to be prohibited: A, having the fole market, raifes the price of his cattle upon the reft of the people, $B, C, D$, down to $Z$, and their pockets are to be emptied to fill his. Is this dealing equally by the nation in general? Though thefe people were as blind as puppies, yet neceffity, and the natural courfe of things, will furce them to retaliate upon him; for as a monopoly railes the price of cattle, their dearnefs raifes the price of labour; dear labour makes dear goods; fo that the food, cloathing, utenfils, labour, every thing $A$ wants, come dearer to him; an inhanced, imaginary value is given to every thing: fo that, though A fhould have more rent for a time (which yet the decline of foreign trade muft bring down afterwards) the money he receives is of lefs value, not going fo far, or being able to purchafe fo much, as when goods bore their natural value only: wherefore what he thinks he gains on the one hand is loft on the other; it is a deceptio vifus, fetting people to prey upon one another, and letting foreigners in the mean while eat the bread out of their mouths; for a nation that adds an artificial value to it's commodities, by monopolies, cannot export them in fuch quantities to foreign parts, where they are rivalled by thole that bear only their natural value; and their home-confumption in general will tink in price, by the nation's having lefs money brought in by foreign trade: luch a two-edged fword are like the monopolies to lands.
Every home commodity, in a free trade, will find it's natural value; for, though that fluctates, as of neceffity it muft, according to the plenty or fearcity of feafons, yet, for the home-confumption, evely home commodity mult have great advantages over the foreign, as being upon the fpot, and free from fieight, infurance, commiffion, and charges; which, on the produce of lands, being all bulky commodities, muft, in the general, be about 15 per cent. and a greater advantage cannot be given without prejudice; for 15 per cent. makes a great difference in the price of neceffaries, between the nation felling and the nation buying, and is a great difficulty on the latter, but, arifing from the natural courfe of things, cannot be helped; though it is fufficient fecurity to the landholders, that foreigners can never import more neceffaries than are abfolutely required; and it is prefumed, in fuch cafes, they have more charity than to farve the people, merely for an imaginary profit, which yet would prove their ruin in the end; for it is an egregious fallacy, and an abfurdity, to think to saife or keep up the value of lands by opprefions on the people, that cramp the commerce of the nation; for, if trade declines, the common people muft either come upon the parifh, or fly for bufinefs to other trading nations. In the firit care, they become a heavy tax upon the rich, and, inftead of purchafing the produce of the lands, muft have it given them : and, in the other cafe, when the confumers are gone, what price will the produce of land bear?
A fmall confumption makes a fmall demand, and a fmall demand makes a fmall price for any commodity: fo that when in converfation the wifdom of our laws is magnified to prevent the importation of cattle, \&c. from Ireland, how would a Hollander or Frenchman fmile when he reflected, that, in his country, the poor, getting provifions from any place where they can be had the cheapeft, are thereby enabled to work at prices the Englifh cannot live on, and, by working cheaper, run away with their trade, their money, and their working people; and, when thefe are gone, we may as well give them the land into the bargain, for any value it will be of.
After the fear that the value of our lands fhould be leffened by the improvement of Ireland, had produced à deftructive prohibition of Irifl cattle, the people of that country, being neceffitated to find out fome other employment for their lands, turned their thoughts to the breeding of fheep, and raifed a growth of wool. No fooner was this effected, but a prohibition enfued on our part, to export the manufactures made of that wool
This prohibition on the Irifh, it is to be greatly feared, has much contributed to the ruin of the woollen trade of GreatBritain, and raifed that of France; for, unlefs the Englifh take off the Irihh wool, and manufacture it themelves, or unlefs the Irifh are fuffered to export woollen goods, they will fell their wool to the beft bidder, and that is France; and they have and will work the fame up into fabrics, façon d'Angleterre, i. e. according to the fame make of the Englifh, in length, breadth, and all other peculiarities, and have deceived foreigners, by paffing them for the Britifh woollen manufactures. See the article France, with regard to their woollen marufactures.
As, therefore, the woollen trade of France has increafed, that of Britain bas declined: fo that fuch reftraints as thefe have not only hurc the lrifh, and injured ourfelves, but inriches France; for, as the cafe now fands, wish regard to the article of cheapnefs, it Chould feem that either Ireland or France muft, at length, have the woollen manufacture,

[^9]
## I R E

unlefs Ireland is effectually encouraged by England in the linen manufacture, \&c. and England can hericlf work up the wool of Ireland as cheap as France or Ireland can do. The Irith export clandeftinely forie cambiets to Libion, and underfell the French; therefore it feems very probable that the lrih might fome how be made inftrumental to recover he woollen trade out of French hands, which the Englifh do not feem capable of, till it's heavy taxes upon trade, and fome monopolies, are removed. And thall we compliment the French with a trade that we deny to our own fubjects? Nav, one third of what Ireland gets centers here at lait; and haall we refufe fuch a fum, which the Irifh would draw from the hands of our rivals, and put into our own? See he article Britain [Great-Britain] Debts [National Debts] Funds, Linen and Woollen ManuFACTURES.

Further Remarks on Ireland, fince the laft War, and the Definitive Treaty of 1763 .
By our prohibiting, by a perpetual law, 32 Car. II. cap. 2. he importation of black cattle, fheep, or fwine; or beef, mutton, lamb, pork, bacon, butter, or cheefe from Ireland, we forced the people of that ifland into the curing of all forts of falt provifions, which they exported to France, whereby the French were enabled to furnifh their infant colonies in the Weft-Indies, at a much cheaper rate than they could otherwife have done; and, at the fame time, by prohibiting the exportation of fugars, cotton, indico, \&c. from the Britifh colonies, directly to any place but England, we kept the price of all thofe commodities at fo high a rate, that the planters in the French colonies found a ready fale, and confiderable profit upon every thing they could produce in their plantations; which they could not have done, had our colonies been indulged, under more eligible reftrictions, with a direct exportation to every market in Europe.
By thefe means we contributed to the eftablifhment of the French colonies; and to thew how we contributed to their woollen manufactures, it may be obferved, that by prohibiting the importation of black cattle, \&c. from Ircland, we put the people there upon keeping numerous flocks of fheep, and producing large quantities of wool they fent to England, which we ftill allowed; but another part they began to work up in a coarle fort of manufacture for themfelves:' this eftablifhed a fort of woollen manufacture among them, which increafed fo fatt, that, before the year 1699 , they had begun to export confiderable quantities, efpecially of the coarfer fort; but in that year a felfifh monopolizing fpirit again feized England, and by an act ro and in Will. III. cap. 10. we prohibited the exporting or conveying out of Ireland, into any foreign parts, other than into England and Wales, any worfted, bay, or woollen yarn, cloth, ferge, bays, kerfeys, fays, frizes, druggets, cloth-ferges, Challoons, or any other drapery ftuffs, or woollen manufactures whatfoever. What was the confequence? An immediate fop was put to many of the woollen manufactures of Ireland, and moft of the poor manufacturers made hift to get over to France, where they were kindly received, änd fet to work as faft as poffible; and for this purpoie, a clandeftine intercourfe was fet on foot for running wool from Ireland to France; which has continued ever fince, notwithftanding the feverity of the punifhment; fo that inflead of having our fellow-fubjects of Ireland for our rivals, we have had our enemies, the French, for fuch, in the whole of our woollen manufactures: and this will always be the cafe, when we give a monopoly of any trade or manufacture to any fet of people, or to any part of our own dominions; we may prevent the reft of our own people from ineerfering, but we cannot prevent foreign ftates; and our monopoly will probably enable them to interfere.
To apply what has been faid to our American ColoNies: If we could prevent them from fupplying themfelves at forfign Ports with foreign Manufactures, it would be the intereft of Great-Britain to allow them a free and direct importation of every commodity they can produce, or manufacture, to every foreign port, where it can be difpofed of to advantage: but if we have, by our mifconduct, unhappily raifed the manufactures of this kingdom to an extravagant price, [fee Duties and Labour] 1 muft think, that this might be done by fuch a finall duty upon importation, as cannot make it worth a man's while to run the rifk of clandeftine importation of any fort of foreign manufacture, into any of our colonies.-But, if our manufactures have been, or thould be, raifed to fuch a high price, as cannot be counter-ballanced by fuch a fmall duty upon the importation of foreign, it may be fafely enough prophefied, that it will be impoffible to confi ie our culonies to the ufe of our manufactures, by any reftraint we can lay upon their trade : they will, by degrees, fer up every fort of manufacture within themfelves, and foon become our rivals, as Ireland did, at the foreign markets; in which cafe, it will net, we hope, be faid, that we ought to do by them as we have done by Ireland; for we thould then be juftly compared to the dog in the manger, who cannot eat his cats himfelf,

