CUSTOMS and USAGES to which all TRADERS are fubject. By MALACHY POSTLETHWAYT, Efq; THETHIRDEDITION.

LONDON:

[^0]
# RIGHT HONOURABLE GEORGE NELSON, ESQ. 

LQRD MAYOR OF THE CITY OF LONDON;
ANDTOTHE
ALDERMEN, AND COMMONCOUNCIL,
Who conftitute the Magistragy of the commercial Metropolis of Great Britain。

My Lord and Gentlemen!

THE Magiftracy of this ancient commercial City being compofed of the different Ranks of Traders, comprehended in Miniature, within the Dominions of Great Britain; and being elected into their Office, by the Suffrages of the Citizens, who are confituted of the like Body of refpectable Traders themfelves; the Author of this Performance upon Trade and Commerce; humbly conceives, that he could not addrefs his Labours with more Propricty than to the Corporation of fo illuftrious a Trading City.

Though the mercantile Order of Perfons, amongft the feveral Degrees of the City Magiftrates, is efteemed the fuprome Clafo of Traters ins zeurral, yet it io-cbfervable, that the Number of Merchants in the whole City, and even throughout the whole Kingdom bears but a fmall Proportion to that of the London Tradefmen contained only in the Metropolis. Nor, indeed, could Merchants fubfift, was it not for thefe Tradefmen in this City; who make a numerous Body in the Wholefale and Retail Way. For they firft purchafe of the Merchants their foreign Imports, Wholefale, and then vend and circulate them again by Wholefale and Retail, amongft all the other Country Tradefmen, reffiding in the remoteft Parts of the Kingdom. The Execution of this inland Circulation of Trade, does not fall within the peculiar Province of the Merchant, whofe Bufinefs is, or fhould be, to maintain his Dignity, reftrained chiefly to Exportation and Importation in the maritime Branch by wholefale Purchafes, and Sales. But it is the Employment of the London Tradefmen in general, to fell and difperfe their Imports from the Metropolis to other Parts of the Nation; and the London Tradefmen are the great Paymafters of the London Merchants. Of what Ufe could the London Merchant be, without their neighbouring Tradefmen, Purchafers, Cuftomers, and Paymafters, to take their foreign Commodities off their Hands?

In the like Manner, do not the London Tradefmen, Warehoufemen, Factors, \&c. take our native Commodities from all the Country-Manufacturers of every Appellation? And do not they fell them in general to the Merchants, who export them? So that, as the London Tradefman firft purchafes of the Merchant his foreign Imports, fo likewife he fells to him his Exports; and as the Merchant gives the London Tradefman fhort Credit for his Purchafes; fo does the London Tradefman give the Merchant Credit for his Exports of native Commodities: And when our Exports exceed in Value our Imports, as they ever ought to do, and ever will, if the State is as wifely governed as it fhould be, the London Tradefmen, Warehoufemen, and Factors, \&ec. give larger Credit to the Merchants, than the other Set of Tradefmen receive from them.

In this Light, London Tradefmen appear to conftitute the very active Soul of the Commerce of the whole Britioh State; and that they are an effential Medium between the Merchant, the Country Shop-Keeper, and the Confumers. And although it may feem, at firft Sight, fomething afluming to affert, that the City-Tradefmen, taken in every Degree, as contradiftinguifhed from the foreign Exporter and Importer, are the Support of all Country Shop-Keepers, and cherefore of the greatef Part of the whole Commerce of the Kingdom; yet it is neverthelefs true: for we cannot go to a thop-Keeper of any Repute, in the moft ditant trading Towns throughout Great Britain, but holds fome Correfpondence with the Tradefmen of London: And as all Country Shop-Keepers purchafe more or lefs at London, fo are they not all ever indebted to the London Tradefmen? And

Vol. I.
A
there-
therefore, the whole Country may be juftly faid to trade upon the City's Stock, feeing the London Tradefmen, Factors, and Warehoufemen, give them all Credit.

Of fuch high Concernment are the London Tradefmen to the whole Traffic of the Nation, that all our native Commodities and Manufactures almoft of every Sort, more or lefs, center at firft in London, and amongtt the London Tradefmen, brought to them from all the inland manufacturing and trading Towns; and are afterwards fent again from London to the feveral different trading Towns and Cities throughout the Kingdom, where thofe Commodities and Manufactures are not made or produced. The Countrymen heeer their Sheep, fell their Wool, and carry it from Place to Place; the Manufacturer fets it to Work, to combing, fpinning, winding, twiting, dyeing, weaving, fulling, drefling, and thus they furnifh their numberlefs Manufactures in the whole Woollen Branch, But what muft they do with them, if London did not take them firft off their Hands, and the London Tradefmen, Warehoufemen, Factors, and Wholefale Dealers, did not vend and circulate them again amongft the London Merchants, as well as to all the remote Parts of the Nation? London is the grand central Mart to which the grofs Body of all our native Commodities are firft brought, and from whence they are again fold; the London Tradefinen purchafe of the Country Manufacturers, and pay them, and then fell them chiefly to the Country Tradefmen and Shop-keepers. This is the Cafe, be it Manchefter for Cotton Wares; Yorknire for Coarfe Cloth, Kerfies, \&c. Wilis and Gloucefter for Fine Cloths; Norwich for Stuffs; Wales for Flannels; they all firft go to London, and all have their Money, or other Goods in Return from London, and the London Tradefmen pay and fupply them.

Whence it appears, that except that Proportion of the inland Trade of the Nation, that is immediately carried on from the Out-Ports, the whole is carried on to and from London, and all through the Hands of London Tradefmen: and fo we have feen is the whole of the Trade of foreign Exports and Imports; and our London Tradefmen have no fmall Share in the whole mercan:tile Shipping of this Kingdom, as well as of all the coafting Veffels; which tends to the general Support of the Navigation of the Empire, its Brood of Seamen, and the Benefit of Freight, Shipbuilding, and Ship-victualling of the trading Part of the Nation.

Upon the whole, therefore, it is not at all to be wondered, that fuch immenfe Eftates have been acquired amongft the London Tradefmen, no lefs than London Merchants; fince this magnificent City hath been, and we hope ever will remain the moft opulent and fplendid commercial Emporium in the whole World. Nor is it to be admired, that from Tonnon Traders, and from the Magiftracy of fo illuftrious a Corporation, fuch numerous noble Families fhould fpring, who reflect a brilliant Luftre upon the Metropolis, as that does upon all the illuftrious Perfonages who have been concerned in its Magiftracy : from the Common Council, they frequently afcend to Aldermen, and from Aldermen to Lord Mayors, whofe Dignity, Power and Authority (occafionally) is not inferior to any of the greateft Nobility in this Kingdom.

If a Trader of this City arrives at the high Office of Lord Mayor, does not the Dignity intitle him to the diftinguifhed Epithet of Right Honourable? And is not his Lordmip conftitutionally invefted with the facred Character of a Judge, as well in capital as civil Affairs? Does he not even precede the Chancellor, and other Judges and Officers of the Crown, upon peculiar Occafions? In cafe of an Interregnum, does not the Lord Mayor of London, become the chief Magiftrate in the Realm? Have not Numbers of wife and eminent trading Citizens arrived, even at the Honor of Lord Chancellor; been created Peers of the Realm, Knights of the Garter, Bath, Bannerets, and Privy Councellors? And what more can be faid of Divines, Lawyers or Soldiers?

To give a few Inftances in Honor to the City of London-The Anceftors of the following noble Families fprung from Trade and the Magiftracy of the City of London; viz. Legg, the Earl of Dartmouth; De la Pole, Earl of Suffolk, Chancellor of England, and Knight of the Garter ; Brown, Lord Vifcount Montacute ; Bullen, Lord Vifcount Rochfort, and Earl of Wilthire and Ormond; Holles, Earl of Clare, and afterwards Duke of Newcartle; Ofborne, Duke of Leeds; Hicks, Lord Hicks, and Vifcount Camden, Anceftor to the Earl of Gainfborough; Dormer, Earl of Carnarvon, and Lord Dormer; Cromwell, Earl of Effex, and Knight of the Garter; Capel, Anceftor to the prefent Earl of Effex; the Riches Earls of Warwick and Holland; Coventry, Earl of Coventry; Cranfield, Earl of Middlefex; Fitzwilliams, Earl Fitzwilliams; the late Lord Haverham; the prefent Earl of Tilney, and the Grandfather of the Duke of Bedford; and numerous other of the moft noble Families in the Britifh Empire; with which this illuftrious Lift might be adorned, to the Honour of Trade and the Magiftracy of this famous CityNor fhould it be forgot, that Henry VIII. thought it no Indignity, when he quitted his Queen, to marry Anne, the Daughter of Thomas Bullen, Lord Mayor of London: And the firf Williams who founded our Royal Race, was the Grandfon of a Tanner.

So far is Trade from being inconfiftent with the Character of a Gentleman, that in England it makes Gentlemen, and hath peopled this Nation with Nobles and Gentlemen; for, after a Generation or two, have not the Children, or Grandchildren of Traders fprung from the Magiftracy of London,
become as good Gentlemen, Statefmen, Parliament-men, Privy Councellors, Judges, Bihops, and Noblemen, as thofe of the highef Birth, and the moft antient Families?

Hath not likewife the Magitracy of the Corporation of London produced fome of the moft diftinguihed Friends to the Trading Intereft of the Kingdom? And hath not the Parliament itfelf repofed the greateft Confidence in them? Was not this the Cafe of Philpot and Walworth, two very noted Aldermen of London; by placing the Money granted by Subfidy in the Minority of the Reign of King Richard II. in their Hands, to carry on the War, inftead of thofe of the Duke of Lancafter, and the other Regents at that Time? Did not Alderman Philpot, at his own Expence, fit out a Fleet with a Thoufand Men to protect the Englifh Merchants in his Days, becaufe the Regency had then thamefully neglected to do it? What important Service to Trade did the celebrated Citizen Sir Thomas Graham do in his Time? Was not alfo Mr. Sutton, the Founder of the CharterHoufe, the chief Intrument in retarding the Sailing of the Spanifh Armada, intended to enflave thefe Kingdoms? Was not the Corporation of London remarkably zealous in bringing about the happy Revolution ; to which we owe the prefent Felicity of this Nation? Have not the Citizens of London been ever loyally attached to the prefent auguft Family regnant on the Throne of thefe Kingdoms' ? Were they not remarkably fo, in the Time of the unnatural Rebellion in the Year 1745 ? What other Affociation for the Support of the Public Credit could have had the happy Effect that had ?

From thefe few Obfervations, it appears how egregioufly miftaken in the Importance of the Trading Citizens, and of the Weight and Influence of the Corporation of London over the whole Kingdom, they muft be who have affected to treat them in a Manner unbecoming their fupreme Utility to the State? From the mean Indignities too frequently caft upon the City Magiftracy in its corporate Capacity, I have judged it not ufelefs to difabufe thofe who have been mifled to entertain a different Opinion to what I do of this illuftrious Corporation: And this I hope will atone for dwelling fo long on a Topic agreeable to myfelf.

Does not the Extent of the Traffic of the Citizens of London, with the remote Parts of the Kingdom, give them a notable Influence by their commercial Connections, and the Univerfality of their tading Correfpondence over the Nation? When the Citizens thrive in their Trade, can other Traders throughout the Kingdom do otherwife? When the far diftant Britih Traders feel a Decline, do not the London Traders do fo likewife? In confequence hereof, it is apparent, that the Voice of London Traders is the commercial Barometer of the State of our Commerce: when they profper, the whole Nation cannot do otherwife. Is it then to be wondered, when they complain that the whole Kingdom fhould echo their Sentiments?

Thefe few Remarks will ferve to fhew, the miftaken Judgment of thofe who are too apt to cenfure, and often ridicule the Conduct of the Corporation of London in their publick Capacity. For what Motive can they have to complain, when there is no Occafion? The moft facred Caufes that concern the Profperity and Happinefs of thefe Kingdoms, are thofe of Trade and Liberty. When the Corporation of London have felt and experienced them to be affected, they complain, they remonitrate, they dutifully petition the Legiflature. Is this unbecoming the Weight and Dignity of the commercial Metropolis? They never fet up for Infallibility any more than other great Bodies. Yet it is rare, very rare, that they ever err, in Regard to what is the moft dear to Britons! Do not thofe who contemn the Corporation of London, difhonour the noblef Families, who are defcended from its Magiftrates?

## I have the Honour to be;

My Lord and Gentlemen;

## With great Veneration,

Your moft Humble

and moft Obedient Servant,

- Feb. 10, 1766.

Broad Street; London.

## I NTRODUCTION.

THIS Dictionary of Trade and Commerce is the firt of it's kind that was ever publified in GreatBritain; and having obtained a reputation for above fourteen years, with thofe efteemed the beft judges in the kingdom, amongft the nobility and gentry ; and it's credit and character alfo amongft commercial people of the beft underftanding, as well merchants as tradefmen, manufacturers and artizans of every refpectable rank, render it the lefs neceffary to urge any thing now in ir's recommendation. With refpett to the preient New Edition here offered to the public, it will be expected that fome account hould be given of it.
The Iaft War, and Definitive Treaty of Peace made in the year 1763, having made a great alteration in the ftate of the Britifh trade and territories in America and Africa, fince the publication of the Second Edition, and the public calling for a third, due notice is taken therein of the various changes made in the American and African trades by the faid Definitive Treaty. In confequence of which, the fante treaty having made a great variation in the territories of France and Spain, in favour of the Britifh empire, it hath become necefiary to reprefent thofe changes and alterations, in regard to the dominions of their refpective kingdoms.
That the candour and impartiality of the author may be the more confpicuous in his reprefentations upon this occafion, he hath continued his former Remarks upon the trade and territories of the feveral before-mentioned potentates,-which were made prior to the laft war and treaty of peace; and hath made his Additional Remarks upon the fame trade and territories fince the peace hath been concluded, in the fame manner and form as they were made in our former editions of this performance. By the method we have purfued, every one will be enabled to judge from plain facts, and natural deductions drawn therefrom, of the different ftate and condition of the commerce and territories of the diverfe powers concerned in the laft war, as well before its commencement, as fince the peace of 1763 .

The author being convinced how much the profperity and the trade of this nation depend upon the mechanical and manufactural arts; and how greatly their ingenuity in working up their wares, commodities, and manufactures of a good quality, to recommend them to all foreign ftates and empires; has been remarkably elaborate in his endeavours to excite and ftimulate thofe artifts to make every fort of improvement in their refpective employs. He has fanguinely pleaded their caufe with the government and legillature, that all wife encouragement fhould be given to this body of ufful undertakers; to the end, that their induftrious ingenuity may not be furpaffed by any rival nation whatfoever, more efpecially by France.
From this motive, the moft judicious laws, edicts, and arrets of that kingdom, relative to the reftriction and regulation of the meaneft manufactures amongft them, that every workman might be obliged, by fuch rigid laws and regulations, to make his goods agreeable thereto, for the credit and reputation of that nation are duly reprefented. For by thefe wife regulations it is, that France has hitherto furpaffed and out-rivalled all the world in their manufactures: and by thefe means they at prefent.worm Great-Britain, more or lefs, out of every branch of trade in Europe, and elfewhere. Nor could any thing have ever fo efficaciounly accomplifhed this great end, fince they add the cheapners, of their commodities to their external qualities.
Some people being pleafed to cenfure our taking fuch notice of the regulations of the French in the above refpects, as thinking them too trivial to be duly remarked on in a dictionary of commerce; we differ in fentiment: and we have the judgment of the Britifh legillature to confirm us therein. For whoever is converfant with our flatute-laws of trade, will find that every branch, at one time or other, has been very minutely lifted into, and put under very minute and fevere regulations, for the credit and honour of the commerce of the kingdom. But the difference between us and: France confifts chiefly in this; that they take no lefs care in the execution of their laws of trade, than in making them: we are remarkable for good laws, but are fhamefully neglectful in their execution. Is it not upon this account, that our bakers are fuffered to adulterate their bread, to the injuryof the public health; and to daily trick the poor in the weight, as well as the rich and poor in the quality of their bread? In France thefe things are better guarded againft.

In the like manner, and for the fame reafons affigned, we have taken notice of the brewers of France. This being a refpectable branch of trade in England, we have pointed out the regulation under which it is put in France; to the end, that if the Britilh legilature fhould think proper to adopt any of them, they are ready at hand. Moft trades at one time or other have been abufed; and it is, therefore, the parliament have been obliged to lay them under fevere laws and reftrictions. And can this nation be too well informed in the regulation of other countries, to furnifh them with every ufful hint and intimation? They certainly cannot.

Will any one that undertands trade fay, that bakers and brewers have no connections with the fubject ? Why do the Britifh ftatutes abound with peculiar laws for their regulation? Why do we fay, that bread is the ftaff of life? Does not the landed intereft greatly depend upon baking and brewing? May we not as well fay, that corn is no article of trade, and not connected with it? Does the revenue gain no advantage by the malttax, or the excife in brewing? What would the induftrious poor do without due regulations by law in baking and brewing? They would foon have bread unfit to eat, and beer to drink!

Abftraft of the laws of other nations refpecting many trades as well as abftracts of our own, has been efteemed a very ufeful part of a dietionary of commerce: without due notice taken thereof, and without making the ufe and application of them as is done in this work, it would certainly have been judged very imperfect. And can the public expect a complete dictionary of trade without them.

This work abounds with no fmall variety of fuggeftions and intimations for the advancement of numerous branches of the trade and commerce of thefe kingdoms; which every difcerning reader will make his proper ufe of, either for his own private benefit and advantage, or thofe of the public. Many manufacturers have wrote letters to the author, returning him their grateful thanks for the fervices he has laboured to do them; and he has been happily inftrumental to fet feveral new manufactures on foot for the public interefts.

The peculiar intereft of tradefmen in every refpectable branch of bufinefs is herein promoted to the utmoft; and that of the merchant and mercantile affairs, was never fet in the light they are throughout this performance; and we may appeal only to one fingle article of it; that of Mercantile College.
That a fummary view of the defign of this work may appear; we fubmit the following brief fketch of the contents to the impartial public.

## A GENERALIDEA of the CONTENTS.

THE prefent performance is compiled to anfwer the following purpofes.
The peculiar benefit and advantage of Britifh traders in general, in their practical concerns, from the fupreme merchant to evēry other fubordinate clafs of refpectable traders in the community.

For the ufe of fuch perfons of diftinction, who are defirous to obtain a political knowledge of trade and commerce.
For the fervice of fuch, who would become mafters of the nature and conftitution of the finances of this kingdom.

For the fatisfaction of fuch who would acquire a knowledge of the political fytems of commerce, that prevail in the feveral frates and empires of the world.

For the fervice of thofe who would be acquainted with the commercial and marine treaties, made between one potentate and another, for the maintenance of commercial intercourfe.
Concerning the commercial policy of ftates, as relative to the mechanical and manufactural arts in trading nations; and of the emolument arifing from the labour, induftry, and ingenuity, of all commercial artits.
The mutual advantage of Great Britain and her American plantations, in divers moft interefting lights. The reciprocal benefit of Great Britain and Ireland.
The landed and trading interefts harmonized. -
The monied intereft confidered in various important views, as compared with the landed and trading.-Of reductions of intereft.-Of fockjobbing, bubbling, and gaming, the deltruction of trade and traders.

The conftitution of trading and monied corporations : their ufe and abufe to individuals, as well as the community.
The immenfity of the national debts, and tax-incumbrances; and their deftructive confequences to the trade of the kingdom, if not fpeedily prevented.
Qualifications of the Britilh fenator.
The commercial conftitution of parliament.
The pernicious confequence of taxes on native commodities.

Of the revenue from the conquelt to the reign of George III.
Of importation and exportation, in a practical as well as political light.
Of the balance of trade.
Of augmentation and diminution of coin.
Of the feveral focieties for the difcovery of new arts, trades and manufactures, and their progrefs.
The utility of the Royal Society to trade.
The jurifdiction of the admiralty relative to commercial concerns.
Of the office of amballadors, refidents, and confuls, in foreign ftates.
Of the computation of annuities on lives, leafes, and reverfions.
Of commercial arithmetic; and of the foreign exchanges, and their arbitration, in a new and interefting view.
The art of debtor and creditor exhibited in a new concife light ; with the whole art of banking.
The new Mercantile College, for training of young Britilh merchants with greater advantages than ever. Alfo a new inftitution for the education of young perfons of diftinction for parliamentary bufinefs.
Of the conftitution of the feveral banks throughout Europe, with illuftrạtions.
The ftandard of gold and filver throughout Europe ; with the intrinfic value of foreign coins.
Of trading in bullion gold and filver, and foreign coins to advantage.
Of infurances of fhipping and merchandize; with grear variety of curious cafes, relating to this effential
part of the mercantile commerce-with the political difcuffion of the point of infuring the fhips and merchandize of enemies in time of war.
Of foreign weights and meafures, and the converfion of the one into the other.
The laws, cuftoms, and ufages, of merchants and traders, with refpect to foreign and inland bills of ex-change-with numerous important cafes adjudged in courts of law.
Of freight, bills of lading, mafters and owners of fhips, charter-parties, averages, baratries, bottomree, fhipwrecks, demurrage, and the laws relating thereto.
An ample reprefentation of the bufinefs of the cuftom-houfe, and it's feveral departments; the method of computing the duties of import and export; with an explanation fuiting all prefent and future books of rates : with abtracts of the commercial laws relating to drawbacks, bounties, and premiums for the advancement of the Britifh trade: alfo the penalties, as well as the rights and privileges to which traders are intitled, never before fo reprefented.
The act of navigation.
An account of the foreign fhipping frequenting the ports of England-with political confiderations, concerning the interefts of Britifh merchants, owners of fhips, and others, relative to the employment and increafe of Britifh Thipping, and Britifh navigators.
The fuperior importance of the city of London, as the trading metropolis; the commercial connections of it's tradefmen and citizens over the whole kingdom, as well as it's mercantile intereft over the world-the great influence of the trading citizens over the nation, on all ftate emergencies.

The fupreme dignity of London, as a corporation: fhewing that the greateft families in the kingdom originally fprung from our trading citizens, who have diftinguifhed themfelves as it's chief magiftrates.

Concerning the bad policy of want of harmony between the court and the city: the weight the city has given, and ever will give, to the conduct of government, both at home and abroad, in fupport of the national power and dignity.

Anecdotes of the diftinguifhing fervices to the fate of many eminent citizens of London, in commercial affairs.
Of it's incorporated city companies; and of the bodies of trade in the city of Paris.

Alfo all the various material French edicts, arrets, and laws, extracted from SAVARY, concerning the chief trades in France, from whence any ufeful intimations may be derived for the benefit of the Britim trade, as that nation have borrowed many good laws and regulations from this.
Many of the like laws, relative to the commerce of other foreign nations, from the fame motives.
Of the peculiar regulations of the French trading corporations, to fpirir up an émulation among their fraernities to excel in their refpective branches.
Of the ftrictnefs of feveral trading corporations of France, not to admit perfons to the freedom of their companies, without manifefting their qualifications for the fame, by the actual performance of fome mafterpiece of workmanfhip, in the prefence of the beft judges, fworn for that purpofe. - The fevere penalties in cafes. of connivance and corruption, on fuch like occafions,Their particular care and vigilance to manufacture their goods of the beft quality for foreign markets.-With Remarks, fhewing the political fagacity of the French to propagate their tride throughout the world, by fuch
like wife meafures.
On the circulating cafh requifite to carry on the trade of a nation.
Of the nature and effect of paper credit in commercial fates and empires.

The par and equation between gold and filver.
The reprefentation of Sir Ifaac Newton upon the neceffity heretofore of lowering the price of guineas, from 21 s .6 d . to 21 s . in order to prevent the fcarcity of filver coin in Erghard.

The ftate of the coin and coinage of England, from 'the revolution to the reign of his prefent majefty king George III.

Of the practical arts of aflaying gold and filver, nèceffary for the merchant or other traders, who may be concerned in trafficking therein, to determine upon their own judgment the value thereof, according to the current price of the ftandard gold and filver in England.

Of the art of affaying gold and filver from their ores; together with the knowledge of allmetallurgical operations to judge of mines and minerals of every kind, upon true philofophical principles: as well for the wife of private gentlemen as traders.
ar 9
Of fubterranean treafures of all forts, apdithe art of mineralogys and alfo of eftimable earths, clays, boles, manures, and their utility in the improvementof landed eftates.
rue! ecxiaz
Concerning the vegetable productions of tinature, confidered as the great objects of traffic throughiout the world; reprefented under the various ftates, kingdoms, and empires, geographically as well as commercially defcribed.
Variety of philofophical experiments, whereby an idea may be formed, of what fort of experiments are neceffary to be made, the better to judge of the quality and worth of certain natural productions.
Of the productions of are, refpecting great variety of capital traffickable commodities and manufactures,' as well in other countries as our own; in order to whet the invention of our artilts to imitate or excel them.
Of the judges, infpectors; and overfeers of the manufactures of France in particular, eftablifhed in the feveral provinces of that kingdom.-Many of the like kind of regulations for the advantage of the woollen manufactories of: Great Britain; which are Thamefurly neglected, to the degeneracy of the Englifh manufactures in quality.- The caufes hereof; and the ufe and abufe of fuch kind of regulations.
The extraordinary wife and political meatures taken by that able ftatefinan Monfieur Colbert, "of 1 France, while fuperintendant and infpectot-general of the commerce and navigation of that nation; with intent toeftablifh the valuable manufactures there, and perperuate their encouragement; which has had a tendency to.extend the commerce of France over the whole globe.Of patents granted in Great Britain for the like purpofes; with interetting obfervations on this head.
Public fairs, free and otherwife, kept ins France, and in other the moft remarkable places throughout Europe; allo of the Afiatic and African caravans, and how commerce is carried on by means thereof, and the caravanferas.
The commerce of the Chinese, and the Eaf-Indies, in general; by what medns 'carried'on.-Of the exceffive cheapnefs of their arts, manufactures, and produce; whereby all European nations are attracted to trade with them, and refort to them for their productions and manufactures. With pertinent obfervations to carry on this commerce both in a private and public way, the beft to the advantage of Europe

The peculiarities of the Turkey, Arabian, and Perfian trades, with fuitabie illuttrations.

Wherein the Britin improvements in the African trade confirts; and by what means one part of that commerce may remain free and open to our feparate traders; and by what meafures the inland trade: may be more cultivared by this nation than it ever was, to the greater emolument of this kingdom, and our EaftIndia company.

Monopolies in general and particular-Britifh laws relative thereto; with polititcal animadverfions.

Political arithmetic, and it's application to commercial affairs and firtances.
The funds of Great Britain confidered in diverfe lights, refpecting the trade of the kingdom.-The confequences to the nation, if we continue the deftruetive practice of funding and borrowing in times of war.
The injurious effects of becoming tributaries to foreigners, by reafon of the magnitude of the national debt--Of the great detriment our trade fuftains by mortgaging the funds of the kingdom.-With various fuggettions for their timely redemption. The difadvantage in rendering our funds irredeemable, when public exigencies required frefh loans.
That the exceffive dearnefs of all Englifh commodities and manufactures is occalioned by the great weight of the public debts, and the oppreffive incumbrances of taxes in confequence thereof.-That this exceffive dearnefs of Englifh commodities and manufactures, is the principal caufe of this nation being underfold at all the markets in, Europe, by the French and Dutch; and that this national evil has been growng, as our national debts and taxes haye increafed, and is at prefent arrived to a greater pitch, than was ever before experienced by this kingdom.
That until the trade of England is freed from a confiderable part of it's taxes, we fhall never be able to fell Englifh wares fo cheap at foreign markets, as. our foreign competitors in commerce are at this time able to, do.
That the dearness of Englinh commodities, is the chief caufe of fmuggling being fo univerfal in Great Britain as 'well'as her American colonies.

That the prefent parliamentary provifion made for the fpeedy redemption of the numerous taxies on the Englifit trade, is inadequate to the purpofe intended.

That the height of the revenue of cuiftoms only proves, that our Imports of foreigh commodities and the foreign manufactures increafe, to the ruin of our native ones; and that mortgaging that revenue, is greatly detrimental to the tuade of our exports.
That the commercial grievances of England daily increale; and that the chief caufes thereof feem quite unattended to
That this performance is intended to fuggeft variety of ways and means, whereby the commercial grievances of the kingdom may be relieved.

That one great end deffigtied to be anfwered by this work, is to promote a happy and lafting Commerciaf Union between Great Britain and her American colonies at this critical juncture.

And as the authorapprehends, that nothing has beeri, or is fo detrimental to the whole trade of England, as the multiplicity of tax-incumbrances', which he conceives is the great caufe of the general dearnefs of it's commodities and manifactures in foreigri countries, notwithftanding the drawbacks allowed; fo he humbly conceives, that he cannot be of more fervice to the nation, than:Itarting a defign to fave it the future expence of engaging in the Continental Wars of Europe ;tince, they have hitherto contributed fo greatly to the enhancement of taxes uponour trade in gerieral.
With many othet interefting additions, of no lefs confequence to private traders than to the whole Britifl empire, never before publifhed. The whole containing a greater fund of commercial knowledge, relating to univerfal trade and navigation, both practical and political, than ever appeared in any dictionary of commerce; in this, or any other ftate or empire: and the great end aimed at by the author is to promote and advance, to the utmoft of his abilities, the commercial profperity and happinefs of the Britifh empire, and her. colonies and plantations in America.

THAT a better idea of this performance may be' formed, than fierely by the preceding fketch of it's general contents, it may alfo be proper to obferve, that our labours abound with occafional animadverfions therto been the great jiftruments of rendeting the fame what it at prefent appears to be; fo the continuance of the fame caufe can only tend to it's lafting fupport and prefervation.
Upon the peculiar atts of carrying on trade, as well for the benefit and advantage of the community in general, as indiyidials therein employed, we haye largely expatiated upon pertinent topics: for we look upon the arduous induftry of traders, to be productive of the profperity of the kingdom; and that commercial vigilance, activity, and induftry, cannot be too much encouraged and inculcated.
If we confult hiftory, whether ancient or modern, we fhall find that idlenefs and luxury have, in all ages of the world, been the nurle and parent of voluptuoufnefs and effeminacy; which gradually increafing in proportion to a conftant diminution of labour and induftry, finally brought an irreverfible deftruction uponi fich countries, " wherever they gained the general afcendancy:
The monarchy of the Aflyrians is a pregnant and remarkable inftance; which degenerating from thofe mafculine and great atchievements which originailly gave rife to their univerfal greatnefs, into a libidinous and intemperate courfe of life, became an eafy prey to Cyrus the Great
Thus it fared with the Perfian monarchy; which being over-run with eafe, luxiry, and riot, with foft and effeminate delights and wanton pleafures, with all manner of delicacy and licentioufnefs, feemed to the great Alexander rather like beafts fitted for the flaughter, than for labour, bufinefs, and induftry; and gave his warlike Macedonians more trouble to difrobe them of that pageantry and fumptuous apparel, which, like to many theatrical grandees, they came vainly adorned with to battle, than they found in obtaining an eafy conquelt over thofe puililanimous and gaudy Perfians, who fcarce gave any oppofition.
But then, how quickly do we find the fcene changed in this mighty conqueror, who no fonncr devoted himfelf to pleafures, and to fotter himfelf in idlenefs and immoderate excefs, but this very man, who had been the terrof of the univerfe, became the fcorn and contempt of his own foldiers? Whilft he purfued the Macedonian frictnefs, and following the genius of his native country, by a warlike activity, vigilance, and induftry, fo long they adored him as a god: when he began to wear the effeminate apparel of the Perfians, and to habituate bimfelf to their vices, even his greateft favourites hardly accounted him a man; whofe debauchery and intemperance foon put an ignominious period to the life of that once illuftrious prince, and to the Macedonian empire, which otherwife might have been of permanent duration.
The like ill deftiny attended the Roman monarchy: when the Turks, who had been conftantly inured to hardfhips and perpetual toil, found the others a people uneafy with their plenty, and fo burthened with their. time, that it was difficult to find ways enough to fpend it.
And it was, doubclefs, forefeen by that grand impoftor Mahomet, that idlenefs and luxury would, if indulged, fo gradually enervate that mighty empire, as foon to bring it to deftruction: for the prevention whereof, like a fubtle legillator, he enjoined it as a law, which even their very emperors were not to be exempted from; namely, to eat no more than the labour of his hands could purchafe every day
It would not be a talk lefs arduous than difagreeable, to reprefent the miferies which at this day attend upon thofe people, who are denied the unfpeakable benefits of arts, labour, trade and commerce. How do the wild Arabs live, and affociate with their herds? from whom, befides the erectnefs of their ftature, no other marks of diftinction are fo vifible upon them, as that they are the more careful beafts in providing for their companions.
For want of arts, induftry, and trade, to civilize the aborigines of America, how miferably wretched are they; in comparifon to the commercial Europeans? What avail the immenfity of the richeft territory to Indians and Caribbeans? Was it not for the perpetual exercife of the European arts, ingenuity; induitry, and trade amongft them, what chance would they ever have ftood to become humanized?
To come nearer home: we find the Irifh, by the accounts given us in their own hiftories, written in their native tongue, to have been fome of the moft abject and miferable people in the univerfe, when the Englidh firft arrived amongt them. Before the Englifh conqueft they were not very numerous, and lived in great idleriefs and floth, being deftitute of arts, labour, and commerce; which put them upon a neceffity of committing rapine, and continually preying upon each other for fubfiftence: for another man's herd being more numerous than that of his neighbour, feemed juft grounds of waging war with him. But the Englifh laws and government having introduced arts, labour, induftry, and trade among them, they have grown populous and wealthy humane, civilized, and polite, in comparifon to what they were; excepting thole who, among that nation, will obitinately adhere to their life of indolence, and favage brutality; of which the late and learned Dr. Berkeley, bifhop of Cloyne, greatly complained; and from which he took great pains to reclaim them.

As the progrefs of traffic hath advanced in every country, fo hath that of arts and fciences, civility, and urbanity. For when trade and induftry adminiftered wealtti and honour, then was encouragement given to letters: in return for which, learning and fcience have contributed to the general advancement of trade and commerce. In this ifland our ancient Britons, the Picts and Scots, were little better than other favages of the human race.

To evince how unfpeakably mankind in general are indebted to trade and commerce, we need only take a trathient retrofpect of the hiftorical ftate of all civilized countries in the world, and compare them with the prefent ftate of thofe countries that have made no fuch advances. The confideration of the trifing degree of trade, which is carried on in the large territory of Barbary'; is it any wonder, that the people remain favage, even to a degree of brutality? What further conviction can be required, that commerce with other nations, as well as within themfelves, has an apparent tendency to polifh and civilize our fpecies? In confequence thereof, has not government been eftablifhed, and mankind ruled by falutary laws that haye conduced to render thern far happier than their original ftate of nature, without commerce, feemed to admit of The contemplation of the ftate of our own country, when our commerte was in it's infancy; and to compare ourfelves then with what we at prefent are, there will appear to be almoft as much difference as there is now betwedn fome of the Barbarian countries and our own. Should not this confideration afford us juft notions of the invaluable bleffings of the commercial itate, beyond that of the Hottentot?

Since it is a true maxim, that by what means any thing is acquired, by the fame it is preferved; it muft ever be for the intereft and glory of this nation, to cherift and encomage to the utmoft the commercial arts of every kind, which have hitherto been productive of our giahdeur and felicity. Does it not hence follow, that frudies of this nature cannot be too watmly and zealouny protnoted by thofe who with well mankind, and have any regard to the welfare and happinefs of their native country? What would our gentry, our nobility, or our fovereign be better than thofe of Barbary, was it not fot onir fuperiority of traffic and navigation? Nay,
were we quite deftitute of trade, and as little acquainted therewith as any of the moft unkriown and intraficable parts of Africa, what reafon have we to imagine that we fhould be better than they? Were the inhabitants of this illand traded in, by the other European nations for flaves, as the negroes of Africa arc, to the ignominy of all countries who carry on this inhumane commerce; what more fhould we iflanders have to boait of than thofe wretched Africans? Can we civilized and polite Europeans think, that the people of fo extenfive a territory as Africa, above 4000 miles in length from north to fouth3, and near the fame in breadth from eaft to weft; were defigned by the Supreme Being, either to be made flaves of by Europeans, or to enllave them, as fome parts of the piratical ftates do the Europeans, in return for their fuperlative humanity? Will not Africa admit of a commercial civilization no lefs than other barbarous parts of the globe have already done? Will not this quartr of the world allow of a far more extenfive, and lucrative trade with Great Britain, as well as other countries; than ever it yet hath done?' Are not thefe people, notwithftanding their colour, capable of being gradually nurured in all the arts of humanity, by the means of trade, as well as many barbarous nations have been? Is there no probability, that the Africans in general, by the wife management of the Europeans, might become as induftrious and ingenious in all the agricultural, mechanical, and manufactural arts, as the people of any other country? Are not their rational faculties in general, equal to thofe of others of the human fpecies? Would it not be far more beneficial for all the trading European ftates, rather to endeayour to cultivate a friendly, humane, and civilized commerce, with thofe people, into the very center of their extenfive country, than to content themfelves only with fkimming a trifing portion of trade upon their fea-coafts? Has not the author of this performance, to no purpofe yet, many years fince fuggefted ways and means, whereby this might be done to the immenfe benefit of the Britifh empire? What avails the infignificant advantage we have received by driving the French out of the river Senegal, in comparion to the great and important defigns that have been propofed by the author, to enlarge and extend the whole of that commerce in times of peace? Might not what he intimated on this head enrich a commercial corporation, as well as the kingdom, far more than any of their Afiatic trade hath hitherto done? Might not this be effected, even confiftent with the prefent freedom of the African trade, and thereby give no umbrage to the feparate traders? This. I have thewn; and fome people may be fooner obliged to take due notice of it, than they, at prefent, feem to be aware of.
Certain it is, that the effectual advancement of the whole African commerce, as the fame might affect the intereft of thefe kingdoms, would be attended with the increafe of divers other branches, that would be connected therewith. Both our exports. and lucrative imports might be very confiderably augmented; by which our commercial induftry would render the kingdom more and more profperous, wealthy, and formidable.

The Germans are a people inferior to none in their veneration for antiquity, and due eftimation of noble blood, that is derived from a race of virtuous and honourable progenitors; on which they fet fo fuperlative a value, that they defpife to an excels, an intermixtion with the plebeian crowd: yet amongft their nobility, the younger of whofe families are employed in their armies, there is rarely found one of them deftitute of fome manual art; by which, if reduced to extremity; he might be able to get a livelihood, rather than fubfift upon the benevolenice of others. For this they look on as moft ignominious fordidnefo of temper, to which they bear an abhorrence and deteftation; having fo much of that brave Roman fpirit, which had rather lofe a life than hold it at the courtefy of another.
This brings to remembranee a ftory that ufed to be told, at his time of unbending from regal concerns, by that illuftrious prince King George the firt. About the year 1615 , there was a nobleman in Germany, whofe daughter was coutted by another young lord. When he had made fuch progrefs in this affair, as is ufual by the interpofition of friends, the old lord had a conference with him, alking him, how he intended, if he married his daughter, to maintain her? He replied, equal ta her quality.: To which the father replied: That was no anfwer to his queftion; he defired again to know, what he bad to maintain her with? To which the young lord then anfwered, he hoped that was no queftion; for his inheritance was as public as his name. The old lord owned his poffeffions to be great, but ftill anked if he had nothing more fecure than land, wherewith to maintain his daughter? The queftion was ftrange, but ended in this: that the father of the young lady gave his politive refolve, never to marry his daughter, though his heir, and would have two fuch great eftates, but to a man that had a Manual Trade, by which he might fubfirt, if drove from his own country. The young lord was mafter of none at prefent, but rather than lofe his miftrefs, he requefted only a year's time, in which he promifed to acquire one: in order to which, he got a balket-maker, the moft ingenious he could, meet with, and in fix months became mafter of his trade of bafket-making, with far greater improvements than even his teacher himfelf: and as a proof of his ingenuity, and extraordinaty proficiency in fo fhort a time, he brought to his young lady a piece of workmanihip of his own performance, being a white twig bafket, which, for many years after became a general fafhion among the ladies by the name of Dressing-Baskets, brought hither to England from Germany and Holland.

To complete the fingularity of this relation; it happened fome years after this nobleman's marriage, that he and his father-in-law Sharing the misfortunes of the wars of the Palatinate, were drove naked out of their eftates; and in Holland, for fome years, did this young lord maintain both his father-in-law and his own family, by making bafkets of white twigs, to fuch an unparalleled excellency as none could attain : and it is from this young German lord, the Hollanders derive thofe curiofities that are ftill made in the United Provinces, of twigwork.

It is a laudable practice in all nations, to manifeft a fondnefs and ambition for arts and mechanical employments, whereby to avoid both idlenefs and future diftrefs and difficulty. If we defcend to the lower and meaner fort among the Germans, we find their induftry for remarkably great, that even children-of four years old will earn their bread : add to this, that they are kept out of harms-way by the fame diverion, though more profitable, than we keep our children in this kingdom: that is, by making toys, painted boxes, pipes, \&cc. for our children to play with: they employ all the children of a tow, from four years to eight. When they advance more in years, it is then ufual to pitch upon a trade; and generally they apply themfelves to that of their fathers, whereby you fhall oftentimes find them to derive their pedigree and their uninterrupted fucceffion in the fame trade or employment, in a continued line from father to fon for fome hundred years. And this genealogy, in many reputable families, as well in occupation as defcent, is infifted upon by them with as much pride and oftentation as can be fhown by their nobility, in their continued, tracings and derivations of themfelves from a numerous and ancient ftock of their famous and heroic progenitors.
It is not their practice, as with us in this kingdom, to bind an apprentice to a trade for feven years; three or four is theircommon ftandard: the reafon is, becaufe they are educated from their cradle to fomething of manual employment, which renders them the more apt: and docible, and confequently the more capable of attaining to a ripenefs and quicker proficiency in bufinefs; Whereas our youth, here in England, being bred to no fort of manuad operation before they enter into their apprenticehip, make a very Iow progrefs, and require much longer time wherein to reach the perfection of accomplified artifts.

## INTRODUCTION.

Such as are of families uneducated in the mechanical or manufactural enployments; are made ufe of either in affairs'military, or elfe in ftudies of genteeler and finer arts than either of thefe: by which admirable decorum, fo regularly obferved, in proportioning every order and degree of men among them to their fuitable and refpective vocations and capacities; it thence happens, that in whole provinces there is not a man that eats the bread of idlenefs, of of other mens labour and iniduttry.

In the Hanfe-towns they ftill hew a greater care and folicitade in concerns of this nature, not judging it expedient to admit of mone man an ufeful and competent number for the city, of any who profers the liberal fiences; buts on the contrary, oblige all theqir natives and inhabitants, either to merchandize, navigation; or to manual arts and manufactures; infomuch, that the famous mart of Hamburgh, to which belong more fhips of burden, for all manner of trade and comnierce, than to any city in Europe, London and Amfterdam excepted, admit, as we have been informed, of no more than one phyfician, of two civilians for the law, and of but one divine, befides thofe who are conftantly employed in the city: yet on the contrary, they give great encouragement to men of all nations to inhabit among them, that are trained to mechanic labour and the feafervice, accounting him but a neceffary evil, whofe induflry and parts lie only in his brain, or bound their fituntion in the tread; and one of fuch they deem fufficient for thoufands, who work with their hands.

By reafon of which orderly management of affairs, and the provifion made to promote labour, and to difcourage idlenefs and all ufelefs and unactive men, it is very remarkable, that in this city we fee no beggars: yet many aged and unfortumate poor there are, occafioned by loffes and accidents at fea; but then fo charitable commiferation of their condition is entertained by the government; that in all bargains and contracts in that city; fomething is preferved as a voluntary gift for the poor; and this is repofited iff the hands of the minifter of the parifh, who has church-wardens joined with him, in order to make a right diftribution thereof among the proper objects.-A thip does not go to fea, without an iron box for the ufe of the poor, of which the keeper has no key, but it is kept by the minifter and church-wardens; and upon the return of the voyage; when the maiter receives the facrament, he brings to the altar his box, which he ufes all care to reptenifh; and thefe is not a feaman in his hip bat puts fomething into it, whenever he receives his wages.
It would be needlefs to inftance the example of the United Provinces, which are lo"defervedly famed throughout the whole univerfe for their eminent and induftrious improvements, and for fuch fuperadditions of art to nature; which have been of far more utility to them than all their martial ftrength and exploits, for the defence of their conntry againft their enemies, and have advanced them from the poor and diftreffed, to the honour able title of the high and mighty ftates of Holland. Is not this, formerly ufelefs and fmall foot of land, become the richeft in Europe? Is not this a glaring demonftration of the miraculous power of trade and induftry, antid of thofe proditious acquifements to which human nature is capable of attaining, by a laborious and indefatigable purfuit? Does not this reflect difgrace anid jgnominy upon their neighbouring nations; whilft enjoying feftike and profitable countries, both fri thelr fituation, and other abundant national emoluments, far fuperior to the Utfited Provinces; which fuffer their land to lie wafte and uncultivated; and neglect all the opportunities both of art and nature, whereby to inrich and emprove them? On the contrary, are not the Dutch forced to change-the very elements, having more inhabitants living upon the water, than they have upon the land; which is fo plentifully ftocked, that it admits of no more?

In Flanders they admit no young men to enter into the matrimonial ftate, without firft obtaining a certificate from the magiftrate of the place of his refidence and abode, fetting forth his having planted fuch a number of trees, \&cc. \&c. The truth of this point might be demonfrated from a great variety of other inftances, both of countries and perfons, which are pertinent to the prefent defign: but, aiming at brevity, thefe may fuffice to Thew the great care and laudable endeavours of fortign governments, to oblige their people to labour and induftry, by the cultivation of ufeful arts, trade, and commerce?

It is matter that deferves confideration, what vocations and employments eqvery part or clafs of the kingdom is moft fit and proper for; and when there is not employment in manufactures, if it be near the fea, to employ them in fifhing or navigation; or if they do not take to either of thefe, and their native country does not af ford them other employment, they fhould then be duly encouraged by the flate to remove to other parts of the Britifh territoriest that they might not remain ide' hands at home.' For want of due attention to this policy, hew many hundfeds' in the year are cut off by the hand of juftice, that' might have became more ufeful member's of the kingdom? Nor is this the-cafe of our numerous poor only, who may have been bred to fome indurtrious employment; it is that of too many gentlemien's children, who not only oftentimes become a charge, but enemies to their native country; by being an annoyance to thofe who are the bleffings to it, by their honeft labour and induftry, in fome ufeful employment. Is not this frequently owing to their education? Is it not a ftrange piece of gentility, that looks upon it as an invafion upon it's privileges if put to a trade, and will rather fubmit to a halter than indentures.

The glory of a kingdom confifts in men and money: England enjoys, in a good proportion, the bleffings of both, but might be improved to more than double. At the moft moderate computation, it is not half peopled; and is not the beft way to fupply that deficiency, by excitements to general induftry and trade? This would not only increafe the treafure of the nation, but that which is far more eftimable, the treafures of men. It is a matter as well of experience as lamentation, that want of employment puts men upon loofe and unwarrantable actions: idlenefs muft be fed, and luxury indulged, and pride and gentility fupported; and when profufenefs and diffipation become habitual, and have deftroyed the hereditary fubftance and patrionon, efpecially where there is but little at firf,' which is commonly the cafe of younger brothers, then the genteel way of taking a purfe, is generally the prologue to the fucceeding trigedy, whofe fcenes are as difmal as-they are common. If fuch idle extravagants cannot maintain themfelves fingly, without plunging into thefe deftructive counfels, how can they provide for a family? Wherefore, if fome happy expedient was thought of to prevent children who have not a certain degree of fortune, from being admitted to be kept longer at fchool than fourteen or fifteen years of age, and they were then put to fome trade or ufeful employment, there would be lefs work for the executioner; and probably, in twenty years to come, there would be a-greater number of people than in fifty
before. before.
If none under a handfome fortune were admitted to apply themfelves to literature, and to the fudy of the liberal fciences, it might be ldoked upon as an unièafonable limitation of fuch whofe natural genius and ability might intitle them to a very great proficiency in fiénee and learning; and confequently to very eminent ftations both in the church and ftate, and yet comee not under fuch qualified degrees of fortune as might be propofed. This, fay fome, would be a great offtruction and difcouragement to learing, which is as well the ornament, as the intereft of every nation to promote; and there are not wanting, inftances of fome confiderable perfonages, patrons of this kind, who were men of mean birth, and of an inferior fortune in the world. To this it may be obferved, that the limitation that might be fuggefted, would occafion no want or decay of ufeful learning in any, much lefs in all forts, where there fhould be many thoufands that would come under the
qualification
qualification fuppofed: and that ought to be fuch, as would render literature more refpectable than it feems to be in our days. Befides, ufeful trades and bufinefs have raifed people to as high a condition from a very low one, as the greateft learning, which we have fhewn in many parts of this work, and far more in number.

That the forrs of diverfe very ordinary perfons have arrived to an eminent height by their diftinguifhed literature, is a truth too undeniable to be difputed: and, indeed, by how much they have by their ftudies advanced themfelves from a low and defpicable ftate, to an high degree in the world; by fo much the more are they to be etteemed perfons more honourable, and merit our greater refpect; fuch who raife themfelves by their own acquifitions of virtue and induitry, from the plebeian ftate to that of fome exalted ftation, deferve our regard more than thofe who are derived from a long and uninterrupted line of heroical anceftors, but bafely degenerate from thofe noble and virtuous atchievements, which at firft ennobled the blood of their predeceffors. Thefe laft are as great a reproach and infany, as the others are a credit, both to themfelves, their progenitors, and their country. But then it mult be conflidered, that though there may, and have been fome rare learned men among the vulgar; yet there are hundreds for one amongft chem, who enter the ftage of life like Pharaoh's frogs, that only croak and make a noife in the country, and not meeting profperity for want of ability, become, inftead of an ornament; a difgrace and a nuifance to the kingdom. Were it not for this, we fhould not experience fuch variety of enthufiafm and errors in religion; fomany empirics in phyfic; nor fo many pettifogers and barraters in the law; all which are a difcredit to thofe learned profeffions, and a general detriment to the community: and, to complete our legions of fcholars, who rob the mechanic and manufactural arts and trades of various kinds of the like number of ufeful hands, the nation fwarms with beggars, who never having been bred to any of the ufeful arts connected with commerce, are unable or unaccuftomed to turn to what would certainly gain them not only a comfortable fubiftence, but probably á handfome fortune for themfelves and families, who, at prefent, become a burchen to the ftate. Has not the knowledge of mechanics, manufactures, and commerce, proved infinitely more beneficial to the mafs of the people, than the fubtilties and fooleries of the fchools, the arts of pedantry, and the crack-brained altercations of enthufiaftic zealots?

There is fcope enough for thofe of the plebeian ftamp, that are of a pregnant ingenuity, to employ it in the fine arts, and the moft curious fort of induftry and labour; wherein they may not only arrive to great eminence, but become more profitable inftruments to the good of the kingdom, as well as themfelves, than they can hope to be by their mere learning; of which we have no profpect of any want, but may be thought to ftand upon equal terms with any part of the univerfe. Nor are we yet arrived, in many of the mechanic and finer arts, to a fuperiority beyond feveral other nations; and thefe improvements feem naturally to be the province for the middling people of this kingdom to be engaged in, leaving the ftudy of human literature to thofe who are able to maintain themfelves, if by an adverfe genius, or other obtacles and exigencies, they fhould happen to mifcarry therein.

Should it be faid, that if we educate the younger fons of gentlemen to trade, it will hinder the nation from martial improvements, and fo reduce it to the neceffity of employing foreigners in the greateft pofts of truft in the army; it may be replied, that fuch of the younger brothers as are addicted to the military turn, may be eafly initiated into that employment, and fo may be reafonably accounted as if converfant in trade; and fuch as fhall affect the fea, may be bred to navigation. So that if the method fhould be purfued, of putting out all the youths of the nation upon fome ufeful employment or other, this fignal advantage would accrue from it; that whereas now armies are fupplied out of the vagrants and refufe of the kingdom, they would then be compofed of a better fort of men, though yet many of them fo extravagant as to be impatient under fober confinement and daily labour; but numbers of them would return to their refpective trades, when difbanded from the fea or the army.

From what has been urged, we are inclined to think, that the ufe of trades, and of every kind of the mechanic and manufactural arts and induftry, is more commodious, and more adapted to a trading ftate, than the educating the poorer fort only to learning and the fciences,

The advantages that will arife to the kingdom in general, by breeding and keeping all hands at work, are numerous; the chief of which we fhall briefly intimate.

We are, at prefent, fupplied from foreign countries with a variety of commodities, which our very numerous Imposts too fufficiently indicate; with which, if the kingdom and it's colonies were replenifhed with ufeful hands and artizans, they would amply furnifh us with. For what is it that makes the United Provinces fo full of merchantable commodities, and of their own arts and manufactures, which they tranfport to all parts of the world, but that every one there is bred to fome trade, and fo forced to rack their inventions to obtain an honeft livelihood? Notwithftanding they abound, proportionably to their territory, with fo many.people as would be accounted a burden to us, as we are at prefent circumftanced, yet they ftill give encouragement for foreigners or fugitives that are artizans to live amongtt them. And this fpirit for the advancement of trade and ufeful arts, diffeminates itfelf more and more throughout all Europe.

As this employing of all forts of people in the ufeful trades, commerce, and arts, would increafe the ftrength of the kingdom by the number of it's inhabitants; fo would it alfo as well the national riches and ftock by it's treafure, every bee then adding fome honey to the hive of wealth; and at the fame time would eafe every individual man from a great part of the taxes under which he now groans: a matter than which nothing is more wanted in this kingdom at prefent.

Another happy effect it hould feem to promife is, to difburthen the nation from beggars, who, by their multitudes, are become the ignominy, as well as the plague of it; whofe children are begot, and fo bred up in the trade of begging, as if they were embodied into a fociety, and eftablifhed by law.

There feems to be no effectual way of doing this, but by laying a good foundation, in taking up the younger fort, and putting them to working trades; and as for the elder and decrepit, that are quite incapable of any employment, fuch fhould be maintained by the parifh, but fo as to have no liberty for begging, as is too much the cafe: and will not the confequence be, that we fhall foon have no aged or decrepit poor, moft of whom are rendered fo, either by fraud and defign of vagrants themfelves, or by being the children of fuch, and fo for want of due care and attendance become deformed and maimed?

It is alfo to be remarked, that plenty of laborious mechanical and manufactural people, and people in trade, prevent famine in a nation; however paradoxical, at firf fight, this may appear, that the multiplying of mouths that eat corn, whofe hands fow none, hould neverthelefs increafe food: yet matter of fact folves it; for who ever faw a famine in Holland? On the contrary, they who fow none, do yet fupply other parts of the world with corn, and this they effect by means of their trade and navigation, which drives the more lucrative plough of the two, that of the fea.

It is obfervable, that no places are more frequently afficted with famine, than thofe countries which are employed in tillage; the reafon of this fcarcity is obvious; for if their corn fails, they have no other way whereby to fupply their want; but it is otherwife with thofe who depend upon arts and maritime trade, for the extent of

Vol, I.

their

## INTRODUCTION:

their harveft reaches to the utmoft confines of the known world; and if one place fails, they can eafily have recourfe to anocher by their navigation.
Labour and arts are a means to purchafe to us one of the greateft bleffings upon earth, health and the length of days; for it both prolongs life, and prevents untimely death. For proof of the firt of thefe it is obferved, as a matter of conmon experience, that there are more old men, who from their infancy have been employed in labour and trades, than there are of gentlemen; which is confiftent with what the phyficians affirm with truth and reafon, that the work of the body is not fo deftructive of, nor decays the vitals fo much, as the ftudy and labour of the head. And that labour and trade prevents untimely death, is a truth fo undeniable as needs no arguments to confirm it, every day's experience fufficiently evincing, that when youth are educated in the way and courfe of conftant trade and bufineff, their heads as well as their hands are ever employed; which leaves them no room for vicious plots and defigns, nor for pinching necefiity to enforce their breaking through the laws of God and man, to make provifion for thofe lufts and exorbitancies, that at length, bring them to the gibbet.

As men bred up to no ufeful trade or employment, and a fuperficial degree of learning, have rarely any virtue or religion; fo neither are they demeanable to the laws of the land, to which religion is the fureft tie or objection; and fubordinately to that, bufinefs and employment have the next prevailing force: for thofe naturally beget a property, which requires protection and fecurity by thofe laws; whereas he that hath nothing to lofe, nor endeavours to acquire any thing but by a manifeft violation and infringement of the laws, his finitter interefts are fuch as ftrongly incline him to deftroy them.

This work is defigned throughout to raife the fpirit of univerfal art and induftry in this nation, that the labour and ingenuity of our people, being inferior to thofe of no other ftate or empire, the kingdom may not dwindle into poverty and ignominy; and from being the greateft nation in the world, we may not become the leaft and moft contemptible. And really the face of things is fo changed to what it was, that general induftry and ingenuity feems to be at a fland among our mechanics and manufacturers; which muft be owing to the general bankruptcies that prevail amongtt the trading part of the kingdom.

The PRESENT COMMERCIAL GRIEVANCES of the NATION DELINEATED:

With their CAUSES and CURE briefly attempted.

Alfo Strictures upon the ILL STATE of the FINANCES of the KINGDOM; and a PLAN to cement a more interefting COMMERCIAL UNION between GREAT BRITAIN, and her AMERICAN COLONIES and PLANTATIONS, according to their prefent extent of Territory.

HUMBLY ADDRESSED TO THE PARLIAMENT:

> In tenui Res eff. Virgit.

TH A T trade which promotes the employment of our people, advances the fale of our commodities and manufactures, and encreafes our navigation, is profitable to the ftate; but that which obftructs the labour of our people, leffens the confumption of native wares, and employs the fhipping of foreigners is detrimental. Whence the confideration of exportation and importation arifes.
To give effectual encouragement to the exportation of our product and manufactures, common policy directs, that we fhall be able to fend them abroad as cheap, or cheaper than other nations, which are our commercial competitors; for wherever different nations attempt to outvie each other in the fale of the fame kind of commodities, the loweft price will be the governing market price, to which all other fellers muft be able to conform, or ceafe to trade at all.
From this motive the Dutch exempt their exports from all port-duties : the French have nearly followed their example. So impolitic was this nation as to vuninue to burthen our exports with the fubfidies of poundage, and other impofitions, as laid on by the ftatute of the reth Car. II. till they were difcharged therefrom in the year 1722 , by the act of the 8 th of Geo. I. cap. 15. §7. where it is faid, "And for the " further encouragement of the Britifh manufactures, that the feveral and refpective fubfidies, and all other "duties whatfoever, upon the exportation of any goods and merchandizes of the product or manufacture of "Great Britain fhall ceafe and determine, \&c."

To what end was this act made by the Legillature, but to exempt our product and manufacture from all port-duties that render them dearer at foreign markets? But this exemption not being judged to reduce our wares to a price fufficiently low to enable us, at that time, to cope with our rifing rivals in trade in foreign countries; we allow drawbacks upon their exportation, of the inland duties, with which fome of our commodities are loaded, and would fill render them too dear for foreign markets. Accordingly the flatutes which impofe an excife upon various of our products and manufactures, are remitted upon exportation.
But it does not feem that the whole burthen of our excife and other inland duties that fall heavy upon our produce and manufacture, are drawn back on their exportation, whereby, it is feared, that the end of drawbacks is defeated; for is it not the intention of granting drawbacks to exempt our native commodities from all inland duties and taxes whatsoever, as the taking off the port-duties was, to exempt them from all fubfidies and other impofitions; to the end that we may not be underfold by any other trading nation? To this purpofe fhould not every duty, tax, or impofition of any kind, that heightens the price of provifions and labour, and every material towards a manufacture, and every ingredient ufed in the completion of the fame be drawn back; fince every burthen upon fuch material or ingredient, will prove yet a heavier burthen upon the manufacture itfelf, no lefs than the high price of provifions? Whereas our inland duties on our home confumption, by augmenting the general price of living, neceffarily augment the general price of all our other merchandizes: fo that unlefs every fort of taxation that tends to enhance the price of our commodities at home, was annihilated at their exportation, we cannot fay the drawback is effectual, to exempt our product and manufactures from all fort of duties and impofitions whatfoever that enhance their prices. 'Tis not the drawing back of one fimple excife dury, that will free the commodities from a multitude of compound of excife and inland duties with which a manufacture is direflly or virtually loaded at its exportation. Whence it fhould feem, that the fuperior price of Englifh manufactures to thofe of our rivals at foreign markets, is owing to the multiplicity of tax-incumbrances wherewith they actually continue burchened at their exportation, notwithftanding the fimple drawback allowed to render them duly cheap.

Certain it is from the flatutes, which grant drawbacks, that it was the fenfe of the Legillature above forty years ago, that we were then in danger of being underfold at foreign markets by foreign rivals; even when our tax-incumbrances on our trade were nothing like what they are ar prefent, our public debts then not being much above one-third part of what they now are.

Notwithftanding the taking off the old fubfidy and the granting of drawbacks; in the year 1735, and for fome time before, France began to underfell England, even in the flaple commodities of the nation, the woollen-manufactures, from ten to twelve per cent. at feveral European markets. Such being the precarious fate of public affairs from the years 1725 , to that of 1735 , our general taxes continued unreduced, and the kingdann received no general alleviation of its incumbrances upon trade, fufficient to keep us upon an equality of price with our competitors.

After the great Spanih war, and the peace of Aix la Chapelle, when our public debts were increafed about thirty millions more of principal money, and our tax incumbrances on commerce became confiterably augmented to anfwer the additional debts, France then began to underfell England at feveral oceign mirketc, from twelve to fixteen per cent. and upwards, and increaled thereby in their number of foreign pur hafers at many
Vol. I.
more new foreign markets. Since the further increare of public debts that have been contracted by the laft wart, and the further additional increafe of tax-incumbrances on trade, is it to be wondered thar France fhall at prefent be in a condition to encreafe their fales in every foreign country in the world at our expence, by underfelling us? Can any one be furprized to hear this; when, as a belligerant power, the expences of France, and their taxes upon their commerce and navigation, have bore little proportion to thofe of this nation, during the laft war?
And, indeed, it feems to have been the determined policy of that kingdom to beat us in trade, though they have been worfted in war. And what nteans can prove more effectual to conquer us in both? If once they can by fuch like meafures, bring Englifh commodities to fuch an exceffive height of dearnefs, that foreigners will naturally exclude them from their refpective ftates and empires, mult not all Englifh wares and manufactures give way to the more cheaper ones of France? Can any thing more effectually conduce to fupplant us in all the foreign markets'of the univerfe, than'commodities from ten to twenty per cent. cheaper than Englifh? What will any treaties of commerce avail to preferve our foreign trade? For although we are upon a level with our competitors in point of duties of import in the like commodities inṭo all countries, can fuch treaties have any effect to prevent their giving the preference to the much cheaper comonodities? It is impofible they fhould; however we may be anufed to the contrary. It would be an affront to the underftanding to attempt to prove, what all mankind readily allow, that the cheaper commodites will ever tand every where exclude the much dearer; and therefore, I fhall think myfelf better employed by obferving; that it is an undoubted truth, that France is able to underfell England in moft of her ftaple commodities and manufactures; and by that means fhe will run away with our forcign trade, and aggrandize her own upon the ruins of that of this nation, provided effectual means are not foon taken to prevent it by reducing the price to a par with thofe of our French and other rivals.
However obvious and glating the caufe of the high price of Englifh commodities is, yet too many feem inclined rather to afrribe it to any caufe but the true one, which alone is adequate to the effect: and I am perfwaded, that no other adequate one can be proved to exitt in this kingdom, except that alone of the weight of our prefent public debts, and of the oppreffive load of our tax-incumbrances in all their detrimental confequences occafioned thereby. This appears to be the cafe to me; which makes. it neceffary to repeat a few of thofe obfervations and arguments deduced therefrom, that are urged throughout all my writings upon this matter. For although there may occafionally be divers other concurrent caufes that have contributed Aill to encreafe the price of our commodities and manufactures in general; yet my fentiments are, that thofe caufes being only temporary, if they were removed, as it is to be hoped the wifdom of the Legifature will foon happily effect: notwithitanding fuch removal, it is to be feared, it may not greatly reduce the prices of Englifh commodities and manufactures in general, net near fo fufficiently as to enable this nation to fell her native wares upon a level in price with either France or Holland in particular; and therefore, as their commodities and manufactures will continue cheaper than thofe of England, thofe rivals, will fupplant us in the foreiga commerce of Europe, if not of other parts of the traling globe.

The temporary caufes that concur at prefent to make the prices of all Englifh goods fo dear, we apprehend to be thofe of fuffering the uniting of farms, monopolizing, foreftalling and regrating : but the grand caufes of all are our perpetuated taxes, to fpeak in parliamentary language, for the payment of intereft of the national debts till their redemption; together with our groat annual taxes fok the current seiwice, which the kiggdom has long bornc; we mean the land and malt taxes, in conjunction with our numberlefs perpetual ones. For lay the taxes where we will, they will all ultimately terminate on the commprce of the nation, as we are at prefent circumftanced; and an annual land tax of four fhillings in the pound, in time of peace, is detrimental to trade, though not fo directly and apparently difcerned and felt, with re= fpect to raifing the price of commodities and manufactures, as thofe taxes that are impofed directly on commodities, as we fhall fee by the fequel.

That our prefent taxes of every denomination, and more efpecially thofe impofed directly upon commodities, are the caufe of the high price of Englifh wares in general, appears from the following facts and apparent deductions.
Taxes laid upon native confumptions by excifes, confiderably advance their prices: they are, indeed, more than doubled, if not in many cafes trebled in their price to the confumer upon the merchandize by the augmentations, which the taxes make, in being paid and repaid by all the hands through which the merchandize paffes; and by the augmentations, which this increafed fum adds to the price of the crude materials, to the price of workmanhip, to the expence of the workmen and traders, which muft come out of the price of the merchandize that has undergone, and comprehends all fuch augmentations, and prove an enormous incumbrance upon Englifh product and manufactures; feeing that our taxes upon taxes are fo highly multiphied, by the immenfity of our national debts. It has become more neceflary than ever to recapitulate a few particulars that run through this work.
This point has been mot evidently and undeniably exemplified by the tax upon leather; by means of which it is found, that the price of fhoes is charged with numerous diftinct augmentations, which the leather hath paid, in paffing fucceffively from the hands of the grazier, through thole of the butcher, tanner, and his workmen, the leather cutter, the fhoemaker, and his workmen. Here are already divers proportional augmentaions of dearness for the fhoes, which they themfelves ufe, as well as their cuftomers; an expence, which every one of them muft regain on leather itfelf: then there is the augmentation of the tax itfelf, and feveral augmentations in proportion to the profits, which muft be made by the butcher, the tanner, the cutter, and the fhoumaker, out of the price thus fwelled of the leather.
A like tax will operate the very fame effect upon the candles and foap, the flarch, the beer, and other the numerous commodities, all which ufed by every hand through which the leather paffed in flooes to the hands of the confumer: here are again numerous other angmentations on the price of fhoes, from every one of thofe articles being likewife taxed.
All who contribute to the fabric and commerce of cloth, from the fhepherd to the wholefale merchant, wear fhoes; and every one of them muft charge the augmentations of them upon the wool, and upon the numberlefs fafhionin-rs it muft receive before it is manufactured into cloth. Thus the augmentations of the tax on the confumprion of neceffaries of life will be repeated ad infritum, till all thofe fums are ultimately p.id in an accumulated lump by the laft confumer. It will not, therefore, be hard to believe, that before coning to him, the tax will have been more than doubled, if not trebled; efpecially if it be obferved, that the tax is, by every one of thofe who pay it, and receive it again upon the merchandize, encreafed at lealt the intereft of the enhancement he bas made, reckoning from the firlt who pays the nalked tax.
In like manner operates the excifes on malt, beer, ale, falt, flarch, $8 x c$. \&c. and on all other neceffaries.

There is no propofition more evident, than that every tradefman, handicraftfman, labourer, or any other perfon, who fubfifts merely by the profits of trade or labour, muft neceffarily advance the price of the commodities he deals in, or the wages he earns, in proportion to every tax he is obliged to pay ; more efpe-

The ill State of our Finances: with a Plan for a more interefting Union between Greal Britain and America, 太ec. xiil
cially, as we have feen, thofe of excifes upon all our native commodities, or he cannot ponibly maintain himielf.
This price muft fill be further advanced, on account of every other tradefnan's taxes he is obliged to deal with for the common neceffaries. So that when any perfon of fortune, or tradefman, pays another tradefman's bill, he not only pays a proportion of his taxes on candles, foap, falt, leather, beer, ale, fhoes, \&c. $\& c$. \&c. but alfo a further proportion of the fame taxes, on account of every other perfon fuch tradefmen alfo deals with for neceflaries. To corroborate what has been urged - The taylor is obliged to pay an enhanced price for meat, on account of the butcher's taxes; and a further enhancement on account of the taxes paid by the feveral tradefmen the butcher deals with for neceffaries, which he mult charge on his meat, as it is the only article in which he deals. He alfo pays the like enhancements on the fame account to the baker, fhoemaker, and every other tradefman he deals with for articles, neceffaries, either for futtenance, or for carrying on his trade; all which enhancements he mult add to his own taxes, and charge the whole on the cloaths he makes.
As the taylor is obliged in this manner to enhance the price of cloaths, the Thoemaker mult enhance the price of thoes on the fame account, and add a further enhancement on account of the dearnefs of cloathsThe tallowchandler enhances on the price of candles on account of his own taxes, and feveral further enhancements are made on account of the dearnefs of cloaths, fhoes, \&cc. \&c. \&c. all which are abfolutely neceffary for fubfillence, and enhanced in their prices on account of thofe taxes. So that each alternately lays the feveral enhancements on the commodity he deals in, or adds to the price of his labour, until the whole comes to the confumer.
It may appear furprizing to thofe who have not confidered the confequences of laying taxes on neceffary articles, fhould it be afferted, that they are paid fometimes five hundred, and sometimes even a thousand fold by the confumer; and yet it is often the cafe, though little attended to.
For inftance, a pane of glafs that does not weigh a pound, which colt but a fhilling before the laft tax of a penny a pound was laid on glafs, was immediately advanced to the price of eighteen pence, which is 600 per cent. advance on account of this tax. The fhoemaker has in like manner advanced the price of a pair of fhoes that do not weigh above a pound, two hillings and upwards extraordinary, on account of a tax of two-pence a pound upon leather, which is above 1000 per cent. advance on account of that tax.

When the parliament laid the additional tax of three fhillings per barrel on beer, which is one farthing a pot, the brewers and vifuallers in conjunction, raifed the price of beer one half-penny per pot; fo that by thus doubling immediately the duty, they accumulated into their own pockets a fum full equal to what the legilature taifed by this tax for the fervice of the government; and at the fame time the beer was generally reputed to be much worfe in quality than what it was before the tax. The journeymen and day labourers, who are the chief confumers of beer, imagining that by this means they were ill ufed and oppreffed, raifed the price of their labour three-pence per day; the journeymen taylors, indeed, raifed the price of their wages fix-pence per day. Hence therefore, the publie, by means of this fimall tax being laid on one of the neceffaries of life, pays above eight times the fum that the government receives for the fupport of the fate.
Three-fourths of the people have been computed to confift of perfons without property, who work for their daily bread, and confume three fourths of our numerous excife commodities: wherefore, they pay threefourths of the excife duties thereon. As thefe induftrious people live but from hand to mouth, whatever taxes are laid on their confumables, they are obliged to fhift off, or they cannot fubfift at all: and fince thefe multiplied duties have been projected, they muftearn enough to pay the taxes, the enhanced price of taxed goods, and of the enhanced prices of all other neceffaries, viz. of meat, bread, cloathing, or whatever they muft neceffarily ufe. Confequently fuch taxes muft occafion the rife of the wages of the working people, as well as the prices of all commodities.
Tradefmien paying enhanced prices on every thing they confiume, as well as vend, mult have enhanced profits: for whether they lay out their ftocks of money in goods that bear their natural value only, or in goods that bear a double value, or merely the weight of taxes, fill a living profit mutt and will be obtained on the flock they employ. For the wages of the manufacturer, the mechanic, the labourer, and the general expences of the malter-undertaker, and tradefmen, being of neceffity raifed, the firft coft of goods miult be fo too: and confidering the various tradefmen's hands that goods pafs through in their circulation, from the workman and labourer, to the confumer, charged as we have feen, with profit upon profit by each of them, on account of the tax (which in fmall trades, that furnifh the induftrious poor, muft be very great, otherwife their returns being fmall they could not live) the enhancement in price thereby occafioned, may, at the moft moderate computation be computed at double, if not treble the grofs, taxes on moft goods to the confumer.
This compelling people in general to live at a much greater expence than if there were no fuch taxes, caufes a proporticnate general dearnefs of every thing throughout the whole kingdom, and amongt every clafs thereof; and mult not this general dearnefs of all our native commodities neceffarily affect our foreign trade, fince the fanne taxes are fo great an oppreffion upon our domeftic? For although we are amufed, I fay, with the drawback of taxes upon the exportation of many of our native commodities, yet is it poffible that the repayment of a fimple tax fhould exempt goods from various compound taxes, and the arbitrary enhancements upon enhancements thereby occafioned?

Whence it appears, that notwithftanding the temporary caufes before intimated, fuch as the ingrofing of farms, and of monopolizing, foreftalling and regrating, \&cc. being fo long fhamefully fuffered to prevail, have certainly concributed to the general expence of living, and thereby raifed the prices of commodities and manufactures; yet the combined weight of all thofe unnarural and illegal practices are not alone adequate to account for the exceffive height to which all Englifh wares are grown, compared with thofe of our trading competitors. But if we have recourfe befides, to the multitude of taxes upon taxes of every fpecies, with which the whole commerce of the kingdom is loaded, this will be found to be a caufe amply adequate to anfwer the effect our trade experiences.

Nor is the effect wholly to be afcribed to the fatal fyftem of perpetuated taxations, as before obferved: a nnual ones contribute their fhare to the evil ; and that not only by means of the matt but the land tax̌. For will not the continuance of four thillings on land co operate as to occafion the landlord to raife his rents upon the tenant? Will not he be induced to alleviate fuch an incumbrance upon his eftate as well as the trader the like upon his commodities? To actuate hereto, does not the landowner bear his proportion of taxes on commodities as a confumer, as well as every other clafs of the community? When the weight falls heavy upon him as weil in his landed capacity as in his confuming one, it is natural to eafe the burthen as much as he can.

As this is the cafe of the landed man as well as the trader, have we reafon to imagine, that if the tenant bears an advanced rent, that he will not in his turn alfo flrive as much as may be to fhift it from h's own fhoulders? To this end, mutt we not expeet that the tenant will reimburfe the extra expence of his ad-
vanced rent by the impofition of arbitrary taxes upon the produce of his lands? Whence at length does not the land tax terminate on the confumer of land productions, in the like manner as taxes laid on all other commodicies do? And will not the farmer and the grazier, \&c.. all concerned in agriculture, enhance their prices more than proportionate to the advanced rents upon them, as the trader does any tax upon his wares? Experience proves they all do this: nay, has it not grown a practice of late for the tenant to be faddled even with the whole land tax itfelf, as well as all ocher parochial taxes? And will not the tenant fhift what proportion he can off himfelf upon the public? So that every fipecies of taxes, lay it wherever you can, will fall at length upon the national trade; and when that is already overloaded, every addttion thereto becomes wery fenfibiy felt throughour the kingdom.
What occafion would there be for a four fhilling land-tax in time of peace, were not the public debts fo greatly augmented as they at prefent are? Does any tax require more equalizing than the land tax ; to the end, that in time of peace the landed interelt might have due relief, the better to enable them to fultain a greater lurthen in time of war? Should an equal land-tax of two fbilings in the pound produce what one of four fhillings now does, what reafon can there be to defer fo national a benefit? In this cafe, a general equalized land-cax of four fhillings in time of war might and would be neceflary in our prefent circumftances. And why fhould we not prepare for it, by giving all requifite eafe to the land in time of peace? Why fhould this faluary work be longer deferred; when we know not how foon we may ftand in need of fuch a meafure? While every branch of the perpecuated part of the revenue is thought neceffary to be put into a flate of improvement, what reafon can be affigned why the annual part fhould be neglected, when cur finances in general require every kind of improvement poffible? Procrattinating a meafure of this kind is deferring relief where and when it is manifettly required; for if that was immediately given, it might have no fmall effect to lower the geineral prices of provifions throughout the nation: an eafement of two fhillings in the pound to thofe who have fo long bore the burthen of four fhillings, may prevent the raifing of rents, and the confequence will be obvious; and thofe already raifed may, after their contract is expired, fall, if that cannot be obtained before. Nor perhaps would any thing be conducive to lower the general price of the neceffaries of life, next to that of regulating all public markets, and putting an effectual ftop to monopolifts, foreftallers and regrators.

We cannot put an end to thefe few obfervations, without noticing that trite remark in the mouth of too many; that if the induftrious poor can obtain enough to maintain themfelves in five days, they will not work the whole fix. Whence they infer the neceffity of even the neceffaties of life being made dear by taxes, or any other means, to compel the working artifan and manufacturer to labour the whole fix days in the week without ceafing. I muft beg leave to differ in fentiment from thofe great politicians, who contend for the perpetual flavery of the working people of this kingdom : they forget the vulgar adage, all work and no play. Have not the Engliih boafted of the ingenuity and dexterity of her working artifts and manufacturers, which have heretofore given credit and reputation to Britifh wares in general? What has this been owing to? To nothing more probably, than the relaxation of the working people in their own way. Were they obliged to toil the year round, the whole fix days in the week, in a repetition of the fame work, might it not blunt their ingenuity, and render them ftupid inftead of alert and dexterous; and might nor our workmen lofe their reputation inflead of maintaining it by fuch eternal llavery? Have not all wife nations inflituted holidays, fports and paltimes, for the diverfion of the mats of chc peopie? To what end? Certainly to give them a frefh relifh for their labour. And if they had not unbendings, we may prefume they would pine away, and become enervated as well in body as marred in undertanding. And what fort of workmanhip could we expeett from fuch hard-driven animals?

However fome London workmen may now and then impair their healths by drunkennefs and debanchery, the buflk of the induftrious artifans and manufacturers throughout the kingdom do otherwife; and when they do make a holiday, they will eafily fetch the loft time up, as they term it, in cafes of piece work, and many of them will execute as much work in four days as a Frenchman will in five or fix. But if Englifhmen are to be eternal drudges, 'tis to be feared they will degenerate below the Frenchmen. As our people are famed for bravery in war, do we not fay that it is owing to good Englifh roaft beef and pudding in their bellies, as well as our conftitutional fpirit of liberty? And why may not the fuperior ingenuity and dexterity of our artifts and manufacturers be owing to that freedon and liberty they enjoy to divert themfelves in their own way; and I hope we fhall never have them deprived of fuch privilege, and that good living from whence their ingenuity no lefs than their courage may proceed. However, fome regulations may be requifite, even for the diverfions of the induftrious poor.
Did not the common working people find time to fpend their earnings, what would become of the public revenue? If they may make three-fourths of the people of Graat Bricain, do not they pay three-fourths of the inland taxes? If fo, have we not feen that every thing they confune mult be proporionably raifed in price by being taxed; and how can it be expected that they hould fubfift at rates they did before our taxes were fo enormouly encreafed? When people complain of the wages of the induftrious labourers, and level all their might at then, are we not apt to neglect the effentials? Should we not rather fhow the neceffity of the reduction and annihilation of taxes, than fpend our political brearh in vain againtt the poor labourer? If. labour in general is too dear, why is not the real caufes removed? The effect will foon follow.
The fuccefs of a kingdom, fays a fhrewd politician, depends upon a wife regulation of its revenues; and particularly $f_{0}$ in a trading nation. For when taxes are not laid and levied in the nanner they ought to be, they are the ruin of the fubject, a moth in the treafury, the univerfal lamentation of a ftate, and the interelt and joy of our trading compelitors. But a wife difpofition of them is the foul of a flate, the life of the people, glory to a prince, grief and diftreff to foreign rivals, and a perpetual fountain of the richett bleffings to
human life.- I could wifh I had reafon to human life.- I could wifh I had reafon to fay this was the cale of the conftitution and ftate of the prefent revenue of this kingdom; but I am convinced it is highly exceptionable in its effentials.
As our mortgaged and perpetuated taxes on trade cannot be reduced or annihilated, 'till the public debts become fo, without detriment to the public credit of the nation, ought not every other evil that can be removed be fo, to reduce the price of things as much as may be, in order to give all poffible relief to the general trade of the nation? But after all, 'tis to be feared, that till the reduction of taxes hall be accomplifhed, our trade will receive no extraordinary eafe by very orher method that is in our power, perhaps; though what is in the immediate power of the nation to do, ought by no means to be delayed for more rea-
fons chan I cluufe to mention.

The only pariamentary provifion made for the reduction of the public debts, and the annibilation of taxes, is the ellablinment of the finking fund; and that having been inftituted near fifty years, but inftead of being out of debt by this time, as we have been long ago given to undertand we fhould have been, by means of the efficacious operation of that all redeeming fund, are not our public debts near trebled fince the firt eftablifhment of that fund? And are not the tax-incumbrances of the nation encreafed to a degree beyond the credibility of any perion who lived forty years ago? Was not that fund originally intended to have difcharged public debss contracted before the year 1716? Inftead thereof, has it not been appiied to the cur- the intereft of the public creditors became reduced in the year 1727 , from fix to four per cent. computations were made, that, by virtue of a finking fund of one million a year only being inviolably applied, to the difcharge of the national debt, and the favings that might have been made by compound intereft at four per cent. the nation might have been out of debt by the year ${ }^{\prime} 756$, fuch fund difcharging a debt of fifty millions by that time: and if the intereft of fifty millions Had been reduced in the faid year 1727 to three por cent: and there had been a million and an half facredly applied to the purpofe of difcharging the principal debt, it would have been paid off before the year 1752 - And that an hundred millions of principal money might have been paid off by the year 1765 : in confequence of which, all our perpetuated taxes were to have been redeemed to the public.-But after fifty years experience, all thefe expectations having proved vifionary; and what reafon can we at prefent have to truft to this fund for our general redemption hereatter? Has it not alfo been boafted, that this all redeeming fund was a greater fecurity to the public creditors for the certain repayment of their princjpal? And was not that made a pretence to ftrip the national creditors of one-third of their intereft by the year 1727 ; and fince of one half? In this manner have the creditors of the nation been amufed; and intead of their principal being rendered more fecure by means of the firiking fund, is it not become lefs fo? And the more and more, the public debss fhall increafe, the more and more infecure will the repayment of the principal be? And the more and more tax-incumbrances on trade fhall. augment, will not every fpecies of Britih commodities grow dearer and dearer? Is it poffible under fuch circumftances', that the trade of the nation can 'grow better and better'? Muft "it not, on the contrary, grow' worfe and worfe, and that of rival countries grow more and more profperous upon the ruin of ours?

Of thefe things the author has long complained throughout the courfe of his writings' he in particular forewarned the nation, at the commencement of the laft war, of what has come to pals, in his tract called Great Britain's True System. Herein he thewed the neceffity of raifing the supplieswithin the year, though he, nor any man elfe then thought the fupplies neceffary would have been fo enormous as they have been, and proved the ill confequences of doing otherwife: and while the anNual expence thall exceed the anNual revenue, he repeats it again, is it poffible our affairs fhould mend? Is it not a pernicious practice to borrow money at intereft on mortgaged funds? Is it not a ruinous practice to borrow on funds that fhall not within the year be applied for the payment of the principal as well as interest? Is it not a deftructive practice to load our commerce and manufactures with taxes in the manner that has been done, and to mortgage thefe deftructive taxes, for a time to come injudicioully as they have been? Hach not a total difregard to thefe maxims been productive of almof every commercial evil we at prefent labour under? And mult not a continuance in thofe egregious political errors one day make this nation rue it ; che landed, the trading, and monied interefts, will all inevitably feel the fatal effects of a feries of fuch perverfe and wrongheaded meafures this nation has purfued by the influence of weak and wicked minifters, fince the revolution? And if there is not public virtue enough in the kingdom to relinquifh fach a ruinous fyftem, and that without delay too, may it not be quite out of our power to do it, when the emergencies of fate may make it indifpenfably requifite to increafe our public debts and our tax incumbrances?

The time of peace is the feafon' for every kind of national improvement to be fade againft that of war: Should we neglect the prefent opportunity to extricate the kingdom from every difficulty, how can we expect
 tain ftate of redemption from its debts and taxes; I mean a confiderable proportion of them fpeedily, what reafon can we have to expect the confervation of our trade and commerce? And what a pitiful figure will the Britifh empire make without them?
${ }^{\text {' T Tis not paging off A' few millions of the national debts, without the reduction of taxes, }}$ that will give any fenfible relief to the commercial intereft. It may, indeed, as fuch expedients heretofore lave done, give a temporary political puff to the public credit." But what end will that anfwer ? Judge as we have repeatedly experienced. The confequence will be this: public credit will be bloated for a time; and then advantage may, and very likely will again be takeh of the happy crifis, to reduce the intereft of the public funds to two per cent, and what will become of the faving? Will it not be transferred, as ufial, to the unfathomable gulph of the finking fund? When it is arrived there, can we be certain that it will not be applied to the current fervice, if occafion requires? Or, may it not become, as it has done, a new additional intereft fund; whereby the more cafily to increafe the public debts, inftead of paying any off, to a degree of fignificance? And will fuch payments avail the nation? Can we expect more advantage thereby than what we have received by the paft payments fince the inftitution of the froking fund? And what eafement will that be to the nation? None at all : I pronounce, if conducted upon the fame principles of former payments; all which have terminated hitherto in the further reduction of the intereft of the public creditors; and can we think they will efteem that a benefit? The proprietor of $20,000 l$. in the funds will make a mighty figure in the world with his annuity of $400 \%$ a year; and a lady with her 20,000 . fortune will appear in great fplendor at Mrs. Cornelly's.