## I R E

nor allow the horfe to eat them that can. And till they could fupply themfelves, they would be chiefly fupplied by foreign mánufactures; for foreigners would imitate our manufactures © exadty, that it would be impolfible to diftinguifh them, after being landed and lodged in the merchant's warehoufe, or retailer's hop, and equally impoffible to prevent fmuggling them afhore, upon fuch extenfive coalts as we now have in America. See the article France.
Therefore, if we can keep the manufactures of this kingdom at a moderate price, which, confidering the extent and fertility of this illand, it will be our own fault if we do not, [fee Agriculture] we have no occafion for laying retraints upon the trade of any part of the Britifh dominions: if we cannot do this, we ought, we mult, at length, encourage manufactures in other parts of our dominions, in order to prevent a clandeftine importation of foreign manufactures even into this iffand itfelf. Let us, therefore, abolifh all thofe reftraints which a mifapprehenfion of the nature of trade has induced us to lay upon our diftant fettements, and content oufelves with the profits that muft accrue to this inland from dominion alone: for whilf the feat of government is here, we may be convinced from hiftory as well as experience, that the riches of all our dominions, how remote foever, will center in this ifland. Rome was never remarkable for trade or manufactures; nor was there a city in Italy, famous for trade during the time of the Romans; yet the riches of the conquered world centered in Italy, and chiefly in the city of Rome. Thither every man in the empire repaired, as foon as he had got a fortune fufficient for fupporting him with grandeur and magnificence in that city. Madrid has no trade, yet all the riches of Spain, and as much of the riches of America as their pride and lazinefs will allow them to retain, center in Madrid. Paris has no trade, nor any great manufacture for export, yet all the jiches of France center at Paris. It feems, therefore, to be our intereft, as well as our duty, to promote, as much as we can, the trade and manufactures of every part of our dominions, without being feared by that old and fool ifh jealoufy of their interfering with the trade and manufac tures of their mother-country; for if they can, foreign nations will and may; and if we muft lofe any trade or manufacture we are now poffeffed of, furely we ought to wifh that it may be gained by our fellow-fubjects, who will bring mof of their riches hither as foon as acquired, rather than that it fhould be gained by foreigners, who will never bring a fhilling of their riches into this inland, and whofe riches may the very next year be employed for our defruction.

Of linen, hemp, flax, thread, or yarn, imported from Ireland.

* Hemp or flax, thread, yarn, and linen, of the growth and manufacture of Ireland, being permitted to be imported directly from thence by Britilh or Irih, duty-free, the mafter of the veffel, in order to exempt them from duty, muft bring a certificate from the chief officers of the port of Ireland where fhipped, exprefling the marks, numbers, weights, or tale of the fpecies of each bale, or parcel, mentioned in the bill of lading, with the names and places of abode of the perfons that have fworn the goods to be of the growth and manufacture of that kingdom, and where, and to whom in Great-Britain conligned. The form of which certificate is ufually as follows:

77 and 8 Will. III. cap. 39. fect. 1. I Ann. cap. 8. fect. 2. 12 Ann. cap. 16. fect. I. 5 Geo. I. cap. 25 . fect. 2. 10 Geo. I. cap. 17. fett. 4. 16 Geo. I. cap. 26. fect. 6.

Port of Dublin.
Thefe are to certify, that A. B. of this city hath entered here 310 pieces, being 7580 yards of plain lrihh linen cloth, duty free; to be thipped on board the Hope of London, Wilfon mafter, for Southampton; which faid linen cloth is the product and manufacture of this kingdom, as appears by the afidavit of B. C. of this city, taken before us the 5 th inftant.
Witnefs our hands and feals of office, this roth day of Fe bruary, 1730.
C. D. Collector, D. E. Cuftomer, E. F. Comptroller.

Which certificate muft be produced to the principal officers of the cuftoms at the port of importation, and the truth thereof be confirmed by oath made on warrant, to which it mult be annexed. The form of which oath muft be as follows:

25th of February, 1730 - No. 54.
In the Hope of London, William Wilion mafter, from Dublin.

Francis Willis.
F. W.

No. I a 5 .
Five bales, containing 7580 yards plain Irifh linen, as per certificate dated the roth inftant, hereunto annexed

## I R E

William Willon, mafter of the above fhip, maketh oath, That the five bales of linen above-mentioned were achually laden on board his faid Thip at Dublin in Ireland, and chat the faid bales, and linen therein contained, are the fame which are mentioned in, and were taken on board, by virtue of the certificate from thence, dated the 1oth inftant, now produced: and that he verily believes, and knows nothing to the contrary, but that the faid linen is of the product and manufacture of the kingdom of Ireland.

Signed-William Wilfon.

Wool, wool-fells, \&c. imported from Ireland.

* Wool, wool-fells, fhortlings, mortings, wooll-flocks, worfted, bay or woollen yarn, cloth, ferges, bays, kerfeys, fays, frizes, druggets, fhalloons, ftuffs, cloth ferges, or any other drapery made of, or mixed with, wool or woollen-flocks, and manufactured in the kingdom of Ireland, may be imported from Dublin, Waterford, Youghall, Kinfale, Cork, Drogheda, and New Rors, into Biddeford, Barnftaple, Minehead Bridgewater, Briftol, Milford Haven, Chefter, or Liverpool, provided notice be firft give to the cuftomer or collector, \&c. of the port into which the fame are intended to be brought of the quality, quantity, and package, with the marks and numbers, and the name of the thip and mafter, and the port into which they are to be imported; and bond muft be entered into with one or more fufficient fureties, in treble the value of the goods, for the due landing of the fame.
- 1 Will. and Mary, cap. 32. fect. 6. 7 and 8 Will. III. cap. 28. feet. 5. 10 and it Will. III. cap. 10. fea. 10 , 14. 4 Ann. cap. 7 . fect. 1.

## The form of which bond muft be as follows:

Noverint univerfi, \&c.
Whereas the above-bounden Benjamin Forward hath given notice, to the cuftomer or collector of his majefty's cuftoms in the port of Chefter, of his intentions of lading at the port of Dublin, in the kingdom of Ireland, 80 packs, containing 1800 ftone of Irifh wool (marked and numbered as in the margin) on board the chip Fortune of Liverpool, whereof James Hopkins is mafter, in order to be imported into the port of Chefter, and for which he hath defired a licence accordingly.
Now the condition of this obligation is fuch, That if the faid Benjamin Forward, or his afligns, or any of them, thall not carry the faid wool, fo laden at Dublin in the kingdom of Ireland, into any port beyond the fea, but fhall duly and truly import the fame in the aforefaid veffel, into the port of Chefter, or into fome of the following ports of GreatBritain, viz. Biddeford, Barnftaple, Minehead, Bridgewater, Briftol, Milford Haven, or Liverpool, and fhall there unlade, and put on thore the fame, the dangers of the feas excepted : then this prefent obligation to be void, and of none effect, or elfe to remain in full force, effect, and virtue

## Benjamin Forward, James Hopkiss.

## Sealed and delivered in the prefence of <br> A. B. Collector,

B. C. Comptroller.

And, when bond is thus given, the chief cuftomer or collector, sxc. of the port, muft grant a licence under their hands and feals of office, for the importation of the goods therein fpecified; which lisence muft be in the following form:

## Port of Chefter.

In purfuance of an act of parliament made in the tenth and eleventh years of the reign of king William the Third, is titled, An act to prevent the exportation of wool out of the kingdoms of Ireland and England into foreign parts, and for the encouragement of the woollen manufactures in the kingdom of England:

We do hereby certify, That Benjamin Forward, of Chefter, hath given us notice of his intention of lading, at the port of Dublin, in the kingdom of Ireland, 80 packs, containing 1800 ftone of
B. F. Irifh wool, marked and numbered as in the marNo. ia 80 . gin, on board the fhip Fortune of Liverpool, whereof James Hopkins is mafter, to be imported into the port of Chefter; and bath here given fecurity, according to the faid act, for the landing thereof accordingly, the danger of the feas excepted: therefore he faid the Benjamin Forward is hereby licenfed to lade and import the

I R O
fame, according to the faid act. Witners our
Loc. * Sig. hands and feals of office, the 27 th day of Janu: ary, 1730.
A. B. Collector, C. D. Comptroller.

* And when, by virtue of the aforefaid licence, fuch wool, \&ec. arrives at the intended port of Great-Britain, it muft be obferved whether the cockets granted in Ireland for the exportation thereof, are wrote on paper (and not on parchment) and are figned by three of the chief officers of the port; and whether the exaft quantities, qualities, marks, and numbers, are indorfed thereon as the law directs, otherwife the landing mult not be permitted: but, if the faid requilites are duly performed, entries are to be made, and warrants granted for the landing, as for other goods; and, at the landing the faid goods, they are to be carefully viewed and examined by the furveyor and landwaiters, in order that the landing may be certified to the officers of the loading-port in Ireland, after the following manner :
* 7 and 8 Will. III. cap. 28. fect. 7. 10 and it Will. III. cap. 10. rect. 7.

## Port of Chefter.

Know ye, that Benjamin Forward hath landed in this port, out of the fhip Fortune of Liverpool, James Hopkins mafter, from Dublin, 80 packs, containing 1800 ftone of Irilh wool, as appears by the endorfed particulars; which came by cocket from thence, dated the 18 th day of February, 1730, mentioning to have there laden 80 packs, containing 1800 ftone of Irifh wool, and for which a licence was granted at this port the 27 th day of January, 1730; which faid goods were configned to Benjamin Forward, and delivered by D. E. land-waiter.

Cuitfed tice 1 sith jay of March, 1730 .
A. B. Collector,
B. C. Comptroller,
C. D. Surveyor.
*This certificate to be made on paper, not parchment, and to exprefs the exact quantities, qualities, marks, and numbera of the goods, which are not to be obliterated or interlined.

23 The circumfances are much the fame in regard to what other ports are permitted to import the aforefaid particulars from Ireland into England.
Wrought filks, ftuffs, \&c. mullins and callicoes, of the manufacture of Eaft-India, China, or Perfia, may not be imported into Ireland but from Great-Britain, upon forfeiture thereof, or the value, and the fhip, furniture, \&c. 5 Geo.I. cap. 11. §. 12.
Officers of the cuftoms of Ireland conniving thereat, \&c. forfeit 5001 , and are rendered incapable.
No fugars, paneles, fyrups, or melaffes, of the product of any of the plantations in America, nor any rum or fipitits of America (except of the growth and manufacture of his majefty's colonies there) may be imported into Ireland, unlefs thipped in Great-Britain, in fhips legally navigated, upon forfeiture thereof, or the value, together with the hip , and all her furniture; and may be feized by the lord-lieutenant, lord deputy, lords juftices, or any perfon authorized by them, or by warrant of a juftice of the peace, or other magitrate, or by any cuftom or excife officer, or their affifants. 6 Geo. II. cap. 13. §. 4 .
Any perfon affifting in the unlawful landing, or receiving any of the aforefaid goods fo landed, are to forfeit treble their value; and, for obftructing officers, 501 , and to fuffer three months imprifonment. 6 Geo. I., cap. 13. §. 5, 6 .
Any officer conniving at fuch illegal landing, or making collufive feizures, is to forfeit 50 l . and be rendered incapable of ferving his majefty. Mafters of hips (being his majefty's fubjects) receiving any of the aforefaid goods on board, in order to land the fame contrary to the true intent of this act, are to forfeit 1001. 6 Geo. II. cap. 13. §. 7.
Such offences and forfeitures may be profecuted and recovered in any of the courts of record at Weftminfter, or in Dublin, at the option of the informer or profecutor, within two years after the offence. 6 Geo. II. cap. 13. §. 4, 11 .
The onus probandi to lie upon the claimer, or owner, of the goods. 6 Geo. II. cap. 13 . §. 8.
Thefe are fome of the principal laws of England for the regulation of the trade of Ireland.
IRON, is the leaft heavy of all metals, ex́cept tin, but confiderably the hardeft of them all; when pure, and well wrought, is very tough, malleable, and ductile, but lefs fo than either gold, filver, lead or copper; when wrought into fteel, it is lefs malleable: or in the impure fate from it's firft fufion, called calt iron, it is very friable; and the moft ductile, if only heated, and fuddenly quenched in cold water, lofes much of this quality.
It is extremely capable of ruft, more than any other metal; it is very fonorous, and requires the ftrongelt fire of all the metals to melt it.
Iron is of lefs fimple compofition than any of the heavier metals, containing a fulphur fo imperfectly blended with it's other
conftituent parts, that it will readily get loofe, and, in a ftrong heat, appear in vifible flames.
It is the moft difficultly of all metals amalgamated with mercury, and is lefs fixed in the fire than moft others, lofing part of it's weight in a moderate degree, and much more when in fufion. Fire renders it more ductile, being moft of atl malleable when neareft to fufion, the figns of which are, it's becoming whiter, and Pparkling; if kept long in fufion, it's fulphur difipates, it becomes much more brittle, and at laft runs into a bluidh glafs.
Expofed to a great burning-glafs, it inftantly grows red-hot, then turns whitifh, fparkles, flames, and melts; after which, moft part flies off in fparks; the remainder turns to a bluifh glafs, which expofed again to the fame focus, on a piece of charcoal, takes up the fulphur it had loft, and becomes true iron again.
It's Specific gravity to that of water, is as 7632 to 1000 ; it is the only known fubftance attracted by the load ftone. When perfectly pure, it readily melts, and unites in fufion with gold and filver; but, if impure, it feparates, and forms a diftinct regulus on the furface.
Heated, it increafes in bulk and weight, but, when cold, returns to it's former gravity and dimenfions. All the ftronger acids diflolve it; fpirit of nitre, or aqua fortis, moft readily; but by lying long, even in common water, it gives a tafte to it, contracts a rutt, and throws off a yellow ochre. All falts, except alkaline, diffolve it. It is alifo moft eafily deftroyed by many other means: neither refifting the force of lead or antimony, but, fufed with them, prefently vitrifies, and goes off in fcariz.
It's great teft is attraction by the magnet; but it muft be in it's true metalline ftate, for many of the ores will not anfwer the trial. It may be produced by art, out of almoft every thing we know. Many earths afford it by calcination; all the parts of animals and vegetables, in the athes of all which it will be found fo perfect, as readily to anfwer the magnet. In the bowels of the earth, when it enters the compofition of cryftals and fpars, it fometimes determines their figure; at others only their colour. Among gems, the amethyft, garnet, and hyacinth, owe their colours to iron.
The iron ores are extremely various in furm and colour, difcovering themfelves by their refemblance to wrought iron in ftructure and look, or by their yellowifh or purplith tinge: the richelt have moft of all the appearance of the metal they contain. The poorer ores are generally of a more lax and friable texture, and of a yellowifh or reddifh bue, or of a mixed colour between thefe, with a brown or blàckifh caft in it. The common ochres, both yellow and red, are very rich in the metal, and worked for in fome places, 10 great advantage.