However agreeable fuch a further reduction of intereft may fit upon the ftomachs of fome, what mighty emolument will the trade of the nation receive by this thread-bare expedient? Can taking away one-third more of the fending money of thofe public creditors fubject thereto, benefit trade? Can they fpend the more the lefs they have to fpend, without breaking in upon their principal? To what a hopeful condition will fuch fund-holders be reduced, when they fhall experience their income to be reduced, and the price of all things to grow dearer and dearer? When a third part more of their prefent annuity of three per cent. Thall be pledged to pay intereft to new annuitants, or become otherwife applied, and their fpending money fhatl be curtailed, will not all the fecific funds feel the happy effects of fuch profound policy? But it will be faid, perhaps, that our acts of parliament abound with provifoes that obviate thefe trivial objections; for if any funds prove deficient, when once we have got fuch funds eftablifhed, the bounty of the legifature oblige themfelves to make fuch deficiency good the enfuing feffion : fo that any new funds, as well as our ancient ones, can never, in reality, become deficient, although their regular and commercial produce be annihilated. A very happy fyftem truly! An inimitable way of raifing money, without the appearance of NEW TAXES, however much the old ones thall be reduced. An admirable prop this to the public credit! Does not every man lee through this cobweb policy? What avails it, whether the funds, with which the public creditors are amufed, anfwers the purpofe for which they are pitched on or not, feeing their deficiencies are certain of being fupplied by the legiflature? But I would afk, Do not thefe deficiencies as well as any fpecific taxes fall upon trade? Does fuch practice any way leffen our burthens upon the commerce of the nation?

Though the deficiency is fupplied, what becomes of the furplus? Does this go to the payment of the principal for which fuch funds were new coined? We have feen what hath become of the old finking fund, conttituted of the furplufles of the Aggregate, the South Sea, and the General funds. As thofe furpluffes have been thrown into the finking fund for the payment of debts contracted before the year 1716; fo likewife have all the diftinct furplufes which have arofe from all the new funds that lave been eflablifhed fince, by the act of the 25 th of George II. for confolidating the funds. But what hath the nation been relieved of its taxes both by the means of the old or the New fund-surpiusses? I recolVol. I.
xyi The ill State of our Finances: with a Plan for a more interefing Úinon between Greal Britain and America, Esici
lect but one fingle appropriated tax that lrath been taken off, except the old fubfidy impored in Charles the Second's time, fince the year 1716, when the old finking: fund was firf eftablifhed: that was the falt duty, in the year 1730; and that was again laid on in the fucceeding year. So that however wife an inliitution the finking fund might have been in the opinion of fome for the difcharge of the public debts, and at length for the redemption of taxes appropriated for payment of the interett thereof; yet we find, that after fo many years trial and experience of its mighty effect for the natignal eafe, we haverreceived none at all. On the contrary, the public debts and tayes to anfwer them, are now brought to fuch an enormous height, it appears that both the old and the fubfequent finking funds have proved an encouragement to increafe both, initead of diminifhing either. And why? Beçaufe they have facilitared the raifing of money by repeated loan after loan, and been made an interest fund, inftead of a rideeming one, for frefh debts, or applied to the current fervice.

If ever it is intended to get rid of the public debts, without violating the public faith, does it not feem neceffary that another fytem fhould be eftablifhed for the purpofe? A new fund; which fhould never more be chiftened a Sinking Fund, but a sovereign debt-paying, of racher a tax-relieving fund, and nevé to be mifapplied

If the public debts fhall not be put into a fure road of redemption, but the ftate-creditors are to remain perpetual annuitants, it may not indeed be bad policy to think of reducing their intereft as low as we.can: in which cafe, the lower that is reduced, the nearer we thall be to get rid of a great part of the debt; for its magnitude will be no burthen, when we fhall pay no intereff for it; and the nearer we draw to a total exemption from the incumbrance of paying intereft, that may effectually anfwer the end of a fpunge, and then the kingdom will be in a happy tate to be fure!
But perchance the wife fcheme of reducing of interef further may defeat itfelf; for when the public creditors are fo alarmed, can we be certain that they will not fell out their funds as faft as they can? And will a run on the funds make the reduction of intereft more eafily practicable? It will not only render the project abortive, but may give fuch a blow to the public credit as will not facilitate our borrowing more money, when we fhall have the utmolt occafion for it. Wherefore, it is to be hoped, that fome fuch confideration may contribute to the laying fuch a fcheme afide, if it ever was intended, as hath been lately talked of among fome great politicians.

Let any gentleman reflect a moment upon the ftate of the old finking fund fince its commencement ; and will he not be convinced that the public creditors have been fleeced of too many millions already to admit of more? Had we from the firft eftablifhment of that fund to pay off the debts contracted before 1716 , have been refolute to have raifed the fupplies within the year, the old finking fund, as it increafed, might have been made a permanent redeemer of the old debts.

Nay, although it had not been found practicable to have raifed the whole of the fupplies neceffary withinthe year; and we had, therefore, been obliged to have contracted occafionally fome new debts, yet had the finking fund been made the right and proper ufe of, the nation need not, perhaps, have been near one moiety of the principal fum indebted it now is ; a great part of the load of our tas-incumbrances have been prevented, and the public credit bottomed on a more folid bafis than it at prefent is But this matter hath been egregiounly miftaken, and by thofe too who have been accounted fuperlative financiers.

However well the finking fund has been imnroved to farilitate tho comeafo of ahe public dehte and taxes, it has been badly fucmed, as was at frft intended, to eafe the nation of the latter. And what benefit is it to the community to pay a few millions now and then of the principal money debt, without reducing at the fame time our taxes :

But in fuch manner is the finking fund conftituted, that no taxes have been taken off, when any parts of the debt have been difcharged: and, indeed, fuch is the nature of that fund; that if taxes had been reduced, as we might have paid the principal by means of that fund beyond the favings made by the reduction of the intereft money, fuch reductions of taxes would have undermined the very foundation of the sinking fund itself. For the whole of that fund is conftituted, as well of the continuance of taxes as of the favings by the pait reductions of intereft; the furpluffes of the aggregate, the South Sea, and the general funds, compofing a principal part of that fund; and being made up of taxes as well as the favings by intereft : and the fublequent parts of the finking fund arifing fince the confolidating ant 25 th of George II. are compounded of new taxes, and their diftinct furpluffes; fo that if any taxes had been reduced and annihi lated, the finking fund could never have fwelled to the magnitude it hath done; and would not that have been a check to the extravagant profufion of the public money? Would the nation have been the worfe for that?

Whence, it appears, that in the firf conftitution, perhaps, of the finking fund, it was illy contrived to give due relief to the nation, although it was a notable device to reduce the intereft of the public creditors from fix per cent. to its prefent ftate; and might have been alfo devifed to have eafed the kingdom of its taxes, inftead of augmenting them, as it has been made the means of doing; but that matter has been beneath the confideration of our profound ftarefmen hitherto.

The paying off a few millions of the national debt, without the annihilation of any tax-incumbrances that can prove an eafement to the commercial intereit, can only give a temporary blaft, I again fay, to public credit, and may thereby tend, as obferved, fill to the further reduction of intereft : nay, fuch meafures may be fo practiced as to bring the irredeemable part of the debt into a ftate of redemption, and thereby reduce the intereft of that, as well as the redeemables; and in confequence thereof, we may ftill' add more and more to the finking fund, and thereby provide frefh intereft funds for the additional increafe of frefh public debts, as hath been our cafe already. The repetition of this thameful policy may be carried to fuch a degree, as we have feen, to deftroy quite the credit of the funds and of the nation. But it is to be hoped, that all fuch expedients will be treated as they fhall merit, unlefs the faving by further reductions of intereft on the funds fhould be facredly applied to a proportionate reduction of taxes

Were, indeed, all the funds reduced to a level of intereft at three per cent. which cannot be done without an infraction of public faith, $500,000 \%$. more might be faved: but if that was fwallowed up in the finking fund gulph, inftead of being applied to the reduction of taxes, that would prepare the way to increafe the public debt about fixteen millions more, if converted into a frefh intereft fund for the purpofe, according to paft example. In the like wife manner may the intereft of the whole national debt be reduced from three to two per cent. per annum, and an additional intereft fund be created of between one and two millions more, which may prove the happy means of fwelling the national debt to above one-half as much more as it is, and make it up no lefs than the round fum of two hundred millions. Every one difcerns how this wife Britifh fyttem may be carried to ftill greater and greater lengths, and bring the kingdom to a very profperous fituation at laft ; for by means thereof, we thail neither be able ever to pay what we owe, nor to borrow a fhil ling more; and thus will Great Britain be duly prepared for the firt conqueror who fhall make the attempr.

Whether the perpetrators of this allwife project will call themfelves fri-nds to the prefent illultrious family upon the throne of thefe kingdoms; whether this is the grateful recompence that the beft of fove-
reigns deferves from this kingdom, is fubmitted to the reflexion of thofe whom it may nearly concern; and whether they may think themfelves beholden to the author for thofe remarks, is a matter of indifference to him; for let them be taken as intended, or otherwife, he is fure to be not one farthing the better for it, unlefs by the enjoyment of that felf-felt fatisfaction in having done his duty,

I could wifh the fubjeet I am engaged on was at an end, being tired of fo difagreeable a tafk that I have voluncarily impored upon mylelf.-But to refume the fubject of paying debts without reducing taxes.

We have confidered the fcheme of difharging public debts without easing the public; or to fpeak in other words, the fcheme of paying public debts by being the worfe inftead of the better for fo doing. For have we not feen that this hath hitherto been our cafe; and what reafon have we to believe the purfuit of this fcheme of proceeding can ever mend our affairs, purfuant to the prefent conllitution of the revenue?

Were we to continue in a ftate of perfect peace and tranquillity for ten years together, and to pay off a million annually of pincipal money-debt, would the difcharge of ten millions be any fort of eafement to the commerce of the nation, without the reduction of taxes? Was this ten millions paid by virtue of the finking fund, which, perhaps, would not be fo eafily practicable, we can expect no annihilation of taxes that contitute that fund; and whether that fund in fuch cafe would admit of the payment of ten millions in twenty years, is to be queftioned. Or were we to add the favings of the interent of the faid difcharged million a year, either fimple or compound, and pay the accumulated intereft as principal, what hope fhould we have of the reduction of taxes? Nay, fhould we be enabled in virtue of the finking fund to pay off a million and one-half annually, for ten years uninterruptedly, with the accumulated compound intereft, it would not difcharge above $17,196,465 l$. with a continuance of taxes; and this could only affect the ftockholders by reducing of their intereit lower and lower.

As fuch payment of the public debt would have a tendency to a further reduction of intereft; and if that fhould take place, the fpending money of the nation would be diminifhed, would not the tax-funds fenfibly feel it? And though the deficiencies of funds hall be made good from year to year;" by parliament, yet will not the public bear the weight of fuch taxes, notwithftanding the declenfion of its trade by fuch fund-deficiencies?
Should it be faid, if the intereft of the funds fhould be further reduced, it might oblige many to enter into trade, who could not fubfitt upon their fund-annuities. It might be fo, and they might then be quite ruined; for do we not find the Gazette abounds with bankrupts enough daily? And what has this been owing to ? The dećline both of our domeftic as well as foreign trade; the one owing to the fmuggling of foreign commodities and manufactures into the kingdom, and her plantations; the other to the exceffive high price of Englifh commoditiés by teafon of our immenfe tax-incumbrances, as we have feen.

Moreover, can people unbred añd unfilled in the arts of carrying on trade obtain knowlege and experience fufficient for the purpofe infantancoully? Can they fuddenly raife a fund of commercial credit, who never before had, or required any? But what trades are they to frike into, that will admit of unexperienced people thriving in? If it be faid, that men who have been in trade and left it off, and live upon their annuities in the funds, may frike into the fame trades again; I afk, can perfons advänced in years, as others feldom betake themfelves to live upon the intereft of their focks gained by trade, begin life again? We may as well pretend to make the aged young again. Who then are to be induced to engage in trade that were wholly out of it?

Beflides, provided further reductions of incereit in the sums abould be thought of, in order to compel people ińto trade who are out of it, fhould we not previoully experience the inducement to be very engaging? Ought it not to admit of a certain greater profit than is to be made in the funds, even when reduced? How cañ raw and untrained people be fure of this? A re not long and large credits given in trade as fellers? But how will fuch find the like as buyers? If they cannot, what hazards of ruin muft they run?

Was the domeftic' and foreign trade of the nation greatly extended; and were the profits thereof inviting, the rifing generations might be encouraged to be bred thereto: but few ftockholders would again engage therein, who had chofe to live at their eafe; fo that the further reducing fcheme would give no grear temptation to fuch proprietors again to turn traders. Some few, perhaps, might rather incline to lend a part of their property on perfonal fecurity for larger intereft than they then could make in the funds. . But thofe to make any greater fure advantage by fo doing, would be people who had acquired experience in trade, and a good knowlege of the man they trufted, or the rifk, would be great; and very few fkilful people would chufe to run it. Should the unkilful be rafh enough to hazard their fund-incomes in trade with others, they might foon have occafion to repent it. And female proprietors, however numerous, would not think of trade.

Notwithitanding, therefore, the trade of the nation fhould be fomething enlarged, yet as the fpending money of ftockholders would be abridged, might not the general trade lofe as much the one way, as it acquired by the other? And how would the nation be gainers? How would fand the plight of the funds? Deficiencies upon deficiencies might be multiplied; and would not that prove a dead weight upon the enlarged trade? But in what manner can the trade of the kingdom be extended, while our commodities and manufactures continue fo exceffively dear by the means of taxes? Were they indeed effectually reduced, it might be fhewn how eafily the trade of the nation might be largely extended. Let this be done, and we fhall find people enough rife up to carry it on, without depending upon the converfion of ftock-annuitants into traders, by the means of reducing of their intereft.

Were our taxes on trade competently reduced, and the price of every thing, in conlequence thereof, to fuch a degree, that a ftockholder could live as well upon his annuity of two per cent. as he at prefent does on that of three or four per cent. and our general commerce greatly increafed, as it might be by wife management ; if there did want more people in trade, experienced traders would the longer decline going out of it, and converting themfelves into ftockholders; and the reduction of intereft might and would conduce to this; and if the favings that might be made hereof were faithfully applied to fupply the places of the moft burthenfome perpetuated taxes, thefe latter might be reduced fill further and further, which would tend to the greater and greater increafe of the general trade.

Nor is it the reduction of taxes to any fmall degree that will give the trade of the nation fubtantial redrefs, as we are circumftanced. The reduction of taxes of one hundred thoufand, or two hundred, or thref. hundred thousánd pounds a year, would not be felt by a kingdom in general that pays above fourteen millions per annum, in time of peace, with all enhancements on its commodities, although the impofition of freh annual taxes to the amount of two or three hundred thousand pounds a pear, would be grievoully felt by the whole nation. There is a great difference at prefent between the laying on of new taxes, and the taking off old ones, to the fame amount. Like the horfe overladen already, a very little more may fink him. Being fo highly tax ridden as we are, a fmall addition to the number is very fenfibly felt by trade, fince traders are compelled to raife their wares in price, as taxes on them are increafed, which foon diffeminates itfelf through the whole community, when impofed upon any commodity univerfally confumed by the mafs of the people. And if once the general prices of commodities are greatly augmented by the multiplication of taxes upon taxes, as we have feen by various inftances, it is not the an-
nihilation,
nibilation, as has been faid, of a fimple tax that will remove the evil entailed by numerous compound ones, which contributed to the greater enhancement the one of the other: they augment the prices of Englifh goods in a ratio fuitable to their number, as well as the weight of every particular tax. Remove, therefore, the fimple tax on one commodicy only, and not the others that proportionally contribute to raife the price of goods; which have an affinity therewith, can we expect that to lower the price of goods fufficiently to advance our foreign and domeftic trade?

We muft give therefore fuch general relief as the trade of the nation hould feem to require: that is to ray, to enable England to fell as good a commodity at any foreign market, and that at as cheap a rate, as any of our trading foreign competitors are able to do; which is the real relief that the foreign trade of this nation requires, if we mean to retrieve, preferve, and extend it. And without foreign trade, will the mere domeftic commerce of the nation render it opulent or formidable? Will not the maritime potency and glory of the Britilh empire dwindle and degenerate from its dignity and fplendor? Wherefore, if this kingdon will maintain its influence, weight and power in the world, ought any meafure to be neglected that fhall tend to the prefervation of its maritime trade, which is the permanent fource of all we enjoy, as a great and powerful ftate?
It is agreed on all hands, that the mere inland trade of the nation cannot fultain its maritime prowefs. If we once lofe our power by fea, how long can we avoid becoming a prey' to the neighbouring conqueror's, whofe maritime trade and power mult increafe as ours fhall decline? What can more effectually prevent the fatal cataftrophe than the fupport of our foreign trade?' Can any thing do that to fuch purpofe like the being, and ever continuing upon an equality with any rival nation in all the prices of our manufactures? And if the multiplicity of our fimple taxes upon fimple taxes, and our compound taxes upon compound taxes, appear to be the chief and real caufe of the high prices of all Englifh wares; if this caule, and this only confidered in its full weight and extent, hall be deemed the caufe adequate to the general effect, the natural remedy for fuch an national evil is certainly to remove the caufe; and to remove it as effectually, and as expeditioufly as we can. For the evil is daily growing upon us; our competitors are daily fupplanting us at more and more foreign markets, and increafing in their rivalhip more and more at every particular foreign market; and therefore, the fulnefs of time feems now to be come, when found policy dictates an attention to every poffible meafure that can expectite the reduction and abfolute annibilation of as many of our perpetuated tax-incumbrances as we can; and thofe hould be firft annihilated that the noftimmediately affect the prices of all commodities and manufactures, that are the fupport of our foreign traffic.

Could any perfon be weak or perverfe enough to deny the effectuality of the commercial policy to reduce the prices of Englifh commodities for exportation, in order to preferve and extend the foreign trade of the nation, let him only confider the trade of the Eat Indies; let him confider that it is the exceffive cheapnefs of all forts of Eaft India wares, commodities and manufactures in general, when compared with thofe of the Europeans, that has induced moft of the chief commercial ftates to eftablifh great joint-ftock companies to traffic in their productions and manufactures, and to export them from one European flate to another, or to their refpective plantations in America, or their fetttlements in Africa. This fingle fact, relative to the general cheapnefs of Eaft India commodities, and the eagernefs of European fates in their purchafe, and in their reforting to the Indies by long voyages, and eftablifing joint-ftock companies for that end, is fufficiently convincing, that the great article of cheapnefs is the govoming principle of ctie trade of the world : and this is the great point of pulicy whereby the wifelt trading ftates ftudy to conduct themfelves; and therefore, it muft be fruitlefs to fpend more time to prove what is an affront to the underftanding, to prefume that any man would difpute the verity of the maxim, by which he is fwayed himfelf in his purchafes. Even people unconverfant with practical trade, know, that their felf governing principle is that of cheapnefs, quality for quality: and traders daily experience both in their fales and purchdfes, that one or two per cent. and fometimes lef, will govern the markers, as well at home as abroad.

Wherefore, the deduction of the following confequences is obvious, and can be as litile difputable as the premifes: while the French and the Dutch commodities, or thofe of any other nation, that interferes in foreign flates and empires, with the fale of the Englifh, by being confiderably cheaper than ours, can we fuppofe, that foreigners will give the preference to ours the dearer, unlefs there is fome other interefting inducement which fhall compenfate for the dearer price given. When this, indeed, is the cale, it will often force the fales of our dearer commodities; when the luxurious returns taken in barter for Englifh wares thall give the Spaniards and Portuguefe, \&c. advantages fuperior to what they fhall receive from the French and Dutch, who ftand in no need of their wines or their fruits, \&xc. \& c.

Let it be fuppofed, that Englifh woollen goods of divers forts arrive at the Spanifh or Portuguefe market in Europe, and that of the like forts there are of the French or the Dutch, equally good quality for quality, and if fold outright for calh, could be afforded from ten to fifteen per cent. cheaper than thofe of England ; can we fuppofe the Spaniard or Portuguefe will give the preference to the dearer goods? But fays the Spaniard or Portuguefe, the Frenchman or Dutchman will not purchale our wines or our fruits, and the Englifhman will be fool enough fo to do. Therefore, on the account of barter with the Englifhman, I can afford, fays the Spaniard or Portuguefe, to allow him five or fix per cent. or confiderably more than I need the Dutchman or the Frenchman, becaufe I get rid of the fuperfluities of wines and fruit; and by fo doing, I find, in the end of the account, that I get as much by the Englifhman as by the French or the Dutch man. And what fays the Englifh merchant? 'Though I cannot afford to fell my Englih woollen goods under eight or ten per cent. or more, dearer than the French or Dutch can, yet by the profits arifing in England on the wines or the fruits in return, I find the gains on the conclufion of the voyage out and home will anfwer, upon the whole in the way of barter.

But was not the Englihmen to take wines and fruit, what chance would be ftand to difpofe of his goods, when his French and Dutch Competitor could fo much underfell him? This we call forcing the markets, and putting off his dearer goods by the means of taking in lieu the Spanifh and Portuguefe luxuries for our folid woollen goods. This does not render the gain of England, in trading with Spain or Portugal, equal to that of France or Holland, who take the Spanifh and Portuguefe gold and filver inftead of their fuperfluities of wines and fruit--Nor would England, we may imagine, fell any goods in Spain or Portugal, while they can have thele fo much cheaper of our rivals, unlefs we were to take their luxuries in return.

England, indeed, gains by the article of freight: and England gains to the revenue by the duties of Spanifh and Portuguefe imports; but had not England mortgaged fuch duties, and therefore food in no need of them, if Spain or Portugal did not take our manufactures, fhould we be under any national inducement to take their difadvantageous luxuries? As things are, the Englifh confumer of wines and fruit pays, in effect, for the Englifh woollen goods confumed in Spain, and the duties of import laid on the nation, are more than equivalent to the benefits of freight; fo that what mighty gainers can we be by this trade as we are at prefent circumftanced upon the whole? We are not fuch gainers thereby as France or Holland, whofe fales muft be much larger, becaufe much cheaper than ours; and as they make ufe of their own bottoms as well as we, their profirs by freight are only lef's by the returns, which they compenfate by other trading voyages from Spain or Portugal, and
make up amply the deficiency by having larget quantities of their cheaper goods in the flota and gall ons, and in the Brazil feets.-Whence it fhould feem to follow, that our fhare in the commerce of Spain and Portugal is of much lefs benefic and advantage to. Great Britain, and of more to our rivals than many may inagine.

If it thould be objected, that the exchange between England and Spain, and between England and Portugal being in our favour, fhews that we are gainers by thofe branches of trade, and how can that be, if the ballance is not on our fide ? To which we anfwer, that although this is the cafe, and the courfe of exchange appears to our advantage; yet it does not follow that this cricerion is an infallible one to prove, that it is on account of a greater value of Englifh goods being confumed in Spain and Portugal than we confume of theirs, though it may indicate that we receive larger remittances from chence in value than we fend thither from England; and for this plain reafon, that Englifh refident merchants, or merchants refident in England, may be intereiled in fending 5 rench manufactures thither to a larger value than they do of Englifh; and in confequence of fuch tranfactions from England, and remittances made to England from Spain and Purtugal on account of French manufactures, wherein Englifh merchants may be concerned, occafion the exchange to appear in favour of this nation, when the ballance of trade is againft us. For,

Do we not well know, that the French have now arrived at an extraordinary imitation of every art practiced in the Englifh fabrics, particularly in the woollen and filken manufactures, and even in their lengths, breadths, marks, and package, \&c. \&c? Do we not likewife know, for a certainiy, that French manufactures have been impofed on foreign countries for Englifh by Englifh merchants? And pray what has induced to fuch like practices? Hath it not been, that French goods fell better there than Englifh, b.caufe they are cheaper?

A merchant is a citizen of the world; 'tis one of the chief mercantile arts to purchafe any where, and of any one, the cheapeft wares of any kind, and fell them where ever he can the deareft. $\cup i$ ill not this tempt merchants refident in England, to intereft themfelves rather in cargoes of the cheaper French goods, that will eafily vend in foreign ftates, than in Englifh, that will lay rotting in their factors warehoufes abroad? Our mere wine merchants, as we term them, are not the only merchants that trade to Spain and Portugal from hence ; but does it follow, that they trade thither wholly in Englifh goods, when they can no lefs eafily trade thither in French? Cannot the Spanih or Portugal merchant refident in England embark a large capitil, either for his own fole account, or in anonymous partnerthips with French merchants in France, wio will rejoice at their correfpondence for fake of their commiffions? is it not eafy for fuch Englifh merchant to confign fuch French goods either to his Englifh or French factory from hence, who may impofe them upon the Spaniards and Portuguefe for Englifh manufactures, being made façon d'Angleterre? And may not fuch merchant refident in England have his remittances made to England for fuch French manufacture; and will not this fwell the exchange for money in our favour, when the real ballance for goods may be againft England? This deception is as eafy as natural; and the greateft proportion of fuch remittances hither may be draws from Eng. land again, to pay for the French manufactures. Is not this the natural confequence of France underfelling us as they do, and having arrived at fo great an excellence in many of their fabrics? Is it poffible by any laws to reftrain, much lefs wholly prevent fuch mercantile practices? No: nothing will hinder them, but an ability in the Engliih nation to fell their manufactures equally cheap with any rival nation. This will have the defired effect ; and is it not well worthy the moft ferious attention of a Britifh legillature? For is not this one of the chief occaiouno uf the prefent groans and lamentations of our Englifh artifts, mechanics and manufacturers, notwichtanding the fhort-lived temporary flarts of employment they may occafionally have, which are eafily accounted for? If the fkill, and ftocks in trade of our Lnglifh merchants thall be rather embarked in the encouragement of the commerce of France than England, is it not a very melancholy conlideration, when the idea is extended to the degree it will admit of?

If likewife our own merchants fhall gain more by the legal and illegal practices of importing French or other cheap goods into England, and the former may cover the latter arts, muft it not tend to the inevitable deftruction of our own advantageous branches of trade, our exports? But while we parade it by our great imporss, and the employment of our fhipping in confequence of fuch imports, does not this dazzle the eyes of many with the idea of immenfe gains, while we may be going to rein apace?

I am forry to have occafion to dwell longer on a fubject fo difagreeable. But is not he a better friend to the nation, who endeavours to probe a malady to the root, in order to excite to the thorough cure of it, than he that artfully labours to k in is over, that it will certainly break out again with incurable virulence?

The deareft markets, or fuch markets where every thing in general fells at the deareft rates, are the greatelt temptation to the confumption of foreign imports, either legally or illegally. The former we enc urage for the fake of keeping in good plight a revenue mortgaged in perpetuiry till its redemption: and when that will be, can any man in the nation fay? I fay, it can never be duly effected, till an entire change of the fyftem of our revenue we have fo long and fo thamefully adopted takes place: and in what manner this can be accomplifhed is the bufinefs of our rulers to think of, there being not the leaft encouragement for any private man to think about it; for fo fure as he does, he may ruin himfelf by his endeavours to ferve the nation: and will he not rather be laughed at, and defpifed, than pitied for his public fpirit?

Some judge of the increafe of the national trade by the increafe of the dutiss of imports; and fay the good plight of the revenue of cuftoms is a criterion of a flourifhing trade. Not fure of a profperous trade, a trade nationally advantageous; however the merchant may gain by it, the kingdom may lofe. It is a fign of the increafe of foreign purchases, and foreign luxuries, and even of foreign manufactures into this kingdom; but no one will fay; that fuch kind of traffic can be the touchftone of a trade beneficial to the kingdom. Imports of foreign materials of utility to our manufactures are entered duty free; but other IMPORTS, unlefs they occafion an equivalent export of native commodities are certainly derrimental, and ought to be difcouraged, unlefs admitted for re-exportation, but not domeftic confumption, when our own commodities and manufattures will do in their ftead, and give employment to our own induftrious poor. In this cafe, the revenue of cuftoms is no great gainer, unlefs they are confumed here; and this is too often the beft market for them, becaufe foreign goods fell to greater advantage here than elfewhere: fo that what the kingdom may gain in point of freight and navigation, is in part, if not wholly loft by fuch domeftic confumption.

The duties of cuftoms were originally devifed to impede and difcourage an inundation of foreign wares and luxuries being confumed in the nation, and to promote the domeftic confumption of our own. This policy feems perverted in our enlightened age; and for the fake of keeping up the revenue of cuftoms to the highelt pitch of produce we can; and to bring in as much as may be into the exchequer, and not to inrich the kingdom, all encouragement is given to the legal importation of foreign commodities that are charged with dutues at the port. And why? Is not this becaufe the duties of cuftoms are mortgaged to the public creditors? Is not this the greateft misfortune that can attend a trading nation? To have its revenues impofed upon foreign goods to prevent their confumption inftead of our native, pledged for the fupport of the public credit! What is this, in effect, other than a declaration to foreign ftates, that the purchafe and im-

Vol. I.
portation of their luxuries and their manufactures are become fo abfolutely neceffary to the maintenance of the public credit of Great Britain, that we are not able to pay intereft for our public debre without them? Import them, therefore, fay fome we mut, let the conduct of thofe ftates towards us be ever fo detrimental, for the fake of keeping up our revenues! Can any thing more ftrikingly than thele confiderations demonfrate the unipeakable injury this nation receives from the weight of its enormous debts, and its oppreffive morgaged taxes in confequence thereof? For as on the one hand, the burthen of our iuland tax-incumbrances thereby occafioned, obitructs the fales and exportation of our native commodities; fo on the other, the neceffrey of continuing our duties of cuftoms, makes it dangerous to difcourage, or much lefs to prohibit the purchate or importation of foreign goods, foreign luxuries, and even foreign wrought manufactures. Becaufe we have fuffered our revenues, and the natural effects and confequences thereof, not only to be fo immenfe a load upon all our trade, but that load to become fo mortgaged and anticipated, that we are difabled from removing it in part, much lefs in the whole. What an unhappy fituation is this for a nation to be reduced to?

To fpeak at prefent with relation only to our foreign imports, and the daties of cuftoms laid thereon.While the public debts fhall render it impracticable to annihilate any of thete duties, how can we, without injury to the public credit, leffen or prohibit fuch importations to any confiderable value; however neceffary to the intereft of the nation either the one or the other may be? How can we refent any mal-treatment in a commercial way, that we may receive from any ftate with whom we trade? Has not this been the reafon, thar inftead of retaliaring injuries in the way we fhould do, without wars, we have been obliged to plunge headlong into them, when they might eafily have been avoided by commercial refraints and prohibitions?

Let it be fuppofed, that Spain or Portugal declines in their purchafes of Englith goods, owing to their greater dearnefs, or any other caufe real, or pretended in time of peace, is it politic in England to continue to take the fame value of their wines and their fruits, as we did before fuch declenfion on their fide took place? Do not the public interefts require, that as they leffen in their purchafes of Englifh goods, that England fhould diminifh in her purchafes of theirs, to preferve the ballance as equal as we can, if we fhatl not be able to keep it in our favour? To do otherwife, is to fuffer ourfelves to carry on trade to no purpofe but the exhaution of our treafure ; and is it not better to let fuch difadvantageous trade alone, unlefs it hall prove effential to the prefervation of the connedions of fuch branches as may be beneficial? Provided that is not the cale, are we, for the fake of keeping up the revenue of cuftoms, ftill to encourage a detrimental trade? Shall it be faid, that becaufe the revenues on their foreign goods are mortgaged to the public creditors, that we are obliged to permit fuch imports, or fuffer the public credir to be undone? For that if we lay any obftruction, or a prohibition on fach branches of trade, and thereby annibilate fuch a proportion of the revenue of cuftoms, we know not how to fupply that deficiency by new taxes.

Whence it fhould feem, that we are reduced to the fatal dilemma; either the public credit muft be hurt, or the kingdom mult be exhaufted. Is not this a deplorable circumftance? And to what is this owing, but to the enormous magnitude of the public debts, which have plunged us into fuch a fituation? For if the duties of cuftoms remained unmortgaged, fhould we not, or ought we not, to retaliate upon Spain or Portugal, in the like commercial way? If we lefened our imports from them as they did theirs from us in the like proportion, we fhould itill be upon an equality with them : if they prohibited our manufactures either by public laws or by excluding them, by giving the preference to thofe of our competitors, which would be the fame in effect to us, we hould devife fome methods tu diminifin uur intuouts, ur tryally prohibit them, as they had done ours. But does not mortgaging the revenues ariling from foreign imports fo tie up the hands of Britifh government, as to make it difficult for the wifelt adminiftration to know what fteps to take upon the fuppofition fuggefled ?

Hath not this mortgaging the revenues of cultoms on forsign wrought filks proved the caufe, that our filk weavers have been, and ftill continue to be reduced to great diftrefs and calamity ; becaufe the adminiftration hath been at a lofs to fupply, by new taxes, the deficieucy that fhall arife in the revenue by the prohibition of all foreign-wroucht silks; thofe revenues being mortgaged, as well as others, upon foreign imports. Whereas, 'tis not unreafonable to believe, that if minifters could have eafily fupplied any deficiency that might have happened in the revenue by new taxes, we thould before now have had foreign wrought filks prohibited. Could this alfo have been done, with refpect to fome other branches of our imports, we fhould long fince, perhaps, have leffened or prohibited feveral, and by this time have fupplied ourfelves with the like commodities, either at home or from our plantations.
'I is of little weight to fay, that if we did not import thefe foreign wrought manufactures, that tend to the ruin of our own, foreigners would not purchafe our goods. We pay at leaft a million a year for foreign wrought filk, both legally and illegally confumed in the nation. Did we fave this, by the employment of our own filk manufacturers, would not this make a difference to the nation, between fpending and faving, of two millions a year? Can any one prove that this lofs is compenfated any other way, in confequence of our confumption of foreign wrought filks in general? From what motive was the general wear of French Cambrics prohibited in the nation? Was it not by reafon it coft us between two and three hundred thoufand pounds a year? And that if we faved that annuity by the employment of our own weavers in the manufac tures of blonds, gauzes, and the numerous other particulars which were encouraged in confequence of the prohibition, the nation would gain half a million thereby? Has not this meafure preferved numbers of our weavers from perilhing? Has it not been from the like motives, that we have encouraged our linen manufactures in general inftead of foreign? Has not Great Britain and Ireland experienced the unfpeakable emolument of this policy? Is not two millions a year worth faving, by giving bread to our own filk manufacturers inftead of foreigners? To, deny this, may it not with equal reafon be urged, for the importation of French woollen manufacturers to deftroy all Englinh looms, and turn this great body of our people out
of the kingdom?

A niongft our feveral grievances, that of our manner of fupplying revenue deficiencies, as we have had occalion to touch on that point, without the impofing of new taxes, is one that fhould by no means be paffed over in filence, by reafon the practice may be attended with bad confequences. It is an increafe of the politic arts of laying imperceptible burthens on the public, when the vifible and barefaced ones by laying new additional taxes are oppreffive enough.

By fuch arts as thefe it matters little what funds a minifter may pitch upon; for if it does not produce a farthing, the fum it is propofed to anfwer for is made good the enfuing feffion of parliament; and if it produces a furplus, that is not applied to make good the deficiency of other funds, but is transferred to advance the credit fide of the finking fund. To fuch a height have we now arofe in the practice of making good deficiencies, that if millions are taken annually from the finking fund itfelf, and applied to the current fervice, the deficiency of the finking fund is again made good the next year. Whence it appears, that this notable practice of raifing large fums without feecific taxes, may grow to fuch an exorbitant degree, that the publick debrs may be
doubled inttead of diminifhed, for by fuch arts doubled inttead of diminifhed; for by fuch arts frefh intereft money may be found for frefh debts. Can fuch practices be conducive to that annihilation of taxes the nation is fo greatly in need of ?

To fuch a pitch of good policy have we at length arrived, by fupplying deficiency upon deficiency, and adding furplus upon furplus to encreafe the magnitude of the finking fund, that we find our annual tax-deficiencies no lels than our perpetual ones are made good. But were not our annual taxes, as well as our perpetual, annually mortgaged and anticipated, what reafon can there be to fupply the deficiencies of annuals?. Ought not the annual land taxes to be ever levied within the year to prevent any fuch practices?

Is there not fome degree of danger to the conftitution attending.this practice? 'Tis an eafy tranfition from mortgaging annual taxes only for a fingle year, to mortgage the fame for two or three years; and after this, to convert the annual taxes of land and malt into perpetual ones, as we have done all the reft of our taxes? Will not this practice produce a molt notable augmentation to the finking fund, and make a freth additional intereft fund, ftill more and more to increale the finking fund? It may be atten ted with a further alarming confequence to the nation. For I would afk, what then occafion will there be for parliaments at all, when our annual taxes thall be changed into perpetual as all the reft are?

Should the nation be once brought to this pitch of fund-policy, to convert our land and malt taxes into perpetual mortgaged ones, when are we likely to fee their redemption any more than of the reft of our tax. ridden oppreflions? Is it not, therefore, a moft dangerous practice to fuffer money to be borrowed at all upon thofe taxes, left future wicked or wrongheaded minifters fhould fo abufe it as to deftroy the very being of parliaments? For the happy confervation of their own exiftence, does it not become the wifdom of the leginature to pay fome attention to thefe ftrictures, and think feriouly rather of converting the conftitution of the revenue, and change our perpetual into annual taxes, than to fuffer the prevalence longer of that dangerous and impolitic fyftem of perpetuation and anticipation we have fallen into? It is humbly hoped, thar the great widom, impartiality and candor of a Britifh parliament will receive thefe few thoughts as they are honeftly intended.-To refume the confideration of the revenue of cuftoms.

Let it be fuppofed that the neat total produce of the revenue of cultoms yields two militons a year to the exchequer: and be it further fuppoled, that thole duties, on an average, amount to fifty per cent. upon the prime coft paid for our imports, muft we not lay ont for fuch imports four millions per annum at leaft to raile two millions by cuftoms? So that to raife a revenue of two millions by cultoms ftands the nation in fix mil-lions.- If the duties of our imports are not fuppofed to amount on an average to fifty per cent. then the Tums paid for imports will be more than four millions to raife the revenue of two millions only.

Let it be reckoned that two millions of the faid four millions of imports come from the Britifh plantations in general; and that we pay no more to foreign countries for our other imports than two millions per annum, from which we raife a neat revenue of cuftoms of one million only, and that we raife the other milIion of the cuftom-revenue from our plantation imports, and that our plantations take of Britig commodities in return to the full amount of two millions; this trade between Grear Britain and her plantations circulates the whole four millions amongtt Britifh fubjects, in Britifh bottoms, and our plantation goods reexported brings an additional profit to the nation.

And did, as our plantations are fuppofed to do, the feveral European fates take of Britifh produce and manufactures to the amount we take from them, we fhould be upon an equality with them, and not pay many of them a confiderable ballance yearly to our great difadvantage: a point that has been moit fhamefully overlooked, and even often for their being our enemies, when from the motive of being fuch gainers by us in the way of trade, we had a right to their friendfhip.——Though we have had fo juft and reafonable a plea and foundation for luch powers to join us in nintes of war, yet when have they done fo? Inftead of that, have they not entered into fublidiary engagements with our enemies, to enable them to hurt our interelt more and more, by plunging us into greater and greater expences, to make a compenfation for thefe unfpeakable obligations they have too many years been under to the Britifh nation?
This is our cafe with regard to the ealt countries of Ruffia, Sweden and Denmark ; to which we have not paid for many many years lefs for the ballance of trade than a million and an half annually; fome have computed it at two millions per annum lofs to the kingdom in time of war: and do we not pay annually likewife A MILLION AND AN HALF moie for intereft money to foreign creditors on the contineat of Europe? 1 fhould be glad to fee it fatisfactorily proved, that we gain three millions yearly by our commerce with all the reft of Europe, to compenfate for the exhaultion we fultain by the Eaft countries and intereft money paid to foreigners: I am afraid that cannot be very eafily done. But if it could, where would be our national gain, if our ourgoings by one part of our European trade and our money tranfactions equal our profits by the reft?

If this is our prefent fituation, confidered in the molt favourable light, refpecting the interefts of the nation in relation to our European traffic, will this fupport the immenfe revenues raifed throughout the kingdom, and leave any profits within the ftate? 'As our exports may be forced to Spain and Portugal, as has been obferved, and we pay fo dear for their imports by heavy duties impofed thereon, that there feems reafon to apprehend the nation but in a very indifferent ftate, however opulent it may appear to fome people, by the external appearance of a few, compared with the mafs of the people: and by what means are thefe few enabled to fupport their exorbitant fplendor? Is it not by dint of the enormous revenues that have been raifed in times of war as well as peace? The fudden monftrous eftates acquired in time of war, have raifed numbers from a mean to a magnificent condition. But have not all thefe riches been fpun out of our own bowels ! What princely revenues center in few hands by the calamities of war? What immenfe eftates are daily acquired by circulating the millions upon millions through the exchequer!

However great gainers our Eaft India company may become at prefent, their rifk feems to be proportionate in its confequences, fince they have commenced a kind of military company inftead of a trading one. Be that as it may happen, the atthor is of opinion, that a commercial corporation might trade with greater certainty elfewhere, and perhaps with no lefs advantage, than they may expect altogether from the Eaft, and promote the profperity of the nation at the fame time they did their own-But this is not my prefent bufinefs; that is chiefy to promote a further commercial union between Great Britain and her American colonies and plintations.
It is a doubt with many wife men, whether it is probable that the immenfe extent of territory acquired by this nation at the late peace, will operate towards the profperity or the ruin of the inland of Great Britain?
It has been long ago agreed upon by perfons of reafon and obfervation, that it is not the extent of a country, but the number of inhabitants in proportion to its extent, that conftitutes the opulence of a nation. The obfervation has not been found to be erroneous from experience.
So extenfive now are our American colonies, that they feem to threaten us with an evil not only dangerous but ruinous, viz. depopulation. Settling fmall colonies may do fuch fervices as to counterballance an inconfiderable lofs of people; but fettling vaft tracts may exhauft the mother-country of irs inhabitants, and prove deftructive. Letting a little blood may be not only harmlefs occafionally, but falutary to the human body; yet exceffive bleeding will as certainly kill as any difeafe to which it is liable. 'Tis not neceffary to fpend time by enumerating the various ways in which our colonies drain us of our people. Men of rank or wealth, who have obtained grants of lands, fpare no pains to inveigle them away in crowds to fettle their feveral
pufieffions,
poffeffions, becaufe without people what are thefe poffeffions worth? Multitudes go away of their own accord, allured by the enchanting profpect of wealth; and either never return at all, or return in a frail dif eafed ftate, uafir for propagation. We fuffer no inconfiderable lofs in the many thoufands of feamen and foldiers, which mult now be fent to all parts of the known world, to annoy our enemies in time of war, and to protect our friends in time of peace.
In proportion as the number of hands is leffened, the price of labour, and the firft coft of our exported commodities muft be increafed; at the very fame time the quantity of thofe commodities mult decreafe, and the gain upon them centering here, muft be diminihhed by the two concurrent caufes.
If, therefore, a trade to our plantations be highly profitable, we ought to be the more concernted, left by driving the mater too far, we leave next to n body at home to trade with them.

The advantage is in danger of being loft anotier way. Our plantations are becoming fo extenfive, that it is probable they will fpeedily fet up manufatures of their own, and be our rivals intead of our cuftomers. With this have they not lately threatened the mother kingdom, and indeed carried their defign in a great meafure into execution? Our commodities might not be lufficient for them to confume, as they augment in people; and they will be too coftly for them to purchafe, as growing deaicr and dearer, as we grow lefs and lefs populous.

The only thing by which it has been faid it is retarded is, that as lands are cheap in America, and labour dear, it is a more immeliate and fure way for a family to get bread by cultuating the ground, than by fabricating goods which may be brought from Great Britain; but if at no cheaper a rate than they can fabricate them; can we fuppofe they will negleet fo doing?

But this will foon be at an end: they will frike inso manufacturing, both from the number of people fetted in places near the fea, and from the unfatiable avarice of the proprietors of land, who will not part with them but at a very great profit. Nothing hath flood in the way hitherto, but the diffculties which attend the firt fetting up manufactures in every country. Whenever intereft or necefity, therefore, fhall overcome thofe difficulties, it is eaty to forefee what an amazing and rapid progrefs will be made in every branch of manufacture, by an enterprizing and induftrious people, as the North Americans in particular are.
We have had a confirmation of this, by the number of manufacturers who have gone, and are daily encouraged to go lately from different parts of the kingdom to America. It hath been faid, that a large number of ftocking-weavers are gone from Nottingham, and that feveral different branches of manufactures have been fet up in New England and in many of the other of our continental colonies, in confequence of the ftamp act. From what we have lately experienced, and the lofs Great Britain hath thereby fuftaned, we have too much reafon to apprehend the abilities in our North Americans to fupply themfelves amply with every fpecies of manufactures with which they fhall ftand in need. For what material for the purpofe can they want, in territories from the extent of the Gulph of Mexico to the North Pole, with little exception? And their extent weftward we are unacquainted with.
That we have been long apprehenfive of their fetting up manufactures, and therewith to fupply themfelves, appears by feveral of our acts of parliament to reftrain them from fo doing. To do this to the mutual intereft both of the mother country and her plantations, herein confift the difficulty of legilation.
Before we think of that point, it may be proper to examine another circumftance in our fituation with regard to the colonies, viz. our exclufive right to trade with them. It may be faid, let them be as extenfive as you pleafe; let them fet up as many manufa\&urcs as hicy nall thunk pioper; nill thair trade will be valuable, and it is wholly confned to this inland ; they are not permitted to carry on bufinefs with any other nation but through the medium of Great Britain. But what fignifies a trade, if it comes to be a lofing trade? And that, from fome of the above confiderations, it may be fooner than we are aware of.
Whenever they can fupply themfelves with manufactures they will have no need of us; moft of the luxuries and celicacies of life they can get nearer home from one another, they being, indeed, a kind of world amongft themfelves in their variety of climates.
Befides, this exclufive right to trade with them may operate flowly and filently indeed, but conftantly, and at laft fatally, to our prejurice. There is much felfifhnefs in human nature; and it will be, nay, probably it has been, a temptation to us not to make our manufactures as good and as chbap as possible to procure voluntary purchasers, becaufe we think we can send them to those who are obliged to take them.
Let no man think this a flight circumftance, or of no moment. The moral caufes, fays Montefquieu, of the thriving or the decay of a nation, viz. fuch as arife from the tempers or principles of the people, the fpirit of their conflitution, or the fituation with regard to others, are unfpeakably more powerful than occafional caufes, fuch as war, famine and peftilence, or their contraries. The reafon is plain -The effeet of thofe which he calls moral caufes, though impracticable, is univerfal and perpetual. If, therefore, our exclufive right to trade to our plantations, tempts us to truft or lean too much to it, it may fink under the weight, and prove the caufe of our deftruction.
Another confequence of our exclufive trade is, that our merchants will import from other nations what they can export to the Britifh plantations with advantage. Such commodities paffing through our hands make a great parade of commerce; and yet add next to nothing to our strength or numbers, and not so much to our wealthas may perhaps be supposed. Does not this, at leaft, fhow that our poffeffions may have the fame effect upon us, that the conqueft of Mexico and Peru had upon the Spaniards, who have become poor by means of the gold and filver mines? We may flacken our own induftry, and fupply our plantations by the induftry of other nations. Great men and great merchants, who have eftates and properties abroad, may make a fplendid figure for a time, while the body of the kingdom is gradually lofing its nourihment, and falling into an incurable confumption.
The firit of commerce is of a very nice and delicate nature-It is of a very fubtile and penetrating nature. The reafon is the fame for both. It is animated and conducted entirely by the intereft of individuals : fo that unlefs this happens to coincide with the public good, one part of the nation muft be indefatigable in bringing on the ruin of the whole. Wherever intereft leads, or feems to lead, trade will force its way over all obftructions; neither can it almott be forced to go another way. Do we not daily hear of great outcries againft thefe mercenary wretches, who, for the fake of private gain, will fuck the very blood of the poor, and riot in the fpoils of their country ?
Nothing but mutual intereft can knit and cement mankind together in fociety. Without this, ten thoufand legiflatures conflancly employed could not devife the means, and an hundred thoufand judges could not enforce the execution. The fpirit of all laws on the commerce of a people, muft be to make public and private intereft not only really, but apparently and evidently the fame.
Whence is follows, that an exclufive trade, preferved by force againt the inclinations of the people concerned, cannot be carried very far, and cannot continue very long. While we ferve our plantations with as CODD COMmODITIES, AND AS CGEAP as other people, we may expeet they will chearfully trade with us: fo foon as we either will not, or cannot do this, they will ufe every poffible means either to fupply themfelves, or be
fupplied from another quarter. The Spaniards have the exclulive trade to their own celonies; and yet there are few branches from which we derive greater profit than an illicit trade with the Spanifh fetelements. If we are fo partial to ourfelves, as to trample upon every law, and every national engagement, when we hope to do it with impunity or profir, why fhould we expect others to be more honeft than ourfelves, or that our colonies will continue to trade with us longer than it is their intereft to do fo? For this reafon we fhould bend all our force to the improvement of our own country, by increafing the number, fobriety and indultry of its inhabitants. If there be any defect here, the moit valuable diftant fettlements will do us no good; and if there be a vifible difproportion between our colonies and our abilities to trade with them, upon juft and equal terms, the more they are enlarged, the fooner fhall we be deftroyed. - All this, and much more might be faid with regard to our prefent large poffefions in. America. If thofe fears are quite groundlefs, fo much the better for us and our pofterity; but do they not carry too much weight with them to be treated with indifference? If they merit the moft candid confideration, as they certainly do, it were to be wilhed, that the beft means were pointed out for retarding our ruin as much, and as long as may be, if we cannot totally prevent it.

Without the mother country fhall make it for the interelt of her colonies and plantations to purchafe her manufactures in preference to thofe of all other rival nations, can it be reafonably expected that our colonifts will not rather become buyers of thofe of our rivals, that are fo much cheaper than Englifh? We cannot expect a ftop will be puc to fmugling in our Britifh plantations any more than in Great. Britain, while this dif proportion of prices continues.

Could Old Spain fupply their American colonies with all the manufactures for which they have occafion, as cheaply as they can purchafe them of other European powers, would not there be an end of fmuggling in the Spanifh Indies? For people are not difpofed to run occafional hazards of lofs, where they can fupply their wants wholly without fuch hazards.

Until, therefore, the Englifh manufactures fhall come as cheap to Britifh colonifts as thofe they can obtain from our competitors, can we fuppofe that they will not give them the preference? If foch fevere laws are made, that they thall not be able to obtain them, is it not natural to believe they will fet up manufactures wherewith to fupply themfelves on the continent of America? They are not deficient in one part or other of thofe extenfive colonies in any materials for the purpofe; and that to what extent they pleafe; if they once refolve fo to do, they moft certainly will fo do, fooner or later, if not timely otherwife diverted, let us amufe ourfelves as we may with contrary notions. And if once they experience the benefits of fo doing, can we flatter ourfelves that they will not become our rivals in the very ftaple manufactures of this kingdom, more efpecially in the Spanifh Weft India trade? When they were able to become fuch, is it impoffible that they fhould fupply the Spanifh flota and galleons, or have a due fhare therein as well as any European nation?

What can obftruct this but the fuperior dearnels of North American manufactures? If this fhall be the great impediment, can we imagine that they themfelves will not be actuated by the fame motives to fet up manufactures for their own fupply at leaft, fince they daily experience the difadvantage of doing otherwife?

That North America will daily grow more and more populous there can be no doubt, from all parts of Europe: and if they fhall have plenty of people, as they have plenty of land to cultivate, what hinders but they may ftrike deeply into all the manufacturing arts? Will not plenty of people, and plenty of land, render every thing elfe plenty? And if the Colonilts fhall find, that by the manufactural arts they can fave the fhare of property, which they now fend out of the colonies for manufactures, how long can we fuppofe they will ceafe to do fo? If once manufactures take deep root amongtt them, and they experience thereby a currency of cafh intead of paper, may not their paper currency gradually approach nearer and nearer to a par with fterling money? Will not this render the price of their manufactures cheaper and cheaper? Will they not foon fall to a price with thofe which they at prefent take from the mother kingdom? And when this comes to be the cafe, how long after can we prefume that they will continue the importation of a fingle manufacture from England? We mutt believe this beneficial part of our trade will foon abfolutely ceafe.

Though the New England currency may now be at 525 , New York 160 , Penfylvania 170, Maryland paper currency 220, South Carolina 750 , and North Carolina 1000 per cent. Aerling; yet that neither can, nor will be any long obftruction to manufacturing, when once they commence in earneft. For if they will content themfelves to wear their own manufactures, be they at firft ever fo ordinary, they will find themfelves grow more and more wealthy, as well as their people more and more expert in the manufacturing arts; whereby they will find the paper currency realized as they increafe in wealth, and the confequence will be, that they then will have manufactures full as cheap, if not cheaper than they at prefent can thofe of England.
'Tis to be feared there is a deception in this point of dearnefs of things at prefent in North America, by which we are led to think, that they will not, becaufe of fuch déarnefs, attempt manufacturing for themfelves. The deception feems to arife from an Englifhman's confideration of their paper currency. For if roool. in North Carolina is only equal to $100 l$. in England, then twenty fhillings a day paper currency is equal only to two fhillings. Englifh. Now, if a manufacturer can purchafe as much of the neceffaries of life for twenty fhillings paper currency, as he now can in England for two Rillings a day ferling, why fhould he not be as well contented in America as in England? And if a fuit of cloaths fhall coft $50 \%$ of paper currency for what we can purchafe in England for $5 l$. is the man in a worfe fituation in America than he is in England?

As England hath increafed in manufactures and commerce, hath not the value of money grown lefs and lefs; and why fhould it not do the like amonglt the Americans? Do we not know that this hath been the ftate of all the trading nations of the world? As they have all had their ebbs and their flows, the time may come that 1000 l . Englifh paper currency may be only equal to 100 l . of American hard money, if England fhall decline in her manfactures and commerce, as America may advance?

If this fhould ever come to pafs, will not the value of lands in Great Britain dwindle to the worth of money at prefent in America? Does not a matter of this weight and importance merit the ferious attention of Britifh legination?

Should it be faid, that if the Britifh colonies, we mean throughout thefe obfervations, chiefly thofe on the continent, fhould ceafe to take our manufactures, in confequence of fupplying themfelves wholly therewith, and, perhaps, becoming our rivals in our very ftaple fabrics, that we fhall defift in our turn from taking any of their produce; feeing we can have every thing abfolutely neceffary that we now have from thence from European fates, particularly from the Eaft countries.

This may be faid. But it is little fatisfaction to be rather drained by Europe than America, The queftion with us is, whether we could, when we had loft our exports to America, futtain the fuppofed drain from any other parts of Europe? And if we could not afford this drain for naval Atores of every kind, as when we had lolt our navigation to and from America we fhould not want, nor could we bear it, Great Britain would decline in wealch and power as Britifl America would rife in both? How long after the lofs of our commercial con-

rections
xxiv THe ill State of our Finances: with a Plan for a more interefing Unics betwech Great Britain and America, Evc.
nections with our plantations fhould we be able to pay interef to our foreign, or indeed our Britifh public creditors?

Hence it thould feem, that if the colonies fupply themfelves with manufactures, and we thould continue to be fupplied by them with what we at prefent take from them, that the ballance of trade mult inevitably turn highly to our difadvantage, even with our own colonies: and if this comes to be the ftate of trade between Great Britain and her plantations, will they not be inftrumental to exhauft the mother kingdom of her treafures no lefs than the Eaft countries have hitherto done? Will not this fo aggrandize thofe colonies as the fooner to enable them to fulfill the apprebenfions of many, and become abfolutely independent of Great Britain? And provided we ceafe to take their product, as they fhall ceafe to take our manufactures, will not all intercourfe of commerce be deftroyed between this kingdom and her colonies? When that is done, will they not be left to fet up for themfelves, and what can then hinder their becoming a fourifhing and porent empire? For if we do not trade with them, other nations will, and laugh at us for our fuperior wifdom and policy. If we fhall attempt to compel our illand colonies to have no trade with their brethren of the continent, will this be relifhed by either? May it not create fuch a coalition of interefts, as to induce them both to unite in one American empire, as independent of the whole world as they would foon be of Great Britain; and fhould not we then be in a fine condition to fubdue them again to our obedience?
Such kind of a commercial union may not appear altogether of a vifionary afpeet, if we confider the late union they ftruck into upon the memorable occafion of the ftamp act. Ought not an attempt of this nature fo to alarm us as to put us on our guard, and incline us to take every wife precaution to prevent the like again, left it hould prove the prelude to one of a more dangerous and formidable nature? For if once a commercial union fhould take place between the Britifh continental colonies and the inands, to a certain degree, they might think it worth their while, probably, to hazard the lofs of the Britifh markets for the fake of the gain arifing from a general freedom of trade to all other parts of the world. What then may become of the Britifn navigation to and from America? When that is loft, will not all our revenues arifing from our prefent American imports be annihilated; and what will be the fate of the public, credit of this nation, when fuch a cataftrophe fhall ever happen, will make a true friend to the intereft of Britain tremble to think of.

The North Americans, as well as Britons, in generral have a wifhful eye upon the trade of Spanifh America, and we well know that they dinike every reftraint thereon; and being now fituated in the contiguous center, as it were, of the Mexican empire, from our poffefion of the Floridas, our right of trade to the Miffifippi, and in the Gulph of Mexico; will not this confideration be an inducement to the North Americans to cultivate trade with the Mexicans to the utmoft? While they thall remain unable to fupply the Mexicans with manufactures of their own, will they not ufe every art to have the European manufactures wherewith to fupply them as cheap as they can obtain them? And will not this prove a prevailing motive with the North Americans to fet up manufacures firft, to fupply their brethren of the Floridas with them, in order to bring in a quantity of fecie, and the fooner enable chem to annibilate their prefent paper currency amongf them? Can the Floridas wifh to be better fituated for the purpofe? And can our more northern colonilts have a more lucrative temptation to eftablilh manufactures that will bring them in fpecie, inftead of taking it from them by the importation of Britifh manufactures, which carries all their money away, and leaves them at prefent little elfe befides paper? Is it unnatural to believe that our Americans will exert themfelves to partake of the treafures of Mexico, at the firt hand, that they may enjoy the whole profits of that money trade to themfelves, inftead of lerting the bulk of it llip through their hands for the emolument of the mother country, in conjunction with other nations, whofe manufactures go by the fota to La Vera Cruz?
The contiguity of our colonies to thofe of Mexico, may, one day, ftrike more terror into the Spaniards, than can be done, perbaps, by any European potentate; and may not that be conducive to promote hereafter a commercial union between North America and Spain; the former to furnifh their galloons no lefs than their fota, with North American manufactures, to the exclufion of any fupply from other ftates? For the Spaniards knowing that the North Americans want nothing but fpecie, and the Spaniards being able to furnifh that, and the imericans able in their turn to furnifh them with manufactures, may not fuch like circumftances, as well as their near neighbourhood, produce thefe natural effects before fuggefted ?
If the Spaniards thall find it more for their intereft to deal with the North Americans than the Europeans, and the North Americans more for theirs to cement an intercourfe of trade with them, there can be nothing ftrained to apprehend extraor inary confequences hereafter.

The difcontents that at prefent appear in old Spain, as well as new, have, doubtlefs, their caufe, and that, perhaps, a more influential and important one, than the idle fories we have had already concerning the troubles in that nation and their Spanifh colonies. The late lofs of the Havanna may have made a deep impreffion in old Spain, to the difadvantage of the Spanifh government there, and why not likewife in America? By this time the Peruvians, as well as the Mexicans, may, perhaps, be ripe for a revolt from the conception of a weakners in Spanifh policy to fuffer the prevalence of the French to promote the late rupture between Great Britain and Spain, which ended in the lofs of their great bulwark of the Spanifh Indits. Something of this kind feems to have taken deep root amongft the old Spaniards in Europe, feeing we hear of the revival of the proverb amongtt them, paz con Angleterra con todos otros la guerra. And does not this idea feem to be confirmed by the voice of the people, who have fhown, and fill continue to fhow, great refpect to the Britifh ambaffador, and lefs than ufual to the French? Our accounts fay, that the people are for rooting out all French fafhions, and introducing thofe of England more and more. Thefe things may forebode fome other confequences not at a great diftance poffibly. And if the Spaniards fhould be induced to call for the aid of the Britifh North Americans, will not the North Americans then difcern their important fervice to the Spaniards? For they can have no immediate affifance in Mexico now, but from the Englifh in North America.

Should our colonifts once experience this, they will know how greatly the Spaniards are in their power ; for thofe neighbours who may prove of great fervice on extraordinary occafions, may alfo become great enemies, in confequence of the fluctuating events of things. North America grows daily more and more populous, wealthy and potent, and they muft inevitably become formidable. When that comes to pafs, may not thefe Americans be able to make a conqueft of the Havanna, even wichout the aid of Great Britain? Their adjacency, as well in the Gulph of Florida as that of Mexico, will certainly acionitter great advantage for fuch an enterprize, as they increafe in ftrength. And to what degree might they not exert thenrelves to obtain a prize of fo invaluabie a nature? For if once they obtain it, "tis to be queftioned, whether they will ever te prevailed on to give up fuch a treafure, if they aim at becoming an empire independant of Britain. And how will Spain be able to recover it out of their hands?
Here prefents a feene that may deferve confideration. For the key of the Spanifh American treafare will be no little temptation to thofe Americans to Atruggle hard to become mafters of ir. And if a commercial union fhould take place, for the reafons before urged, between our North American colonies and our prefent

American inands, might not their conjoint power bid fair for fuch conqueft, notwithtanding the affitance of the imporent Englifh to prevent it, when they thall have lott their American trade and navigation?

From thefe few reflections, it feems as if our territorial acquiftions to the fouthward of the American continent may be attended with ftill greater and greater power, fhould they ever become independent of their mother ftate. And may not this conqueft of the Havanna prove the eftablifhment of a very formidable new commercial empire in the American world? The great motive to the North A mericans to fet up manufactures of every kind, would be the profpect of a ready vent for their wares of all kinds, no. lefs than furnifhing themfelves amply therewith. And what better profpect could they defire, when mafters of the Havanna, than the fupply of all Mexico and Peru with the manufactures they want? The Mexicans and Peruvians will purchafe them much cheaper from the North Americans than they now do from the Spaniards, feeing there would be no exorbitant in iulto impofed on their manufactures outwards, that fo extravagantly enhance their price to the Spamili Indies at prefent.

As there may be a revolution in the Britifh plantations and colonies in America, unlefs due care in time is raken to prevent it; fo likewife there may be one in the Spanifh Indies to thake off their prefent dependency. Mexico a:d Peru may become diftinet empires, kingdoms or fates, and may nor be indifferent to commercial alliances with the North Americans, who, if they cultivate manufactures, and are once poffeffed of the Havanna, would be the belt able to furnifh them with all they wanted for their money.

On the northern parts of the American continent, and its various ifland-dependencies thereon, as ceded to the crown of Great Britain, by the peace concluded in the year $17 \sigma_{3}$, there offers another fcene from whence great power may arife to the continental colonifts. Should North America change mafters, alter their form. of government, and fet up for themfelves, it is not unnatural to fuppofe that they would extirpate not only the French wholly from the Newfoundland fifheries, but the Englifh, and monopolize them folely to their own ufe, if they fhould ever be able; or oblige all who hall enjoy the privilege of filhing on the borders of any of their dependent dominions to become tributaries to them for iuch privilege.

North America abounding with timber for fhip-building, and New England and New York built-hips already not being of a defpicable kind, but purchaled occafionally by the merchants of London and the illand colonies, as great numbers are built for mere fale, which are fent to England and our iflands for that purpofe. They have all manner of materials for fhip-building very cheap, and excellent timber, as alfo mafts and yards merely for cutting ; fo that they build Mips to very great advantage. Their fhips alfo have the reputation of being well built, are good fea boats, and ftrong bottoms: they have not hererofore, indeed, proved always the beft failors, but that bath been owing to their building fo very ftrong; but they have greatly improved in this branch, and will, doubtlers, excel herein as well as any other part of the world.

The colonies alfo of Virginia and Maryland are as well furnifhed with timber and plank, and all forts of materials for fhip-building, as New England and New York, though they have deltroyed infinitely more for clearing the land, their plantations being exceeding large, and extended fo far over the country.

They indeed have not applied fo much to Chip-building as the New England people do, nor has it been fo well worth their while; the planting of tobacco having hitherto been their chief care, and taken up all their hands, which hath occafioned them to buy fo many negro flaves, befides tranfported felons from England, and all the other white fervants, which they have got volunteers from England, and efpecially from Scotland and Ireland, which have been-a prodigious number.

But, as it feems that their tobacco trade of late hath not türned to fo good account, they may, and doubtlefs will betake themfelves to other branches, and amongtt the reft, doubtlefs to fhip-building. For this is at any time in their power to extend. They build, at prefent, all their own noops, which, as they are fo highly ufeful, that no plantation of any confideration can be without them, as well to carry their tobacco and other product down the creeks and fmaller rivers to the Rhips which are loading, for England, or for the inlands, and to land and bring home their returns of goods from the faid fhips; 'tis fcarce credible what a number of them are employed in this bufinefs, fome fmall, fome large, that carry goods from one plantation to another, from 50 to 150 hogtheads; and thefe are loaded oftentimes with provifions for the Weft Indies, and bring back rum, fugar and melafles, for the fupply of the country, as is done in the other colonies. The number of thips employed for thofe purpofes is fo great, that it would appear incredible; but there is no doubt of there being many thoufands of them, fmall and large, the conftant building of which makes the people as expert in the art of fhip-building as any people in Europe.

The fhip-building that is now going forward in Canada likewife, and in all parts of thefe colonies, where they are well fituated for the purpofe, and the ports for that convenience being very numerous, this muft convey an idea to every one, that the art of fhip-building, by reafon of the conftant navigation that is between North America and the inland colonies, will arrive to great perfection, and that thefe colonifts may become of themfelves a formidable maritime ftate or empire: and what fuch a mighty power may not one day be able to do, who can fay?

That the idea of a great degree of maritime power muft, and will certainly fpring from the confideration of North America, and their commercial connection with the intands, is obvious to every one, who confiders that they now, and will foon have to a much greater degree, the command of the three great gulphs of St : Laurence and its great river, the gulph of Florida, and the gulph of Mexico, and the great river Miffifippi. Moreover, the immenfe lake-navigation, as well that of the very numerous great river internal navigation, muft neceffarily vaftly contribute to the furprizing increafe of fhipping, feamen and navigation of every kind amongtt them. 'Tis faid, that we have lately authentic accounts from New York, that the firit of adventuring has lately difcovered the courfe of a river that branches out from St. John's, and extends fouth-fouth-eaft all the way navigable to the confines of Florida, and within twenty miles land carriage of St. Augultine, from which great advantages are expected to arife_-Ports for fhip-building they poffefs, or can have innumerable, and what can hinder the prefent Britifh Americans from becoming a formidable maritime potentate? Had the Dutch, the Genoefe, or the Venetians, any thing comparable to fuch advantages? Has Great Britain iffelf now fo many, comprebending every circumftance that we have with all brevity noticed?

This fketch of the porentiality of thefe colonies to become very formidable at fea, ought to alarm this nation with apprehenfions that they actually will do fo. Nay, we may prefume to fay, it cannot be otherwife. Wherefore, can we be too early on our guard to prevent their growing independent of the Britifh empire? We certainly carnor, fince their territories are now fo immenfe, and they grow daily more and more populous, and this not only at the expence of draining of many other parts of Europe, but at that of hazarding the depopulation of Great Britain in general, and England in particular. For the hardfips of living, under which the induftrious poor of England at prefent labour, are motives that drive thoufands continually to America; and the arts of kidnapping people for that purpofe are faid never to have been fo prevalent, particularly amongt the artifans and manufacturers of every denomination. Does not this merit the confideration of our rwlers."

From this view of things, and from the reafonable indulgence lately given by the legiflature, in the repeal of the ftamp act, to the Britilh Americans, it is no fmall incitement for the people of England, and elfewhere, to flock away to America.
Since the Americans have defervedly met with the favour of the Britifh parliament, and have been moft graciounly gratified in what they have fo warmly requelted of their mother country to comply with on her fide, in refpect to the ftamp act, we are of opinion, that there are fome other effential compliances, wherein, 'tis conceived, Great Britain ought ftill further to grant to her American fubjects; to thofe in North America in particular; provided a more interefting commercial union between Great Britain and her colonies is really intended.

That the ballance of trade has been annually fo much as a million and an half at leaft to the difadvantage of Great Britain, during the laft war, with the Eaft countries, will not be difputed; -and that we, at leait pay a million and an half more a year for intereft money due to our foreign public creditors, is no lefs certain.-That the high prices of our Englifh commodities at this time is a great obftruction to our whole European commerce, and that our foreign competitors therein daily avail themfelves at all the European markets, to our unfpeakable derriment, are points likewife inconteftible.
Upon thefe confiderations, it becomes the wifdom of this nation to exert every nerve of policy to diminifh fuch drains of our treafures out of the kingdom. With refpect to the annuity paid to our foreign creditors, there is no way to prevent that bur being in a capacity to pay them off as faft as we poffibly can; and to contract for the future public debts only within ourfelves, if debts cannot be avoided, that the intereft money may center in the kingdom, and not exhauft it of its wealth. But thefe things feem to be at a diftance.
What is in our power to effect immediately, ought not to be delayed, to compenfate for the commercial drains we now experience; and therefore, I would humbly propofe, that whatever we import from the eaft countries of Rufia, Sweden and Denmark, fhould be raifed with all poffible expedition in North America, there being no one thing that we import to our difadvantage from the faid countries, but we may obtain from the continent of America to our advantage.

To this end every reafonable encouragement fhould be given by bountier, premiums, \&xc. to the raifing of plenty of naval ftores of every kind in our own plantations, and whatever elfe we take at a difadvantage from other countries; and as faft as we can be fupplied therewith from thence; that we import them from America, and ceafe to take any thing of that nature from the Eaft countries, or from other countries, where the ballance of trade is not in our manifeft favour.
That every encouragement be given to our American fellow fubjects to fupply Great Britain with every feecies of timber we at prefent take from Norway in particular.
England is certainly now in a capacity to turn the whole channel of the Norway trade from that country to North America, and to fupply itfelf with fir, timber, balks, fpars, poles and deal boards from North America, infinitely more to the advantage of the commerce of England in general, than it is fupplied from Norway, and every way as cheap to the Englifh purchafer.
Moft certain it is, that the trade in deals and timber, as at prefent carried on with Norway, and has been for too many years, is much to the lofs of Great Britain in the ballance of trade, becaufe almoft all that trade is paid for in hard money, and very few Britifh goods are taken in part of it; and which is ftill worle, the money exported for that purpofe is generally not foreign. filver, hut Eaglifh coin; crowns and halfcrowns, as is well known, have circulated far more plentifully in Norway than in England for many years paft; the quantity is fo great, that there is reafon to believe more money in fpecie is carried out of Great Britain by the trade to Norway, than by the trade to the Eaft Indies, however popular the complaint has been of the one more than the other, efpecially of late years, fince the fpirit of houfe-building has been fo prevalent in this kingdom.

Great part of the Norway trade is carried on in Norway hips, navigated by Danes, whereas this trade would be carried on in Britifh or North American fhipping, which is all one, and thefe hhips wholly navigated by Britifh feamen; an advantage very confiderable, the freight all centering amongft ourfelves, while we thall preferve a due commercial union with our colonies.

It might be further proved, if we could fuppofe that any one could doubt it, that with refpect to hemp, pitch and tar, flax, and all thofe things which fall under the name of naval ftores, which have been fo long ferched as far as from Riga, Narva, Peterıburgh and Archangel, all might be plentifully raifed in and they brought from thofe Englifh colonies in America, highly to the reciprocal advantage of Great Britain as well as her colonies; and fo plentifully and cheaply may they be raifed there, as to vie with the Eaft countries themfelves, whereby we might re-export quantities to other nations, befides fupplying onrelves cheaper therewith than we ever have done.
Nay it is equally certain, or this nation has many years been moft fhamefully duped and impofed uporn, that we might long ago have raifed raw silk in North America; but it is not to be queftioned at prefent we may, as our territories have extended fo much to the fouthward of that continent. And if the prohibition of foreign wrought filks thall happily take place, and we thall likewife be able amply to furnilh ourfelves from our colonies' with raw filk, and manufacture the whole up in Great Britain, the difference may be above rwo millions per annum advantage to the Britifh empire. We cannot import fo little in value of foreign wrought filk, either legally or illegally of every kind, as to the value of a million fterling annually, as obferved, and the difference between purchafing foreign wrought filks and fupplying ourfelves therewith, will make a difference to the nation of double the fum. - To which mult be added the expected benefit of furnifhing ourfelves from America with raw filk, inftead of buying it from Turky, Italy and Perfia, by way of Ruflia, which will ftill confiderably more augment our national emolument.

That we may be alfo furnifhed with plenty of wines of divers kinds from America is not to be doubred ; I mean from the continent. But if that fhould never prove the cafe, 'tis certain that we may be furnifhed amply from our fugar colonies, if proper meafures were taken for that purpofe, the balis of all wines being a faccharine fubftance, as the learned Doctor Shaw has proved.

In a word, there is no impartial man, who is well informed in the prefent ftate of Britifh America, but will allow we import a great variety of very colly particulars from Europe and other parts, that we might eafily have for luxury no lefs than utility and convenience from our colonies, either from the continent or from our iflands, to the mutual benefit of both Britain and her colonies.

One principal reafon that may have been afligned for the neglect of this hitherto, is, that if we encour raged our flantations too much upon the old fyftem, we might and fhould have loft as much in the diminution of our exports to feveral European councries, as we gained by fupplying ourfelves with variety of imports from our colonies: whatever weight fuch reafon might have, we fay, upon the old fyftem of conduct between us and the colonies, and when we were lefs incumbered with public debts and taxes, and when our commodities and manufactures in general were confiderably cheaper, and our European trade was far leís injured by competitors: however fubftantial fuch arguments might be heretofore, when our colonies were not fo greatly extended, and not fo capable of furnifhing our wonted imports, that reafon which held good for-
merly, when we were differently circumftanced, has lof all its force in our prefent fituation; and the fullnefs of time feems to be come, which renders it now good policy to fave evety particular ballance of trade we pay, to enable the nation to get rid of its tax-incumbrances as expeditioufly as we cari ; and we are of opinion that our colony trade rightly regulated, may be made the great foundation of fo doing: Should this $\mathrm{b}=$ happily effected, our colonies may prove the falvation, inftead of the ruin and deftruction of Great Britain : our vaft continental and other colony acquifitions may then anfwer the defireable end of a lafting mutual prolperity.

However heretofore the power and dignity of the Britifh empire hath been pretty happily fuftained, before the laft two wars, when our debes and taxes were not much above one-third part of what they now are ; however this nation has, by the dint of a ftupendous fcene of paper credit and paper currency, hitherto held up its commercial head, we cannot reafonably prefume to do fo long under the national burdens we at prefent are obliged to bear; unlefs every difadvantagedus channel of trade is ftopped up, and every beneficial one fhall be opened; and that of the colonies, 'tis humbly apprehended, may be made fubfervient to our national fupport, notwithftanding our load of tax-incumbrances is fwelled to an enormous magnitude ; to a magnitude, I am perfuaded, far greater than has been duly confidered.

The neat income of taxes perpetuated, till the redemption or reduction of the public debt, into the exchequer, does not amount to fo little as five milions ayear; and the grofs produce for the receipts and iffues of charges of management upon this occafion only does not come to lefs than twenty per cent. upon the neat revenue, which makes another milition for the collection and diftribution of fo large a dead national burthen on the ftate.- It is reckoried by the beft judges in the kingdom, that we do not owe lefs than onethird part of the public debt to foreigners, and confequently that we are not tributaries to them for lefs than one million and an half per annum as Britifh annuitants, which is a conitant drain of treafure upon the nation.

By the account now before me delivered into parliament the 13 th day of March 1766 , of the money given for the fervice of the year 1765 , it amounts to the fum of $7,969,337 l$. $12 s .1 d$. together with deficiencies of grants for the current fervice of the faid year 1765 ; which being added to the faid six millions, make 13,769,337l. 12 s . id. raifed in time of peace, exclufive of his majefty's civil list revenue for the fupport of his houfehold and the honour and dignity of the crown; which, if further added; will make the whole $14,569,337 \mathrm{l}$. 12 s . I d . befides fome other public expences we fhall pafs over, befides that great orie in the raifing and iffuing the faid fum of $7,969,337$ l. I2 5 . I $d$. which is extravagantly large, as I could flow.

If it be confidered, that we further expend yearly, according to reafonable eftimation, not lefs than a mil.LION AND AN half more by the poor's tax; what is alfo expended annually in all other parochial taxes together, it can hardly amount to fo little as half a milion yearly more, which will make a total of $16,569,337$ l. 12 s . 1 d . without reckoning any thing for the annual expences of turnpike roads, which is alfo a charge on our commerce, as well on our foreign, as our domeftic; which, that we may not be fup: pofed to exaggerate, we will exclude from the total of our accumulated charges upon the national trade of this kingdom, which is the great fund of the public treafure.

Now, let it be confidered, difpaffionately confidered, what may be prefumed to be the amount of the arbitrary enhancements of the public expence levied upon the whole traffic of the kingdom by fo enormous a revenue.- From the example before given; it mult certainly amount to fomething véry confiderable, occafioned thereby; and muft inevitably raile the pricc of all things confumable throughout the nation, by the way of trade and commerce; and this muft proportionably affect the foreigu no lefs than the inland trade of the whole Britifh empire-_It may look too invidious to attempt any fort of eftimate of this matter, fince the bulk of the arbitrary enhancements upon the general trade, in confequence of fuch an immenfe taxation, mult be fo very extraordinary, feeing it may be faid, we will fuppofe, that the chief part citculates and centers in the nation. But notwithftanding that, as our domeftic commerce alone will not enrich the ftate, nor add any great matter to the maritime power of the kingdom without foreign trade; if our general foreign trade be fo highly loaded with tax-incumbrances, moft certainly fuch an oppreffive load muft neceffarily affect every foreign branch, as hath been fhown, by raifing the prices of all Englifh commodities and manufactures to a degree that rehders then unpurchafeable in foreign countries, by reafon of their exceffive dearnefs, when compared with thofe of rivals; and therefore can we reafonably hope and expect to preferve our foreign trade while this fhall be the cafe ?

In a word: the whole tax-incumbrances tupon our trade (for there the whole terminates, that being now our great fund of property) comprehending all our arbitrary erihancements upon enhancements, cannot amount to near fo little as twenty millions per annum. And if one moiety only of that immenfe tax-burthen was abfolutely annihilated, what an extraordinary eafement would not this prove to the whole commerce and navigation of England? Would it not enable us to fell our wares and manufactures in general to foreigners as cheap as any other nation? Who will take upon him to demonftrate the contrary? Perfuaded I am, that if only all our appropriated and perpetuated taxes were juftly and equitably abolifhed, that pay intereft money for the public debts, and thereby fend a million and an half a year out of the nation as tributary debtors ; perfuaded is the writer, if this was effectually done, confiftent with the prefervation of the public faith and credir, that we fhould be able to fell our goods as cheap at foreign markets as any nation in Europe.

This being the fimple and unexaggerated ftate of our enormous expence, I would pray leave to afk, whether under fuch circumftances it can be eligible and politic for us to permit of an additional drain of treafure of a million and an half that we pay to the Eaft countries, in our intercourfe of trade with them to our difadvantage? For if we are tributaries to our foreign national fund creditors to the amount annually of a million and an half; and we pay a ballance of trade likewife to Ruffia, Sweden and Denmark, to the amount of a million and an half more; will not this exhauft the nation of three mileion a year of the public wealth? Can we, under our prefent circumftances, afford to fuffer fuch great outgoings? I Thould be glad to know what certain national recruits we have conftantly to fupply fuch large exhauftions of treafure?

The immenfe fortunes that have been acquired during the two laft wars, have bloated the nation with fundcredit to an enormous degree, which hath centered amongt a few families only, compared with the whole of the people. And becaufe our large fund-treafures have fo greatly fwelled; and thofe paper-credit-mongers make fo fplendid a parade, by their wealth wrung out of the bowels of the kingdom, inftead of being brought into it, by fair and honeft traffic with foreign flates and empires, we are dazzled with the gaudy and tinfel appearances. Of what, Ialk? Of papir-property, paper circulation, and paper-credit: of thefe, indeed, we are full; we overfow. But what is all this fhow of riches but the fhadow of that folid wealth with which we have hitherto parted for fairy treafures? Upon what a foundation this magnificent fyftem of paper-wealth fands, we may eafily difcern, from what hath been faid in thefe few fheets. With what defign do you aik? The writer will frankly and honeftly tell you. With a defign that the maladies of the nation may be probed to the root: to the end that they may be radically cured, not kkinned over only, as they have too long been, to fefter, gangrene, and break our in a fate of incurability.

Yos. I.

We have feen the potentiality of our colonies to become capable of fupplying this nation with many of thofe valuable and expenfive imports we at prefent take from other nations at a difadvantage; it is to be hoped, that the conduct of the colonies themfelves will enable the mother-ftate to render them actually fo.

It is apparently the prefent difpofition of the legilatiure, and, indeed, that of the whole kingdom in general, to adopr every meafure that will promote the incereft of the colonies: but this fpirit of indulgence, if no equivalent returns fhall be made on the fide of the colonifts, will foon difable Great Britain from a continuance of thofe indulgences. She will be compelled, from the principle of felf-prefervation, to contract, infead of inlarge and extend them; or what is the abour? Is the not purfuing direct ways and means to render herfelf an impotent and beggarly nation, to raife her colonies to that ftate of aggrandizement which has been reprefented; the fooner? Will not fuch conduct in this nation tend to make the colonies great and formidable ar her expence and ruin; provided the colonies fhall not, without a moment's delay, manifett their intention to return reciprocal advantages to the mother ftate? The defireable commercial union cannor be duly cemented between them, unlefs it is fixed upon the bafis of mutual interelt and advantage : without this, it is impomble it thould be of any duration.
It remains then only to be confidered, how and in what manner the colonies thall as effectually evince their regard to the mother kingdom as that has already done towards them? Every man will anticipate the anfwer, becaufe quite natural and unftrained. The colonies defire this kingdom to give their trade every fort of encouragement, and take off every reftraint thereon, that the colonifts apprehend difadvantageous to their rifing power and fplendor. The mother ftate rejoices in this promotion, provided they are affured that rife in the colonies fhall not injure or ruin her, as we have feen is not at all improbable. But with what reafon can the colonifts expect to be fuffered to rife to the pitch of grandeur they are capable of, unlefs the mother-ftate Thall rife at the fame time? If the rife and magnificence of the Britifh Colonies fhall have any tendency to the impoverifhment and deftruction of Great Britain, is it not the intereft of Great Britain to keep them in a ftate of poverty, inflead of elevate them to that independent wealth and power? The colonies have experienced the tendernefs and affection of an indulgent parent. How thall they manifeft their returns of duty and fenlibility? If they do not, muft they not look for an increafe of obftacles to their advancement, rather than further indulgencies to it? This is conmon policy, dictated by the fovereign principle of God and nature.
We muft prefume, that none are more fenfible of this than the colonifts themfelves; and that we cannot require them to grant more grateful returns than they are chearfully difpofed to do. What returns can the mother-kingdom require of them, for all paft advantages received, and to encourage them to grant them more and more? The anfwer, I have faid, is natural and obvious. If the colonies expect a continuance of this happy difpofition in us to extend our good will and munificence, there is certainly reciprocal obligations due on their part. If this kingdom fhall be difpofed to grant them every encouragement by largeffes and premiums, to promote their interefts in agriculture and planting in general, and in THE PRODUCTION or EVERY thing that we now take from other nations, and import the same from them, is it not their interelt to take whatever they can in return of us to compenfate for our outgoings on their account?
They cannot expect that we fhould hazard the encouraging of them firft in thefe productions we at prefent take from other nations, and take the fame, in confequence of fuch encouragement from them, unlefs they fhall think of taking an equivalent from us. This would be unequal; it would be impolitic; it would be reducing ourfelves to an abject ftate of poverty to make them our mafters, ourfelves their dependent flaves; it would abfolutely undo our whole landed and trading intereft, and deftroy all hope of future profperity. This the colonifts know as well as we do; and cannor be ignorant of what would in fuch cafe be in their power, and how much it would be out of ours to right ourfelves, fhould we be fo infatuated as to confult their intereft independent of our own. There feems no intention in this kingdom but to do all they can for the benefit of the colonies. This appears now too glaring to be denied; the colonifts will acknowledge it, not only by words, but every other teftimonial of gratitude in their power, it is not to be doubred. Our regard has been demonftrated by actions that fome think were unbecoming the wifdom of the Britifh nation. The writer hereof is of different fentiments. He judges the repeal of the ftamp act a right meafure; and the other fteps taken for the benefit of the colonies hitherto not altogether wrong: but why does he think fo? Becaufe he doubss not of becoming returns from the colonies to their mother-country. This is his chief reaton for adopting this opinion; and he hopes he fhall not be therein miftaken by experience.