Remarks.

## REMARKs.

Since this nation has given encouragement to the making of iron in our American plantations, we have experienced the benefit of it; and we hope it will prove true, that new iron works are about to be eftablifhed in Canada, fince the late French colonies have been in our hands. Thus we are likely to fave that money. that we ufed to pay for iron, to our great difadvantage: nor can it be long, we hope, before we alfo experience the benefits of fupplying ourfelves from America, with every kind of naval fores we fland in need of, which will prove of no little additional emolument to thefe kingdoms. Sce our articles HEmp, Pitch and Tar, and Naval Stpores, and Jusiness of the Customs at the End of Letter I.

$$
I_{R O N} \text {, as applied to medicinal ufes. }
$$

It has greater medicinal virtues than any of the other metals, being alone any way foluble in the human body; for even it's crude filings, taken inwardly, are always fo much'acted upon by the juices, as to produce confiderable effects.
The preparations of it in moft frequent ufe are, befide the crude filings reduced to an impalpable powder, the following, viz.

## Salt of iron.

## Process.

Mix together a quart of water, and eight ounces of oil of vitriol; pour the oil of vitriol in by little at a time; put the mixed liquor into a glafs veffel, and add four ounces of filings of iron; when the ebulition is over, evaporate the liquor to a pellicle, and fet it to fhoot; there will be a oreen vitriol, of falt, in fair cryftals; dry them for ufe. This is one of the mof powerful preparations of this metal in ufe; it opens all obfructions, and frengthens the vircera, and is good againft worms. The beft manner of giving it is in folution, half an ounce in a quart of water; the dofe four ounces, drank as chalybeate waters, will be found to exceed moft of them in it's good effects. But, in many cafes, the crude filings fucceed better than any other form. When taken in female diforders, in which the body is weak, and full of acidities, the juices are themfelves the beft menftruum for it; the natural heat, before wanting, being always excited by this means, and more good found than from all the laboured preparations ever invented.

Aperient crocus of irön.

## PROCESS.

Expofe a quantity of pure iron flings to the air in the fpring, till by dews and rains they are perfectly converted into a reddifh ruft; powder, and keep them for ufe.
There is another preparation of it with fulphur, thus; mix together equal quantities of iron filings and powder of common brimftone; make them into a ftiff pafte with water, roll it into a ball, and lay it by for five or fix hours, it will half calcine with the heat it acquires; then put it into an earthen pan, fet it over the fire, and burn away the fulphur, and there will remain a red powder for ufe.
The dofe of either of thefe is from ro to 30 grains, in cafes of obftructions; but the firft is moft efteemed.

Tincture of iron with fpirit of falt.

$$
P R O C F S S
$$

Take filings of iron half a pound, Glauber's fpirit of fea falt three pounds, rectifed fpirit of wine three pints; di-
geft the fpirit of falt and flings without heat, as lang as the firit will work upon them; let the faces fublide, and pour off the clear liquor; evaporate to one pound, and add the fpirit of wine. This is preferable to any tincture hitherto in common ufe: it is good in all cafes in which the falt or crocus are.

## Flowers of iron

## Process.

Take of iron filings, or of the colcothar of common green vitriol walhed, one pound, of crude fal armoniac two pounds; mix together, and fublime in a retort; mix the flowers again with the refiduum, and repeat the procefs till they are of a beautiful yellow colour. To the remainder may be added frefh fal armoniac half a pqund, and, repeating the proceff, more flowers will arife, like the former. This is the fame with the ens veneris of, Mr. Boyle, except that he ufed blue vitriol: both, however, are good medicines.

## Steel wine.

Process.
Take filings of iron four ounces, cinnamon and mace of each half an ounce, of Rhenifh wine two quarts; infure a month without heat, often fhaking the veffel; then filter off for ufe.
This wine is an excellent fomachic and aperient: it may be drank a glafs once or twice a day, or mixed in apozems of the aperient vegetables.

## Aftringent crocus of iron.

## Process.

Expofe a quantity of clean and fine iron filings to the air, and fprinkle them at times with vinegar; let thern remain thus till almoft converted into ruft, then fet the whole in a ftrong reverberatory fire; till it be of a deep purple colour; when cold, levigate it to an impalpable powder for ufe.
This is a good medicine in hxmorrhages, and in obftinate diarrhceas and dyfenteries: the dofe is from 10 grains to 30 . It muft be given in a bolus or pills, for in any liquid it finks to the bottom too fuddenly to be taken without watte.

## Antiphthyfic tincture:

Process.
Take fugar of lead and green vitriol, of each three ounces; rectified fpirit of wine a quart; powder the falts feparately, and digeft them in the fpirit, without heat, and there will be a fine purple tincture.
It is the moft powerful aftringent and fyptic tincture we are yet acquainted with; it's dofe is from is to 40 drops.

## REMARKs.

As we pay to Sweden, Ruffia, and Spain, between 3 and 400,0001 . a year for bar iron, does it not become the wifdom of the nation to offer a parliamentary reward to any one or more who fhall difcover the fecret of making bariron by the means of pit-coal fuel, that the kingdom may be enabled to fupply itfelf with a commodity that carries fo much money annually out of it?
2. Whether alfo the art of making of caft iron more pure, tough, and malleable than is done at prefent, whereby it may be applied to various ufes that hammered bar-iron itfelf is, does not merit fome public reward and encouragement? See the article Foundery.

The PRACTICALBUSINESS of the CUSTOM\&HOUSE continued from the end of letter H .

Informations, with refpect to violating the laws of the cuftoms, \&c.

INformations. - Every informer, upon a penal flatute, muft exhibit his fuit in proper perfon, and purfue the fame only by himfelf, or by his attorney in court; which purfuit muft be by way of information, or original action; upon which information, the time of exhibiting muft be noted. - No procefs to be fued out upon fuch information, till exhibited in due form; upon which procefs mult be indorfed the party's name that purfueth, and the fatute whereon grounded. 18 Eliz. cap. 5. §. г. and 27 Eliz. cap. 10. §. 2.
The offence not to be laid in the information, to be done in any other county, than where really committed. 31 Eliz. cap. 5. §. 2. and 21 Jac. I. cap. 4. §. 2.
Actions, fuits, bills, or indictments for frauds relating to the cuftoms, may be laid in any county; and on actions for forfeitures upon penal ftatutes, any officer, \& c . may fue within a year; which being expired, the king may fue within two years more, unlefs fhorter time be appointed by any other ftatute. 31 Eliz. cap. 5. §. 5, 6. and 2'r Jac. I. cap/4. §. 3, 5.
But for Drawback-goods relanded, fuit may be within five years after offence committed. 8 Ann . cap. 13. §. 16.
Informer or plaintiff may not compound or agree with the offender, but after anfwer made in court to the information; nor after anfwer, but by order and confent of the court: and if the informer, \&c. delay, or difcontinue his fuit, or is nonfuited, or has verdict paffed againt him, he muft pay the defendant his colts, charges, and damages, 18 Eliz. cap. 5. §. 4. and 27 Eliz. cap. io. §. 2.
Informers offending in fuing out of procefs, making of compofitions, \&c. without order or confent of the court, upon conviction, are to ftand in the pillory for two hours, and to forfeit 1ol. 18 Eliz. cap. 5. §. 4, and 27 Eliz. cap, 10. §. 2 .