Was he nor morally certain of that, he fhould think it the moft impolitic flep the Britif legifature could have taken. From his opinion of the happieft difpofition in our colonifts to approve themfelves worthy of all regard that this kingdom has fhown towards them, or fhall be hereafter induced to fhow them; he will take the liberty to declare what heathinks to be incumbent on their part to do, without delay, in order to cement that everlafting commercial union that he hopes may fubfift between Great Britain and her American territories.

Before he declares himfelf, he defires, that the reader will pleafe to recollect what has been already urged. That the dearnefs of Englifh commodities and manufactures in general, and therefore the caufe of our being underfold by our competiors at foreign markets, no lefs than that of fmuggling in Great Britain, are owing to the weight and opprefion of our taxes in oeneral. Wherefore, the writer has recommended the leffening of our taxes as foon as pofible, in order to lower the prices of our manufatures; to the end, that our American colonifts, as well as any foreign European ftate, may purchafe them at as cheap a rate as they can do thofe of France or any other rival nation; this being an inducement to the colonies as well as the mothercountry to lay afide fmuggling.
Till our taxes can be fufficiently reduced by certain means the writer conceives to be in our power, to enable us to fell our manufactures upon an equality with our rivals, 'tis to be hoped that our colonitts will not be averle to co operate with their mother-country in the reduction of our taxes, as we have fo readily reduced theirs, and obliged ourfelves to make good the deficiency of the fuppofed produce of the late ftampatt: fering the mother-country has done this for the colonies, we cannot prefume but the colonies will as readily unite with the mother-country to eafe her taxes in general. And, indeed, will not the colonies themfelves reap no lefs benefit by fuch conduct than this kingdom will? Will they not purchafe our manufactures the cheaper, if the general taxes of Great Britain thall be confiderably reduced? And can they, or will they refufe to lend their helping hand to forward a work fo beneficial to themfelves no lifs than to Great
Britain?
However impracticable the natural reduction of taxes may appear to fome; yet the writer is of a contrary opinion; and that one great foundation for its accomplihment may be laid, by promoting the commercial union he propofes by thefe papers, between this kingdom and her American plantations. By what means fuch an advantageous union may be effected, is by the plaineft and fimpleft means; it not requiring any mighty complicated and myferious fcheme to bring the fame to pafs. They are fo obvious, that every man will, 'tis apprehended, readily difcern their reaionablenefs, and acquiefce therein upon the firt hearing.

The fhort plan, therefore, that I would propofe is only as follows: viz. That Great Britain gives effectual encouragement to the colonies to produce whatever we at prefent import from the Eaft countries; and as faft as the colonies fhall be able to afford the fame, that Great Britain fhall import them from chefe American colonies.

That Great Britain gives effectual encouragement to her colonies to produce every ocher fpecies of materials for manufactures, that we do not, at prefent, import from the Eaft countries : RAW silik in particular, together with every other material that we import from any other parts of Europe, or elfewhere.

That this kingdom gives effectual encouragement to her colonies for the making of cochineal, and the raifing every fpecies of dyeing productions ufed in our manufactures, that we now import from any other parts of the world: alfo cotton and flax in plenty, and whatever elfe we take from other countries that is contained in our whole catalogue of imports, where it cannot be demonftrated that this nation is a gainer by fuch importations.

That we give effectual encouragement for the productions in our colonies, as well in the inland as the continental ones, of whatever in general we take for ufe, or convenience, or even luxury, from other itates, that will come to us in a little time cheaper than we import them from fuch other ftates, either for Britifh confumption or for re-exportation to other foreign countries.

What our own extenfive colonies in general may not be able to afford as objects of traffic, is hard to determine: provided, we fay, that the encouragement we give them Thall be effectual for the purpofes of fair and repeated trials and experiments made there for that defign. And, therefore, it is hard to fay, what commodities we Thall ftand in need of within ourfelves, or for trade with other nations, that cannot be obtained from fome or other of the prefent Britifh colonies.

Should we carry this matter to the full extent it will admit of, we may certainly obtain a great variety of materials for manufactures more than we at prefent have; and fuch, perhaps, with which we are quite unacquainted at prefent. And if thefe are obtained in that great plenty that the extent of our whole American dominions will now allow of, why may we not obtain fuch materials at a rate as cheap as they can be from any other parts of the globe? They certainly may. When this great point thall be gained, the next we ought to aim at is to manufacture them as cheap as any nation under the fun can do. But how can this be effected but by the fpeedy annihilation of taxes to their proper degree? By what obvious means one good foundation for this can be obtained, we thall next animadvert on.

The fuppofed full and adequate encouragements being given to our colonies to raife every thing for traffic, that the great variety of climates abound with in America; we mean fuch materials for Britih manufactures as can be raifed there by agriculture, hufbandry, or planting in every refpect, that thall be experienced to be practicable; and every thing elfe that we hall find our intereft to confume amonglt ourfelves, or reexport to any where elfe.-This is our general idea, without further expatiation on the matter.

Hereby we fhall render, perhaps, Great Britain for every fpecies of imports that we want for domeftic ufe, convenience or luxury, or re-exportation, in a great meafure independant, as it were, for imports of any fort with every other part of the world: We fay, as we would be fo underftood, that if we fhould judge it politic to encourage our colonies to the full heighth they will admit of, we might have little occafion for any fort of foreign imports whatfoever: we might become fellers to all the world of much more than we yet ever did, and buyers of much lefs. This will fo inrich the nation as to enable her to reduce her taxes, and thereby perpetrate the proposed national system of colony-union.
But whatever we did import from any foreign country, ought we not to oblige fuch foreign country to take an equivalent of our native products and manufactures in return? Or why nor ceafe to have any commercial intercourfe with them? Is it not more eligible to ceafe to trade with any country, than to carry on a lofing trade with them? We mean, a lofing trade when the fame fhall be confidered in all its circumftances, relations and connections, with any other branches of trade; for one branch may be a loofing one, and yet that may prove inftrumental to render fome other branch or branches more beneficial than they otherwife could be, and therefore amply compenfate, or more than do fo, for any lofs we might occafionally fuftain. So that if we lofe by one branch of trade, yet that very branch giving being to, or tending to render forme other advantageous, we fhould not trade to our national injury upon the whole. For we can never expect to get rid of the bulk of our taxes, and preferve the public faith, but by rendering our particular balances of trade as advantageous as we can, in order to make the general more fo.

Our colonies then being actually brought to furnifh us as before reprefented, in as ample a manner as fhall be judged politic on our fide, we come now to the fhort queftion; What conduct ought to prevail amongft all our colonifts? To which we anfwer, that as we advance in their encouragement to furnifh us, is it not their intereft to enable us to pay them for what they fhall fo be enabled to furnifh us? Without this, 'tis impoffible we fhould either be able to encourage them, and continue our imports from them.
But if our colonies determine one and all, and that alfo in the moft effectual manner, that they will take and actually fhall take, all their manufactures from Great Britain, whom they thall furnifh with all materials for that purpofe, inftead of taking them from the Eaft countries, or elfewhere, \&c. \&cc. this conduct on the part of the colonies will put Great Britain in a condition to pay them for every fpecies of materials wherewith they fhall fupply them; and every fort of production, which they at prefent import from any other ftate, which does not take an equivalent value of Britifh commodities and manufactures.

That the colonies duly indicate their intention to do this, is it at all unreafonable, that they fhould as much as poffible, defift from, lay afide and forbear, every fort of attempt to fupply themfelves with fuch manufactures, as they ought in juftice to take from their mother-kingdom? We are of opinion, that it is incumbent upon the colonies to manifelt immediately the fincerity of their intention to lay afide manufacturing, and that inftantly, all thofe manufactures lately fet up upon the continent, and all other, except fuch as thall be reafonable to except. But this cannot be effectually evinced by the vague declarations that they have hitherto only made to this kingdom. During the dependence of the reconfideration of the late act before the legilature, they forbid their correfpondents in this nation to fend Britifh manufactures to America. This was done to fhow their general difgult and diffatisfaction the ftamp act had given them: no fooner was the fame repealed, than thefe orders were gratefully and politicly countermanded, and the courfe of trade hath partly reverted to its wonted channel.

Notwithitanding this, in confequence of our humble opinion to inlarge and cement the commercial union to the degree we have propofed, and to induce the mother-country to acquiefce in the meafures fuggefted for that purpofe, fomething more fhould feem requifite to be done and performed on the part of the colonies; apprehending what they have hitherto done only to be a fignificant prelude to what ought to fucceed; which, we conceive, fhould be fomething bordering upon the following conduct, and that is humbly fubmitted.

That the refpective colonies in their legal affemblies, or by their deputies, authorized to convene for that purpole, come to fomething like thefe refolutions, viz.
sxx The ill State of our Finances: weith a Plan for a more interefting Union between Crcat Britain and America, Evc.
That in conlequence of his Majefty and the Parliament of Great Britain having, in their great wifdom, been pleafed to regard the remonftrances of the Britifh Americans againft the late ftamp act, and have at their humble requeft and follicitation repealed the fame, the feveral and refpective colonies have come to the following refolutions:
t. It is refolved, by and with the confent of the faid feveral and refpective Britifh colonies in all his Ma jefty's dominions in America: That they have unanimoully refolved, in confequence of the repeal of the ftampact in Great Britain, to make and enadt fuch law and laws in the feveral affemblies; as fhall encourage the importation of Britifh manufactures into the faid colonies.
2. It is refolved, That all manufactures which interfere with the manufactures of Great Britain, and which have been at any time fet up and eftablifhed in the faid colonies, fhall be abfolutely abolifhed, from and after the day of That proper laws be made by the feveral affemblies belonging to the refpective colonies; and that all and every of his Majefty's fubjects refiding in the faid colonies, fhall be prohibited from manufacturing, from and after the faid day of any houfehold furniture, or wearing apparel of any kind or kinds, except fucb as fall be excepted, Esc. Eic. Eve.
3. It is refolved, That no kind or kinds of manufactures fhall be fuffered to be made in the faid colonies, excepting fuch only as have relation to agriculcure, hufbandry, or to planting, and the raifing of all fuch materials for manufactures, and all fuch other productions as Great Britain fhall encourage to be produced within thofe colonies; and excepting alfo the making of all fuch utenfils as may be neceflary to the building of dwelling boufes, the ereEting of planiations, $\mathcal{E}^{3} c$. $\mathcal{S}^{3} c . \mathcal{E}^{2} c$.
4. It is refolved, That all difcouragement fhall be given to the illegal importation by finuggling of every kind of French or other foreign manufactures into the Britifh colonies, purfuant to the laws that are, or fhall be enacted for that falutary purpofe in thefe colonies and in Great Britain.
5. It is refolved, That proper meafures be taken by the Britifh colonies to reprefent to the parliament of England: that it is their defire to enlarge and extend the commercial union between Great Britain and her American colonies, by their giving fuch encouragement to agriculture and hufbandry, and to planting, and the raifing of all fuch other productions, \&c. \&zc. as to their wifdom hall feem meet; as well with refpect to the commerce and navigation between her and her northern colonies, as between Great Britain and her whole American colonies in general.
Something like the preceding refolutions being folemnly agreed upon, and formally and duly reprefented to the parliament of Great Britain, may probably be attended with all the happy confequences briefly fet forth in thefe papers. Certain it is, that fuch meafures being taken by the colonies, would manifeft the difpofition of the colonies towards their mother-country; and the latter would, doubtlefs, make becoming returns towards fuch a reprefentation. In a word, by fuch fteps as are hereby generally fignified being taken on both fides; will naturally bring about thofe defirable events aimed at by this difcourfe. Let it be fuppofed, for a moment, that our plantations actually prohibited all manufacturing of houfehold furniture and apparel only; and this kingdom, in confequence thereof, was only to give effectual encouragement for the productions in America; and the importation from thence of all thofe feveral imports that we at prefent take from the Eaft countries: this firft ftep would confiderably enlarge our commercial connections with each other. If we look to the additional amount of a million and an half a year from our colonies, this would enable the colonies in their turn to take to the like additional value of our manufactures.
Was this the cafe, would not this create an additional circulation of trade and navigation between this nat tion and Britifh America to the amount of three millions a year? Is not this an object deferving the attention of parliament? What confiderations relative to the Eaft countries can induce us to forego fuch a nas tional emolument? There are no alliances or treaties that we can make with thofe powers, either in time of peace or war, that can be an equivalent advantage to Great Britain, for the lofs of fuch a commercial union as thefe meafures would inevitably produce between this kingdom and her American plantations. For this increafe of union will be conducive to a further, not only with-North America, but between our continental and our ifland colonies; and as the more opulent both grow, the more manufactures will they both be able to take from Great Britain, and inrich her likewife, as the commerce will increafe her breed of feamen, and augment her maritime power to a degree far beyond any fervice we can expect to receive from the Eaft countries beneficial to thefe kingdoms. Moreover, every addition made to this branch of trade will be our own trade, under our own controul and direction, and will prove the increafe of our own beft ftrength, the increafe of employment amongtt the induftrious poor, and the increafe of our own national treafure. Wherein can the Eaft countries, I folemnly afk, benefit Great Britain to fuch like degree? They may tend, as they have hitherto done, to exhauft us by fubfidiary alliances, as well as by their commerce, if we continue in the lethargic flate we are in.

Should it be faid, that if we decline in our commercial connections with Rulfia, Sweden and Denmark, our commercial rivals may think it the more politic in them to increafe in theirs, and adhere alfo to that fubfidiary fyttem we may find it our intereft to relinquifh. Let our rivals do this; let them trade with the Eaft countries to the difadvantage we have too long done : let them increafe their fubfidiary exhaultions of treafure, and let them purfue this trade for naval ftores, \&zc. \&c. to their detriment, while we augment ours with our colonies, to our high advantage; what will the confequence be? While they fhall behold us rifing in opulence, maritime ftrength and fplendor, by an extended commercial union between us and our colonies: while they fhall behold this fcene of profperity on our fide, will they not experience themfelves to grow poorer and poorer, and more and more impotent, while this kingdom grows more and more wealthy, potent and formidable? What need we then to dread their clofeft connections with the Eaft countries, when our maritime ftrength will be a match for theif united naval force? Provided, likewife, fome other meafures fhall be adopted by the court of England, that we may fuggef, it is the humble opinion of the writer, that Great Britain will have little reafon to apprehend any kind of injury from the prefumed connections that may probably take place between our competitors and the Eaft countries.
Another objection that might be made againt gradually declining in our difadvantageous trade with the Eaft countries, as we fhall augment in that of our colonies, is, that the revenue of cuftoms will fuffer by the lofs of our imports from the Eaft countries. Every one converfant with our fubject will inftantly obviate this objection, by obferving, that the fame duties will be laid upon the like commodities as gradually imported from our plantations, as at prefent come from the Eaft countries; and the new duties may be appropriated as the old at prefene are. The revenue, therefore, can fultain no dimination from fuch a change of conduct; and as to the temporary expence to which the nation may be at firf put for encouraging premiums, bounties, \&c. \&c. to the colonies; That when put into the fcale againft the national benefits, will be of no weight in the ballance, even with relation to the Eaft country trade alone. But if the plan be farther extended, even to the production of raw filk, cochineal, and every other article of dying ingredients we have imported from other parts, the ballance of national advantages will not be inconfiderably augmented in our favour, without the enumerating a great variety of other imports we take from countries we are lefs beholden to than is generally imagined; that this nation ought to fudy how to have them from her American plantations, our circumftances requiring this
policy to be carried to the utmoft pitch it is capable of; for if we make the certain benefit and advantage of the kingdom our guide herein, we can never carry the $\gamma$ rinciples upon which we reafon to too great lengths. The more the colonies fhall be enabled to take of our manufactures, the more they will take; and the more we fhall be able to import from them, the more able will they be to increafe their imports from us; and by this increale of commercial intercourfe, our navigation will be proportionably inlarged, by our own unprecarious traffic, independent of the caprice of all foreign flates whatever.

Be it fuppofed, we add no more than the article of raw filk to that of the Ealt country trade, it will be well worth our while to exert our efforts to accomplifh it. Let the value of the import of raw filk be eftimated, in conjunction with that of foreign wrought European filks, legally and illegally imported, at no more together than one million per annum; and that by means of our colonies, and the prohibition of European wrought filks, our weavers fhall be enabled to fupply us therewith, the difference to the kingdom between fpending a million a year out of the nation, and faving the fame fum within it, will make two millions a year. If half a million only of raw filk be imported from the colonies, inftead of Turky, Perfian and Italian, and the colonies fhall in lieu thereof take half a million of our manufactures, this creates a circulation of a million between the kingdom and her colonies, and improves her navigation. And if by the prohibition of European wrought filks we preferve at leaft in the kingdom the other half million we pay for thofe manufactured filks, this will fave a million more to our internal circulation ; fo that together with the three millions before of circulation on account of the Eaft country trade between this nation and her plantations, will occafion a faving of five millions a year to this kingdom. Sure this is an object deferving of our attention.

Let it be imagined, that by carrying our commercial connections to the degree intimated between Great Britain and her American colonies, and declining fomething in thofe between us and thofe of Italy, will not the faving of the ballance we at prefent pay for Piedmontefe raw filk, compenfate for any lofs we may be prefumed to fuffer by our exports to the feveral other Italian ftates, when the value of wrought filk imported from Italy hath been duly confidered. The Italians cannot do without our lead, our tin, and our filh; and if they take the woollen goods they have hitherto done from us wholly from France, would this equalize the advantages, which we may derive from fupplying ourfelves from our colonies with raw filk, and fupplying ourfelves likewife and our colonifts with wrought filks?

The Turkey trade is at prefent in our disfavour, and bas been fo for fome time; why fhould we be anxious for the prefervation of a trade we are lofing by, unlefs at length to become gainers by it ? Is it not better policy to turn every difadvantageous branch of our foreign trade into a beneficial one, by means of increafing our trading connection between us and our colonifts upon the footing fuggefted, than to continue in the lethargic ftate of difadvantage for want of roufing ourfelves to turn the channels of commerce into lucrative currents? If indeed by the change of channels our maritime power fhould fuffer by it, it might have fome weight in a nation whofe ftudy ought to be to preferve their mercantile navigation, for the fake of maintaining a powerful royal navy. On the contrary, by cultivating a more extenfive navigation with our colonies, we fhall certainly confiderably more increafe our naval prowefs than we thall diminifh it by any imaginary loffes in the decline of our trade with other European ftates. And it fhould not be forgot, candid reader, as before noticed, that our colony trade is our own trade, under our own conduct and controul; and while regulated upon the general principles herein propofed, may be rendered conducive to the increafe of our trade to all other parts of the world hereafter, as well as the immediate inrichment of the nation. For why may not we become sellers of all North American, as well as our inland productions, to other nations? Under proper regulations, and by ftrengthening the act of navigation in confequence of what has been faid in the general, we may aggrandize the colonies no lefs than ourfelves; and they will then never be induced to attempt an independency, when they experience themfelves happy and profperous in the reverfe ftate and condition. Nothing will urge them to that but finding their intereft neglected, inftead of encouraged, from principles reciprocally beneficial to the mother-country, as well as to themfelves. To this both have a right; and withous that right being duly maintained and perperrated, the fubferviency and dependency of the colonies long upon this kingdom cannot be expected; the grand tie and cement of union being deftroyed.

Willing to hope and believe, that fomething like what has been fuggefted may take place, the confequence mult have a very pleafing afpect with relation to both. Provided the North Americans fhall be encouraged to direct their whole efforts to the productions of all things that thall not interfere with thofe of the mother-flate, but may interfere with thofe of other European flates or any other country whatfoever : provided they fhall chearfully acquiefce in the laying afide all forts of Britilh manufacturing, and will determine to take the moft vigorous meafures to promote the importation of Britifh manufactures, and to difcourage, by the moft fevere and falutary laws and regulations amongft themfelves, the fmuggling of any kind of foreign wares or manufactures into the Britifh colonies in general, the iflands as well as the continental plantations: if thefe meafures fhall be adopted, and refolutely adhered to, their temptation to the purchafe of foreign commodities and manufactures will ceafe, becaufe thofe of England may become as cheap as thofe of France. For as fuch like conduct will enrich the mother-country, as well as the colonies, will not this lay a sure foundation for the annihilation of Britifh taxes; and will not that prove the effectual means, if carried to its proper extent, to lower the price of all Englifh wares to a level with thofe of any European ftate or empire? Where then will be the temptation to Britifh colonifts to prefer foreign commodities and manufactures to Britifh ?

Till a more defirable commercial union than hitherto has taken place, between Great Britain and her colonies fhall do fo, to their mutual benefit and advantage, is it not the duty of our rulers to take every meafure that thall tend to the reduction of taxes, in order to cheapen all Englifh manufactures, that the colonitts may be the more readily inclined to take them, and relinquifh the fmuggling of thofe of our rivals? It is moft certainly incumbent on them to forward and promote to the utmoft of their power, whatever has a tendency to fo happy an end. How, otherwife, can we imagine that the colonies will continue to prefer Englifh manufactures to thofe of our competitors, if the abolition of tax-incumbrances to fome purpofe is not zealoully purfued?

Inftead of any thing of this kind appearing to have been thought of by men in power for above thefe forty years paft, we have feen, that the whole revenue is fo conftituted, in its prefent ftate and condition, as to give either to ourfelves or our colonifts very little hopes foon of fo happy an event; however practicable fuch a notable fyftem might be, and however foon fuch might take place, were there public virtue and public fpirit enough in the nation to encourage it. But private perfons have too long experienced difficulties and difcouragements enough in confulting the public intereft. Prudence, therefore, direets every fuch perfon to attend to his own avocations, and leave public concerns to thofe who enjoy their thovsands and their ten thousands a year only do diftract the kingdom, and increafe the public debts and taxes, inftead of Fudying how to prevent the one or to leffen the other. Unhappy Britain! What muft be thy fate, if thofe who have been fo amply rewarded to raife thy profperity, fhall only ftill think of their dear felves, and neglect thy welfare, fplendor and glory! Is this the grateful return made to the beft of fovereigns for his gracious endeavours to make his. fubjects happy? Is it not one of the greatelt misfortunes of this kingdom that there are fuch numerous lucrative

Vol. I.

## sxxii Theill State of our Finances: with a Plan for a mors interefing Union between Great Britain and America, Eic.

places for the great folks to ftruggle for, by their party cabals and intrigues, intead of duly regarding the true national interefts? It is to be queftioned, whether his Majefty and his kingdoms would not be better ferved, were there fewer, much fewer places of profit and honour to beftow? And on whom are the bulk of the public polts of truft, honour and profic beftowed? Are they beftowed on thofe only who have performed any thing really meritorious? No: they are generally given to thofe who have done no public fervice: to thofe fometimes, who have done great mifchief; to thofe who have lent theit aid to make the worll of laws, and have thereby contributed to alienate the affections of the fubjects from the beft of princes.

But what encouragement can any man in the kingdom exped from any fuch idle fchemes and projects as the difcharge of public debts and the abolition of taxes; while fome of our rulers themelves think, and fagely declare too, that the increafe of public debts and taxes is a national emolument and bleffing, inftead of the reverfe? When fuch deftructive principles are embraced, by thofe whofe duty it is to difcountenance them, is it any wonder that men in power fhould be fo lukewarm as they appear to be, about their reduction? This, however, may be one of their political pretences; becaufe there is fomething more difficulty in the diminution and abolition of national debts and taxes, than in angmenting them.

It is extraordinary that a people fo jealous of their liberties and their conftitution of government as we affect to be, Thould not fet themfelves one and all againft the contituance of national debts and taxes, from the imminent danger they apparently are to both; for as the judicious Mir. Hume obferves, "The time may come " when the vile and infamous fcheme of fhutting up the exchequer may again happen, and all the funds may " be feized, by the advice of wicked minifters." As the funds of this kingdom are fo enormous at prefent, and we have experienced fuch unparalleled profufion of the public money, bad minifters, if they cannot obsain parliaments to give a fanction to their pernicious fchemes, may advife the abiolute ceffation of parliaments, and what then will become of our liberties and conftitution? Though we are in no danger of fuch like practices under the government, at prefent, of the beft of fovereigns, yet our prefent mof gracious fovereign cannor anfwer for his fucceffors, nor the minitters they fhall employ. if our public debts and taxes were equitably abolifhed, we hould have no occafion for perpetuated taxes of any kind; and bad princes and worfe miniters could never have fuch immenfe revenues at their command; and therefore could neither have it in their power to deltroy the being of parliaments or the public credit; for no revenue being then raifed but what fhould be annually fo done, the parliament muft annually meet to raife the whole, or the prince would have none whereon ever to rely independant of parliaments.

To fecure, therefore, to pofterity the existence of pardiaments, as well as the life of public credit, would it not be a fovereign prefervative to both to difcharge the public debts and reduce the perpetuated taxes, and fuffer no taxes in future to take place, but fuch only as fhall be annuallíy voted by parliament for the annual current service, and that annual deficiencies fhall be made good the fucceeding year, and all annual surplusses of particular taxes applied to make good their part, if not the whole of fuch annual deficiencies.

Was this practice once happily introduced, and our fund-fyftem fo changed as never to contract frefh debts to endanger our liberties or conftitution, what halcyon days, what profperous days might not the whole Britifh empire enjoy? We might poffefs, upon the principles fuggefted, infinitely more commerce and navigation between Great Britain and her American colonies in general than we ever did, and by the cheapners of our Britifh manufactures and our plantation prodnctions, draw the whole world to trade with us, and be the general arbiters of their differences, without acting the belligerent part in any.

But while our public debts and taxes fhall continue as they are, and be liable to an increafe by every frefh war, we can never expect a permanent flate of peace or profperity. While we fhall remain in fo precarious a ftate, our neighbouring potentates will never permit us to continue long in a peaceful condition; for they will difern their true road to victory, is to put us under the fatal necefficy to go on to augment our public debts and taxes, which will at length inevitably deftroy all our trade; and when that is gone, what head fhall we be able to make againt any foreign enemy? What eternal broils, diffenfions and rebellions at home fhall we not be fubject to? And will not our colonies then be liable to revolt, and fhake off their dependency, from fo miferable and diftracted a mother-country? May we not thank ourfelves for Thamefully neglecting the means of fafety which we have in our power, by a wife and honeft public firit being exerted and encouraged for our prefervation?

The public debt is attended with èvery dreadful confequence that can accompany any national calamity. If it was payable only out of the rents of lands, and of fuch as live on their means, it might be pretended, that fince the induftrious farmer muft pay his rent, it is the fame thing to the nation, whether it is wholly poffeffed by a lord, or one-half of it be enjoyed by a ftockjobber. Even in that cafe there would be a wide difference. But the rents of lands are not fo much in queltion; and the farmer mutt pay his thare out of his own particular profits, independent of what the lord hall pay out of his eftate. A tax of five or ten per cent. on any commodity, muft raife the price of it above eight or fixteen per cent, and as our arcifts, manufacturers and tradefmen, work under the difadvantage of paying taxes for every thing they confume, either direetly or virtually, it is impoffible that they fhould afford to fell their workmanfhip and goods fo cheap as thofe who pay confiderably lefs, as before hewn.

To judge fairly of the bad effects of our taxes, let us fuppofe ourfelves releafed from them, or a confiderable part of them, and a proportion thereof given in bounties to the artifts, manufacturers and exporters; and then let one imagine how many more hands would be fet to work at home; how many foreigners would be attracted hither; and whether we fhould not be able to underfell all the European world at foreign markets, inftead of being underfold by any fate in Europe.

If our people are grown more idle and lefs induftrious than they were heretofore, as fome will have it, may not our public debts and taxes have occafioned it? The civil magitrate, whofe chief office ought to be to reftrain vice, is forced to connive at it. The large revenue cannot be fupported without encouraging idlenefs and expence, by licenfing numberlefs more public houfes than ever before exifted in the nation: moft of which are to be confidered as fo many academies, for the acquiring and propagating the whole fcience of iniquity. From thefe academies it is that Newgate is peopled, and Tyburn fupplied; but it is likewife from thefe that a very confiderable part of our great revenue arifes; which otherwife, we may prefume, would be fuppreffed, the better to fupport honeft induftry rather than fioth and debauchery. Pulpits may thunder againft vice, and juries may hang criminals to eternity, while every means of corrupting the morals of the bulk of the people is thrown in their way to intice them from their duty: it is in vain to expect reformation.

The public debt has opened the iniquitous traffic not only of ftockjobbing, but that fpecies of gaming has introduced the general fpirit of the fame deftructive practices amongt all degrees of people, even into their $0{ }^{w n}$ families, by routing it at home, and affembling it abroad. The attention of the merchant is too much taken off from folid trade; he engages, through the prevalence of cuftom, in what he fancies is the more lucrative bufinefs of Exchange-Alley, and leaves export and import to fuch as have more patience to follow it. And what is too frequently the confequence? Does it not fill our Gazette with bankrupts, and increafe diftrels and poverty, inftead of promote the national commerce or private gain in the'general?

The trade of the Alley confifts too much in confpiring to pick the pockets of every body not in the temporary fecret. Thofe who are, can make ftocks rife and fall ar pleafure, and pocket the difference. A has 5000 l . to lay out. India ftock is at 180 . B transfers 100 l . to C at 179 . Next morning he transfers another 100 l . at 178 l. The price is fer, and A buys 5 cool. at 178 . In a week or two, A wants to fell. If the objeft is confiderable, an article in the Hague Gazette is made to confirm that the emperor of Monomotapa defires to be comprehended in the alliance of Peterfburgh. C transfers his 200 l . back to B at 180 ; the market is fettled again, and A fells out at 180 . Thus their indultry brings two per cent. in a few weeks. But who do they get it from? From women, young brothers, and all fuch of the well-meaning people of England as will dabble in flocks, without being in the fecret, or without knowing how to carry on the lucrative fcheme, if they are. It is from this fcandalous commerce that numbers of thefe mere fund-jobbers have, in a few years, acquired millions amongft them at the expence of the unknowing ones.

One would imagine, that nothing but our necelities could make us wink at a practice fo iniquitous and detrimental; yet there are fome men abfurd enough to fancy, that we are extremely beholden to thofe moneymongers, for condefcending to fet up their trade amongft us, for the circulation of public credit, as they affeit hamefully to term it.

The city of Briftol, or Birmingham, might with equal reafon think itelf obliged to a fer of Marpers, who fhould bring a fum of money along with them, and fet a faro bank for all the citizens-to pont at, Nor would is be more ridiculous in a country fquire to think to improve his carp, by throwing in a parcel of pike amongtt them. We can only increafe our people as we do our game, by difcouraging poachers and deftroying vermin.

There is a public detriment attending the public debts not inferior to any mentioned, which has efcaped the notice of moft. The public debt has produced a different intereft in this nation, that we have greatly fuffered by, and if not remedied, can have no end. It is the interelt of the flockholders to involve the nation in wars, becaufe they are gainers thereby, although they fhall in the long run ruin the kingdom: it is the interelt of landed men and the merchant, the national merchant, whom the tiate only oughe to encourage, and not the ftockjobbing merchant, whom the ftate ought to difcourage to the utmolt rather than engage the kingdom in war upon his account; or the chief burthen and evils thereof will fall on land and trade.

However contemptible fome may think the weight of the fockjobbing clafs, in comparifon to that of the folid trading one, it has been by their fuperior influence, that the nation was involved in the two laft great wars. The greater the public debt, the greater the weight of the public creditors, and the louder their cry for wars. And may we not expect that this worthy fet of flockjobbing patriots will, on every the leaft occafion, renew their efforts to plunge us again into the like thraldom? Deplorably precarious muft the fituation be, where one clafs of people muft be undone, even by a neceflary war, and another, of perhaps equal influence, impoverifhed by the beft peace.

If England was obliged to pay a tribute to France, or to any other foreign country, of a milion and an hale a Year, would not every man declare, that we could not fultain fuch a drain of treafure long without being undone? And yet that tribute ftands on a footing at prefent ftill more deftructive to the nation; becaufe there is no effectual provifion yet made for getting free from that burthen paid to foreign creditors, without giving an extravagant purchafe for our redemption, which we are incapable of doing, by the prefent fate of the kingdom. Befides, foreign ftockholders have a temptation to increafe the tribute due to them, by applying their dividends daily to buy up more flock, out of the hands of the natives; who, as our foreign creditors grow richer and richer, fo Britains in general grow poorer and poorer : than which nothing can be a greater confirmation than the numerous bankrupts we daily experience in the kingdom, and the very few that happen amonglt our chief foreign creditors in comparifon thereto.

To thofe who are not refolved to fhut their eyes againlt indubitable truths, it muft be obvious, that if the public debts and taxes were cleared off, the profits of the manufacturer, the tradefman and the merchant, would be their own. They would be exempted from large difburfements out of their gains. It would be equal, in every refpect, to a bounty to that amount on all our productions of nature or of art, and of proportionable advantage to the day-labourer. With thofe advantages, why fhould we not be able to underfell our competitors? Our people would of courfe multiply, for which there is now all difcouragement intead of the reverfe : our poor would find full employment, and live more comfortably, when we enjoyed greater plenty of every thing at cheaper rates: new arts and manufactures would be introduced, in confequence of invention being on the wing, and the old ones brought to greater perfection: our moft barren lands would be cultivated, both in Britain and America, to reciprocal benefit, provided a due commercial union took place between them, and our general produce of both would be infufficient to fupply ourfelves and our foreign cuftomers: fo large would be the demand.

In confequence hereof, the ftockjobbers, when paid off, would find employment for their money in trade and manufactures, and would find that turn to a more certain and better account than preying on the vitals of their country; which, if fuccefsful, they do ; and if otherwife, does nor fuch jobber ruin himfelf and numerous others who have connections with him, as is more or lefs daily experienced?
Men of narrow conceptions may, probably, object, there was a time when we owed no debt; and yet this country was never richer, nor had it more trade than at prefent. Let fuch men recollect the fate of this, nation fixty or feventy years before king William's war, with refpect to the numbers of people, the trade, fhipping, wealth and manufactures; and let them compare it with our fituation when that war broke out, and then let them give a reafon why we have not increafed in the fame proportion fince that period. Trade was then in its infancy; our colonies were hardly eftablifhed; thole times bad all the expence of them, and we all the profit: Ireland was then but little better than our infant fettlements in America are now; we had no union with Scotland, and Portugal afforded but little money; each of thefe has opened a new fource of wealth to us; and with fuch advantages, ought we not to have throve in the fame proportion we did in the former period? Had it not been for the public debt, there can be no doubt but our improvements for the laft fixty years mult have furpaffed thofe of the fixty years preceding.

The enormity of the annual taxes we pay, together with-all the enhancements upon enhancements we likewife pay on occafion of our perpetuated and annual taxes, cannot amounc to fo little we affirm, as the full value of all the lands in England, if valued at twenty millions per annum; and if all the national taxes could at once be difcharged by the landed property, what would the nation be worth may deferve confideration. 'Tis true we are fwoln with a vaft paper credit, and that dazzles us with imaginary inftead of folid treafures. Such an immenfe public debe, its perpetual fales, purchates and transfers, and the circulation of its intereft, occafion a great parade of wealth; fo does the circulation of other paper fecurities, exchequer bills, bank notes, bankers notes, bills of exchange, perfonal notes, bonds and mortgages, and every other fpecies of paper circulation property, make a fhow of a prodigious magnitude of riches: but as the real treafure of the nation cannot be eftimated, till all public incumbrances fhall be difcharged, the deduction of twenty millions a year will make a confiderable drawback upon the national property : and if to this confideration we add thofe other of the
ballance of trade we pay yearly to the Eaft countries, together with the intereft money fent out of the kingdom to fatisfy our foreign public creditors; all thefe difadvantages under which the nation labours, put in ballance againft the whole of its magnified paper wealth, mould incline us to think that thefe together ought to alarm ts to retrench every expence we are able, and take every meafure to abolifh every tax-incumbrance that impedes the increafe of the folid national property. Could we free ourfelves from the load of fix millions a year we now raife for national debts, what might that be prefumed to eafe the nation of annually, if it be confidered the enhancements upon enhancements on our whole trade and navigation fix millions grofs revenue occafions? If every tax is no more than doubled, confidered in its compound as well as fimple light, as we have obferved, the national expence will be fo on our whole crade.

During the laft two wars we beheld numerous opulent families to have fprung up. - But whence came this mighty treafure? Has it not been extracted from our own inteftives; from the millions upon millions that have been raifed in this nation during thofe periods? Before thofe eras, the nation was folidly wealthy, and daily increafing therein, by enriching commerce and navigation, which difperfed the treafures more equally amongit the people : fince thole æras, that treafure has been extracted from the pockers of all claffes of people by the immenfity of taxes; and thofe taxes have been converting into funds to pay intereft for above thirty times fuch annual tax amount, that has been only in paper property; which fome wife men have termed imaginary or fairy property, and not real. This fabric of imaginary property, or, if you like it better, this public debt PROPERTY, and its mighty circulations, furnifh the appearance of millions upon millions of fuch fort of property, and this public debt property will hold up its circulating head, while the nation flall continue able to pay interelt for it. Will not every thinking man confider, how long we can fupport the paying fo many millions a year as are raifed upon our general trade, to pay intereft only for fuch public debts? For our arbitrary enhancements on the prices of every taxed commodity renders our burthen at leaft of ten millions per annum on that account only. How long can this nation befides afford to raife above ten millions more yearly, with additional enhancements for the current fervice, and other expences; elpecially if to the accumulated annual expence be tacked alfo that of the poor's tax raifed throughout the kingdom, together with every other parochial tax, and the charge of turnpikes? If thefe fhould all be confidered as burthens on the trade of the nation, and certainly they ultimately center there, every man will allow this caufe alone to be adequate to account for every commercial grievance we at prefent perhaps experience: this however is the grand caufe. And why may not this be the natural caufe even of that monopolizing and foreftalling feirit that prevails ?

If our debts and taxes do not diminifh, they mut increafe; and if they do increafe, we may pronounce with certainty, that nothing can preferve us but our neighbours being in the fame unhappy fituation with ourfelves, and that we fhall only continue a great nation as long as they do fo.

When the art of funding, and borrowing thereon, was firft introduced, the common talls of mankind was, that in time the people of England muft be undone, by adhering to a fyitem fo detrimental to the ftate. Some tell us, that the event has proved the futility of that apprehenfion. The prediction has been verified, and that, perhaps, in the ftricteft fenfe. All that could be meant by the affertion was, that the then poffeffors, and their pofterity, muft be undone, and their inheritance taken away from them, and become the property of other men. It could never be their meaning, that the land could run away, or ceafe to be occupied by fomebody. At prefent, that is above 70 years after the revolution, one tenth part of the lands of England is not poffeffed by the pofterity or heirs of thofe who poffeffed it at that period of time ; and if the extermination (as it may be jufly termed) is not univerfal, it is only becaufe there were a few overgrown eftates; fuch as the Devonfhire, Bedford, Curzon, \&c. which have been proof againt the wafte of luxury and taxes.
Suppofe the Turks were to over-run England, it might certainly be affirmed with propriety, that, if we did not drive them out, England mult be undone; and yet, if they fhould prevail, the land would ftill remain, would fill be occupied and cultivated, and poffibly the trade of England would receive fome advantages from the favour of other Mahometan nations, who have been cultomers for the woollen and moft other manufactures: and it is more than probable, that a greater proportion of the property of the country would remain in the poffeffion of the original inhabitants 70 years after fuch a conqueft, than is now to be found in the pofterity of thofe to whom it belonged as the revolution. As the caule, I mean the public Debt, ftill fublifts, by its amazing magnitude, the prefent poffeffors muft not expect a more durable eftablifhment. Was the plague to rage in a city, and all the rich to perifh, the poor would get poffeffion of their lands, houfes, and effects; but if the infection continued to prevail, they would foon make way for others in their turn.
We have feen that our debts and taxes have arrived at fuch a height, that the nation hath at length fufficient caufe to be alarmed at the danger ; the monied intereft in particular ought to be fo, feeing they are liable to be the.firft that will feel the fatal effects, provided they do not beftir themfelves to procure the fpeedy redemption of their monied property. The weight of taxes thereby occafioned upon trade and navigation, may one day be thought to render their property fo highly detrimental to the public interefts, that future bad minifters may take it into their heads to attempt to annihilate all their principal, by an abolition of the funds exifting for their annuities; for if the public debts and taxes fhall not be put into a train of more certain and more expeditious ftate of redemption than they feem to be in at prefent, and thereby the latter hall be leffened, they will both affuredly increafe; and if they fhall continue to increafe, they may become infupportable; and when things Shall be brought to an extremity, it may occafion fuch convulfions in the ftate as may conduce to the taking of fuch violent meafures as otherwife might never be thought of.- In a like extremity, when the clergy had ingroffed too large a Thare of the property of the country, Henry VIII. was obliged, for the relief of the people, to feize on their temporalties, and has fince had the general approbation of the nation for fo doing - Our continuance in the increafe of public debts and taxes will reduce the nation to a condition much more intolerable than we were in before the days of Henry VIII. becaufe the clergy contented themfelves with poffeffions in land, without pretending to a fhare in the general induftry of the people, as the monied intereft mult have, and be intitled to, in confequence of fuch increafe of taxes upon taxes.
As to a violation of laws and public faith, it may be in vain to urge thofe in cafes of extreme neceffity. The firft of all principles is that of felf-prefervation; nor could the ties of law and public faith be ftronger in favour of fund-holders now, than of the clergy at the reformation. As to public credit, we fhould have no more occalion for it, fince people, relieved from fo opprefive a burthen, would, on any future emergency, by fubmitting to the former taxes, be better enabled to raife money within the year, than they can do under our prefent circumftances be brought into the exchequer by anticipations; and the greateft advantage of abolifhing the debt would be, that it might fecure us againft running into debt for the future.
Should it be faid, that it might be dangerous to drive fo powerful and fo opulent a body of people as the proprietors of above 130 million to defpair: true it is, they are powerful at prefent, while they poffers fo large a Thare of national property, and their cry is loud, becaufe they are poffeffed of fuch vaft treafure; but if they fhould be ftripped of that, as would then be the cafe, they muft and would be as inconfiderable, and as little liftened to, as any other fet of beggars in the kingdom. We do not fay it would be wife or equitable in any prince to adt this part; and we are affured, that during the days of the prefent beft of princes, he will never
fuffer fuch a melancholy catatrophe to happen; but we cannor anfwer for his fucceffors, nor the conduct of furure minillers, if the nation fhoud be driven to defperation, from the increafed magnitude, weight, and opprefion of our public debrs and taxes.

I be moni d intereft will naturally infer from what has been obferved, and it has been fo obferved on their account chielly to remind them, that the greater and the greate the public deb sthall grow, the greater and greater will the tax-incumbrances grow, or the greater and greater reductions of their intereft mult take place, to creare new interest funds for new debts, as we have before noticed, to the difadvantage of the fock-proprietors, as well as to that of the nation in general: and yer, when we ftand in need of more money, the fate mult be fupplied, and 'tis to be hoped ever will; be the temporary confequence as it may.

Dangers of this nature have been fugsefted to attend the nonied-intereft; and thofe not only in the manner above intimated, but by other injurious projects to which the ftate of defperation might drive a nation fo circumftanced. It has been obferved, that the French, fince the year 1613, have, in order to decreate their pultic debts, and to reduce the prices of their commodities, by frequent enhancements of their money, varid the relation between filver and commodities; that is, they have altered the meafure of value; by which means, they do not give half fo much filver for a day's labour as they did an hundred and fifty years ago. At that time they coined abour eighteen livres out of eight ounces troy weight of fine filver; and now they coin near fifry four livres our of the fame quantity ; and yet they now give no more fous for a day's labour than they did before fuch enbancement of their money. Hence it is manifeft, that, from this circumftance alone, therr labour is fallin two thirds, whilf our filver money has remained the fame; and hence our labour has received no diminution; and ought oot, and it is to be hoped never will, by fuch like deflructive projects. This circumitance, however, added to their cheaper way of living, and our enormous tax-incumbrances, together with our arbitrary enhancements on all taxed commodities, will account for the diminution of our trade to ltaly, Turkey, and Spain in particular, wherein the French are our porent rivals, and whertin they will loon become fo univerfally, unlefs our public debes and taxes fhall be reduced to a competent degree, as before fignified throughout tuele obfervations.-The national detriment that would atiend the enhancement of our coin, would prove hi hly ruinous to the whole monied intereft, as well as to the nation in general. See our article Conn, where this matter is put in our intended general light; and wherever we have mentioned this Fienthrujet, in any of our writings, the reader will plea e to oblerve, that it is only done with a defign to fhew by uhat combinations of policy that rival nation is enab'ed to underfell us, but with no view whatioever to re ommend fuch a deteftable practice to this nation. Projects of this kind are inconfitient with the conflituon of our government; and we ho e that our public debis and taxes will never be fuffered to increafe ufon us, as to make any fuch kind of de'perate meafure, neceffary: to prevent which is one principal view of my jabours, by alarming the kingdom now in time of peace, of the intolerable magnitude of their incumbrance, and thereby excring to the fpeedy redu: ion of our taxes, by every pofible meafure that can be dev fed; and particularly to apprize the monied intereft to contribute all in their power to fuch an abolition of tax $s$, ds may not put the nation under the neceffity of pract.fins' any means for leffening the + ublic debts that hall be repugnant to the pubic faith, or any way detrimental to their intereft in particular, as they are likely to be the mot deftructively and the moft immediately affected thereby: and certainly they are the whole clats of people who are the beft able to prevent fuch calamity, wh.le their property and their power fhall continue to grat as it at prefent is. Is not this motive fufficient for them in time to take what has been urged in their behalf in good part?

I he monied intereit, we fay, is more particularly concerned to take care that their monied property be put into a more certain ftate of redemption than it hiherto has been, as well for their own greater fecurity as well as that of the nation. Can they expect that the nation will be anxious about what they the wfelves thall be indifferent? We have feen the danger wherein their' great eftates may be, provided debts and taxes are not reduced. It has heen feen, that it is no better than a political amufement, to pretend to discharge any part of the public debts without the reduction of taxes; we have feen likewife, that all reductions of intereft have been thrown into the finking fund, and that this fund, inftead of being mate a debr, or a tax redeeming fund, for the decreafe of national taxes, hath become oily a public debr and tax increafing fu d, by furn thing interelt money the more eafily for fuch detrimental practicts.We have had fifty years experience of the efficacious operation of this fund to eafe the nation. Inftead of that, are we not the worfe tor the exiftence of any fuch fund at all? Have not our debts and taxes been by the means of that fund rendered fo immenfely enormous as they at prefent are? For whatever hath faclitated the means of raifing fuch immente fums as have been raifed, hath made minifters the more profufe and extravagant of the national treafure, and ever will. Such facilicies rarely prompt to palfimenious meafures, but limulate to exorbitant diffipation. We have feen the enormous height to which our annual supplies for the current fervice in time of peace alfo have arofe; and that they all ultimately terminate on the commerce and navigation of the empire; that our annual, no lefs than our perpetuated fupplies fall molt heavily thereon; even without thofe additional enhancements that traders in general are obliged to levy upon the nation, by the increafe of the general prices of every thing throughout the kingdom-We have feen to what an amazing turthen thefe muft inevitably amount, even exclufive of the poor's tax, and all other parochial taxes and turnpikes on our trade. We have feen, that the weight and oppreffion of our taxes are amply fufficient to account for the exceffive prices of all Englifh commodities, withuut having recourfe to any temporary caufes which have likewife contributed thereto: this caufe alone, confidered in all its confequences, is artequate to all our prefent grievances; and this is a ftanding, a durable, not a temporary caule; and without the removal of this caufe, the effect cannot ceafe; it will grow worfe and worfe, and the national calamities more and more intolerable.

The annual ballance in trade that we pay to the Eaft countries is, at the fame time, a drain of national treafure we ought not on any account to admit of, if we can poffibly prevent it. We cannot fupfort it.-_ The other conftant drain of treafure that we fuftain on account of our public debts to foreigners, is another additional grievance that terds to our greater impoverifhment. Does not common policy direct that fuch mighty drains may ceafe? And yet they feem to be never thought of by our very minifters of ftate, whofe duty it is to do fo! What! will not the prefent high price of gold and filver alarm them! Will not thefe barefaced deftructive phxnomena roufe the nation from its lethargy! Will not ***********

To contribute to bring about thefe happy confequence-we have recommended a more interefting union between Great Britain and her American colonies; we have prefumed to fketch in what manner fuch a further union might take place, to their reciprocal benefit and advantage. - We have fhown how fuch an happy union, carried to its full extent, might fo inrich the nation as to enable us to leffen our public debts and taxes, and thereby augment our commerce and navigation with our plantations more and more, by reafon of the grtater cheapntis of Finglinh commodities. When thefe national meafures thall be duly purfued, our colonifts will increafe in their importation of them from us, and we in our importations from them. This will inlarge and cement the defirable commercial union, and nothing elle can or will effectually do it. We have thewed by what eafy means thefe things may be accomplufhed-We have thown that the fame duties may be levied upon our ad-

Vol. I.
ditional
xxxvi The ill State of our Finances: wilh a Plan for a more interefing Union belween Great Brilain and America, Eoc.
ditional plantation imports that are now levied upon thofe detrimental ones from the Eaft countries and elfewhere; fo that the revenue cannot fuffer in this refpect, by the propofed change of meafures-We have fhown what addicional and extenfive a circulation of trade may be carried on between Great Britain and America by fuch meafures; efpecially between her and her continental colonies-_We have feen in what manner that commerce and navigation may be inlarged between the continent and the illands, to their mutual advantage.

From the increafe of our inland commerce in America that feems to be promifed by our additional territories, we may expect confiderable benefits; efpecially if well regulated free ports fhall take place, confiftent with the act of navigation.- We have intimated that our American trade is our own trade, and under our own controul and government, and if wifly regulated by this kingdom, may and will anfwer ends of infinite emolument to this nation; regulated as well to the advantage of the colonifs as the mother kingdom; to fuch a degree, perhaps, might the fame be carried, that this nation might in time become not very anxious as to any other branch of maritime trade that fhould not be apparently and unqueftionably profitable to the nation as well as the trader; and therefore this commerce is an object well deferving the moft attentive legillative care and concern. By cultivating this trade to the pitch it will admit of, will furnih innumerable articles for re-exportation to all parts of the European world, and augment our maritime power, and bring in treafures from every quarter; it will amazingly increafe our wealth and our maritime prowefs: as it will detach us from all commercial connections but fuch as fhall be evidently beneficial to the ftate; fo it will never fubject us to the caprice and infuts of other potentates; for whenever they fhall ufe us ill, by the infraction of commercial treaties or otherwife, we fhall have nought to do but to return the treatment in a commercial way : that is to fay, if they flall impede and obllruct our trade with them in any unjuftifiable manner, we fhall refent it in the like manner, without having immediate recourfe to the fword-On the contrary, every flate will be the more cautious how they thall dare to quarrel with us, when they hall behold us in a kind of ftate of independency of trade with them all, and in a capacity to right ourfelves at any time, upon any kind of injurious treatment that found policy fhall direct to refent with our whole national force. And when we fhall arrive at this happy ftate of commercial independency, as it were, who have we to fear? What power, or what combination of powers will prefume to difturb our tranquillity, efpecially if fome other points thall be regarded thar we may hereafter, if our other avocations thall admit of it, fuggeft?
The increale of navigation and maritime power between the mother-kingdom and her colonies, may become very great; it may really become unfpeakably great, by means of the commercial union fuggefted : and as we fhall then get into the fure track of difcharging the public debts and annihilating taxes, what will hinder but Jikewife then the happieft commercial union may take place between Great Britain and Ireland? For nothing hath hitherto obftructed that meafure, but the immenfity of our debts, and the enormous burthen of our taxes. When once our tax-incumbrances fhall be duly annihilated; and whenever, in confequence thereof, all Englifh commodities and manufactures hall be reduced in price to a level with thofe of our compecitors, may not Great Britain, Ireland, and her American plantations, becone fo happily united, as to bid defiance to almoft any combined power that may dare to maltreat or infult us? Thefe are the days that every true friend to his country ought to rejoice to fee; and till the due reduction of our debts and taxes, we cannot expect to fee, for more reafons than I chufe to mention; and alchough I am perfuaded, that I fhall not be thanked for what I have faid; that gives me no manner of concern; independency is the ftate I enjoy, and fhall ever endeavour to maintain; perfons in other conditions giving themfelves no trouble to reprefent things in their true light, private intereft fwaying them to the contrary, or to be quite indifferent about public affairs, while they enjoy their lucrative pofts of profit and honour.
Then it is we may expect to fee the enhanced price of provifions and every thing elfe fall, to the comfort and relief of the induftrious Britifh artifan and manufacturer, and to the renown and glory of the Britifh empire. Bread alone is infufficient to comfort the laborious heart; they muft have meat alfo, and in plenty too, in order to replenifh their exhaufted ftrength; yet it is at prefent fo dear, that even perfons of middling fortunes can hardly afford a joint of the beft for their families. Does not this merit the moft ferious attention of Jegiflation? Is not the woftt of confufions always to be expected from an opprefled, a ftarving, and a defpairing people? Does not all hiftory how the tragical effects of the prevalence of want and famine, and prove that it is impofible to retain the obedience of any nation, while the people's bellies are empty? Will not people deftitute of the comforts of life, refufe to be bridled by laws? Will perfons in that forlorn condition be reftrained from violence, by fentiments of regard for fuperior condition? Has not this been lately exemplified by our neighbours in Spain, where the general cry of the people feems to be againtt the government for inpoverining them? Will not the fame caufes have the fame effect every where? Is it not full time to remove the caufes of general difcontent in this nation?
In Greece, Italy, Perfia and Egypt, whenever the public was obferved to be affaulted by real or artificial famine, officers were employed both at home and abroad, to buy up the neceffaries of life wherever they could be obtained, at the moft reafonable rates, and convey thofe ineftimable commodities, at the public charge, to the unfortunate cities where want raged, that the fubjects might not be traded out of their lives and domeftic quiet, by engroffers, foreftallers and regraters. All wife minifters have always looked upon it as a matter of the lat importance to pay a capital attention to the wants of capital cities, becaufe the working multitudes affembled in the fervice of a large metropolis, can neither want, nor provide for themfelves. Why is every proper arrangement that can be made, till our taxes can be abated, neglected, to prevent the enormous price of butchers meat in our markets? The virtuous and humane may propofe affociations of private men to provide for the wants of the public. Such defigns are laudable, and merit every poffible private encouragement. But 'tis to be feared, that no attempts of this fort will be crowned with the wifhed for fuccefs, till a national reinforcement can be obtained againft national evils. The fame is the cafe at Birmingham; wheat has been lately near double the price it was about twenty years ago; fo has beef, mutton, pork, veal; alfo cheefe, butter, \&c.-We hear the fame melancholy accounts from the manufacturing towns of Leeds, Halifax, Manchefter, \&c. Thus our own induftrious poor, who by their labour fupport our manufactures, and even the kingdom iffelf, are in feveral parts almoft ftarving alive. Will not people, prompted by the irrefiftible force of hunger and nakednefs, endeavour, by fome neans or other, to get redrefs? May not calamities of this nature create a kind of defperation amongtt his majefty's fubjects, and the confequence prove of the moft dangerous nature, if not foon put a ftop to?
If minifers are at a lofs to reduce our moft burchenfome taxes themfelves, that opprefs the oppreffed, why do they not employ and reward well, thofe who are able to do it in their ftead? 'Till this can be done by fomebody, why do they not put in execution what they have in their immediate power, to pur a fop to monopolizers, foreflallers and regraters? It will not be faid, that it is not in the power of the legillature to effect this. Why then do not our minifters lay the matter before them without delay? Why bave the moft falutary meafures that can be thought of been delayed fo long? Can any thing be unequal to the wifdom of a Britifh parliament? Though we cannot be of opinion that the removal of thofe caufes, which we have termed temporary, will be ftriking at the root of our grievances, yet ought not every thing be done that can
be towards the lowering the price of provifions in the firlt place, to pacify the mals of the working people, till the moft effectual meafures thall be taken to leffen the public debts and taxes? Is not the burchen of nett tight millions a year, befides the vaft expence of collection, burthen fufficient for the nation to fupport in time of peace, without bearing our enormous tax-incumbrances for public debts alfo; more efpecially when it is confidered, that the whole weight of national burthens fall upon trade, as the ultimate great fund that fipports all other?

Let any impartial man duly confider, what cannot be too often inculcated, to what an intolerable height our enhancements upon enhancements fill further augment the vait national expence; and to what a ftill greater degree our poor's tax, and all other heavy parochial taxes incumber the whole commerce of the kingdom; and then let him judge, whether this caufe alone is not adequate to every calamity the kingdom at prefent groans under?
'Tis no compenfation to the nation to attribute the caufe of our misfortunes to this or the other adminiftration; we may complain upon this head to eternity, without redrefs. Has it mended, or can it mend public affairs, merely to turn out one miniftry and put in another raw and unexperienced? Can changes alone amongft men of power relieve the kingdom from millions of the national taxes from which it requires to be relieved? Has granting fome great men penfions, the fons and relations of others places upon places, contributed one jot to render the nation more profperous and more happy? Has not this political farce been too long acted to bear being brought upon the ftage any more? Is not fuch ftate-craft grown quite ridiculous in the eyes of every wife and upright man? Does it not incline every one to think, that nothing more is meant thereby than mere minifterial frrambles for places of profit and honour? Muft not this prove a great affiction to the beft of fovereigns? Would he not enjoy a far greater fhare of complacency and confolation, we repeat it again, had he lefs inftead of more lucrative places to beftow, fince they occafion fuch eternal wranglings, intrigues and diftractions in the nation? Is it not fcandalous to behold fuch numerous profitable places faid to be in the gift of the crown; and yet the whole power of beltowing them wretted out of the royal hands by over-ruling cabals and intrigues, that feem to care as little for the honour and dignity of the crown, as they do for the felicity of the people? But if a ftrict fcrutiny is made into the poffeffors of all places of truft, honour and profit, faid to be in the gift of the crown, for it is no more than a fay-fo, on whom fhall we find them beftowed, and for what public fervice have they been beftowed on their poffeffors in moft reigns? Have they been given to men who have deferved them; who have done any real fervices to the fovereign or the nation? Was this natter duly enquired into, where is the lift of thofe fuperlative patriots who have laboured to keep the kingdom free from debts and taxes? Inftead of recollecting any large catalogue of the names of thofe worthies, I confefs myfelf at a lofs to think of one fingle great perfonage, who has for many years filled any of the great polts of profit and honour, that has diftinguifhed himfelf in preventing thofe grievances the nation now labours under. Were we happy enough to have been bleffed with but a few of thefe, we could never have been reduced to the condition we are now in. On the contrary, it would be no difficulty to furnifh, within my own time, a very large lift of perfons, among whom, and their relations and dependents, many millions upon millions of the public treafure have been amaffed, together with great titles of honour. But where are our celebrated financiers, who have annihilated our tax-opprefions? And wherein confilts the public virtue of heaping tax upon tax upon the nation, which has heaped calamity upon calamity upon it, till we are brought to the ftate we are at prefent in?

The fyftem of multiplying debts and taxes is now carried to great lengths; and our ftatefmen will not be convinced it is carried to its full extent, till it fhall be out of our power to carry ir further. But if we are to wait till that very day comes, before we fhall begin to think of changing the fyftem, will it not then be too late to do it? How far diftant that very day may be, is no great difficulty to prejudge, from the feveral national fymptoms, that are fo flagrant at prefent. What other prognoftics of its near approach would we have, than what we at prefent experience, and are reprefented through the courfe of this fhort difcourfe?

The prefent money fyftem calls aloud for reformation: for this, added to the accumulated force of what has been here urged, occafions the magnitude of our public calamity, by the excelfive high prices of every thing in England; from thofe of provifions in general, to thofe of all other commodities and manufactures.

If the effects of that great paper circulation which is now carried on in the nation be duly confidered, we fhall find that to be a caufe that contributes to the evils we complain of; and indeed is a neceffary effect proceeding from our mighty public debts and taxes. The price of labour, and the value of commodities, it is evident, would not be the fame in this inand, when there is twenty millions of pounds in circulation, as when there is forty millions of paper: but as the monied intereft has arofe to the pitch they are, and in confequence thereof paper circulation has become fo very extenfive, it has created this artificial kind of circulation. Add to this, the grearnefs of banking carried on in the kingdom, by the filent but inceffant iffuing of notes; this has more than doubled the new coined current fecie of the ifland; confequently a crown will not go further than half a crown would have gone formerly. Thus they have in a manner ftripped the landed gentlemen of a great part of their incomes, as one thoufand a year is now of little more value than five hundred pounds, through this artificial increafe of paper money ; for the price of labour and commodities has arifen in a fafter proportion than the landed gentleman's property has been improved.

If we examine the extent of this circulation, we fhall find it immenfe. It has been computed by fome judicious perfons, that including our national debts, and every other kind of paper currency, there are notes exifting in this kingdom at prefent, in the proportion of twenty, or racher twenty-four pounds in paper, for every pound in gold and filver. Almoft the whole of this artificial fpecie has been coined, year after year, by private perfons; and opportunities of loans to the government has been the very inlet by which they have infinuated their nominal money into circulation. Neither the whole of the gold, nor of the artificial fpecie, is kept up in actual currency; but from the flighteft attention to money-matters at prefent, we may perceive, that there is above ten times greater quantity of the latter kind of money ufed, than of the former. All fums of one thonfand pounds, or upwards, are now puid almolt wholly in paper. It is nearly the fame with fums of one hundred pounds: nay even fhop keepers and tradefmens bills, of twenty or forcy pounds, are now generally paid in bankers notes. The ftewards of noblemen and gentlemen, in the remoteft parts of the inand, receive the rents chiefly in paper: and it is even faid, that a very few years ago, for fome time, certain copper-plate preffes have worked off many hundred of notes a day for circulation. Does not this demontrate the neceffiry of reftraining fomehow the power of fuch artificial coinage in the hands of monied men, who feem not to care how foon they unnerve the nation, provided the public diftrefs will afford them an opportunity of enlarging their fortunes? While there is a malady fubfifting in the ftate, corrupting its very blood, in vain do we attempt to reftore health by mere palliatives. If we would effect a cure, we muft apply remedies to the very root of the evil.

This renders the order of monied men a very dangerous nuifance, inflead of an ornament, frength, and advantage, to the kingdom. May not this, in time, conduce to their ruin, inftead of their further aggrandifement at the public expence? Formerly we had no confiderable monied men out of the order of merchants and undertaking U-1. it monied men, whotht havin been concerned in manufacture or intific, or being poffefed of had Can 1.1 : : orune, be orh $r$ wife raied, than by presing upon the nerfitits of the l'ate, or upon the indulary of priwe neifm? Confequently, hould not a bufinefs of to detrimental a nature be fone-how reflained, if not in a in fompeffer, by every well policed governme:t? And how can tha be moft effectually done, but by
 fu. ha dehts evermore?
hate monied men have been encumbering the ftate, and finking the value of money, by the ir arbitrary incrat of paper cu rency, the wicked prattice of fockjobbing has added occafionally to the contufion and di refs. I he greateft part of the profers'd money j, bbers may not tinjuftly be termed public robbers ; tor by the ir arifices they have for thefe feveral years paft, ftripped innocent individuals of nore of ther property than all the highwaymen in Grear Britain. Their practice is exa ly fimilar in its effects to that of houfebreakers. A gentieman, we fhall fuppofe, burs $1000 \%$. Hock for $1000 \%$ and locks up his title thereto in the fouror, or has ir legally tran fred. Here he mav reafonably think it fafe ; yet the event has proved the miftake: for the tricks of the money-jobbers thall have fuch an influence upon its value, that when he offers it for file at market he will find it is net worth quite $700 l$ Would it hive made any difference to this gencleman, to ha e had his ferutore bruke open ar home, and out of 1000 l . cafh contained in it, to have found 300 l . carried of by thieves?

Had there been no annual loans, the ftocks would have ceafed to fluctuate as they have done; and by the eftablifhment th. t ouz ht to take place, they fhould be continually kept up at par, or very near it, till we can annth late the whole, tven in times of war. I his would give new life to trade, fave millions fiom going out of the kiagdom Though the fluctuating ftate of the funds fhould not really affect the public credit of the flate, yet their inftabili $y$ and low price has too trequently given an oppo tunity to foregners to draw large fums our of the kingdom, and tempted many manufacturers and traders to forfake cheir bufinefs, and go into Exch nse alley with their money; where for every eight pence they could purchife a fhill ng, whi h has bern a geeater profit than they could expect by following their occupation. This profir, however, few of them ever receive; for not being able to wait to renlize tieir milling, by feeing ftocks rife to par, they are obliged by $t^{\text {te }}$ e necefity of their affairs, to fell out at much the fame rate they bought in, and find themfelves fufferers by having neglected honelt induflry. The broker, however, till thrive, by a fuciefion of new bubbles; but tra $k$, in the mean time, is daily receiving frefh wounds under fuch a fyllem, and that firit of indultr, which is the very lite of the ftate, by continualiy fupplying new retources from agriculture, and the labour of arrifts, and the fold arts of commeice, declines more and more into a firit of gaming, which fubfits merely by devourng the folid relources of opu'ence.
Part of every new loa: is made up by deductions out of the old funds; for the money lenders are gainers even by tellin. out of the old funds one fer c.nt. lefs, when they fubicribe the fame money into a new loan of two pir ce $t$. advantage. The funds, by this means, are kept gradually finking, and the government, on the other hand, is obliged proportionally to augment its premiums, the buthen of all deficiencies being laid at laft upon the ftate. The public funds are like a grana $y$, with a bole at the bottom. While the grain is drawnont every day by that opering, it is no wonder that the heap finks down, notwithtanding any fmall furplies that may be poured in at top; but if the opening were once ftopped up, the granary would foon be filles up, by the freh ftores brought to it from all parts.

In the like ma ner, the funds muft immediately rife if the government once ceafe to make any demands for fupplies from the monied men; for no part of the yearly expence of goveroment beins drawn from thence, the nu ber of fellers would be very few in comparifon of the buyers, which is always the mof certain means of ra:fing the market. If there were to be no transfers or deductions from the furds, fur thote occafioned by real neceffities of fockholders, lefs than half a million of money brought to market would be fufficient to raife them to par at any time.

The mifchievous practices of fwelling our paper circulation are far from ending with the war: even in time of peace, perfon not only affume the coinage, but the fole diredion of the cir ulation of all our paper money, which is a power too great to be left in the hands of private $m: n$, who are every day extending it more and more, to the great prejudice of the fate. Though the bad confequences of this paper coinage have never been attended to at home, yet the colony of Connecticut have not only remarked them, but guard-d againft them by a wife law, which ordains, "That any society, presuming to emit or issue bills of cre" dit, to be used as money in trade, shall be punished as in case of counterfeiting; and the " utterer of such bills shall forfeit double the sums." Douglas's Summary of American affairs, vol. II. p. 200

If bankers are fuffered to proceed without any kind of-legal controul, at this rate they alone will be in poffeflion of all the gold and filver in the nation ; in which cafe, exclufive of the great power they would acquire, trade would be as much burdened by an over-abundance of paper fpecie, as it is at prefent by taxes. Bankers, at prelent, by iffuing notes, draw all the cafh to themfelves, which they offer in loans to the government; and as thefe loans are paid at eight or ten different payments, it renders it ftill more eafy to keep up their arbitrary paper circulation.

According to the vulgar prejudices, indeed, loans of ten or twelve millions have been raifed for fome years together, from the mere favings of our wealthy traders; but this opinion, from what has been urged, mult apprar to be falfe and abfurd in the highe'? degree.

Befides the opportunity which a loan affords to the bankers of iffuing notes, which exilt as fo much paper wealth, and lie as a burthen on the fate till they be redeemed by parliament, that is, till the debt be paid off.

The fway and influence of our paper-monied men, as things have been unhappily managed for the nation, have been vtry formidable; but is not that entirely owing to their being made uffeul engines to the fate, to multiply the public debrs and taxes? What would their power and intereft be, if they were not fupported by their connection with the government? Should the government wifely detach themfelves from their old fyltem of raifing money, they would become of all men the molt dependent; for as the richeft of them have iffued more paper obligations than they can well anfwer at certain times, intlead of being able to check others, they will be checked themfelves, with the perpetual apptehenfion of fuch runs upon them for cafh, as might end in the ruin of numbers. This would force them gradually to abridge their dealings in paper, and turn themfelves to fome other bufiners, which would be doubly beneficial to the ftate.
It would neither be cruel nor injurious for the ftate to oblige any body of men, who thrive by diftreffing the puble, under the appearance of ferving them, to quit their pernicious occupations, and betake themfelves to fome other means of living confitent with the welfare of the ftate. Hardly any public reformation can be effected, without interfering, in fome meafure, with the private intereft of individuals: but that is never thought any jut reafon why fuch reformation fhould not take place. At the conclufion of the war, a hundred thouland men were turned out of bread; that is, were deprived of their then means of fubfitence, and
compelled to look for fome other : but this was no reafon why the war Thould continue for ever, left thofe who made it their profeffion thould want employment. When the art of printing was invented, numberlefs perfons got their living by writing. This had no weight againt the encouragement of the art of typography, fince it has been judged, in all well-policied countries, that as many, or more, might get their living by printing, as ever had done by writing, and the world become infinitely better inftructed. The interef of wacermen who ply on the river Thames, was oppofed to the general conveniency that would arife from the building of London, Weltminiter, and Blackfriars bridges, and others; yet thefe uleful undertakings have not been difencouraged in the leaft on account of that trifling objection. The interell of the water-carriers in London, who were formerly a very numerous body, was oppoled to the fcheme of introducing the New River water into the metropolis; but though it was eafily forefeen that their trade would be ruined, if the new fcheme fhould take Flace, yet the extraordinary convenience that would accrue to the public, from the condant and pleatiful fupply of water, outweighed all confiderations of the private intereft of thefe individuals, who could earn a Iivelihood by turning themfelves to fome other employment. The fociety of water-carriers, it will be allowed, is not much miffed in this great city, the inhabitants of which are now better fupplied with water by the New River company, and the Bridge Houfe, $\& x$. who, for a fmall expence, circulate it in pipes through the ftreets and houles, in great abundance. This circulation has been attended with fo many conveniences, that the trade of the water-carriers has long been rendered ufelefs and obfolete; and to thofe who are accuftomed to think only of modern times, it now feems odd that fuch a fociety ever exifted..-If ever, therefore, this grear point of paper circulation in this kingdom fhould be duly confidered by the legiflature, as perhaps may fooner become the cafe than many are wont to apprehend, the whole fyllem may be reformed that we have too long been habituated to ; and the intereft of all the monied proprietors may be put upon a more fecure eftablifhment than ever it will be without it. They will then think well and refpect the memory of all who thall have endeavoured to promote the required reformation ; and it is better it hould come upon them gradually, as the national incurmbrances might very eafily be leffened, than fuddenly, to their intire deftruction. Before the late revolution, there was no diftinction of monied-intereft, nor fcarce a fingle banker in all London, much lefs a bank-ing-houfe in every grear city; yet in thofe times trade flourifhed, the people lived in plenty, the prices of things were in the general extremety cbeap to what they ar prefent are; which made our manufactures find every where a ready market, and the national ftock of gold and filver kept annually increafing. If the nation could then profper without fuch paper credit, and paper circulation, which has contributed its thare to the prefent ftate of things in this kingdom, why fhould it be thought that it could not fill fourifh, though we were not incumbered with a fhilling of national debt, nor a fingle banker in the nation; effecially as our liberties and properties might then be better fecured, and great improvements added to the arts, and the intercourfe between us and our colonies likely to be infinitely extended?

And whether the prevalence of fuch a practice hath not contributed, in conjunction with our mighty taxincumbrances, to the prefent high price of every thing throughout the kingdom, may one day well deferve the moft attentive deliberation of the legiflature' ; for it is to be feared, that this has been none of the leaft grievances under which the nation hath too long laboured, as it has facilitated the raifing immenfe fums of paper-moncy for the fervice of the government, and thereby made it eafy for minifters to increafe the public debts and taxes *o the height to which we have feen they are arrived : And it is now full time to confider, whether this uncontrouled arbitrary augmentation of paper circulation, to fuch degrees beyond the folid wealth of the nation, will not one day fo bloat the kingdom with imaginary treafure inftead of real, that the whole paper fabric mult at laft inevitably blow up, if it is fuffered longer to prevail without any fort of legal check or reftraint.

And if to the valt ftretch of private paper credit and paper circulation, we continue to add the ftill further increafe of public debts, we fhall, at length, certainly arrive at an immenfe degree of paper riches. While fuch forts of paper wealth and paper circulation thall be deemed as good as folid gold and filver, and merchandize of every kind, we have nothing elfe to do but to multiply this fpecies of national treafure : and if we can only devife ways and means to pay intereft for paper public debts, both abroad and at home, with paper, what have we to do but to coin on? An admirable fyftem to grow rich as falt as we pleafe! There can be no end of fuch a Babel of treafure; we may tower it to what height we pleafe; the larger the fabric grows the firmer it will be ; the more our public paper debts, as well as private, augment, the fafer will fuch monied property become. This will doubtlefs be the infallible way to render every thing as cheap as we pleafe and the nation moft formidable, withour further trouble!

Notwithftanding what has been reprefented, the affairs of this nation are very far from being irremediable; yer we judge it requifite to apprize our rulers of the difficulties with which, we apprehend, they have to encounter, to the end that they may be the better prepared to fubdue every obftacle to the common profperity, and the more fpeedily take every proper ftep to act offenfively and defenfively againt any enemies that may deferve chaftifement from this nation.

We have at prefent a notable foundation laid in America for the moft beneficial commercial union between Great Britain and her colonies; a union that might be as glorious as interefting, if it fhall not be obftructed by a weak adminiftration, but forwarded by a wife, an able, and an upright one. And on whom can the kingdom fo fecurely confide to accomplifh this happy defign as a tried, a faithful, a wife, and a fucceffful minifter; a minifter beloved by the people, and will ever render his fovereign univerfally fo, while he himfelf fhall retain the confisence of the people: the minitter, whofe weighty interpofition at once united the hearts of the Americans with their mother country? Can any minifter be prejudged fo likely to carry the defireable commercial harmony between this kingdom and her plantations to its pitch of fupreme reciprocal emolument? No man in the nation is fo fit to bring about this great work; and this event alone will conduce to bring about many other we ftand in need of. It will rectify our affairs at home as well as abroad. For if his majefty hall gracioully condefcend again to place the great commoner at the head of his affairs, what is it he will not be able to effect, if through his means a coalition of men of the beft abilities thall act in concert with fo wife and fo weighty a guide at the head of public bufinefs, and an end is put to minifterial cabals, intrigues and difraftions? Such then may the laft peace become, if duly improved, upon the principles herein fuggefted, that we hall have no lefs reafon to efteem the peace makers and the peace improvers, than the fuccelsful war conductors.

The improvement of the laft peace in America to the utmoft ftretch of found policy, is the great point this nation has to purfue; if that is fteddily and wifely done, a reform in the money-fyftem may foon be brought about, under an adminiltration of apparent public virtue and true public fpirit, let whoever will be at the head of ir. And it is to be hoped, that we have many wife and good men in the kingdom fit to be fo, fhould the great commoner not chufe to be fo, and be rendered by any means incapable of fo important a truft, in the opinion of a wife fovereign, and the voice of his loyal and well-intentioned people.

The End of the First Prelimitary Discourse.

ToL. I.

## PRELIMINARY DISCOURSE the SECOND.

Animadversions on the Foundation laid for a more intrresting Commercial Union between Great Britain and British America, by the Definitive Treaty of Friendship and Peace between his Britannic Majesty, the most Christian King, and the King of Spain, concluded at Paris the roth Day of February, 1763 : To which the King of Portugal accedid on the same Day:

Alfo

Of the good Effects and Congequences such Union may have towards the better enabling Great Britain to redress the National Grievances represented in the precedino Preliminary Discourse:

## With

Consideratibns upon the Conduct of Great Britain, with respect to Alliances with European Potentates to preserde the said Peace, or to carry on War, when the same shall be needful.

FR OM what has been urged in the foregoing difcourfe, fome may imagine that it is not very likely to have any good tendency to preferve the prefent tranquillity; inftead of intimidating thofe potentates difpofed to break through it, fuch a melancholy reprefentation of the affairs of this kingdom, may rather encourage a rupture than prevent it.
Be the confequence as it may, fuch premonition will be of utility. If the reprefentation of our affairs therein given be true, could it anfwer any wife or good end to conceal it? Will it not, on the contrary, apprize our rulers of the difficulties they have to encounter: and will not that the better enable them to make provifion, in time, for the purpofe? If they fhall prove falfe and groundlé's alarms upon due examination, and that we have no fuch grievances to redrefs, of which we have complained, fo much the better; our rulers may pais them by as a kind of political romance; and they will have the lefs trouble upon their hands. But great care fhould be taken that they are not deceived themfelves intead of the writer. If he happens to be fo, the fallibility of a private man is not to be wondered at, and the confequence is of little concern; but if men in power, if thofe on whom the nation, and his Majefty depend to redrefs every public grievance, hall difregard what it is their duty to enquire into, can we admire that a general difcontent fhall fpread itfelf throughout his Majefty's dominions? Can we be furprized, that our gracious Sovereign has no fooner made choice of one fett of minitters, than he fhall experience the neceffity of taking another into his royal fervice? For if minifters fhall be difinclined or indifferent about enquiring into the true caufe of general murmurs, complaints, and diffatisfaction in a flate, how is it poffible that they fhould ceafe? The eternal changing of minitters will never change the ftate of the national grievances: it will increale, inftead of redrefs them; and therefore minitters are more obliged to them who lay the caufes of public maladies before them, than to thofe who fhall ftifle or palliate them : can the ftate-phyfician cure fate diftempers, unlefs the caufes fhall be expofed to his view? Can he preferve the affections of the people, or of his Sovereign, without he is able to effect the cure? He deferves neither the one nor the other; nor will enjoy it in this kingdom. And how can he expect is? How then can we be furprized, that the nation fhould be diftracted with changes of men in power, when the people do not experience relief, relief fufficient to render them eafy, contented and joyous, inftead of the reverfe? No minifiers can reafonably expect to fit eafy in the feat of power, nor any fovereign enjoy complacency of mind, unlefs the people do fo too, in this kingdom.

National ferments will fometimes fring from imaginary, and not real caufes; thefe are only temporary in free flates, and fubfide when the caufe comes to be difoovered. The prefent difontents of the people feem to proceed from caufes every way adequate to them, in our humble opinion; and therefore, until thofe caufe's fhall be competently removed, 'tis greatly to be feared, that general murmurs, difcontent and diftraction will increafe in the kingdom. I could heartily wifh and rejoice at my miftakes, as a private man, delighting in the general happinefs of my country. 'Tis from no other motive I write; as being unpaid, unpenfioned, and unplaced: I write not to diltract, but to conciliate men in power to unite in a coalition of abilities and refolution to frike at the root of the public evils; for many there moft certainly are, and I am willing to believe I have exhibited the principal. - But it is not talking or writing of them that will cure then, though thefe are previoully neceffary; for if our rulers are not convinced of the caufe, they can never be able to cure them: if they are once convinced of that, they will prefribe themfelves the method.
Left the foreign enemies of this kingdom fhould prefume to take advantage of the prefent fate of our affairs, and break the peace, I take the liberty to fay they will moft affuredly repent it, far more than they have yet done the effets of the lat war. For there is nothing reprefented as a grievance in all we have urged in the foregoing difcourfe, but what, in our humble opinion, is to be redreffed, and that foon too, notwithftanding they may be judged otherwife. We apprehend that one fure foundation for that purpofe is already laid; we mean a foundation in the flate of our American affairs, as the arrangement thereot has been adjufted by the laft definitive treaty of $\mathbf{1 7 6 2}$. This is our private fentiment; and 'is upon this foundation we nould defre to be underfood, that we aim at the firm erection and effablifhment of that further com; mercial unios we have attempted in thefe cifcourfes between this kingdom and Britifh America...This ftep, 'tis conceived, carried to its due extent of policy, upon the general principles we live betore fugerefod, will prove the fecondary foundation, whereon the mutual profperity of the mother kingdom, and her colonies, may be laid for redrefs of grievances in both.
Should it be faid, that this is a work of long time, before it can ripen to fuch martuity as is requinie fo to inrich the kingdom, as to tnable it to reduce our public debts and taxes to any drgree to be fenfibly felt by the people : we are of a contra-y fentiment; more efpecially if the proper coincidnot theps be alio takin in England to co-operate the more immediatcly and the more powerful to promore that thapy commercial union we would intend.
Bur if our minitters fhall once refoive upon the general meafure, and our Northern colonins fhall determine to att in concert with them, in fome fuch mamer as has been intimate, ever, requifite flep may; then be previouily thought oi to ren'er whatever we have in view effesual.

And if once France, and her allies in the fammy compact, fhall find that we are in earnelt to promote the propoled union to the utmaft, they will, doubtlefs, endeavour to thwart it, and that by an infraction of the lalt treaty of peace, and an open rupture.

We fhall, therefore, at prefent, enquire how far it may be prefumed to be in the power of France and Spain to defeat our intentions.

In our former difcourfe we have shewn the poffibility of the independency of the Northern colonies from their mother kingdom, provided a more interefting commercial union fhould not take place between them and this nation. But, as we thall prefume, that no wife meafure will be left untried to prevent an event of that kind, as well on the part of the colonies, as on that of Great Britain, it may be neceffary to confider how, and in what manner the foundation has been laid by the definitive treaty of 1763 , to conduce to the further commercial union, the better to anfwer the purpofe hereby honenly defigned.

By the definitive treaty of $177_{3}$, all Canada, and its dependencies, the river St. Laurence, the coalts of Acadia, or Nova Scotia, and Cape Breton, are ceded and annexed to the crown of Great Britain.Fereby is fecured to this nation an uninterrupted intercourfe to the gulph and river St. Laurence, all the inands contiguous thereto, and to the ftraits of Belle-1ne. This, together with our freedom of navigation to and from Hudfon's Bay, renders us formidable in this part of the world.

By the ceffion of all $\mathrm{C}_{A N A D A}$, and its dependencies, to this kingdom, and the very triling poffeffions the French at prefent enjoy of the fmall illands of St. Peter and Miquelon, for a fhelter only for their fifhermen at Newfoundland, cannot enable that nation to annoy us from thence in any of the territories of Canada and its dependencies. Stripped as France now is of the territory of Cape Breton, called very properly the Dunkirk of North America, as well as that of Newfoundland, they are deftitute of every place, by the means whereof, they are not capable to rendezvous any formidable naval power to do us any great injury in this part of America, if we thall take due care to keep all our territories in thofe parts in a proper plight and condition, and be able to fultain our brave Americans with a due degree of maritime force.

And although the fame defnitive treaty grants the fubjects of France the liberty of fifhing and drying on a part of the coafts of the illand of Newfoundland, fuch as is fpacified in the thirteenth article of the treaty of Utrecht, which is renewed and confirmed thereby, except as therein excepted, \&cc. yet as they have no place to refort to where they can form any degree of marine or military force, they being limited to a guard of fify men only for the police in the fmall inands of Miquelon and St. Peters, what hinders but we can, at any time, when they fhall break treaties with us, deprive them of this fifhery for ever after? So that as the will be in no condition in thofe feas to refift us if, a due union fhall be preferved between this kingdom and North America, we, on the contrary, flall be able to do them the greateft mifchief by turning them quite - cut of this valuable fifhery.

By the ceffion of Canada to the crown of England; and extirpating the French, we have alfo fecured to us the internal navigation of all the great lakes and rivers within the extent thereof, and hereby laid the fureft internal foundation in North America to raife a more numerous race of feamen than we ever had there before: and the navigation of the gulph and river St. Laurence, and all our other dependencies upon Canada, will adminifter conftant employment for a great number to be employed externally as well as internally.

Had not the extenfive and valuable territories of Canada been fecured to us by a free navigation to and from the great gulph and river of St. Lawrence; or had the French been left any other poffelfions in this part of the world, except the trifling inlands of St. Peter and Miquelon, without force, we might have been liable to their infults or interruption; but now we never can be fo, without being enabled to chatife them for any infolent conduct to us in thofe feas.

Whence it fhould feem, that France will not be able to prevent or interrupt our further defirable commer: cial union between this nation and this part of North America, without being likely to fuffer an eternal deprivation of the privilege of filhing in thofe feas at all. And what Briton would not rejoice at this? To what degree would not our gallant North Americans exert themfelves to difpoffefs them for evermore of that liberty they long to enjoy to themfelves, in conjunction with the reft of their fellow Britons? France have always been lofers by waging war with us in America; and they will be infatuated to think they fhall be gainers by another, let them attempt it as foon as they will.

By the definitive treaty we have likewife fecured to ourfelves the fafe and uninterrupted navigation to and from all our other colonies on the American continent, as well from Spain as France. By fettlements at Mobille and Penfacola in Florida, and our right of navigation into the great river Miffilippi, in the other gulph of Mexico; by our fettlements likewife of St. Augutine and St. Mattheo, in the gulph of Florida, together with our fituation at the Bahama inands, and at Georgia and the Carolinas, we moft certainly thall be far better able to protect and defend our fouthern continental colonies from any attempts of the Spaniards, than we were before, if due care is taken of them for that purpofe. And as we fhall be able to do this, fo we are alfo in a betrer condition to act offenfively againft Spain than ever we before were in the gulphs of Florida and Mexico. Have we not therefore fo well fecured all our North American colonies by dint of a free navigation to and from them, as to afford us more encouragement than we ever before had to enlarge and cement a more interefting commercial union with them? Were we not fo fecured by the navigation to and from the three great gulphs, we might be difcouraged to make farther attempts to extend our union with them; but the definitive treaty has left us every motive, and every incitement to do it to the utmoft of our power. So that as our North American colonies are fecured to the more northerly parts from France; fo are they from Spain to the more foutherly. For although fince the conclufion of the faid definitive treaty, France has agreed to transfer New Orleans to Spain, for latent confiderations, we apprehend will foon appear, yet we cannot look upon fuch a ftep as difadvantageous to this kingdom, the Indian nations not being fo much under the influence of the one as they have heretofore been under the other; there, indeed, having been an inveterate ancipathy between them and Spain, inftead of a friendhip betwixt them and France.
'Tis true the Spanin American territories are nearer to ours on the continent than they ever were before: and are not ours nearer to theirs? May we not regard this rather as an advantage than otherwife?

We being now fituated in the gulph of Mexico, as well as that of Florida, will not this in time of peace more facilitare our trade with this part of Spaninh America, than when our dominions were at a greater diftance? In times of war, do we not approach nearer to La Vera Cruz? Are we not more contiguous to the Spanifh Mexican mines of trealure? And will not the freedom of navigation in the Miffifippi give us advantage over the Spaniards here, when occafion may make it eligible to take it? May not our adjarency to the Havanna render its conqueft now more eafy than ever it was before? Though we no lefs than che Spaniards, once thought that key of the Spanifh wealth invincible, yet Spain, to their lofs, have experienced it otherwife; and what has happened may again more probably, from our nearer and our flronger neighbourhood thereto; and more efpecially when a more formidable union between Great Britain and North America fhall happily take effect, Can the Spaniards hinder it? We fay, they now are not near fo able as they were before we poffeffed the Floritas, the right of navigation in the Mexican gulph, and to and from the Miffifippi ; they are not fo able to do it, while we have the ports of Mobille and Henlacola in that grear gulph, and thole of Sc. Auguftine and St. Mattheo, in that alfo in the gulph of Florida. Are not allo, in confe-
quence hereof, the Bahama illands become of more importance to this nation than ever we knew them before? When we fhall be at war with Spain, is not the Havanna at prefent, a, it were, quite furrounded with Britifl dominions and Britifh power? And are not thofe dominions from their natural contiguity more able to give mutual aid and affittance to each other, and therefore to reider the whole Britifh marititue power more formidable in this part of the world than it ever was before the laft definitive treaty of 1763 ? Port Royal, in South Carolina, together now with the ports of St. Augufline and the Bahamas, are all fo contiguounly fituated, that they can foon give affiftance to each other. Carolina-Port Royal is capable of receiving fhips of any fize or number; and thefe, with fhips ftationed at St. Auguftine, and cruizers at the Bahamas, we now lie conveniently not only to guard our northern colonies on this fide, but to affemble a maritiaie force, when occafion, to attack any enemy in thofe parts.
The Spanifh galleons or flota, from the Havanna, in their paffage through the Gulph of Florida, may now be eafily intercepted by a fquadron ftationed at South Carolina-Port Royal and Auguftine, affifted by fuch private advices as the cruizers, belonging to Providence may conflantly be able to furnifh them with; bur there is no inftance of the king's fhips ftationed at Jamaica having ever intercepted the Spanifh galleons or flota in their return home; for they have either had notice from Janaica before at Britioh quadron appeared, or when they have feen our fhips cruizing for them, they have lain fafe and quiet at the Havanna till the Englifh have been tired out and retreated throuigh fickneff, or for want of provifions, or elfe carried with the fream through the gulph, and then the Spanifh fleets have foon followed and efcaped us. Is not likewife our fituation at Mobille and Penfacola, in the Gulph of Mexico, more likely to catch the fista from La Vera Cruz to the Havanna than ever it was before?
Britifh Chips bound to Jamaica from Great Britain or Ireland, or the plantations on the American continent, or from the coaft of Africa, inftead of paffing through the Gulph of Florida, where the current is ftrong againft them, or through the Windward-Paffage, which is equally hazardous, fhape their courfe fo as to fall down fo far fouthward, till they arrive fomewhat ealt of the Caribbee-iflands, in a parallel latitude with Jamaica; to which end they generally make the inland of Antigua, or others in that neighbourhood, from whence they alter their courfe due weft, and bear away with the trade-wind to Jamaica.-But when fuch fhips are homeward bound to Europe, or the northern colonies on the continent of A merica, they have their cho:ce of two courfes, viz. either through the Windward-Paffage or through the Gulph of Florida.

From clearing the weft point of Jamaica to the weft of Cape St. Antonio, in the ifland of Cuba, the fhip has the advantage of the trade-wind upon her ftarboard quarter all the way; but when the doubles Cape Sr. Antonio, and changes her courfe to bear away for the Gulph of Florida, which is in the teeth of the tradewind, the then lofes much more time and way than the had gained in her quick paffage from Jamaica to the leeward of Cuba: and while fhe has been thus beating againft the wind between the coaft of Cuba and the Gulph, fhe has been in great danger from the Spanifh guarda coftas from the Havanna; and fuppofing the efcaped them, and was juft entered the Gulph, fhe was itill in danger from the coaft and current of Florida. Now we are in poffefion of Penfacola and Mobille in the Gulph of Mexico, and St. Augufline, we can difpatch cruizers after them, and intercept the Spanih trade or their guarda coftas much better than ever we could before; whereby the navigation from Jamaica is rendered more fecure. Befides, next to being in actual poffefion of the Havanna itfelf, we are now as happily fituated as we need be, as well for our own fecurity as to annoy the Spaniards.

There is no other homeward courfe, except that through the Windward-Pafage, in which the trade-winds blowing continually from eaft to weft, and the moft difficult part of this paflage being from Port Royal point in Jamaica to Morant, which is directly againt the wind, often detains fhips for a month or fix weeks together; and even after that, many have been forced to return to Port Royal in Jamaica, and pafs through the Gulph of Florida. So that as our moft conflant courfe of mercantile navigation is through the Gulph of Florida; fo likewife is that of the Spanifh flota and galleons, though the latter have fometimes ftered through the WindwardPaffage ; but the unwieldinefs of thofe fhips making it rather more difficult than private merchants fhips, they very rarely chure this paffage.

Upon the whole, therefore, our fettlements as well in the Gulph of Mexico as Florida, confidered at prefent in conjunction with thofe of the Bahama illands, and thofe of Georgia and South Carolina, feem to be happily fituated, as well to intercept the Spanifh treafure in the galleons and flota, in their courfe home to Old Spain, either before they may reach the Havanna, or when they fhall fail from thence for Europe. Next therefore, as obferved, to our being in poffeflion of the Havanna itfelf, we could hardly be better fituated for the purpofe of fuch interception of the Spanifh American treafure; efpecially if we wifely embrace every other advantage we may enjoy in thefe parts, in confequence of the laft peace, however badly it may have been reprefented by many, who do not feem to me to have duly confidered the benefits we may derive from it by our prefent whole American fituation.

The reafon for my obfervations hereon at prefent, is owing to the confideration of the prepared ftate Britifh America is now in for the commercial union herein fubmitted. For if our colonies were not in that flate of fecurity the laft peace left them ; if the French or Spaniards continued fo fituated on the continent of North America as they were before the laft war, and we were liable to the fame perpetual diftraction by their machinations with the Indian nations, we could not have that encouragement we at prefent have to attempt that extenfive commercial union we have fuggefted in the foregoing difcourfe. As we fhall increafe the trade on that continent, we fhall find more commercial employment for the Indian nations in general; for we cannot profper but they mult do fo likewife; and when once the arts of agriculture, planting, and raifing every production which Great Britain fhall find it her intereft to encourage, the Indians themfelves, as well as the Europeans, may naturally fall into the like, there being fo clofe a connection and affinity with the prefent Indian way of life, and thofe of agriculture, planting, \&c. The wants of the Indians may, by good policy, be increafed, and this inftigate to their efforts to fupply them; which, together with intermarriages between their people and our Europeans, will create a defireable incorporation between them. This will produce harmony and affection, inftead of fcalping and wars : they will experience more felicity to arife from fuch amicable and commercial connections than they ever did from the reverfe. May we not, therefore, prefume, that the whole face of things will foon be entirely changed on this continent, when a due commercial union thall be promoted? The Indians allo may as eafily be induced to frike into the employment that will be afforded them, by a very extenfive inland navigation, as from a great increafe of agriculcure, hufbandry and planting, \&cc. \&c. it is an eafy tranfition from hunting to agriculture and planting, and from fifhing to a trading navigation.

By the more interefling commercial union between this kingdom and North America, we may create fuch an univerfal 〔pirit of commercial induftry, as well amongtt the Indians as others, as will infpire univerfal love and amity amongtt the people in general : and if wife regulations are made to prevent every fpecies of the wonted fraudulent impofitions upon the Indians, they will become one united people with us. This will remove the common caufe of thofe broils and mifundertandings we have too frequently had with thefe people.
On thefe confiderations it very clearly appears, that we are betrer fituated than ever this nation before was, to act offenfively as well as defenfively againft Spain, in America; and in the former in the moft important manner, and to the moft important purpofes. For as affuredly as we took the Havanna itfelf, fo certainly are we better able
now to retake it than we ever before were, from the circumftances of the preceding account. The contiguity of the fituation of our molt foutherly continental colonies is fuch, that we may have aid much fooner, and much more formidable, from the continent in thofe parts than we ever had; and we may do much greater execution there againft Spain than we could ever before do. Fron the Carolinas to the Floridas, we are in a capacity to raife a more confiderable land and maritime force than was ever before in our power, from America alone; and, therefore, may we not reafonably prefume, that we fhall be able to do more execurion acainlt the Havanna irfelf in a few months than heretofore we have been ever able to do "till the laft war? Nay, upon any future rupture with Spain, it is to be hoped, that we thall level our whole inaritime flrength, as well from the American continent as from Europe, direetly againft the Havanna, this being the fort cut to chaltife them at once effectually, and by no means to trille with ourfelves or them at all in Europe. Will not this ever prove the leaft expenfive, the fhorteft, and the moft formidable way to deal with that nation, without fpending our ftrength elfewhere? Will not this conduct in Great Britain be far more eligible than even wait ing for the interception of their flota or galloons? For they may keep them a tedious while locked up in their other Spanifh American ports at a great uncertainty to us: and therefore at a great expence to us, in waiting for them: whereas, if we once again poffefs ourfelves of the Havanna, how can that nation be able to get home their American treafure? Or, how can they with fafery bring any from Old Spain to New ? With the greateft difficulty will they be capable of doing either : and when the whole currency of this Spanifh trade fhall be ftopped up, and obitructed, what will become of the Spanifh revenues arifing from this the moft valuable part of their whole commerce? By a refolution in the court of London to level the whole of that force the Britifh nation can apply againft Spain, in any future rupture with that nation, wholly at once againft the Havanna, we thall do more execution againft that nation, when they thall deferve it, in one twelvemonths, than in our former dilatory and vague ways of dealing with Spain we have done in fome years: in fuch a condition has the definitive treaty of ${ }_{1} 7^{6} 3$ put this kingdom with relation to that of Spain. And may not fuch management fave us millions upon millions of expence hereafter, which heretofore we have expended to right ourfelves againft that infolent Spanifh nation?

As by means of the advantageous fituation we at prefent have in North America, we are better enabled to take the Havanna again when that point fhall be refolved on by the government of Great Britain; fo is there not the greateft probability that we fhall not be difappointed in our attempt? Have we not now fafe contiguous harbours for our flects to fic and refit? Can we not reinforce them as we fhall have occafion, as much and as expeditiouny as the Spaniards thall be able to guard or to defend themfelves at the Havanna? Are we not at prefent better able than ever we were to furround fuch part of the illand of Cuba as fhall be conducive to our fuccels, as well from Jamaica, as from Port Royal in Carolina, the Bahamas, St. Augutine, Penfacola and Mobille? Can we not give affitance alfo from our logwood fettlement in the river Baylis, if that fettlement be made the proper advantage of? Can we not likewife very eafly take poffeffion from Penfacola, and ellewhere, of the bay of Campeachy; and from thence carry a great maritime force to the Havanna? In fhort: while the Havanna fhall be open at top, as our brave Admiral faid formerly at the taking of Gibraltar, what is it that our gallant and magnanimous Britifh feamen and foldiers will not chearfully attempt and fucceed in? What is it they will not accomplith, if wifely conducted by harmony between our fea and land officers, under a wife adminiftration, which fhall engage them by encouraging rewards to exert themfelves? By fuch like animating meafures, whatever is pofible to be done, by the braveft of men, we may take for granted will be done. They have been lately accultomed to conquer; and what is it they will not determine to conquer under an adminiftration they have been wont to conquer? An adminiftration beloved at home, and dreaded abroad; an adminiftration judicious in the choice of officers of every kind to conduct our forces: officers tenacious to fupport their honour as Britifh feamen and foldiers; determined to live in friendihip, and unanimouny refolved on victory?

We do not flatter ourfelves with impofibilities: the prefumption of fuccefs, we may, with great truth, fay, is more probable than ever, becaufe we are better fituated to obtain it than ever of the Spaniards, And are we not in the like circumftances with relation alfo to France in North America, as we have before briefly fhown? Well then : as we have feen that France is not in lefs danger on a future rupture with this nation to lofe for ever the privilege of the Newfoundland fifheries, from the happy fituation we are in, by virtue of the defnitive treaty in America: fo is Spain of lofing the Havanna for ever on the like occafion. Perhaps, France may think this a vifionary idea, that may appear plaufible upon paper only. We pretend to no divinatory gift of prediction: but we hope we are not difpoffeffed of that of common fenfe, which furpaffes every enthufiaftic phantom. Let them judge from numerous things we foretold, from the principles of common fenfe, for many years before the laft war: whether we are likely to be miftaken in our future, if they and Spain force us into one foon again. And this, we conceive, they will do: and fo fure as they do, they will rue it. For notwithftanding the prefent ftate of our domeflic affairs may look with a melancholy affect, from the reprefentation given of them in the former Preliminary Difcourfe, yet, we know, that every grievance, as before intimated, therein complained of may be redrefled: and that foon too to their forrow. And although they may pleafe themfelves with our prefent minifterial divifions; and think this the proper time to take advantage of us; let them remember, that all Britons will unite to fcourge them when there fhall be occafion for it. This their great minitter Richlieu ever forefaw, though weaker ones may not.

We are happy in the enjoyment of the liberty of the prefs: we are happy even in the abufe of that liberty; was it for no other reafon than to deceive our enemies; for 'tis obfervable, that they rarely diftinguifh the difference between party and national writings. All we write is for the national fervice, having nothing to do with party diftractions of any kind: and if we put our rulers in mind of any grievances, 'tis only from a motive to have them redreffed: not to fhow that it is impracticable. We, however, fhall have no reafon to be forry if our enemies thall make another ule of them than what we intend; they will repent it. Will not their lofs of Jamaica, and their lofs of the Floridas, and our gain of them, and the ports of St. Auguftine, Penfacola and Mobille; and our gain of the freedom of navigation to and from the Miffifippi, make Spain dread the further confequences of quarrelling with Great Britain? Let France too remain infenfible to their lofies of Canada, and all its dependencies, of Cape Breton, the illands of St. Johns, Mifcou, Richlieu, \& c. $\& c . \& c$. let them remember that they are now poffeffed only of the trifing iflands of Sr . Peters and $\mathrm{Mi}-$ quelon in their own right, and the privilege of fifhing at our will and pleafure under Britifh reftrictions; and let them judge what chance they will ftand to retain this privilege upon another rupture with this nation; and they mult be infatuated to quarrel with us foon again.

We not only behold with pleafure, the ftate of affairs at prefent in all North America, and the ability we are there in to act offenfively as well as defenfively, but we view alfo the rifing condition of our new acquired Illand territories in America.

By the definitive treaty of 1763 , the three inlands of Dominica, St. Vincent and Tobago, are yielded in perpetual fovereignty to the crown of Great Britain, and the inand of St. Lucia is ceded to France, in exchange for the ifland of Granada, with the Granadines, and all their dependencies, which are alfo for ever yielded to this nation.

Vol. I.

Such is the fruation of the iland of Dominica, that befides the immediate affitance it may receive from our antient ine of Barbadoes, a refpectable fquadron, on the fint appearance of a rupture with France, might be fent to Prince Rupert's Bay for its prorection; and will lerve as a place of arms, and the rendezv us of our forces, from all parts of the Weft Indies; and from the nature of its fituation, the whole of the Fiench commerce in thefe parts will inttantly become precarions, and all their fettements lie at British mercy.

The illand of St. Vincent is fituated directly to the leeward of Barbadoes, and may in a few hours be reached from thence; and is, at the fame time, fo feated, as to cover and conneft the finall flands that lie between it and Granada.-By the inland of St. Vincent, Great Britain has likewife gained an aclditional check upon the French inland colonies in general ; and particularly on that of St Lucia. There can be no meafure taken there, of which we may not have immediate notice; and if we confider the fituation of this in ind in refpect to that, and the reft of the French illands, now that Granada and all its depen lencies are become Bricih, it is apparent that we may from thence eftablifh a cruize; by which the French may be effectually blocket up, or at leaft deprived of all commerce in cafe of a future war. This illand may likewife ferve us fur a place of arms, by which forces may be tranfplanted from the other adjacent iflands, and embarked very conveniently for our future expeditions in this part of the world. It alfo contributes to cover and connect all our other poffeffions, that together we have acquired by the peace; and from thence reinforcements and fupples may be lent with equal eafe and expedition to Dominica.

Iobaco, the moft renore of all our new acquired inands in America, being fituated near to the Spanifh main, is an advantage that may tend to render this ine of important utility. It may open to us a correfpondence with the free Indians, who live upon the continent; and who would be glad-to have commerce with us; and with good management we might thereby make an acquifition of people as we hive done of country. From hence we migit be able to annoy the Spaniards, as well on the ifland of Trinidada as on the continent, if we hall find it worth our while in time of future war, as they have done us from that Spanifh ifland during the latt w.s.
Another advantage we have gained by the definitive treaty, is that of annexing the illand of Granada to the crown of England. By our mott accurate accounts, it appears to be about twice as larg, as Barbadoes, larger than St. Lucia, Sc. Vincent, or Tobago. The harbour, which lies to the north-weft end of the illand, and is called the Carenage, the harbour of Port Royal, or the Old Port, has been always reckoned one of the beft harbours in the Weft Incies, as poffeffing almoft every advantage that can be defired. It is fo capacious as to hold, with eafe, a fquadron of twenty-five ships of the line, where they may ride with perfect fafety, in refpect to wind or weather. In time of war, this ifland will give us very great advantages againft the Spaniards no lefs than the French : and if it fhould fo happen, that by a multiplicity of fervices, our naval force thould be fo divided as to leave us only an inferior fquadron in thofe parts, the Carenage would afford us a fafe retreat, without obliging our fhips to quit that ftarion : a circumftance well worthy our regard, of which the French availed themfelves often, fo long as this inland remained in their poffefion. Nor fhould it be forgot, that our illand of Granada, and its dependent Granadines, are free from hurricanes; to which alfo our ifland of St. Vincent is feldom expofed.

By the arrangement of things in the Weft Indies, in confequence of the treaty of 1763, there is not now an ifland fmall or great there, the right and poffeffion of which is not duly afcertained. By virtue of this ddjuftment, we poffefs a new and considerable province in the West Indies, compofed of illands well fituated; as well for the mutual protection of each other as for their offenfive annoyance of an enemy; and for their general intercourfe with Great Britain. This new diftribution of territorial property has brought us much nearer to the Spanifh main, and this in time of peace may enable us to furnifh them with fupplies of negroes, and other neceffaries, which they have long received from the French and Dutch. From thefe illands, we have in times of war effectual means of keeping enemies fleets in awe, interrupting all correfpondence between their Weft India fettlements, and making defcents upon their coafts, let them break with us as foon as they will.

The French judged Martinico could not be fecure without St. Lucia. They were ftrangely prepoffeffed with the notion of St. Lucia, not to difcern, that we poffefs in Dominica much more than we could poffibly have had, if we had kept St. Lucia. For Dominica lies in the very middle of the channel, between Martinico and Guardaloupe, to the windward of the laft of thefe iflands, and not fo much to the leeward of the former, but the veffels can eaflly fetch the road of St. Peter, which is its principal town and port from Dominica. We have alio in that inland, to leeward, Prince Rupert's Bay, and to windward the Great Bay; fo that, having Barbadoes to the windward of all, and Antigua to leeward of Guardaloupe, it is fcarce pofible in time of wat, that either trade, or supplies fhould get into thefe French inlands. Dominica is of large extent, and great natural frength; and may be defended againft any force: St. Lucia is fo acceffible on every fide, that it mutt of neceffity fall to a fuperior maritime force. Dominica will ferve to cut off the communication between Martinico and Guardaloupe in time of war, and reduce the inhabitants of both thefe French ines to the laft extremity.

Upon the whole: it appears, that the proportion between the property, and confequently between the power of Great Britain and France in the Weft Indies, is now extremely altered to what it was before and fince the conclulion of the peace of 1763 . Our property, in the former period, compared to theirs, was no more than one to five: whereas 'tis now as near as ten to fifteen, or nearly as two to three. If, therefore, when we were in fo much a weaker ftate, we ware ftill able to protect, even the fmalleft of our inands, during all the late wars between the two crowns, and in a condition to conquer almoft all theirs; fhall we have any reafon to fear when we have acquifed fo large an acceffion of united force in the Weft Indies?

Befides: the fituation and difpofition of our inlands give us, in refpect to France, ftill greater advantages. Our northern illands will remain what they always have been; a perpetual check on them on that fide. Jominica lies, as fhewn, in the very center of their poffeffions; fo as to commanland diftrefs the mavation equally of Martinico and Guardaloupe. At the fouthern extremity again we have Granada, and its dependencies, connected with St. Vincent; from whence we have an eafy correfpondence with Barbadoes, and a number of fafe and commodious ports, whereto our fleets may at'all times refort: all which confiderations, taken with their united force, may banifh the apprehenfions of danger, either to our old or new colonies in thefe parts, in cafe of another rupture with France.

From this concife view of our prefent fituation, in point of fecurity, to act defenfively and offenfively againt the united powers of France and Spain, both in North America, as well as in the Weft Indies: what can Great Britain have now to dread from thofe mighty potentates? We have little to fear from thefe nations: but they have every thing to fear from the due exertion of the force of Great Britain once more being turned againft them both.

But what will they not have to fear, from the additional commercial union proposed to be made between Great Britain and her North American, and her illand colonies; and as well between thofe of our Bricifh colonies on the continent as our iflands?

After this view of their fituation for defence and offence, we fhall now give an idea of the additional commerce we may derive from our new acquired inand colonies.

Dominica is a large inand, at leaft twenty eight Englifh miles in length, and about thirteen in breadth, in circumference about thirty leagues. It is not interfected by large inlets of the fea, as many others, both of the larger and leffer of our own, as the French Weft India inands are, and of courfe contains more land. Some have judged it near twice as large as Barbadoes, and the French efteem it near half the fize of Martinico. The climate in general is reputed wholfome. The face of the country is rough and mountainour, towards the fea fide efpecially, and within land, there are many rich and fine vallies, and fome fpacious and fair plains. The declivities of the hills are commonly gentle, fo as to facilitate their cultivation, and the foil in general a deep black mould, and commended for its fertility, by the Spaniards and French, as well as the Englifh. It is well warered, by at leaft thirty rivers; fome of which are fpacious and navigable for feveral miles, the reft commodious for planting, and variety of fifh. It abounds in all kinds of timber that are cuftomary in the Weft India inles. Their fruits are fuperior to thofe in Martinico and Guardaloupe. Hogs, both wild and tame, are in plenty, as well as moft forts of fowl. Ground provifions in general are here as good as in any of the other inles; fuch as bananas, potatoes, maniac, from which the caffuda is made, the common bread of the Indians, Negroes, and even Europeans.
The fettlements made here by the French upon the coall were efteemed equal, if not fuperior in produce, to thole in their own illes. There are feveral fafe ports and convenient creeizs. On the north weft end of the inland there is a deep, fandy, large bay, well defended by the adjacent mountains from molt winds, called Rupert's Bay, where our armament under the late lord Cathcart lay very commodioully, and which was of great fervice to our fquadron in the courfe of the late war. There is good anchoring ground along in all the LeEward coast.
The French have acknowleged, that fugar, cotton, coffee, cocoa, and indeed every thing, that either they, or we have beea able to raife in any of the other inlands, may be produced in large quantities, as well as in great perfection in this illand. As it is greatly peopled already, it will induce to the difoovery of that mine for which this inland has been always famous, as believing it, from tradition, to be filver, but what the French well know to be gold; and though it fhould not be judged expedient to open it ; yet the certain knowlege of it could do us no injury, as the fame of it might invite numbeis there, and prove of great benefit.

The illand of St. Vincent is from north to fouth about twenty-four miles in length, and about half as many in breadth; fixty, or thereabouts in circumference. It is rather bigger than Antigua, and if no larger, at leaft as large as Barbadoes, fomewhat fmaller than St. Lucia, and much about two-thirds of the bignefs of Dominica. The warmth of the inland is fo tempered with fea breezes, that it is looked upon as very healthful and agreeable, and on the eminencies, that are numerous, the air is pleafantly cool.

The foil in general is extraordinary fruitful: though the country is hilly, and in fome places mountainous. Amongt the former there are pleafant vallies; at the bottom of the latter fome facious and luxuriots plains. No illand of the like extent is better watered; from the mountains there defcend rivers, and leffer freams run on both fides from almoft every hill. There are various fine fprings at a fimall diftance from the fea; and the flopes fo eafy and regular, that there are hardly any marthes, and no ftaniing waters on the illand. There are befides large quantities of valuable timber, as well as good fruit trees; fome peculiar to this ine. It abounds with wild fugar canes, from which the natives make a pleafant liquor ; corn and rice, and all forts of ground provifions are raifed in plenty, and without great trouble. In the fouth part, where the French have raifed fome large and fourihing fettlements, they have coffee, cocoa, indigo, anatto and lignum vite, and very fine tobacco. They have plenty of cattle and poultry. The rivers are ftored with divers forts of frefh fifh; and the fea contiguous to its coafts abounds with thofe proper to its element and the general nature of the climate. Land and water fowl are in great plenty.
With refpect to its produce in general, it bids fair to become inferior to none of the other inles, according to its extent : and it has many commodious bays on the north and north-weft fides, with abundance of convenient creeks and good anchoring ground on every fide. At the fouthern extremity there is a deep, fpacious, fandy bay, called St. Antonio, where fhips of large fize may lie fafely and conveniendy. The French for feveral years went on fettling, planting, cutting timber, and raifing every kind of Welt India commodities, except fugar, and carrying on a very lucrative trade to their other iflands, in which a number of noops were employed.

Tobago is thirty-two miles from fouth-eaft to north-wef, which is the greateft length, and where broadeft is about nine miles, from eaft to weft, fomewhat more than feventy miles in circumference. Ir differs not a great deal in bignefs from the ille of St. Vincent, is rather larcer than Barbadoes, and of confequence than any of our leeward inands. The climate, though it lies only eleven degrees and ten minutes north from the equator, is not near fo hot as might be expected; the force of the fun's rays being happily tempered by the coolnefs of the fea breezes. 'Tis another favourable circumftance that this ifle lies out of the track of hurricanes.

There are many rifing grounds over this illand, but they cannot be properly filed mountainous, except, perhaps, in the north-weit extremity, and even there they are far from being rugged or impaffable. The foil is well diverfifed; being in fome places light and fandy, in others mixed with gravel and fmall fints, bur in the general it is a deep, rich black mould. From the extraordinary fize of the fame fort of trees that grow in the other illands; and from the trials made by the Courlanders and the Dutch, this ifland is efteemed to be Juxuriantly fertile; well fuited to the different productions that are raifed in the Weft Indies; and from the concurrence of various circumftances, may be wrought with eafe, and is not liable to the blaft, and other accidents, which are fomerimes fatal to the molt promifing crops in fome of our leeward inlands.

It is generally agreed, that hardly any country can be better watered than this is, Befides fprings that are found in plenty all over the inland, there are not fewer than eighteen rivulets that run from the hills into the fea, fome on the eaft, fome on the weft fide. Some of thofe take a ferpentine courfe through the meadows; others pent up by rocky channels, roll with fuch rapidity, as renders them very fit for driving of mills; but there are very few or no moraffes or marfhes, or lakes, pools, or other collections of ftanding water, which of courfe mult render it more healthy, and in all parts of it alike habitable.

Yet this diftribution of frefh water is not more commodious than the difpofition of the bays and creeks of the fea upon its coafts. At the fouth end lies the bay of La Guira, and at a fmall diftance the leffer and the great Rockley bays. The latter of thefe may, with propriety, be filed a harbour, for it is land-locked on every fide, and is very fecure. In this bay, the Dutch and French fleets engaged in the year $16_{7} 7$, in which engagement the French fhip called the Glorieux, of feventy guns, belonging to the fquadron of count D'Etrees, was blown up; which fhews that it is capable of receiving as confiderable fquadrons, and thofe of as large fhips, as are ufually, fent into thofe feas. To the northward of thefe lies Fat Hog bay, and beyond that Grand River bay, Great Hog bay, Little Hog bay, and L'Ancre Batteau, covered by the illand of Littie Tobago - Oppofite to this, on the other fide of the inland, is John Moor's bay, now Man of War bay, very deep and fpacious, with ten fathom water clofe to the fhore, with two fine rivulers running into the bay,
where our fhips may careen, with the utmoft conveniency and greatef fafety; it being furrounded by ligh hills, that come down clofe to the fhore, by which the veffels lying there will be effetually helrered from both wind and weather. There are alio feveral litete commodious bays between this and Great Coulland bay, and Sandy Point bay, which brings us again to the fouthern extremity of the inland.
Whence it evidently appears; that this inand is in all refpects mott convenient for commerce, and affords many obvious and extraordinary advantages to provide for and preferve its fecurity.
This inand is covered with all that valt variety of valuable timber, that is to be found in moft countries in the Weft Indies; many forts of which are no lefs extraordinary in their fize than excellent in their nature. The fame may be faid with refpect to fruit trees, and amongtt thefe there are fome that are peculiar to Tobago. Such, for inftance, as the true nutmeg tree, which the Dutch themfelves, who are good julges, affirm to have found there. They, indeed, fay it is a wild nutmeg, that the mace is lefs florid, and the ta! e of the nut itfelf more pungent, though larger and fairer to the eye, than the fpice of the fame kind brought from the Eafí Indies by them.-The cinnamon tree grows likewife in this illand, though the bark is faid to have a tafte of cloves as well as cinnamon.- Here alfo grows that tree which produces the GUM copal, refembling that brought from the continent of America, and very different from what goes by the fame name in the reft of the Wett India inands.
All ground provifions are produced here in great abundance, as well as perfection. Here likewife are plenty of wild hogs and other animals, together with large quanticies of fowl, and an amazing variery borh of fea and river fifh. During the time the Dutch poffeffed this inand, which was not many years, they exported jarge quantities of tobacco, sugar, cassia, ginger, cinnamon, sassafras, cum copal, cacá, rocou, indico and cotton, befides rich woods, materials for dying, DRUGS of different kinds, and feveril forts of delicious fweermeats. Thus we have a profpect of raifing here all the moft valuable commodiues which the Weft India inlands produce- - There is no forc of improbability of our being able to produce a great part, if not all the variery of spices of the Ealt Indies in this very inand.
We fhall now confider what commercial advantages may be derived from our poffefion of the ifland of Granada, and the Granadines. This inand lies fouth from St. Vincent feventeen or eighteen leagues; fouthweft from St. Lucia about thirty-five leagues; fouth fouth-weft from Martinico fifty leagues; fouth-fouthweft from Dominica fomewhat more than fixty leagues; weft-north-weft from Tobago thirty-five leagues, or according to fome charts forty leagues; fouth from St. Chriftophers one hundred leagues, and north from the Spanifh main about thirty leagues. It lies in the latitude of eleven degrees thirty minutes north, the fartheit to the fouth of any of the Antilles. It is upwards of thirty miles in length, fifteen or fixteen in breadth, in fome places, though in others lefs, and is about twenty-five leagues in circumference. It is near twice as big as Barbadoes, larger than St. Lucia, St. Vincent or Tobago, and according to fome French memoir writers, contains of cultivatable lands near one third of what is to be found in Martinico.
Though the fituation of this ine is warm, yet the French writers affure us, that it is much moderated by the regular returns of fea breezes, by which the air is rendered cool and pleafant. From the fame authority we may affert, that it is wholfome. The feafons are remarkably regular; the blaft has not hitherto been known in this inland, and it lies out of the track of hurricanes; which, with refpect to the fafety of the fettlements on fhore, and the fecurity of navigation, is an inelimable benefit in this part of the world.

There are in Granada fome very high mountains; but the number is fmall, and the eminencies fcattered through it are in general rather hilly, yet gentle in the afcent, of no great height, ferile and capable of cultivation. The foil is every where deep, rich, mellow, and fertile in the higheft degree : fo as to be equal in all refpects, if not fuperior, to that of any of the iflands in the Weft Indies, if the concurrent teftimony buth of French and Britifh planters may be relied on.

It is perfectly well watered by divers ftreams of different fizes, and running in different directions, flowing from a large lake on the fummit of a high mountain fituated very near the center of the ine. There are fmadl brooks running from molt of the hills, and very fine fprings almoft every where, at a fmall dilance from the fhore. All thefe rivers abound with variety of good fifh, and are reforred to by multitudes of water fowl. There are likewife in Granada feveral salt ponds, which have their ufes and their value.
The great produce of this country, at our firft poffeffion of it, was a prodigious variety of moft forts of timber that are to be met with in the Weft India inands, which is of no little advantage. It abounds with many rich fruits, valuable gums, dying woods, and diverfity of vegetable productions; fuch as oils, refins, balfams, \&c. which have always born an high price here. All the various kinds of ground provifions, which are fo requifite to the fubfiftence of Weft India plantations, are here in great quantitits, and fome kinds of grain ripen very kindly in this, which are not raifed at all, or are raifed with difficulty in other inlands. River and fea fifh are here in great abundance; in refpect to the latter, turtle of large fize and fine flavour, as well as lamentins. They have plenty of all forts of fowl, and prodigious quantities of game, ortolans, and a kind of red parrridge efpecially. The woods are fored with many wild animals, that afford excellent food, and are very rarely met with in the other illands. They have much cattle; and as their hills yield excellent pafture, they increafe daily.
But the diftinguifhing excellency of Granada does not lie fimply in its great fertility, or in its fitnefs for a valt variery of ettimable commodities, but in the peculiar quality of its foil, which gives a furprizing and inconteftible perfection to all its productions. The sugar of Granada is of a fine grain, and of courfe more valuable than either that of Martinico or Guadaloupe. The indico is the fineft in all the Weft Indies. While tobacco remained the ftaple commodity, as once it was, of thofe inlands, one pound of Granada tobacco was worth two or three that grew in any of the reft. The cacao and cotron have an equal de ree of pre eminence; nor is this founded fimply in the opinion of the French, but is equally known and allowed by the Englih and Dutch.

By memoirs of the French, the true cinnamon and nutmegs are here: this illand, with Tobago, may render us mafters of valuable fpice iflands. In refpect to fituation, and thofe expofitions that are effencially requifite to the proper cultivation of thofe valuable productions, thefe illands are every way equal: or, if upon making the experiment, Granada fhould be found preferable to Tobago, it will be preferred accordingly.
There is good anchoring ground on all the coaft, and many commodious creeks and bays, both on the eaft and wett fides; which will be infinitely advantageous to commerce, when this inand thall be complecely cultivated. There are befides two large ports of great excellence, and which deferve particular notice. The firt of thefe is the harbour of Calivenie, at the fouth-caft extremity of the illand, and is fingu'arly fafe and fpacious. It confifts of an outward and an inward port. The former is three quarters of a mile broad at its entrance, but widens as you advance, and becomes above a mile in extent within. As to the entrance of the interior pors, it is above a quarter of a mile broad, but prefently expands iffeff on both fides, fo as to be very capacious, and has abour feven fathom water, with a foft and muddy bottom; from whence feamen will judge of its utility. Ships lying here in the utmoft fafety, may from warehoufes take in their lading very conveniently, and may then with great eafe be hauled into the outer port, which has this peculiar adrantage,
that Thips may either come into or go out of it with the ordinary trade wind. This port, fupprifing there was no other, in an illand thus fituated, and to very capable of being improved, would, in a trading nation like ours, render it a molt important acquifition.

But the worth of Granada mult be highly enhanced, when we confider, as before hinted, the other harbour, which lies at the north-weft end of the inland, and is called the Carenage, the harbour of Port Royal, or the Old Port, which has bee nalways efteemed one of the beft harbours in the Weft Indies, as poffefing almoft every advantage that can be defired. It is a full quarter of a mile broad at its entrance, and, when once eatered, isfo capacious as to hold with eafe a fquadron of twenty-five fhips of the line, where they may ride in perfect fafery in refpect either to wind or weather. There lies alfo, at a fmall diftance from this port, a lake of a confiderable fize, very deep, and which by cutting through a fand bank, might be eafily joined to the port, and would then make it one of the fineft bafons in the world, and afford ail the conveniencies that could well be wifhed, for careening the largett fquadron of the largeft thips that are ever employed in this part of the world. The benefits that may be juftly expected from fuch a port, that may be fortified to what degree we pleafe, in an inland fo well fituated, and producing fuch a diverfity of valuable commodicies, are fo obvious, that it is needlefs to enter into a detail of them. In time of war it will give us inexpreffible advantage againtt the Spaniards as well as the French: and if at any time it fhould fo happen, that by a multiplicity of fervices our naval force fhould be fo divided, as to leave us only an inferior fquadron in thofe partş, the Carenage would afford us a fafe retreat, without obliging our hips to quit that flation; a circumftance worthy attention, and of which the French availed themfelves often, fo long as this illand remained in their poffefion.

The French, for fome years before this illand came into Britifh hands, produced $\mathbf{1 2 , 0 0 0}$ hogtheads of sugar annually, befides coffer, cocoa, and a large quantity of excellent cotton. Yet they never fettled above one-half the country, nor received above one-half the profit even that would admit of, had the inhabitants been better planters, and ixetter fupplied with flaves.
Exclufive of thefe production, this inland was of great utility to the French during the lat war, when the fingle fhips of forre they fent to the Weft Indies, with the tranfports under their care, came regularly hither, with little danger of falling into the hands of cruizers. Here they remained in fafety, and from hence they fent fupplies of men, ammunition and provifions, in fmall veffels, which creeping along the Granadines, St. Vincent and St. Lucia, arrived generally fpeaking fafely in the harbour of St. Peter's in Martinico. In this refpect, as well as many others, the French will very fenfibly feel the lofs of this inand, as we fhall the advantage arifing from our poffefion of it. A Britifh fquadron !tationed here, will certainly be a fevere check both upon the Spaniards and French in time of war.
From the fouthern extremity there runs a long range of fmall ishets, extending about twenty leagues. Their number is about twenty-three, capable of cultivation. Their foil is remarkably rich, and the climate pleafant. They will afford large quantities of indico, coffee and cotton; nor are they unfit for sugars. They abound with excellent timber. They were formerly ferviceable to the planters of Barbadoes, who cut large quantiies of mill-timber for their fugar works. But for many years paft the French have not only prevented this, as injurious to their property, but by ftationing gur re-hips upon the coaft, made prizes in time of full peace, of all Englifh veffels they found at anchor there, and even of fuch as appeared in fighr of them, which was a great detriment to our navigation. For if veffels bound to Barbadoes, either through thick weather, or being difabled, miffed that ifland, and run down the fouth of it, which was the common rout, they came of courfe upon thefe illands, and fell into the hands of the French guard-hips; the apprehenfion of which made them fo cautious, as to render their vo;ages to that Britifh illand longer and more tedious than it now need to be, which inhances the value of thefe illands.

There are befides thefe, five larger iflands dependent on Granada, covered with valuable timber, interfperfed with rich fruit trees, and are capable of variety of Weft India improvements, whish render them eftimable. They are named Carronacou, which has a convenient and capacious harbour, ine of L'Union, Carmorn, Moustiques, or Moskito Island, and Beeovya, or Bekia.
The confideration of thefe fmailer indards led to the quetion, whether they might not, all circumftances confidered, be more proper for the introduction of spices than even that of Tobago? The five inands of the Moluccas, which are Ternate, Tydor, Motier, Mareifen and Bacham, were fo many feparae kingdoms, before they were known to the Europeans. They lic in a line like thefe, and none of them larger than fome of the five of ours. They have fmall nraits of the fea between them like the Granadines, bear the fame trees, herbs and roots, are fome of them like thofe, deficient in frefh water, and produced originally cinnamon and nummegs, as well as cloves, the ufes as well as the method of cultivating and curing of which were taught them by the Chinefe, as Dr. Angenfola, who wrote an excellent hiftory of the Molucca Islands, informs us. Banda, where the nutmegs originally grew, is not above half the fize of Bekia; and Amboyna, to which the Dutch feem at prefent inclined to confine both nutmegs and cloves, is rather inferior in point of extent to our Granada.
To judge of the true value, and to a afertain the real importance of all our new inland acquifitions, we mult view and contemplate them in all their different lights, from which they may every one of them become more or lefs, immediately or remotely, directly or indirectly, afiiting to the interefts, increafing the power and commerce, extending the navigation, and thereby promoting the welfare of Great Britain; or, in orher words, conducing to the induftry, the independency, and the happinefs of their fellow citizens and fellow fubjects, who are the inhabitants of the mother-country.:
In virtue of the general arrangement of things by the treaty of 1763 , many of our old plantations will avail themfelves of thofe fupplies of timber, from which they were for many years before precluded. The run away negroes will not be able to fhelter themfelves any more in uninhabited illands, and thofe impediments to, and embarraffments of our navigation, which have often been feverely felt, and in confequence of which fo many frequent and loud complaints have been made to almoft every government in our colonies, is now removed, by taking away the caufe. For there is not now an inland fmall or great in the Weft Indies, the right to as well as the poffeffion of which, is not clearly afcertained.
Our old fettlements will gradually difburthen their fupernumerary inhabitants on territoriss belonging to their mother-ftate, inftead of reforting, as has been too notorious that great numbers have done, to $\mathrm{D}_{\text {ANISH }}$ and Dutch fettements.
If we advert to the alterations this new diftribution of territory has made, in regard to the French in thofe parts, it appears plain enough from what has been already obferved, that they have loft the conveniency of raifing valt quantities of frefh provifions, as well as very conliderable fupplies of valuable commodities of the various kinds before enumerated, as belonging to our refpective new acquifitions in the Weft Indies, which the French conftantly received from thofe that were ftiled neutral, but to far as this went, were in reality made French illands. They have allo loft the advantage of felling timber and building sloops, and even larger veffels in Dominica and St. Vincent, as they were accuttomed to do; and all thefe benefits are now thrown into the Britifh fcale of wealth, power and fecurity. Befides, they are deprived of their communica-

xlviii Foundation laid by the Peace of 1763 foi the thore interefing Union between Great Britain and America, $\mathcal{E}_{\mathrm{E}} \mathrm{c}$.
tion with the Indians in the one, and with the Indians and the free Negroes in the other of thofe inlands, from whence they derived, by their own confeflion, fuch fervices as were productive of variety of advantages, exclufive of the check they kept upon us. They no longer enjoy the turtle and lamentin fifhing round the coaft of Toljago, which was their annual refort, but are now confined within che bounds and to the coafts of their own inands.
Thefe confequences, when confidered together, have given very great advantages to our planters, and broupht very fenfible difficulcies upon the French planters, and a larger number of hands for procuring thofe neceffary fupplies, which they formerly received in great abundance, with little trouble and very fmall expence. It will alfo follow, as all who are acquainted with thofe countries muft know, that from being thus ftreightned they are compelled to employ more negroes; and yet, even with this increafe of faves, lefs will be done in their fugar plantations than formerly, when almolt all their wants wifh refpect to fubfiftence, and even with regard to buildin, vere fupplied upon fuch eafy terms, as we have feen. In this fituation likewife as many veffels of different fizes were continually occupied in their intercourfe with thofe ifles, with which they can now have no furtler connedtions, their navigation of courfe declines.
By the arran; ement made, the French have not only loft the additional produce of fugars, coffee, cotton, \& c. of the feveral betore defcribed illands, which taken all to ether mult be very confiderable, with all title to any furtherimpiovemen.s they have not only loft there; but all the advantages of thofe various fafe and commodous ports before defcribed, as belonging to our feveral new colonies; they have loft the facility which they had from tience of fuccouring all their inlands, even when we had fuperior fquadrons in thofe feas, to which for the future they mult in cafe of future war with us be incvitably expofed. They have alfo been deprived on one fide of the intercourfe they had with the Spaniards, and muft hereafer run much greater hazards than formerly, in receiving, when their necefities fhall require them, fupplies of provifions and military flores from the Dutch.
As to the French having St. Lucia, they can receive no great benefit from that iland, nothing comparable to what we do from the rett before reprefented. For that illand is far from being healthy. It is fo full of venomous creatures of different fizes, that the French can farce flir abroad but in boots. It is not only very mountainous, but even the flat country is full of marfhes. Befides, it lies fo immediately within the view, and under the power of the well fettled colony of Martinico, that without being at a great expence in fortifications, and keeping a conftant military force there for its defence, we could fcarce hope that it would ever have been thoroughly fertied. If even with the affitance of fortifications and a regular force, it had been fettled by us, it might have been found impracticable to have fecured it, as there are fo many landing places in different parts of the ifland; and as in cafe of a war, this frmall fertlement would have been immediately expofed to the whole ftrength of the French iflands, fo that the inhabitants might have been ruined before any affifiance could have been fent them; and this, if the country had been recovered, or quitted by the enemy, would certainly have difcouraged our people from fettling it again. As the cafe now flands, the French are liable to all thefe inconveniencies; and whoever confiders the fituation of this ifland, and of thofe belonging to us in its neighbourhood, and refects at the fame time on the fuperiority of our maritime force, will fee, that in time of war it muft be a very precarious poffeffion, more efpecially if fo thoroughly fetted as to make the conqueft of it a matter of much confequence to us.
Our new Britifh inand colonies, like our old ones in America, muft depend entirely upon us, and draw from hence every neceflary, every conveniency that they want, either for their own fubfiltence, or for carrying on their plantations; and how extremely beneficial this is, and fo confiderable an increafe of commerce mult it be to the mother country has fufficiently appeared.
There can be no room to fear that our new fettlers will not find wherewithal to make confiderable returns, from the particular valuable Weft India commodities before enumerated to be produced. So that the increafed intercourfe of trade between the new colonies and their mother-country, as it has from the caufes before reprefented began, fo the advantages arifing from it will diffufe themfelves generally over the whole ifland of Great Britain; indeed through the whole fphere of the Britifh dominions in Europe, fince very large quantities of linens and falt provifions will be exported for the ufe of thofe colonitts and their fervants from Ireland; their increafed demand, we may reafonably hope, will, in a great meafure, abforb thofe fupplies with which the inhabitants of that inland have hitherto furnifhed the French and Spanif hhips, and contributed thereby to their navigation much cheaper than othervife they could have done.

But exclufive of the benefirs flowing from their direct trade with us, they will bring in likewife confiderable advantages by the encouragement they will afford to other branches of our commerce. The African trade has received a new fpring from their demands, fince all that they can do at prefent, or in future, muft chiefly arife from the labour of negroes. The fupplying them with liaves, therefore, will be a continual fource of wealth in that fhape to fuch as are employed in that branch; more efpecially to thofe who have the largeft fhare therein, the merchants of London, Liverpool and Briftol.

This trade is of importance to Great Britain, as it is carried on principally with our own manufactures, and more efpecially with woollen goods of different kinds; to a large amount; and in all the incidental profits, exclufive of what is produced by flaves, which arife from our correfpondence with Africa, whether obtained by the purchafe of elephants teeth and gold duft, upon the coafts of that country, or from the fale of commodities to foreigners in the Wefl Indies, finds its way hither. On the winding up of the account, therefore, as the fale of the negroes centers in the Weft Indies, the profits ariing from them, and every other acceffion of gain centers ultimately here, and becomes the property of the inhabitants of Britain.
This will appear with greater degree of evidence; when we reflect, that more than the moiety of that part of the cargo for the African trade, which is not made up of our own goods, confifts of the manufactures of the Eat. Indies. Befides the quantity of India goods employed on the coaft of Africa, there is likewife no fmali demand for the fame commodities in our old sugar colonies, and of courfe there will be the like demand in our new.

From what we have faid, we may difcern in what manner the comprehenfive chain of commerce is united, and in what manner the different products of the mot diftant parts of the world are carried to and brought from thefe diftant countries in Britifh fhipping; and that all the emoluments arifing from this extenfive navigation, which will be daily augmented, by our new acceffion of territory, in the Weft Indies only.
And if the further interefting commercial union hall be promoted to the full degree and cxtent to which the fame will now admit of "intiy greater fafety and fecurity than ever it could do heretofore, what vaft emolument muft not inevitably from lence arife? To what an amazing height in trade and navigation may this kingdom not arrive by an increafe of the circulation of commerce between Great Britain and her colonies and plancations in America a d d frica? Nay, will not our Afiatic trade likewife derive great advantage from the augmentation of general trafic that will hence enfue? And while thefe thall go on daily advancing, will not our European trade receive advantages proportionate hereunto? Efpecially fo, provided in confequence hercof, we fhall fo increale in opulence as to become able to leffen the public debts and taxes to that degree as

Shall make our commoditits of every kind cheaper for exportation, as well our plantation commodities in general, as our native manufactures in particular: efpecially, we fay, when our native commodities in gencral flall be reduced to a degree of cheapnefs equal to thofe of our moft detrimental competitors, by the due reduction of taxes in this kingdom?
The prodigious compafs of this additional commercial circulation, will be effentially defective, if we fhould omit mentioning the conftant connection that will fubfift between all the NE: British sucar colonies and our new Northern colony acquisitions. A connection equally neceflary, and reciprocally advantageous to thofe of our fubjects who hall be fettled in both; a connection, that will be ever maintained between them, by which the daily increafe of numerous fubjects of Britain, who fhall fettle cither in the continent of America or in the Weft Indies, to their mutual benefit, as well as that of the mother empire.

The Britifh northern colonies fupply the fugar illands chiefly with lumber and provifions, which are articles capitally lucrative to boch. Hereby, they difpole of numerous bulky commodities; derive inmenie advantages from their fifheries, fupport an extenfive navigation, which is fo much the more profitable to them, as it is carried on intirely with fhips of the northern colony built; circumtances which to the eye of a judicious reader, who extends his view tof the whole circle of this commerce, will place this trade, and all its beneficial confequences that attend it, in a very confficuous and interefting point of light; and convince him, that nothing can be either more convenient for thefe people, or more to their prufit: and therefore, the more the new inand colonies fhall take of the northern colonies, the more the new as well as the old northern colonies will be benefited.

On the other hand, the benefits that will refult to the inhabitants of, the new fugar colonies, are not lefs confiderable. They draw all thefe neceffary fupplies from the neareft, and confequently from the cheapeft market; markets that by the additional advantages they have received by the peace, will become more and more inexhauftible, more and more plentiful, and therefore more an! more cheap on all their productions, if the additional commercial union thall take due effect, and upon which our fugar iflands may always depend for a cheap and ample fupply. Thefe are brought to them both by their North American countrymen to their own doors; which is a circumfance exceedingly fuitable to their fituation as it fares them the pains and labour requifite to provide them, which would otherwife be a great drawlack on their indutry in their fugar plantations. Thefe fupplies they pay for in their own productions of another kind, which is a grat advantage, and no obltucion to their different commercial improvements: from all whith circumftan : 3 , comprehended togche:, it is apparently obvious, that the convenience of this mutual correfpondence, and benefits refulting from it, are equally on both fides, and exactly fuited to the genius, the temper, and the fituation of the people by whom it is thus carried on.
By the attentive confideration of this conjunction of interefts, we cannot but plainly difcern, that by thefe new acquifitions in the Weft Indies, new markets are opened, to which our new fubjects on the continent may refort. Thefe iflands will mere than replace to the people of Canada, the trade they formerly carried on to the French colonies; and will, at the fame time, enable our other fettlements upon the continent, to find new cuftomers for all their additional commodities, without leaving them that colour of neceffity which was the only plaufible excufe they had to plead for fupplying our rivals with the materials effentially neceffary to the fupport of their fugar plantations, and of courfe detrimental in the fame degree to thofe of their fel-low-fubjects. Befides, as the increafe of our fugar iflands affords them the increafe of commerce, fo from their fituation they will be a great bar to that illicit and injurious trade with the French and Dutch, which cannot for the future be carried on with the fame facility as it has heretofore been.

As the inhabitants of the fugar colonies are continual purchafers from fucl as a:e fertled upon the continent of America, the amount of their purchafes contitutes a ballance from them in the fwour of all thofe who difpofe of them. On the other hand, the inhabitants of the northern colonies, drawing large and conftant fupplies of commodities and manufactures from hence, we at prefent, for the fame reafon, have a ballance in our favour againf them. And upon the promotion of the further commercial union between us and them, the mutual fales and purchafes may be highly augmented on both fides, and the general equilibrium of trade between them rendered more equal than it ever yet has been.

There will be room in our new iflands for attempting many things, and improving more. The planting cocoa walks cannot be confidered as impracticable, fince we fee the French have fucceeded in it; and fo, no doubt, may we, at leaft in a degree fufficient to furnifh our own and our North Amer can confumption. We have coffee already in our inlands, but it would certainly turn to more account if the culture of it was berter undertood; in order to which, pains fhould be taken to be thoroughly informed of the manner is which it is managed in Arabia, fince it is not at all improbable that the flavour, in which only our coffee is deficient, depends upon the culture and the method of curing it. Tea, if we may believe the French, is a native of the Weft as well as of the Eaft Indies; in refpect to which it would be certainly right to make due enquiries, and in confequence of them experiments; and if from thence it fhould, if it is not already there, it might eafily be carried thither, and a trial made whether it might not be cultivated to advantage. It has been no difficult matter to introduce black pepper, rhubarb and fenna, and feveral orher eftimable Drugs are faid to have been raifed in the Weft Indies by the curious to great perfe-tion. If the culture of thefe, and other medicinal plants, were once undertood, they might be rendered profitable articles of commerce. The laudable Society for promoting arts and manufactures, have given feveral premiums with refpect to farfaparilla, and other things; and it is to be wifhed, that thofe endeavours, fo well intended, may have good effects; for the increafing the number of our commodities appears to be an affair of no little confequence.

The fuccefs attending thefe, or any other experiments of the like kind, might become the means of improving many fpots of ground that would otherwife prove ufelefs; as it is well known that either lands worn out, or which are utterly unfit for either fugar or corton, might be employed for cocheneal. The raifing a variety of more commodities, would prevent the loffes that fometimes enfue from fhort crops; a feafon unfavourable for fome things, might be advantageous to other. In refpect to many articles that have been mentioned, the cultivation of them might be carried on with fewer negroes, and yet afford comfortable fubfitence to white fanmilies; the increafe of which in our colonies, is an object of great concernment, and is a matter conttantly atte 2 ded to by the French. Add to this confideration, that though tea, coffee and chocolate are at prefent not improperly reckoned as articles of luxury, they would be much lefs fo, if they only, or even if they principally, came from our own plantations; and the confumption of them fhould become much greater than it is at prelent, would likewife promote and increate the confumption of our great ftaple commodity of fugar, and thereby augment the revenue thereon. In thefe, and in divers other lights, fuch plantation improvenents would be experienced of great confequence, and are therefore extremely well worthy of confideration for the extending our commercial union of crade between Great Britain and Britifh America.

The profperous fettement of our new inands in the Weft Indies, can be no der:iment to our old fugar colonies. It has been generally allowed, that there was a want of more fugar-land in the Weft Indies; and this being admitted, it is certain, that Britain is a great gainer by the peace of land fic for the cultivation of fugar in our own plantations plencifully. This was not only an opinion, in relpect to the truth of which the beft judges agreed, bur it was a point alfo decided from matter of fact; becaule it is known, that numbers of Britifh fubjects refortcl to countries in the poffefion of orher powers. No one will deny, that many Englifh fubje ts are fettied in the Danifh feetlements of $S_{t}$. Cruz; that there are many refident in Eustatia, and that many more are interefted in the Dutch fettements upon the continent of America. Did it nor, theiefore, become highly neceffary to remove this growing evil, by giving fuch adventurers an opportunity of exerciling their indultry in councries belonging to their mother country; and to thefe many of them have returned?

Moreover, as from facts it has appeared, that old fugar colonies began to be overllocked, fo as to afford litcle encouragerent to new plantations, it feemed incumbent upon us to have an eyc at making the peace to this circumflance, to prevent fuch enterprizing people, who were determined to feek their fortunes in thofe parts, from being driven into foreign fettlements; where their labour and induftry, inftead of benefiting us, would continie to have turned to the advantage of our rivals; and foreign markets would have been fupplied, for the profits of foreigners, by commodities raifed by the fkill and pains of Britih fubjects.

Nor c :n we but obferve, trom what has already fell out, that indigent people here, would go in fearch of fubfiftence elfewhere; and we muft alfo be fenfible, that by providing countries for fuch people to refort to, their induftry, though not their perfons, will ftill be preferved to Britain. By that increafe of trade, which their labour abroad gradually produces ar home, the number of our neceffitous people here have been grearly leffened. There have been alfo large quantities of our commodities and manufactures wanted, that are requifite in our planeations; and to fupply thofe, numbers have been fet to work, who were either idle before, or fubfifted by the poor's rate, or took methods of fubfiting more injurious to the public, and much lefs to their own advan:age and comfort, than if they had betaken themfelves to honeft labour here, or even went abroad to thofe new infands.
From what has been faid, it muft appear to every candid and impartial man, that our new Weft India acquifrions have contributed to lay a moft notable foundation for that moft lucrative commercial union we have recommended to be fupertructed thereon. This has been accomplihed by the laft peace, likewife, with the refpet to our continental colonies. We have already confidered the points of fecurity, and of acting defenfively and offenfively in virtue of the laft peace againft both Spain and France in North America, as well as in the Weft Indies. There remains nothing more to be faid, than to fpeak at prefent more fully with regard to the improvement of the commerce of the continental colonies between the motler kingdom and them, for the further extenfive promotion of our mutual commercial union, harmony and concord.
Were not our North American colonies acceffible by our mercantile fhipping and royal naval power, the vaft extenfivenefs of thofe new acquired colonies would have rendered them rather a burthen than emolument to this kingdom. But fo wifely has the peace been devifed, as to render them acceffible on the nortir, the south, AND the west, by sea, as our ancient colonies were before on the eaft only, as we have before fhown. And does not this maritime acceflibility add an invaluable eftimation to thofe colonies, while Great Britain fhall preferve her fuperiority of power on the ocean? While this fhall be the cafe, will not this happy circumftance adminiter a more permanent ftability and fecurity, as well to our old as our new acquired colonies and plantations, than they ever before had? Nay, will not the increafe of mercantile navigation to and from the gulph and the great fpacious river of St. Laurence; to and from the gulph of Mexico, and the great river Miffifippi, and to and from the gulph of Florida, contribute to the maintenance of that flability and fecurity we have obtained? And will not this at all times enable us to act as well offenfively againft France and Spain, as defenfively, in this part of America, as we have before thewn?
But to what degree our mercantile fhipping in North America will increafe, by virtue of that maritime acceffibility, we, at prefent, enjoy, has not yet been duly reprefented. Wherefore, it will be neceffary to give fome idea of that matter, with relation to the additional internal mercantile navigation, that this vaft continent will afford to our Britifh traders. For provided our mercantile navigation fhall daily increare there, as well as to and from the Weft India inands, will not this give additional ftrength to the whole royal maritime power of the Britifh empire? Will not a vaft additional increafe of mercantile internal navigation in North America, greatly contribute to expedite and facilitate that further commercial union we plead for between the mother kingdom and thofe colonies?
The whole country of North America, now annexed to the crown of Great Britain, absunds with every advantage to promote a more beneficial commercial union between them and the mother kingdom. It abounds with very large rivers, which it were endlefs to enter into the detail of. The river St. Laurence is the largent in all North America, and inferior to few in the world, it being computed about twenty five or thirty leagues wide at the mouth, and two hundred fathoms in depth, and one hundred and fixty leagues in length; and yet by the help of a good fouth wind, and the currents, which are pretty ftrong, may be failed, according to Charlevoix, in twenty-four hours. As to its fource, though the European mifionaries have failed up it above $y 00$ or near 800 leagues, that is as far as the lake of Alemipicon, yet it is ftill unknown, unlefs it really fprings from that lake, which no one hath yet been able to decide-That lake difcharges itfelf into that called the Upper or Superior, and this into that of Huron, and this again into that of Erie, or Conti, and this laft into that of Frontenac, or Ontario; all this by means of the sameriver, from which it feems to iffue out with a fmooth courfe during the firt twenty leagues; after which it becomes more rapid during another thirty leagues; that is till it comes to Montreal. From this it refumes its fmooth fow quite to that of Qubbec, growing ftill wider as it runs, till it empties iffelf into the fea above one hundred leagues below it: but according to the report of the Indians, this famed river arifes out of another Lake, farther up, and larger than any of thofe we have mentioned, and which they call the lake Assinipolis, or Assifoufls; and this laft is faid by them to lie about fifty or fixty leagues above that of Alemipicon, and is fuppofed to have a communication with the nortarin sea; and it is not improbable but a northern paflage into it may be found by means of this lake. There are falls or cataracts, fuch as that of Niagara. The river is, however, deep almof all the way, and hath a number of pleafant inands in it; the mon remarkable of which are Coudres, Orleans, Montreal, St. John, Miscou, Richlieu, and feveral others. The highland is well wooded, and fome lowlands well inhabited and manured, infonuch that they yield valt crops of corn and other grain, befides fruitc, pulfe, \&c. The fettlements, which are moftly round the fhore, are alfo well fituated and built, and yield a noble profpect as o..e fails by them: the fame may be faid of the reft.

The river St Lawrence receives feveral confiderable rivers in its courfe, the chief of which are called Desprairies, or of the Meadjws; the Mons, the Treble River, and the large one of Sanguenay, and

St. Margaret, near the mouth of it. All thefe, and many other lefs remarkable, fall into it on the north fide : there are others alfo on the fouth.-The river Missisippi runs through the whole province, which was the French Louisiana, from north to fouth, and overflows, at certain fealons, a valt quantity of land, and renders the fame the more fertile in the general: this great river is called by the Spaniards La Pallisada, from the prodigious quantities of timber of divers kinds, which are fent down upon it in foras to the fea. It is known to be navigable 450 leagues up from its month. The fering head remains fill unknown, though the natives fay, that i: flows from a large flream that comes down from a hill in the country of IsATI, about the fiffieth degree of latitude. We have extraordinary accounts of the numerous tribes of Indian nations met with on each fide of this river, and they are reprefented as an hofpitable civil people, and willing to commerce with Europeans. The French formerly made two fettlements, the one near the : ake Assinipolis, which is computed about thirty leagues round; the other'among the Chogafkades, or Stout People, who live in their neighbourhood.

The Missisppri receives a great many facious rivers into it; and the country on both fides is fruitful enough, and inhabited, as obferved, by a great variety of nations of different appeliatione, for which we refer to Mlonfieur Sale's account chereof, who failed down it in the year 1638, made fome fettements on each fide of it , and hath marked the dillances between all thofe rivers that fall into it, and the names of the feveral tribes that live berween them on each fide; the amount of which, from the river of the Illinots, from which he firl fer out, down to the mouth of it, he computes to be 653 leagues. The river difcharges itfelf inco the gulph of Mexico by two branches, which form an inand of confiderable length.
The moft important place upon the Miffifippi is reckoned to be at the Forks of that river, where the OHo falls into the Miffifippi; which, like anocher ocean, is the general receptacle of all the rivers that water the interior parts of that vaft continent. Here thofe large and navigable rivers the Obio, river of the Cherokees, Wabache, Ilinois, Miffouri, and Miffifipi, befides many others, which fpread over the whole continent, from the Apalachean mountains to the mountains of New Mexico, upwards of une thouland miles, both north, fouth, eaft and weft, all meet together at this fpot; and that in the beft climate, and one of the mott fruitful countries, of any in all that part of the world, in the latitude of thirty-feven degrees, the latitudes of the Capes of Virginia'and of Santa Fé, the capital of New Mexico. By that means there is a convenient navigation to this place from our prefent fettlements to New Mexico; and from all the inland parts of North America, farcher than we are acquainted with it: and all the natives of that continent, thofe old friends and allies of the French, have by that means a free and ready accels to this place; nigh to which the French formed a fettement, to fecure their intereft on the frontiers of all our fouthern colonies. In fhort, this place is in the center of this vast continent, and of all the nations in it, and feems to be intended by nature to command them both; for which reafon it ought not to be neglected by Britain.
As foon as we pafs the Apalachean mountains, this feems to be the molt proper place to fettie at; and was pitched upon for that purpofe, by thofe who were the bett acquainted with thefe countries, and the proper places of making fettlements in them, of any we know. And if the fettlements of this place had been made by the Englifh, as they were propofed, about twenty-three years ago, they might have prevented, or at leaft fruftrated, the late attempts to wrelt that country, and the territories of the river Ohio, out of the hands of Britain.

It may be faid, that thofe inland parts of North America will be of no ufe to Britain, on account of their diftance from the fea, and inconvenience to navigation. That indeed might be faid of the parts which lie immediately beyond the mountains, as the country of the Cherokees, and Ohio Indians abour Pitfburgh, the only countries thereabouts that we can extend our fettlements to, which are inconvenient to navigation. For that reafon, the firft fettlements we make beyond the mountains, that is, beyond thofe we are now poffeffed of, fhould be upon the Miffifippi, convenient to the navigation of that river; and in time thefe fetrlements may come to join to our prefent plantations; and we may by that means reap the bentit of all thofe inland parts of Norch America, by means of the navigation of the Miffifippi and the other great rivers that fall therein, which will be fecured by this poft at the Forks.

This great river the Miffifippi, is navigable upwards of two thoufand miles to the falls of St. Anthony, in latitude forty-five degres, the only fall we know in it, which is fixteen degrees of latitude above irs mouth; and even above that fall, there is thirty fathom of water in the river, with a proportionable breadth. About 1000 miles from its mouth it receives the river $\mathrm{O}_{\mathrm{H} 10}$, which is navigable 1000 miles farther, fome fay 1500 negh to its fource, not far from Lake Ontario in New York; in all which fpace there is but one fall or rapide in the Otro, and that navigable both up and down, at leaft in canoes. This fall is 300 miles from the Mififippi, and 1300 from the fea, with five fathom of water up to it. The other large branches of the Ohio, the river of the Cherokees, and Wabache, afford a like navigation from Lake Erie in the north, to the Cherokers in the fouth, and from thence to the bay of Mexico, by the Miffifippi; not to mention the great river Miffouri, which runs to the north weft part of New Mexico, much farther than we have any good accounts of that continent. From this it appears, that the Miffifippi affords the moft extenfive navigation of any river we know; fo that it may be juftly compared to an inland fea, which fpreads over nine-tenths of all the continent of North America, all which the French, before the laft peace, pretended to lay claim to for no other reafon but becaufe they were poffeffed of a paltry fettlement at the mouth of this river.
If thefe things are confidered, the importance of the navigation of the Miffifippi, and of a port at the mourh of ik , will abundantly appear. It is the only navigation for all the interior parts of North America, which are as large as a great part of Europe; no part of which could have been of any fervice to Britain without the interior navigation of the Miflifippi, and fettlements made upon it. It is not then withour reafon that we fay; whoever are poffefied of this river, and of the vaft tracts of fertile lands upon it, muft in time command that continent, and the trace of it, as well as all the natives in it, by the fupplies, which this navigation will enable them to furnifh thofe people. Had the French, therefore, or any others, been left in poffeffion of the Mififippi, while we had neglected it, they muft have commanded all that continent beyond the Apalachean mountains, and difturbed our fertlements much more than ever they did, or were able to do ; the very thing they engaged in the laft war to accomplifh, and we to prevent.
The Miffifippi, indeed, is rapid for 1200 miles, as far as to the Miffouri, which makes it fomething difficult to go up it by water. For that reafon the French have been ufed to quit the Miffifippi at the river St. Francih, from which they had a nigher way to the For ks of the Missisippi by land. But however difficult it may be to afcend the river, it is notwithftanding done, and its rapidity facilitates a defcent upon it, and a ready conveyance for thofe grofs commodities which are the ftaple of North America, from the mof remote places of the concinent abovementioned ; and as for lighter European goods they are more eafily carried by land, as our Indian traders do, over great part of the continent on theis horfes, of which this country abounds with great plenty.

The worft part of the navigation, as well as of the country, is reckoned to be at the mouth of the river, which, however, is from feventeen to eighteen feet deep, and will admit hips of 500 tons, the largeft geneVol: I.
rally ufed in the plantation trade. And even this navigation might be eaflly mended, not only by clearing the river of a narrow bar in the paffes, which Charlevoix, and others, think might be eafly done; but likewife by means of a bay, defcribed by Mr. Coxe, from the aftual furvey of his people, lying to the weft ward of the fouth pafs of the river, which, he fays, has from twenty-five to fix fathom water in it, clofe to the fhore, and not above a mile from the Miffifippi, above all the fhoals and difficult paffes in it, and where the river has 100 feet of water. By cutting through that one mile then, it fhould appear, that a port might be made there for thips of any burden; the importance of which is evident, from its commanding all the inland parts of North America on one fide, and the pafs from Mexico on the other, fo as to be preferable in thefe refpects even to the Havanna; not to mention that it is frelh water, and free from worms, which deftroy all the fhips in thole parts. And if we have another war with France and Spain, 'tis not unlikely that we fhall leave neither of them any more footing here; and then we may obtain fuch a valuable port independent of them.

If the ftate and extent of our ancient colonies in North America, before the lat peace, be confidered, it will be found that we really flood in need of an increafe of continental colonies, inftead of poffeffing too much land there before the peace, as fome people have afferted.
Our ancient poffefions in North America, between the fea and the mountains, appeared, from many forveys and actual menfurations, as well as from all the maps and other accounts of them, to have been at a medium about three degrees of longitude, or 110 miles broad in a firaight line : and they extended from Georgia, in latitude thirty-two degrees, to the bay of Fundi, in latitude forty-five degrecs (which is farther than the lands appeared to be of any great value) which makes thirt en degrees difference of latitude, or 780 miles : this length multiplied by the breadth, 140 , makes rog,200 fquare miles. This is not much ab ve the quantity contained in Britain and Ireland, which by Templeman's Survey make 105,634 iquare miles. Inflead of being as large as a great part of Europe, as we have been commonly told, all the lands we poffeffed in North America between the fea and mountains, did not amount to much more than thefe two inlands. This appears farther, from the particular furveys of each of our colonies, as well as from the gencral eltimation of the whole.
Of thefe lands, which are thus poffeffed, both the northern and fouthern parts are not of the extraordinary kind. It is only in our middle plancations, Virginia, Maryland and Carolina, that the lands produce any staple commodities for Britain. It is only the more rich and fertile lands on and about Chefapeak bay, with a few fwamps in Carolina, like lands on the Miffifippi, that turns to any great account to this nation in all North America, or that were ever likely to do it. This made the quantity of lands that produce any ftaple commodity for Grear Britain in North America incredibly fmall, and vaftly lefs than what has been commonly imagined. It is reckoned that there are more fuch lands in Virginia, than in all the reft of our old colonies; and yet it appeared from the public records, about twenty-eight years ago, that there was not above as much land patented in that colony, which is at this time the oldeft of any in all North America, than is in the county of Yorkfhire in England, to wit, 4684 fquare miles, although the country was then fettled to the mountains. Our colonies are already fettled to the mountains, and have no lands, either to extend their fettlements, as they increafe and multiply; to keep up their plantations of faple commodities for Bricain, or to enlarge the Britifh dominions by the number of foreigners that remove to them, till they pafs thofe mountains, and fettle on the Miffilippi.

This fcarcity of land in the colonies proceeds from the mountains, with which they are environed, and by which they are confined to this narrow tract; and a low vale along the fea fide. The breadth of the continent from the Atlantic ocean to the Miffifippi appears to be about 600 miles, of fixty to a degree, of which there is about 140 at a medium, or 150 at moft, that lies between the fea and mountains; and there is fuch another, and rather more fertile tract of level and improveable lands, about the fame breadth, between the weftern parts of thofe mountains and the Miflifippi; forthat the mountainous country, which lies between thefe two, is equal to them both, and makes one-half of all the lands between the Miffifippi and Atlantic ocean; if we except a fmall tract of a level champaign country upon the heads of the OH 10 , which is poffeffed by the Six Nations and their dependants.

Thefe mountainous and barren defarts, which lie immediately beyond our ancient fettlements, are not only unfit for culture themfelves, and fo inconvenient to navigation, whether to the ocean or to the Mififippi, that little or no ufe can be made of them, but they likewife preciude us from any accefs to thofe more fruitful lands that lie beyond them, which would otherwife have been occupied long ago, but never can be fettled, fo at leaft as to turn to any good account to Britain, without the possession and navigation of the Missisippi, which is, Ás it were, the sea of all the inland parts of North America, beyond the Apalachean mountains, without which those inland parts of that continent can never be of any advantage to this nation.

This makes the poffeffion of the Miffifippi abfolutely neceffary to reap the benefit of it. We poffeffed but one-fourth part of the continent between that river and the ocean; and but one-tenth part of what lies eaft of Mexico, and can never enjoy any great advantages from any more of it, till we fettle on the Miffifippi.

How neceffary fuch fettlements on the Miffifippi may be, will farther appear from what we poffers on this fide of it. The lands in North America are in general but poor and barren; and if any of them are more fertile, the foil is light and fhallow, and foon worn out with culture. It is only the virgin fertility of frefh lands, fuch as thofe on the Miffifippi, that will render them of any great and lafting value to Great Britain. Such lands in our colonies, that have hitherto produced their ftaple commodities for this nation, are now almolt exhaufted and worn out, and we meet with none fuch on this fide of the Miffifippi. But when their lands are worn out, neither the value of their commodities, nor the circumftances of the planters, will admit of manuring them, at leaft to any great advantage to this kingdom.

The ftaple commodities of North America are fo grofs and bulky, and fo fmall in value, that it generally takes one-half of them to pay the freight and other charges in fending them to Britain; fo that unlefs our planters have fome advantage in making them, fuch as cheap, rich and freih lands, they can never continue to make any; their returns to Britain will then be neglected, and the crade will' be gained by others, who have thofe advantages, as the Germans, Ruffians and Turks, who have plenty of lands and labour cheap: by which means they make more of our flaple of North American tobacco than we do ourfelves, while we cannot make their taple of bemp, flox, iron, pot-afh, \&xc. \&c. - By that means our North Americans have been obliged to interfere with their mother country, for want of the ufe of thofe lands of which there is fuch plenty in North America, to produce thefe commodities that are fo much wanted from thence.

The confequences of this may be much more prejudicial to this nation than is commonly apprehended. The trade of sorth America, whatever may be the income from it, confifts in thofe grofs and bulky commodities that are the chief and principal fources of navigation, which maintain whole countries to make them, whole fleets to tranfort them, and numbers of people to manufature them at home; on which account this tade is more proficable to a nation than the mines of Mexico and Peru.

Thofe grofs commodities that afford thefe fources of navigation, however valuable they may be to the public, and to this nation in particular, are far from being fo to individuals: they are cheap, and of fmall value, either to make or to trade in them by the planter, and for that reafon they are neglected dy private people, unlefs the public take care to give them all due encouragement, and fet them about thefe employment:; for which purpofe good and proper lands, fuch as thofe on the Mififippi, are lecome abfolutely neceffary, without which we flall make no advancement but cecline in this eflimuble trade.

I he many advantages of fuch lands that produce llaple commotities for Britain in North America, are inexprefible. The whole intereft of the nation in thofe colonies depends upon them, if not the colonies themfelves. Such lands alore enable the colonies to take their manufactures and other n cessariis from Britain, to the mutual advantage of both, How neceffary thit may be, uillappear from the faie of thele colonies in North America, which do not make one with another, as much as is lufficient co fupply them only with the neceffary article of cloathing, not to mention the many other things they fland in need of, and would take from Britain, were they enabled to do tt byproper evcouragement. In fhort, it would appear that our colonics in North America cannot fubfift much longer in a flate of dependance for all their manufactures and other neceffaries, unlefs they are provided with frefh lands that may enable them to purchafe them; and where can they find any fuch lands, but fuch as the peace bath given them upon the Mififippi?

When their lands are worn out, are grown poor and barren, or are in an improper climate or firuation, fo that they will produce norhong to fend to Britain, fuch lands can only be converted into corn and pafture grounds; and the people in our colonies are thereby neceffarily obliged, for a bate fubfiftence, to interfere with Britain, not only in manufactures, but in the very, produce of therr lands.

By this we may difcern the abfurdity of the popular outcry, that we have already land enough, and more than we can make ufe of in North America. They who may be of that opinion, fhould fhow us where that land is to be found, and what it will produce, that may turn to any account to this nation. T hofe people derive their opinion from what they fee in Europe, where the quantity of land that we poffeffed in North America, before the peace, would maintain a greater number of people than we had there. But they fhould confider, that thofe people in Europe are nor maintained by the planting of a bare raw commodity, with fuch immenfe charges upon it, but by farming, manufactures, trade and commerce, which our colonies would foon have been reduced to, had they continued confined to our antient fettlements, between the fea coaft and the mountains that furround them.

Lands hould be made in North America both cheap and plentiful, by which they might reap much greater profit by planting than by manufacturing. That is, moreover, a pledge for the allegiance and dependence of the colonies; and at the fame time makes their dependa ce become their interel. It has been found by experience, that the making of a faple commolity for Britain is more proficable than manufactures, provided our colonies have good lands to work on.

Ihere is an inconvenience attending fome of our ancient colonies, with regard to any improvements on them for Britain, which is nor to be remedied. The climate is fo fevere, and the winters, fo long, that the people are obliged to fpend that time in providing for the neceffaries of life, which fhould be employed, in profitable colonies, on the making of fome proficable commodicy, and returns to Britain. They are obliged to feed their creatures for five or fix months in the year, which employs their time in fummer, and takes up the beft of their lands, fuch as they are, which thould produce their ftaple commodities to provide for themfelves and their ftocks againft winter. For that reafon the people in all our northern colonies are nectflarly obliged to becone farmers, to make corn and provifions, inftead of planters, who make a ftaple commodity for the mother country, and thereby interfere in the moft effential of all employments to a nation, agriculture.

Neither the foil or the climate of our ancient northern colonies will admit of any additional improvements for Britain. If they could produce any thing of that kind it muft be hemp, which yet never could be made in them to any advantage, as appears from many trials in New England, according to Douglas's hiliory of America, and Elliot's improvements of New England. The great dependance of thofe northern colonies is upon the fupplies of lumber and provifions, which they fend to the illands. But as they increafe and multiply, their woods are cut down, lumber becomes fcarce and dear, and the number of people inhances the value of land, and of every thing it produces, efpecially provifions.

If this is the cafe of thofe northern colonies on the fea coaft, what can we expect from the inland parts; in which the foil is not only more barren, and the climate more fevere, but they are, with all other difadvantages, fo inconvenient for navigation, on account of their diftance off the river St. Laurence, that it is to be feared thofe inland parts of the northern colonies will never froduce any thing for Britain, more than furrs, which they will do much better in the hands of the natives than in ours.

However, thefe northern colonies are very populous, and increafe and multiply yery faft. There are above one million of people in them, who can make but very little upon their lands for themfelves, and fill lefs for their mother country. For thefe reafons it is prefumed, it would be an advantage to them, as well as to the nation, to remove their fpare people, who want lands, to thofe vacant lands in the fouthern parts of the continent, which will turn to much better advantage than what they are poffeffed of. There they may have the neceffaries of life in great plenty; their focks maintain themfelves the whole year round, with little or no coft or labour, " by which means many people have a thoufand head of cattle, and for one man to have " two hundred is very common, with other ftock in proportion." See Defcription of South Carolina, p. 68.

This enables them to beftow their whole labour both in fummer and winter on the making of fome ftaple commodiry of the mother kingdom, getting lumber and provifions for the illands, \&c. which both inriches them and the whole nation. That will be much more preferable, furely, than to perifh in winter for want of cloathing, which they muft do unlefs they make it, which will excite thofe jealoufies, that will ever fubfitt between them and Great Britain in their prefent ftate, and grow fo much the worfe, the longer they continue in it.

1 he many advantages that would enfue, from the peopling of thofe fouthern parts of the continent from our northern colonies, are hardly to be expreffed. We might thereby people and fecure thofe countries, and reap the profits of them, without any lofs of people, which are not to be fared for that purpofe from Britain, or any of her dominions. This is one great ufe and advantage that may be made of the expulfion of the French from thofe northern parts of America. They, before the peace, obliged us to ftrengthen thofe northern colonies, and confined the people in them to towns and townhips, in which their labour could turn to no great account, either to themfelves or to the nation; by which we loft, in a great meafure, the labour of above one-third of the people in our colonies.

But as they are now free from any danger on their borders, they may extend their fettlements with fafety, difperfe themfelves on plantations, and cultivate thofe lands that may turn to advantage both to them and to the kingdom: they may now make fome ftaple commodities for the mother country, on which the intereft of the colonies and of the nation chiefly depends, and which we could never before expect from thofe colonies.

The ftaple commodities we might get from thofe fouthern parts of North America will appear, when we mention HEMP, FLAX and SILK, thofe great articles and neceffary materials for manutaetures, for which alone this nation pays one million and an balf a year, if not two millions, and we could never get them from all the colonies we had. Cotton and Indico are equally ufeful: not to mention copper, inon, potalh, \&cc. \&cc. which with hemp, flax and silk, make a great ballance of trade againtt the nation, and drain it of its treafure; when we now might have thofe commodities from our colonies for manufactores, and both fupply ourfelves, our colonies and others with thefe manufactures from Grear Britain__Wine, oil, raifins and currants, \&c. thofe products of France, Spain and Portugal, on which Britain expends fo much of her wealth to enrich thole nations, might likewife be had from thole her own dominions. Britain might thereby cut off thofe $r$ fources of her enemies, fecure her colonies for the future, and act, when occafion fhall require, more powerfully againt them in time of war.

The fea coaft in general is the fame with all the reft of the coaft of North America to the fouthwatd of New York, and indeed from thence to Mexico, as far as we are acquainted with it. It is a low flat fandy beach, and the foil for fome twenty or, thirty miles diftant from the fhore, more or lefs, is a pine barren. Buc however barren this coaft is in other refpects, it is entirely covered with pines, which afford great fore of pitch, far and turpentine. Thefe pines likewife make good mafts for fhips, which have lafted twenty odd years, when it is well known, that our common fhip-malts of the New England white pine, will often decay in three or four years. The cypress, of which there is fuch plenty in the fwamps on this coaft, is reckoned to be equally ferviceable, if not more fo, both for mafts (of which it would afford the largeft of any tree that we know) and for fhip building. And fhips might be built of both thefe timbers for half the price, perhaps, of any, other, both on account of the vaft plenty of them, and of their being fo eafily worked.

In moft parts of thefe coalts likewife, efpecially about the Miffifippi, there is great plenty of cedars and ever-green oaks, which make the beft Mips of any that are built in North America. And it is faid, that of thefe cedars and the American cypress, the Spaniards built their fhips of war at the Havanna. It is not without reafon, therefore, that Monfieur le Page du Pratz tells us, the largest navies might be built in that country at a very small expence. From this it appears, that even the fea coaft, barren as it is, from which the whole country has been fo much depreciated, is not without its advantages, and thofe peculiarly adapted to a trading and maritime nation.

All along the Nimifippi, Dumont tells us, the lands, which are free from inundations, are excellent for culcure, and produce Indian corn, tobacco, $\& x$. and all kinds of provifions and efculent plants, with little or no care ur labour, and almoft without culture, the foil being in all thofe places a black mould of an excellent quality.-Thefe accounts are confirmed by our own people, who were fent by the government of Virginia in 1742 , to view the weftern parts of that province; and although they only went down the Ohio and Miffifippi to New Orleans, they reported, that "f they faw more good land on the Milifippi, and its many large branches, than they judge is in all the Englifh colonies, as far as they are inhabited; as appears from the report of that government to the board of trade. What makes this fertile country more eligible and valuable, is, that it appears both from its fituation, and from the experience the French have had of it, according to Du Pratz, to be far the moft healthy of any in all thofe fouthern parts of North America; a thing of the la'i conjequence in fettling colonies, efpecially in thofe fouthern parts of America, which in the general are not fo very healthy. Thofe lands on the Miffifippi are high; dry, hilly, and in fome places mountainous at no great diftance from the river; befides the ridges of the Apalacheans before mentioned, that lie to the northward of them, which muft greatly refrefh and cool the air over all the country, efpecially in comparifon of what it is on the low and flat, fandy and parched fea coaft of our ancient colonies. Thefe high lands begin immediately above the drowned lands, at the mouth of the Mififippi; above which the banks of that river are from 100 to 200 feet high, without any marfhes about them, and continue fuch for 900 miles to the river Ohio, on the ealt fide of the river. Du Pratz.
Such a fituation on rich fertile lands in that climate, and on a navigable river, mult appear to be of the utmoft confequence. It is only from the rich lands on the river fides (which indeed are the only lands that can be called rich in all countries) that this nation reaps any thing of value from all its colonies it has in North America. How ought we then to value fuch rich and healthful countries on the Miflifippi? As much fure, as fome would depreciate and vilify them. It may be obferved; that all the countries in America are only populous in the inland parts, and generally at a diftance from ocean navigation; as the fea coafts borh of North and South America are generally low, damp, exceffively hot and unhealthful, in the moft fouthern parts, of thofe from which we can expect any confiderable returns. Intances of this may be feen in the adjacent provinces of Mexico, New Mexico, Terra Firma, Peru, Quito, \&c. and far more in our fouthern colonies, which never became populous till the people removed to the inland parts, at a diftance from the fea. This we are prevented to do in a manner in our ancient colonies, by the mountains which furround them, and confine us to the coalt; whereas on the Miffifippi the whole continent is open to them, and they have, befides, this healthy fituation on the lower part of the river, at a fmall diftance from the' fea.