Bills or plaints not to be filed till the informer has fworn before fome of the judges of the court, that the offence was committed in the county alledged in the information, and that he believes it was committed within a year. 2I Jac. I. cap. 4. §. 3 .
May not be entered in any of the courts in Weftminfter, or Edinburgh, againt any perfon for the recovery of penalties infiged by the laws of the cuftoms, excife, and falt duties, unlefs In the name of the attorney-general, or an officer of the faid revenues. 12 Geo. I. cap. 28. §. 28.
Perfons taken up by capias, in prifon for want of bail on any information relating to the cuftoms, \&cc, not pleading for the fpace of one term, judgment mult be entered by default, and execution awarded againft body and eftate. 12 Geo. I. cap. 28. §. 27.
And fuits for forfeitures and penalties relating to the cuftoms, \&c. incurred to his majefty, may be commenced in any of the courts of record at Weftminfter, and in the court of exchequer in Scotland; unlefs in fome few cafes, where the juftice of the peace or the commiffioner of the cuftoms and excife, may, in a fummary way, proceed to condemnation of goods feized: for which, fee the feveral heads referred to, under the article of Seizures and forfeitures of goods, and penalties pecuniary. 6 Ann . cap. 26. §.6. at the end of letter S .
Or indictments being commenced or profecuted for affaults upon officers, the offence may be tried in any county of England. 9 Geo. II. cap. 35. §. 26.
Sheriffs, mayors, or bailiffs, or other perfons, having the execution of any procefs againft any offender in relation to the cuftoms or excife, are upon requeft (indorfed upon the back of the faid procefs, figned by the follicitor of the cuftoms or excile) to grant a fpecial warrant to fuch perfon as is named by the faid follicitor, for apprehending the offender; and in default thereof, are fubject to fuch penalties, \&c. as they are now liable to, for refufing or neglecting to execute fuch procefs. 9 Geo. II. cap. 35. §. 32 .

The Business of the Customs, with regard to the Restrictions of the Trade of Ireland.

Ireland.-Hemp, or flax, and any manufacture made thereof in Ireland, may be imported by Britilh or Irifh ditedtly into Great-Britain, free of all duties, upon certificate of the officers of the port where lhipped, exprefling the marks, number, tale, or weight of the fpecies in each bale or parcel, mentioned in the bill of lading, with the name and place of abode of the exporter from Ireland, and of the perfon who thall have fworn that the goods are the manufacture of Ireland, and where, and to whom in England conVot. I.
figned; and oath of the mafter, that the goods are the fame mentioned in fuch certificate. 7 and 8 Will. III. cap. 39. §. r. and 16 Geo. II. cap. 26. §. 6.

Wrought filks, ftuffs, \&c. mullins and callicoes of the manufacture of Eaft-India, Cbina, or Perfia, may not be import ed there, but from Great-Britain, upon forfeiture thereof, or the value, and the hip, furniture, \&cc. 5 Geo. I. cap. ir §. 12.
Offers of the cuftoms in Ireland conniving thereat, \&c. forfeits 5001 . and are rendered incapable. 5 Geo. I. cap. in. \$. 12.
No fugars, panelles, fyrups, or molafles of the product of any of the plantations in America, nor any rum or fipirits of America (except of the growth and manufacture of his majefty's fugar colonies there) may be imported into Ireland, unlefs hipped in Great-Britain in hhips legally navigated, upon forfeiture thereof, or the value, together with the fhip and all her furniture: - But not to extend to reftrain the importation of fugars of the produce of any of the dominions of the king of Spain or Portugal, from any place from whence they might have been lawfully imported before. 6 Geo. II. cap. 13. §. 4, 13 .
Any perfon affifing in the unlawful landing or receiving any of the aforefaid goods fo landed, are to forfeit treble their value; and for obftructing officers, 501 . and to fuffer three months imprifonment. 6 Geo. II. cap. I3. §. 5, 6.
Any officer conniving at fuch illegal landing, or making collufive feizures, is to forfeit 50 l . and be rendered incapable of ferving his majefty. 6 Geo. II. cap. 13. §. $5,6$.
Mafters of fhips (being his majefty's fubjects) receiving any of the aforefaid goods on board, in order to land the fame contrary to the true intent of this act, to forfeit 1001.6 Geo . II. cap. 13. §.7.
Such offences and forfeitures may be profecuted and recovered in any of the courts of record at Weftminfter, or in Dublin, at the option of the informer, or profecutor, within two years after offence. 6 Geo. II. cap. 13. §. 4, it.
The onus probandi to lie upon the claimer or owner of the goods. 6 Geo. II. cap. 13. §. 8 .
No glafs of any kind or denomination, other than the manufacture of Great-Britain, may be imported into Ireland, upon forfeiture thereof, and of the hip, with her tackle, apparel, and furniture, and 10 s. for every pound weight by the mafter of the hip, and every other perfon concerned or affifting in importing or landing it, and the glafs to be deffroyed within ten days after condemnation. 19 Geo. II. cap. 12: \$. 22.
The mafter of every thip which fhall carry any kind of glafs to Ireland, muft, before he is permitted to fail out of the port of Great-Britain, take from, and under the hands and feals of, the collecior or comptroller thereof, a duplicate of his contents in writing, of all the glafs taken on board, which is to be delivered him without fee; and upon his arrival at the port in Ireland, where he intends to unlade, he muft deliver upon oath, fuch duplicate to the collector, comptroller, or other officer of the cuftoms there, before he is permitted to land fuch glafs; for landing fuch glafs, before the duplicate is fo produced, the penalty is the fame as in the foregoing article. 19 Geo. II. cap. 12. §. 23.
No glafs of any kind may be exported from Ireland, or laden upon any horfe, cart, or other carriage, or on board any veffel, in any place belonging to the kingdom of Ireland, with intent to be exported, upon forfeiture of the glafs, and 10 s . for every pound weight, by every perfon concerned or affifing therein and alfo of every thip or veffel, barge, boat, or other bottom, on board which it was laden, with her tackle, apparel, and furniture, and the glafs to be deftroyed within ten days after condemnation. 19 Geo. II. cap. 12. §. 24.
Offences againft this act, relating to the exportation of glafs, and importation, are to be heard and determined by the commiffioners, and fub-commiffioners of excife, in their refpective diftricts in Ireland; who may proceed in a fummary way, and give judgment, and levy the penalties and forfeitures in fuch manner, as they may in cafes of excife in Treland. 16 Geo. II. cap. 12. §. 25.

The Business of the Customs, refpecting Iron.
Iron, notwithftanding the act of 28 Edw. III. cap. 5 . may be exported by any perfon. 5 and 6 Will. III. cap. 17. §. 2.
Armour, bandeliers, bridle-bits, halbert-heads, and harps, bolfers, mufquets, carbines, fowling-pieces, piftols, pikeheads, fword or rapier-blades, faddles, fnaftles, ftirrups, catveikins drefled or undreffed, geldings, oxen, theep-fkins drefled 12 U
without

The PRACTICAL BUSINESS of the CUSTOM-HOUSE.
without the wool, and all forts of manufactures of leather may be exported by any perions. 12 Car. 11. cap. 4. §. 11.

Pig-iron, made in, and imported from, the Britifh colonies in America, may be imported into any port of Great-Britain; and ar iron, made in and imported from the faid colonies, may be imported into the port of London, free of all duties, under the following regulations. 23 Geo. IL. cap. 29. §. J.
The perion thipping the pig or bar-iton in America muft, before clearing out the veflel for Great Britain, make oath before the governor, collector and comptroller of the cuftoms, and naval officer, or any two of them, that the iron fo thipped, exprefling the true weight, was made at ..... Within the colony of $\longrightarrow$, with the name of the perfon to whom fold or configned. Thereupon the faid officers are to grant a certificate, under the hands and feals of office, of fuch oath having been made before them. 23 Geo. 1I. cap. 29. 8.5.