It is by this means, that we have not been able to get in one hundred years, above twenty-five thoufand people in South Carolina. The low and drowned lands, indeed, about the mouth of the Miffifippi muft, no doubt, be more or lefs unhealthful; but they are far from being fo.very pernicious as many woild reprefent them.
The Floridas, eaft and weft, being annexed to the crown of Great Britain, and our colony of Georgia having them for a barrier, whatever can be produced here will, we hope, be encouraged in thofe moft fouthern parts of our continental colonies, efpecially as we are poffeffed of the ports of Penfacola and Mobille in the bay of Mexico for our further protection, the former in north latitude thirty degrees twenty-five minutes, and which is a road, wherein thips can be fafe from all winds. It is land-locked on every fide, and will hold a great number of Rhips, which have very good anchorage in it, in a good holding ground, and from twentyfive to thirty-four feet of water. There is not lefs than twenty-one feet of water on the bar, which is at the entrance into the road, provided you keep in the deepelt part of the channel.

As there is but half a foot rifing on the bar of Penfacola, every fhip of war, if it be not in a ftorm, may depend upon nineteen, perhaps twenty feet of water, to go into the harbour, as there are twenty-one feet on the bar. Ships that draw twenty feet may be towed in. By this we fee, that fhips of fixty guns may go into this harbour, and even feventy gun fhips, the largelt requifite in that country in time of war, if rhey were built flat-bottomed, like the Dutch hips, might pafs every where in that harbour.

In the year 1719 Penfacola was taken by Monfeur Champmenin in the Hercules man of war of fixtyfour guns, but carried only fifty-fix, in company with the Mars, pierced for fixty-four guns, but had only and twenty guns *:

The road is fubject to one inconvenience; feveral rivers fall into it, which occafion ftrong currents, and make boats or canoes, as they pafs backwards and forwards, apt to run aground; but as the bottom is all fand, they are not apt to founder. On the other hand there is a great advantage in this road, it being faid to be free from worms, which never breed in frefh water, fo that veffels are never worm-eaten in it. If we may credit F. Laval, royal profeffor or mathematics, and mafter of the marine academy at Toulon, who was dent to Louiliana on purpofe to make obfervations in 1719 , and had the accounts of the officers who took Penfacola at that time, and furveyed the place.
F. Charlevoix feems to contradict this laft circumftance: "The bay of Penfacola would be a pretty " good port, fays he, if the worms did not eat the veffels in it, and if there was a little more water in the "entrance into it ; for the Hercules, commanded by Mr. Champmelin, touched upon it." It is not fo certain then, that this harbour is altogether free from worms; although it may not be fo fubject to them as other places in thofe climates, from the many fmall frefh water rivers that fall into the bay, which may have been the occalion of thofe accounts, that are feemingly contradictory.

However, in fuch a place fhips might be preferved very probably from worms, by paying their bottoms with aloes, or mixing it with their other ingredients: that has been found to prevent the biting of thofe worms, and might be had in plenty on the fot. Many kinds of aloes would grow on the fandy lands about Penfacola and in Florida, which is the proper foil for them, and would be a good improvement for thofe lands.

It has been objected, that the French Louifiana country is not likely to turn to any account, becaufe the French made fo little of it.

But that objection, however common, will appear to proceed only from the ignorance of thofe who make ir. No country can produce any thing without labourers, which, it is certain, the French never had in their Ľuifiana, in any number, at leaft, fufficient to make it turn to any greater account than it has done. The reafon of this appears not to be owing to the country, but to their proceedings and mifconduct in it. Out of the many thoufand people, who were contracted for by the grantees, to be fent to Louifiana in 1719 , there were but soo fent; and of thofe the greateft part were ruined by their infamous fchemes; which made them and ochers abandon the country entirely. The few who remained in it, were cut off by an Indian mafacre in $17^{29}$, which broke up the only promifing fettlements they had in the country, thofe of the Natches and Yafous, which were never afterwards reinftated.

Inftead of encouraging the colony, the minifter, cardinal Fleuri, either from a fpirit of oeconomy, or becaufe it might be contrary to fome other of his views, withdrew his protection from it, gave up the public plantations, and muft thereby, no doubt have very much difcouraged others. By thofe means, the French had few or no people in'Louifiana, but fuch as were condemned to be fent to it for their crimes, women of ill fame, deferted foldiers, infolvent debtors, and galley flaves; who, " looking on the country only as a place " of exile, were difheartned at every thing in it, and had no regard for the progrefs of a colony of which * they were only members by compulion, and neither knew nor confidered its advantages to the fate, It is " from fuch people that many have taken their accounts of this country, and throw the blame of all mif. * carriages in it upon the country, when they are only owing to the incapacity and negligence of thofe who " were intrufted to fertle it."-Charlevoix Hitt. N. France, tom. III. p. 447.

There remains nothing for our further confideration immediately relative to our further commercial union with Britifh America, than a view of the Canadian parts of the northern continent, from whence an idea may be formed of the commercial emolument we may derive from thence likewife.

Before the laft definitive treaty of 1763 , the boundaries of Canada and Louifiana, and thofe between the Britifh and French colonies, were ever left vague and undetermined on the whole continent. At prelent, they are clearly and explicitly afcertained, by the faid definitive treaty, without the leaft uncertainty or ambiguity: an advantage this nation, nor her American colonies ever before enjoyed; an advantage that we have ever ftood in need of fince we have had any territory in the new world; an advantage from whence we may now raife a fuperftructure of invaluable other benefits, which were before not with fafety to be attempted by Great Britain. See our article America, where the reader will find the definitive treaty at large, to which, together with our map of North America, we refer our readers to, that there may be the lefs interruption refpecting our prefent animadverfions.

All that part of Canada and its dependencies, which before the treaty of 1763 lie on the eaftern fide of the Minifippi, belonged to the French, being annexed to the crown of Great Britain, its extent is fo great both in length and breadth, that its temperature, climates, foil, \&cc. cannot but vary accordingly. All that part which lies along the banks of the great river St. Laurence, is, generally fpeaking, pretty cold in winter, though hot in fummer, as moft of thofe American tracts commonly are, which do not lie too far to the northward. The reft of the country is interfected with large woods, lakes and rivers, and has no inconfiderable quantity of good fertile lands; which, by long experience, has been found capable of producing corn, barley, rye, and other grain, in abundancce, and tobacco, which it has yielded in large quantities.

There are plenty of ftags, elk, bears, foxes, martins, wild cats, caftors, and numerous other fecies of wild animals in the woods, befides great plenty of wild fowl and game. The fouthern part in particular, breeds great numbers of wild bulls, deer of a fmall fize, divers forts of roebucks, goats, wolves, \&c. and a prodigious variety of other animals, both wild and tame.

The meadow grounds, which are all well watered, afford excellent grafs, and breed great quantities of large and fmall cattle; and where the arable land has been well manured, it produces large and rich crops. The mountains abound with coal mines, and fome, we have been told of filver, and divers other metallic and mineral productions. The marfhy grounds, which are likewife very extenfive, fwarm with otters, beavers, and other amphibious creatures, and the rivers and lakes with filh of moft forts, and fine of their kind. We have before given fome idea of their numerous and extenfive lakes, and of their vaft interior navigation that may, and certainly will be carried on by means thereof.

We have alfo given a brief view of their prodigious river navigation, which it is endlefs to enter into a further detail of; the great rivers, thofe of St. Laurence, the Miffifippi and the Ohio, \&c. abound with great variety of fifh, and receive confiderable fmaller rivers in their courfe.

Cañad Proper, as 'tis called by geographers, includies all the north and weft of the great river Sc. Laurence and lakes; hath on the north Terra de Labrador, Hudfon's Bay and New Wales. On the eaft, the

* The admiral was on board of the Hercules, which drew twenty-one feet of water, and there were but twenty-two feet into the harbour in the higheft tides, fo that they defpaired of carrying in this fhip. But an old Canadian, named Gruneau, a man of experience, who was perfectly acquainted with that coaft, boafted of being able to do it, and fucceeded; for which he was the next yearhonoured with Letters of noblesse (Dumont, an officer here at that time) II. 22.

river

## 1vi Foundation laid by the Peace of $1 ; 63$ for the more intersfing Union between Great Britain and Anerica, $\xi^{\circ}$ c.

river Sanguenay divides it from the province of that name. The numerous Indian nations of thofe parts are enumerated by baron la Hotan, to whom we refer the reader for a paticular account. We fhall only oblerve, that between our European colonits and them, an immenfe frene of valuable trade may be cultivated. For why may we not bring them gradually, by humane and jult ufage and equitable dealings, to conform to the cuftomary European modes of living, and therehy induce them to induftry and planting of divers kinds? Why may we not civilize perfons of fuch frong natural underftandings, and incline them not only to afford us the material for manufactures of Ikins and furs, as they have for years done, but difpofe them to pla, ting and agriculture, increafe their wants, and thereby rouze their active induftry to matters of more plealurable benefit and advantage to themfelves as well a: to this kingdom? Can we pronounce this impracticable, efpecially now we have no European comperitor to diflurb and annoy our plantations here, without being able feverely to chafifife them for fo doing? Why may not our people intermarry with them, and we and they become gradually one people? May it not prove as good policy to think of every means of turning the aborigines of America to every European art of cultivating lands to advantage, as merely thinking of peopling of our new acquired territories with Europeans?

The Three Rivers, fo called from the three rivers which form their currents near ir, and fal! into the great one of St. Laurence, was the capital of the French government formerly, and much reforted t , by feveral nations, who came thither to trade confiderably in valuable furs of divers kinds. It was the cominon empory for the Indian trade The country about it is pleafant, and fertile in corn, fruits, \&cc and hath a good number of lordfhips and handfume feats, and there is on each fide of the river a vaft number of genteel houfes, fcarce above a gun thot from each other, and the river is full of pleafure and filier boats, which catch valt quantities of fifh.
Mont-Real is fituated on an inland of the fame name in the river St . Laurence, about fourteen leagues long and four wide, where broadelt, and is very fertile in corn, fruits, \&c. This town drives a prodigious trade with the natives and Europeans. The great concourfe of Indian traders begins about June, and fome of them are taid to come hither $a b$ ut 500 leagues. The fair is kept along the banks of the river, where thofe natives barter their commodites with the European colonils.
Sanguenay, a province in the Eaftern Canada, is divided on the weft from that properly fo called, by the river of its name. It has adjacent feveral Indian nari ns. Its exrent is computed from the Three Rivers, which is the fron ier of Canada Proper, quite to the farther end of the bay called the Seven Ines.

The territory and land on each ficte the river here were round fo indifferent, and that the colony that had fettled here fuffered fo much, that they were for a time difcouraged; but at length, upon their lailing up as high as Quebec, they found fuch encouragement as produced great profperity there.
The river Sanguenay fprings from the lase St. John, and falls into that of Sc. Laurence, at the town of Jadouffac. 'The haven is caprable of containing twenty five men of war, and hati a good anchorage and helter from ftorms, it being of a circular figure, and deep, and furrounded at ad ftance w th very high rocks. 'Tis needlefs to dwell longer in the defcription of this province, it being much the fame, as to us fuil, climate and inhabitants, with that of Canada Proper It is, indeed, remarkable for an extraordinary pleñcy of marble of feveral kinds, infomuch that not only the principal towns, forts, churches and polac-s, bu: tven the houfes of private men are built of it.
Quebec, the metropolis of Canada, is fituate on the confluence of the great rivers St. Laurence and St. Charles, or the Little River, and on the north fide of the former, and about one hundred and torty leagues from the fea. The haven is large, and capable of containing at leaft one hundred fail of hips of the line.
Without the enumeration of the feveral tribes of Indians, who inhabit contiguous to this pait of Canada, it feems moft ufful only to take notice of the Iroevors, who are the moft confiderable, and $t$, e bett known hereabouts. They are feated along the north fide of lake Ontario, irontenac, and along the river of that name, which is that which carries the water of the lake into the river St. Laurence. They are bounded on the north by the nations called Algonkins and Outavais, about Montreal; and on the calt and fouth-eaft by New England, New York, Jerfey, \&c. on the fouth by part of Canada Proper, and the lake Erie, and on the Weft by that of the Hurons, and the canal between thofe two lakes. Befurc Canada became Britifh, the Iroquois were fo advantageoully fituated between the Engiifh and French, that they could join forces either with the higheff bidder, or with thofe who could keep them in the molt fubjection. Now we have difpoffeffed France of thofe parts, it.will be our own faults if effectual meafures fhall be neglected fo to attach them to the Englifh nation, that they may be inftrumental to keep all the other Indian tribes, with our proper aid, in a ftrict commercial alliance wish us, as well for the general bent fit of trade, as for defence and offence, when we may have occafion. It feems they at perent cumplain of the Englifh at New York, having encroached greatly on their territories, wherein they fhould be righted.
The Illinois Indians inhabit near the lake and river of that name. They live in villages at a great diftance from each other. on the marky plains, on both fides of the river, near which are large woods and hills, covered with a delighiful verdure abo t nine months in the year, whillt the current thereof, which is moftly fouth-weft, is fo fmooth and agreeable, that veffels of a confiderable fize may fail up and down it with eafe and fafety, for a courfe of one hundred and twenty leagues, before it falls into that of the Miffifippi. The lands on each fide afford fuch plenty of patture, that they are covered with herds of Jarge and fimall catthe, as well as goats, deer, and orher animals of the wilder kind. The river fwarms with water fowl of divers ipecies, fuch as fwans, geefe, cranes, ducks, \&c.
The Illinois have been great friends to the French, as they were wont to protet them from the other In dian nations, with which they were at enmity; and the French always dealt with them with honour and honelly, and inviolably adhered to their alliances with them. Were not thofe the natural means to attach them to the intereft of our enemies and rivals? Shall we not regard the like meafines to engage them to us, now we have gat rid of fo troublefome a neighbour, when it is more in our power than it ever was before?
The eternal difputes that have heretofore fubfifted between Britain and France, relative to Acadia and Garpefia, a a firally adjufted by the treaty of 1763 , as being included in Canada and its dependencies; fo that we are now in a condition to reap uninterruptedly all the benefits of Nova Scotia. La Hentan fays, that almoft every part of Acadia yields corn, fruit, peafe and other pulfe; that in feveral places there are masts as strong as those of Norway, and that all kinds of shipping might be built here, the oak timber that g olvs here being better than that of Europe.-Charlevoux fays it abounds with all the neceffaries of life, in every feafon to. fubift the inhabitants without much fatigue.-He alfo fays, that Monfieur Denys, who publifhed an accurate defription of this country, in which be refided a long time, and was proprietary and governor tor the French king of the eaft coaft, reports, that one single crain of wheat, sown near La Hurve, produced one hundred and fifty ears, very long, and so loaded, that they were forced to support them with iron hoops. - The jefuit adds, that bere are m nes both of copper and coal, and that about three fourths of a league from the ine of Monano, which fhows the way into St. John's river, on the north fide of Funda Bay, there is a rock of lapis lazuli,
which is .Imol covered with the fea; and Monfteur Denys, who faw a piece that had been taken off it and fent to france, fays it was valued at ten crowns an ounce. The bay of Funda breaks two hundred miles into the land from Cap Sable, the maft fouthern point of New Scotland, to the iftmus, which joins the peninfula to the con inent According to Charlevoix, it is two French leagucs over to the river of St. John, and has a clean fhore, with depth of water enough to carry the largest ships to the lesser bay.

Annapolis, which lies in a fair clean bay within the bay of Funda; Charlevoix fays this harbour has but one fault, which is the difficulty of entering or coming out of ir, to that only one thip can pals in or out of it at a time. This, fays be, excepted, nature has farce omitted one thing to male it the fineft harbour in the world. It is two leagues in length and one in breasth, having a fmall inand called Goat : fland, almoft in the oiddle of $t$ 'e bafon, which, it is faid, is able to contain alle tere ships in America, where they may lie fecure from als winds. In a word, by means of the ille of Cape Breton, St. Fobns and Anicofte, \&xc. and all the dependencies of Canada, Enjland now commands the navigation to Canada by the gulph and river Si. Laurcnce, and a most excellent additional fishery on all this coaft, togecher wht feveral good hat bours for our fhipping; and when the natural commercial advantages fhall be made of the w ole of the territones here annexed to the crown of Great Britain, what increafe of trade and navigation fhall we not experience, at the coft of the French ?
by our poffefion of all Canada and its dependencies, here is prefented to this nation an unfueakable fource of commercial benefit, even from what hath butherto been fec forth refpecting this point. But if we confider the numerous Invian nations that lie on th. back of our ancient northern colonies, now within our own arw ceded acquifitions, with the countries they inhabir, and the valt productions that may be made to arife from thofe countries; if we fo happily manage the natives to fall into the arts of cultivating lands, and duly planting them by fuitable encoura ements, why may we not expect a vantages no way inferior to thofe we derive from the furr trade by the $r$ hunting? How glorious would it be for us to undertake the cultivation of men as well as lands withon thofe continental territories? To civilize fo many nations, and improve fo large and fpacious, a corncry frum north to fouth, as well as from eaft to weft, may be made to adminiter an immenfiry of we.lth ro thi kingdom, and the reign of Giorge the Third rendered the moft conficuous ara that thas natio ever yer beheld, by communicating our conftitution and liberties, both civil and religious, to fo many number of rational beings, whole delight and happinels would increafe at the fame time that an increafe of treafure and power will he added to $B$ itain!
Have we not experienced the bentit of inftucting and civilizing the Mowhawks, amongft the great nat'on of the Iroquois, who from a mer, warlike people have been trained to trade, and entered into alliances It in all the nations round the lakes Huion and Erie, to the weitward of the Miffifippi; which trade is now Griay ettablifhed by the gain they make by it, and the advantages we have acqui ed by the poffeffion of Ca: add and ifs dependencies The Englifh from New York have fixed at Ofwego, Niagara, St. Jofeph, Mifi11. n.st, at the botion of the Illinoife lake, in their co. nery, and 'tis to be hoped they will not act unequiubly by ther people, who are dif ofed to carry on a large trade with us, and with other numerous natious, whole tanes, were und nnwn to us before.

By rbole and many other ettlenents that we are now poffeffed of, we alfo may the more fafely encourage the Hu'fra's 3 小保 c to unipeakably greater benefic to this nation than we ever before did. We may now be Hietualy mired to lay onen this monopoly for the gene al advantage, which would open a greater vent is: Buth manufacture, as well for $\mathrm{t}^{\prime}$ is trade as that in all North America. Whereas all the trade we have a. Fitht, wh Ift it is confined to the company, is only the employment of about 30 men in all their confin $d$ tactrr.es a d $t$ o or three hips in the trate, manned with about 200 men in time of war, to enri $h$ nine or ten m-reat its at ther country's expence; at the fame time it is faid that they have betrayed the nation, by allowng the Fremb to enc. oarh upon us at the bottom of the bay, they giving up he etofore the greateft part of the it trade there to the French, rather than their own countrymen fhould reap the full emoluments of it, ua, this eltmable branch laid open by parliament.
it is, theretore humbly fubmitted to the government, at prefent, whether it is not juft, as well as prudent, as we are now 10 happily fituated for the purpofe, to open this whole trade to all Britifh merchants, and refums at the lame time the charter, fo far as to cake fiom them all the lands they have not reclaimed or occupud, alter eig. ty years poffeffion? leaving them only their factories, and fuch lands as they have reclaimed a joi:ing to chem, and to give grants, as ufual in other colonies, to all who fhall go over to trade and make fettemenis in the country; for no grants were ever intended to be made to them, to enable them to prevent other fubjects of Britain from planting thofe colon es, which they themfelves would not plant or occupy; for fuch a $p$ wer, inftead of being beneficial, is highly prejudicial to Britain.
fill the objections that have ever been mide to this great point by the company, have appeared to be frivo:luus, and it is to be hoped, will no longer be regarded, as 'tis needful for us to open every channel of advaniageous commerce. For the whole ftate of this matter, and anfwers to objections againft it, the reader is defired $t$ ) rum to our article Hudson's Bay, where he will find, that fince Canada and its dependencies are ceded to the crown of England, we can now do that with great benefit, which might before have been attended with great diffeulty $\qquad$ This affording us an additional field of trade, to which our Canadian fettlements may become a grand barrier, we are willing to hope, it will be duly attended to, as well as every other branch tnat may be cultivated with the Indians, and to which they may in any thape be rendered lucrative to the Britifh empire; fince we have every inducement of fecurity to promote it, from every part of the Britifh American continent, in virtue of the late peace.

But above all, we fhould not be unmindful of that moft valuable branch of trade, which we may derive from our fisheries of every kind upon our prefent extended coaits of North America, the definitive treaty having foffefled us of greater advantages for that purpole than this nation ever enjoyed before. For although Britain has condefcended to fuffer the French to fifh upon the coalt of the dependencies of Canada, yet it is only while they fhall keep within the limits to which they are by the treaty reftrained. As foon as they fhall deviate therefrom, we have a right to d prive them of that privilege. In the like manner, when they fwerve from the pirit of the treaty that has granted them the liberty to fifh on the coaft of Newfoundland, we may with grear infice ceafe to grant them that liberty; and that without their being able to refit us in thofe feas. Ther poff fion of the trifling illands of $t$ Perers and Miquelon, is reftricted to an infignificant force merely for the police of thofe inands, which are fuffered only for a fhelter for their fifhermen there. Befides, we have not excluded ourlelves fiom filheries where we have indulged France; fo that we can always watch their motions and prevent their intration of the treaty. We can, therefore, only look $\mathrm{u}_{\mathrm{j}}$ on this privilege granted to France of filing ar all in thofe feas in the light of a trial for their good behaviour; the moment they fhall tranfgrefs the treaty, they being liable to have that privilege taken from them, by a far fuperior force in thofe parts, as we have bifore fhown. And if we fhall be again provoked to turn them out of thefe whole filhefies, they will hardly ever be reinftated again; as we fhall endeavour further to thew before we have finifhed thefe oblervations.

## 1viii Foundation laid by the Peace of 1763 for the more interefing Union between Greal Britain and America, 定c.

But firlt we defire the reader to recapitulate in his own mind, from what has been reprefented, the foundation laid in America by the treaty of 1763 , for that future enlarged commercial union between Great Britain and Britifi America that we recommend; and then let him judge, whether we have not, at prefent, the greatelt inducement and the greateft encouragement to attempt to raife a molt notable fuperftructure of commercial profperity, by the means of our happy fituation in America? Whether we could well wifh to be better circumftanced than we are there, to act either defenfively or offenfively againft France and Spain, fhould they difturb us in extending our commercial union in thofe parts? Whether we can have any thing to fear from France in North America? Whether, on the contrary, that nation has not every thing to fear from us on the whole fea coafts? Whether we have any thing to fear from France, with refpect to the interior parts of the American continent? What can we have to intimidate us there from increafing our commercial union? Have the French now power there to do it themfelves? No one will fay this. On whom then muft France depend to do this great work for them? It will be faid, perhaps, the Indians. That fome of the Jndians, who had been many years in the friendhip of the French, may by their occafional machinations be influenced to mifbehave to the fubjects of Grear Britain refident the molt contiguous to them. But have we not more numerous Indians already attached to our intereft, who will take up the hatchet againgt our Indian enemies? Are we not daily making frefh friendhips amongt thofe people, and drawing great numbers into our fcale of power? And as all the eaftern parts of the Miffifippi belong to the crown of England, and thole parts grow more and more populous with our European fettlers, will not this make the ballance of dominion gready preponderate in Britilh favour? If not by dint of amicable alliances more for the Indian intereft than is now in the power of France to do, by the dint of our arms, we can reduce every Indian enemy to our fubjection; though I am perfuaded that the moft friendly, juft and equitable meafures will be praticed cowards the natives, as being meafures by far the moft eligible for both parties: Befides, are not we mafter of the navigation of all the lakes, and the great and friall rivers contained within our own territories? Can we not by means thereof greatly humble the Indian powers, which confifts only of disjointed nations, whofe interefts lie different to each ocher? But have not thefe Indians experienced that Great Britain has conquered her great European enemies there; and that we are now in poffeffion of all their lands they before enjoyed? Can it be fuppofed, that this bas not fruck a great awe into all the Indians in genetral? And will not their good fenfe lead them to difcern, that thofe who have been able to conquer and extirpate the French themfelves from thence, will be able, if provoked to it, to do the fame much eafier by them? Muft they not know, therefore, that it is their natural intereft to maintain friendifip and harmony with us, who are fo much their fuperiors in power?

Well: but if the French, at prefent, have it not in their power, with the aid of fome few of their deluded Indians, to hurt us, may not the union with them of the Spaniards, who are now poffefled of New Orleans on the American continent? What can the Spaniards do to irritate Indians againtt us, who are fo remarkably abhored by them? Is it not far more likely, that the Indians would rather join with us againft the Spaniards than them againft us? Has not this giving up New Orleans by France to Spain, precluded France from any fettlement on the eaft of the Miffirippi? And whether this very ftep hath not alfo precluded them from all navigation to and from the river Miflilippi, in virtue of the definitive treaty may be queftioned ? For by the feventh article it fhould feem that France had left to them New Orleans only for the fake of the navigation of that river, as well as the Englifh; and if they give up the poffefion with which the privilege was given, do they not give up the privilege itfelf? For we have not heard of any new treaty made by Britain to grant the right to France of that navigation to Spain as well as France. And if we granted France that privilege, it does not follow that Spain fhall enjoy the fame, alchough France may have given them up New Orleans; and therefore, the Spaniards, without the confent of the crown of England, can have no right to the navigation of the Mififippi. And although the good behaviour of the Spaniards towards this nation may induce us, to continue the privilege to them; yet when they ceafe to deferve it, can they expect we fhall longer grant it? No; nor the poffeffion of New Orleans itfelf; and then we fhall have no competitors on the Anerican continent that can injure this nation. It does not feem that this gift of France can be any detriment to us, but it may be of fome to Spain, efpecially if they have given up the Spanifh part of Hifpaniola, or any other equivalent to obtain it, feeing Spain may one day lofe New Orleans, without any reltoration of fuch equivalent.
From the unired weight of what has been urged, it appears, that the way is quite clear now for us to make what further additional commercial union with our colonies we fhall judge eligible, without fear of any obfrruction either from France or Spain, or from the Indians. What hinders then that we fhould not do it to the utmoft ftretch of good policy? Have we not every motive to induce thereto, as we have fhewn in our firlt difcourie, and that upon the broadeft bottomed fytem that we can?
Have we not feen how eafily evafible all treaties of commerce are with European potentates in our prior preliminary difcourfe? For what avails the moft feemingly beneficial treaties of commerce with any European potentates whatfoever, while we fhall be underfold in the dominions of that very potentate, by a foreign rival in trade? Had we, indeed, an exclufive treaty of commerce with a nation, it might, perhaps, be of fome extraordinary advantage, whilit out commodities continued as dear as they at prefent are, and thofe of our competitors as cheap as they are; yet this extraordinary advantage would be greatly diminifhed by the fmuggling trade of our rivals into fuch country? But we can never expect fuch exclufive trade with any country; and therefore we can never expect to make a beneficial treaty of commerce with any ftate, while we fhall be liable to be underfold; the underfelling nation ever fupplanting us, and depriving us of any imaginary advantages twe may flater ourfelves with having obtained; and this they will do, without having any treaty of commerce fubfiling with the fame nation at all. How then fhall we deceive ourfelves with great expectations from any extraordinary commercial treaty with Ruffia or any other power, while France fhall be permitted to fell the very fame fort of goods in their empire as we fhall be permitted to do?
Inftead of amufing the nation with fuch fort of advantageous treaties, would it not be far more eligible to put the kingdom into a condition to be able to fell our commodities upon an equality of price with our rivals? For that is the previous ftep requifite to render any treaty of commerce beneficial; and without it, we are lulled with imaginary gain for our real lofs, becaufe as fuch treaties always ftipulate mutual advantages to both ftates, if we grant any to out difadvantage, and we are difabled to reap any to our benefit, we are certainly deceived, and the nation is injured inftead of advantaged by fuch fort of creaties of commerce, however common is has been to impofe fuch conduct on the nation for fuperlative ftrokes of Britifh policy.
But in the name of truth, wifdom and found policy, why are we folicitous to make treaties of commerce with foreign countries, whofe advantage mult at beft be doubtful, as our trade is ar prefent loaded with taxincumbrances, and to neglect them with our own colonies and plantations; where we may be certain to reap the full benefit of them, if grounded on the maxims we have urged throughout thefe difcourfes? And, indeed, the additional commercial union hereby intended, may not improperly be confidered as a NEw TREATY of commerce fetween Great Britain and her American colonies and plantations, for the
folid mutual permanent intereit of both. In this light, we fay, what hath been fuggefted may be confidered : nay, it is the only rational view wherein the matter ought to be confidered; it is in that, however, it is defigned by the writer, let others put what conftruction they pleafe thereon. For herein we have not lefs comprehended the intereft of the colonies than that of the mother-ftate; judging it a weak and fandy foundation to ground our new commercial fuperftructure upon the intereft of Great Britain alone, without including that of our colonies at the fame time: we would be underftood to be advocates as well for the one as the other, efteeming their interefts infeparable.

Without entering, with all poffible brevity, into the detail we have exhibited, and without exhibiting the fame in the divers lights wherein we have done it, no true judgment could have been made of the foundation that is laid in America for that extenfive commercial union we have recommended between this kingdom and her colonies. Speaking in general would have carried no conviction, nor have anfwered the purpofe we have in view, which is to fhew to what degree fuch further union might be prefumed to contribute towards the redrefs of thofe grievances, of which we have complained in our firft preliminary difcourfe.

That our new acquired continental as well as inland colonies, are daily increafing in Europeans from various parts is certain. -That the Indian tribes in both are extremely numerous is no lefs fo; and that they daily grow more and more friendly and tractable, and have a better relih for the Britifh governmenc and conftitution, and are more inclined to civilization, is not to be doubted. On the continent, they have experienced our fuperiority of power and dominion; and this mult have impreffed on them a formidable idea of the magnitude of our ftrength in war, feeing we have obtained the maftery over both France and Spain, and left them no more territory on the whole eaftern part of the Miffifippi, than the trifling fpot of New Orleans. Muft not this give the numerous Indian tribes an excellent conception of the mighty fway and fupreme power and authority of the Britifh nation, by which fuch great feats have been accomplifhed? Than fuch events fo illuftrious to this kingdom, nothing can have a more happy effect to excite in them the ideas both of dread and attachment. And will not thefe operate, by kind, humane and equitable treatment, to cement concord and harmony between us? They affuredly will promote a lafting friendfhip between us and all the lndian tribes; and perhaps they are not in the whole lefs numerous at prefent on that continent, than all the Europeans taken together. Nay, if we once gain the hearts of all the Indians within our own boundaries, will not this naturally draw them to us from remoter parts? Whence ir appears, that we have not only gained an extent of territory, but we have gained numerous people, which muft render fuch territories proportionably lucrative to the mother empire. For now we have no weighty European competitor to deal with on the continent ; we have, or foon may put an end to all machinations to irritate the Indians againt this nation. This being done, may we not expect, that thefe fenfible Indians can by good policy on our fide, be brought to the cultivation of lands, as they have been naturally difpofed to hunting and fifhing for their maintenance? The tranfition from the one to the other is fo familiar, that the one may foon become as pleafing to them as the other: and then they will divide their time into a more delightful variety of objects; and their old men may direct agriculture, farming and planting, with due inftructions, while their youths ball execure the laborious part. Why not? They lay claim to large territories; and if they are put into a more fure way of preferving them to their pofterity, by cultivation, and having them fecured and guaranteed to them by Britifh laws, may they not be convinced that their intereft is infeparably united with ours? Will not this prove the means of preventing thofe broils and mifunderftandings in future about the extent and rights of lands, more effectually than by any other whatfoever? They will not want underftanding to be made fenfible hereof; and when once they become convinced that no injury, but benefits fhall be intended them, why cannot their native robuftnefs and attivity be turned into channels to increafe their felicity? Cannot the wifdom of the Britifh government devife ways and means to render thofe people more beneficial to the flate, as well as happier within themfelves, than they yer ever have been? As it is beneath the dignity as weil as intereft of Britain to neglect this, we will not fuppofe it; we will, on the contrary, pleafe ourfelves with the agreeable idea, that Indian labour and induftry may be converted to the Britifh no lefs than Indian happinefs. And why not intermarriages between them and Europeans become as fafhionable as heretofore between them and the French? When fuch confanguinity and incorporation of families thall take effect, will they not become a more united and civilized people amongtt our Europeans? When thefe things dhall be effected, will not the Indian tribes be eafily brought to habit in the European modes; and this increafe of their wants, and ability to fupply them, will increafe their demand for Britih manufactures, as it will our demands for the productions of their materials for every purpofe of that kind.

We look upon it as not the leaft advantage to have fuch a body of new Britifh fubjects united to this kingdom, provided we fhall be wife enough to make the right ufe of them. If we do not, it will not be the fault of the Indians; but it will be an eternal ignominy to this nation. Who will believe that good hunt men and fifhermen fhould not make good planters, vine-dreffers, flax and hemp-dreffers? Who will credit that even their women and children cannor nurfe the filkworms in their proper clime, as well as raife flax and hemp, and food? Will not olives grow in America, as well as flax, hemp and cotton? Why fhould we not be fupplied wish oil as well as wine and raifins from Britifh America, no leis than fugars? Let any man caft his eye on the Book of Rates; and let him view the thoulands of articles that we import from other countries at a great expence, that we may now have from Britifh America, at a far greater advantage, as might be fhewn in numerous particulars? Is it not bad policy to negleet it as we are at prefent circumftanced, when we fhall be certain that the more we take from America, the more the Americans will be able to take in return from us upon the plan propofed? But how are we certain of this from any foreign country, as the dearnefs of our commodity almott exclude us from too many markets? Is it not wifer to enjoy a certain lucrative degree of foreign trade and navigation of our own, and under our own direction and management, than to be liable to the will and caprice of any foreign ftates and empires folely? I could wifh to iee this point duly weighed and confidered by our rulers, being perfuaded it would turn to the unfpeakable intereft of the Britifh empire, and their eternal glory at this time.

Let me not be underftood to contend for an exclufion of this nation from all trade with other European countries except with Britifh America; this would be repugnant to the whole firit of my writings: but this I would be underfood to mean and intend, that fince we are poffeffed of fuch great advantages in America; it is right that we fhould not neglect them; if we do, we have hhewn how fuch neglect may tend to the detriment of the nation, by rendering America independent of Britain.- If we embrace them to the full extent they will now admit of, it will make the Britifh colonies more and more dependent on Britain, and ftrengthen and aggrandize both to a degree beyond what this nation ever before experienced. This is what we contend for; and we alfo contend for the diminution of our foreign imports from every nation we have dealings with, as they fhall diminifh in the importation of our commodities, let it proceed from what caufe it will. This will be the way to prevent many of our particular balances of trade being fo much to our difadvantage, and will contribuce to turn the general balance to our general advantage. This is what I have ever aimed at in all my labours for the public fervice, and what I would be judged to defign at prefent. For by this means only can the nation become folidly wealthy; by this means only can we be put into a condi-

Vol. I.
tion to reduce the public debts honourably ; and by this means only can we obtain a competent annihilation of our taxes, and enable us to fell our native as well as our plantation commodities at cheaper rates.
The reader will hardly forget, that we have endeavoured to fhow the improbability of France and Spain obtaining any advantage by a frefh rupture with uis in America. However, left thefe nations fhould again think of quarrelling with Britain, the fooner fhe extends her commercial union with her own colonies, the better will he be prepared to cope with them; and therefore it will be impolitic to be dilatory in a matter of fuch inmediate important concern.
Bur if we fhould be again forced into a war, it may not be inconfiftent with this work to fay a word with refpect to every other preparatory ftep requifte to be purfued, as well in regard to Europe as to America: indeed this will be expected, feeing we have promifed fome confiderations upon this point, which we call

A New Design to render the Peace of Europe more lasting, and to save Great Britain the future Expence of encaging in the Continental Wars of Europe.

NO man in the kingdom, we apprehend, no more than ourfelves, ever imagined that the fupplies to carry on the laft war could ever have rofe to the height they did, nor the fucceffes of the war have been fo extraordinary as they proved.
Wherefore, at the commencement of the laft war, the writer drew up a tract, which was intitled Great Britain's True System; wherein is endeavoured to be thewn, i. That the increafe of the public debts and taxes muft, in a few years, prove the ruin of the monied, the trading and the landed interefts. 2. The neceffity of raifing the supplies to carry on war, within the year. 3. That fuch a defign, however feemingly difficult, is practicable; and 4. An expedient to fupport the public credit in all times of public danger.

The fundamental principles whereupon the raiing the fupplies within the year was grounded, was, that the government fhould deal with all contractors for the navy and army, \&c. payable within the year, or rather, if poffible, at three months credit, which is efteemed equal to ready money dealings, if punctuality couid be depended on.-That to enable the government to have complied therewith, the fupplies fhould be raifed as early in the year as pofible, and that all contractors fhould have been paid as foon as poffible; fo that by the money collected from the people returning into their hands again as foon as pofitible, fuch a quick circulation from and to the hands of the public, the fupplies might have been raifed without running the nation furcher in debt, and the nation oppreffed with no additional taxes after the war had been ended.
This propofition was fupported by a variety of reafonings in divers lights, all which feems to have corroborated the reftitude of the meafure. Though the manner of handling the fubject was well received by the greatef men in the kingdom, yet party diffractions prevented that being carried into execution, which every one approved and applauded. And this may poffibly prove the fate of the extensive commercial union between Great Britain and her colonies the writer has propofed in thefe difcourfes; an that from the like party broils and diffentions, there appearing a fimilitude of circumftances between our great men at prefent as heretofore; and there may be the fame caufe to repent the neglect of the one as there has been that of the other. For,
Had public affairs been fo happily conducted as to have left the nation exempt from thofe great additional tax-incumbrances, we now fuftain, in confequence of adhering to the deftructive ways of funding and borrowing, the circumftances of the kingdom would have been widely different from what they are at prefent; not only the induftrious poor would have been in a much happier condition, but every rank of people in the community.
As things have happened otherwife, the writer is not weary of well doing; and therefore taking the flate of our affairs as they are, he is willing to hope that he has fallen upon the molt natural way to extricate the nation from the prefent difficulties under which it groans. Though fuch polisy may be prefumed to operate but fowly to redrefs the public grievances, yet he prefumes to fay the effeers will be fure. Befides, this capital ftep, the writer apprehends, may be aided by fome others, that will both facilitate and expedie it, and that much fooner, perchance, than may be judged practicabie, by thofe unacquainted with what he may pofibly hereafter have leifure to confider. The writer's other daily avocations not admitting of his digetting, at prefent, what he conceives will co-operate with what he has aleady tuggefted, he is obliged to defer it, till he fhall have time to execute it to his intentions. And if he thall be able to accomplifh his end to his own fatisfaction, he may probably fubmit the fame to the confideration of the legifature, provided he fhall be affured previoufly, that he thall be intitled to an adequate parliamentary recompence for his public fervice, which, he humbly apprehends, would be very important, whether the nation continues in peace, or is compelled to go to war. Without this he is obliged to attend his private affairs, take care of his family, and damp inftead of cherih that public fpirit which is fo natural to him, as appears throughout all his la-bours.- But there being in thefe our happy days no encouragement for any private man to ferve his country, he has no hopes to be enabled to execute what he judges of the most mmportant concern to the kingdom at this time.
In the beforementioned treatife of raifing the fupplies within the year, the writer bas in the Introduction intimated a new plan of British politics, with respect to our foreign affairs, and our connections on the continent of Europe.-This plan of foreign affairs, before the laft war, was intended in aid of the plan to raife the fupplies within the year without increafing the public debts or taxes, and was never yet made public ; but the writer put it into the hands of the minittry, it being then not proper for publication. But as it may prove of public ufe hereafter, he will communicate a part of the fubtance of it, preparatory to what be fhall fubmit upon the fame topic at prefent.

It never being imagined that we fhould attempt to increafe the territorics of Great Britain to the degree we have done, the foretgn plan was adapted to render the war as fucceffful againf the enemy as we could, at the Iealt expence to this nation. The new foreign fytem offered for that purpofe was to have formed, at the beginning of the wat, a genfral protestant commercial confederacy againft France, and all the Catholic allies she should join with against Great Britain and her confederates.

The new commercial protestant confederacy was founded on the eventual fuccefs againft the enemies; and each power was to be incitled to its due fhare of new acquired territory that fhould be taken from the enemies of the confederacy, and that in proportion to the flipulated quota of maritime or landed force that each confederate fhould be able to advance to promote the fuccefs of the common caufe.-Thus the intereft of every confederate being concerned in the eventual fuccefs of the war, no one would be backward in furnihing the full degree of force fuch confederate fhould be in a capacity to advance, according to their

[^1]Gituation or their circumflances fo to do; and that the divifion of the new acquired territory that fhould be obtained from the enemies, fhould be made by the congrefs appointed for that purpofe in the mioft equitable manner, as well as every circtumftance of conducting the confederate war to a fucceffful iffue.

That as Great Britain was at the head of the Proteltant commercial confederacy, and was prefumed to be the moft capable to contribute a fuperior fhare or quota of maritime ftrength; fo her ftipulated fhare fhould be fetcled at the congrefs; and the fhould be intitled to no more of the new acquired territory, or other commexcial wealth, than thould have been proportionate to her quota of men, fhips, \&cc. In a word, every preliminary article was to have been ftipulated by the congrefs of the confederate powers, before the fword hould be drawn, and after the fame fhould be fheathed, the moft advantageous peace fhould be made for their mutual benefit.

That the Proteftant commercial confederacy fhould ever fubfift for the prefervation of the tranquillity of Europe, againt any Catholic flate whatever that fhould interrupt it, and for the due prefervation of perfect amity, concord and unity between the Proteftant confederates.
That no Catholic ftare whatever fhould be admitted amongt the Proteftant commercial confederates; Jeft fuch flate fhould have been any way inftrumental to have diffolved the Proteflant alliarce, \&xc.

That fuch of the Proteftant confederates who fhould not then be in a capacity to raife as much degree of force as they were defirous of doing, fhould have the liberty, to have raifed what money they required amongft any of the confederated flates, for which they fhould pay four per cent. intereft till the principal fhould be repaid to the lenders; and that the whole confederacy fhould have been guarantees for the difcharge of both the principal and intereft.-And that as a further collateral fecurity to the lenders, the new acquired fhare of territory, or any other fort of acquiftion by the capture of fhips and merchandizes, \&c. Thould have been mortgaged for the fame loans, \&c. to the whole confederacy, \&c. That the confederates agreed, that all the acquifitions of wealch or territory made by the united force should never have been restored.

Thefe were the outlines of the new foreign British system intended : the whole may one day, perhaps, fee the light.

That a more adequate idea of the whole may be at prefent formed, be it fuppofed, that the millions which were raifed by Great Britain alone, had been raifed amongtt the whole body of Proteftant confederates; and that the acquiftions that were made, had been done by, the united aid and affitance of the whole confederacy, inftead of Britain alone.

Suppofealo, that there were six Protestant states confederatell for the purpofe aforefaid; and that Great Britain was admitted to bear two-fixths, equal to one-third of the whole expence, and the other five ftates two-fifteenths each of them, and the whole acquifitions made were to be equitably divided amongt the confederates, by the congrefs fettled for that purpofe: this fuppofed, then all the captures and territory obtained by the laft war would have belonged to, and have been divided amongtt the feveral parties interefted therein.
Thofe who are of opinion, that we have obtained too large a fhare of territory, may not judge the preceding plan of foreign politics a romantic or vifionary fyftem. Had the cafe been, as fubmitted by the new plan, we could have been intitled to no more than one-third of the conquefts the whole confederate force thould have made; and then we fhould have been at no more than one-third of the expence we have been at, and fhould have faved the other two-thirds. Which of the two might have been more eligible for Great Britain, is a quettion that others may think of; we are certain, that the whole Proteftant caufe would have been a much more confiderable gainer in general than this kingdom has been, and the Catholic ones would have been a much greater lofer.' For the Proteftant intereft would have gained the Havanna amongft them, as well as the French fugar illands, except their part of Hifpaniola.
Had the poffeffion of the Havanna, the key of the Spanifh Indies, together with thic whole fifheries of Newfoundland, amongft other parts of the conquefts, been allotted to the fhare of Great Britain, and the Stares General of the United Provinces, for their feven-fifteenth parts, and had the refidue been as equitably proportioned as could have been, between the other confederates, worrd not this have drawn the teerh and have pared the nails both of France and Spain? Would not nine tenths of the whole fugar trade of the world have been poffeffed by the Proteftant intereft, as well as the principal filheries of America?

With refpect to the American continent, and all to the eaftward of the Miflifippi, fuch parts might have been appropriated as would have tended to the fecurity and due enlargement of the antient Britifh colonies, and the remainder might have been diftributed amonglt fuch other of the confederated powers as might have chofe it; and the whole diftribution of territory might have been made under the guarantee of the whole conféderated Proteftant allies; and who would have wrefted the fame out of their hands? So likewife might the American conquered illands have been diftributed amongft the Proteftant ftates. In virtue of the proportion coming to Pruffia, might not that monarchy have been conftituted a maritime power, and Sweden and Denmark have received their proportion of eftimable commercial conquels taken out of the enemies fcale of power, and thrown for ever into that of proteftantifm?

Be it further prefumed, that the Englifh and Dutch had, in conjunction, poffefion of the Havanna, 'and in confequence the whole ifland of Cuba, as the French and the Spaniards poffefs the illand of Hilpaniola, might not England and Holland have made the Spaniards for ever tributaries to them, for permifion to have traded to Spanifh America, had the Proteftant confederates chofe to continue to them that privilege under fuch certain regulations and rellicictions as they fhould have granted it, as a check upon them for the future? And by the Spaniards being obliged to have paid England and Holland for the privilege of trading to their American colonies, through the medium of the Havanna; and the refort thither of the galleons and flota, the advantages arifing from thence, would have well enabled Britain and Holland to have maintained the Havanna, and have vircually conftituted them mafters of the whole Spanifh American commerce, under the guarantee of all the Proteftant confederates.-This might have proved the high importance of the Proteflant confederated intereft againt Spain, and with relation to France, when they had been deprived of the whole of the Newfoundland fifheries, and the fugar colonies, and all the neutral inands, what injury could they have ever after been able to do to any of the Proteflant powers in Europe, while the fame commercial confederacy fubfifted, as it was propofed to have always done? They could not have dared to have maltreated the leatt refpectable Proteftant ftate in Europe, the confederacy rendering every individual as powerful as the whole.

Moreover, thofe ftates would, doubtlefs, have had Dunkirk abfolutely demolifhed and razed to the ground, and all the barrifr towns put into Proteftant hands, and effectually upheld and maintained at the joint charge of the whole Proteftant confederacy, and not fupported in fuch a fcandalous condition as they have been betweena Catholic and a Proteftant flate, whofe interefts are ever incompatible. Had this taken place, what future danger could the Proteftant intereft have been in as well in Europe as America, when Auftrian no lefs than French Flanders had been at the mercy of the Proteftant confederates? Could France and the houfe of Auftria have ever more been able to have waged wars in Germany, provided a potent barritr Proteftant fovereign had been fetrled in the Auftrian Netherland, as was further propofed by the new Proteflant Syltem, by the confent of the confederates? Need Great Britain, or the States General, or his Pruffian

## 1xii New Foreign Syfem to fave Great Britain the Expence of enraging in the Continental Wars of Eurofe.

majefty, Sweden or Denmark, or our fovereign's German dominions been longer in danger; or this nation obliged to expend more money on the continent to prevent wars there with Catholic ftates?
Or, if a powerful proteftant barrier prince had not been judged eligible to have been fettled, by the confent of the confederates, in Auftrian Flanders, and duly fupported and guarantied by them, the States General of the United Provinces might liave more naturally, perhaps, had their dominions extended thither, and they have unidertaken to have maintained the Proteftant barrier againft the houfes of Bourbon and Auftria, under the permanent fupport and maintenance of all the Proteftant confederates: that is to fay, that the faid confederacy being prefumed to be perpetual, that whenever the Proteftant barrier fhould have been attacked, the active union thould inttantly take place, to withftand fich attack, atid the quota of each confederate being ftipulated in the alliance, it might have rendered the barrier impregnable: and Dunkirk being abfolutely demolifhed, French Flanders would be open to the penetration of the confederates on one fide, and the Auftrian dominions on the other. For, as foon as the tranquillity of the barrier ftate had been difturbed, the confederates would have inflanly taken the alarm; Great Britain might, in conjunction with the States General, immediately bave had forty or fifty, or even one hundred fail of men of war ready, with a competent military force, ready encamped in the Ine of Wight, to have poured into French Flanders, and prevented the junction of France and Auftria, by ravaging all the coafts of France. On the other fide, the Proteftant confederates alfo would have been prepared to have kept the Houfe of Auftria in due fubjection, and hereby have maintained the peace of Germany. This, however, was the writer's plan, and the defign of the new confederacy; and whether the fame might not have been to improved upon by the joint wifdom of the confederates, is humbly fubmitted to thofe who are judges of it, from the fketch exhibited.
But it did not end here. It was extended to Africa no lefs than Afia, as well as America and Europe, wherein fuch a confederacy might have been rendered fuccefffully formidable to any Catholic compact that could have been formed againt it. The defign, in a word, was fo devifed as to have preferved the tranquillity of Europe in all probability far more durably than it ever had been before, and would have lowered the creft of all oppofers to as great a degree, perhaps, as might have been found requifite.
The reader will pleafe to obferve, that this new fyttem at the beginning of the war was bottomed upon the prevailing fentiment, that Great Britain did not ftand in need of any extraordinary addition of territory, if that thare of which the was poffefied had been made the beft ufe of. As it has fo fallen out, that we have obtained a far greater fhare of valuable territory than was ever before thought necefflary, we have feen the foundation that is laid to reimburfe us the great expence we have been at to gain it: and it is wifdom to make the beft advantage we can of it.
The writer had taken no notice of the former propofed foreigri confederacy at this time, did he not conceive, that if another rupture fhould take place between this kingdom and the Catholic ftates, this plan might either in part, or in the whole, be adopted. Should the Family Compact extend itefle to a far greater degree than we may at prefenc be apprized of, we have feen in what manner it may be effectually matched for the beneft of the Proteftant caufe. And a Proteflant commercial confederacy might, perhaps, ftand a fairer chance for greater fuccefs, than they could have done in the laft war, had it then takerr effect; feeing Great Britain is at prefent fo happily fituated in America to act offenfively for the benefit of the confederates; and fuch being more likely to be benefited by their alliance with Great Britain than the latter with them, their intereft might probably prompt them chearfully to enter into fuch alliance, to inlarge their commerce and territory, if the fame hould be properly reprefented to them.
Another principle whereon the Proteftant confederacy was grounded, was that of its being unnatural for any Proteftant ftate whatever to league with a Catholic one:
There have been no more inveterate animofities between ftates, than thofe which have fprung from the differences of religion; the prefent neceffity may, indeed, diffemble them, but it is fcarce poffible that time fhould not difoover them; and how is it to be imagined that.amity can ever be maintained between them, when the one cannot truft the other? When the ruin of this is the intereft of that? Confederacy with thofe of a different religion is lawful, when its end is the intermiffion of war and liberty of commerce, fuch as that was which Ifac made with Abimelech. 'Tis the well known maxims of Popifh flates, that no obligations are to be kept with Heretics, as they ftile all Proteftants. Hence has the Gallica fides towards England and othet proteflant potentates become proverbial.
In the reign of Charles II. there was a tract publified, entitled Chriftianiffimus Chriftianandus, in which the author endeavoured to prove, that the moff Chrititian king was himfelf void of all the common principles of Chriftianity; and this very treatife was encouraged to be printed by Lord Danby, then Lord Treafurer; yet this very treafurer fuddenly changed fentiments, and by his councils, his matter in the clofet formed a mof dangerous alliance with that crown. We never gained any advantage by leaguing with that nation, as we experienced alfo when we allied with them in confequence of the treaty of Hanover in the year 1725; for when Gibraltar was attacked by the Spaniards, they gave us no manner of affitance. How we have fuffered by our alliances with the houfe of Aultria, let our national debts declare. Nor did they give us any fort of affiftance at that time, though we were put to a great expence to prevent the confequences of the treaty of Vienna, notwithftanding the Spaniards feized the effects of the South Sea company, to a very great value, at La Vera Cruz, and took our merchants fhips at fea
Our former alliances even with Proteflant powers having never been devifed upon the principles of the New Syitem, were never of any great advantage either to Great Britain or her allies. They were grounded upon temporary, fubfidiary or auxiliary treaties only. Had they, on the contrary, been bottomed upon commercial and territorial acquifitions, the tranquillity of Europe might have been of far longer duration than it ufually has; for fuch interefting ties and inducensents would have made the confederates more faithful to each other than ever they were, it being once refolved that every commercial advantage they could obtain by war fhould never be given up at a peace. Our former alliances have only proved a rope of fand, being left always of a very vague and precarious nature, and never calculated but as temporary expedients to anfwer merely the prefent purpofe. The New Syttem we fee was quite otherwife projected.
If any thing of the kind here planned hould ever take place amongtt the Proteftant ftates, it will be firl previounly neceffary to fecure their mutual fafety in Europe, before they turn their eyes on the inlargement of their trade and territories in America, or elfewhere. To contribute to that, Great Britain would advance her reafonable quota of expence chearfully, and certainly could be more affiting therein, by the aid of her maritime force, than by exhaufting herfelf by any continental expence: fo that if it again fhould become neceffary to oppofe continental meafures, the other powers moft likely to fuffer thereby ouglit to take care of that matter for their own fakes ; or, be the confequence as it might, Great Britain will be obliged to take care of herfelf and her Britih territories, and not intermeddle with the continent, if thofe who are more nearly concerned do not think proper to do fo. If the reft of the Proteftant flates will neglect their own fafety, they can never again expeet fupport from this nation, be the confequence in regard to the king's German dominions what it may. For by dint of our maritime power, we fhall be in a condition to oblige any Catholic ftate to reftore them again to the elettor, his Britannic majefty, though the Germanic body and conftitution would hardly fuffer them itant ftates themfelves fhall chule to prefer a flate of inaction upon fuch an occafion.
Should a general Protestant commercial confederacy be thought uneligible or impracticable at firf, the next point that may concern Britain to confider with refpect to alliance, will be, whether that of a commercial one with the States General of the United Provinces might take place, fuch having been ever judged a natural alliance prefervative of both powers. And is there no way to bring this abour? If, indeed, it is not in the power of Briain to make it as much for the commercial intereft of Holland to engage offenfively in conjunction with her againft any Catholic ftate, it will be in vain to expect them to relinquifh their neutrality as well hereafrer as they have done heretofore. Unlefs, we fay, the States General can be thoroughly convinced of this, they cannot be expected to break with France or any other power by whom they will gain more advantage by their neutrality. Should Britain, therefore, think at all of any offenfive alliance in cafe of a future rupture with France, \&zc. and Holland be thought of for the purpofe, it feems to be in our power to offer the United Provinces terms that they may probably accept.

The fineries of Holland are jufly efteemed by the Dutch as more valuable than mines of gold. They were the firft rife of that republic, and have been the grand prop and fupport of their commerce and navigation. The molt eftimable of all their fifheries is their herring fifheries, which the Dutch carry on upon the coafts of Great Britain and Ireland. Sir Walter Raleigh informed king James, that the Dutch fifhed on the coaft of Great Britain with no lefs than 3000 fhips and 50,000 men, and that they employed and fet to fea, to tranfport and fell the fifh fo taken, and to make returns thereof, 9000 fhips more, and 150,000 men befides: and, if we hereunto add what he fays further, viz. that twenty buffes maintain 8000 people, and that the Hollanders had in the year 1618 no lefs than 20,000 hips at fea, as alfo their filhing, navigation and traffic by fea, with its dependencies, fince that time to the year 1667 , increafed to one-third more; if this be fo, we may then eafily conclude, he obferves, that the fea is a fpecial means of Holland's fubfittence, feeing Holland by this means alone yields, by its own induftry, above 300,000 lafts of falt fifh.

The French too make great advantage by the herring fifhery on the coafts of Britain and Ireland. When the French king was moved, in the wars of queen Anne, to admit the Dutch and Englifh fifhing boats into Dieppe, Dunkirk, St. Vallery, and other ports, with their herrings, the king anfwered, No! ey no means: if my people will have herrings, why do they not catch them, as the English and Dutch Do? Upon which, the merchants of thofe parts immediately fitted out veflels, and took herrings fufficient for all the country, and have continued to do fo ever fince upon our coafts.

There is no treaty fubfiting between Great Britain and the United Provinces that grants the Dutch the privilege of fifhing on our coafts, neither is there any that grants the French that privilege; they both enjoy this liberty only as a matter of favour and indulgence, and not as a matter of right, as is fhown under our article Fiheries.

Now, as neither of the fubjects of either of thofe powers have any fuch right by treaty; be it fuppofed, that in order to lay the foundation between Great Britain and the United Provinces, for a better Protestant commercial confederacy, it was propofed by this nation to grant by treaty, amongft other commercial articles to be ftipulated between the contracting parties, the fubjects of the United Provinces the fulle liberty of fishing on the coasts of Great Britain and Ireland, in the fame manner as is done to the fubjects of his Britannic majefty, without being liable to any moleftation.

1I. That the fubjects of France, or any other power, fhall be excluded from carrying on the faid fifheries upon the coafts of Britain and lreland, and the fubjects of all other powers, unlefs thofe who fhall be invited and accede to this Proteftant commercial alliance.
III. That the fubjects of the United Provinces fhall be intitled to the right of fifhing on the coalts of $\mathrm{N}_{\mathrm{Ew}}$ foundland; and that the fubjects of France, and of all other fates, fhall be for ever excluded from the Newfoundland finheries, unlefs thofe who fhall be invited and accede to this commercial alliance.
IV. That this alliance fhall be extended to what other branches of their fifheries the contracting parties fhall judge proper, and allo the fubjects of thofe powers who thall accede hereto.

V . That this alliance may be alfo extended for the mutual protection of the commerce and territories, both offenfively as well as defenfively, of the contracting parties, in all parts of the world, and all other Proteftant ftates who thall be invited and accede to it.
VI. That this alliance fhall fubfift in time of PEACE, as well as WAR; and that in times of war, the quotas chofen to be flipulated by the feveral contracting parties, fhall be explicitly agreed on to act offenfively or defenfively.
VII. That the feveral parties to this alliance fhall have the privilege to borrow any sum or sums or money in the dominions of each otaer, to enable them to advance their refpective quotas at per cellt. intereft.
VIII. That it be agreed, that all commerce or territory the allies fhall be able to take from their enemy or enemies, fhall be divided amongst them as equitably as possible, according to the proportion of the expence which they have been at jointly with the reft.
IX. That the eventual territories taken from the enemy fhall be a fpecial security to the lending rarties in the feveral ftates, and that the whole confederacy fhall be a collateral security for all fuch fums of montey that fhall be borrowed for the purpofe of annoying and diftreffing their common enemies.
X. That no Catholic ftate whatever fhall be admitted to accede to this Proteftant commercial alliance.
XI. That no new acquired territory fhall be given up at the end of the war.
XII. That this alliance be perietual, and fhall exift as well in time of peace as war, and fhall be further cemented by fuch ftipulations as thall be judged neceffary by the contracting parties.
XIII. That no treaties or alifances thall be entered into by any of the confederates without commenicating the same to the rest, for their confent and approbation; and without their unanimous confent, no treaty or alliance either between themfelves or with any Catholic fate fhall be entered into.

Thefe will ferve as a fketch of the outlines of this new Proteftant alliance to counteract the faminy compact made amongt the Catholic ftates, to preferve peace, and to extend the commerce and navigation of all the Proteltant flates.

Without entering into a further detail of other flipulations for the perpetuation of the Protestant confederacy, and for the common fecurity of their trade and territories, and for the extenfion thereof, the writer judges that he has intimated fufficient to convey the general idea of his intention, leaving any additions or amendments thereto to the wifdom of thofe who may think the future prefervation of the Proteflant intereft againft the family compact, \&xc. merits attention.

It will be naturally oblerved, that the propofed commercial alliance. between Great Britain and the United Provinces, may be made to terminate in a grand general Proteftant commercial alliance, as before fhewn.

MoL. I.

The writer being of opinion, that it is unnatural for Proteftant ftates to ally with Catholic ones, has reftrained what he has humbly fubmitted to the former; the latter having already entered into a compact, that may make fuch a counter-alliance fooner neceffary than many may be inclined at prefent to conceive. Wherefore, he apprehends the time of peace is the proper time to ruminate on what may be done to preferve the tranquillity longer than has been hitherto the cafe of Europe.

Notwithftanding the United Provinces, during the two laft wars, have not been induced to relinquilh their neutrality, and join with Britain offenfively againft her enemies; yet it is not improbable that the time may foon arrive, when the States General may pofibly be glad to ally both offenfively and deferively with this nation. For the United Provinces are fituated between two fires; and they may, perhaps, one day be attacked on the one fide by a warlike $m-h$, as well as by France and her allies on the other: in fuch cafe, on whom can the States depend for protection but their old friends Great Britain? who, let them remember, have facrificed many advantages on their account, fince the treaty of Utrecht, which ought to wipe off any ill impreffion which that treaty juftly made on them. And if this nation thows a due regard, without injury to herfelf, to promote the commercial intereft of the United Provinces, fomething in the manner that has been fhown, it may contribute to revive and cement that ancient friendifip that ever ought to have fubfifted between thefe maritime powers, for their mutual benefit.

Being upon the topic of commercial union, it is no way repugnant to our fubject juft to mention that of Ireind with Great Britain, which is not lefs defireable than that with her colonies and plantations.
The great obftacle hereto has been that of Britain's public debts and taxes; and while thefe fhall remain to the degree they are, 'tis no wonder that fhould be ever defpaired of. Whereas, were they duly diminifhed, that Ireland might be induced to acquiefce and follicit this kingdom for fuch union, that fhe might be exempt from thore reftraints in trade to which the is liable, it would contribute to their mutual emolument, by taking that hare of trade out of the hands of our rivals, which we of this nation are not able to do at prefent, or rather to put both nations on a level in trade. Wherefore, ought not this to be a further motive to us to try every poffible meafure to accomplifh that defireable end? For the advantages thereby arifing to Ireland, would in a great meafure center in Britain, and add to the inrichment and ftrength of the united empire.

To leffen the public debts and taxes, we have fhown in the former difcourfe the indifpenfable neceffity of, as well to promote and extend the further commercial union between this kingdom and her plantations, as between us and Ireland. For when we fhall be able to fell our manufactures cheaper to our colonilts, they will the more readily decline every fpecies of fmuggling therein ; in which cafe, they will take larger quantities of Britifh manufactures; which will enable us to give them greater encouragement to fupply us with every fpecies of material, and every kind of production that they thall be capable to raife.

In order to advance thefe feveral commercial unions which we recommend, there is another kind of union that feems to be the fource, and indeed the grand bafis of all the reft: we mean a union between thofe British personages who are likely to be the rulers of the state, under his majefty's gracious choice and authority. This is a union at home amonglt ourfelves, of which we highly ftand in need; and which to our grief be it faid, that the beft of fovereigns has not enjoyed to his defireable content ever fince his reign, except jult at the commencement of it. To what caufes can this be attributed? 'Tis much to be feared, that our late divifions, diftrattions and animofities, that have fubfifted amongft the great people, have been owing to his majefty's having in his power too many favours to beftow. This may be a greater misfortune poffibly to the beit and wifeft of princes, in a free fate, than is commonly confidered; for if a monarch has lefs to beftow, he may have lefs follicitations for his liberality, and confequently there will be lefs ftruggling for the loaves and fifhes, than where he has more to give by lucrative places and penfions. This creates jealoufres and envy, and at length invidious cabals and intrigues amongtt the great folks, to fupplant each other in the favour of their fovereign.

Another reafon of thofe diffentions may be, that the road to pofts of truft, profit and honour, hath not always been made fo refpectable as could be wifhed; for when the prince is eternally diftracted with thofe perfonal intrigues, to gain them, it is impoffible for the beft intentioned monarch always to beftow them upon the moft deferving and the moft meritorious objects; whereby, oftentimes, the greateft places have been wrefted out of the prince's hands by objects the leaft deferving of them. Whereas, were there much fewer very profitable places in the gift of the crown, and were thofe filled only by fuch perfonages that had, in the opinion of all wife and good men, earned them by their meritorious fervices to the king and kingdom, where is the Briton that would exprefs his difpleafure at fuch choice? Would not the people have reafon to confide in the future behaviour of thofe, whofe advancement had been owing folely to their public and private virtues? Would not this render the people ever happy and contented as well as their monarch ?

Moreover, by cuftom, not reafon, it is ufual, when fovereigns have been, as it were, forced to beftow one great place upon a great bad man, and a very weak man, and this great man fhall have in his gift a fcore, or perhaps many more places belonging to his department, will fuch a great bad man beftow his fubordinate places, by whom the whole of the public bufinefs is oftentimes tranfacted, on good and able men? Will he not, on the contrary, beftow his liberality upon underftrapping wretches of the fame kidney with himfelf ? Perfons who fhall be ready to do every fpecies of dirty work their worthy patron fhall put them upon? And will not fuch people blood-fuck the public from fecret combination, to aggrandize themfelves at the expence of the nation? Will not this make the people feel the oppreflion of, and magnify every tax-burthen that is levied on them, far more grievoully than otherwife they would do? This has been another great fource of national difcontents.
What can be expected from the fale of places, but the purchafers will make the molt of them at the public expence? Has not this rendered the perquifites of offices fo exorbitantly great upon the public, that a petty clerk of 100 l. a year falary, fhall out-fpend the country gentleman of $500 \%$ per annum? Do not all fuch like burthens fall upon the public, and render every thing dearer and dearer in the kingdom?

Were there much fewer places in the difpofal of government, and thofe for life, beftowed on fuch only who had done fome diftinguifhed public fervice, the government and the nation would be well ferved. While alfo adminiftrations are eternally upon the change, who will accept of places as changeable as thofe of minifters themfelves? The glory and intereft of the ftate being thus made the certain road to preferment, what unfpeakable emolument might not the community expect from fuch policy? The whole nation would then become genuine patriots; nor would the public want a fucceffion of thofe who fhould ftudy the public profperity and happinefs.
What a univerfal emulation to ferve the nation would not fuch conduct in government create throughout the whole Britifh empire; as well within doors as without, when meritorious deeds were made the only way to obtain all places of truft, profit and honour? Intead of our moft gracious fovereign being eternally tormented by minifterial changes, cabals and intrigues, the prince would inftantly pitch upon fuch men for his minifters, who had themfelves done the greatelt public fervices? And would not fuch men ever have the voice of the people on their fide? Would not fuch a prince ever attach to himfelf the hearts and affections of his fubjects?

What way could be to effectual to unire the king with his peoplè, and the people with his minifters? There is, perhaps, no art of government that could do it to fuch good purpofe, as there is no furer method to extricate the nation out of every difficulty, as foon as any was tcen growing. Inftead of minifters being everlaftingly on the ftrecth to devile new taxes, we fhould have no occafion for them. Every head would then be at work to abolifh moft of the old ones, which we fhould foon be able to do, if due rewaris and honours were fure to attend the doing fo.
To bring a defign of this kind to the ultimate perfection, every man thould print any thing for the public fervice; and if his majelty maade his minifters, who had the moft public merit themfelves, judges thereof, no private man would be flamefully tricked out of the merit of his owñ labours by thofe who had none of their oun to boaft of. For that, in our happy days, is the common practice of the pretended patrons of private perfons. And have not many great men made themfelves greater by fuch detefiable perfidy, and increafed both their honours and eftates by fuch like nefarious pratices? Was this the cafe, private people then need not thance attendance and dependance upon the unworthy. They need only make their intentions public in print, and fend them to thofe, whom the wife and good prince fhould authorize to examine into their urility, and have their reward accordingly. And fuch who might not chufe their recompence by places of profit and honour, as miglt be the cafe of many advanced in years, fhould have it in money, for the benefit of their families. What honour would not the minitter deferve, who fhould advife the adoption of fuch a defign for the encouragement of public merit? What ineffable public advantages would not the ftate derive from fuch a wife inftitution? What glory would the prince obtain, who Ghould wifely countenance an eftabl:hmment of this kind, fo as not to be abufed? Might not this be inftrumental to call forth, or raife numbers of grear genii of every clafs and degree for the national fervice and fplendor? We fhould not then fee men of the firlt rate underftanding buried in obfcurity, lamenting their ill treatment received from fome superlative scaundrel of great dignity with his borrowed trappings, derived from the labours of those they have abused and deceived.
But while this nation fhall be unhappily diftratted by party cabals, only from mercenary and ambitious principles, we can never expect that any noble defigns will take root in the kingdom.

When difcord reigns amongtt thofe who ought to unite for the public fervice, the confequence is generally no lefs unhappy for the people than the prince: they will catch the flame of difcontent when kindled amongft their fuperiors; and has not that frequently terminated in infurrections and civil wars? The fmalleft things increafe by concord; by diford the greateft fall to the ground. Thofe, which being divided, were weak and impotent, when united refift any force whatever. Thefe have been reprefented in various fimilitudes. The many fold cord is not quickly broken. What arm can pull off the horfe's main, when the hairs fhall be well twitted, or break a bundle of arrows? And yet either of thefe, of itfelf, is unable to withftand the leaft violence. By emblems of this kind, Sertorius and Scilurus, the Scythian, expreffed the ftrength of concord, which of many diftinct parts make one united, and confequently ftrong body. All the works of nature are preferved by amity and concord; and when this fails, they decay and die. What is the caufe of death but the prevalence of difcord in the human body? The very fame happens in commonwealths; as common confent made them a fociety, fo a diffention between the greateft or moft powerful part diffolves again, and diffociates, or new models them. This divifion engenders hatred, whence revenge arifes, and from that a difrefpect to laws, without the authority of which, juftice lofes its efficacy; and where that fails, arms are taken up, and inteltine wars breaking out, the order of the ftate, wholly confifting in unity, is confounded. The bees no fooner fall out, but their commonwealth is deftroyed. If it has the fame effect between citizens, how will they be able to unite for the common defence and intereft ? Plato ufed to fay, nothing was fo pernicious to commonwealths as divifions. Concord is the wall and guard, no lefs than the ornament of ftates. Domeftic diffentions are fo many vietories for the enemy, as thofe formerly of the Britons were to the Romans, noftris illid difentionibus, $\mathcal{\text { difcordiis clari, vitia boftium in gloriam }}$ exercitus fui vertunt, fays Tacitus in vit. Agric. and elfewhere, converf/is ad civile bellum animis, externa fine cura babentur.
What differs from, and is at variance with itfelf, muft of neceffity fuffer, and what fuffers can never be lating. Who, when a republic is divided, can keep the flames of diffention within certain bounds? Who will afterwards quench it, when all are involved in them? For thefe, and fuch like reafons, ought not difcords to be nipped in the bud, and union encouraged in a ftate? And is not that eafily maintained, if none be advanced to places of truft and honour but thofe who fhall have deferved them, as well in the eye of the people as the prince? Where the equal diftribution of favours and gratuities are made amongft the meritorious, they will be a true fupport and aid to the good prince under the greateft difficulty and diftrefs. Under the adminiftration of fuch a monarch, the whole executive part of government will be faithfully oblerved; the laws duly obeyed and inforced; the induftrious poor duly kept to their honeft toil, by the encouragement of trade and commerce, and have corn and provifions cheap and plentiful; the nobility in government employed in arms and ufeful literature, will difcourage and ftifle cabals and clandeftine meetings to diftratt the flate ; the great ones will be kept frugal and modent, and the inferiors peacefully and univerfally contented; all which will conduce to a greater mediocrity in wealth, and a general poverty prevented amongft the mafs of the people. From the reformation and regulating of thofe things, refults good government; and where that is, there peace and concord ever flourifh.
There is but one cafe wherein it feems warrantable to kindle difcords in kingdoms; that is, when they are already troubled with feditions and inteftine broils; for then to diftract them into factions, will be a means to weaken the power of the bad, the only end in that being to render peace to the good. And it is a piece of felf-prefervation, not to fuffer difturbers to be at quiet, in as much as the concord of ill men is to the prejudice of the good; as it is to be wifhed that thefe may live peaceably, fo it is that thofe may be in dif-' cord; for good men and good fubjects always come by the worft, when bad men are united. Concordia malorum contraria eft bonorum, $\mathcal{E}$ ficut optandum eft, ut boni pacem babeant ad invicem, ita optandum eft, ut mali fint difordes. Impeditur cnim iter bonorum, f_ unitas non dividatur malorum.

When the fame thing is done occafionally between minitters, it may have its ure; fome kind of emulation and diffidence one of another, might make them more attentive to their duty; for if once through a neglect of this, they diffemble and conceal each others faults, or with one confent are fuffered to join the purfuit of their own interefts, there is as great danger to the prince as to the flate, without remedy; in that none can be employed but by their hands. But if a public firited and generous emulation to ferve the nation fhall degenerate into averfion and enmity, it will create the fame inconveniencies; for they will then be more intent on contradicting and thwarting one another, more follicitous to overthrow each others councils and aetions, than to promote the public good and their prince's fervice. Every one has his friends and creatures, and the common fort of people are apt to be led into factions; whence generally arife tumults and infurrections. For this reafon, Drufus and Germanicus joined themfelves, left the flame of diffention kindled in the palace of Tiberius, hould be increafed by the blaft of their favour.

The arts of fowing difcord, and procuring the rife of one minifter by the fall of others, are too much in ute in courts and palaces. They proceed from ambition; for rewards being alreaty divided, and there being no means to introduce new forms but by the corruption of others, they procure it by fcandal and violence. Sometimes 'tis the envy of one minifter towards another, for fome excellent qualifications, endeavouring to prevent his continuance in poft where they may become the more conficuous; or clle to ruin the repuration he has already acquired by falfe and inflammatory accufations: and when he cannot obfcure the truth, he fneers, jokes at, and ridicules it, under pretence of a kind of friendihip; that lofing his credit in things of fmall concern, he may afterwards gain it in things of greater moment. Such malicious fly tricks are at length ever pernicious to their author. Perniciem aliis, fays Tacitus, ac poftremum fibi invenere. Notwithftanding fays the fame hiftorian, Lucinus Proculus fucceeded well, by acculing others_-Ut cuique erat, criminando, quod facillimum failu eft, pravus $\mathcal{E}^{\circ}$ callidus, bonos $\mathcal{F}^{\circ}$ modeftos antiebat. This happens fometimes, when goodnefs and modefty are fo referved as to live privately, defifing the honours and favours of princes, as it befalls thofe, who, through dittrut of their own abilities, are thought unfit for the management of public affairs: fuch as thefe, affiduous malice, fuch as are intent upon gaining men's opinion, ealily robs of the due rewards of their virtue. But fuch artifices fall with the fame fpeed they rife; of which we have numerous examples in hiftory.

Whether this nation may be again upon the brink of a frelh war or no, we cannot be too early in our preparations for it. If our condition fhall not require it, for military purpofes, fuch proper preparation may be applied for the redrefs of other grievances. Occafions do not always happen as we could wifh; fometimes it is not in our power to retard or hatten them. It will, therefore, be the part of political prudence to conIfder, whether it is better to execute our refolutions with leifure or expedition; for that fome affairs require fpeed in their refolutions, others, time and mature confultation; and to offend on either hand, will be to the prejudice of the government. Confideration, when of worfe confequence than rafhnefs, is to be avoided. In fudden emergencies, counfels are better fnatched than dilatorily deliberated. Whatever time is fpent in deliberation, will either overcome the danger, or lofe the opportunity. The greatelt part of our deliberations are upon things already paft, and the counfel comes after the event. Our affairs run with fo much fwiftnefs, that counfel muft be fpeedy to purfue them; nay, even that will be too flow, it ought to be in readinefs to expect them. Our affairs, which allow time, fhould be tranfacted with maturity; for nothing is more oppofice to prudence than precipitation. Impetuoufnefs is feldom fucceffful, and examination and attention are confounded by it. Whence it is that hot rafh counfels almoft always pleafe at firft fight; are difficult in the execution; in the event oftentimes grievous, and the perfons who fuggeft them, though they may appear at firft daring, yet when they come to execute are at a ftand, being embroiled by their own counfels, for hafte is blind, and without forecaft.
The common people love to fee effects before they do caufes, and fo always condemn flow counfels; yet wife rulers will ever be proof againt thefe murmurings, which, upon fuccefs, will ever redound to their glory. Neverthelefs, delay muft not be fo great, as to let flip the opportunity of execution. This is a general error in imprudent cqunfellors, who, perplexed with the weight of affairs, can neither judge of the danger, nor come to any conclufion; whence they ftart at the leaft fhadow, and think by thefe doubts to pafs for profound ftatefmen. They fufpend their counfels, till time itfelf furnifh them; and then begin to refolve, when the opportunity is loft. Counfels, therefore, fhould be ripened, not hurried; for maturity errs neither in excefs nor defect of time, either in affairs of peace or war.

We have throughour thefe preliminary difcourfes given our humble fentiments, and we hope not without decency, upon what the writer apprehends to be the general caufes and cure of the chief of our public grievances; we mean more particularly thole relative to our commerce and our finances. He has done it with an honeft, and he flatters bimfelf not with an unbecoming zeal, for the true fervice of his king and country.

The general fyftem of our money affairs that he has cenfured, he attributes to no perfon in being; but he is of opinion, that it cannot be too foon rectified, the profperity of our whole commercial intereft depending upon a wifer regulation of the revenue upon folid commercial principles, not temporary expedients; which has been too much the cafe of this nation for thefe fifty years paft.

The further commercial union of Great Britain and her colonies upon the principles herein fuggefed, the writer judges to be a right meafure, and that there is a broad bottomed foundation laid to carry the fame to a very profperous extent; which will facilitate a reform in the money fyftem; and the former alfo expedite the more fuccefsful execution of the latter, the one being mutually helpful to the other.

The fketch here given of the new Proteftant commercial confederacy, is done with a view to anfwer the following purpofes. 1. To counterballance the power and Atrength of any Catholic compact or confederacy, to the difadvantage of the general caufe of Proteftantifm and the liberties of mankind. 2. That as the new conquefts annexed by the laft peace to the crown of Great Britain, render her more capable than the ever before was to promote the commercial interefts of all the Proteftant ftates, fhe propofes, to be at the head of the faid confederacy, to increafe their joint interefts by adding to their refpective territories more for that purpofe. 3. That a general confederacy now of all Proteftant powers, would prove an overmatch for any confederacy that could be made by the Catholic flates to oppole it. 4. That fuch a kind of Proteftant league might be perpetual, and ever ready to unite, for their joint advantage. 5. That fuch an alliance between Proteftant fares alone, would not be fo liable to be diffolved, as if any Catholic power was united therein. 6. That fuch a league may be naturally commenced firft between Great Britain and the United Provinces, upon the bafis of the filheries. 7. That the United Provinces would difcern their commercial advantage to be better and more laftingly advanced by the Proteftant confederacy, than by a neutrality in times of war between this kingdom and Popilh powers. 8. That it would be more beneficial to the Proteftant ftates than making temporary fublidiary treaties, either with this nation or any Catholic power. 9. That it would render the peace of Europe more lafting than it has generally, if ever been before. 10. That the liberty of the lefs opulent and powerful Proteftant ftates borrowing money wherewith to fupply their quotas of expence, will defeat any objection of inability to accede thereto. I I . That it will prove more likely to advance the trade and increafe the territories of any Proteftant power who fhould defire to extend both, or become a maritime flate. 12. That Spanifh, French and Portuguefe America would afford the confederates fuch acquifitions as would increafe the commerce and navigation of them all, wholly at the expence of the Catholic powers, and the more permanent increafe of the Proteftant intereft in the world. 13. That as Great Britain has now a conftitutional militia eftablifhed, fifty or fixty fail of men of war, and tranfforts, with thirty or forty thoufand of the confederated Proteftant troops encamped at the Ille of Wight, would be able to ravage the coafts of France, and defend thofe of the Proteftant ftates in Europe. 14. That the confederates, who were the belt fituated for the purpofe, might act in Germany, if needful, on one fide, and the States General, in conjunction with them, on the other, with far lefs additional expence than was ever done before, and with far more fuccefs againft the houfes of Bourbon and Auftria. 15. That great advantages are to be gained by a Proteftant con-
federacy, as well in Africa, Afia and America, as in Europe, to their mutual interelt. 16. That they may greatly increafe their commerce amongft each other in virtue of fuch a confederacy, and that at the expence of their opponents, by retaining all the conquefts made. And laftly, that a confederacy of this kind may be made inftrumental to keep Great Britain ever after from engaging in the manner the has hitherto done, fince the revolution, in wars upon the German continent, and thereby fave in future thofe millions of public debt, and thofe millions of tax-incumbrances, with which the is at prefent oppreffed.

A commercial confederacy firt begun between this kingdom and the United Provinces, might be prefumed to terminate in that general Proteftant one fuggelted by the writer at the commencement of the laft war; and might, probably, upon another taking place, enable Great Britain to raife the fupplies neceffary for her quota, within theyear, and prevent the contraction of any future public debts, or perpetual taxes. This was the writer's great aim in drawing up his Great Britain's True System to raife the fupplies within the year for the lalt war, by the aid of this new foreign Protefant fyftem. Had this been then done, the nation would have been lefs in debt than it now is by fixty millions of money, and have been lefs taxed than it is by two millions per annum at lealt.

Indeed, had a general Proteftant commercial confederacy taken place at the beginning of the laft war ; and had they, by means of their united force, made no more conquefts than they did, and ftipulated amongtt themfelves not to have given any territories up which they had taken from the enemies, not only Great Britain, but every other Proteftant ally, would have been greatly advantaged, as might eafily be made appear by their poffeffion of the Havanna amongft the confederates:

But allhough that has not proved the cafe, by the Proteltant confederacy being adopted, the nation may poffibly be compelled to embrace it, fhould another war foon take place. Should then fuch a confederacy take place, it might, and molt certainly would be productive of unfpeakably commercial advantages to the whole Proteftant intereft, as will be eafily difcerned, by any one, who has duly attended to what has been urged upon that head already, without faying more.

The advantages refulting to Protefant nations in general from fo extenfive a confederacy, will hardly be denied by men of impartiality; but it is to be apprehended, that too many fovereigns, imagining they fhall thereby be refcinded from the imperious pleafures of ditturbing the tranquillity of human kind, fo frequently as they could wifh to do, and of wafting the blood and treafure of eheir fabjects to fatisfy fanguinary refentments, and of acquiring of falfe glory by filling the world with terror and defolation, may renounce the calmer means of rendering their fubjects happy, where peace and abundance would long accompany their footfteps.

Whatever may be the inclinations of princes, it is more to be dreaded, that minifters will exert every effort to difappoint fuch a plan for the future tranquillity of Europe; becaufe, by removing the caufes of after contention, 植eymay lofe the power of working on the paffions of princes, and nothing remaining to be purtued but the prablic-interef, can no longer:acquite that powerfal afcendancy over them, which is generally obtained by daring to injure their native country, in obedience to the deftructive inclinations of their mafters; and which bear them on into immenfe riches and diftinguihed honours, for actions to which, in the eye of jufsice, the moft ignominious deaths are only due.

It is not unnatural to think, that the military exploits of the Greeks and Romans being rendered more indutrious by the writers of thofe nations than their legiflative intitutions, have, in a great meafure, contributed to ftamp on the deeds of arms, a fuperior worth to that of legiflation and found policy, and particularly on the minds of princes; but were it reflected on, how much the genius of a legiflator is fuperior to that of the nolt confummate general, how much more arduous the tafk of planning and perfetting government, is than that of defeating armies, that intellect and virtue can alone be equal to the former, arid cafualty may, and frequently does, give victory to inferior underftandings and vicious hearts: was this duly confidered, fovereigns might be induced to relinquilh the clamonous joy of triumph from the filent and feffapproving enjoyment of fpreading happinefs for many years on millions, and by that means the ambition of writing their renown in blood on half the plains of Europe, might yield to the long continuance of peace, by a wife eftablifhment thereof by the means propofed.

Would it not redound more eminently to a rovereign's immortal fame, to have it infribed on his tomb, Here lies the prince who firf exerted himfelf in eftablifhing a general Protestant confederacx, by whigh all Europe was rendered happier? than to have a fumptuous monument, adorned with trophies, and all the military inftruments of death, embellifhed with pompous infcriptions of thoufands flain, cities ranfacked, kingdoms laid waile, and empires ruined? Millions unborn; at the hour of thole eternal military atchievements, have fince deplored the ruin which was brought upon them by the lofs of thofe fathers who fell in victory; millions to come fhall feel the blifs and blefs that Proteftant power which gave long reft and happinefs to mankind in general, and tied the hands of the fanguinary powers of popery to root heretics from the face of the earth. The latter refemble the fupreme parent, the former the implacable deftroyer of man.

Happy will be that Protestant potentate, who fhall firt endeavour at the execution of a defign of this kind ; and when fo many fovereigns, friends to the felicity and the liberties of mankind in general thall unite in a congrefs for the unshaken establishment of the Protestant interest in the world; we may imagine that our prefent wife and beloved Britifh prince would chearfully be the foremolt in promoting this univerfal happinefs and long tranquillity, in freeing the fubjects of all Proteftant fates from being eternally liable to be involved in cares, impolts and oppreffion, in contriburing to extinguifh for many years the rage of war, and profufion of national treafure, in acquiring immortal glory by acts of public virtue, and delivering down a more permanent felicity to a people who may have reafon to blefs him through many fucceeding generations.

## To the $\quad \mathbf{P} \quad \mathbf{U} \quad \mathrm{B} \quad \mathrm{L} \quad \mathbf{I}$.

Mr . Postlethwayt, Author of this Dietionary of Trade and Commerce, offers his fervice to any young nobleman, or other perfons of quality, to initiate them into the national and parliamentary knowlege of trade and finances.
II. He draws memorials, petitions, or any other kind of representations, relative to trade or the revenur, eifher of a public or of a private nature, proper to be laid before the king in council, his majelty's ministers of state, or before the oreat boards, which concern the various departments of public bufinefs.
III. He gives his opinion upon commercial disputes between traders, and on complicated mercan? tile accounts of importance, which the parties may defire to adjuft in an amicable manner.
IV. He gives his advice to young merchants of diftinction privately, in any thing relative to their intereft or credit, wherein he may be judged of fervice, confiftent with his New Plan for a Mercantile College.
${ }^{*}{ }^{*}$ He offers his fervice in general to any gentleman to whom he may be prefumed to be of ufe, on Mon: days, Wednefdays and Fridays; from nine in the morning till three in the afternoon.

## TRADE and COMMERCE, Eic.

## A.

## A A M

## A B A

A,The firf letter of the alphabet, not only in the Englifh, but mof other languages. Merchants, bankers, and book-keepers ufe it, either alone, or followed by fome other initial letters, as an abridgment of certain terms in trade for faving time, and room in their journals, and other books of account.
Being fet alone, after mentioning a bill of exchange, A ftands for accepted; in French accounts A. S. P. fignifies, 'accepté fous proteft, i. e. accepted under protef.' A. S. P. C. ‘accepté fous proteft, pour mettre à compte; i. e. accepted under proteft, to be placed to account.' A. P. fignifies to proteft. Merchants commonly diftinguifh their fetts of accounts by the letters A, B, C, \&c. which anfwers the end of No. 1, 2, 3, 8 ce . in order to refer by thefe letters, from new fetts of books to the old, to certain articles which had their rife in the preceding books.
AAGGI-DOGGII, a Perfian word, fignifying " The bitter mountain.' It is fo called, on account of being a very dangerous paffage for the trading caravans, which travel into Perfia, and take their route of Conltantinople to Ifpahan. It is fituated a day's journey from Louri, on the frontiers of Perfia, near Chaouqueu.
When thefe caravans are arrived at the pafs of this mountain, all the camels and borfes are numbered, for each of which the caravan-bachi takes a duty, which he employs partly for the pay of foldiers that guard the caravans, and partly for other fmall charges: but he detains the greateft part for himfelf.
AAM, or HAAM, is a meafure of 4 ankers, or 2 ftekans, or 32 mingles, the mingle being of 2 pints of the meafure of Paris. 6 Aams make one ton of 4 hogfheads of Bourdeaux, each hoghead making at Amfterdam 12 ftekans, and 50 ftekans the ton, or 800 mingles of wine and lees; which amount to 1600 pints of Paris, and confequently the aam contains about 250 to 260 pints of Paris.
The aam is alfo a meafure which the Dutch ufe generally in the feven united provinces of the Low Countries; it agrees to that of the hoghead, barrel, or ton, provided the contents of each of thefe veffels be 128 mingles, which is a Dutch meafure alfo, ufed for liquids, and which weighs about 36 ounces avoir-dupois.
The Bourdeaux and Rhenifh wines, brandies, and the different forts of oils, are fold in the fame provinces by the aam. Mr. Savary is miffaken in faying, that the mingle makes two pints of Paris mealure, it making only one pint, and about $\frac{1}{x}$. His error was occafioned by Ricard's Treatife of the trade of Amfterdam, which he made ufe of, where in page 19 it is faid, that it is divided into two pints. Mr. Ricard, not having explained what pint he meant, occafions foreigners to miftake him; it is the Englifh pint that he intended, which makes a little more than the balf pint of Paris, whofe difference is not above half an ounce; for the Paris pint, filled with common water, weighs 3 r ounces, and that of England
Vol. I.

16 ounces. According to this, the aam, filled with common water, weighs 288 pounds, and makes of Paris pints $148 \frac{2}{2}$, and not 250 , to 26 C , as Mr. Savary fays: it makes in Englih pints the fame number as that of pounds, viz. 288 pints, the Englifh pint of water being a pound.
From hence it is plain, that the mingle makes more than two Englifh pints, by about four ounces; but retail traders in the Came provinces make ufe of the divifion of two pints, as Monf. Ricard lays, by way of obtaining gaod meafure.
Laftly, the aam of oil, among the retail traders, is reckoned no more than 120 mingles, by reafon of the wafte to which it is liable.
ABACA, a kind of flax or hemp, gathered in fome of the Manillas or Pbilippine illands.
There are two forts of it, the white and the grey. This plant is a fort of Indian plantane, which is fown every year, and, being gathered, it is feeped in water, and beaten as hemp is. The white abaca ferves for making very fine linnen; but the grey is employed for nothing but cordage.
ABAGI. See Abassi.
The abagi (which feems to be the fame thing as the abaff, although of different value) is worth at Tefflis, and throughout all Georgia, about 36 fols French money; four chaouris, which are alfo called fains, make one abagi. An ufalton is worth half an abagi, or two chaouris. Forty afpers, or carbequis, make one abagi. Finally, the fequin of Venice is worth fix abagis, or three chaouris.
ABASSI, a filver coin in Perfia, in figure and fize very much like the ancient pieces of fifteen fols in France. The abaffi takes its name from Shah-Abas II. king of Perfia, who ordered the coinage of it. It has on one fide, for legend, the profeffion of the Mahometan faith, s There is no God but God, and Mahomet is his prophet;' and on the other the king's name, and that of the city where it was coined.
This coin, which has a great currency in Perfia, is worth two mammoudis or four chayes; the chaye being eftimated at the rate of nine fols fix deniers of French money, makes the abaffi worth thirty-eight fols, or feventeen fols of Holland. They have alfo pieces of five abalfis, in value nine livere, and from twelve to thirteen French fols; and likewife pieces of two abaffis, which are in value one half of the former. Of thefe they coin but few, and they are fcarce current in commerce, being commonly accounted a fort of pocketpieces. The pieces of five abaffis are round, a little thicker and larger than a French crown, and the half of thefe in proportion.
In trade, both at Ifpahan and in the reft of Perfia, the filver coin paffes by weight, not by tale: the bags contain 50 tomans, which make 2500 abaffis: they are weighed by weights of one toman, or fifty abaffis each. If they furpect that there are any light or counterfeit pieces, they difcover them by weighing 25 of them againft 25 , and fo on.

## A B E

ABATELEMENT, a term ufed by the French in the ports of the Levant, fignifying a fentence of the conful, which imports a prohibition of commerce to all merchants and traders of the French nation, who will not ftand to their bargains, or who refufe to pay their debts. This prohibition is lo levere, that thofe againft whom it is iffued, are not fuffered to fue any perfon for the payment of their debts, till they have made fatisfaction, according to the conful's fentence, and have got the abatelement taken off, by the execution of its full contents. ABATEMENT, otherwile REBATE, a term in uie among traders, for a difcount or abatement in the price of certain commodities, when the buyer advances the fum directly, for which be might have taken time.
As traders are not always inclined to pay ready money, an abatement or deduction of fo much per cent. per ann. has been devifed to induce them thereto, that they may take the advantage of the cuftomary difcount.
'Tis alfo the practice of feveral great trading companies in foreign countries, to allow difcount for payment of ready money, and of that of the Englifh Eatt-India company in particular, to allow 6 per cent. to the buyer for prompt payment, as it is termed.
Abatement. It fometimes happens, that goods upon delivery at the cuftom houfe are found to have received damage. In this cafe, the furveyor and landwaiter are to make their report on the back of the warrant, and return it to the collector and principal officers; who are then to chufe two indifferent and experienced merchants to view the goods, and upon oath to determine the quantum of the damage. Then the furveyor and landwaiter certify, that the goods viewed by the merchants are the fame for which duty was paid: whereupon a certificate of the whole proceedings is made out, and a proportional abatement of the duty is made, and repaid to the merchant upon his figning the receipt.
ABB , fo the clothiers call the yarn of a weaver's warp. They alfo fay abb-wool in the fame fenfe.
ABBAASIES, a filver coin current in Perfia. See Abassi.
ABEL-MOSC, which the French call ambrette, or graine de mufc, (mufk-feed) is the feed of a plant growing in Egypt, and in the Antille iflands, having greenifh and velvet leaves, very much refembling thofe of the marlh-mallows; for which realon the modern botanifts have given it the name of the velvet marh-mallow of the Indies. The feed is fcarce bigger than a very large pin's head, formed like a fmall kidney, of a gre ifb coluur, and, as it were, hagreened on the upper fide, of a fcent like a compound of amber and mufk. Its principal ufe is in the compofition of fome perfumes, with which it is difficult to incorporate, without knowing how to manage it. The Italian perfumers ufe a great deal of it; and in France the nuns and pater-nofler makers ufe it to make chaplets, or bead-ftrings. This piant is ftiled by Monfieur Tournefort, ' ketmia Ægyptiaca, femine mofchato, Egyptian ketmia, with feeds imeling like mufk;' and the ingenious Mr. Miller (Gardener's Dictionary, obferves, that it is commonly called mufk-feed in the Weft-Indies.
The ambrette of Martinico is the beft of all. It ought to be chofen new, plump, dry, neat, and of a good fcent.
ABERDEENSHIRE, in Scotland, is bounded on the fouth with part of Angus and Merns, or rather with the river Dee and the Grandibain mountains; with part of Bamf on the north-welt; part of Murray on the north; the German ocean on the eaft ; and the river Spey and part of Badenoch on the weft. The chief places of trade in Aberdeenfire are,

1. Aberdeen, one of the principal cities in this thire; there are two towns or cities of that name, the old and the new; the old lies about a mile northward from the new, and is fituated in the mouth of the river Don, which is remarkable for its extraordinary plenty of falmon and perch.
2. New Aberdeen is fituated at the mouth of the river Dee It exceeds all the cities in the north of Scotland for largenefs and beauty. It fands in a fine air, and has a great revenue arifing from its falmon fifhery. The adjoining fea not only furnithes them with plenty of fifh, but reproaches them with their negligence, when they fee the Dutch fleets perpetually fifhing on their coafts, to very great advantage : but it has been till lately the humour of the inhabitants to apply themfelves chiefly to the falmon-fining, and to neglect that of all other forts.
The quantity of falmon and perch, taken in both rivers, is a kind of prodigy. The proprietors are united into a company, there being fo many fhares, of which no perfon can enjoy above one at a time. The profits are very confiderable, the falmon being fent abroad into different parts of the world, particularly into England, France, the Baltic, and feveral other part:-
The herring fifhing is a common bleffing to all this thore of Scotland, and is like the treafure of the Indies at their door, were it properly ufed by the Scots in general : by this, however, the merchants of Aberdeen are enabled to carry on a trade to Dantzick and Koningberg, Riga and Narva, Wybourg and Stockholm.
They have alfo a very good manufacture of linnen, and worfted flockings, which they fend to England in great quantiEtes. They make fome fo fine as to be fold from 14 to $3^{\circ}$

## A B E

thillings a pair. They alfo fend them over to Holland, and into the north and eaft feas, in great quantities; yet the poor who knit them, if they get two pence fterling a day, think they make a good day's work.
They have a great exportation of pickled pork, packed up in barrels, which they fend chiefly to the Dutch for vietualling their Eaft-India thips, and their men of war, the Aberdeen pork having the reputation of being the beft cured, for keeping on long voyages, of any in Europe.
They alfo export corn and meal; but they generally bring it from the Firth of Murray, or Cromarty, the corn coming from about Inverntfs, where they have great plenty.
The people of Aberdeen are inded univerfal merchants, fo far as the trade of the northern part of the world will extend; and it may be juftly efteemed the third city in Scotland; that is to fay, next after Edinburgh and Glafgow.
Peteriead, in this fhire, on the fouth fide of the water of Ugie, is a fea-port of confiderable trade, and has a bay or road that will contain 100 fail of hhips with good riding in 8 or 9 fathoms. 'Tis high water here when the moon is directly fouth.
4. Strathbogy, in this Thire, is fruitful in corn and paftures has black cattle, fheep, and horles for exportation; and is remarkable for its fine linnen yarn, fpun here by the women, and fold to the merchants.

REMARKs.
The trade of Scotland, particularly the linnen manufacture, being at a very low ebb, before the year 1725, the royal boroughs, who are the guardians of the trade of Scotland, took under their confideration the ftate of their trade and manufactures, in their general annúal convention, held at Edinburgh, in July 1725, and in feveral fublequent meetings of their grand annual committee in that year.
The fociety alfo for the improvement of agriculture, and many perfons well ikilled in trade and manufactures, formed propofals and fchemes for encouraging the manufactures and filheries: the refult of which was, that, in their meeting of February $1725-6$, they refolved to addrefs his majefty, to have the monies, fettled by law for the encouraging of their manufactures applied for that purpofe, in fuch a manner, as that all mifapplication might be prevented.
The effect of this was, that his late majefty was gracioully pleafed to write the following letter to the royal boroughs, which was prefented to the convention by his majefty's advocate, upon the 6th of July i $7^{26}$, and has had very happy confequences in regard to their manufactures in general ever fince.

## Superfcribed GEORGER.

Trufty and well beloved, we greet you well. We having obferved, that the feveral fums of money referved and provided by the treaty of union, and by divers acts of parliament, to be employed for the improvement of fifheries and manufactures in Scotland, have not hitherto been applied to the ufes for which they were intended; principally, becaufe no particular plan or method hath been concerted, directing the manner in which thefe fums thould be applied for the faid purpofes. And being defirous to remove that hindrance, as fpeedily as may be, we have thought good to recommend to you, that, at your firft general meeting in the month of July next, you do take into your confideration the fitate of the faid fitheries and manufactures, and of the monies provided for encouraging the fame; and that by yourfelves, or by committees of your number, you do devife and propofe the particular methods, rules, and regulations, which to you Chall feem the moft proper, for the application of the faid fums towards the encouraging and promoting fifheries, and fuch other manufactures and improvements in Scotland, as fhall moft conduce to the general good of the united kingdoms; and that you do return to us the propofitions in which you fhall have agreed, to the end, that, upon due confideration thereof, a certain method may be fettled for thr application and management of thefe fums for the future. he welfare of our loving people of Scotland, and the prolperity of the royal boroughs, is fo much concerned in what we recommend to you, that we doubt not you will go on in the execution of what is expected from you, with the utmon diligence, unanimity, and impartiality : and, on our part, we affure you of our countenance and encouragement in what you fhall propofe for the real good of your country, confift ent with the general intereft of our united kingdom, \&c.

Holles Newcastie.
In confequence of this lecter from the throne, the convention agreed upon an anfwer, wherein they expreffed their joy and gratitude to bis majefty, for his tender concern for the welfare of Scotland; which filled the hearts of the molt knowing people, with great gratitude and loyalty, and animated them zealoufly to exert themfelves to obtain feveral acts of parliament for regulating their linnen manufacture, and promoting the fifheries in general of this part of the united kingdom. Fnd, fince this period of time, the linnen manufactures of Scolland have arofe to a very extraordinary perfuction; and 'tis now to be moft ardently wilhed and de-

9
fired,

## A B R

A 5 Y
fired, that their finheries will meet with fuch fuccefs and profperity, as to employ numberlefs of the diftrefled poor, and prove as good a nurfery for our Britifh feamen as the coal trade has been.
The reafon for taking notice of his late majefty's regard to the improvement of the Scots manufactures and fifheries, is with a view to oblerve, what great and happy effects proceed from proper encouragement being given by authority to any particular branch of trade. The commiffioners and truftees appointed in Scotland, in confequence hereof, for the care of their trade, were fo affected with his majefty's tender concern for their profperity, that they beftowed their time and attendance upon the fervice of the public, without fee or reward. Their meetings were frequent and regular. Every federunt manifefted, that their fervice was of great ufe and importance to their country, by contributing greatly to advance the improvement and extenfion of their fifheries and manufactures of every kind. Numberlefs letters were received by their fecretary from every corner of their country, for the folution of doubts and queftions, and as petitions and applications for encouragement of various kinds upon different branches of trade; allo memorials and complaints of abufes, defects, flovenly and unprofitable practices in the management of many parts of their manufacture, and propofals of improvements, and of the moff frugal and expeditious methods of carrying on feveral branches of trade to the beft advantage. Thefe the commiffioners duly weighed, and gave full fatisfaction thereto by regular anfwers, according to the beft information they could poffibly receive. And fuch have been the good effects of this correfpondence, and zeal for the intereft of trade fince, that we may truly fay, that the whole face of Scotiand is changed. But, under thi. head of Scotland, we fhall reprefent the general ftate of the trade of that part of the united kingdom, as we falll the particular branches carried on in the feveral fbires or counties.
ABLAQUE, as la foye Ablaque, or Ablaque filk, is the Ardaffine filk, which comes from Perfia by the way of Smyrna. It is very beautiful, and hardly inferior in finenefs to the Sourbaftis. It is but little ufed, however, in the manufactures of filk ftuffs made at Lyons and Tours, becaufe it will not bear hot water in the winding. The French have given it the name of Ablaque filk.
ABORTIVE VELLUM, is made of the fkin of an abortive calf. See Vellum.
ABOUCOUCHOU, a fort of woollen cloth made in France, particularly in Provence, Languedoc, and Dauphine, defigned for Egypt. See the article Cloth, where mention is made of thofe that are fent to the Levant by the way of Marfeilles.
ABRA, a filver coin in Poland, worth from 24 to 25 French fols. The abra is current at Conftantinople, and in all the dominions of the Grand Seignior: it is received there upon the foot of one fourth of the aflani, or Holland's dollar. See Aslani.
ABRIDGMENT, a fummary or contraction of a writing, \&c. wherein the lefs material things being omitted, or more briefly mentiuned, the whole is brought into a leffer compafs. ABROHANI, or MALLEMOLLE, the name of a certain muflin, or clear, white, fine cotton-cloth, brought from the Eaft Indies, and particularly from Bengal, being in length 16 French ells and 3 quarters, and in breadth five eighths. ABRUZZO, a province in the kingdom of Naples in Italy. It is divided into two parts; the one called the Farther Abruzzo, the other the Nigher Abruzzo. The former of thefe is bounded on the north-weft, by the Marca d'Ancona; on the fouth-weft, by Sabina and Campagnia de Roma; on the fouth-eaft, by the Nigher Abruzzo; and on the northeaft, by the Adriatic fea.
This country is cold and mountainous, being crofled by the Apennines; yet is fertile in grain, fruits, and efpecially in faffron; and breeds great quantities of beafts both wild and tame. It is healthy, plealant, and well inhabited, and the people are induftrious, given to traffic, and fome manufactures, particularly the woollen.
The Nigher Abruzzo, is more mountainous and cold than the other, and yet is far from being fo healthy as that. The rivers of it are the Lenta, Foro, Moro, Feltrino, Sangro, Afignella, and Irigno. The country watered by them produces great plenty of corn, rice, wines, fruit, and efpecially faf fron; but here are many large woods, that thelter great number of wolves, bears, and other wild creatures, which oblige travellers to go always in troops and well armed: which prevents improvements in trade.
Ortona al Mare, in this province, fo called to difinguifh it from Ortona di Marfi in the fame province, is an ancient town belonging to the Frentani, and fituate on the Adriatic gulph, between the rivers of Foro and Moro. It had formerly a convenient and fafe harbour for fhipping, but is now thinly inhabited and little frequented, becaufe the Venetians fpoiled the haven.

Remark.
We may here obferve, that, in places where there is no trade, they are hardly worth taking notice of, unlefs to ma nifeft the neceflity of cultivation in our own country, whereever it appears practicable.

ABUCCO, ABOCCO, or ABOCCHI, a weight uted in th: kingdom of Pegu. One abucco is twelve teccalis and a halt two abuccos make an agiro, which is alfo called giros tue giri make half a biza, and the biza weighs too teccalis; that is to fay, 2 pounds 5 ounces the heavy weipht, or 3 pounds 4 ounces lightr weight of Venice. See Venice for its weights, 8 -ic. ABUKESB, or AhSLANL. See Aslani.
ABYSSINIA, or upper Ethiopia, is bounded on the north by Nubia or Sennar. On the eaft it had formerly the Red Sea, and the coalt of Abex; on the fouth by Alaba, fendero, or Gingiro, as the Portuguefe write it; on the weff by the ris ver Maleg, which falls into the Nile, and by this lat quite to the boundary of Nubia. For the more tedious difputable defcriptions with refpect to its boundarits, we refer to thofe who bave profeffedly written thereon; our view being only to take a furvey of what commerce they have, and this is very trifing for fo extenfive a kingdom.

> REMARKKS.

Trade and manufactures are wholly wanting here; and, tho their way of living makes then need the fewer, yet even thofe that are moft neceffary, they are fupplied with by the Jews; fuch as weaving fluffs for drefs, and forging heads for their lances, \&c. They bave a natural averfion for all fmiths, as people that deal in fire, and live in a kind of hell as they conceive of it; and yet their princes are not infenfible of the great advantages a plenty of all forts of trades would be to their dominions, though they dare not, it feems, force their fubjects to what they would deem an infuptortable flavery; witnefs the letter, which David one of their monarchs, fent to Joha III. of Portugal, wherein he defired him to fend over to him fome printers, armourers, cutlers, phyficians, furgeons, architects, carpenters, mafons, goldfmiths, miners, bricklayers, and jewellers.
They feem indeed by their churches, and other ruinated places, to have heretofore encouraged architecture. But the workmen were fent for from other countries, and were forced to do all themelves; fo that when thefe fabrics were reared, efpecially the imperial palace built ty Peter Pais, a Poituguefe architect, the people flocked from all parts of Ethiopia to view it, and admired it as a new wonder of the world. However, thefe occupations which they have among them, are always conveyed from the father to the children.
Gold, filver, copper, and iron, are the principal ores with which their mines abound in this extenfive part of Africa; but not above one third part is made ufe of by way of merchandize, or converted into money; of which they have little or no ufe in Abyffinia. They cut their gold indeed into fmall pieces for the pay of their troops, and for expences of the court, which is a pretty modern cuftom among them; the king's gold, before the end of the feventeenth century, being laid up in his treafury in ingots, with intent never to be carried out, or never ufed in any thing but veffels, and trinkets for the fervice of the palace.
In the lieu of fmall money, they make ufe of rock falt as white as fnow, and as hard as a ftone. This is taken out of the mountain of Lafta, and put inco the king's warehoufes; where it is reduced into tablets of a foot long, and three inches broad, ten of which are worth about a French rrown. When they are circulated in trade, they are reduced fill into fmaller pieces, as occafion requires. T:is falt is alfo applied to the fame purpofe as common fea fatt.
This falt is fold, as it were, weight for weight for gold. With this mineral falt the Ethiopians purchafe pepper, fices, and filk ftuffs, which are brought to them by the Indians, in their ports in the Red Sea.
Cardamums, ginger, aloes, myrrh, callia, civer, ebonywood, ivory, wax, honey, cotton and linnens of various forts and colours, are merchandizes which may be had from Abyffinia; to which may be added fugar, hemp, flax, and excellent wines, if thefe people had the art of preparing them.
It has been thought, that the coffee-berry was originally tranfplanted from Ethiopia into Arabia, from whence a great quantity is brought: but this is uncertain, as there are no figns of it among them at prefent.
'Tis affirmed by good hifforians, there are in this country the fineft emeralds that are any where to befound; and, tho ${ }^{*}$ they are found but in one place, they are there in grear quantities, and fome fo large and fo perfect, that they are ineftimable in value. Alfo on the iflands near Argua (which for that reafon the Turks keep a garifon at) they find very rood bright pearls, and very large, fome of which are of the fineft colour.
The greatelt part of the merchandizes, whereof we have fooken, are mure for foreign than inland trade. 1 heir domeftic commerce confifts chiehy in falt, honey, buck-wheat, grey peare, citrons, oranges, lemons, and other provinions, with fruits and herbage neceflary for the fupport of life.
Thofe places that the Abyffinian merchants frequent the moft, who dare venture to carry their commodities by fea themfelves, are the Arabia happy, and the Indies, particulenly thofe of Goa, Cambaye, Bengal and Sumatra.
With regard to their ports on the Red Sea, to which foreign merchants commonly refort, the moft confiderable are thofe

## A C A

of Mette, Azum, Zajalla, Maga, Dazo, Patea, and Brava. They bad formerly Ercocco and Quaqueu; but the Turks ruined thefe ports towards the middle of the feventeenth century, and with them others of their maritime cities.
The trade of the Abyffinians by land is inconfiderable. There are, however, bands of Abyffinians who arrive yearly at Egypt, particularly at Cairo, laden with gold duft, which hey bring to barter for the merchandizes of that country, or of Europe, for which they have occafion.
Thefe cafilas or caravans, if we may be allowed thus to call a body of 40 or 50 poor wretches, who unite together for their mutual affiftance in their journey, are commonly three or four months on their route, traverfing forefts and mountains almoft impaflable, in order to exchange their gold for neceflaries for their families, and return immediately with the reateft part of the merchandize on their backs. Sometimes the Jews or the Egyptians will give them credit.
'Tis extraordinary that thefe merchants Chould give thefe poor wretches credit, againft whom they have no recourfe, if they fail of payment. But experience bas fhewn, that they have never abufed the confidence repofed in them, not even on account of their death; for, if that happens, their fellowtravellers take care of the effects of the deceafed, for the benefit of their families, and in order therewith to difcharge thofe debts contracted at Cairo.
Other nations with whom the Abyflinians carry on trade by land, are the inhabitants of the kingdom of Adel, the Turks who are now mafters of Ercocco and Quaqueu, the Melendians, the people of Mofambique, and the Portuguefe who are fettled upon thofe coafts.
Before we conclude, it fhould be remembered, that one of the principal branches of trade of thefe people, is that of flaves, who are greatly efteemed in the Indies and Arabia for the beft, and the moft faithful of all that the other kingdoms of Africa furnilh. The Indian and Arabian merchants frequently fubftitute them as their factors; and, on account of their good fervices and integrity, not only often give them their liberty, but liberally reward them.
Though the productions and populoufnefs of this part of the world, would admit of a furprizing improvement in general commerce with the Europeans ; yet it is as little cultivated here, as in any other parts of Africa. See Africa, and its feveral divifions from that general head.
ACACIA is, according to Pomet, the fruit, or rather the feeds of a yellow fruit inclining to red, of the fize of a magdalenpear, or lefs than that of an orange. The tree which bears thefe, is, according to the Sieur Rouffeau's letter, 5 or 6 feet high, adorned with leaves of a yellowifh green, and fomething of the fhape of ivy. The flowers are fmall, and grow in tufts, of a carnation colour; from whence comes a yellow fruit, or feed, of the bignefs of a chernut, of the mape of a kidney, and of an olive colour, covered with a nut or ftone, wherein is a white almond, which, after it has been roafted like a chefnut in the fire, is pleafant to eat.
The Americans cut the yellow fruit in flices, and eat it in the manner we do a China orange, as well to revive the firits, as to cool them, becaufe they are full of a well- tafted juice. You muft chufe fuch as are large and new, of an olive colour, with white kernels, which are the certain figns they are frefh; and not of a chefnut colour, which is a fign of their being old and over-ripe.
ACACIA VERA is, according to many authors, the thickened juice of a large tree, growing in Egypt and Arabia, whofe bloffom is white and purgative, and which is all over thorny, except its trunk. From this tree it is, as fome other authors pretend, that the gum arabic illues. However that be, for the opinion of both has but a flender foundation, this thickened juice, from what tree foever it is produced, comes from the Levant, in round balls of different fizes, wrapped up in very thin bladders.
The acacia vera, to be good, ought to be full ripe, of a tan colour, of a reddih brown, fmooth and thining, and of a fyptic and fomething difagreeable tafte. This drug is ufed in the compofition of Venice treacle.
ACACIA GERMANICA, or German Acacia, is a counterfeit drug, made of the juice of floes, or wild plums, which grow upon the black-thorn; that juice is boiled afterwards to a folid confiftence, and put into bladders like the true acacia, which comes from Egypt. But neverthelefs it is fcarce poffible to be miftaken in it; the acacia vera being of a reddifh tan colour, and the acacia Germanica as black as common Spanifh liquorice. Lemery fays, the true acacia is made by expreffion out of the fruit, and that either ripe, or unripe. From the ripe fruit there is a black juice: from the unripe fruit a red or yellowifh juice, the colour not fo black, but more inclining to red, and of a fweer feent. This; he adds, is the true acacia of Diofcorides, which is to be ufed in making Venice treacle.
ACAJOU, is the fruit, or rather the feed of a tree, growing in the Antille illands, and in many places of the continent of America, and efpecially in Brafil.
There are three kinds of trees which bear this name, but there is but one of them that produces fruit. The fruit bearing acajou is a tree of a middling fize, with branches that in-

A C A
cline very much downward. Its leaves are broad and fircaked with many veins, and round at the end, The bloffoms, which grow in clufters, and are of a very agreeable fmell, are white, when they firf open, and afterwards of a carnation and purple colour. Its fruit is of the form of an apple fomewhat oblong, covered with a thin rind of a lively red and crowned with a kind of creft of an olive colour. In the infide are fpungy filaments, which yield a juice between fweet and four, very good for quenching the thirf, and againft fainting fits, when mixed with fugar, The Indians make a liquor of it, which will inebriate like wine; and laftly, the ftone or feed, which is what the druggifts and grocers at Paris fell under the name of acajou, is a kind of chefnut in the form of a hare's liver, within which there is a kernel, and that being peeled is an excellent ftomachic.
The acajou nuts fhould be chofen freih, and of an olive colour. When incifions are made in the acajou tree, it emits a clear tranfparent gum, very like the gum arabic.
The Chevalier des Marchais, in his Voyage de Guinée, Tom 11I. p. 266, fays,
That there are two kinds of acajou; the firft is that to which the Spaniards have given the name of cedar, on account of the fcent of its wood, though in reality it differs as much from the cedar, as the cedar does from the apple-tres. The fecond kind has retained throughout all America, the name which the Indians of all nations have given it, with fo little difference from each other, that it is plainly known to be the fame in all their idioms. This tree is fo common, that there are whole forefts of it in Brafil and Guiana. The Portuguefe have no remedy more fure for curing their negroes of a pain in the ftomach, which is a kind of dropfy, than to leave them to themfelves, in places abounding with thefe trees. Hunger preffing thofe poor wretches, and they not finding any other food but the fruit of the acajou, they glut themfelves with it; and the fruit foon cutting the noxious humours, that occafion the diftemper, thele dropfical flaves, who were fearce able to ftir, are feen in a fhort time running like ftags, and in a wonderful fate of health.
The nut, which the fruit bears at its extremity, contains in the fhell an oil, which is the more fbarp and biting, the lefs ripe it is. This oil is however of a wonderful ufe, in drying up and cleanfing the oldeft ulcers, and all other difeafes of the fkin; and alfo for killing thofe dangerous infects that get under the toe-nails, and into the wrinkles of the fkin, where they occafion ulcers that are frequently incurable. The Portuguefe call them bichos, the Spaniards niguas, and the French chiques.
In proportion as the fruit ripens, the fharpnefs of the oil decreales; but there always remains more than enough to make the tongue and gums of thofe fmart, who are fo imprudent as to crack that nut with their teeth.
There is no occafion to extract this oil in the country where the fruit grows, in order to bring it to Europe; it being fufficient to fend the nuts thither. Though they be never fo ftale, they always retain oil enough. In order to extract it, the nut muft be fplit, and its pieces laid upon burning charcoal. The oil, which is contained between the two coats of the fhell, comes out as foon as it feels the fire : it is collected with a little cotton, and applied to the ufes mentioned above. The kernel contained in this thell is white, folid, delicate, and of a better tafte than the beft almonds, and is much like that in the flone of a pine apple. Thele nuts are eaten raw when frefh gathered, after having been fteeped for a fhort time in water, with a little falt : many like them better roafted. In order to that, the fhell is a little broke, and laid for a moment on the coals: it then opens of itfelf, the kernel is taken out, and a little browa fkin, that coversit, being peeled off, it is then of à delicious tafte. Thefe. nuts will keep many years, and fcarce lofe any thing of their goodnefs. The Indians fet fo great value upon the fruit of the acajou, and the nut that adheres to it, that they oiten make war with each other, for the crop of this fruit, which in Guiana is ripe in the months of December, January and February.
This fruit is of the form of an apple. The fkin is thin and fmooth, of a fine red on the fide next to the fun, and of a gold colour on the oppofite fide. Their fmell is fweet, agreeable, and comforting. Their fubftance is entively fpungy, and full of an exceeding tart and nyptic liquor, before the fruit is ripe; but fweet, pleafint, and wholefome, when it has attained its maturity. They refrefh and exhilarate; and, though they are a little binding, yet they wonderfully provoke urine.
They make a tart and pleafant wine of it, which is heady, kept two or three days; after which it turns into a very fharp vinegar. People of fkill might make a wine of it, that would keep longer : fome have caufed the juice of the acajou fruit to be diftilled, which bas produced a very ftrong fpirit. This tree, during the great heats, emits lumps of gum, of an amber colour, hard and friable, or apt to crumble. 'The Indians diffolve it in water, and give it with fuccefs to women troubled with hyfteric diforders, or their periodic maladies. This gum has little or no feent.
ACANTHUS, otherwife called branca urfina, or bear'sbreech, is a plant ufed in medicine. Its leaves afe fomewhat
like thofe of the thifle; the flowers are labiated ; the under lip of the flower is divided into three fegments, which in the beginning is curled up in form of a fhort tube: in the place of the upper lip are produced the ftamina or feeds, which fupport the pointals: the cup of the flower is compoled of leaves which are prickly; the upper part of which is bent over like an arch, and fupplies the defect of the upper lip of the flower. The fruit is of an oval form, and is divided in the middle into two cells, each containing one fingle fmooth feed.
There are four fpecies of this plant known, viz. 1. Acanthus fativus, vel mollis Virgilii. The fmoothleaved garden bear's.breech. This is the fort ufed in medicine, and fuppofed to be the mollis acanthus of Virgil. 2 Acanthus aculeatus, the prickly bear's breech. 3. Acanthus rarioribus \& brevioribus aculeis munitus, the middle bear's-breech, with fhort fpines. 4. Acanthus Lufitanicus, ampliffimo folio lucido, the Portugal bear's-breech, with large fhining leaves. All thefe plants are eafly propagated by parting their roots' in February or March, or by feeds fown at the fame time.
ACAPALTI, a plant of New Spain or Mexico, that bears the long pepper. Its trunk grows winding like that of the vine, and has leaves upion it like thofe of white pepper, but longer and more pointed, of a very frong fcent, and a hot and Charp tafte. The fruit is round, and from two to three inches long, of a pretty red colour, when ic is near its maturity; which it can never attain entirely on the plant; fo that it is neceflary to gather it, as foon as it begins to redden, in order to compleat its ripening in the fun.
This pepper is eaten either green or dried, and both ways gives a very high relifh to meat, provided, that, after feafoning therewith, it be not put again to the fire ; in which cafe it lofes part of its tafte and itrength.
ACAPULCO, a port town in America, fituate in Mexico, on a large bay of the South-Sea, from whence a rich thip has been faid to fail annually to Manilla in the Philippine Illands, near the coaft of China, in Afia; and another returns annually from thence to Acapulco, laden with a great treafure from the Eaft-Indies. One of thofe rich fhips loaden with filver, and bound from Acapulco to Manilla, was taken by the late Lord Anfon.

REMA亩Ks.
It is a great, though general miftake, that the Spaniards employ but two hips to Manilla, whereof one goes and one returns every year; for they fend out two ilhips or galleons, and receive back two every year. Sometimes indeed it happens that they come not back till two years, but that is ex traordinary and by accident. The burthen or cargo which thefe thips carry is very great; the ordinary loading, befides their guns and fores, being 1000 to 1100 ton each : and they had one many years which carried 1600 ton.
Thofe Manilla fhips are always full loaden outwards with European goods, befides the filver, and bring back likewife a full loading of all forts of Eaft-India and China goods; and all thefe goods, both out and home, except what are fent fouthward to Panama and Lima, are carried by land carriage from and to Mexico, which is about 240 miles: and thefe goods by computation, befides what may go to Lima and that way, cannot be lefs than 4000 ton in weight, that is 2000 ton one way, and 2000 ton the other, and this encreafes the trade of the country in the employment of people, horfes, mules and carriages.
The Acapulco fhips carry all forts of European goods from America; and thefe furnifh the Spaniards therewith at Manilla chiefly, and the Indians of the Philippine Inands in general, whom the Spaniards have taught to go cloathed after the Spanifh manner, with all kinds of European manufactures: fume of thefe are alfo fold to the Maylayans, and the Indians of all the coafts and illands contiguous; but much more confiderable in value are the utenfils, weapons, fire-arms, workmen's tools, and all heavy goods made of iron and brafs, which are brought from Acapulco, which are vended amongtt all thofe Indians to great advantage; alfo unwrought iron, or iron in bars, is brought from Old Spain to Acapulco, and carried from thence to Manilla; and here the Chinefe and Japanefe, who are the beft cutlers in India, and make all manner of utenfils, purchafe large quantities of iron and brafs of the Spaniards. Both Chinefe and Japanefe are pretty curious workers in moft kind of bard-ware in gold and filver : they are good founders, turners, goldfmiths and lockfmiths, but not good gun-fmiths, nor good fword-blade makers.
However, being very dextrous in their way, and having great variety of materials by the Spanifh hips from Acapulco, this occafions a numerous refort of traders at Ma nilla, from whence they difperfe their goods to the other Indian illands, and trade with their refpective countries and countrymen, even in the European factories; as in Borneo in particular, and to Sumatra and Malacca, where fome of thofe European goods are vended amongt the natives.
But as for the manufactures of woollen, linen or filk, they are of finall ufe, except to the Spaniards themfelves; the Chinefe and Japanefe fupplying themfelves with cotton ma-

Vol. I.
nufactures of all kinds, fuch as mulins, callicoes, Esc. Yét the Spaniards find reveral things whith the Acapulco Mips bring, with which the natives of thofe countries are greatly taken, and for which they get in return the product of the countries they come from; which being of very little value there, and of great value in America, the triffic is by fo much the eafier ; as particularly beads, toys, looking glafles, pins, needles, and all kinds of fmall wares of irin, fteel, pewter and brals ; with variety of glafs ware, which is particularly valued by the Indians in gerderal.- In return, the product of the place is itfelf rich, and infinitely valuable among the Spaniards; as particularly their eftimable perfumes, which being originals, and the produce of mere nature, are extremely dear when they corne to New Spain, as ambergreafe, civet, bezoar, $\mathfrak{E}^{\circ} c$. Nor does any thation in Europe orAmerica ufe more than the Spaniards, both men and womeh; and efpecially in thofe hot climates of Mexico and Peru. Befides thefe, they have feveral other valuable products, which never lofe or leffen their price, amongt Chriftian na. tions, although they may have the fame things among themfelves: as particularly, i. Very large pearls, of a good colour, which the Spaniards tell us are the beft in the Eaft, the oriental pearl being found on the coaft of India, in the mouth of the Perfian gulph, and at Ormus, and paits adjacent in the Perfian gulph; they being finer and faiter than any of the Batavian or Borneo pearls, or moft others. 2. They bave alfo gold, which is found in almoft the pure metal, and of the moft perfect quality, in the rivers, as it is in other countries, and fome in the mountains: they fend about the value of 50000 doubloons a year to New Spain in this metal only. How that agrees with the account fome give us, that this country cofts the king of Spain 250000 pieces of eight a year to fupport it more than the produce, is not eafily reconclleatle : we art rather of opinion, that they fupply the treafury of Spain with thofe 50000 doubloons in gold every year, as the product of this government; for if it were otherwife, how fhould the governors, who live in fuch ftate and pomp that fome fovereign princes do not equal, lay up fuch immenfe fums in the eight years of their government, (for fo long they continue at the Philippines) and appear fo rich in Europe as it is faid they do? For we are told that they generally return back to Europe or to Acapulco, with a treafure of two millions of pieces of eight, or more.
They have alfo great plenty of honey and wax ; both which, but efpecially the latter, is very valuable in Spanifh America, and is carried thither yearly in large quantities. They have eftimable drugs and gums of divers kinds, which the Spanifh padres, who are generally phyficians, gather and fend to their particular focieties in America, and they again to Europe: fo that they are a kind of merchandife peculiar to themfelves. Of thefe they name feveral which are in great eftimation, as the Cafia, aloes, gum arabic, fago, camphire, and feveral others, as likewife medicinal herbs, of which they have no fmall variety.
The articles are very confiderable that enable the Spaniards to make fo rich a return to America by their Acapulco fhips. They have the richeft fices of the eaft, drugs, diamonds and gold, mulins, callicoes, china, taffaties, rich atlaffes, and feveral other forts of the richeft wrought filks, china ware, and tea, fine lacquered ware, cabinet wofk, tables, freens, umbrellas, and other niceties of the country. Thus the Philippines, by the coutfe of their neighbouring trade, are furnilhed with ftores of merchandize for making their returas to Acapulco, and that in a manner fully to the fatisfaction of the Spaniards, who ufually make a profit of four for one in all the goods they fend from Acapulco to Manilla,
It may be wondered why the Spaniards fo ftrictly confine themfelves to the fending of no more than two fhips a year on this trade; nor can we eafily fuggeft the reafon for it : however, the merchants make themfelves amends another way, for they build thofe fhips fo vaflly large, that they ordinarily carry from ten to twelve, or fourteen hundred ton, fome have faid to fixteen hundred ton burden. So that though it is making a great adventure in one bottom, yet as thofe feas are generally very fafe and pacifie, they can afford the freight the cheaper in proportion: and on the other hand, as theie large fhips are built prodigioas ftrong, they are able to bear the fea with the greateft feddinefs, if navigated by able feamen.
Above all, they are the more fecure againf pirates and rovers, who cannot eafily hurt them, and dare not, as the feamer term it, lay by their fide; for they have all three decks, and carry large guns of 24 to 30 pound ball, which the fmaller fhips cannot bear the fhot of: on the other hand, the fmaller fhips can hardly, except by fire onfy, any way hurt the great thip, and to burn them does not anfwer the pirate's end. When Rogers and Cook attacked the Acapulco or Manilla fhips, they faw them both, and took the fmalleft, a fhip of about 4 or 500 ton; but when they came to attack the great carrac, a hhp of 1200 ton, they could make nothing of it; every fhot they received made them tremble, and ftand off to ftop the leak; whereas, the Shot they made at the carrac ftuck in her fides, but could not go through; and when they thought to board her, fise
boombed them off with great pieces thruft out by the multitude of her hands; for the had, paffengers included, above 800 men on board; and when they found the began to open her lower tier of ports, and put out guns, which were $3^{6}$ pounders at leaft, they durft come near her no more, tho' there were three fhips to one.
Thus, in cafe of a war, or of rovers and pirates, the Spaniards feem to judge right in fending great fhips as the moft fecure, and their main end is anfwered hereby alfo; for two thips at this rate carry as many goods as twelve thips or more of 200 tons each would do: and it appears that the goods they bring are a very great quantity, and of a very great value; for at their arrival they occation a fair at Acapulco, as great in proportion as the fair at Porto-bello, when the galleons from New-Spain arrive there; and the merchants repair to Acapulco from Mexico, Lima, from Curco, from all the capital trading places of Peru, and even from Chili itfelf, to buy the rich goods they bring: which fair fometimes continues thirty days; and it is not one or two, no nor ten or twenty fhips only, that attend to carry off the goods, befides the great quantities that are carried upon mules and other beafts by land. So that during the fair, which is always proclaimed and appointed on that occation, the town of Acapulco, which at other times is empty, and only inhabited by a few fifhermen and mean' people, is for that time fo full, that it is not able to receive them, much lefs to entertain the number of people.
ACCEPTANCE, a term in the traffic of inland and foreign bills of exchange. The acceptance of a bill of exchange, is the fubfcribing, figning, and making a perfon debtor for the fum of its contents; by obliging him in his own name, to dif harge it at the time mentioned therein. The acceptance is ufually made by the perfon upon whom the bill is drawn, when it is prefented to him by the bearer.
Bills payable at fight are not accepted, becaufe they muft be paid on being prefented, or elfe protefted for want of payment. There are fome acceptances that need not be dated, and others that it is neceflary to date.
The acceptances which need not be dated, are thofe upon bills payable at a day fixed, at ufance or double ufance, Efc. Upon thefe the word 'accepted' ought only to be wrote, and the accepter's name; dating being of no ufe in them, becaufe they ate always to run to the day mentioned for their payment. And the time for the bills at ufance, double ufance, Ec. begins from the day of the date of the bills themfelves.
It is not abfolutely neceffary to have bills of a fixed day, at ufance, double ufance, छoc. accepted, becaufe their time is always running: it is however an advantage to the bearer to have them accepted, becaufe, by virtue of the acceptance, he has the fecurity of two inftead of one, the accepter and the drawer.
If the perfon upon whom a bill is drawn, at a day fixed, at fingle or double ufance, E*c. fhould make difficulties to accept it, the bearer has a right to have it protefted, for want of acceptance, and to return it to the drawer, in order to oblige him, either to caufe it to be accepted, or to give fe-curity (in cafe it mould not be paid when due, by the perfon upon whom it was drawn) to return and reftore the fum mentioned in it, with the difference of exchange, re-exchange, and the charges of the proteft.
The acceptances which it is neceffary to date, are thofe drawn at a certain number of days fight, becaufe the time does not begin to run, till the next day after that of acceptance. This kind of acceptance is made thus, 'accepted fuch a day and year,' and figned.
If the bearer of a bill of exchange confents to an acceptance at twenty days fight, for inftance, inftead of eight days expreffed in the bill, he runs the rifk of the twelve days of prolongation, in cafe the accepter happens to break in that time; and the bill remains to his account, without any recourfe againft the drawer.
If a bill was drawn for three thoufand pounds, and the bearer fhould think fit to take an acceptance for two thoufand only, and fhould receive no more than that fum, the remaining thoufand would be at his own hazard, as well as in the cafe of prolongation of time.
Thefe examples may be fufficient for acceptances of this kind. It is, however, not amifs to obferve, that if the bearer of a bill fhould have written orders from the drawer, to have the fame accepted in either of the manners as above, in fuch a care, the bearer would have undoubtedly a right againft the drawer, for an indemnification.
In former times, bills payable during the fairs of the city of Lyons, which are called payments, were not accepted in writing; the perfon, upon whom they were drawn, ufed to fay by word of mouth, 'feen without acceptance, to be anfwered at the time,' and the bearer noted it in his bill-book. But, becaufe of the contefts which happened on occafion of thefe verbal acceptances through the breach of faith of accepters, an article was inferted in the ordonnance of the exchange of the city of Lyonr, made June 2, 1667, by which the manner of acceptances was regulated. It is the 3 d article, and is to this effert: "That the acceptances of the faid bills of
exchange fhall be in writing, dated and figned by thofe upoth whom they are drawn, or by perfons duly impowered by letters of attonney, the original of which hall remain in the hands of the notary; and all acceptances made by factors, clerks, and others, not impowered by letters of attorney, fhall be void and of no efficet, againft the perfon upon whom fuch bills fhall be drawn, without prejudice however to the legal recourfe againft the accepter." "This regulation or order was confirmed by Art. 7. of Tit. 5. of the ordonnance of commerce, of March 1673, the tenor of which is as follows: "We do not intend to make any innovation in our regulation of June 2, 1667 , concerning acceptances, payments, and other difpofitions relating to the commerce of our city of Lyons." And, by article 2. of the fame title of the faid ordonnance, the manner of making acceptances is regulated for the other places in the kingdom, and runs thus: "All bills of exchange thall be accepted purely and fimply in writing. We abolith the ufe of verbal acceptances, or in thefe words, 'feen without accepting;' or, - accepted to anfwer at the time;' and all other conditional acceptances, which fhall pafs for refufals, and fuch bills fhail be liable to proteft."
In the general, be to whom a bill is made payable, at the time fhould demand acceptance thereof, both for his own and the drawer's fecurity, and on refufal of acceptance to return it with proteft.
The addrefs of a bill of exchange is the directions fignifying by whom, and where the payment fhall be made when due, and to whom the poffeffor may apply, in cafe the party, who is to accept or pay, be not in the way.
He that has the bill may demand acceptance of the perfon the bill is addreffed to ; and, in cafe that perfon hath no order or power to accept the fame, the poffeffor may defire fuch perfon, if to be trufted, to fend fuch bill to procure acceptance, or to return it with proteft. This the perfon to whom the bill is addreffed is obliged to do, otherwife the poffeflor may, before the faid perfon, make protefl for non-acceptance. If the poffeffor can't fafely truft the perfon to whom the bill is addreffed, to procure acceptance; or if the drawer has not addreffed the bill at all ; the poffeflor muft caufe the bill to be fent to fomebody, in whom he can confide, that lives at the place where the perfon refides on whom it is drawn, to demand acceptance, and, upon refufal, to proteft.
When the remitter or poffeffor has no correfpondent to fend the bill to, who lives where the acceptant does, it is common to defire the drawer to fend the prima bill, to procure acceptance, and return it accepted to the remitter, or poffeffor. The drawer is not obliged to do this, yet he cannot well refufe it, if he be affured of the honefly of his correfpondent, and that he will accept his bill.
In cafe the drawer does not in convenient time return the bill accepted to the remitter, the drawer is not obliged to give further fatisfaction to the remitter, but the remitter muft look to it himfelf, and fend a fecond bill to fome other, to procure acceptance, and to enquire whether the prima be accepted, or not; if not, the acceptant muft accept the fecond bill, or a proteft muft be made for non-ac ceptance.
A cautious remitter will not leave a prima bill in the drawer's hands to procure acceptance, unlefs he is well affured of his worth and integrity.
When the poffeffor of fuch bill has no correfpondent at the place where the acceptant lives, nor dare truft the drawer with it; it is ufual for the poffeffor to advife the acceptant by letter that he has fuch a bill on him, and defire him to return anfwer, whether he accepts the fame, to pay it at the time, or no; if he returns anfwer that he will not accept it, nor pay it, or if he gives no anfwer at all, the porfeflor is obliged to carry or fend the bill to that place, and there formally, by a notary public, to demand acceptance; and, in cale of refufal, to proteft.
If the acceptant be an out-dweller from the place where the bill is to be paid, it is ufual, when acceprance is demanded, to defire the accepter to underwrite to whom he mult apply for payment, when due.
When a bill is payable to order, by an out-dweller, and not to a certain perfon, and the accepter has not ordered to whom the laft party it is affigned to, fhall addrefs for payment when due, the poffeffor is obliged to give the accepter timely notice to whom the bill mult be paid, that the accepter may, within the refpite days, return an anfwer, and take care of the payment.
If the out-dweller remits, at the time appointed, to the porfeffor of his accepted bill, in other bills due at the fame time with his bill, the poffeffor is not obliged to demand acceptance, and to get thofe bills paid, without provifion allowed him. But, when the accepter directs him to any particular perfon for payment, the polfeffor is obliged to go to fuch party to receive his money without provifion.
An out-dweller baving a bill remitted to him payable by an in-dweller, and the out-dweller defiring his accepter at the day to fend his money in fpecie, or to remit him the value in other bills, the in.dweller is not obliged to do this without allowance of provifion.

If the poffeflor of a bill payable by an out-dweller does not get his money in time, he muft order a public notary to proteft for non-payment, which proteft, though not made in the prefence of the perion, nor at the houfe of the accepter, is valid, becaufe the poffeffor of the bill is not obliged to proteft againf, an out-dweller at his houfe or dwelling, nor to feek him out of the town where the payment is to be made. If an out-dweller refufes acceptance when a bill is fent to him, a proteft may be made either at the houfe of the outdweller by the poffeffor, or elfe at the place of payment. A lefter from the perfon that demands acceptance, being produced to a notary, is fufficient to ground a protelt upon, as alfo in cafe of non-payment.
Although the poffeflor is not obliged to feek payment of an out-dweller in any other place but where the bill is payable, and the drawer or accepter hath addreffed; yet, in cafe of non-payment, the accepter or his effects are liable in any place where either can be found.
Should an accepter of a bill of exchange fail or become infolvent after he has accepted a bill, the drawer of the bill will be obliged to pay the fame, with re-exchange, provifion, and charges to the poffeffor.
When the perfon on whom a bill is drawn underfands that the drawer has failed before acceptance is demanded, he need not accept fuch drawer's bills, notwithftanding be may have promifed to honour fuch bills, without indemnification from all and every one that fhall make any demand thereof, whether it be the drawer, his creditors, truftees, or his principal, for whofe account the draught was made, $\xi^{\circ} c . \mathcal{E}^{\circ} c$.
Nor ought any one on whom bills are drawn, accept them from an infolvent drawer, though the bill is dated before the infolvency is known, and the letter of advice bears the fame date, whether it comes by the common poft or not; becaufe there is reafon to fufpect fome fraud, and that both the bill and letter were antedated.
If A draws on B, on account of C, and B before acceptance has advice that A has failed, B fhould not accept fuch draught, though be promifed $A$ he would; becaufe $C$ is not obliged to make grod the value to B . And more efpecially fo, if C advifes $B$ of A's failure, or on any fufpicion hath forbid B's acceptance for his account, although he had ordered the acceptance thereof before.
On failure of a drawer, the accepter is not obliged to give better fecurity for payment; but the poffeffor muft wait till the day of payment, before he can demand any thing of the accepter; and then the accepter is obliged to pay, though he accepted for the drawer's account, and has no effects of his in hand.
If an accepter refufes payment of a bill, on failure of the drawer, the poficfior is not obliged to return the bill and protef, to the place from whenee it is drawn; it being apparent; that the charges of re-exchange cannot be recovered of the infolvent drawer. The poffeffor therefore muft without delay, after a proteft is made; proceed by attachment: for a difference in conduct is required when the drawer maintains his credit, and when he has failed.
When an accepter fails or abfents himfelf, the poffeffor is obliged to get a proteft made by a public notary, and fend the fame, with the bill, to the remitter, to procure fatifaction from the drawer; and advice thould be given directly to the firft remitter, and not to the laft endorfer only, that the drawer may, if he pleafes, order fome other to honour his bill, and prevent lofs by the re-exchange, $\xi^{\circ} \mathrm{c}$. Though a poffeffor through ignorance of cuftom, or of the acceptant's failure, or by reafon the bill did not come to hand till after due, or for any other caufe of the like nature, does not, or cannot make proteft by a public notary ; yet this will not hinder the poffeffor's redreffing himfelf on the drawer and endorfer, though the accepter failed before the bill became due.
When an accepter fails before the day of payment, if the bill be payable to order, the poffeffor muft get a proteft made and fend it to the firit remitter, but keep the bill till it falls due, that, if the drawer orders any other to honour his bill in time, the poffeffor may be ready to receive the value.
If any other offer to accept and honour a bill whofe firt accepter is failed, in favour of the drawer, or any other endorfer, the poffeffor is not obliged to accept fuch offer, if he difapproves the offerer; but if the offerer is a fufficient man, or will give fecurity, the poffeffor cannot refufe fuch an offer. It is not fafe to accept a bill, whofe firft accepter is failed, without a proteft for non-payment, declaring the bad circumfances of the accepter; and fuch an acceptant, in honour, muft prefently fend the faid proteft, together with the notary's atteftation of his accepting the fame in honour, to the drawer, "or to him for whofe account he has accepted the fame. Acceptance after the day of payment paft is ufual, and good. Lo Raymund 364, 574. So acceptance for the honour of the drawer. Idem. 575 .
The queftion, whether a general indebitat affumpfit will lie upon a bare acceptance of a bill of exchange, in the argament of the cafe of Bellafis and Hefter. By Juftice John Powel, a general indebitat affumpfit does not lie on a bill of exchange; but it ought to be a fpecial declaration upon the
cuftom of merchants, as in the cafe of Brown and Londoh: i Levinz 298. 1 Mod. 285 . 2 Keble 695, 73I, 758 , 822. I Vent. 152. In which cafe, judgment was arrelted after verdic, as reported by Levinz and Ventris
Acceptance of a bill of exchange may be pleaded as payment in bar of an action of account. Luc. 37.
Where the drawee firft accepts, and then fuffers the bill to be protefted, he fhall pay intereft from the time of the proteft. Leuc. 37.
If a bill be accepted, and afterwards indorfed to the drawer, he may maintain an action as indorfee, in cafe he had effecls enough in the bands of the drawee, to anfwer the bill: but it is ocherwife where the acceptance was only for the honour of the drawer. Luc. 37.
A bill was drawn on the York-buildings compaty; one Bifhop, who was their cafhier, accepts it without writing ' for the company, or any thing to that effect : an action was maintained againft him in his private and fingle capacity upon this acceptance.
If a bill is drawn upon a merchant in London payable to J. S. at double ufance, J. S. is not bound in ftrictnefs of law to procure an acceptance, but only tender the bill when the money is due: but merchants, who generally have generous. fpirits, will not furprize a man, but firft procure an acceptance, or at leaft leave the bill for the party to confider, and give his anfwer, and then give advice of the fame, and, if the money be not paid, then proteft.
A proteft is no more bui to fubject the. drawer of a bill to anfwer in cafe of non-acceptance, or non-payment; nor does the fame difcharge the party accepter, if once accepted; for the deliverer hath now two remedies, one againft the drawer, and the other againft the accepter.
To entitle the party to àn action at law in England againf the accepter, it matters not whether there be a proteft; but to entitle the party to a recovery againft the drawer beyond the feas or elfewhere, there muft be a proteft before a public notary.
If a merchant hath accepted a bill, and, before the fame becomes due, he proves infolvent, or at leaft his credit is publickly blafted, a proteft ought to go.
By the ftatute of 3,4 A. c. 9 . it is enacied, That if the party on whom an iniand bill of exchange fhall be drawn, thall refufe to accept the fame by underwriting it, the party to whom the fame is made payable, may and thall caufe fuch bill to be protefted for non-acceptance.
No acceptance of fuch inland bill of exchange flall be fufficient to charge any perfon, unlefs the fame be underwritten or endorfed in writing thereupon; and, if fuch bill be not accepted by fuch underwriting or indoriement, no drawer fhall be liable to pay any cofts, damages, or intereft thereon, unlefs fuch proteft be made for non-acceptance thereof, and without, fourteen days after fuch proteft, the fame be fent, or notice thereof be given to the party from whom fuch bill was received, or left in writing at the place of his ufual abode.
If fuch bill be accepted, and not paid before the expiration of three days after the fame fhall become due, then no drawer thall be compellable to pay any cofts, damages, or intereft thereon, unlefs a proteft be made and fent, or notice thereof be given in manner above-mentioned: neverthelefs, every drawer hall be liable to pay cofts, damages, and intereft, if a proteft be made for non-acceptance, or non-payment, and notice thereof be fent, given, or left as aforelaid.
Such proteft is not neceffary, unlefs the value be acknowledged in fuch bill to be received, and unlefs the bill be drawn for 20 . or upwards.
If any perfon accepts fuch inland bill of exchange in fatiffaction of a former debt, the fame fhall be efteemed a complete payment of fuch debt, if the perfon accepting fuch bill for his debt doth not take his due courfe to obtain payment thereof $\mathrm{f}_{2}$ by endeavouring to get the fame accepted and paid, and make his proteft as aforefaid.
Before this ftatute, the declaration need not have fhewn a proteft upon fuch bill, though the drawer ought to have had convenient notice of non-payment. L. Raymund 992, 993 . But the law feems to be altered, as to the proteft by this ftatute.
A bill drawn on two jointly muft have a joint acceptance, otherwife it mult be protefted; but to two or either of them, è contra.
Then, if the lams be accepted by one, it is purfuant to the tenor of the bill, and ought not to be protefted but in cale of non-payment; and in that cafe the perfon accepter is liable to an action, but, if it be on joint traders, an acceptance by one will conclude and bind the other.
A faclor of the Hamburgh, Turky, or India company, draws a bill on the fame, and a member accepts the fame, this perhaps may make him liable, but not another member.
So it is if ten merchants hall employ a factor at the Canaries, and the factor draws a bill on them all, and one of them accepts the bill, and then refufes payment, this will not oblige the reft.

## A C C

But if there be three joint traders for the common ftock and benefit of all three, and their factor draws a bill on them, the acceptance of the one will oblige the refidue of the company.
A fmall matter amounts to an acceptance, fo that there be a right underftanding between both parties; as, "leare your bill with me, and I will accept it;' or, 'call for it to-morrow, and it fhall be accepted;' that does oblige as effectually by the cuftom of merchanrs, and according to law, as if the party had asually fubfcribed or figned ir, which is ufually done. But if a man fhall fay, 'Leave your bill with me, I wi'l look over my accounts and books between the drawer and me, and call to morrow, and accordingly the bill thall be accepted;' this fhall not amount to a complete acceptance: for this mention of his bnoks and accounts was really intended to fee if there were effects in his bands to anfwer, without which perhaps he would not accept of the fame. And fo it was ruled by the Lord Chief Juftice Hale at Guildhall, London.
A bill may be accepted for part, for that the party upon whom the fame was drawn, had no more effects in his hands; which being ufually done, there muft be a proteft, if not for the whole fum, yet at leaft for the refidue: however, after payment of fuch part, there muft be a proteft for the remainder.
Before the time of payment of the bill, the party may notwichftanding accept it, and pay it at the time of payment; or another may accept the bill for the honour of the drawer, and, if he pay it in default of the party, yet before payment he is bound to make a proteft, with a declaration that he hath paid the fame for the honour of the drawer, whereby to receive his money again.
Any time before the money becomes due, the drawer may countermand the payment, although the bill hath been accepted. The countermand is ufually made before a notary; but, if it comes without, fo it comes under the party's hand, it is well enough.
If the bill be accepted, and the party defires to have the money before it be due, and it is paid, and then there comes a countermand, it hath been conceived that it ought not to be allowed; for, as he could not enlarge the time, fo he could not thorten it, but his duty is to follow his order.
The drawer of a bill is bound to the deliverer, and the accepter to the party to whom the bill is made payable; yet both are not bound to one man, unlefs the deliverer be a fervant to the party to whom the money is made payable; or the party to whom the money is made payable be fervant to the deliverer: yet both taker and accepier are liable till the bill is paid.
Therefore, when you bring your action, be fure to draw your declaration accordingly, and make the fame part of the cuftom as you fet it forth; for, if you vary, you muft expect to be nonfuited: and the party is not bound to alledge a particular place of demand.
If a bill be protefted for want of payment, the drawer is to repay the money and damage, or elfe he may procure a fecurity, which is no more but another perfon of value fubfcribes the bill, in thefe or the like words, 'I here underwritten do bind myfelf as principal, according to the cuftom of merchants, for the fum mentioned in the bill of exchange whereupon this proteft is made, dated, ' ${ }^{\circ} c$.
Now the drawer, by virtue of this fupplemental agreement, hath as much time again to pay monies as there was given him in the bill when it was firf drawn; fo that if the money be not paid, together with the rechange and charges of the party, the party may recover the fame on the principal or fecurity.
Beyond the feas the proteft (that is to fay, for non-payment, the bill being once accepted) under the notary's hand, is fufficient to hew in court, without producing the very bill itfelf. But if a bill in England be accepted, and a fpecial action grounded on the cuftom be brought againft the accepter, at the trial the party plaintiff mult produce the bill accepted, and not the proteft, otherwife he will fail in his akion at that time.
Therefore it is fafe that a bill once accepted be kept, and only a proteff for non-payment be remitted; but a bill protefted for non-acceptance muft be remitted.
If a bill is left with a merchant to accept, and he lofes the bill (or at leaft it is fo minaid, that it cannot be found) the party fhall requeft the merchant to give him a note for the payment according to the time limited in the bill of exchange; otherwife there muft be two protefts, one for nonacceptance, the other for non-payment : but if a note is given for payment, and there happens to be a failure, yet in that cafe there muft be proteff for non-payment.
No perfon, be it wife or fervant, can accept of a bill of exchange to bind the mafter without a lawful authority, as a letter of attorney, and the like, which mult be under hand, unlefs that it has been formerly and ofually done by the wife or fervant in fuch cafe, when the mafter hath been out of town, who hath approved of the fame and anfwered payment: it muft be ufually done; but one partner may for another.

If'a bill of exchange by contrary winds or other occafions be fo long on the way, that the ufance or time limited by the bill be expired, and, being tendered, both acceptance and payment are denied; protefts for both mult be made, and the drawer mult anfwer the value, rechange, and damage. A bill, once accepted, cannot be revoked by the parry that accepted it, though, immediately after and before the bill becomes due, he hath advice the drawer is broke.
If a bill is not accepted to be paid at the exact time, it muft be protefted; but, if accepted for a longer time, the party to whom the bill is made payable, muft proteft the fame for want of acceptance according to the tenor; yet he may take the acceptance offered notwithttanding. Nor can the party, if he once fubfribes, the bill for a longer time, revoke the fame, or blot out his name, although it is not actording to the tenor of the bill ; for if by bis acceptance he hath made himfelf debtor, and owns the draught made by his friend upon him, whofe right another man cannot give away, and therefore cannot refule or difcharge the acceptance.
Note, This cafe will admit of two protefts, perhaps three.

1. One proteft mult be made for not accepting according to the time.
2. For that the money, being demanded according to the time mentioned in the bill, was not paid.
3. If the money is not paid according to that time that the accepter fubrcribed or accepted.
A bill was drawn payable the firt of January, the perfon upon whom the bill was drawn accepts the bill to be paid the firft of March ; the fervant brings back the bill: the mafter, perceiving this enlarged acceptance, ftrikes out the firft of March, and puts in the firft of January, and then fends the bill to be paid; the accepter then refufes payment: whereupon the perfon to whom the monies were to be paid, ftrikes out the firft of January, and puts in the firft of March again: in an action brought on this bill, the queftion was, whether thefe altcrations did not deftroy the bill? And ruled it did not.
$A$ draws a bill on $B$, and $B$ is in the country; $C$ a friend of his hearing of the bill accepts it: the party to whom the money is to be paid, muft make a proteft for non-acceptance by $B$, and then he may take the acceptance of $C$, and it thall bind C to anfwer the money.
Where a merchant hath accepted, and, before the fame became due, he becomes infolvent, or at lealt his credit publickly blafted, a proteft ought to go; but then there is ufually a demand made, which once coming, the drawer is compellable to give better fecurity; and if a fecond bill comes, if no proteft, then drawer and fecurity lie at ftake.
If a bill be accepted, and the party dies, yet there muft be a demand made of the executors or adminiftrators; and, in default or delay of payment, a proteft muft be made : and although it may fall out, that the monies may become due before there can be adminiffrators, or the probate of the will be granted ; yet that is delay fufficient for a proteft in cafe of non-payment.
N. B. Fourteen days are allowed from the death before adminiftration can be committed, unlefs there be a will.
But on the other hand, if the party be dead to whom the monies are made payable, and the monies are ready to be paid, and there is no perfon that can legally give a difcharge, yet a proteft ought not to go for non-payment; the reafon is, becaufe there is no perfon that hath any authority either in deed or in law to make it, and a notary ought not to make it; if he does, and the party receives any prejudice thereby, an action of the cafe perhaps may lie againt him for his pains: nor does it avail, that if fecurity be offered to fave him hamilefs againft the executors or adminiftrators, for that is an act left to his own difcretion; for perhaps the fecurity may not be liked: but whether good or bad, makes nothing as to oblige him in law.
N. B. An intimation ought to go, and that the accepter is willing to pay according to order. For further matter on this head, fre Bills of Exchange, Drawer, Remitter, Indorser, Protest, Notary Public.
ACCEPTER, the perfon who accepts a bill of exchange by figning it, and obliges himfelf to pay the contents', when it becomes due. As long as the accepter has his fignature in his own power, that is, as long as he has not returned the bill with his name to it, he may ftrike out his acceptance : but, when he has once delivered it, it is no longer in his power fo to do, though it fhould come again into his hands. In a word, there is no retracting an acceptance once delivered: the accepter mult pay the bill. Some ufe the word acceptant, which is the ufual French term : though they alfo ufe the term accepteur.
It is the cuftom at Amfterdam, that all who accept bills of exchange make themfelves debtors for them, by virtue of their acceptance; and though the drawers hould become infolvent before the term for the payment elaples, the accepters can have no recourfe againft the endorfers of the bills, Ordinances of Amfterdam, quoted by Mr. Ricard, in his Traité General du Commerce, under the title Acceptances. ACCOMMODATION, is ufed both in matters of trade and of law, to fignify a friendly agreement or compofition
between

## A C C

between perfons at variance, and is frequently brought about by the mediation of common friends, or by a partition of the things in difpute.
A CCOUNT, or ACCOMPT, fignifies in general all computations made arithmetically, whether by the addition of feveral fums, or by fubtraction, multiplication, or divifion.
We account time by years, months, Gic. diftances by leagues, miles, poles, perches, Esc. weights by tuns, hundreds, quarters, pounds, ounces, drams, E'c. long meafure by rods, ells, yards, $\mathcal{E}^{\circ} c$. liquid meafures by tons, hogheads, pipes, barrels, galions, quarts, Efc. dry meafure by quarters, bufhels, pecks, $\mathcal{E}^{\circ} \mathrm{c}$. money by pounds, fhillings, छ${ }^{\circ} \mathrm{c}$.
Money of account is an imaginary feccies, continued in feveral fates, to facilitate the keeping of accounts, as nobles, angels, marks, were in England, mill-rees in Portugal, Fic.

REMARKs relative to practical trade.
Accounr is allo ufed collectively for the feveral books which merchants, traders, and bankers keep, and in which they enter all their bufinefs, traffic, and bargains with each other. Hence they fay, To make out an account, to pals accounts, $\mathfrak{E}^{c}$. All merchants in France, are obliged to keep books of their accounts, and all bankrupts to deliver up theirs. See the articles Books of Accounts, Book-Kebping, $\varepsilon^{\circ} c$. Thefe books are kept in the manner of debtor and creditor ; that is to fay, the debit, which is the receipt of the account, is wroteon the left fide, or page; and the credit, which is the expence, on the right fide, or page. The debit fide is diftinguifhed by the word Dr. (debtor) which is placed at the beginning of the page after the name of the debtor; and the credit fide by the letters Cr . for creditor, which is placed op. pofite to the other. The French, inftead of the words debtor and creditor, ufe the words doit (owes) and avoir (to have). There are three kinds of accounts abfolutely neceflary for clofing books of.double entries; namely, the accounts of ftock, of profit and lofs, and of balance.
The account of ftock is the particular account opened on the debtor and creditor fide of the ledger. It contains all the effects of a merchant; that is to fay, his ready money, merchandizes, bills, promiffory notes, bonds, contracts, accounts fettled, real and perfonal eftate, and all in general, that is his own, free and clear of all debts and mortgages. This kind of account is fometimes clofed on the debit, and fometimes on the credit fide of the account of profit and lofs. On the debit fide, when the lofs exceeds the profit ; and on the credit fide, when the profit exceeds the lofs.
The account of profit and lofs is opened upon the ledger. It confifts of all the loffes and gains made, by a merchant in his trade: the loffes are written on the debtor, and the profit on' the creditor fide of the book.
This account is generally balanced annually, or when the books are to be clofed, in order to the opening of new ones; or when the merchant intends entirely to leave off trade.
To balance the account of profit and lofs, feparate additions muft be made of the debtor and creditor fides, and the leffer total fubtracted from the greater, of which the remainder, if the profit exceeds the lofs, is carried to the credit of the 'account of ftock, and to the debit, if the lofs exceeds the profit.
The account of balance is opened in the ledger, only for the clofing of the books. When the books are to be finally clofed, it is called the account of the final balance; but, when new books are to be opened, it has the name of balance of entry, or balance carried over.
In the final balance account all that is due to fock is carried to the debit, and all that is owing from it to credit ; and in the account of balance carried over, or of entry, all on the credit of final balance is placed to the debtor, and all on the debit to the creditor; the ending or continuing trade making fuch reverfed entries neceffary.
The merchants and traders who keep their books by double entries, have one in particular, which they call the book of accounts current, wherein they enter copies of all the accounts which they make out, and fend to their correfpondents, in order to have recourfe to it occafionally. This book, which is of the number of thofe componly denominated auxiliaries, is ruled and kept in the fame manner as the ledger. See Books, Eec.
Mr. Savary, in his Parfait Negociant, liv. 3. chap. 2. of the fecond part, lays down excellent rules for apprentices, factors, or agents of merchants, or wholfale dealers in France, with refpect to the manner of fettling accounts with retailers, the fubftance of which is as follows, viz.
" 1 . The clerks, factors, or agents of wholefale dealers ought to go to the houfes of the retailers, to whom the merchan: sizes have been fold, to fettle the account or bill with them as foon as poffible, in order to avoid the difficulties which commonly arife, either with regard to the price or the mearure of goods; for, if that be delayed too long, the memory eafily fails.
" II. In fetting accounts, they ought to be very careful of what they are about; that is, they ought not to admit tares upon pieces of goods, before they have meafured them
Vos, 1.
themfelves, in order to fee whether they be right, and not to allow any out of complaifance, becaufe that is againt their mafter's intereft.
" III. To fettle an account regularly, they ought to make an extrad from the journal or day-book, containing the numbers, the meafures, and the prices, for which the.goods were fold.
" IV. Finally, in order to have the bill well drawn up, they muft compare the extract they carry, with that which was delivered together with the merchandize, to fee whether they agree; and upon each article they fhould fet down the tare, if there be any, and the fum to which it amounts: and, on their return to the warehoufe, they ought to enter it exactly in the book itfelf, that there may be an agreement between their mafter's book, and that of the retailer with whom they have fettled the account. This exactnefs keeps up the good underftanding that fhould fubfift between the merchant or wholefale dealer, and the retailer."
To open an Account, is to enter it for the firf time into the ledger. This is done by writing in large characters the chiffian name, furname, and place of abode of the perfon with whom an account is thus opened: afterwards the articles are pofted to it, either on the debit or credit fide, as affairs occur.
When an account is opened in the ledger for any one, his name muft be entered at the fame time in the alphaber, and the folio of the book fet down, where the account is entered, for the more eafily referring to it.
Merchants, who keep open accounts with each other, fometimes agree to honour the bills of exchange, which they draw reciprocally.
To poft a fum to Account, is to enter into the ledger, either on the debit or credit fide, the articles for which perfons become either debtors or creditors.
Counterpart of an Account, is in the bank filie of France, and in that of the clerks in the offices of the king's farms, the regifter kept by the controller, wherein he enters and pofts all the articles which the book-keeper, if for the bank, or the receiver, if for the king's farms, charges his book with. See Bank-Roxal.
Order of an Account, is it's divifion into three heads, of receipt, expence, and defalcation; that is, the deduction of fuch fums as are taken into the account, and not received or admitted. The French call it reprife.
To examine an Account, is to read it exactly, to point the articles of it, and prove the computation, in order to know whether there be no errors, and whether the balance be right. I have examined your account, it is right, there is nothing to except againft it.
To fettle an Account, is to caft it up, by calculating every article of it, and balancing the fame. In the like fenfe are ufed the words to hut, to balance, to clofe, to make up an account. Accounts are balanced upon the ledger on two occafions; the one, when traders fettle or adjuft affairs with fome debtor or creditor, in order to know what they owe, or what is due to them : the other, when it is neceflary to carry over accounts to fome new folios in the fame book, or into another, in order to continue them, for want of room in the former.
Prudent merchants ought to fettle their accounts at the end of every year, in order to open new ones in the beginning of the next.
To place to Account (paffer en compte) is to give one credit for a fum received, either of him or for bim. It fignifies alfo to make him debtor for a fum paid to him, or for him. Thus, in a bill of exchange, the drawer puts fometimes thefe words after the fum, Which you'll place to my account, or, To the account of, $\mathcal{E}^{\circ} c$.
To purge an Account, as the French fay, is to caufe all the difputed articles to be adjudged by a referee, and the objections to be ebviated.
Ballance of an Account, is the fum in which the debt exceeds the credit, or the credit the debt, when the account is duly examined and fettled, and the ballance taken. I owe you 300 l . for the ballance of our account. There is fo much due to me for the ballance of our account.
Account in Bank, is a fund which merchants, traders, benkers, and other private perfons, if they think fit, depofit into the common cafh of fome bank, to be employed in the payment of, bills of exchange, promiffary notes, bonds, debts contracted, either in trade or otherwife, as by buying eftates in land, $\mathcal{F}_{6} c$.
The French, in their mercantile writings, commonly ufe certain cbaracters, or initial letters, to fignify in brief, the different kinds of accounts kept by merchants and traders; C. fignifies compte (account) C. O. open account (compte ouvert) C. C. compte courant (account current) M. C. (mon compte (my account) S. C. Con compte (bis account) L. C. leur compte (their account) N.C. notre compte (our account). A man is faid to teach the keeping of books of accounts, when he teaches the manner of keeping them in a proper order, either by fingle or double entry.
Merchants and traders, in France, are obliged to deliver in their books of accounts, in good form, when legally required.

To afirm an Account, is to declare and make oath that it is truc. The accountable when they deliver in their accounts, in order to their being examined, ufually write in the margin of the firf page, ' Prefented fuch a day, and affirmed true.'
To difpute an Account, is to make remarks or objections upon the feveral articles of an account, either for augmenting the receipt, or diminifhing the expence therein contained. To note an Account, is to make, in the margin of each ar ticle, certain remarks, fhewing either that there is no excep tion to be made, and that they are to pals as fet down, or reafons for difputing them, and hewing under what conditions they are to pas. The remarks which the perfon who audits an account, fets on the fide of each article by way of approbation, or otherwife, are called the notes (apoitrilles) of an account.
Account in Company, is a fpecies of account between two merchants, or traders, in confequence of a kind of aflociation, or partnerfhip between them.
Account is alfo a relative term, ufed with regatd to a partnerfhip, when two or more perfons make receipts or difburfements on account of each other. In this fenfe a man is faid to keep a good account, to fignify that be is juft in his dealings, and does not defraud his partners or mafters.
Account alfo lignifies gain, profit, advantage, and, in French, the word compte is alfo taken for a good bargain. The moft common exprefions in which this term is ufed, as to trade and merchandize, are the following: the merchants have perfectly found their account, in the.effects they have bought this year of the French Eaft-India company, at the fale of Nantz. Some manufacturers work at a better account (that is, cheaper) than others. People find their account in buying goods at the firft hand, where they are made; and, finally, a merchant is faid to have made his fmall account (in French, fon petit compte) when be has acquired a competent fortune in the trade wherein he was concerned.
Account is alfo ufed to fignify voluntary difburfements and charges, which are to be at the expender's lofs, and cannot be paffed in account. They fay, if he expends beyond his orders, it will be on his own account. If he commits errors in his calculations; if he fuffers himfelf to be robbed, it fhall be on his own account; that is to fay, it will not be allowed in his accounts; it will be entirely to his.own lofs.
The French fay, to receive à bon compte, or à compte, that is, on account, to fignify, to receive a fum on condition of deducting it from what"is due. To pay a bon compte, is to pay on account, on condition alfo of deducting it from the debt.
Account (compte) as alfo ufed in various mercantile and proverbial phrafes, but with different fignifications. The French fay, He has his account (il en a pour fori compte) that is, he is cheated, máde a bubble, he is catched, or taken in. He takes it to his account (il le prend fur fon compte) to fignify, that a man charges himfelf with a thing, and anfwers for it. Good accounts make good friends; which implies, that people cannot continue friends, without mutually keeping their encagements, and obferving the rules of jultice and equity. They fay alfo, à tout bon compte revenir, good acounts will fuffer a revital; to intimate, that thofe néed not fear coming to a fecond account, when there has been no deceit in the firft, though there may have been fome involuntary miftake or overfight in it.
The French ufe the word compte (account) in feveral other fignifications, which it would be fuperfluous to repeat here. Account-Paper, is a fort of fine large paper, fo called at the paper mills in France, and by the itationers and others who trade in paper, becaufe accounts are commonly wrote upon it It is like our poft-paper in England, on which merchants generally write their commercial letters, and draw out their various accounts.
Account of Sales, is an account given by one merchant to another, or by one factor to his principal of the difpofal, charges, commiffion, and net proceeds of certain merchandizes fent for the proper, or company account of him, who configned the fame to fuch factor or vender.
When the like account is inland or domeftic, the fame is tranfmitted in the current moncy of that country, wherein the buinefs is tranfacted. As from a Blackwell-hall factor to the clothiers in the country, or from the warehoulemen in tcwn, who deal by commiffion for the country manufacturers, as bay-factors, drugget and duroy-factors, and the like.

## Remarks.

r. . . It mult be obferved that, in this domeftic or inland account of fales, the manufacturer is fuppofed to run all the hazard in the fales, and that the factor has only his common commiffion of fo much per cloth for the fale thereof. This is plain from the words, 'without my prejudice'; the meaning of which is, that, if the buyer fhould fail, the clothier muft fand to the lofs. 2. . . But fome manufacturers, perhaps the generality, rather chufe that their factors fhould run the hazard of bad debts, their refidence in town giving them opportunity of knowing the characters of buyers, and inducing them to be the more cautious whom they truft. In which cafe, the factor is allowed an extra-commiffion for flanding the middle-man; which is reafonable.
3. . If the manufacturer chufes to run the hazard himfelf, then he cannot expect his money before it becomes due from the buyer. But if it Chould fo happen, that he ftands in need of fome part of his money before that, as is commonly the cafe, the factor permits bim to draw for fuch a proportion thereof as they thall agree upon, the maptifacturer allowing the factor the common provifion for thus advancing the money before it becomes due.
Yet, under thefe circumftances, the factor has the fecuricy of the manufachurer, as well as the buyer, fince he did not allow the factor an extra-commiffion to induce him to remain anfwerable for bad debts.
4. . . As the generality of manufacturers cannot afford to be fo long out of their money, as the ufual time of giving credit requires, it is the more ordinary practice for the factor to ftand to bad debts, on confideration of having greater commiffion allowed him on the fales, and to have provifion alfo for what money he advances before the time of payment.
Mr. Locke fays, 'that the multiplying of brokers is prejudi' cial to the trade of any country; that they eat up too great ' a fhare of the gains of trade, and therefore, he obferves, ' it would be convenient to hinder, as much as is poffible, c any one from felling any of our native commodities, but he ' that makes them; fhopkeepers in this being worfe than ' gamefters; for they do not oniy keep fo much. of the mos ney of a country conftantly in their hands, but alfo make ' the .public pay them for their keeping of it.'
Thefe are fevere reflections upon fhopkeepers, factors, and brokers, and indeed very unjuftly grounded. For, if the clothier was to attempt to act both in the capacity of a factor and a woollen-draper, who muft attend his manufacture in the country? While his attention was fixed in town upon the fales, might not the commodity dwindle and degenerate in quality; and thus the clotbier, by over-acting his part in one Chape, under-act it in another? Was this maxim in general to take effect, it might prove the ruin of all our manufactures, by gradually debafing them.
Befides, for a clothier to take this upon him, not only requires three times the capital, but fuch an expence by town refidence, as, I am afraid, would prove of little benefit to him in the long-run; efpecially, as the nature of credit is at prefent circumflanced.
'Tis true, thefe middle-men between the manufacturer and confumer may be faid to be inftrumental to enhance the price of our manufactures among ourfelves; and this was Mr. Locke ${ }^{\text {k }}$ motive for bearing fo hard upon them. But 'tis much to be doubted, whether the public could have their manufactures cheaper at home, was the clothier to take upon him to act in a treble capacity, he being obliged to raife the price of his commodity, in proportion to the extraordinary expence he is at.
Manufacturers, who have thought themfelves injured by their factors, which doubtlefs is fometimes the cafe, have attempted this, but few have found their account in it. Some have carried their view fo far, as even to turn merchant-exporters, but to their abfolute ruin to my certain knowledge; for the fkill of a manufacturer and that of a merchant are very diftinct, the knowledge of a Solomon, in the one refpect, making him but an idiot in the other.
Thefe obfervations are not made to difcourage, but to caution the ingenious and enterprizing manufacturer to be upon his guard, and neither to undertake too much either at home or abroad.

## ACC

## $A C C$

Notwithtanding what has been raid, 'tis very defirable that bur Britilh manufactures may go as-cheap to foreign markets, as thofe of our rival nations, which are not fuperior in point of quality. Upon this principle Mr. Locke reafoned; and 'tis upon this principle that merchants of the mof money and fkill purchafe commodities at firft hand of the mana facturer, pay him ready cafh, and fend their goods abroad, with every advantage.
And thefe exportures of our manufactures, who are not in circumftances to fend them abroad at firft hand, are an inju$r y$, rather than a benefit to the national trade; they injudicioully glutting the markets abroad, which finks the price too often below what they can afford to fell at; and yet they are importunate for remitances, and thereby force their factors to fell almoft at any rate. Such merchants not only hurt the trade of a kingdom, but are fure to hurt themfelves, and all who have connexions in trade with them.

Remarks.