The faid pig or bar-iron muft allo be ftamped with a mark, denoting the colony where it was made, and the certificate above-mentioned muft be produced to the chief officer of the cuftoms at the place of importation, and oath made before him by the commander of the veffel, that the iron fo imported is the fame mentioned in the certificate, otherwife to be chargeable with the puties as before. 23 Geo. II. cap. 29. 9.6, 7 . For fallely making fuch certificate, the penalty is, forfeiture of 200 J . lols of office, and being incapable of ferving his majefty; for falfely making the oaths above-mentioned, the offender incurs the punilhment by law for wilful and corrupt perjury; and for counterfeiting the ftamp or certificate, the punihment by law for forgery.-The penalties for faliely making fuch ftamps or certificates recoverable in any court of record at Weftminfter or America, or in the exchequer in Scotland refpectively, where the offender thall dwell when the offence was committed, or information, \&c. brought; and every information, \&x. brought in Great-Britain, is to be laid elther in the county where the offence was committed, or where the offender dwells when the information, \&c, is brought. 23 Geo. II. cap. 29. §. 8, II.

Bar-iron imported into the port of London by virtue of this act, is to be entered at the cuftom-houfe, and ftamped with fuch mark as the commiffioners fhall direct in three different parts of each bar ; that is, two at the diftance of a yard from each end, and one in the middle. 23 Geo. II. cap. 29. §. 13

Such bar-iron may not be exported or carried coaft-wife, except for the ufe of his majefty's dock-yards, on forfeiture thereof, together with the veffel; and the perfon exporting or fending it coaft-wife, the mafter of the veffel and mariners are fubject to the fame penalties as in cafe of being laden with prohibited or uncuftomed goods, or goods clandeftinely imported or exported: and any officer of the cuftoms granting a cocket, or other warrant for fuch purpofe, forfeits 2001. and is to lofe his office, and be rendered incapable of ferving his majelty, and the cocket, \&rc. to be void. 23 Geo. II. cap. 29. \$. 2.

Such bar-iton may not be conveyed by land to any place
beyond ten miles from any part of the port of London, excep to his majefty's dock-yards and for his ufe, on forfeiture of 20 s per hundred weight by the perfon conveying it, or caufing it fo to be conveyed. 23 Geo. II. cap. 29. $\ddagger .4$.

For counterfeiting, deftroying, or defacing the ftamps, with intent to convey the iron ten miles from the port of London the penalty is 1001.23 Geo. II. cap. 29. §. 14.

No bar-iron may be carried coaft-wife, unlefs mention is made in the certificate of the day on which the duties were paid at importation, and by whom, 23 Geo. II. cap. 29. §. 3.

Business of the Customs with refpect to the Isle of Man.
Isle of Man. - Corn of the growth thereof may be import. ed into Great-Britain. 15 Car. II. cap. 7. §-21.
No goods but fuch as are of the growth, produce and manufacture of the faid inle, may be imported from thence into Great-Britain, or within the limits of any port thereof. 12 Geo. I. cap. 28. §. 22.
Veffels found, or difcovered to have been with fuch goods within the limits of any port of Great-Britain or Ireland, whether bulk has been broke or not, are forfeited, with the tackle, 8 cc . and likewife the goods or their value. 12 Geo . I. cap. 28. §. 22.
Perfons concerned in landing or conveying away fuch goods, forfeit 100 l . or fix months imprifonment, at the difcretion of the court. 12 Geo. I. cap. 28. §. 22.

Foreign goods entered outwards for any other parts than the Int of Man, and yet carried thither and landed; the exporter is to forfeit the drawback, or the amount thereof, as allo treble the value of the goods. 12 Geo. I. cap. 28. §. 23.
Mafters of the veffels fubject to the like penalties, and to fuffer fix months imprifonment, without bail or main-prize 12 Geo. I, cap. 28. §. 23.

To be added to, and included in, the oath of the exporter, upon all debentures for foreign goods exported. 12 Geo. I cap. 28. §. 24 .
The treafury, in behalf of the crown, may treat for the abfolute purchafe thereof. 12 Geo. I. cap. 28. §. 25 ,

## With refpect to Juries.

Juries, in cafes relating to the cuftoms, to confift of free born fubjects only. 13 and 14 Car. II. cap. II, §. 11 .

The Business of the Customs, with refpect to Justicas of the Peace.

Justices of the peace, magiftrates, and all other his majefty's officers and fubjects, are to be aiding and affifting to the officers of the cuftoms in the execution of this act, and for fuch aid, \&c. thall be thereby defended and faved harmlefa I3 and 14 Car. II. cap. II. §. 32.

## K A Y

KALI, is a grey falt, which we bring from Alicant and Carthagena in Spain, in loaves or cakes of different fizes. It is made from a plant that grows along the fea-coaft, which the botanits call kali, and we faltwort, foap-wort, glafs-weed, kelp, and many other names. This plant bears a ftalk a foot and a half high, or thereabouts, furnifhed with fmall narrow leaves. They fow this herb, and, when it is come to a due height, they cut and manage it like hay.
When it is dried, the Spaniards make large holes or pits in the ground, in the nature of lime-kilns, into which they throw a bundle of the dried herb, to which they put fire; and, when it is well lighted, they thfow in other bundles, till they fill it full of the dried herb; when they have filled it, they ftop it up, and leave it all together for fome time, that it may not only be reduced the better to afhes, but likewife incorporate, and be capable to form into a ftone or cake, in which form it is now brought to market: when they have opened the pit, they find the faid herb burnt into a hard ftone, which they are obliged to break and raife up, juft as they do ftone out of the quarry.
There are fold at Paris four forts of pot-afhes; the firft and moft valuable of which, is that of Alicant: which, when they are right, ought to be dry and clean, of bluifh grey without and within, having little holes made like partridge's eyes, and, when fipit upon and held to the nofe, have no of fenfive finell. And beware the ftones be not inclofed with a greenifh cruft, or full of pebbles; for the firf will fain and fpot, and entirely fooil linen, according to the nature of the itones that are found within. Likewife take heed that the bales be not opened, and the commodity that was good, exchanged for that which is naught, and chufe fuch as is in fmall pieces. This is very much ufed by the glafsmakers, to make the beft glafs; and the foap-boilers likewife ufe it confiderably, drawing it's falt from it, which they ufe in the making of white and marbled foap; but the greateft part of that which comes from Spain is confumed at Paris and the neighbouring villages, by the fcourers or whiteners, who ufe it to whiten their linen.
They make from this falt, which the French call foude, by the affiftance of common water, a white falt, called falt of kali, or alkali ; which is as much as to fay, foude falt, becaufe al is an Arabian word that fignifies falt, and kali, foude. It is to be obferved, that this falt is only properly called alkali falt; though the fixed falts of other plants may be alfo called alkali'falts, with the addition of the name of the plant they are made from, as the alkali falt of wormwood.
The fecond fort is that of Carthagena, which only differs from that of Alicant in not being fo good, neither is it of the bluifh caft, but more crufted, and the bales are much larger. The third fort of pot-afhes is that named the Bourde kind, which ought to be entirely rejected, as being fo bad, that it is fit for nothing but to deceive thofe that buy it. This is ufually moif, of a blackifh green colour, and very foetid. The fourth fort is that of Cherbourg, which is made of an herb found along the fea coafts of Normandy. This is likewife a very bad kind, being extremely humid, of the fame colour and imell with the laft fort, and filled with ftones. Thefe two forts are good for nothing, but to impofe upon the unwaty buyer, and cheat the whitfers, and damage their linen. See the article Bxeaching, Glass-Making.
KAY, or KEY, or QUAY, a wharf for mipping and landing of goods in the port of London.
In rotulo feaccarii, anno 19 Car. II. In purfuance of * an 2 et of pariiament, it is there ordained, That $t$ the kays, wharfs, and places hereafter named, and no others, be affigned, appointed, and allowed by his majefty, to be lawful kays, wharfs, or places, for the fhipping, lading, or landing of goods: that is to fay, the kays or wharfs called,

18. Gaunt's-kay, containing from eaft to weft 3I feet, including the fmall ftairs on the ealt fide thereof, and from the river of Thames northward 40 feet; but the ftairs are hereby declared unlawful for fhipping, lading, or landing of goods añd merchandize.
19. Cock's-kay, cohtaining from eaft to welt 40 feet 8 inches, and froth the river of Thames nbithward, $4 \checkmark$ feet in the narrowell place:
20. One place betwixt Cock's-kay and Frefh-wharf, commonly called Part of Frefh-wharf, cohtaining frome caft to weft 25 fees, including the ftairs at the eaft fide thereof, and northwards
hothwards from the river of Thames 40 feet in the narroweft place : but the faid fairs are hereby declared unlawful for thipping or landing of goods.
21. Frefh-wharf, containing from eaft to weft 115 feet, and from the river of Thames northward, 40 feet in the narroweft place.
22. Billinfgate, containing from north to fouth $17 \mathrm{I} \frac{1}{2}$ feet, and in breadth from eaft to weft 40 feet; to be a common open place, for the landing or bringing in of filh, falt, victual or fuel of all forts, and all native materials for build ing, and for fruit, (all manner of grocery excepted) and for carrying out the fame, and for no ocher wares or merchandize. And if the lord mayor and aldermen of the city fhall think fit to fill up any part of the faid dock, at the north end thereof, not exceeding 40 feet in length, the fame ground, fo filled up, may have the fame privilege as the reft of the wharf before prefcribed.
Bridge-houfe in Southwark may be allowed as a place convenient for the landing of any kind of corn, bought or provided for the provifion or victualling of the city, and not upon any private or particular perfon's account, and for no other goods or merchandize.
It may be lawful for any perfon to fhip or lade into any fhip or veffel, on the river of Thames, bound over feas, and lying between London and Woolwich, any of the goods or merchandize hereafter mentioned, viz. horfes, coals, beer, ordinary ftones for building, fifh taken by any of his majefty's fubjects, corn or grain : provided that the cuftom and duties of fuch goods be duly paid, and cockets or other lawful warrants paffed for the fame, and delivered to the fearcher, or one of his majefty's under-fearchers, and fhipped in the prefence of fome of them, and in the prefence of a deputy, to fuch perfons as thall be appointed, from time to time, to manage or receive the cuftoms in the port of London, and not otherwife.
It may be lawful for any perfon, or perfons, to unfhip and lay on land deal-boards, balks, and all forts of mafts, and great timber, at any place of the river of Thames betwixt Weftminfter and Limehoufe-dock: provided the owners of fuch goods do firft pay or compound for the cuftom and other duties, and declare the place at which they will land them (before they unthip any of the goods) to the officers or farmers of the cuftoms thereof for the time being, and receive fufferance or permifion from them fo to do; and that they unthip none of the faid goods, but in the prefence of a waiter or officer appointed thereunto; unlefs by a fpecial licence of the faid officers or farmers of the cuftoms for the time being, otherwife the faid goods to be liable to forfeiture according to law.
It may be lawful for the owners or poffeffors of the feveral wharfs, called Lyon-kay, Somer's-kay, Dice-kay, and Sab'sdock, to fill up, or wharf over and enlarge into the river of Thames, fo much as will make the front of their wall or camphot range equally with the adjoining kays or wharfs. If any, of the houfes or buildings be intended for warehoufes upon the wharf, or hereafter fo employed, the two upper fories and garrets of the faid houfes to be made, and from time to time continued with glazed windows.
The number of cranes upon the faid feveral wharfs to be at the election of the owners or poffeffors of the ground, provided they exceed not the dimenfions following, viz. A fingle crane with one wheel, 12 feet in breadth, and a double crane with two wheels 20 feet, and each of them in depth or length from the wall or camphot, 21 feet at the moft; and that the faid cranes, as well fingle as double, be kept open and free, for common paffage from the ground to the floor under the wheels, without any other inclofure, partition, feparation, or bindrance by pofts or fpurs, than the neceflary pofts and timbers, which fupport the fame at both ends, and that the open height of the faid crane be at leaft $10 \frac{1}{2}$ feet from the ground to the floor under the wheels, that carts and carriages may freely pafs under them.
It thall not be lawful for any perfon to build any outfetts, jets, penthoules, warehoules, rooms, lodgings, or any manner of pofts, fheds, or buildings, contiguous or annexed to the faid cranes, or any part of the open wharf of 40 feet in breadth, defcribed as aforefaid, more than what is convenient about the cranes, for the wheels to work in and upon, and fufficient covering thereunto, not exceeding the height, breadth, and length aforefaid. And, for further ornament, thofe cranes to be laid in oil and coloured blue, and, in the front thereof towards the Thames, be placed the king's arms, painted and fet in an efcutcheon, or other frame, with a decent moulding about it, of at leaft $4 \frac{\pi}{2}$ feet diameter.
That all the paffages, lanes, or cartways, leading to the faid kays or wharfs from Thames-ftreet, and every of them, be made of the breadth of II feet at the lealt: but, if any was of a larger breadth or dimenfion heretofore, this fhall not be conftrued or meant to leffen or ftreighten it, but that it con tinue at the ancient or larger dimenfion.
The feveral kays and wharfs defcribed, and allowed to be free places for fhipping and landing of goods and merchandizes as aforefaid, and which according to the tenor of the faid act of parliament for rebuilding the faid city, is and ought to be
left open and free at the diftance of 40 feet from the waterfide, thall not be feparated or divided one from another by any houfe, wall, pail, pof, rail, or other impediment what. foever, but only by mere ftones or marks in the pavement, for the diftinction of property, and not otherwife.
If any wharfinger or owner of any of the wharfs or grounds allowed for hipping, lading, or landing of goods ormerchandizes as aforefaid, do not conform to the prefent form, rules, and method, hereby prefcribed and directed, for their wharfs, cranes, or buildings, or hereafter thall difcontinue or alter the fame, or make new encroachments thereupon, after public notice given by any three or more of the principal officers or farmers of his majefty's cuftoms, by fixing up a writing under their hands, upon the wharf where the fault fhall be committed, declaring the offence and limiting a day and time for the amendment thereof; which if not amended or performed accordingly, that then fuch wharf, or crane, fhall from thenceforward be no more reputed or taken, to have the benefit or privilege as a lawful place of fhipping, lading, or landing of goods or merchandize; but be thenceforward utterly debarred thereof, unlefs reftored by his majefty's fpecial warrant; and neverthelefs the faid buildings; alterations and encroachments, to be demolifhed and removed, as the law in that cafe hath directed.
If at any time it fhall feem reafonable to the principal officers or farmers of the cuftoms for the time being, and confiftent with his majefty's fervice, to give fufferance or permiffion for the thipping, lading, or landing, of any goods or merchandize, at any other place or places, or in any other manner than is herein before nominated and advifed, or affigned to be lawful kays and wharfs; it fhall and may be lawful for them fo to do, and fuch fufferance and permiffion fhall be good and warrantable, without any forfeiture or advantage to be taken againft the goods fo landed, notwithftanding any thing herein before declared to the contrary.
Whofoever fhall accept of, or from henceforward employ any of thofe kays or wharfs, by virtue of fuch conceffions, to the ufe of hipping, lading, or landing of goods or merchandize, it is to be underftood, and it is declared to be with this covenant and condition, that they perform all and fingular the orders, affignments, and appointments, which on their parts and behalfs is before declared to be performed and done, and not otherwife.
The feveral wharfingers or poffeffors of any of the faid kays or whatfs, or their fervants, fhall not fuffer to ftand or remain upon their wharfs, or paffages leading to them from Thames-fitreet, any more than fuch cars or carts as fhall be immediately called to lade or take up goods, wares, or merchandize there.
To prevent all future differences and difputes touching the extent and limits of the port of London, and the many frauds and abufes which bave been acted and committed, as well upon and within the river of Thames, as without the mouth thereof upon the fea, the faid port is declared to extend and be accounted from the promontory or point called the North Foreland, in the ine of. Thanet, and from thence northward in a fuppofed right line, to the oppofite promontory or point called the Naes, beyond the Gunfleet, upon the coalt of Effex, and fo continued weltward through the river of Thames, and the feveral channels, ftreams, and rivers falling into it, to London-bridge: faving the ufual and known right, liberty, and privilege, to the ports of Sandwich and Ipfwich, and either of them, and the known members thereof, and of the cuftomers, comptrollers, fearchers and their deputies, of and within the faid ports of Sandwich and Ipfwich, and the feveral creeks, harbours, and havens to them, or either of them refpectively belonging, within the counties of Kent or Effex : but that every part and place of the river Thames, and fea, within the limits and bounds aforefaid, not included or belonging to the faid ports of Sandwich or Ipfwich, or the feveral creeks, harbours, or havens, to them, or one of them, refpectively belonging, within the faid counties of Kent or Effex, thall be deemed and taken to be within, and part and parcel of the port of Landon.
No further or other paffage to be made or enlarged to the wharfs, or any part of the river of Thames from Thamesfreet, within the limits aforefaid, other than the ancient and common paffages to the fame.
KENT, is bounded with Suffex on the fouth-weft; Surrey on the weit ; the Englifh Channel on the fouth; Dover Streights on the fouth-eaft; the Downs on the eaft; and it is divided from Effex and Middlefex on the north, by the river Thames; and is about 166 miles in circumference. Both the air and foil of it are various. The fhore from Woolwich to Gravefend, is low, and fpread with marhes and unhealthy grounds, excepting about Erith, Greenhithe, Northfleet, \&xc, where the chalk-hills almof join the river; and from thence the city of London, and parts adjacent, and even Holland and Flanders are fupplied with chalk; which is alfo carried by lighters and hoys to all the ports and creeks in Effex, Suffolk, and Norfolk, where it is fold to the farmers, who give from half a crown to four hillings a load for it, according to the diftances,