1. Foreign accounts of fales of merchandizes, are or ought to be, governed in fome meafure by the invoice, fent therewith from the principal, See Invorce.
$\therefore$. Merchants, being inured to hazard from their firf fetting out in life, fend their property to foreign countries with as much alacrity, on the good faith and honour of their correfpondents, as a monied man lends his property at home on land fecurity.
Credit therefore, is the great foundation of commerce between nation and nation, as well as between one man and another in the fame nation. Whence it follows, that the firt principle the trader fhould tenicioully cultivate, is the fupport of his perfonal credit.
2. It too often falls out, that thofe who take up their refidence at foreign factories, no fooner get a houfe eftablifhed there, than they ufe every art to draw people in, to fend them large configuments of merchandizes by commifion. To which end, they at firft make remittances to their principals in a reafonable time, and give them an handfome profit upon their goods, in order to indace them to increafe their confignments.
3. When they have thus drawn people in to entruft a large fortune in their hands abroad, it is then that they too often begin to ufe every difhonourable art, to keep them out of their money.
If you prefs for remittances, you are given to underftand, that nothing can procure them but frefh confignments, which have proved the ruin of many; and, if you draw upon them for your property, your credit may fuffer by that means at home.
4. On thefe confiderations, our moft opulent and experienced merchants have eftablifhed houfes of their own at many of the Britifh factories in foreign countries; wherein they breed up a fucceffion of perfons, whom they gradually take into partnerfhip, which makes it for their interef to be punctual and faithful.
5. Such capital houfes feldom take commiffion from any, but the perfons who are the principals belonging to thofe houfes: and fuch are generally capable to fupply them, with whatever
goods they are able to vend, and thofe too with that variety of affortments, which engage the natives to give the preference to thefe houfes, in cheir general deallings.
6. Other houfes, which take commiffions in the general, and never give any in return, too oftein ufe no little craft in the making out their foreign accounts of fales, by couching great impofitions under many of their articles of charges, which they have never paid.
7. Nor is this the only practice which ought to be guarded againft. Goods perbaps may be fold at three or four months credit, or for ready money, and yet the principal kept out of his property for years, by falfe and frivolous pretences.
Thefe arts are mentioned, with a view only to guard the young and unexperienced from being too eafily enfnared; and we hope they will have the good effeat thereby intended. ACCOUNTANT, or ACCOMPTANT, one who is not only well rkilled in cafting up an forts of accounts, and readily performs all arithmetical operations, but who is verfed in the art of book-keeping, by charge and difcharge, or by debtor and creditor.
This appellation is applicable to a perfon, or officer, appointed to keep the accounts of a public company, or cifice; as the accountant of the South-Sea, or India company, or of the Bank, the Cufom-houfe; or Excife, \&c.
ACCOUNTAN TSHIP, comprehends not only a $\mathbb{E k i l l}$ in figures or arithmetic, but a knowledge in the art of accountkeeping by debtor and creditor, or by the method of tegular charge and difcharge, according to the nature of the tranfactions; which method keeps every diftinct account, if they are ever fo numerous, always fit for a ballance: and th't ballance is found by fubtracting the fum total on the debit fide from the fum tetal on the credit fide, or the fum total of the latter from that of the former.
To be fundamentally grounded in arthmetical operations requires a competent-acquaintance with geometry and aigebra, becaufe the geometric and algebraic way of reafoning difcovers certain rules and theorems, whereby to calculate numerically in the moft concife manner: and to be properly grounded in the nature of debtor and creditor requires a knowledge in the art of keeping accounts, according to the method of double entry, or what is commonly diftinguifled by the Ita* Jian method of Book-keeping, or by the name of Merchant's Accounts.
From hehce it may be obferved, that no perfon can be properly faid to be duly fkilled in accountanthip, wifhout being fkilled in the art of debtor and creditor, as well as in that of numbers: nor, on the other hand, does any one deferve the name of an accountant, who is only acquainted with bookkeeping, and not with figures.
The art of accountanthip is not onily applicable to the regular adjuftment of the variety of tranfactions among traders of every denomination, but alfo to the private affairs of gentlemen and noblemen. And as it well becomes all perfons of the greateft diftinetion to take due care of their effates; fo nothing, perhaps, can have a happier tendency to that end, than a knowledge in the art of debtor and creditor, as well as that of numbers. For ' merchants accounts, fays Mr. - Locke, though a fcience not likely to help a gentleman to

- get an eftate, yet poffibly there is not any thing of more 6 ufe and efficacy to make him preferve the eftate he has. ' 'Tis feldom obferved, that he who keeps an account of his 6 income and expence, and thereby has conttantiy under view - the courfe of his demeftic affairs, lets' them run to ruin.
- And I doubt not but many a man gets behind-hand before
' he is aware, or runs farther' on, when he is once in, for 6 want of this care, or the fkill to do it. I. would therefore © advife all gentlemen to learn perfectly merchants áccounts, - and not to think it a fkill that belongs not to them, becaufe - it has reçeived its name, and has been chiefly practifed by - men of traffic.

Nor is accountanthiplers ufeful to the gentlemen of the law, than to private gentlemen; and niot only to thofe who are intended for the bar, but to all follicitors and attornies litigations between traders making fo confiderable a proportion of the bufnefs of our courts of law and equity. Without the perfect knowledge of debtor and creditor in particular, accounts may be fo craftily and fophiftically ftated, as to deceive the moft upright judge and jury, as well as the council, if they are not capable of unravelling them in the courfe of their pleadings.
Perfons of diftiricion allo, who are concerned in the chief pofts of the public revenue, or who act in the fenatorial capacity, carinot be too well filled in accountanthip. The one will thereby be enabled to acquit. himfelf with credit and reputation, in, whatever branch of the revenue he fhall be employed; and the other will become perfectly acquainted with the finances and money affairs of the kingdom. For fuch is the nature band excellency of the mercantile art of debtor and creditor by double entry, that it is as eafily applicable to the accounts of nations as to thofe of traders, or private gentlemen, millions being as familiarly adjufted thereby, as hundreds of pounds. When once a perfon is acquainted with the feveral funds from whence the national revenue arifes, as likewife their approptiations to the payment

## A C Q

of intereft of certain national creditors; when it is duly obferved in what manner the deficiencies of fone funds are occafionally fupplied, and the furplufages of others tranfferred: when the general heads of fuch accounts are underftood from the fatutes, and the accounts annually laid before the parliament are duly attended to, any gentleman, well grounded in the art of debtor and creditor, may obtain as complete a knowledge of the money affairs of the nation, as of his own private concerns: that is, when he is a mafter of the facts relating thereunto, and the diftinct heads under which the funds are kept, he will be capable fo to fate thefe accounts by way of charge and difcharge, or debit and credit, as always to have a fatisfactory view before him of the ftate of the national debts and funds, and of the feveral variations they flall from time to time undergo. See Merchants AccqunTs, or the nature of debtor and creditor, according to the method of double entry
ACCOUNTING HOUSE, COUNTING-HOUSE, or COMPTING-HOUSE, is a place fet apart by merchants, and other traders, wherein to tranfact their bufinefs, and to keep their books of accounts and vouchers relating thereunto.

## REMARKs.

It is the cuftom of the Dutch merchants in Holland to keep a kind of Public Counting houfes, for the reception of a number of gentlemen's fons of fortune, more particularly of the Englifh, Scots, and irifh, who pay them at the rate of one hundred pounds fterling per ann, and continue with them upon that footing from year to year, as long as they pleafe. It is common to fee tell, or a dozen, or more of thefe young people in a Dutch counting-houfe; fome being weak enough to imagine, that a foreign country is the beft place to be bred in, in order to underftand the Britith commerce, and that there are no merchants who refide in England, are able to qualify their fons fo well as foreigners who refide abroad.
An humble attempt, however, was lately made to introduce fomething of the like kind of practice, of keeping a Public Counting-houle in our own country; and accordingly, a treatife was publifhed for that intent, entitled s The Merchant's Public Counting-houfe, or the New Mercantile Inftitution:' wherein is fhewn the necefity of young merchants being bred to trade with greater advantages than they ufually are: with a practicable plan for that purpofe.
In this plan are digefted, in miniature, the various qualifications, which have been judged neceffary to form the accomplifhed Britifh merchant. And, however low an idea fome may entertain of the abilities of fuch a trader, it is prefumed that, upon the perufal of the before-mentioned tract, they will be of a different opinion. Perfons of candor and impartiality, it is imagined, will therein fee, that it is not thrufting a young fark into any counting-houfe, either at home, or abroad, that is likely to qualify him to fave, much lefs to improve, an handfome fortune by merchandifing. Thofe who are defirous of perufing this tract, may meet with it at Mr. Horsfield's, bookfller in Ludgate-ftreet, by afking for Poßlethwayt's Merchant's Public Countinghoufe, or New Mercantile Inftitution, Evc.
ACHAIA, now Livadia, a province of Turkey in Europe, is bounded on the norch by Epirus, by I heffaly, from which it is divided by mount Oeta, now Banina, and by the Euripus, now the flraight of Negropont; on the eaft by the Archipelago ; on the fouth it has the gulph of Engia, or Egina, the ifthmus of Corinth, and the gulph of Lepanto; and, on the weft, the Ionian fea, and part of Epirus. Achaia is at prefent divided into three parts: namely, 1. Livadia, properly fo called. 2. Stramulipa, or Stramnzupa. 3. The dutchy of Athens.
A little way out of Thebes there is a hill, where they dig a kind of ftone, of which they make bowls for tobacco-pipes. The fone, when it is firft dug out of a deep pit, is of the colour of new cheefe, and almoft as foft, being in lumps commonly as big as a man's two fifts. This they bring to the town. and carve very curioufly into bowls of pipes; and as foon as it is dry, it grows very hard, as white as fnow, and fhuning. The natural dexterity of the people of Athens, in all the little matters they undertake, fhews itfelf extraordinary, as in buying, felling, and in all their domeftic affairs; and it is obferved by Mr. Wheler, that fo much of their ancient fpirit remains, that few towns in Turky have preferved themfelves fo well as this, or enjoy greater privilcges, under the tyranny of the Turks. Some other cities, indeed, feem, by trading more rich: but is it not a wonder, that Athens, though the has had but an equal thare in the ill fortune of all thofe noble cities of the Eaft under the dominion of the Turks, Should be inferior to many of them in trade, when fhe wants reither good harbours, nor good merchandzes for general commerce? The revenue of the city is raifed upon the cuftoms, caratchs, or poll-money, weights of the town, avenies, or amercements, tenths, and vellanies; thefe latter are the cups of acorns, with which they tan their leather. They alfo who carry merchandizes to any fair mult pay a certain duty to the Veivode, who receives the whole revenues and pays to the Kiflar Aga, or chief of the black Eunuchs, 30,000 crowns a year for bis place, which yet brings him in $50 c 0$ wns more, all charges and expences defrayed.

Livadia is large and populous, and is inhabited by many rich Turks, who are more numerous here than the Chriftians, and there are but few Jews. The trade confifts in fome woollen ftuffs, made here, and in rice, which they fell ready hifked, and prepared by water-mills, and therewith they furnifh all the adjacent country.
The inhabitants of Megara, which are all Chrifians, get their living by tilling the ground, for which they have half the crop; the reft goes to the Turks, as their lanillords under the Grand Seignior. They alfo make pitch, and faw boards and planks, out of the pines and firs, which grow in great abundance on the mountains about them.
The trade of Salona confilts in fome cotton, but chiefly in tobacco; of which 15 okas are worth but one dollar: an oka weighs about 42 ounces.
The little trade they have at Delphos, now Caftri, confifts in cotton and tobacco; their wine is exceeding good.
The trade of Lepanto confifts in leather, oil, tobacco, rice, barley, and wheat: furs are alfo pretty cheap here. On each fide of the city, under a mountain, are fruitful vallies, which ftretch out towards the fea. That to the weftward is well planted with olives, vineyards, and corn; and that to the eaftward is equally well planted, and divided into gardens of oranges, citrons, and lemons. The wine here is the beft in Grecee.
All hips that pafs out of the gulph of Patras pay 3 per cent. cuftom to the Emir, who pays about 6000 crowns rent per ann. for his office.
ACHIA, a kind of cane that grows in the Eaft Indes, which is pickled green in the country, with ftrong vinegar, pepper, and fome other fice and ingredients. This pick'e comes to Europe in a fort of earthen jars, about a foot high, and the fame in breadth, growing narrower at the mouth. The bits of cane are an inch and a half in diameter, and a little above two inches long, almoft of the fame confiftency with pickled cucumbers, being no lefs crifp, and cutting as well. They are of a pale yellow colour; and, inftead of pulps, their infide is a clofe, fibrous fubftance, like that of the common canes, when the outfide coat is off. The Dutch bring home great quantities of this pickle, which their culd climate makes them think whollome. They generally eat it towards the end of their meals, judging it very good to quicken the appetite, and ftrengthen the ftomach, becaufe of the ftrong vinegar, lemon, pepper, and other fpices, of which the pickle is made up, and in which the achia muft always lie, in order to keep it, give it a fharp tafte, and make it very hot and fiery.
This fruit is alfo called achiar. It is a green, which is preferved. in vinegar. It is extremely efteemed throughout all the Eaft-Indies, and they drive a prodigious great trade in it. The beft comes from Perffa, and is preferved in bottles, almoft after the fame manner as thofe fmall cucumbers are in France, which they call cornichons. Each fort of fruit is not preferved by itfelf, but feveral forts are put together into the fame bottle.
ACHIAR, is a Malayan word, which fignifies all forts of fruits and roots, pickled with vinegar and fice. The Dutch import from Batavia all forts of achiar, which the Chinefe make after the manner of the Malayans; but particularly that of bamboe, a kind of cane, extraordinary thick, which grows in the Ealt-Indies, and is preferved there, whilf it is fill green, with very ftrong vinegar and fpice. This is called bamboe-achiar. The name changes according to the fruit with which the achiar is made.
ACHIOTL, a name given by the Brazilians to a drug ufed in dying, more conmonly called Rocou. See Rocou
ACHTELING, a meafure for liquids, ufed in Germany, Thirty-two achtelings make a heemer; four feiltems, or feiltins, make an achteling.
ACHTENDEELEN, or ACHTELING, a meafure for grain, ufed in fome parts of Holland. Two hoeds of Gorcum make five achtendeelens; 28 achtendeelens of Afperen make 32 of Rotterdam, which contain only 26 of Worcum. 29 achtendeelens of Delft make 12 viertels of Antwerp. Four achtendeelens $\frac{24}{35}$ of Delft make the hoed of Bruges.
ACICOCA, an herb that grows in Peru, and is fometimes ufed inflead of the herb of Paraguay, of which it is faid to have all the properties. A great quantity of it is yearly carried from Lima, and other parts of Pere, to the city of Avira, from whence it is fent to Potof, efpecially when that of Paraguay is very fcarce, and confequently dear.
ACORI, or BLUE CORAL. The true acori is very fcarce; fome, however, is fifhed upon the coalt of Africa, particularly from Rio-del-ré, to the river of the Camarones. This coral is part of the merchandizes which the Dutch trade for with the Camarones: that of the kingdom of Benin is alfo very much efteemed. It grows, in the form of a tree, upon a rocky bottom. See Coral.
ACQUIESCENCE, in the French commerce, fignifies the confent that a merchant, or other perfon, gives to carry into execution the determination given cither by arbitration, or by a conful, or by any other refolution, in the courfe of juftice. There is no receding from fuch a judgment
or fentence, after an acquiefence, or agreement thereunto. See Arbitration.
ACQUITTANCE, in France, a kind of difcharge upon ftamped paper, which is made out and delivered to traders, facors, or carriers, by the officers, reccivers, and comp. trollers of the two grand farms, eftablifhed for the imports and exports in the kingdom of France, and the provinces reputed foreign.
There are four forts of acquittances; thofe of payment ; thofe of caution, or precaution; thofe for fecurity of paffing, or thofe of perfonal fecurity, or bail; and thofe of certificates of franchife.
The Aceuittance of payment mentions the quantity, quality, weight, or value of the merchandize; the number of chefts, bales, and packs, in which they are contained; their marks and numbers; the leaden-marks or tickets affixed to them; the fum paid for duties of import or export; the merchant's name for whofe account they are fent; the place where they are to be unladen; and the road the carriers are to go. This acquittance, or certificate of payment, muft go with the merchandize, and remain at the laft office of the cultoms, to be revifed and examined by the clerks of the farms, in order to know whether the duties have been fully received or not; and, in cafe they were not fully received, to caufe the deficiency to be paid by the merchant to whom the merchandizes belong. Belides all thefe particulars being enumerated in fuch acquittance of payment, the time in which the merchandize is to arrive at the laft cuftom-houfe, is alfo mentioned; after which they remain void, and cannor be received by the officers, except there has been fome lawful hindrance, which muft be proved by a verbal procefs, in due form. The carriers are alfo forbidden to pafs by any other cuftom-houfe, except thofe mentioned in the acquits, and are obliged to carry the goods directly to all the offices of the cuftoms upon their route, and prefent their acquits, in order to their being indorfed, viz. feen ; and, finally, to leave them at the laft office, where, after the chefts, packs, or bales, have been opened and infpected, the officers deliver to them a warrant, called brevet de controlle, without any charge. The carriers are alfo obliged to produce their acquits on the firit demand of the officers of the cuftoms, whom they meet upon their route, at whofe difcretion it is to keep them, on delivering, in the like manner, a brevet de controlle ; though the opening can be done no where but in the cuftom-houfes, and of fuch goods only as have not been vifited before, it being prohibited, with regard to thofe that have already been examined, to open them any where but at the laft office of the cuftoms. All this is directed by the Ordonnance of the five great farms, of February 1687, Tit. 2. Act. $16,17,18,19,20$.
The AcQuit Tance of caution, or precaution, or of fecurity, or bail, is delivered by the officers of the cuftoms to a private perfon, who binds himfelf as fecurity, that a bale of merchandize fhall be infpected by the officers of the cuftomhoufe at the place to which it is configned, and that the cuftoms, if there are any due, fhall be paid there; in confequence of which, the bale is packed, corded, and loaded, at the office, where the acquittance is delivered, that it may not be opened, nor the goods changed, upon the route they are to go. And, when the bale arrives at the place of jts deftination, and the merchandizes, and other things contained in it, have been examined and vifited by the infpector, the receiver and comptroller, on the infpector's certificate, caufe the duties to be paid, if any are due, and endorfe the recept upon the back of the acquittance, which is afterwards fent back to the perfon who bound himfelf, to be refurned by him to the officers from whom he had it, in order to his being difcharged from his bond.
The Aceuittance for fecurity of tranfit, or paffage, relates to certain merchandizes; or materials, for working and manufacturing; fuch as are exempt from the duties of import and export in the kingdom of France, and alfo from tolls, grants, and other impofts; as are thofe which relate to the manufactures eftablifhed in the towns and diftricts of Lifle, Doway, Orchies, Tournay, and other cities in the Low Countries, conquered by the King of France in Flanderc, or yielded to him by treaties of peace, or truce, and which are entered and cleared at the cuftom-houles of Calais, Bayonne, Seftome, near Marfeilles, Pont de Beauvoifin, Stralburg, and Peronne, to be fent into the Indies, Spain, Italy, and England.
This acquittal is ufually delivered by the officers of the cuftoms at Lifle, according to the certificate of the magifrate of the town, and mentions the name of the perion for whofe account the merchandizes are, their quantity, quality, and weight; the number of the bales; packs, or chefts, in which they are contained; how corded, packed, and leaded; their marks and numbers; the cuftom-houfes through which they are to enter and clear: that they are not to be lodged any where, except in the cuftom-houfes through which they are to pafs, nor opencd, except at the laft office on the froatier, where they are to clear, and to be viewed and vifted by the officers of the farms. For lecurity of which, the merchant, or who configns them, enters into a bond

Vos. 1.
to bring in, within four months from the delivery of the acquittance, a certificate in due form, that the faid merchandizes have been found, in number, weight, quantity, and quality, with the bales, package, and leads of the cuftomhoufe, whole and entire, conformably to the acquittance. This certificate, being enderied upon the back of the acquitrance, the fecurity is dicharged. without any defficulty. The Acquititance, or certicate of franchifes, concerns the exemption from the duties of export on merchandizes, intended to be fent crit of the kingdom, which are bought and fent away during the franchifes, or freedom of fairs. They are particularly ufed at Lyons, during the four free fairs, which are thofe of Twelfh-day, Eafter, Auguft, and All faints, each of which continue a fortnight free, and begin as follows: That of Twelfth-day, the firf Monday after that feftival ; that of Eafter, the firft Monday after Lowfunday; that of Auguft, the $4^{\text {th }}$ of that month; and that of All-faints, the $3^{\mathrm{d}}$ of November.
This acquitance, or certificate of franchifes, is at firf delivered by the receivers and comptrollers deputed, or appointed, by the provoft of the merchants, and by the aldermen of the city; it mentions the perfon for whofe account the merchandizes are, their quantity, quality, weight, the number of bales, packs, or chefts; that they bave paid none of the ufual duties of the city, and that the faid bales, packs, or cheffs, were taken away, and loaded, dusing the time of the franchife, or freedom of the fair, and have been marked by them, with a particular mark, of which thete is a Itamp in the margin of the certificate; and that they contain no prohibited or contraband goods. On the back of this acquittance, or certificate, mult be fet down the warrant of the clerks of the general office of the cuftom-houfe, to the clerk of the gates of the city, commanding him to certify the going out of the bales, packs, or chefts, mentioned in the acquittance, or certificare of the magiffrates of the city, and that the duties are allowed to bave been paid during the fair; and that declaration has been made, that they fhall be exported, out of the kingdom, through fuch a province. It mult be obferved, that, in order to have the benefit of the franchife for exemption from duties, the merchandizes mult be carried out of the town, towards the end of each fair, and out of the kingdom before the firft day of the fair next following; except, however, in cafes of juft and legal hindrances.
The acquittance, or certificate, or permit, as we term it in Englifh, of franchife, muft go along with the me:chandize, to the laft office of export, and remain there.
Acquittance, among the French merchants, fignifies alfo a receipt. Paid fuch a one, by acquittance, of fuch a day; that is to fay, upon receipt, or acquittance. When a banker, or any other perfon, gives to a fervant, or porter, a bill of exchange that is due, in order to go and receive the payment of it, he generally endorfes it in blank; that is, leaving a void fpace above bis name, that the receipt may be wrote there. But a man mult always take care, with regard to thofe blank endorfements, toput the words, "pour acquit," for receipt, or acquittance, under his name, that the void fpace may not be filled up with an order payable to another, which might be attended with very bad confequences.
To Aceuit, fignifies alfo in French, to pay the duties of import or export for merchandizes, as they are imported into, or exported out of, cities, and at the culfom-houfes. Thus they fay, ' that merchant drives a vaft trade, he has - acquitted (that is, he has paid) this year, above Io0,000 " livres duty to the king.? It fignifies alfo to pay one's debts: - this merchant has at laft acquitted himfelf towards ' his creditors ;' that is, he has paid thementirely. They alfo fay, to acquit bills of exchange, promiffory notes, bonds, \&c. that is, to pay them.
Acquittance, a releaie, or difcharge, in writing, of a payment, debt, or any other thing we are obliged to pay or perform. Some acquittances are made before a notarypublic, and others only under a perfon's private fign manual; they are both' equally good, but not equally fafe with regard to what may happen afterwards, the latter being fometimes lidble to very great inconveniencies.
The receipt wrote on the back of a bill of exchange that is paid, is properly a true acquittance.
ACTION, a right which a perfon has to fue for any demand or pretenfion, at law. It is allo faid of actions entered againft a perfon, and of the proceedings carried on for afferting and proving one's right.
Action, in French commerce, fignifies fometimes the moveable effects: thus they fay, that a merchant s creditors have feized upon all his actions; which is as much as io tay, that they have taken poffeffion of all his active debrs, that is, the debts owed to him.
Action Redhibitory, is an atlion at law by which the buyer may oblige the feller to take back damaged goods, or fuch as do not prove according to the agreement.
Action of a Company is an equal part, or pertion of flock, of which feveral, joined together, make the capital fund, or ftock, of a trading company. Thus a company which has 300 aetions, of a 1000 J . each, bas a fund of 300,000 l.

Which is to be undcrftood in proportion ats the actions are fetted at a larger or fmaller furm. A merchant, or any other perion, is faid to have 4 or 6 actions in a company, when he has contributed to the capital ftock, and is concerned in it for, 4 or 6000 l . if the actions are 1000 l . as we have juft fuppoied.
A propriecor cannot have a deliberative vote in the affemblies of a company, unlefs he has a certain number of actions, fixed by the letters patents of it's eftablifhment; nor can he be a director, unlefs he has fill a greater number of actions. This proportion of actions, in order to a deliberative vote, or the directoribip, is mentioned in another place. See Trading Companies.
Action lignifies alfo the bonds, contracts; and acknowledgements, or $\mathcal{S}$ тоск in general, which the direqurs of trading companies transfer, or deliver, to thofe who have paid their moncy into the company's cafh, and made therffelves proprietors. Thus to deliver an action, is to expedire in due form the title by which the actionary becomes a proprietor of the action he has taken out.
The actions of trading companies rife or fall, according as fuch companies gain or lofe credit. A very fmall matter often occafions this rifing or falling of the actions, and frequendy an uncertain rumour of a rupture between neighbouring powers, or the hope of an approaching peace, when they are at war, is fufficient to lower, or raife the price confiderably, at which they are ufually negociated. It was feen in France, in the year 1719, how far the credit of a company is capable to carry that of its actions: thofe of the company of the Wctt-Indies, known fince by the name of the India company, having rofe, in lefs than fix months time, to 1,900 per cent. which had never happened to any other company, bowever high it's credit or power were.
Before the war which France declared againft the States General of the United Provinces, in 1672, the aetions of the Dutch Ealt-India company bad rofe to $6 ; 0$ per cent. which is the utmolt height to which they were ever known to arrive. But, in the firft months of that war, which was like to have proved fo fatal to that republic, the actions fell to lefs than 250. The company having afterwards retrieved themfelves, their actions rofe again, after the peace of Nimeguen in $\mathbf{6} 78$. The different ruptures that have happened fince, between France and Holland, till the treaty of Utrecht in 1713 , either on the account of the league of Augfburgh, or the fucceffion of Spain, did indeed occafion fome fall in the ations, but always inconfiderable in comparifon to that of 1672 ; and they eafily refumed their price at the end of each war, and even rofe higher than they had been before: fo that, in the year 1718 , they were not much below 600 per cent. the actionifts, as they are called in Holland, thereby feeing their capital increafed to fix times it's original value, and each action, which, at the eftablifhment of the company, coft only 500 livres de Gros, or 3000 florins, being then worth 18000 florins.
The trade of actions, or flocks, is one of the moft confiderable that is carried on upon the exchange at Amfterdam, and in all the other cities of the United Provinces, where there are chambers, or courts, of the Eaft-India company; and there are even great numbers of people who fubfift and enrich themfelves by this traffic only. What renders this trade fo commun, and often fo profitable, in Holland, is, becaufe it can be carried on without any great fund of ready money, and confifts only, if we may ufe the expreffion, in a continual viciffiu le of buying and felling of actions, which they buy when they fall, and fell cut again when they rife.
In the buying or felling of actions of the Dutch Eath-India company, a broker is almoft always employed; and, when the pice is agreed upon, the feller transfers them, and figns the acquittance, or receipt, in the prefence of one of the directors, who caufes them to be booked by the fecretary, or regifter, which is fufficient for transferring the property of the ftock fold, from the feller to the buyer.
The broker's fee for his trouble is ufually at the rate of fix florins for each attion of 3000 florins, one half paid by the buyer, and the other by the feller.
It is not fo eafy to fpeak of the trade in the actions of the French company, as of that in the actions of the Dutch companies every thing in the latter being tranfacted with the utmolt regularity, and exact form; and all things in the former being at firtt conducted with a kind of frenzy, which feemed to have feized all perfons, whom the prudence of the direftors could not moderate for a great while; and which had, in a manner, cleared all the fhops at Patis of their traders, to make as many brokers or ftock-jobbers of them, and had robbed the neighbouring ftates of their inhabitants, who came to thare the immenfe fortunes of the ft;eet called Quinquempoix, where the caprice of the people had in a manner fixed the center of that rich traffic, as Change-alley, near the Royal Exchange, was at London, in $\begin{aligned} 17 \\ \text { I }\end{aligned}$
The method of transferring Adtions, or Stocks, at Am fterdam.
When two perfons have agreed between themfelves, or by
the affifance of a broker, upon the price of one or mote actions, and they are to be delivered; the feller goes to the Eaft-India houfe, to make his declaration to the book-keeper, who immediately enters it; and, after having made the feller fign it, caufes it alfo to be fubfribed by one of the directors; before whom the feller muft likewife declare, by word of mounh, that he has fold it. The transfer being thus regiftered, and the feller having informed the buyer of it, the latter has a right to go and aflure himiflf farther of it at the EaftIndia houfe, in cafe he does not think fit to truft the perfon with whom he has negociated: after which, he ought to caufe the value of the actions transferred to be paffed over at the bank to the fellers account, who, when he is certain that the value has been placed to his account, or credit, at the bank, returns to the Eaft-India houfe; and figns the acquittance; or receipt; at the bottom of the transfer which he has made. As long as this acquittance is not figned, the purchaier cannot difpofe of the actions transferred, though he has paid for them: but, in cafe of the feller's refural to fign fuch acquittance, after receiving the full value, he may be compelled to do fo, only by a petition to the echevins, or aldermen. Each transfer cofts three florins and tenl ftivers, both, for the feal, and to the book keeper.
It muft be oblerved, that the regifters of transfers connfift of printed forms, in which the clerks have only to fill up the blank. Thefe forms are called Seals, becaufe they have an imptefs upon them, not unlike the ftamped paper of France; This regulation for the transfer of actions was eftablifhed by feveral placarts, or decrees; of the States-General of the United Provincés; and, among others; by thofe of July 15, 1621, May 30, 1624, and September 16, 1677. By the fame decrees; all perfons, of what quality foever, are prohibited to fell, either for a fixed term, or for the prefent; any actions of the company, either for their own account, or the account of others, unlefs the faid actions be really and actually entered in their name, or in the name of thofe for whom they fell, at the time of fuch fale, upon penalty of the feller's paying a fine of one fourth part of the price for which they' fhall have fold them: ordering further, that the transfer of them thall be regiftered witbin the fpacé of 14 days after the fale, if they were fold in a city where an office or chamber of the Eaft-India company is kept, or within a month, if it be in another city, under the fäme penalty of being fined a fourth; nor hall the contracting parties have power to except againft thofe placarts, or decrees; nor the brokers for them, upon pain of the latter being immediately deprived of their office, and for fuch as are not brokers to be punifhed arbitrarily, as the cafe fhall require.
The French Actions are, at prefent, of three forts; namely, fimple actions, actions rentieres; or rent actions, and actions intéreffées, or actions bearing intereft.
The fimple Actions are thofe which have a thare in all the company's profits and loffes, having no other fecurity than the company's fund only.
The Actions rentieres, or rent aftions, are thofe which have a profit certain of two per cent. for which the king made himfelf fecurity, as he was formerly for the annuities upon the city; but they have no fhare in the dividends.
The Actions intéreffées, or bearing intereft, are, as it were, a medium between the two former; they have two per cent. fixed revenue, with the king's fecurity, like the rent-actions; and muft, befides, thare the over-plus of the dividends, with the fimple actions. Thefe actions were eftablifhed in behalf of ecclefiaftical communities, who might have money to put out to ufe.
Befides this diftinction of actions, authorized by the king's edicts and declarations, the caprice of the flock-jobbers of the ffreet Quinquempoix had invented many others; as aetions of the old weft, actions of the five hundred, of mothers, of daughters, of grand-mothers, of grand-daughters, and fome others equally ridiculous. But, as all thefe terms came to nothing at the fame time, with the credit of that freet, it would be ufelefs to trouble the reader with an explanation of thefe bubbles.
We fhall only add here fome other more fucceffful terms, which had their day in the traffic of actions. Such are thofe of dividend, of well fed actions (nourrir) to feed an action, and to turn an action into cafh; all thefe expreffions, being pretty well eftablihed in the trade of actions, deferve a place in this Dictionary.
To feed an Action, is to pay exachly, when they become due, the feveral fums fubferibed to the fock of the company, according to the orders of council, made for the creation of the new actions; to fell or difpofe of them, according to the occafion, for calh, either to feed other actions, or for other aflairs.
An Action fed, is one upon which all the payments bave been made, and which is capable of tharing in the dividends of the company's profits. Till this complete and entire payment is made, it is not properly an action, but a lubfoription. See Subscription.
Dwidend is what is otherwife called repartition, that :s, the part, or mare, which each proprietor of actions is to have

## A C T

out of the profits of a company, in proportion to the number of actions he has in it.

Observation.
Of the commerce of Actions, or Stocks, in foreign countries, from the remarkable period of the year 1719 , to 1721 .
What we fhall add in this place relates to the actions, or focks, of foreign companies, which have been carried to as great an excefs as thofe of France, and have met with much the fame fuccefs; the infatuation and avidity of fuddenly growing rich having been in a manner equal amongft almoft all the nations of Europe, and made them turn to an ill ufe one of the beft and moft advantageous eftablifhments that ever was, for the increafe of trade, and to make it flourifh in a country.
The example of what paffed in France, in the trade of actions, and the immenfe fortunes which fome perfons made there, tempted . both the Englifh and the Dutch at the fame time; fo that an infinite number of new companies were foon feen to deluge, in a manner, England and Holland. AmAterdam, Leyden, and Haerlem were almoft the only cities in the United Provinces which were not carried away by the torrent; and fo prodigious a number of thofe chimerical eftadifhments were feen in London, that the whole trade of that geat metropolis was almoft reduced to the fole negociation of ftocks; which, by their fall, ruined the fortunes of many confiderable merchants, and feveral of the moft illuftrious families of Great Britain.
The companies whofe ftocks, or actions, made the greateft noife at London, were, among the old ones, the South Sea, the Eaft-India, and the Bank.
The South-Sea fock, which, in the beginning of April 1720, was only at 120 per cent. was raifed, in the month of July following, to 1020 per cent.
Bank ftock rofe from $\mathrm{I}_{4} 8$ to 300 , and Eaft-India flock from 198 to near 500 .
Thofe times, fo favourable to the old proprietors, continued fcarce a few months: after feveral fluctuations, South-Sea ftuck fell in November to 100, and, to wards the beginning of the year 1721, it could be raifed only to 150 per cent. Bank fock to 130, and Eaft-India ftock to 160: and they fell afterwards into fuch a difcredit, that the parliament made it their chief bufinefs, for above a year, to difcover and punifh the frauds and milmanagements of the cafhiers and directors of thefe three companies, and to reftore the credit of their ftocks, which could not be accomplifhed before the year 1723.

The London Affurance company was, of all the new companies in England, that which feemed to make it's firft ap. pearance, under the moft favourable aufpices. It's ftock, on which only ten per cent. was paid at firft, prefently rofe to 120 per cent. that is, to twelve times the capital paid in, and even to 160 . This flourihing fate continued but a fhort time. A form, which, towards the end of October 1720, occafioned the lofs of twelve Jamaica Ihips, gave the affairs of that infant company fo terrible a hock, that it's ftocks fell the fame month to 60 ; other loffes having alfo weakened it fome time after, the focks fell to 12 or 15 per cent. In fhort, towards the clofe of the fame year, this promifing company farce fublifted, but in the complaints the proprietors made of being cheated by the directors.
The actions of the new companies eftablifhed in Holland, or augmented according to the model of thofe of England, foon experienced the like revolutions:
The directors of the Weft-India company, having obtained leave from the States-General to take in new fubforiptions, at the rate of 250 per cent. foon faw them rife to 650 ; but, falling afterwards almolt on a fudden, they came down to cent. per cent.
The actions of the company of Affurance, eftablifhed at Rotterdam, in the beginning of July 1720, on which only 4 ftivers per 100 guilders had been advanced, that is to fay, to guilders for every action of 2500 guilders, foon rofe to cent. per cent. But their credit hardly continued fome months, when no body would give 18 per cent. for them. Thofe of Gouda (or Ter Goude) for which but one per cent. was paid in, after having fold at the rate of 30 per cent. foon fell again to their original value.
Thofe of the Delft company met with the fame fate, and in a fhorter time. Finally, not to tire the readen with a tedious detall of parciculars as there was fcarce a city in North Hol land, even to the moft inconfiderable, but where, after the example of Rotterdam, companies of navigation and affurance had been eftablifhed, fo there was not one, in which the avarice of the proprietors was not punifhed by the fall of their actions, and the entire lofs of the money employed in them.

## Remarss.

To caution proprietors of ftocks from being hereafter led away by the like infatuations as prevailed in the year 1720 in England.
From this fuccinct account of the extravagant rife and fall of actions or fucks in thefe feveral public companies both at
home and abroad, it may prove ufeful and agreeable to fuch of our readers to whom thefe matters may te new, to give the fentiments of thofe, who have fet the fatal con equences hereof in the ftrongeft light; in order to warn polt:rity "againft being led into the like calamitous fchemes and projects.
The clofe connexion which at prefent fubfifts between the monied and trading interefts of thefe kingdoms makes this the more natural and neceflary in a Dictionar of Commerce; our trade having then received, and always muit receive, the greateft injury from fuch enormous abufes, as took place in our flock negotiations, in that famous æra in England, called the South-Sea year.
Such is the nature of the public credit, that notody would lend their money to the fupport of the fate under the moft preffing emergencies, unlefs they could have the privilege of buying and felling their property in the public funds, when their oceafions required. 'Tis certain, therefore, that the greateft delicacy and tendernefs is to be obferved, in laying any reftraints upon thefe tranfactions, left the public credit fhould be thereby irrecoverably prejudiced.
In regard to great trading companies and banks, which carry on bufinefs, and make thereby a certain and apparent profit, it can never be difficult for the chief managers' of fuch corporations to be able to judge pretty nearly, at all times, of the value of the properties of their conftituents: and whenever the value of their actions, hy any kind of artifices or unfair practices, are made to rife or fall beyond their real worth, it feems a duty incumbent on them to fet the public right upon thofe interefting occafions.
It has been thought by fome very wife and honeft men, that one way to prevent thofe evils, which may attend the fudden and exorbitant rife or fall of hocks, would be, if thefe companies were obliged, once a year, to ftate an account of trade, and of their real profits, and lay it before their general court; and if they were tied down from dividing more than ther profits, as the Dutch Eaft India company are faid to have done, with great honour and ftability to that corporation. The great difproportion between paper and fpecie currency, in this kingdom, fhews, that, without the former, the bufinels and trade of the nation muft be, perhaps, proportionably ftagnated ; unlefs we could fupply our deficiency in currency by hard money.
If by fuch arts as were practifed in the Miffifippi and SouthSea times, the flocks of this nation, belonging to our public companies, fhould be blown up again to be nominally worth one thoufand times more than they intrinfically are; although this would increafe the quantity of paper circulation, yet, as it would not increafe our commerce in proportion, it would only draw the money out of all the channels of trade, and reduce us to real beggary, by grafing at imaginary wealth.
To fupport the public credit of the nation upon a folid bafis, and to prevent the fpreading of thefe corruptions and enormities in our public companies for the future, the fentiments of thofe cannot be too often inculcased throughout this kingdom, who have zealoully laboured to guard us againft the like public diftrefs and calamity for the future, which the nation was plunged into in the South-Sea year.
As this matter is fet in a ftrong and affecting light in what was urged by wife and honeft men in thofe frenzical times, we fhall give the reader the fubftance thereof, with fome fuitable variations. And as for other political hints, which are interlarded, and which are not directly pertinent to the point we intend to illuftrate, the reader may pafs them over as he thinks proper; fince mangling the piece would deftroy the fpirit of it.
The gentleman, whofe fentiments thefe are, having explained the true nature of public credit, which confits, as be fays, in the affluence of trade, the general wealth of the nation; and the confidence of the people in the juftice and integrity of their governors, proceeds thus:
I have endeavoured to fhew what, and what alone, ought to be called credit. But there hath lately rifen up, in our age, a new-fangled and fantaftical credulity, which bath ufurped the fame name, and came in with the word Bite, which hath been made free of a neighbouring court *; whereby the poor, innocent, induftrious, and unwary people have been delivered into the ravenous and polluted jaws of vultures and tygers; and thoufands, I bad almoft faid millions, hase been facrificed, to fatiate the gluttony of a few. This hath inverted the occonomy and policy of nations; made a great kingdom turn all gamefters; and men have acquired the reputation of wifdom, from their fkill in pickirg pockets. It hath entered into the cabinets of courts; hath guided the counfels of fenates, and their whole wifdom, and moft of their time, hath been employed in keeping up this vile and airy traffic, as if the bufinefs of government was not to protect people in their property, but to cheat people out of it.

* Hereby is meant the Mififilippi fcheme, wh ch was fet a foot in France in 1719

This is eminendy true in a neighhouring country [meaning in France] and I winh I could fay, thas nothing the it had

## A C T

ever happened amongt us. - Neither public nor private cre dit ean confift in felling any thing for more than it is worth, or for any thing but what it is. It is certainly the intereft of a country, that its commodities fhould fell at a good price, and find a ready vent; that private men fhould be able to truft one another; that lands fhould find ready purchafers, good fecurities, money at low interelt ; and that mortgages thould be eafily transferrable. And the way to bring thele good purpofes to pals, is to afcertain titles; give ready re medies to the injured; to procure general plenty by prudent laws, and by giving all encouragement to honefty, induftry, and trade. But it will never be effected by authorizing, or countenancing frauds ; by enabing artful men to circumven the unwary, flamping the public feal upon counterfeit wares; and by conftantly coining a new fort of property, of a precarious, uncertain, and tranfitory value; and, by conllant juggles and combinations, confpiring to make it more fo ; which conduct, whenever practifed, muft foon put an end to all public and private credit.
In what country foever thele pratices meet with encouragement, all fair and honett commerce will be turned into juggling. There will quickly grow a fort of cabaliftical learning; and there will be a fecret and a vulgar knowledge one to be trufted only to the vere adepti, and managers of public companies; and the other to be divulged to the people, who will be told nothing but what it is for the intereft of their betters to communicate ; and pretty advantages may be made by being in the fecret. As for example ; juft before any public misfortune is to make its appearance, thofe who know it may fell out their actions or focks; and in the height of the danger buy again; and when it is over, by taking another opportunity, they may fell a fecond time; and, when thefe evils are averted, they may go to parket once more; and fo, toties quoties, till the greatelt part of the property of a kingdom, or a public company, is got into the hands of but a few perfons, who will undoubtedly govern all the reft. Nor can thefe mifchiefs be poffibly prevented, but by wholly deftroying this fort of traffic, or by appointing fklful pilots to fet up occafional buoys and fea-marks, according to the thifting of the winds and the tides; that is, by aicertaining and publifhing the real value of ail public fecurities, as often as there is an alteration made in them by new provi. fions, or by wholly preventing the abufes, occafioned by the mere trade of ftock-jobbing.
Till fomething of this kind is done, it is foolifh to think, and worfe to pretend to think, that any effectual methods can be taken to difcharge and pay off the national engagements; for in whatever country it happens, that the public funds become the markets and ftanding revenues of thofe, who can beft cure the evil; where great and fudden eftates may be more eafily raifed by knavery and juggling, than fmall ones by virtue and merit; where * plumbs may be got at once, and vaft focieties may be made the accomplices of power, in order to be indulged with feparate advantages; it is not to be hoped, that effectual methods will be taken to dam and choak up fuch inexhauftible fources of wealth and dominion. On the contrary, it is to be feared that new projects will be yearly invented; new fchemes coloured with popular pretences, to tofs and tumble the public fecurities, and to change them into as many hapes as Proteus knew. One year thall metamorphofe the fchemes of another, and the next thall undo both. The leaders of one faction thall unravel the projects of their predeceffors; hall charge their defigns with corruption and rapine, and be more rapacious themfelves; and all, in their turns, fhall raife immenfe eftates upon the public ruins; and the laft fpirits fhall be always the worlt.

* A plumb is a kind of cant word for an hundred thoufand pounds.
I would gladly know, what advantage ever hath, or ever can accrue to the public, by raifing ftocks to an imaginary value, beyond what they are really worth to an honeft man, who purchafes them for a regular fupport to himfelf and family, and defigns not to fell them again, till he hath occafion for the money they will produce. It can moft affuredly ferve no honeft purpofe, and will promote a thouland knavilh ones. Befides thefe before-mentioned, it turns moft of the current coin of England out of the channels of trade, and the heads of all its merchants and traders off their proper bufinefs. It enriches thofe who are inftrumental to bring no riches into the nation by fair and honourable traffic, and it ruins the innocent who are unacquainted with the tricks and artifices of ftock juggling. It hath changed honeft commerce into bubbling; our traders into projectors; induftry into tricking: and applaufe is earned, when the pillory is deferved. It hath caufed all the confufion in our public finances. It hath overwhelmed the nation with debts and burthens, under which it is almoft ready to fink; and it hath hindred thofe national debts from being paid off; for if focks fell for more, or much more than the prices, at which they are redeemable, or more can be got by mere jobbing them than by difcharging them, then all arts will be ufed to prevent a redenption.
'Tis folly in any one, who is the leaff acquainted with the
affairs of nations to preteid not to fee, that if we do not foon put our public debers in a method of being paid, they can never be paid; and all will do their utmoft to prevent fo fatal a mifchief to their country, who do not intend it. But, if there are any fuch, they will undoubredly take early care to fave themfelves out of the general wreck, which very few will be able to do, though all will intend it. Thofe in the fecret will have the advantage; for, when felling of focks becomes the word, no one can fell, unlefs he fells for little or nothing. All are waiting for a rife; and, if that happens, all or moft will endeavour to fell, and then all felling is at an end. The managers and brokers will engrofs the books, as they did in the South-Sea year, and command the firf fale ; and, by the time they are got out, no one will be abie to et out.
There is nothing left to be done, but for all honeft men to join heads, hands, and hearts, to find all means to difcharge the public burtheris, and to add no more to them; to fearch every meafure, whereby we can leffen the national expences; to avoid all occafions of engaging in new ones; and to do all in our power to increafe the public wealth by folid trade, which will afford conftant employment for our people, and convert our paper-money into fubftantial cafh.
Such a revolution of property did this abufe, in the buying and felling of thocks, occafion in England in the year 1720, that a zealous advocate for the public interefts expreffes himfelf in the following manner, which, will give us a ftrong idea of what may be expected on the like occafion:
What, fays he, can be more invidious, than for a nation ftaggering under the weight and opprefion of its debts, eaten up with ufury, and exhaulted with payments, to have the additional mortification to fee private and worthlefs men riot in thcir calamities, and grow rich, whilft they grow poor; to fee the town every day glittering with new and pompous equipages, whilf they are mortgaging and felling the:r eftates, without having foent them; to fee blazing meteors fuddenly exhaled out of their jakes, and their mud, as in Egypt, warmed into monfters?
For other matter relating to public companies, fee the feveral Great Companies eftablithed throughout Europe, under their proper heads. As the East-India Company of England, under Eaft-India; South-Sea Company, under South-Sea; Hudson's Bay Company, under Hud-fon's-Bay; Dutch East-india Company, under Dutch Eaft India, \&c.
ACTIONARY, or ACTIONIST, a proprietor of flock in a trading company. In France the word Attionaire is in ufe, and that of actionifte in Holland. It is lawful for an aetionary, or proprietor, to fell his actions or flock, either in whole or in part, with lofs or with gain.
To enter an Action, is to commence a procefs at law againft one, for the recovery of a debt. The word actioner was furmerly ufed in matters of French commerce; but it is now almoft out of date, and they fay affigner.
ADARME, a fmall weight in Spain, which is alfo ufd at Buenos-Aires, and in all Spanifh America. It is the 16 th part of an ounce, which at Paris is called the Demi grofs (or half draghm.) But it mult be oblerved, that the Spanfis ounce is feven per cent. lighter than that of Paris, fo that a hundred ounces of Madrid make but 93 of Paris.
ADATAIS, or ADATIS, a muflin or cotton-cloth, very fine and clear, of which the piece is ten French elli long, and three quaters broad. This mullin comes from the Eaft-Indiec. The fineft adotais are made at Bengal.
ADDITION, in arithmeric, is the firf of the four principal rules, or operations in the art of calculation by figures. It confifts in finding the fum total, or amount of feveral numbers added one to another.
The common character which denotes addition, by our modern arithmeticians, is + , or plus, the fame as is ufed by algebraifts. Thus $5+7$ denotes the fum total of 5 and 7 . The addition of fimple numbers is plain. Thus it is readily known, thit 5 and 7 , or $5+7$, make in the whole 12; and $12+10$ make in the whole 22 .
In compound numbers, thofe which are of the fame kind, are fet under each other; i. c. units under units, tens under ens, $\& c$.
Addition of numbers of different kinds or denominations, is performed by cafting up each denomination by itfelf, beginning with the loweft; and, if after the addition rhere be enough to make one or more of the bigher denomination, they muft be added to the figures of that denomination; referving the odd remaining number by itfelf, under its proper denomination.
ADIT of a mine, is the hole or opening through which it is entered and dug, and through which alfo the water and ore are carried out. See Mining.
ADMINISTRATION, thus the Spaniards in Peru call the ftap'e magazine, or warehoufe, eftablifhed at Callio, a fmall town on the Souch Sea, which is the port of Lima, the capital of that part of South America, and particularly of Peru. The foreign hips, which get leave to trade along that coaft, are obliged to unload at the adminiftration, or

## A D M

ftaple magazine of all the European merchandizes they carry thither, paying 13 per cent. of the price they fell for, if the cargo be entire, and even 16 per cent. if it be not. Befides which, they pay 3 per 1000 duty for confulfhip, and fome other fmall royal rights and claims.
ADMIRAL, he who commands a fleet. It is allo the name of the thip which he commands. In France, the admiral is one of the great officers of the crown, general of the marine, and of all the naval forces of the kingdom. All the captains and mafters of merchantmen, or trading veffels, are obliged to take their licences, pafferts, commiffions, and fafe conducts, of him.
The tenth of all prizes taken at fea, or on thore, under a Frenth commiffion and flag, belongs to him, together with the tenth of all ranfoms, the whole of all fines adjudged in the particular courts of admiralty, and half of thofe adjudged at the matble tables. (See that article.) He alfo has the duties of anchorage, tonnage, and fea-marks, and one third of all the effects taken out of the fea, or caft on fhore; all this is according to the marine law or ordonnance made in 168 I .
Admiral is alfo fid, in France, of the moft confiderable thip of a feet of merchantmen, which keep company together: it is the fame with regard to the fhips bound to Newfoundland, which go filhing for green cod on the great bank. As for thofe which go for dried cod, when feveral fifhing veffels meet together, and defign to fifh, and cure the cod in the fame harbour, he whofe long-boat lands firft, has the admiral-ticket given him. The bufinefs of this admiral is to take care, that a board be pofted up, and kept on the fcaffold erected to dry the fifh; upon which board each mafter of a hip is obliged to fet down his name, and the day on which he arrived: the admiral alfo gives proper orders, and appoints the fifhing-places to thofe who come after him, and it his bufinefs to determine their differences. He has allo the privilege of chufing what place he pleafes on the fandy fhore, to dry his filh; and all the wood he finds upon the coaft on his arrival, belongs to him. As long as the fithing fealon continues, this admiral carries the flag on his main-maft. See the article CodFishing.
ADMIRALTY, the office of an admiral. In France that office is beftowed on none but princes, or perfons of the higheft birth and quality.
The office of high, great, or firf admiral (for in different countries they give him thefe different titles) is always very confiderable; and the high admiral is one of the great officers of the fate in all maritime kingdoms and fovereignties, and is either a prince, or a perfon of the firft rank. We have feen, for inftance, in England, that James duke of York (only brother to king Charles II, who himfelf was afterwards king, and died in France) was invefted with that office, during the war with the Dutch. His title was Lord High Admiral of England, and he enjoyed very great powers and privileges. The fame high office has alfo been often divided among feveral perfons, under the title of Lords Commiffioners of the Admiralty; and thus it is at prefent, there being now no high admiral in this kingdom.
They call in France duiies of the admiralty, thofe duties which belong to the admiral, and are received in his name, in all the ports and places under his jurifdiction, by his receivers and deputies. You will find in the article Admiralty what thofe duties are.
Admiralty of Great Britain. It was formerly under a great officer of the crown, who was ftiled Lord high Admiral, and capitaneus nautarum \& marinellorum, in reference to his deciding all differences among thofe in the king's fervice. And as the place was great, fo the power was extenfive, efpecially in all things belonging to the royal navy. He fat formerly in the king's houfe, and there kept his court, as the French admirals do at this day, at the marble-table in the king's houfe at Paris. But, at prefent, this office is adminiftered by a number of commiffioners, appointed by the fovereign of Great-Britain: they are filed, Lords Commiffioners for executing the Office of Lord High Admiral of Great-Britain and Ireland, $\Xi^{\circ} \mathrm{c}$. By the flatute 2 Will. \& Mar. feff. 2. cap. 2. fect. 2. it is declared, "that all ju" riddictions and power, which by act of parliament, or " otherwife, are invefted in the lord high admiral of Eng" land, have always appertained to the commilioners of " the admiralty, as if they were lord high admiral." But the perquifites are, of late years, on every new commiffion being made out, refigned, by fome deed or writing, to the crown. When the office of lord high admiral is in commiffion, the number is not fixed; but, at prefent, it confifts of a firit commiffioner, who prefides at the board, and fix more, who take place in the order in which they are named in the commifion. The next immediate officers under them are the vice and rear-admirals of England, who are generally the two fenior admirals. The perfons who do bufinefs under them, are two fecretaries, a follicitor, feven clerks in ordinary, befides fupernumeraries, door-keepers, meffengers, $\mathcal{E} c$. The firft lord, or commiffioner, of the admiralty, is, in effect, lord high admiral, having the fupreme direction of the

## A D M

board, except that no orders or commilions are valid when figned by him alone, it being necefliary for two more to fign with him; notwithfanding which, he is not to be controuled by them.
Under this authority are all the naval officers and hipping; as the navy-office, vichualling-office, fick and wounded office; Deptford, Woolwich, Chatham, Sheernefs, Plymouth, and Portfmouth dock-yards; as are alfo all the hhips and veffels of war, their admirals, commanders, lieutenants, of* ficers, and men.
The juriddetion of the lord high admiral, or of the lurds commiffioners, is over Great-Britain, Ireland, and $W_{\text {ales }}$, with the dominions and illands belonging to them; as alfo New England, New York, Eaft and Weft Jerfey, Jamaica, Virginia, Barbadoes, St. Chriftopher's, Nevis, Montferat, Bermudas, Antigua, Newfoundland, in America, and Guinea, Benin, and Angola, in Africa, and all and fingulat of the plantations, dominions, and territories whaffever, in parts beyond the feas, in the pofleflion of any of his majefty's fubjects.
The lords commiffioners of the admiralty have the general direction of the affairs of the navy; though fometimes the fovereign interferes by his fecretaries of ftate, and directs the motions of the fleet.
The admiralty grants their commiffion to fuch perfon as his majefty directs, whereby he is appointed admiral and commander in chief of the fleet, for the expedition which is defigned; and fuch admiral, when out of the Britifh channel, appoint, all officers, as vacancies happen, who are generally confirmed by the admiralcy, unlefs any very material objection occurs. An admiral is ufually furnithed with full powers to hold courts martial, and commonly appoints his fecretary the judge-advocate ; yet any officer may hold courts martial whom the admiralty impower, though he be a private captain only: but the judge-advocate at home is appointed by the admiralty.
When any naval bufinefs is to be tranfacted, as building, repairing, fitting out, or victualling thips of war, the admiralty direct their orders to the proper officers. They likewife direct their warrant to the mafter-general of the orde nance, for fuch naval ftores as are wanting on board the fhips of war.
They alfo, by their warrant, direct the commifioners of the navy to appoint officers in the dock-yards, rope-yards, Esc. as likewife all ftanding officers aboard hips of war; as purrers, gunners, boat-fwains, and carpenters; but the mafters, furgeons, and cooks are appointed by warrant of the commiffioners of the navy. Admirals, captains, lieutenants, chaplains, volunteers, and fchoolmafters are appointed by the board of admiralty.
Before the meeting of the parliament, the admiralty prefent their memorial to the king in council, praying his majefty to declare the number of feamen proper to be employed for the current year; and the commiffioners of the navy and victualling-office are directed to make out fuitable eftimates, which being approved of, and the general fanction of the king and parliament had, orders are iffued accordingly. When war is declared, the admiralty, by memorial prefented to the king and council, pray his majefty to direct the advocate for the office of high admiral in the court of admiralty, to prepare and lay before his majefty, for his royal approbation, the draught of a commiffion, authorizing him the high admiral (or the lords commifioners) to impower the coult of admiralty, in the foreign governments and plantations, to take cognizance of, and judicially proceed upon, all manner of captures, feizures, prizes, and reprizals of all hips and goods feized; and to adjudge and condemn the fame, according to the courfe of the admiralty, and law of nations; as alfo all fhips and goods liable to confication, purfuant to the refpective treaties between his Britannic majefty and other princes and ftates.
As alfo to defire his majefty's direction in council, to his advocate-general in the high court of admiralty, and to the advocate-general of the high admiral in the fame court, to prepare and lay before his majefty a commifion, authorizing him the high admiral, or the lords commiffioners of the admiralty, to iffue forth letters of marque and reprizals to thofe whom he or they fhall deem fitly qualified, to feize all hips or veffels of the enemy, Eic. as alfo to direct the advocate of the faid court to prepare, for his royal approbation, inftructions to commanders of merchants Ihips, to whom fuch letters of marque and reprifals fhall be granted; the fubflance of which inftructions are as follows:
I. They are impowered to feize all hips of war, and other veffels whatfoever, as alfo the goods, merchandizes, veffels, or fubjects of the prince, or ftate, againlt whom war halk be declared; as likewife all other hips and veffels that may have contraband goods on board; but to take care, that ngt any hoftilities be committed, nor prize taken, within the harbours of princes and flates in amity with his majeffy, or in rivers or roads within the reach of their cannon.
II. To bring fuch prizes as they take eitber to fome port of this kingdom, or to carry them to any of his majefty's foreign
calonies

## A D M

colonies and'plantations, wherc there are courts of admiralty, as it may be moft convenient for them, in order to their being legally adjudged. And here it may not be improper to onferve, that there is no other appeal from the faid courts of admiralty abroad, with relation to prizes, than to a committee of his majefty's moft honourable privy council, particularly appointed to hear and determine therein
III. They are to produce before the judge of the high court of admialty, or the judges of the admiralty-courts in the foreign governments, three or four of the principal perfons who belonged to the prize, that fo they may be examined and fworn, touching the intereft and property of fuch fhips, goods, and merchandizes; as alfo to deliver to the judge all papers found on board fuch prize, and to produce fome perion who can make oath that thofe papers were actually found on board at the time of capture
IV. To take care that not any thing belonging to the prize be embezzled, before judgment be given in the high court of admiralty, or by the courts abroad, that the faid thip, goods, and merchandizes are lawful prize; and not to kil any perfon belonging to fuch laip in cold blood, or to treat them otherwife than according to cultom in fuch cafes
V . They are forbid to attempt or do any thing againft the true meaning of any article, treaty, or treaties, depending between the crown of Great-Britain and it's allies, or againt the fubjects of fuch allies.
VI. It is declared lawful for the captors, after condemnation, to fell or difpofe of fuch prizes, with the goods and merchandizes on board them, fuch only accepted as by act of parliament ought to be depofited for exportation.
VII. They are required to aid and affift any fhip or veffel of his majefty's fubjects, that may be attacked by the enemy. VIII. Such perfons who fhall fcrve on board merchant-fhips, with commiffions of marque, or reprifal, are in no wife to be reputed or challenged as offenders againtt the laws of the land. IX. The merchants, or others, before their taking out fuch commifions, are to deliver in writing, under their hands, to the lord high admiral, or to the commiffioners for executing that office, or to the lieutenant, or judge, of the high court of admiralty, an account of the name and burthen of

* the fhip, with the captain and owner's names, her number of guns and men, and for how long time the is viequalled. $\mathbf{x}$. The commanders of fuch fhips are to hold a conitant correfpondence with the fecretary of the admiralty, and to give an account of the defigns and motions of the enemy's fhips, as far as they can difcover, or be informed thereof, as alfo of their merchant-fhips and veffels, and whither bound, either out or home.
XI. They are reftrained from wearing the king's colours, commonly called the union jack, and pendant; but, befides the colours borne by merchant-fhips, they are allowed to wear a pendant, together with a red jack, with the union jack defcribed in a canton, at the upper corner thereof, next the ftaff. XII. They are required, upon due notice given them, to obferve all fuch other orders and inftructions as his majelty fhall think fit to direct.
XIII. It is alfo further declared, that thofe who violate thefe infructions fhall be feverely punifhed, and be obliged to make full reparation to perfons injured.
XIV. Before letters of marque, or reprizal, are iflued, it is required that bail be given in the high court of admiralty, before the judge thereof, in the fum of 30001 . if the fhip carries about 150 tons; and, if a leffer number, 15001 , to make good any damages that fhall be done contrary to the intent and true meaning of their inftructions; and (in cafe the whole of the prizes is not given to the captors) to caufe to be paid to his majefty, or to fuch perfon as thall be authorized to receive the fame, the full tenth part of the prizes*, goods, and merchandizes, acccording as the fame fhall be apprailed, as alfo fuch cuftoms as thall be due to the cropwn.
* N. B. His moft gracious majefty George II. was pleafed to give up, during the late war, thefe royal advantages, which his prerogative entitles him to, for the benefit of the
Britilh feamen of this kingdom. The admitalty, on the entering into a war, give directions to the navy and victualling offices, for the getting ready and vidtualling fuch fhips and veffels as, by the report of the commiffioners to their lordfhips, are found fit for fervice, and to rebuild or repair the reft, as they direct, and to contract with mafter builders in the merchants yards for fuch purpofes, $\boldsymbol{J}_{c}$. but it is to be oblerved, that nothing of importance can be done, or any contracts made, by fuch inferior officers, without a report by them firft delivered in, and an order thereupon obtained from the high admiral, or from the commiffioners, who have before them a lift of all the navy fhips and veffels fit for fervice, or otherwife, with their rates, tunnage, complement of men, and guns.
Admiralty Court of Great-Britain (curia admiralitatis.) This court is held at Doctors-Commons in London. The lord high admiral, or the commiffioners for executing that office for the time being, are fupreme in this court. Under them are a deputy judge (ufually a doctor of the civil law) two regifters, advocates, proctors, and a marfhal. The judge is confticuted by the king's letter patents, and holds his place, quamdiu fe bene gelint, i. e. during good behaviour.

## A D M

This is not efteemed a court of record, our common lawyers fay, becaufe it proceeds by the civil law, the judge having no power to take, fuch a recognizance as a court of record may: yet it is thought this court may fine and imprifon for a contempt in the face of the court. The procefs and proceedings are in the name of the lord high admiral, and by libel : the plaintiff and defendant enter into a flipulation, or bail, by a kind of recognizance, for appearance, and to abide the fentence.
This court is generally ruled by the civil law, and the maritime laws of Oleron. It has power to determine all maritime caufes arifing wholly upon the fea, out of the jurifiction of a county. See Oleron Laws.
The juridiciaion of the admiral, or of the commiffioners for executing that office, is declared by feveral ftatutes, which cannot be difpenfed with by any non obftante, becaufe all the king's fubjects have an interelt in the jurifdiction of the admiralty.
By the 13 th Richard II. chap. 5. "The admirals and their deputies thall not meddle with any thing done within the realm; but only with things done upon the fea. By the 15th Richard II. chap. 3. The court of admiralty has no manner of cognizance of any contract, or any other thing, done within the county, either by land or water, nor of wreck of the fea: but of the death of man, or of mayheim, done in great fhips, being and hovering in the main fream of great rivers only, beneath the points of the fame rivers, the admirals fhall have cognizance. And alfo to arreft chips in great fleets, for the voyages of the king and kingdom; and fhall alfo have jurifdiction in fuch feets during fuch voyage. By the 2d Henry IV. chap. 2, the $13^{\text {th }}$ Richard II. chap. 5 . is confirmed; and 'the party - grieved againft the form of that fatute fhall (by action - upon his cafe) recover double damages againft the profe-- cutor in the admiralty, and the profecutor thall alfo for' feit Iol. to the king." By the 5 th of Elizabeth, chap. 5. p. 30. "The offences beforementioned, which hereafter thall be done upon the main fea, or coaft of the fea, being no part of the body of any county, and without the jurifdiction of the Cinque ports, and ont of any haven, or pier, fhall be tried and determined before the admiral." We have already obferved, in the beginning of the article of the Admiralty of Great-Britain, that by the ftatute 2 Will. \& Mar. the jurifdiction and powers of the lord high admiral belong to the commifioners of the admiralty.
Appeals from the admiralty are to a court of delegates, appointed by the commiffion, whofe fentence is final. 8 Eliz. chap. 5 . From inferior admiralty'courts, the appeals lie to the lord high admiral, or lords commifioners of the admiralty, in this court: but the warden of the Cinque Ports is fupreme admiral within his own jurifdiction. 5 Elizabeth. Piracies and felonies, committed within the admiral's jurifdiction, may be tried at fea, or on land, according to the court of the admiralty. 2 Will. \& Mar. feff. 2. chap. 2.
Perfons in actual fervice and pay aboard his majefty's fhips of war, committing any of the crimes mentioned in the ${ }^{13}$ th Car. If. chap. 9. upon the fhore in foreign parts, may be tried and punithed for the fame, as if the offences had been committed on the main fea, or on board any lhips or veffels of war. 6 Geo. chap. 19.
Within the cognizance of this jurifdiction are all affairs that particularly concern the lord high admiral, or any of his officers, as fuch; all matters relating to the navies of the kingdom, the veffels of trade, and the owners thereof, as fuch; all affairs relating to mariners, whether fhip-officers or common feamen, their rights and privileges refpectively; their office and duty; their wages; their offences, whether by wilfulnefs, cafualty, ignorance, negligence, or infufficiency, with their punifhments: alfo all affairs of commanders at fea, and their under officers, with their refpective duties, privileges, immunities, offences, and punifhments. In like manner, all matters that concern owners and proprietors of fhips, as fuch; and all mafters, pilots, fteerfmen, boatiwains, and other officers; all fhipwrights, fifhermen, ferrymen, and the like: alfo all caufes of feizures and captures made at fea, whether jure belli publici, or jure belli privati, by way of reprizal, or nullo jure, by way of piracy. Likewife, all charter-parties, cocquets, bills of lading, fea commiffions, letters of fafe conduCt, factories, invoices, Rkippers rolls, inventories, and other fhip-papers. Alfo all caufes of freight, mariners wages, load-manage, port-charger, pilorage, anchorage, and the like : alfo all caufes of maritime contracls indeed, or, as it were, concracts, whether upon or beyond the feas; all caufes of money lent to fea, or upon the fea, called foenus nauticum, pecunia trajectitia, u'ura maritima, bomary money, the grofs adventure, and the like. All caufes of pawning, hypothecating, or pledging, of the hhip itfelf, or any part thereof, or her lading, or other things, at fea; all caufes of jactus, or cafting goods overboard; and contributions either for redemption of bip or lading, in cafe of feizure by enemies or pirates, or in cafe of goods damnified, or difburdening of fhips, or other chances, with average: alfo all caufes of fpoil, depredations at fea, robberies and piracies; allo all caufes of naval confort-fhips, whether in

## A D M

war or peace ; infurance, mandates, procurations, payments, acceptilations, difcharges, loans, or oppignorations, emptions, venditions, conventions, taking or letung to freight, exchanges, partnerfhips, factorage, palfage-money, and whatever is of a maritime nature, either by way of navigation upon the feas, or of negotiation at or beyond the fea, in the way of marine trade and commerce: alfo, the nautic right which maritime perfons have in Chips, their apparel, tackle, furniture, lading, and all things pertaining to navigation likewife all caufes of outredders, or outriggers, furnihers, hirers, freighters, owners, and part-owners, of hips, as fuch. Alfo all caufes of privileged fhips or veffels in his majefty's fervice, or his letters of fafe-conduct: all caufes of thipwreck at fea, flotfon, jetfon, lagan, waifs, deodands, treafure-trove, and finhes royal, with the lord admiral's fhares, and the finders refpectively. Alfo all caufes touching maritime offences, or mifdemeanors; fuch as cutting the buny-rope, or cable, removal of an anchor, whereby any veffel is moored, the breaking the lord admiral's arreft, made either upon perfons, goods, or thip; breaking arrefts on Thips for the king's fervice, being punifhable with confifcation, by the ordinance made at Grinfby in the time of Rich. I. mariners abfenting themielves from the king's fervice after their being impreffed, impleading upon a contract, or in a maritime caufe ellewhere than in the admiralty, contrary to the ordinance made at Haftings by Edward I, and contrary to the laws and cuftoms of the admiralty of England. Foreftalling of corn, filh, धec. on fhip-board; regrating and exaction of water-officers; the appropriating the benefit of faltwater to private ufe, exclufively to others, without his majefty's licence: kiddles, wears, blind-ftakes, water-mills, and the like, to the obftruction of navigation in great rivers. falfe weights or meafures on fhip-board: concealing of goods found about the dead within the admiral's juriddiction, or flotfons, jetfons, lagans, waifs, deodands; fifhes royal, or other things, wherein the king's majelty, or his lord admiral, have intereft. Exceffive wages claimed by fhip wrights, mariners, छ'c. maintainers, abettors, receivers, concealers, or comforters, of pirates: tranfporting prohibited goods without licence ; draggers of oyfters and mufcles at unfeafonable times, viz. between May-day and Holyrood-day; deftroyers' of the brood or young fry of filh: fuch as claim wreck to the prejudice of the king or lord admiral: fuch as unduly claim privileges in a port : difturbers of the admiral's officers in execution of the court-decrees: water-bailiffs and fearchers not doing their duty: corruption in any of the ad-miral-court officers: importers of unwholfome victuals to the people's prejudice: freights of ftrangers veffels contrary to the law: tranfporters of prifoners, or other prohibited perfons, not having letters of fafe-conduct from the king, or his lord admiral : cafters of ballaft into ports or harbours, to the prejudice thereof: unfkilful pilots, whereby thip or man perifh: unlawful nets, or other prohibited engines for fifh: difobeying of embargoes, or going to fea contrary to the prince's command, or againft the law: furnifhing the fhips of enemies, or the enemy with Chips: all prejudice done to the banks of navigable rivers, or to docks, wharfs, keys, or any thing whereby fhipping may be endangered, navigation obfructed, or trade by fea impeded: alfo embezzlements of hip-tackle or furniture; all obftructions of mariners wages; all defrauding of his majefty's cuftoms, or other duties at fea; all prejudices done to or by paffengers on fhip-board, and all damages done by one fhip or veffel to another: alfo going to fea in tempeftuous weather, failing in devious places, or among enemies, pirates, rocks, or other dangerous places, not being neceffitated thereto: all clandeftine attempts, by making private cork-holes in the vefiel, or otherwife, with intent to deftroy or endanger the thip. Alfo the fhewing of falfe lights by night, either on hore or in fifhing veffels, or the like, on purpofe to intice failors to the hazard of their veffels: all wilful or purpofed entertaining of unfkilful mafters, pilots, or mariners, or failing without a pilot, or in leaky or infufficient velfels: likewife overburdening the fhip above her birth-mark, and all ill ftowage of goods on thip-board; all importation of contraband goods, or exportation of goods to prohibited ports, or the places not defigned ; together with a great many other things, relating to the ftate or condition of perfons maritime, their rights, their duthes, or their defaults.

## Observations relative to commercial and marine

 affairs.It muft be obferved, that the jurifdiction of the court of admiralty is fometimes interrupted by a writ, which in our law is called a prohibitio, and may be properly defined to be, " A writ, forbidding to hold plea in any matter or caufe, fuppofed to be without the jurifdiction and cognizance of the court where the fuit depends."
But, in all cafes where the admiralty have legally an original or concurrent jurifdiction, the courts of common law will be well informed, before they will take cognizance of them. We fhall give fome of the principal cafes relating to the jurildiction of the admiralty, as to matters cognizable there, or at common law.

## A D M

If a man be in cuftody for piracy, if any aids or affilts him in his elcape, though that matter is an offence at land, yet the adimiralty, having jurididion to punifh the principal, may have likewife power to punifh fuch an offender, who is looked on as an acceffary to the piracy; but, to refcue a prifoner from an officer of theirs, they may examine the caule, but they cannot proceed criminally againft the offender.
Mariners may join and fue in the admiralty for wages, which is an indulgence; and was granted, becaufe the remedy in the admiralty was eafier and better than at common law; eafier becaule they muft fever here, but may join there; and better, becaufe the fhip itfelf is aniwerable. Yet it was never allowed the mafter Mould fue there; nor is it reafonable, where he commenceth the voyage as mafter; for, tho' the Thariners contract upon the credit of the fhip, the mafter doth contract on the credit of the owners. Lord Raymond 397. But yet the mate may fue in the admirally for his wages, becaufe he contracts with the mafter, as the reft of the mariners do. Lord Raymond 632.
If a fhip rides at anchor in the fea, and the mafter fends his boat on Chore for victuals, or other provifions for the fhip, and accordingly the flop-feller brings viluals and provifions; in that cale, if the contract be made there, it mult be fued for in the admiralty: but, if the goods are by the purfer or mariners contrated for at land, they mult fue at common law.
But a fuit in the admiralty for feamen's wages, grown due in the river, though no voyage made, was not prohibited. Lord Raymond. 1044.
If a fault be committed in any port, haven, river; creek, or any place within the body of a county, the common law Tha!l have jutidiction to anfwer the party damnified; but if the fame be committed on the high fea, the adnuiralty fhall have jurifdistion of it; and, if it be on a plate where there is divifum imperium, then according to the flux or reflux the admiralty may challenge.
Trials are to be where original contracts were made, which if in England, though the fubfequent matter to be done be upon the fea, the trial thall be at the common law. But if the contract and what is to be done, all of it, is beyond fea, it cannot be tried at law here, but in the admiralty; but if part be done here, and part beyond fea, fo as it is mixed, then it Mall be tried at law. As an action upon the cafe*, upon a policy of affurance made at London, that a fhip fhould fail from Melcomb Regis, in the county of Dorfet, to Abville in France, fafely, \&c. And the plaintiff declared, that the fhips in failing towards Abville, viz. in the river Soame in France, was arrefted by the king of France, E ${ }^{\circ}$. and the iflue was, whether the fiip was fo arrefted or not ; the trial was by Nifi Prius in London, and refolved to be well brought; though 'twas objected, that this iffue, arifing merely from a place out of the realm, could not be tried at law, for the afumpfit + , being at London, was the ground and foundation of the action, and therefore fhall be tried here, for otherwife it could not be tried at all. Cited in Dowdale's cafe, 6 Rep. 47.6. Godbolt, 76 and 204.

* Action upon the cafe, is a general action, given for the redrefs of a wrong done any man without force, and not efpecially provided for by law. This, of all others, is now moft in ufe-Where there arifes an occation of fuit, that has neither a fit name, nor certain form already prefribed ; the clerks of the Chancery, antiently conceived a proper form of attion for the thing in queftion: which was called ar action upon the cafe, by the civilians actio in factum.
$\dagger$ Aflumpfit, is a voluntary promile made by word, whereby a man aflumeth, or taketh upon him, to perform or pay any thing unto another. This word included any verbal promife made upon confidetation, which the civilians ex prefs by divers words, according to the nature of the promife, calling it fometimes pactum, fometimes fponfionem, fometimes promiffionem, pollicitationem, conftitutum.
And fo if a contract be made at land, though beyond fea, the trial fhall be at law, though what is to be done be all of it beyond rea, by laying the conitract made at a place in England ; as in Bourdeaux apud Iflington in Com. Middlefex. So is the cafe of Slaney and Cloberry againft Cotton, where the plaintiff fued the defendant in the admiralty.court, upon a promife made in Barbary, to Cail from Sirborona in Barbary to Ricumpta in Brazil, Ec. Upon fuggeftion that the contract was made in London, prohibition was granted : for the performance of the confideration does not give the action, without the contract; and this was made at land, though beyond the feas, which may be fuppofed to be done in a place in England. 2 Rolls Rep. 486. See Tucker and Cuff's cafe in the fame book, 492 and 497, and 2 Brow. ro, II.
A contract was made at Newcaftle, that a thip fhould fail from Yarmouth to Amferdam; a debt was brought upon this contract in the court of Newcaftle; adjudged that the action would not lie there, being a limited juridiction, which thall not have cognizance of any matters done in partibus tranfmarinis, but only the courts at Weftminfer. March's Rep. 3. If one libel in the court of admiralty for a thing done upon the land, and it appeareth upon the libel that the thing

## A D M

was done upon the land, and they, notwithfanding that, hold plea of it, a premunire * lieth upon it; but, if the fame do not appear within the libel, then it is not within the 1.3 of Rich. II. cap. 5. and 15 of Rich. II. cap. 3. but a prohibition thall only iffue. 2 Leon. 183.

* Premunire, is taken either for a writ fo called, from the words therein, pramunire facias, or premonere facias, $\mathcal{O}^{\circ} \mathrm{C}$. fignifying to forewarn, or bid the offender talke heed, or it is the offence on which the writ is granted.
A Dutch fip was broken by a great tempeft in a creek of the fea, infra corpus comitatus de Dorfet; the failors, upon pretence that the goods in the fhip were bona peritura, procured a commifion of fale out of the admiralty-court to fell them; and the true owners, to prevent fuch fale, brought a fuperfedeas*; and, upon thewing the libel to the court, a prohibition was granted. (I.) Becaufe the caufe of action accrued infra corpus comitatus. (2.) Becaufe the fale of the goods was good, as bona peritura. Calmer againft Brand. 2 Sid. 8 1.
- Superfedeas, is a writ in divers cafes, and fignifies in general a command toflay, or forbear the doing of that which ought Ot to be done or in appearance of law were to be done were it not for that whereon the writ is granted.
Thus a man regularly is to have furety of peace againf him of whom he will fwear he is afraid, and the jultice required hereunto cannot deny him; yet if the party be formerly bound to the peace, either in Chancery, or elfewhere, this writ lies, to flay the juttice from doing that which otherwife he ought not to deny.
One having taken a thip as prize, which had bona peritura, entered into recognizance with fureties before the judges delegate, to bring the money raifed by fale of the goods in the admiralty-court before fuch a day, if they, upon a plaint there depending, did not adjudge the fhip and goods to be lawful prize; which they adjudged lawful prize; and after, at another time, cited the owner before the judges of the admiralty, and, for his not coming and bringing the money at the day, they threatened to fue execution againft the bail or fureties, who were merchants of London; upon which prohibition was prayed; for, by their firf judgment or fentence, their recognizance was difcharged, and they ought not, by colour of this, to endanger the credit of men of reputation; but the court would not grant a prohibition, for they faid an unjuft fentence of the admiralty, in a caufe of which they have original conufance, is not a caufe of prohibition. 2 Sid. 152. Becks v. Chelfcoke.

In the cafe of Sir Richard Hawkins, vice-admiral of the county of Devon, who was profecuted in the Star-chamber, for abetting and comforting Hull, and other notorious pirates. It was there refolved that, by the common law, the admirals ought not to meddle with any thing done within the realm, but only with things done upon the fea; and alfo by the flatute of 13 Rich. II. cap. 5. 2 Hen. IV. cap. ir. It was likewife refolved, that the faid ftatutes are to be intended to hold plea, and not of a power to award execution; for the judge of the admiralty, notwithftanding thefe flatutes, may do execution within the body of the county. Where one admits the jurifdicion of the admiralty by pleading there, no prohibition thall be granted. Jennings againt Audley, 2 Brow. 30. 12 Rep. 77. Therefore, on a motion for a prohibition in a fuit for feamen's wages there, the fuggeftion was, that the court below refufed to allow the defendants allegation; that the place, where the plaintiffs intided themfelves, was not a port of delivery : this is no foundation for a prohibition; if any thing, it mutt be an appeal. Cradock bought divers things within the body of the county, which concerned the furnilhing a fhip, as cordage, $\mathcal{E}^{\circ} c$. the vender fued him in the admiralty-court; a prohibition was granted, 2 Brow. 37. Cradock's cafe, Owen 122. 3 Keeble 552. Merryweather againft Mountford. Note, No appeal from the admiralty before a definitive fentence. Lord Raymond $124^{8 .}$
The defendant being mafter of a fhip, of which the plaintiff was owner, the fhip was taken by pirates upon the fea; and, to redeem himfelf and the Chip, he contracted with the pirate to pay him 501. and pawned his perfon for it ; the pirate carried him to the ifle of Scilly, and there he paid it with money borrowed, and gave bond for the money at his return; after the redemption both of the fhip and himfelf, he fued in the admiralty for the 501 . and had a fentence for it, and thereupon a prohibition to the admiralty was prayed, but denied; becaufe the original caufe began upon the fea, and whatever followed was büt accefiary and confequential. Hard. 183. Prohibition was granted to the admiralty-court, on the 22 d and 23 d Car. II, cap. 26. fect. II. in fuit there, for the forfeit of a fhip on felling wares in Ireland without breaking bulk, being put into Ireland from America, by contrary winds, this being triable in the plantation', or any court of record in Weitmintter. Pidgeon con. Trent, 3 Keeble 640, 647, 651. A maffer of a thip agreed with certain merchants concerning a voyage, and received orders from them to lay in provifions of meat and drink, and to provide mariners, $\xi_{c}$, and, ater the voyage was finithed, the merchants efufed to pay the mafter of the thip what they had agreed far; upon which
he libelled againt them in the admiralty; prohibition was granted upon the ftatute of 2 Rich. II. car. 3. the contract being upon land, and den'ed the cafe, Hill, 8 Car. I. Cro. 296. which faith, that when a thing is in it's nature marttime, as in the cales of mariner's wages, the elmiralty fhall have the conufance of it. Woodward againft Bouithan, Raymond 3 and 3 Levinz 60. Coke againf Cretcher, \&c. 2 Vent. 18 I.
If a contract or obligation be made upon the fea, yet, if it be not for a caufe marine, the fuit upon this thall be at common law, not in the admiralty. Hob. ir.
If the original contract be made at fea on a marine caufe, and after reduced into writing at land, the common law, not admiralty, fhall have the conufance. Hob. 79, 212. Patmer againft Pope.
If a charter-party be made in England to do certain things in divers places upon the fea, though that no act is to be doine in England, but all upon the fea, yet no fuit thall be in the admiralty for non-performance of the agreement; for the contract is the original, and is out of their jurifdiction; and where part is triable at common law, and part in the admiralty, the common law thall be preferred. Maldonado and Slaney I Roll. Abr. 532, 533.
A contract laid to be made intra fluxum \& refuxum maris, \&c. is well enough laid to give the admiralty a jurifdiction: it was upon the high feas when the water was at high-water mark, and it might be at land when the water was at lowwater mark. In that cafe, there is divifum imperium between the common law, and admiralty juriidiction. Lord Raymond, 1453.

It was moved for a prohibition to the admiralty, becaufe the libel was to execute a fentence of the Alcade, which is the admiralty at Malaga in Spain, upon a thing done within a port there, and, after a rule for a prohibition Nifi, 'twas moved that no prohibition fhould be; for though this court will not execute the fentences of any foreign court, inafmuch that it is governed by a diftinet law, yet thefe of the admiralty may, and it is their ufe to do fo; for this, that all the admiralty-courts in Europe proceed by the fame law viz. the civil law, and Wibrel and Wiat's cale, 5 Jac. was cited to be adjudged accordingly. But, upon reading the libel in the principal cafe, it appears that the fentence was not definitive, but interlocutory, concerning a matter that founds as an action upon the cafe, and no fum fet; and allo the Alcade is not as an admiralty there, and for this a prohibition was granted. Jurado and Gregory, I Sid. 418. I Levinz 267. I Vent. 32, and 2 Keeble 512, 610.
Motion for prohibition to the admiralty, for that they libelled againft one for refcuing a hip, and taking away the fails from one that was executing the procefs of the court againft the faid fhip, and for that, in the prefence of the judge and face of the court, he aftaulted and beat one, and fpake many opprobrious words againft him. Now, feeing that thefe matters were determinable ar law, the fhip being intra corpus comitatus, and they could not adjudge damages to the party, or fine, or imprifon, a prohibitian was prayed, but denied ; for they may punih one that refifts the procefs of their court, and may fine and imprifon for a contempt, though they are no court of record; but, if they fhould proceed to give damages, they would grant a prohibition as to that. Sparkes, $\xi^{\circ} c$. againft Martin, I Vent. 1. The fame doctrine Lord Raymond's Rep. 446. and I Vent. is there cited.
Suit in the admiralry, the defendant pleaded the itatute of limitation; if that court deny the plea, prohibition will be granted; or if they do receive the plea, but will not give fentence accordingly, prohibition will go. Hardrefs 502. Berkly and Morris.
A prohibition prayed to the admiralty, where there was a libel for a fhip taken by pirates, and carried to Tunis, and there fold, for that it did not appertain to the court to try the property of the hip being fold upon land. In regard it was taken by pirates, it is originally within the admiral juridiction, and fo continues, notwithftanding the fale afterwards upon the land. Otherwife, where the fhip is taken by enemies, for that alters the property. Contrary to Lord Hobart in the Spanifh ambaffador's cafe, 78. I Vent: 308. 3 Cro, 685. After fentence in the admiralty-court for the feizing of a fhip, trover and converfion at law will not lie. Beake contra Thynwhitt, Laws of the fea, 425.
Cafe upon the ftatutes of 13 Rich. 11. c. 5. 15 Rich. II. $\therefore 3$. and 2 Hen. IV. c. II. for fuing in the admiralty for matters done upon land. The fhip of the plaintiff was arrefted in the port of London, with goods going to the Eaft-Lodies, by which the plaintiff loft the profit of his voyage. The EaftJodia company having an exclufive charter, by the ftatute ${ }_{13}$ Car II. petitioned the king in council to ftay the Rhip, and an order was made to the admiralty to flay the flip by their procefs, which was iffued accordingly; all which was done by the defendants as agents of the company, and they, as agents, paid the fees of the profecution; and, if guilty, damages for the plaintiff in duplo iscol. and to upon arraignment judement for the plaintiff, and an error affirmed, Sands againe Sir Jofias Child and others. 3 Levinz 35x. A like cafe, I Vent. 47. Home againt Ivie.