## K E N

The country, in general, abounds with plantations of hops, corn-fields, paflures, and woods of oak, beech, chefnuts, \&c. and many woods of birch, whence the broom-makers, who live in Kent-ftreet, Southwark, are fupplied. They have mines of iron, pits of marl and chalk, woad and madder for dyers; wool, flax, faintfoin; and on the cliffs between Folkitone and Dover, is plenty of famphire.
Canterbury, the chief city, is feated on the Stour, which runs through it.
Here are computed to be about 2 or 3000 French proteftants, who, with fome others that came hither before them, brought over the art of weaving broad filks, which is now arrived to fuch perfection, that the filks woven here are as good, if not better, than any foreign filks, and are ferit to London in great quantities.
But what has added moft to the advantage of this city, is the hop grounds all round it, to the amount of feveral thoufand acres; fo that, till it was equalled by Farnham, it was reckoned the only great plantation of hops in the whole illand. This city and Sbrewbury are the two moft noted places in England for brawn.
Rochester, lies in a valley on the eaft fide of the Medway, in feveral creeks and branches of which, within the jurifdiction of this city, is an oyfter-fifhery, which is free to every one who has ferved feven years apprenticefhip to any fifherman or dredger that is free of the faid fifhery; for regulation of which, an admiralty-court, as they call it, is held by the mayor and citizens, as occafion requires; at which they appoint-what quantities fiall be taken, and when. Every licenfed dredger pays 6 s .8 d . yearly, to the fupport of the courts.
Maidstone, the county town, is feated on the Medway alfo. It's chief trade is in linen-thread, and in hops, of which are great plantations about the town, as well as orchards of cherries. This town, and country about, is fo eminent for it's plenty of provifiotis and rich lands, that London is fupplied from hence with more commodities than from any fingle market-town in England; as alfo with a fort of paving-ftone, about 8 or 10 inches fquare, exceeding durable, and with a fine white fand for the glafs-houfes and ftationers.
Rumney, is one of the Cinque Ports, the fea having deferted it's haven; the chief trade it has now is grazing cattle in the marth, which is reckoned fome of the richeft pafture in England. This marfh is the place from whence the owlers have for fo many ages exported our wool to France.
Hythe, is another of the Cinque Ports, but a place of no trade, it's harbour being choaked up.
Dover, another Cinque Port, is a large populous place, and noted for it's tide, harbour, and the ftation of the packetboats, which go twice a week to France and Flanders.
Sandwich, is the laft and moft eafterly of all the Cinque Ports. This port has for many years paft been fo choaked up with fands, that it will receive only fmall veffels. It's chief trade at prefent is in fhipping and malting.
On the weft point of the illand of Sheppey, lies Sheerness; a regular fortification, with a line of heavy cannon to guard the mouth of the Medway. Here is alfo a - yard for building thips, and a dock for repairing.
Chatham is, as it were, a fuburb to Rochefter; it was built

## K I R

by king Charles II. and has been noted ever fince as the tiation for the royal navy. The dock was begua by queen Elizabeth, but fo much impioved fince, that there is nos a more complete arfenal in the whole world; the warehoufes, or rather tirects of them, being the largeft that ever were.
Tunbridge, is of chicf note for the wells near it.
Deal, is a handfume large town, and carries on fome foreign trade.
Feversham, is a populous flourifing place, fituated in fo fruitful a part of the county, that it may be called it's garden, and has the conveniency of a creek from the Thames; which is navigable by hoys, Jighters, \&cc. 'Tis one of the towns that fupply London markets with abundance of fruit, and the largeit and beft oyffers for fewing, which the Duth alfo fetch away in grear quantities, that a prodigious number of men and boats are employed here in the winter in dredging for them.
Milton, is a large town, and has a confiderable market for corn, fruit, and other provifions; which with oyfters taken in the creeks, among which it is fituated, are fent moftly to London.
Gravesend, has fo much gardening abouit it, that they not only fupply the towns for feveral miles round with gardenftuff, but fend great quantities to London, where the afparagus in particular is preferred even to that of Batteriea.
Woolwich, is of note for the yards and works erected here for the naval fervice.
Deptrord has alfo a large yard, and noble dock.
KINCARDINSHIRE, in Scotland, is bounded on the eaft with the German Ocean, on the fouth with the water of Noith Efke, on the weft with the Granibain-Hills, and on the north with the river Dee and Aberdeenfhire.
The foil is fruitful in corn and paflurage, and on the fencoafts are feveral convenient creeks and fome good harbours. Stonehive, the county-town, is one of it's beft harbours, and, for it's greater fafety, the late earl marhal, having a falmon-fifhing on the north fide of it, raifed a pier of itone.
Paldyikirk, is noted for a yearly fair, which laft three days, when great quantities of coarfe cloth are bought up here and exported to the Netherlands.
The ftewarty of KIRCUDBRIGHT in Scotland. 'Tis one of the two difticts or divifions of Galloway. It begins at the middle of the bridge of Dumfries, lies between the water of Cree on the welt, and Nithfdale on the eaft; is bounded by part of Kyle on the north, and has the Irim Sca on the fouth. There's fuch plenty of pafture in it, that valt flocks of fmall cattle and fheep grazed here are fent into England.
Kircunbright, fands on a bay of the fame name in the Irifh Sea, at the mouth of the river Dee, in which it has a good falmon-fifhing. Here is a commodious harbour, with depth of water, and room enough to hold the Englifh navy. Yet it is a place of no great trade.
New Galloway, on the river Ken, has a good weekly market, well frequented for corn and other provifions; and a good falmon-filbing in Lochken; which abounds not only with falmon, but other fifh ; contains feveral iflands, is about five miles long, and in fome places about one mile broad.