ADmiralty

Admiralty is alfo faid of the jurifdiction or court in France, where juftice is adminiftered in the name and under the authority of the adiniral. The admiralty general of France fit at the bench of the marble-table, in the hall or court of Paris, every Monday, Wednedday, and-Friday in the week; it is compofed of a lieutenant general who prefides, a particular lieutenant, three counfellors, the king's advocate and follicitor, a chief regifter, or fecretary, and two ufhers' or ferjeants. All thefe officers, as well as thofe of the general and particular courts of admiralty, eftablithed in the ports and harbours of the kingdom, are appointed by the admiral, but they muft have their commiffions from the king.
The jurifdiction of the judges of the admiralty, has been regulated by Title II. of Book J. of the Ordonnance of the Marine, or Navy, of the month of Auguft, r68r. That title comprehends the fifteen following articles.
I. The judges of the admiralty thall take cognizance, exclufively of all others, and between all perfons, of what quality foever they be, even privileged perfons, natives or foreigners, both plaintiffs and defendants, in all matters relating to the building, rigging, tackle, arming, victualling, manning, fale, and adjudication of fhips.
11. We declare to belong to their cognizance all actions arifing from charter-parties, freights, bills of lading, carriage or paflage, dues, lifting and wages of feamen, and the provifions to be allowed them, whilft the veffels are fitting out ; as alfo from policies of infurance, bonds for money ventured on the fhip's bottom, or for their return from the voyage, and generally from all contrads relating to commerce by fea; notwithftanding any exemption or privileges to the contrary. III. They thall alio take cognizance of prizes taken at fea, wrecks of all kinds, of goeds thrown overboard, and contribution for them, of averages, and damages fuftained by the fhips or cargoes, together with the inventories, and delivery of goods left on board by fuch as die at fea.
IV. They thall likewife have cognizance of the duties for paffes, thirds, tenths, buoys, anchorage, and other duties belonging to the admiral; as alfo of thofe which fhall be raifed or claimed by lords, or other private perfons dwelling near the fea, for filthing, or for fifh, or for merchandizes or fhips departing from, or entering into, ports.
V. The cognizance of filhing either at fea, in falt lakes, or at the mouths of rivers, fhall alfo be vefted in them, as likewife that of inglofed fibiing-places, of the nature of nets, of fales and bargains of fifh, in boats, upon the ftrands, and in ports and harbours.
VI. They fhall, befides, have the cognizance of the damages done by fhipping to inclofed fifheries, even in navigable rivers, and of thofe which veffels may receive from fuch fifheries, as alfo of the ways allowed for the towage of fhips, coming from the fea, if there be no regulation, title, or cuftom to the contrary:
VII. They fhall alfo take cognizance of damages done to keys, moles, banks, palifiadoes, and other works built for faying the violence of the fea, and take care that the ports and harbours be preferved in their due depth and cleannefs.
VIII. They thall caufe drowned bodies to be taken up, and fhall draw up accounts of the condition of dead corples found at fea, upon the fands, or in ports, and even of feamen drowned in working their veffels in navigable rivers.
IX. They hall affift at the mufters and reviews of the inhabitants of the parifles which are obliged to watch the coafts, and fhall take cognizance of all the differences that may arife on occafion of fuch watch, as alfo of the offences committed by thofe who are to guard the coaft, during the time of their continuing under arms.
$X$. They fhall, moreover, take cognizance of piracies, plunders, and defertions of fhips crews, and in general, of all crimes and offences committed at \{ea, or in ports, harbours, and on fhore.
XI. They thall admit all mafter thip-carpenters, ropemakers, fail-makers, maft-makers, and other artificers, who work only in the conftruction of veffels, mafts, and riggings, in fuch-places where there are free companies of theie different trades, and thall take cognizance of the ofences committed in the refpective trades.
XII: The remifions granted to foccagers for crimes cognizable by the officers of the admiralty, chall be referred to, and adjudged by, the courts of the admiralty, from which there fies no appeal but to our cóurts of parliament.
XIII. The officers of general courts of the admiralty, at the marble table, fhall take cognizance in the firt inftance of all matters, as well civil as criminal, contained in this prefent ordinance, when there fhall be no particular courts in the places where fuch matters fhall occur; and by appeal, except in cafes of corporal punifoment, in which cafes our ordinance of the year 1670 thall be obferved. XIV. They thall have pawer to call up before them, from inferior judges, caufes exceeding 3000 livres in value, when the matter thall have been laid before them by appeal from a decree or interlocutory fentence, given in the firft inftance. XV. We prohibit all provofts, judges of caftewards, viguiers, bailiffs, fenefchals, prefidials, and other ordinary judges, judge-confuls, and commiflaries, perfons holdiss the courts
of requefts of our houfhold and court of jullice, and ourgreat council, to take any cognizance of the above-mentioned cafes, circumftances, and dependencies. We alfo prohibit our courts of parliament to take cognizance of them in the firft inflance; and all merchants, mariners, and others, to proceed before thofe courts for fuch matters, upon pain of being fined arbitrarily.
Here follows the regulation made by the admiralty in France, eftablifhed at the marble-table in the Juftice-hall at Paris, the 29th of Auguft, 1673. This regulation is compofed of 12 articles, which, with the king's good-will and pleafure, ought to be followed in all.proceedings, and pleas relating to differences and fuits brought before the admiralty.
I. The court thall fit every Monday, Wednetday, and Friday, in the week, from to o'clock in the forenoon till 12 ; and in cafe one of thefe days fhall be holy day, the court thall fit the next day.
II. The fummons, or writs, to appear with regard to fuch parties as have their dwellings at Paris, or who fall have chofen a fixed dwelling-place, by themfelves, or their attornies or agents, thall be made returnable in three days, within which are comprehended the day on which the fummons is iffued out, and the day of appearance; and, with regard to aliens, or perfons having no fixed dwelling-place, in cales of appeal, the ufual delays fhall be obferved.
III. In fuch cales, however, where there might be fome danger in delays, the fummons thall be delivered from day to day, by virtue of an order written at the bottom of a petition, which for that purpofe fhall besprefented by the party, and figned by his attoracy or follicitor.
IV. On the day of appearance, the caufe thall be brought before the court, and, for want of appearance in either of the parties, a verdict, or fentence, of default, fhall pafs in behalf of the playutif, with coft of fuit, and his complaint be judged juft and equitable (in cafe the defendant does not appear) and likewife a fentence with coft in behalf of the defendant (in cafe the p'aintiff does not appear) the attorney having firft taken a minute of it, in court, of which a deed thall be given to him in writing, and mentioned alfo in the fentence; which fentence, however, may be reverfed in the fame fitting of the court; and, in fuch a cafe, no deed fhall be delivered.
V. The parties, appearing in perfor before the court, fhall be admitted, if they think fit, to plead their own caufe, without the affiftance of a council or attorney.
VI. The party, condemned for want of appearance, thall be at liberty to fue in oppofition, within eight days from the date of the fummons, by refunding the coft, which of right thall be determined to the fum of four livres.
VII, The oppofition fhall be admitted, whether it be made by a petition, or by a fingle deed, figned by the attorney. VIII. Three days after the oppofition, including the day on which it was notified, and that of its expiration, it hall be brought before the court, without any further delay, provided the petitoner did fet down in the fummons of notification the day on which he intended to bring it before the court
IX. After the firft oppoftion, if the oppofer is caft by default, it fhall not be in his power to bring in a fecond oppo. fition, under what pretence foever; but he may have a reme dy by an appeal, which fhall not be turned into an oppolition, but with the confent of all parties concerned.
$X$. In cafe the defendant in an oppofition does not appear before the court, on the day appointed to anfwer the oppo fition, a fentence of default thall be given againtt him; for the profit of which the plaintiff fhall be allowed to put in his claim as opponent; and, with regard to the chief point, the parties fhall be referred to the next firting of the court, for a decifive and final fentence.
XI. The fummons and other proceedings Mall not be notified but by the tip-faffs belonging to that court.
XII. It is ordered, by this laft article, that thefe regulations fhall be publifhed, the court fitting, and notified to the regifter of the fociety of the advocates and attornies of the parjiament, and to the regifter of the court of infurances at Paris.
The Admiralty of Holland. The admiralty of the States General of the United Provinces is divided into five colleges, which are thofe of Amfterdam, Rotterdam, Hoorn, Middleburgh, and Harlingen.
Each college has its particular oficers; namely, an advocatefifcal, a receiver-general, a commiffary-general, feveral fecretaries and regifters, an overfeer of the failors, a commiffioner of fales, a treafurer-paymafter, a grand provoft, and many officers for the infpection of paffports, and the receipt of duties.
That the reader may have a more complete rotion of all thefe colleges, and of their rights, privileges, and functions; we fhall give a particular account of that of Amfterdam; which will be-fufficient to make the others known.
The college of Amferdam is compofed of 32 lords, called counfellors of the admiralty. Of there i2 Jords; one is deputed by the nobility of Holland, one by the city of Amfterdam, one by that of Leyden, one by Haerlem, one by

Gouda, and one by Eadam. The other fix are chofen by the other provinces ; viz. Guelderland, Zealand, Utrecht, Groningen, with the Ommelanden and Overyllet.
Thefe lords of the admiralty have the right of taking cognizance of all the cafes that happen in refpect to the frauds, malverfations, and coneraventions committed againt the placarts and ordinances relating to the navy; as well concerning the duties of export and import of merchandize, as to take care that the prohibitions relating to contraband goods be obferved; upon all which cafes they pals fentence fummarily and Covereignly; excepting, however, fuch civil matters in which the fum in difpute amounts to above 600 florins: in thefe cafes a man may remove the caufe by appeal, before the States General, and have a rehearing of it.
Paffes muft alfo be taken out from the admiralty, and they are diftributed in the chambers, or offices, which are called fimply convoys; and this is alfo the name given to the duties of export and import, paid on merchandizes. At Amfterdam the convoy is kept in the prince's court, which is a great building, where the college of the admiralty fits.
All the duties of import and export, paid by goods imported into, or exported from, the United Provinces, are paid to the admiralties; each college of which has its offices and officers for that purpofe.
Thofe of the college of Amfterdam are at the entrance of the city, on the fide next the gate called Boorn. When boats go to, or return from, any fhip, with merchandize, the officers have a right to vifit them, and examine whether they have not more goods on board than are contained in the pals, in which cale they may ftop them ; however, they are not allowed to break open or unpack any thing, before notice be given to the commiffary-general.
ADRESSE, in commerce, fignifies a direction to any one by letter or otherwife. My adreffe is at Mr. ——at Orleans, \&ơ. that is to fay, You will direct for me at -_ ADVANCE, an anticipation of time. Money paid by way of advance is money paid before goods are delivered, work done, or bufinefs performed.
To pay a note of hand, or bill, by advance, is to pay the value before it becomes due, for which a difcount is ufually taken.
Advance fignifies allo loan of money, or fupplying with merchandize. I am upion advance with fuch an one: that is, I have lent him confiderable fums; I have fupplied him with abundance of goods, and do not know when I Gall be reimburfed.
Advance. In the terms of bills of exchange they fay, advance for the drawer, when, upon a negotiated bill, the perfon who has negotiated it, receives above par upon it, that is, more than the fum contained in it. On the contrary, they fay, advance for the paycr, and lofs for the drawer, when he, to whom the bill belongs, does not receive the full value of it.
To Advance, to be at the expence of an undertaking, before the time arrives for being reimburfed. Abundance of money mult be advanced in fitting out thips, before any returns come to hand; he has advanced all the coffs of that manufacture, G\%.
To Advance, fignifies alfo to lend money, or fupply a perfon with commodities. I have advanced abundance of money; I have fupplied that merchant with abundance of goods, to fupport him in his trade.
They fay, to advance the payment, to fignify to pay a bill before the time it has to run be elapfed. When the payment of a note of hand, or bill, is made, or advanced before it is due, it is always cuftomary to allow difcount for the time it is pre-advanced.
ADVENTURE, a term ufed in commerce by fea, which the French feldom employ without adding to it the epithet groffe ; mettre de l'argent à la groffe aventure, that is, to apply money in order to fhare in the profits of hips.
The Englifh, intead of adventure, vulgarly ufe the word venture for a fmall parcel of goods, Gic. fent with a friend that goes to fea, to any part of the world.
ADVENTURER. A merchant's fhip is called an adventurer that goes to craffic within the limits of a grant to a trading company, without having obtained their permiffion
Adventurer, fignifies alfo a perfon little or not known in public bufinefs, who boldly thrufts himfelf into affairs, and proves a trickfter: all prudent merchants ought to be well aware of fuch perfons.
Adventurers, fo they call thofe bold and enterprizing pirates, who join together againft the Spaniards in the WeftIndies, and form enterprizes againt chem both by fea and land, which would fcarce be credible, if the French adventurers of St. Domingo had not in fome fenfe verified them, by the taking of Carthagena under Meffieurs de Pointis and du Caffe. The name more ufually given them is Buccaneers, though not fo honourable. See Buccaneers.
Merchant-Adventurer, is a merchant that adventures his goods to fea, and trades to foreign parts; fo called, in diftinction from fuch as carry on only an inland or home trade.
Adventurers, thofe alfo are called fo, who undertake either by themlelves, or in companies, the fettlement of colo-
nies and plantations in America; which diftinguines them from the planters, by the name of proprietors of fuch lands, colonies, or planiations.
The later are employed in planting and cultivating the lands, and the othcrs lend their money, and hazard or adventure it, in hopes of the profits they are to receive thereby. Thefe are what, properly fpeaking, are called in france, actionaries; the others, inhabitants, colonifts, and grantees. In th sfe:re we find, in the collection of the charters of England, the adventurers and planters of Virgima, the adventurers and planters of New England, and fo of the relt ; the charters granted for new colonies always diftinguifhing thore two kinds of parties concerned, and granting them different privileges.
ADVEN IURINE, or AVENTURINE, a precious fone of a yellowith-brown colour, full of Jittle fpecks, which feem to be of gold. There are pretty fine pieces of it found in Bohemia, Silefia, and different parts of France.
This ftone takes the polifh eafily, but then it cafly breaks. It is ufed in the fineft inlaid works: fnuff-boxes, patch-boxes, and watch-cafes, are allo made of it.
There is a counterfeit advensurine made with the filings of brafs, and powdered glafs (whilft they are in fufion over the fire) to which a yellow tinclure is given; but the factitious adventurine never comes near the genuine and natural.
To ADVERTISE any thing that is loft, or flolen, which the French call recommander une cliofe perduë, is, with them, to fend to all the merchants or traders, who might purchafe the fame, tickets or notes, containing a defcription of the thing, its nature, quality, form, $\sigma_{i}^{\circ}$. that, in cale it be be offered them to fale, they may ftop it, and give proper notice. This is much after the fame manner as is practifed here in London, with regard to any piece of plate that is loft, of which notice is given to all the filverimiths. But we generally advertife here in England, in the Gazette, or in any other off the printed news-papers. It is alfo cuftomary in Holland to give notice by the public crier.

## OBSERVATIONS.

Advertifing in the news-papers, in regard to matters of trade and bufinefs, is now grown a pretty univerfal practice all over the kingdoms of England, Scotland, and Ireland; and it feems to be a very natural way for men of bufinefs of any kind to communicate what they have to propofe to the public. It is the way, indeed, by which the very government impart their intentions to the kingdom in general, the Gazette, printed and publifhed by authority, being nothing more than a kind of public advertiler, for the information of the whole community. The great trading and monied corporations practife the fame, as being the beft method of letting the public know their proceedings. And however mean and difgraceful it was looked on a few years fince, by people of reputation in trade, to apply to the public by advertifements in the papers; at prefent, it feems to be efteemed quite otherwife; perfons of great credit in trade experiencing it to be the beft, the eafieft, and the cheapeft method of conveying whatever they have to offer to the knowledge of the whole kingdom. See News-Papers, their general utility, Eic.
ADVICE, advertifement, inftruction given to a perfon concerning fomething, that he did not know. To give advice is ufed to lignify, the communicating to another, by letter, what paffes. My correfiondent of Nantz has given me advice of fuch a bankruptcy, Eic.
The merchants of Provence fometimes ufe the term advifo, which they have adopted from Italy.
A letter of advice is a letier milfive, by which a merchant, or banker, informs his correfpondents, that he has drawn a bill of exchange upon him; that his debtor's affairs are in a bad ffate, or that he has fent him a quantity of merchandize. To letters of advice concerning the fending of goods, the invoice is ufually annexed. See Invoice.
In regard to letters of advice for the payment of a bill of exchange, they ought to contain the name of the perfon for whofe account it is drawn, the day, month, and year, the fum drawn for, and the name of him from whom the value is received. It ought alfo to mention the perfon's name to whom it is payable, and the time when due; and, when bills of exchange exprefs the payment to order, that ought alfo to be fpecified in the letter of advice.
A perfon may refufe accepting a bill of exchange, when he has not had advice of it.
Advice, is alfo ufed for opinion, or counfel. This is my advice, or opinion. I have done nothing in this, but by the opinion and advice of the moft ikilful merchants.
To ADVISE (in trade) to advertife, acquaint, or give notice of any circumftance relating to a perfon's iffairs; as I advife you, that fuch a banker does not appear upon our exchange; that fuch a thip is arrived in our port.
To ADULTERATE, to mingle fomeching foreign to it's kind, with any fubftance, to debafe any thing with bad ingredients; to adulterate or counterfeit the coin, is a capital crime in all nations.
AEM, or AAM, a liquid meafure ufed at Amferdam. See AAM.

AEM，AM，AME．This liquid meafure，which is ufed almoft all over Germany，is not the fame as that of Am－ ferdam，though it has almoft the fame name；neither is it alike in all the cities of Germany．The ame commonly contains 20 vertels，or 80 maffes．At Heidelburgh it is 12 vertels，and the vertel 4 maffes，which reduces the ame to $4^{8}$ maffes：and in Wirtembergh the ame is 16 yunes，and the yune 10 mafles；which makes the ame amount to 160 maffes．
无STUARY，in geography，an arm of the fea，running up a good way into land．
历THIOPS MINERAL，a compofition of crude mercury， and common brimftone，made by rubbing together an equal quantity of each，till they are incorporated into a black powder．
AFFA，a weight ufed on the gold－coaft of Guinea．It is equal to an ounce，and the half of it is called eggeba．Molt of the Blacks on the gold－coaft give thefe names to thofe weights．
AFFAIR，every kind of bufinefs and occupation，in which a perfon employs himelf，or is concerned．
This term is much ufed in commerce，in which it has vari－ ous fignifications．Sometimes it is taken for bargain，pur－ chafe，contract，Fic．but equally in a good or bad fenfe，ac－ cording to what is added by way of explanation．Thus they fay：Such an one has made a fine affair of it；to fignify， that he has gained much．And on the contrary：That he has a bad affair of it，when he has loft confiderably by a bargain，purchafe，contract，Eic．
Sometimes affairs are taken for a merchant＇s fortune，and in this fenfe they fay，he is very well in his affairs，when he is rich and at his eafe，without debts，and poffefled of a con－ fiderable fortune：and that he is ill in his affairs，when he has had great loffes，and is much in debt．
AFFICHE，fo the French call thofe bills or advertifements， which are pafted up in public places，to make any thing known．
The ufe of thefe public bills is very common in trade． They are put up for the fale of merchandizes and of fhips， and to inform the public of thips ferting out for voyages，as is done upon the Royal Exchange of London．Thefe laft con－ tain the places to which they are bound，thofe where they are to touch on their voyage，of what burthen or number of tons they are．how many guns they carry，and their number of men．It is alfo by thefe bills，that the French trading companies inform the public，of the quality and quantity of the fuffs，linnens，metals，drugs，ficices，and other effects， which arrive on the return of their thips．The place of their arriva！is ufua！ly mentioned in them，with the day，and often the conditions of fale．In a word，there are few things in trade，for which the French merchants may not fometimes be obliged to have bills fixed up，though it were only to make known the new manufaciures they are endeaveuring to eftablifh，or even the change of their place of abode，in or－ der to keep their cultomers．
It is not allowed at Paris to caufe bills to be pafted up，upon any pretence whatfoever，without having firt obtained the lieutenant－general de Police＇s permifion，or that of the fu－ perior judges，according to the nature of the cafe．
AFFIDAVIT，an oath written and figned，and properly fworn before fome perfon legally authorifed for that purpofe． As traders are frequently called on to make affidavits of one kind or other，they thould be made thoroughly fenfible of the nature thereof．
It is defined by divines and moral philofophers，a religious af－ fertion，or affeveration，wherein a perfon invokes the Al－ mighty，renounces all claim to his mercy，or even calls for the divine vengeance upon bimielf，if he fpeaks fallly．－In a legal fenfe it is a folemn action，whereby God is called to witnefs the truth of an affirmation．

REMARES on the hardfhip of the frequency of oaths by trade．
There is nothing that has been more complained of，nor with more reafon，by wife and good men in all ages，than the multiplying of oaths，more elpecially among the trading part of mankind，in the ordinary courfe of therr bufinefs． 1 feak particularly with regard to cuftom－houfe oaths，$\xi^{\circ} c$ ． which，I humbly apprehend，traders fhould by no means be liable to；for although traders，who fupport their reputation by thei：care，induftry，and ability in bulinefs，are certainly as honella clafs of men as any in the community；yet，as they are no：impeccable，they have a natural right to be upon a level with the reft of their fellow－fubjects，and not to be under the neceffity of fwearing to every thing they do，or tranfact；which they are daily obliged to do，in refpect to the revenue．
There is no order of men in the community，who labour under the like reftrictions．Was the lawyer，the phyfician， or even the divine，to be obliged to twear to do rigorous juf－ tice，in all cafes where their intereft is concerned，it is to be prefumed，that they might not be free from evil any more than traders are，in cafes where their interelt is cancerncd：
fuch a law，it is to be feared，would tend rather to render oaths ufeiefs，than to fupport their folemnity．
－I have heard，fays Mr．Locke，very fober and obferving per－ ＇fons complain，of the danger men＇s lives and properties are ＇in，by the frequency and farfionablent $\left\{\frac{1}{}\right.$ of perjury amon $\_$it ＇ us．Faith and truth，efpecially in all occafions of attefting －it upon the folemri appeal to heaven by an oath，is the great －bond of fociety：this it becomes the wifdom of magiffrates ＇carefuliy to fupport，and render as facred and awful in the ＇minds of the people as they can．
－But if ever frequency of oaths thall make them to be looked ＇on only as formalities of law，or the cuftom of ftraning ＇truth（which men＇s fwearing in their own cafes is apt to －lead to）has once dipt men in perjury，and the guilt with ＇the temptation has fpread itfelf very wide，and made it ＇fafhionable in fome cafes，it will be impolfible for the fo－ －ciety，thefe bonds being diffolved，to fubfift ：all muft break －in pieces，and run to confulion．
－That fwearing in their own cafes is apt，by degrees，to lead ＇men into as little regard of fuch oaths，as they have of ＇their ordinary talk，I think there is reafon to fufpect from ＇what has been obferved in fomething of that kind．Mafters ＇of thips are a fort of men generally induftrious and fober， ＇and I fuppofe may be thought，for their number and rank， ＇to be equally honeft to any other fort of men；and yet，by ＇the difcourfe I have had with merchants in other countries， ＇I find，that they think，in thefeparts，they take a great li－ ＇berty in their cuffom houfe oaths；to that degree，that I ＇remember I was once told，in a trading town beyond fea， －of a mafter of a veffel，there efteemed a fober and fair ＇man，who yet could not hold faying，＂God forbid that a ＂cuftom－houfe oath fhould be a fin．＂
－I fay not this，to make any reflection upon a fort of men －that I think as uncorrupt as any other；and whom I am －fure ought in England to be cherifhed and efteemed，as the －moft induftrious and moft beneficial of any of its fubjects． －But I could not forbear to give this here as an inftance， －how dangerous a temptation it is，to bring men cultoma－ s rily to fwear，where they may have any concernment of ＇their own．And it will always be worthy the care and －confideration of law－makers，to keep up the opinion of an －oath high and facred，as it ought to be in the minds of the ＇people；which can never be done，where frequency of －oaths，biaffed by intereft，has eftablifhed a neglect of ＇them；and fafhion（which it feldom fails to do）has given ＇countenance to what profit rewards．＇
The Chinefe adminifter juftice with great rigour in all their tribunals．When any perfon commences a fuit againtt ano－ ther，he lays his claim in writing before the court of judica－ ture，and the defendant gives in his defence in writing，which he figns，and which he is obliged publickly to hold up in court between his fingers．＇
Thefe two writings are delivered in together；and，being ex－ amined，fentence is delivered in writing，and each party has his papers returned to him ；but firft they return the defend－ ant his writing，that he may again acknowledge it．
When one party denies what the other affirms，he is ordered to return his writing；and if the defendant thinks he may do it fafely，and accordingly delivers his papers a fecond time，they alfo call for thofe of the plaintiff，and then they fay to him who denies what the other affirms，Make it ap－ pear that your antagonilt has no right to demand of you what is in debate；but take notice，if he makes out what you deny，you fhall undergo twenty ftrokes of the bamboo upon the back－fide，and pay a fine of twenty fakuges，which make about two hundred dinars．
This bamboo punifhment is fuch，as the criminal could not furvive；it is fo grievous，that no perfon in all China may， of his own authority，inflict it upon another，on pain of death，and confifcation of his goods；fo that nobody is ever fo hardy as to expofe himfelf to fuch certain danger：where－ fore juftice is uell adminiftered to every one．They require no witnefs，nor do they put the parties upon oath；which is the chief reafon for mentioning this cuftom in China．
To collect the public revenue，therefore，without compell－ ing traders to fwear perpetually，was one great motive to Sir Mathew Decker，as I heard bim declare，for propofing his latefcheme．
AFFINAGE，an action which purifies and refines any thing， to render it finer，neater，and better；as metals，fugar，飞ec． Affinage is fometimes ufed with us in law－books，for the re－ fining of metals．See Refining．
AFFIRMATION，is a poffitive allegation of any thing： the Quakers call giving their evidence，their affirmation， which they make upon the holy fcriptures in courts of law． The French ufe affirmation to expreis the oath taken incourt， and the affurance given of the truth of any fact：this paffes in the pretence of a judge，who makes the deponent hold up his hand，and fwear，that the thing affirmed is true．
There is an article in the ordinance of 1673 in France， which requires an affirmation in certain cafes relating to bills of exchange：it is the XXI．of Titic V．Its terms are as follow：＂That bills of exchange thall be deemed to be difcharged，after a ceffation of demand，or fuit for five years，
to reckon from the next day after they became due, or were protefted, or from the laft time of fuing. However, the pretended debtors fhall be held, if required, to make affirmation, that they are not further indebted; and their widows, heirs, affigns, or reprefentatives, that they actually believe, there is nothing due.
Affreightment. See Freight.
AFIOUME (or FIUME) a kind of flax, which comes from Egypt, by the way of Marfeilles and Leghorn.
AFRICA, one of the four principal parts of the world. Afric, in its largeft fenfe, lies fouth of Europe, and weft of Afia, and is bounded on the north by the Mediteranean, which parts it from the foriner ; and on the eaft by the Red Sea, which feparates it from the latter, to, which it only joins by that frall ifthmus, or neck of land, which cuts off the communication between thefe two feas, and is commonly known by the name of Suez. On the fouth and-weft, it is furrounded with the main ocean, fo that it may be properly ftiled a valt oyer-grown peninfula, joined only to the continent of A fia by the ifthmus above-mentioned, which, if cut off, would make it by far the largeft inand in the world. It extends itfelf a prodigious way, not only on each fide of the equinox, but of the two tropics likewife, the fouthern verge of it reaching quite to the 35th degree of fouthern, and the northern almoft to the 37 th of north latitude; . whereby its utmolt extent from north to fouth, is almolt 72 degrees, or about 4320 miles. From eaft to weft it reaches ftill farther, viz. from 17 welt to 60 eaft, or 77 degrees of longitude, that is, 4620 miles.
Its fituation for commerce is certainly beyond either of the other quarters of the world. It flands, as it were, in the center between the other three, and has thereby a much nearer communication with Europe, Afia, and America, than any other quarter has with the reft. For (1.) It is oppofite Europe in the Mediterranean, for almolt 1000 miles in a line eaft and weft, from beyond Tripoli to cape Spartel at the ftreight's mouth; the diftance feldom 100 miles, no where 100 leagues, and often not 20 leagues. (2.) It is oppofite to Afia for all the length of the Red Sea north and fouth; the diffance fometimes being not above 5 leagues, feldom 50 : and it fronts all the fouthern coaft of Afia, viz. the coaft of Cilicia, and that of India, though at a greater diftance, yet much nearer than any other country. It is wonderfully accommodated for commerce, by the interpofition of iflands from Madagafcar to Malabar; and more particularly by means of the alternate trade-winds, which render the navigation fafe, eafy, and conftant. (3.) It alfo lies oppofite to America, or about the diftance of 500 to 700 leagues, including the inlands, for a coaft of above 2000 miles: whereas America no where joins Europe, except where it may be a terra incognita, under a diftance of 1000 leagues, and not Afiz under that of 2500 .
It is furnifhed with the greatelt and moft convenient navigable rivers, and perhaps, with as many of them, as any other of the chief parts of the world: fuch are the Nile and Nubia on the north hore, running into the Mediterranean fea; the Niger, or Rio Grand, running into the Atlantic ocean, on the weft fide of Africa; the Congo, the Zairi, and the Loango, three rivers of prodigious extent, fouth of the line, which empty themfelves into the Ethiopic ocean on the fame weft fide, but beyond the Gold-coaft : alfo the Natal, the Prio St. Efprit, the Melinda, and the Mozambo, all rivers of a very great length and breadth, which empty themfelves into the Indian ocean on the eaft fide of Africa.
Thefe are all rivers of the firf magnitude; befides which, there are innumerable others, which, though not equal to the former, are yet very noble ftreams, fitted for navigation and commerce, and which by their long courfes penetrate far inland: and, was this country blefled with a people qualified for trade and bufinefs, they might become the medium of an endlefs commercial correipondence.
The country is populous beyond credibility, the foil fruitful, the feafon, for the greateft part, mild and clement, and the air Yalubrious: and, if once a turn for induftry and the arts was introduced among them, a greater quantity of the Eutopean produce and manufactures might be exported thither, than to any other country in the whole world. And, as the natives in general ftand in great need of European commodities, fo they have the moft valuable returns to make for them. This the Europeans experience, from the fhare of raffic they carry on with them at prefent.
To what a great degree this country abounds in gold, we have not only the teftimony of the Portugueze, the Dutch, and the French, as well as Englifh, who have fettlements on the coaft of Africa, but the vouchers of the mouthentic hiftorians.
There is no country in the world, fays the biftorian Leo Africanus, richer in gold and filver, than the kingdoms in Africa; as thofe of Mandingo, Ethiopia, Congo, Angola, Butua, Quiticui, Monomotopa, Cafati, and Mehenemugi. By means of fettlements of Atrength on the continent of Africa, adds he, the Europeans might, by the exchange of their commodities, draw into their hands all the gold of thofe countrics. And here is a prodigious number of elephants,
which would not only facilitate the inland intercourfes of commerce, but alfo afford a very beneficial branch of traffic, in the teeth of thefe notable animals. In the fame hiftorian are numberlefs paffages relating to thofe rich mines, and Shewing how eafy it would be for the Europeans to carry'on a very extenfive traffic with that part of the globe.
This account of the great treafures of Africa is confirmed likewife by the Nubian geographer, who fomewhere fays, that the king of Guinea, the greateft city in all the countries of Negroland, has a mafs of gold of thirty pounds weight, as it was naturally produced in the mines; which is completely pure, tough, and malleable, without having been fmelted by the ordinary arts of refining that metal from ts native ore. Father Labat, a modern French author, has defcended to a very minute fpecification of great variety of rich mines; which, he fays, are very thamefully worked by the 1 Jegroes, by reafon of their being totally ignorant of the nature of mining: nor have they ever yet come to the main vein of any of their mines.
The copper is the next valuable ore found in this part of the world. The quantity of this metal is not fully fearched into, though there is great reafon to believe it is exceeding great: fo great, that it is commonly faid amongft them, that the mountains which we call Atlas, are all copper. Thus much, however, is certain, that the quantity is extraordinary great, that is difcovered in feveral countries diftant and remote from each other; as in Fez, Tunis, and Abyflinia, or Ethiopia; and it is allowed to be the fineft copper in the whole world. On the northern coafts they have fuch plenty of corn, that their fields, though but very meanly cultivated for want of a knowledge in agriculture, yield them an hundred-fold increafe. Gums, ivory, wax, civet, oftrich-feathers, are in fuch quantities, that any expence of them can farce ever be milled.
And, in thefe warm climates, the country, befides what nature has of herfelf diffeminated, is, and muft be, capable of improvement, in all the niceft and moft eftimable productions, which the well cultivated world fupplies us with, from other places in the fame latitude.
It cannot be doubted, but the fruitful rich lands, every-where to be found upon the coafts, and within the country, upon the banks of the rivers near the gold coaft, and the havecoaft, would produce all the richeft articles of the Eaft and Weft-India commerce. Doubtlefs the fices of Banda, Ternate, and Amboyna, might be produced on the rich and fruitful Mores of Melinda, on the eaft fide, or of the lavecoaft on the weft fide, of Africa; and that as eafily, and to as great advantage, as where they are now produced; the latitude being the fame, and the foil not anlike.
The cinnamon of Ceylon, the tea of China and Japan, and the coffee of Mocha would all there be produced, on the fame coaft, from the Rio de St Efprit, and fouthward to the river Natale; a temperate, fertile, healthy, and manageable foil.
It has been affirmed that the fugars of Barbadoes and Jamaica, as alfo the ginger, cotton, rice, pepper, or pimento, with the cocoa, the indigo, and every other plant which comes from thefe illands, would be as eafily produced in Africa, and the crops be equally profitable and plentiful, if fupported by the fame induftry as in America:- and we are affured that the ginger, the cotton, and the indigo have been attempted by the Englifh factories on the gold-coaft of Africa; and have thriven to admiration.
Upon the foundation of thefe facts, nothing feems wanting to render Africa equal by nature, if not in many refpecto fuperior, to any of the three other parts of the world. For although the middle of it, lying between the tropics in the torrid zone, and under the line, is exceedingly hot; yet even in the hotteft part it is habitable, and inhabited; and the people who dwell in thefe extreme hot climates, do abound in plenty, have cattle, corn, cooling fruits, fhades, rivers, 8 cc . and live very agreeably and healthy; as in the ifland of St. Thomas, under the very line, alfo on the goldcoaft, and in the kingdom of Benin, and Angola on the weft thore ; and in Ethiopia, Melinda, the coaft of Zanguebar, and feveral of the more intemperate places on the eaftern fhore.
But, making allowance for fome of the inland countries remote from the fea, whi h we are told are without weter, and therefore defert, yet they are not equal to the uninhabited waftes either of Europe, Afia, or America Notwithftanding this, Africa, in one relpect, has greater advantage than the other parts of the world, for it fen's no cold, the moft northerly latitude being about 37 , and the mof foutherly about 35 degrees, fo that infinitely the larger part enjoys the fineft and moft temperate climat:-
It is melancholy to obferve that a countr, which has near 10,000 miles fea-coaft, and noble, large, deep rivers, fhould yet have no navigation; ftrams penctrating into the very center of the country, but of no benefit to it; innumerable peóple, withour knowledge of each other, coirefpondence, or commese.
At the entranco of thefe rivers into the fea are the mof excellent hartuurs, prodigious in number, deep, fafe, and

## A FR

calm, covered from the wind, and capable of being made fecule by fortifications; but no Chipping, no trade, no merchants, even where there is plenty of merchandizes. In hort, Africa, though a full quarter of the globe, ftored with an inexhauftible treafure, and capable, under proper improvements, of producing fo many things delightful, as well as convenient within fifelf, feems utterly neglected by thore who are civilized themfelves, and its own inhabitants quite unfolicitous of reaping the benefits which nature has vided for them. What it affords in its prefent rude, unimproved ftate, is rolely given up to the gain of others, as if not the people only were to be fold for llaves to their fellowcreatures, but the whole country was captive, and produced is treafures, merely for the ufe and benefit of the reft of the world, and not at all for their own.
Whether, inftead of making haves of thefe people, it would not rather become fuch nations that aflume to themfelves the name and charafler of Chriftians, to give them a relifh for the bleffings of life, by extending traffic into their country the largeft degree it will admit of, and introducing among them the more civilized arts and cuftoms, may be fubmitted to confideration
The Dutch, by recommending their drefs, and introducing their cuftoms among the natives, have prodigioufy improved commerce of the fice iflands, and wonderfully humanized the inhabitants, who were as favage in their manners as the negroes.
But it is to be feared that, while the flaving traide with thefe people continues to be the great object of the Europeans, it will ever firit up wars and hootilities among the negro princes nd chiefs, for the fake of making captives of each other for fale. This, therefore, will ever obftruct the civilizing of thefe people, and extending of the trade into the bowels of Africa, which, by the contrary means, might be eafily practicable.
The obtaining a competent number of fervants to work, as the negroes at prefent do, in the colonies belonging to the feveral European potentates, who have fettlements in America, does not feem at all impracticable. Europe in general affords numberiefs poor and diftreffed objects for that purpofe, and if thefe were not over-worked, as the negroes particularly are in Martinico, and in other the French colonies, the Europeans would make as good fervants for the American planters as the blacks do: and, if alfo all the Europeans were upon a level in regard to the price of labour in their colonies, we can not but think they would all find their account in laying ab folutely afide the flave-trade, and cultivating a fair, friendly, humane, and civilized commerce with the Africans.
Till this is done, it does not feem poffible that the inland trade of this country fhould ever be extended to the degree it is capable of; for, while the firit of butchery and making flaves of each other is promoted by the Europeans among thefe people, they will never beable to travel with fafety into the heart Africa, or to cement fuch commercial friendfhips and alliances with them as will effectually introduce our arts and manufactures amongtt them.
We muft, however, at prefent take the ftate of the trade as it ftands, and men as they now are: thefe hints may poffibly fome time or other roufe fome noble and benevolent Chriftan fpirit to think of changing the whole fyftem of the African trade, which, as things are now circumftanced, may not be fo eafily brought about.
This trade, in its prefent ftate, is of as great advantage as any we carry on, and is, as it were, all profit, the firft coft being fome things of our own manufactures, and others generally purchafed with them, for which we have, in return, gold, teeth, wax, and negroes; the laft whereof is a very beneficial traffic to the kingdom, as it occafionally gives fo prodigious an employment to our people both by fea and land Thefe are the hands whereby our plantations are at prefent improved ; and it is by their labours that fuch quantities of fugar, tobacco, cotton, ginger, fuftic, and indigo are raifed which employ a great quantity of fhipping for tranforting them hither; and the greater number of fhips employs the greater number of handicraft trades at home, fpends more of our produce and manufactures, and breeds more failors, who are maintained by a feparate employment; for if every one xaifed the provifions he eat, or made the manufactures he wore, traffic would ceafe; which is promoted by a variety of employments men have engaged in, which confficutes a mutual dependence, without invading each other's province. Thus the hufbandman raifes corn, the miller grinds it, the baker makes it into bread, and the citizen eats it: thus the grazier fats cattle, and the butcher kills them for the market: thus the fhepherd fheers his fheep, the fpinifter turns the wool into yarn, the weaver makes it into cloth, and the merchant exports it; and every one lives by each other: thus the country fupplies the city with provifions, and that the country with neceffaries.
On the whole, the African trade, both for exports and imports, and alfo as it fupplies our Britifh plantations, and advances navigation, is certainly very beneficial to this kingdom; but whether the laying this trade abfolutely open, white our rivals carry the fame on, by the means of great trading companies
with joint flocks, will prove the moft effectual means to promote out hate therein, mult be left to time and experience. In giving a particular account of the trade of Africa, we fhall divide into the following general heads, viz. Upper Egypt, Lower Egy'pt, Middle Egypt, Nubia, Abyffinia, or Ethiopia, Barbary, Barca, Tripoli, Tunis, Biledulgerid, Algier, Fez, Morocco, Zara deferts, Sanago, or Senagal river, Negroland, Gambia river, Melli, or Mendingo, Tơmbut, Guinea, Benin, Congo, Cafraria, Cape of Good Hope, Monomotapa, Zanguebär, Ajan, Madagafcar inlanḍ, Cape Verd, Canary, Azores, and other fmall illands, under the articles of African Islands, and alfo under the British, French, and Dutch Afritcan Companies; to all which we refer alphabetically, for an account of their refeective commerce.

## AFRICAN I'SLANDS:

I. Madagascar lies between the 12. 30 . and 25 degreeg 10 minutes of fouth latitude, and between the 44 th and 5 ift of longitude eaft from London. It abounds with fpacious plains, extraordinary good paftures, sivers, and lakes, well flocked with fifh; agreeable fprings, the water of which is, perhaps, the beft in the world; and large forefts, always green, where lemon and pomegranate-trees, agreably mixed with odoriferous flowering trees, perfume the air with the moft delightful fcent. Here are great number of oxen and cows, great herds of fheep, and tame and wild hogs. They have a kind of nut, which fmells of all forts of fices; it is as big as a nutmeg, but browner and rounder. Pepper grows about fort Dauphin, but in fmall quantities, becaufe it is not cultivated. Grapes and wheat do not come to maturity here; oats and barley fucceed better. There is a great quantity of tobacco, but it is prodigioully flrong. The foil prôduces two crops of every thing in a year, except fugarcanes, which muft be left two years ftanding, that they may grow to a proper bignefs.
Here are four forts of honey, all which are very agreeable to the tafte; and three forts of wines; honey-wine, which they call fich, and taftes like Spanifh wine; wine of fugar-canes, called touach, which is fomewhat bitter; and the wine of bananas, which is tartifh ; together with feveral forts of oil Gum of tacamaca, frankincenfe, and benzoin are found in abundance in this ifland: ámbergreafe is gathered on the feacoaft. Here is alfo talc, with which they garnifh their windows for want of glafs; mines of coals, falt-petre, fteel and iron, with which the negroes make razors, haffagayes, and infruments to cut wood.
It is confidently affirmed that they have alfo gold and filyer mines, but it is not known in what province they lie. Nor does this ifland want for precious flones, as topazes, amethyfts, agates, E'c. The riches of the inhabitants confift in $^{\circ}$ cattle, which the men look after, and in fields of rice and roots, which the women fow : gold and filver ferve only for ornaments. They make paans and carpets of cotron, of divers colours; and, as they have no looms, but only flicks laid on the ground, which they raife by turns, to make the woof, they cannot work very faft. 'The ifland is not populous in proportion to its bignefs, but the iflanders are capable to learn the arts and fciences; and there are even few trades in Europe of which they have not fome notion, and practife to a certain degree; and yet they are for the moft part lazy enough, and, when they work, it is flowly.
As for the trade they have among themfelves, it is managed only by barter, for they have not the ufe of money: the mer-cery-wares and glafs beads, which they get from the Eus ropeans, ferve them inftead of coin. When they go into remote provinces to buy oxen, cotton, filk, paans, iron hafiagayes, hatchets, knives, and other fuch things, they exchange gold for copper, filver for iron, and carty on their trade after that manner. If they have any pieces of gold or filver coin, they melt them down to make bracelets.
They have not as yet any true knowledge of commerce, which is the reafon why they heglect to gather up thofe things which their country produces. They value a plate of copper more than the mof beautiful precious fone when rough, and laugh at foreigriers who bid them any thing for them. In the greateft part of the country they eat the wax with the honey, and the Aleh of oxen and fheep with their hides, or kins. They generally burn ambergreafe in their facrifices; and, towards the north, they throw away the fllk and eat the wotm, whilft in the chryfalis. He who wants cotton catries rice or cattle to the place where cotion is cultivated; and he who has cotton, and wants rice, carries his cotton to fell to thofe places where there is rice: for there is neither fair nor market here. The chief places in this ifland, or rather on the coaft, are,
t. The bay of Antongil, in the bottom of which there is a fmall ifland, which abounds in all forts of provifions, and very good water: it affords a fafe harbour for ihipping. This bay has been once much frequented by the Durch, who ufed to buy flaves and rice here. Thèy had a kind of factory conffiting of 14 Dutchmen, fome of whom died with ficknefs, the place being very unwholfome, and others have been murdered by the inhabitants, whom they ufed with too much haughtinefs.
2. The
2. The ifland of St. Mary, otherwife called Noff Ibrahim, or the inle of Abraham, lying to the fouthward of the bay of Antongil, is furrounded with rocks, over which canoes may pafs at high-water, but, at low water, there is not above half a foot depth. On thefe rocks is to be feen the fineft white coral in the world. On the caftern coaft of the illand is allo found ambergreafe, and the ifland-itfelf affords feveral forts of gum. While the French were fettled upon this illand, it became much more populous than it was before; the lord of Antongil, who ufed formerly to make war againft the inhabitante, dared no longer to attack them, fince they were under the protection of the French; fo that there are now here o or 12 villages.
3. Fort Dauphin, built by the French, fands near the foutheaft point of Madagafcar; but, the French finding that the commerce would not bear the expence of the colony, they left it again.
4. The bay of St. Auguftin lies on the weft coaft of Madagafcar. The Englifh formerly drove a trade for flaves on the weff fide of the illand, particularly at St. Auguftin's bay, and at new and old Meffalige; but now they are afraid of the pirates; though fome venture their necks in going to trade with them
II. Mascarin, called Mafcareigne, or the ille of Bourbon, by the French, is about 370 miles diftant from the coalt of Madagafcar to the eaft, under the 21 If and 22d degrees of fouth latitude. It was difcovered by a Portuguefe of the houfe of Mafcarenhas, who gave it his name. Afterwards Mr . de Flacourt, governor of fort Dauphin and of the French fettements in Madagafcar, gave it the name of Bourbon in the year 1654, when he took pofleffion of it in the name of his king. However, the French did not rettle at firf upon this ifland; but, finding afterwards how advantageous it might prove to their navigation, they made a confiderable fettlement there in 1672, after they had quitted thofe which they had on the ifland of Madagafcar. They have now three pretty confiderable towns there, with a governor, and feveral magiftrates. There are many good roads for fhipping about this ifland, but no fafe ports to fecure fhips againf the violent ftorms which often rage in thefe parts.
The firf fettlement the French made here is the town, or village, of St. Paul; the others are called St. Dennis and St. Sufanna. The governor refides generally at St. Dennis: this is at prefent the baiting-place of the French Eaft-India Chips, and the only one where they can conveniently get refrefhments. The ifland is fruitful in plants, and abounds particularly with aloes, tobacco, white-pepper, ebony, palm, and other fruit-trees; a kind of trees which produce odoriferous gums, as benzoin, $\mathcal{F}^{\circ} c$. and a great many trees proper for timber. The foil is well watered by feveral fmall rivers, rivulets, and fprings of very good water; and the rivers abound with filh. On the fea-hore are gathered great quantities of ambergreafe, coral, and fine thells. There are many more fmall iflands about Madagafcar, but not worth mentioning.
III. St Helena is about the I4th degree of fouth latitude; its longitude is 5 degrees 30 minutes weft from London. It is a fettlement of the Englifh Eaft-India company, and there is a fmall Englith town within the bay, which is the common landing-place, where are about 20 or 30 fmall houfes; but the houles in the town fland empty, fave only when fhips arrive: for the owners of thofe houles have all plantations farther in the ifland, where they conitantly employ themfelves; but, when fhips arrive, they all flock to the town, where they live all the time that fhips lie here; for then is the fair, or market, to buy fuch neceflaries as they want, and to fell off the product of their plantations.
Their plantations afford potatoes, yams, and fome plantanes and bananas. Their focks confift chiefly of hogs, bullocks, cocks and hens, ducks, geefe, and turkeys, of which they have great plenty, and fell them at a low rate to the failors, taking in exchange fhirts, drawers, or any light clothes, pieces of callico, filks, or muflins; arrack, fugar, and lime-juice are allo much efteemed and coveted by them. But now they ate in hopes to produce wine and brandy in a fhort time, for they already begin to plant vines for that end, there being a few frenchmen there to manage that affair. The company's affairs here are conducted by a governor, deputy-governor, and ftorehoufe-kecper, who have ftanding falaries allowed by the company, befides a public table well-furnithed, to which all commanders, mafters of thips, and eminent paffengers are fwelcome. The ifland produces here and there a drug like benzoin, and great plenty of wild tobacco on the hills, which the flaves ufe to fmoak for want of the right fort. The inhabitants are fupplied with necefflaries twice a month out of the company's fore, at fix months credit. The chief commodities for fale here are cherry-brandy, malt, and cyder, fpirits, beer, Madera and Canary wines, and Spanifh brandy, which may be taken in at thofe iflands; Batavia arrack, fugar, fugar-candy, tea, fans, china, lacquered ware, filks, China ribbons, coarfe ftriped ginghams, ordinary mufin, coarle chints, blue and brown long-cloths, falampores, and all forts of coarfe callicoes.
IV. Ascension Island lics under the 7 th degree of fouth dacitude; it's longitude is about i3 degrees 10 minutes weft
from London. It is a mountainous and barren inland, notwithftanding which it is generally ufed by our homeward bound Eaft-India Mips, as a place of refrefhment. The foil is covered with cinders and ahbes, which makes fome think here was once a vulcano. Yet in fome parts it is fit for tillage, and it has a fafe, convenient harbour, where the mariners fometimes hunt and feed upon turtles for 10 or 15 days together, which they reckon both a pleafant and wholefome food. There are a few goats, but they are lean: there are alfo feveral forts of birds here, but fo ill-tafted, that the mariners will not touch them
V. St. Matthew lies to the north of St. Helena, and to the north-eaft of Afcenfion, in the 2 d degree of fouth latitude. It is defert, though there is a fine rivulet of freth water that runs through it.
VI. Annobon lies in the latitude 2 degrees fouth, in the 5 th degree 10 minutes longitude eaft from London. Here are two high mountains, which, being continually covered with clouds, occafion frequent rains. Here are feveral fertile vallies, which produce plenty of bananas, potatoes, oranges, pine-apples, tamarinds, and cocoa-nuts. Befides which, the ifland abounds alfo in lemons, citrons, nuts, figs, Turkifh comn, and millet. Here are alfo oxen, cows, hogs, goats, fowls, pigeons, and other poultry, and efpecially plenty of filh. It produces allo a vaft deal of cotion. The governor is a Portugueze, who has very few white people with him; all the other inhabitants are blacks, who are neverthelefs very fubmiffive to the-governor, and zealoufly attached to the Roman catholic religion. On the fouth-eaft of the ifland is a very good watering-place, the water running down from the mountains into a valley full of orange and other fruit-trees; but it is a difficult matter to come at that water, becaufe of the violent breakings of the fea; and the negroes have made an intrenchment of flone there, from which they can very much incommode thofe who go thither for water. The road for fhipping is on the north-caft fide of the ifland, where is good anchoring in $7,10,13$, or 16 tathoms water, on a fandy ground, clofe to the land. The revenues of this illand confift chiefly in cotton. The negroes gather it, and, after they have cleaned it, they fend it into Portugal. Here are alfo fome civet-cats in the mountains, which yet afford but little' profit.
VII. St. Thomas, or St. Thome, lies directly under the equinoctial line, under the 6 th and 7 th degrees of longitude eaft of London. It never rains except in March and September, when the fun paffes directly over this illand, but a dew falls every night, which renders the foil very fruitful. It produced formerly forty thips load of fugar; but in Mandel. floe's time, from whom we borrow this account, fcarce enough to lade fix. Neverthelefs, it produces wheat, wine, millet, rye, barley, melons, cucumbers, figs, ginger, red parfnips, cabbages, French turneps, lettice, radithes, fage, beet, parfley, and all forts of roots, pulfe, and pot-herbs. The Portugueze have planted olive, peach, and almond-trees here, which feem to thrive well enough, but bear little fruit, becaufe of the exceffive heat and moifture. The fea abounds with excellent fifh and large whales. There is a mountain in the center of the illand, covered on the top with a cloud, which moiftens the trees, and makes them drop water enough for the fugar-canes. The Portugueze built a town here called Pavoalan, with a harbour towards the continent.
It was at firf inhabited by all nations, who had a free trade here; but now all pay tribute except the French, who enjoy the fame immunities as the Portugueze, becaufe a French jefuit was very laborious and fuccelsful in propagating the Roman faith here. The town is very pleafant, and the inhabitants exchange their fugar (which by the by will not eafily dry) for wine, cheefe, leather, and clothes.
VIII. Cape Verdiflands, are feated between the 13 th and 50 minutes, and the 17 th and 50 minutes of north latitude, and between the 22d and 25 th degree of longitude weft from London. The Portugueze have a viceroy here, who refides in the ille of Jago. Thefe iflands are inhabited by Europeans, or by families originally come from Europe, who profefs the Roman catholic religion. Here are alfo fome negroes. The moft confiderable of thefe illands are,

1. Mayo ; the whole of which illand is a very dry fort of foil, either a fort of fand, or loofe crumbling flone, without any frefh-water ponds or ftreams to moitten it; but only fhowers in the wet fealon, which run off as faft as they fall. There is but one fmall fpring in the middle of the ine, from which proceeds a little fream of water, that runs throughia valley between the hills. On the weft fide of the ifland, where the road for fhips is, there is a large fandy bay, and a fandbank about 40 paces wide, which runs two or three miles along the fhore, within which there is a large felina, or faltpond, contained between the fand-bank and the hills beyond it. The whole falt-pond is about two miles in length, and half a mile wide, but above half of it is commonly dry: the nerth end only of the pond never wants water, producing falt from November till May, which is here the dry feafon of the year.
The waters which yicld this falt, work out of the fea through a hole in the fand-bank above-mentioned, like a fluice, and
that only in fpring-tides, when it fills the pond more or lefs, according to the height of the tides. If there is any falt in the pond when the flufl of water comes in, it prefently diffolves: but then, in two or three days after, it begins to ketn; and fo continues kerning, till either all, or the greateft part, of the falt-water is congealed or kerned, or till a frefh lupply of it comes in again from the fea.
This water is known to come in only at that one paflage on the north-ealt part of the pond, where allo it is deepent. They who come hither to lade falt, take it up as it kerns, and lay it up in heaps on the dry land, before the water breaks in again. And it is obfervable of this falt pond, that the falt kerns only in the dry feafon, contrary to the falt-ponds in the Wefl-Indies, particularly thofe of the inland of Salt-Tortuga, where the falts never kern till the rains come in about April, and continue fo to do in May, June, July, $\sigma^{\circ} c$. while the wet feafon lafts, and not without fome great thowers of rain firf. Our nation drives a great trade here for falt, and has commonly a man of war here for the guard of our hhips and barques, that come to take it in ; of which, in fome years, there have not been lefs than a hundred a year. It coffs nothing but men's labour to rake it together, and wheel it out of the pond, except the carriage, and that alfo is vety cheap; the inhabitants having plenty of affes, for which they have lietle to do, befides carrying the falt from the ponds to the fea-fide, at the feafon when hips are here.
The inhabitants lade and drive their affes themfelves, being very glad to be employed, for they have fcarce any other trade but this to live by. The pond is not above half a mile from the landing-place, fo that the affes make a great many trips in a day. The uland of Mayo is generally barren, being dry, as obferved above, and the beft of it is but an indifferent foil. The fandy bank that pens in the falt-pond, has a fort of filk-cotton growing upon it. It may be of ufe for ftuffing of pillows, and the like, but elfe is of no value. The right cotton-fhrub grows bere alfo, but not on the fandy bank. There are fome buthes of it near the fhore, but the molt of it is planted in the middle of the ifland, where the inbabitants live, coton cloth being their chief manufacture; but they have not great ftore of that cotton.
The inhabitants of this ifland, even their governor and priefts, are all negroes; though, being fubject to the Portugueze, they have their religion and language. The negro governor has his patent from the Portugueze governor of St. Jago, and expects a fmall prefent from every commander that lades falt here, and is glad to be invited aboard their hips. He fpends moft of his time with the Englifh in the falting feafon, which is his harvelt; and, indeed, all the illanders are then employed in getting fomewhat; for they have no veffels of their own to trade with; nor do any Portugueze thips come hither, fo that they have fcarce any but the Englifh on whom they depend for trade: and, though they are fubjects of Portugal, they have a particular value for our nation. Affes themfelves are a commodity in fome of thefe iflands, feveral of our thips coming hither to freight with them, and carry them to Barbadoes, and our other plantations.
2. St. Jago, or St. James's illand, is the chief, the moft fruitful, and beft inhabited of all the iffands of Cape Verd; and yet it is mountainous, and has much barren land in it.
On the eaft fide of the ifland is a town called Baya, with a good port, which, in peaceable times efpecially, is feldom without thips: for this bas been long a place where thips outward bound to Guinea, or the Eaft-Indies, Englifh, French, and Dutch, have been wont to touch at for water and refrefhments, but few fhips call here on their return to Europe. When any fhips are here, the country people bring down their commodities to fell to the feamen and paffengers, viz. bullocks; hogs, goats, fowls, eggs, plantanes, and cocoa-nuts, which they exchange for hhirts, drawers, handkerchiefs, hats, waiftcoats, breeches, or in a manner for any fort of clothes, efpecially limen; for woollen is not fo much efteemed here. They do not willingly part with their cattle of any fort, but in exchange for money or linnen, or fome other valuable commodity. The people are very thievifh, and, if they fee an opportunity, will fnatch any thing from you, and run away. There is a fort here on the top of a hill, which commands the harbour.
St. Jago town, the capital of the ifland, lies on the fouthweft part of it, and is the feat of the general governor, and of the bifhop of all the Cape Verd illands. This town ftands fcattering againft the fides of two mountains, between which there is a deep valley, and a run of water in the bottom, that empties ittelf into a fine fmall cove, or fandy bay, where the fea is commonly very fmooth; fo that here is good watering and fafe landing at any time, though the road be rocky and bad for fhips. The people here are pretty orderly, but they are generally poor, having but little trade. Befides chance fhips from other nationc, there come hither a Portugueze fhip or two every year, in their way to Brazil. Thefe vend among them a few European commodities, and take off their principal manufactures, namely, fltiped cotton cloth, which they carry with them to Brazil: Another fhip alfo comes hither from Portugal for fugar, their other manufacture, and returns with it directly thither. For there are feveral

8 For there are feveral
fmall fugar-works on this ifland, from which they fend into Portugal near 100 tons every year: and they have plenty of cotton growing up in the country, wherewith they cloath themfelves, and fend alfo a great deal to Brazil. They have vines, of which they make fome wine, but the European hips furnifh then with better, though they drink but hitte of any. Their chief fruits, befdes plantanes in abundance, are oranges, lemons, citrons, mufk and water melons, limes, guavas, pomegranates, quinces, cuftard-apples, papabs, E'c.
The other illands are, Buena Vifta, Sall, or Salt-ifland, St. Nicholas, St. Lucia, St. Vincent, St. Anthony, Fuego, Brava; fome of which have very good roads and harbours. The ifland Sall is full of large falt-ponds, where the water naturally congeals into falt; and, at St. Vincent, the Portugueze Joad hides.
IX. The Canary Islands, lie between 27 degrees 10 minutes, and 29 degrees 50 minutes of north latitude, and between the 12th and 17 th 50 . of longitude weft from London. The foil of thefe illands is fertile, producing wheat, barley, millet, and excellent wine, which is tranfported thence to moft parts of Europe, but efpecially to England. There are alfo abundance of pomegranate, poplar, fig, citron, and orange-trees: they yield likewife fugar, dragon's blood, and fome other forts of gum. Moft of the inhabitants are Spaniards. The Spanifh fleet, returning from the Wefl-Indies, often make thefe iflands their place of rendezvous. The moft confiderable are the following.

1. Lauzarota, or Laucerota, is divided by a ridge of mountains, which afford nothing but palfure to the fheep and goats; but the vallies produce very good wheat and barley, though they feem fandy and dry. Here are afies, kine, camels, and very good horfes.
2. The foil of Fuerte Ventura is partly mountainous, and partly champain, abounding in wheat and barley. There are feveral brooks of freh water along the coafts, and foft crooked trees on their banks, that yield gum, of which they make white falt. There are palm-trees which bear dates; olive and maftic-trees, orchel for dying, and a fort of figtree, which yields balm as white as milk; that is of great yirtue for feveral medicines. They make cheefe of the milk of their goats, of which this ifland breeds above 50,000 a year: Befides that, their flefh is very good, and the inhabitants make great profits of their ikins and fat, each beaft weighing 30 or 40 pounds. The harbours are only fit for middling veffels. There is on this illand a little town, which bears the fame name.
3. Great Canaria, or Canary, is a fruitful illand, noted chiely for it's excellent wines, which bears it's name, and of which Heylin fays, they ufed to fend 3000 tons every year into England and the Netherlands. It abounds alfo in melons, apples, oranges, citrons, pomegranates, figs, olives, peaches, and plantanes; as alfo with fir, dragon, and palmtrees.
4. Teneriff produces the true Malmfey wine, and that near Laguna is faid to be the beft in the world. Here is alfo Canary wine, and Verdona, or green wine. The Canary grows chiefly on the weff fide of the ifland, and therefore is commonly fent to Oratavia. Verdona is a green, ftrong-bodied wine, harfher and Gharper than Canary. 'Tis not fo much efteemed in Europe, but is exported to the Weft-Indies, and will keep beft in hot countries. This fort of wine is made chiefly on the eaft fide of the illand, and fhipped off at Santa Cruz. Befides thefe wines, here is alfo tore of grain, as wheat, barley, and maiz, which they often tranfport to other places. They have alfo fome beans, peafe, and coches, a fort of grain much like maiz, fowed moftly to fatten land. Here are likewife papahs, apples, pears, plums, cherries, pomegranates, citrons, oranges, lemons, limes, pumpkins, onions, the beft in the world, Eic. They are alfo well ftocked with horfes, cows, mules, fheep, goats, hogs, conies, and plenty of dear. Laftly, here are many fowls, as cocks, hens, ducks, pigeons, partridges, Eoc. with plenty of fifh. All the Canary Illands have of there commodities and provifions, more or lefs. But as the Laucerota is moft famed for horfes, and Grand Canary, Teneriff, and Palma for wines, Teneriff efpecially for the bef Malmfey, for which reafon thefe three iflands have the chief trade; fo is Forteventura for dunghill fowls, and Gomera for deer. Fowls and other eatables are dear in the trading illands, but very plentiful and cheap on the others.
Oratavia lies on the weft fide of the ifland, and, being the chief fea-port for trade, the principal Englifh merchants refide there with their conful.
5. Gomera has a prety good haven, and a town of the fame name. The Spanifh Welt-India fleet often comes into it's harbour, and takes here corn, wine, fugar, fruit, Eic. The country is high, feeds fanall catte, and produces dragontrees.
6. Palma has a town of its own name, and a fafe barbour, well frequented for wines, which fome reckon the beft of the Cavaries, and like Malmfey. They are tranfported thence to the Wef-Indies, and other places. The beft comes from the neighbourhood of a place called Brenia, from

Whence they export about 12000 pipes a year. Here are four fugar-engines.
X. Madeira, or Madera, lies under the 32 d degree of north latitude, and under the 17 th and 8 th of longitude weff from London. The air is far more moderate than in the Canary inlands, and the foil more fertile in corn, wine, fugar, and fruits, being much better watered by five or fix little rivers; but it is alike ftored with the fame fort of cattle, birds, plants, and trees, from which is extracted the fanguis draconis, or dragon's blood, maftic, and other gums.
Here is a perpetual fpring and warm water, which produces bloffoms and fruit every month in the year: white onions are here fo fweet, that they may be eaten like apples. Here are lemons of a monftrous fize, with oranges of all forts. Fruittrees from Europe thrive here in perfection. They make here the beff fweet-meats in the world, and fucceed wondeffully in preferving large citrons and beautiful oranges, and in making marmalades and perfumed paftes, which infinitely exceed thofe of Genoa, whatever the Italians may pretend.
Here are feveral fugar-plantations: the fugar they make here is extremely beautiful; and fmells naturally of violets. This is the firtt place in the weff, where this manufacture was fet on foot; and from hence it has been carried into America, where they make fuch vaft quantities of fugar, that the Portugueze, finding that this trade was not fo proftable to them here as it proved at firft, have pulled up the greateft part of their fugar-canes, and planted vineyards in their ftead; which produce excellent wine, and which foreigners come and buy up, and whereby the Portugueze make an immenfe profit. There are three or four forts of thefe wines. One fort is of the colour of champaign, but is not much valued. The fecond fort is a white wine, much ftronger than the former. The third is delicious, and is called Malmfey, being of the fame nature with that in Teneriff. The fourth is of the fame fort with Alicant wine, but much inferior to it in tafte. It is never drank but mixed with the other forts, to which it gives a colour, and frength to keep. It is obfervable of Madera wine, that the heat of the fun improves it much, when it is expofed to it in the barrel, after the bung is taken off. They make in the whole illand about 28,000 pipes of wine, 8000 of which are drank there, and the reft exported : the greateft part is fent to the Weft-Indies, efpecially to Barbadoes. All European nations trade hither, and receive in exchange for their commodities this wine (much ufed throughout all the American iflands, as keeping beft in hot countries) fugar, wax, oranges, lemons, pomegranates, and citrons. In the year 1735, they reckoned in this iffand 6096 houfes, the number of which is very much increafed fince. The chief town is
Funchal, which is very populous. But the natural Portugueze do not make up the greateft number of the inhabitants; for there are a great many French and Englifh Roman catholicks fettled here, who live after the Portugueze manner, befides a great number of Mulattoes, and of negroes, both freemen and flaves. The road here is very bad for fhips to ride in.
XI. Porto Santo lies to the north-eaft of Madera, under 32 deg. 30 min . of north latitude, and under 15 deg. 30 min. of longitude weft from London. This ifland wants harbours, and bas only a bay, which is fafe enough, except when the wind blows from the fouth-wef. This bay affords a convenient retreat for thips that cone from the Indies, or go to Africa: fo that the merchant-men often flop there, which affords a conifderable profit to the inhabitants. The inand produces wheat and other corn, fufficient for the provifion of the people. Here are plenty of oxen and wild boars, and a prodigious number of conies. Here is alfo dragon's blood, abundance of honey and wax, and the fea abounds with filh.
AGATE, and ACHATES, a precious fone, that has different names according to its different colours. There are traniparent-agates, and opaque ones, and fome that are partly tranfparent and partly opaque.
The agates which are called fardian are red; the moft valuable are of a kind of flefh-colour, mixed with brown; the leaft efteemed are thofe of which the red inclines to yellow. The oynx is all opaque, of a whitifh and black colour. The fardonix is a mixture of the onyx and fardoine. This laft kind of agates is the moft precious of all.
There is alio a fpecies called chalcedony, or calcidony agate, befides the agate of Egypt, the Roman agate, the facred agate, or agate of Candia, which fome antient writers mention. This laft, which is not now to be feen any where, was red like coral, and fpotted with gold.
The agate is one of the precious fones to which the antients have afrcibed the moft occult and miraculous properties. Pliny has filled a whole chapter with them; and Ariffotle, long before, had fet him the example, and prepared the matter. The moderns, either lefs fubtle or more knowing, content themfelves with the mechanic ufe, and defpife the virtues of it.
The agate is ufed in making cups, rings, feals, handles for knives and forks, hilts for $\because$ ords and hangers, beads to pray
with, fmelling-boxes, patch-boxes, fnoff-boxes, falt-cella ; littte mortars, and abundance of toys. It is alfo ured in the compofition of fome tabernacles to contain the hoft, and of cabinets and tables inlaid with precious ftones; being a kind of ftone that is cut, fawed, polifhed, and carved with no great difficulty. Much of it is brought from Strabburgh entirely, manufactured; but this kind is far from being fo hard, or of fo fine a polifh, as the right oriental.
None have a right to trade in that commodity at Paris but the wholefale mercers and the goldfrmiths. The fword-cutlers are, however, allowed to fell it; but only when made into handles to couteaux de chaffe, and ready fet in. The cuters have the fame privilege for their knives and forks.
The antient river Achates in Sicily, near which were found the firft quarries of thefe precious flones, which were called Achates, is not one of the leaff fources of the riches of that country. Thefe ftones are much harder than jafper, and polifh infinitely better: though they are not entirely tranfparent, they are, however, very luminous. Their colours are various; white, grey, brown, red, and violet. In fome are feen a furprifing mixture of colours, which naturally reprefent trees, animals, houfes, flowers, birds, and even buftoes well finithed. Thefe different ftains, well managed by fkilful and attentive workmen, have produced medals, which feem mafter-pieces of nature. For this flone bears the graver very well: and, as pieces of all magnitudes are found of it, they make all forts of work of it. The highaltar of the cathedral at Meffina is incrufted all over with it. The lapidaries pretend that the agates of the Indies are finer than thore of Sicily. - I own, fays F. Labat, that one may ' meet with fome that are finer than others, and alfo, that, ' to make them the dearer, the dealers never fail to pretend ' that they come from remote parts. It is their common ' rule; though one part of the fame piece may be much finer ' than another. Their prudent avidity does not permit them - to fay that they are of the fame country, the fame quarry, ' the fame block; but, in order to fell them the dearer, they ' make them come from the Eaft-Indies; and, if you are ' defired to obferve the difference between two parts, or - pieces, they are far from telling you that they are of the - fame block; they make them grow at a 1000 leagues from - each other, in order to enhance exceffively the price of thofe
' to which nature has given moff variety and beauty. In

- former times people fet more value upon them than they ; do at prefent. Whether the coft has deterred the curious - or thefe ftones are no longer in fafhion, as they once - were, it is certain that fo many of them are not ufed as - formerly. I have feen cafes of confiderable magnitude and - extraordinary workmanhip, in fome cabinets and repofito-- ries of churches, in which the flades and variety of co-- lours had been fo dexterounly managed, that the pencil could ' not have fucceeded better.' V oyage d'I Italie du P. Labat, tom. v. p. 156.

AGE, which is allo called urance of woods, in the Frencli commerce, fignifies, in the trade of that commodity, the time elapled fince the laft cutting of a wood or cop-. pice.
The ordinance of waters and forefts in France appoints; - That, in cutting of woods, 16 ftanders hall be left on every, acre of the age of the wood, to grow up into timbertrees.'
They file the age of the confiftence of a tree, that at which it ceafes to grow: the age of the confiftence of an oak is 100 years.
Age is allo faid, in the file of the manage, or riding-houre, and among the dealers in horfes, of the knowledge of the years thofe animals are old, by the infpection of their teeth, as long as the mark is in their mouths; or by their tufhes, and outward, or corner teeth, when out of it.
AGE (in law) fignifies 2 particular flate, or time of life, at which a perfon is qualifed for certain offices in civil fociety, and for lawfully tranfacting fome affairs, which before he was not capable of, for want of years and a fufficient difcretion.
By the common law here in England there are two principal ages in a man; at 14 he is at the age of difcretion, and at 2 I years at full age.
In a woman they diftinguifhed formerly fix ages. At feven years her father might diftrain the tenants of his manor for aid to marry her, for at thofe years the may confent to matrimony: at nine years old the is dowable: at 12 years the is able finally to ratify and confirm her former confent to matrimony: at 14 the may take her lands into her own hands, and thould be out of ward, if fhe were at this age at her anceftor's death: at 16 fhe fhould be out of ward, though at the death of her anceftor fhe was under 14: the reafon is, that the might take a hufband able to perform knight's fervice: at 2 I years the may alienate lands and tenements, and tranfact all kinds of bufinefs.
For a man, the age of 12 years binds to appearance before the fheriff and coroner, for enquiry after robberies, 52 Henry III. I4. At the age of ${ }^{3} 4$ he may chufe his own guardian, and claim his lands held in foccage, though Eracton limits this to 15 years, with whom Glanville agrees. At 14 a man

## A G E

may confent to milarriage, as a woman at 12 : at that fame age he may be bound apprentice. At 21 a man is at full age, and capable to make contracts, and manage his own eftate, which before that time he cannot do, with fecurity to thofe who have dealings with him.
In France they ftile majeur (major) a perfon who is of age to manage bis own eftate, to buy, truck, alienate; in a word, to difpofe of it after any manner allowed by the laws and cuftoms of the country.

Remarks,
With refpect to mercantile and other commercial Dealings.
The civil law and common law of Paris fix the age of majority at the age of 25 years; and the common law of Normandy at 20 years and a day. But there is no age fixed for the majority of thofe who apply themfelves to commerce, merchants and traders being reputed to be of age; the moment they enter upon bufinefs. This is according to the ordinance of March 1673; in the fixth article of the Girtt title of which it is declared, that "s all merchants and traders, either wholefale or retail, fhall be deemed of age in matters relating to their trade, nor thall be fuffered to recede from any bargain, tranfaction, $\sigma^{\circ} c$. under the pretence of their being minors." This mercantile regulation, concerning the majority of merchants and bankers, was eftablifhed in France long before the abovementioned ordinance; and there are feveral decrees of the parliament of Paris, and of fome other parliaments, by which it is decided that any minor, catrying on a trade, becomes of age with regard to his trade; and that children of good families, applying themfelves to commerce, have no occafion for the confent of their parents, in order to bind or oblige themfelves; which, however, muft be underftood only of what relates to commerce, for it is in that refpect only they enjoy fuch kind of emancipation; continuing ftill, as before, in their age of minority, under päternal power and authority, with regard to all fuch other engagements and obligations as do not relate to trade.
As it might be afked, in order to explain that article of the ordinance, At what age it is lawful for a man to enter upon trade, and, confequently, at what years he may be repưted to be of age? Monfieur Savary obferves (in his Negotiant Parfait) that this depends on their being, or not being, of free companies in the city, where a man would fet up and carry on his trade. At Paris, for inftance, where a man cannot take up his freedom before he is 20 , he is reputed to be of age, the moment he enters upon his 22d year.
In thofe cities where by the flatutes of the companies the time of taking up the freedom is fixed before or after the 2eth year, the age of majority mutt follow the time fixed by thore ftatates; and, in thore cities where there afe no free companies, a minor is reputed to be of age; the moment he begins to trade for his own account, bei-it at 19 , or even at 18, years of age.
AGENDA [things to be done] fo merchants call a pocket or memorandum-book, in which they fet down all the buffiriefs they are to tranfact during the day; either at home or abroad.
The agenda is very neceffary to merchants, and traders in general, particularly to thofe who have bad memories and much bufinefs; it being but too common, for want of fuch a temembrancer, to let flip good opportunities in trade, either of buying or felling, or of regotiating bills of exchange. It ought particularly to be a conftatit pocket memento to factors and agents for others, to avoid omifions prejudicial to the interefts of their principals.
Ageinda is alfo a name by which many merchants and traders call a little pocket-almanack, which they carry about them for afcertaining the dates of their difpatches, bills, meetings, and the like.
AGENOIS, a province of France. It is bounded by Condomois on the fouth, Quercy on the eaft, Perigord on the north, and Bazadois on the weft. It is the fnoft fruitful country of all Guienne, is watered by fome navigable rivers, and produces a great deal of corn, wine, oil, hemp, and tobacco, with which it furnifhes other provinces. Its chief places are
AGEN, its capital, where tanned leather and the manufacture of ftockings afford a pretty good trade. Its woollen trade likewife is very confiderable, efpecially in goods brought hither from other places. Thefe feveral forts of merchandizes are carried to the fairs of Bourdeaux. The other principal articles of its trade are the vines which grow on its neighbourhood, and the brandy made from them.
Clerac, or Clairac, in this province, is inhabited by rich merchants, who carry on a confiderable trade in corn, wine, and brandy.
AGEN T, in matters of bufinefs, is a perfon entrufted, or appointed, with the conduct, management, and negotiation of the affairs of other people, or of a corporation. There are alfo agents to the feveral regiments belonging to the army, and agent-victuallers for the navy.
Vol. 1 .

Agenct-Business comprehends any fort of bufinefs which is undertaken on the behalf, or on the account, of other perfons. To act in this capacity requires fuitable natural and acquired talents and abilities; and, in particular, a good knowledge of men and the world.

## Remarks.

To be well qualified for fuch kind of bufinefs requires a facuity and expertnefs. Such an one fhould not only have the expeditious, mechanical ufe of his pen, but thould be mafter of a plain, ftrong, and intelligible ftile, in order to communicate his intentions with perfipicuity. He fhould, in public bufinefs too, be as ready with his tongue as his pen.
In order to tranfact bufinefs to the beft advantage of his principal, he fhould be a man of method, and be capable of digelting and reprefenting the ftate of a cafe, in the cleareft and mon bemeficial light, the more effectually to obtain his point. And to be a man of figures and accounts is as effentially neceffary as any thing elfe; more efpecially if he is any way concerned in matters of trade and money affairs. In a word, a perfon who undertakes any branch of agency-bufinefs, ought to be one of a good general education, a genteel, affable, and communicative difpofition, and to Have nothing of the pedant about him.
Agent of the Bank afd Exchange in France, in England called a broker, is a public perfon, who, in cities and places of trade, acts between merchants, traders, bankers, and other perfons of bufinefs, to facilitate the traffic of money, and the negotiation of bills of exchange.
For the nature of this office in England, fee Brokers.
In France, before the reign of Charles IX, every one that pleafed made brokerage their bufinefs, either of money or merchandize, and there was no difference between brokers of goods and agents of exchange. Nothing more was neceffary for a perfon's taking on him this office, than an eftablifhed reputation, and à large acquaintance among merchants, bankers, and other ranks of men of bufnefs. The brokers uffualty (as is ftill the cuftom in fome places), were chofen by the provoft of the merchants, mayors, and Cheriffs, or judgescomful of cities, to whom they took an oath for the faithful difcharge of their employment.
Charles IX. by edict, in the year 1572, was the firf that inflituted a number of profeffed brokers, as well of exchange and money as of merchandize, who were to be admitted by the bailiffs, fenefchals, or other judges royal, of the places of their refldence.
The wars of the league prevented the execution of this edict. But Henry IV. refuming the defign of his predeceffor, by a decree of council in 1595, prohibited all perfons from exercifing the profeffion of a broker, without having firf obtained a commiffion from him, on pain of being fentenced as guilty of fraud, and paying a fine of 500 crowns; and, at the fame time, he fixed the number of brokers; eight for Paris, twelve for Lyons, four for Roan, and as many for Marfeilles; one for each of the cities of Amiens, Dieppe, and Caldis; three for Rochclle, three for Bourdeaux, and in all other cities as many as fhould be deemed neceffary; but with this intent, that none thould be obliged to employ them in the negotiations of the exchange and bank, or in the fale of merchandize, who did not think proper.
The inftitution of thefe bank and exchange-agents in France having undergone various changes and alterations, which afford little matter of ufe or curiofity to be acquainted with, we fhall not tire the reader with a tedious detail thereof, as is done in Savary, but give a fuccinct account of the fuppreffon of the bank-agents, and the new creation of ex-change-agents in 1723, wherein there is fomething deferving notice.

## Suppreffion of the bank-agents in France, and new creation of exchange-agents in 1723 .

The bank-agents by commiffion, created in 1720 for the city of Paris, were fuppreffed in their turn, and others effablfhed in their ftead, with the title of office, by an edict of the month of January 1723.
In this edict his majefty obferves firf, that, being informed that the feveral alterations made in thefe offices, by the fuppreffions and re-eftablifhments which had been ordered, had rendered their condition abfolutely uncertain, he took the refolution to remedy it, by a new creation of thefe officers. He declares afterwards, that he annuls and fuppreffes all the offices of bank, exchange, and trade-agents, eftablifhed till then in the city of Paris, in what number foever, with what title, and under what denomination, they may have been eftablifhed; and that he creates and eftablifhes, in their ftead, 60 new offices, or employments, of counfellors, agents of exchange, bank, and commerce, to perform the fame functions, and enjoy the fame prerogatives, and the fame perquifites, or brokerage, enjoyed formerly by the agents of exchange, bank, and commerce, created by the edicts of Auguft 1708, and November 1754 : but yet they fhall not have a sight to

## AGE

## A G E

claim an excmption from the poll-tax, lodging of foldiets, and other taxes, which was granted to the faid officers; nor have any fettled falary, nor enjoy the franc-falé, or exemption from the falt-duty.
And, in order to forward the redemption of the national debts, and alfo to the end that fuch perfons as would purchafe thefe offices might do it the more eaflly, his majefty permits, that the money to be paid for them, together with the two fols for every livre of it, be paid in rent, or annuity-contracts upon the city, in rents upon the provinces, or other governmentfecurities, well and duly liquidated. Ordering, likewife, that the annual taxation of thefe offices fhall be reduced to one half of what it was, to be paid by the officers, according to the fums which thefe employments colt them; and that the purchafers fhall be admitted, after the fame manner as the former proprietors were, by virtue of the grants which thall be fealed in the great chancery, they paying only one half of the ufual perquifites of a gold mark, for the regiftering and the feal. His majefty further orders, that, whatever is regulated by the edicts of Auguft 1708, and November 1714, and by the proclamations iffued out in confequence of them, concerning the functions and brokerage of exchangeagents, be executed according to the form and tenor of them, in every thing that is not abrogated by this prefent edict. It was regiftered in the parliament the 12th of February 1723. For the execution of this ediet, and the liquidation or clearing of the new offices of exchange-agents, commiffioners were afterwards appointed by a decree of council, dated April the 5 th; and another was alfo publifhed the 4 th of Auguft following, for the reimburfement of the fupprefled offices, the poffeffors of which were prohibited by the faid decree to intermeddle with the functions of exchange agents, or to take or receive any brokerage annexed thereto, upon pain of a fine of 3000 livres.
His majefty having thought it proper to eftablifh in 1724 a public exchange in the city of Paris, where all bills of exchange, and all other commercial affairs, relating both to inland and foreign trade, Chould be negotiated, and the offices of exchange-agents, created the foregoing year, not being taken up, his majefty judged it more agreeable to the new eftablifhment of this exchange to put the exercife of thofe offices into commiffion, and to appoint fixty perfons of capacity and honelty to perform the functions of them, in the form and under the conditions in the regulations which fhould be drawn up in council.
There regulations contain 25 articles, which are part of the 41 , that compofe the decree of council iffued the 24th of September 1724, which orders the fetting up of an exchange in the city of Paris. We thall mention here fuch of them only as relate to the exchange-agents, by commiffion.
The articles of the decree, which contain the regulation of the functions of the exchange-agents, begin with the 17 th, and continue to the 4 rft and laft of them, both inelufive; they are as follows, viz.
XVII. His majefty gives leave to all merchants, traders, bankers, and others, who thall be admitted upon change, to negotiate among themfelves bills of exchange, notes payable to the bearer, or to order, as well as merchandizes, without the mediation of exchange-agents : and with regard to all other commercial effects and papers, in order to abolifh thofe fictitious fales, which have hitherto brought them into difcredit, they thall not be negotiated but by the mediation of the exchange-agents, after the manner as thall be hereafter explained, upon pain of imprifonment of thofe who thall trade in them, and a fine of a thouland livres to be levied by diftrefs; half of which fhall belong to the informer, and the other half to the general hofpital; nor fhall it be lawful either to remit or mitigate that fine.
XVIII. All negotiations of commercial papers and effects, tranfacted without the mediation of an exchange-agent, fhall be declared null and void, in cafe of a difpute; his majefty forbidding all tiptaffs and bailiffs to bring any fummons, on account of fuch negotiations, upon pain of deprivation, and a fine of 300 livres; and forbidding likewife all judges to give any fentence in fuch cafes, upon pain of nullity of thofe fentences. XIX. The 60 offices of agents of exchange, bank and commerce, created by the edict of January 1723, not being taken up, his majefty orders that the faid offices hall be'put into commiffion, to be executed in the form prefribed by thefe prefent regulations.
XX. Ten confiderable citizens and merchants of the city of Paris thall be chofen, to examine the capacity of thofe who fhall prefent themfelves, in order to be provided with the 60 commiffions of agents of exchange, bank, and trade; and, upon the report of thefe ten confiderable citizens and merchants, his majefty will caufe letters in the great chancery to be delivered to them, for the executing of the faid commiffions. XXI. The exchange-agents fhall all be of the catholic, apoftolic, and Roman religion, Frenchmen, or inhabitants of the kingdom, naturalized at leaft, of twenty-five years of age complete, and of an unblemifhed reputation. They who Thall have obtained letters of refpite, or made contracts for delay of payment, or been bankrupts, thall not be admitted exchange-agents.
XXII. The exchange-agents thall be fworn, that they will fulfil their commiffions faithfully, before the lieutenant-general for civil matters at Paris, after inquiry made by him of their lives and morals, and they fhall pay no perquifites for the oaths taken, nor for their admiffion.
XXIII. The commiffions of exchange-agents may be performed, without derogating from the quality of noblemen, his majefty giving leave to thofe who thall be provided with them, to exercife them together, with the offices of counfel-lors-fecretary to the king, both in the great court of Chancery, and in all the other courts of Chancery in the kingdom, without their having occafion for any other decree, nor for letters of compatibility, his majelly difpenfing and difcharging them from fuch letters and decree.
XXIV. Upon any alteration happening, either by death; or otherwife, in the number of the fixty exchange-agents, which fhall bave been appointed to exercife the faid commiffions; the examination of thofe who are to fucceed, fhall be referred to the fyndic of the exchange-agents for the time being, upon whofe advice new commiffions fhall be iffued out.
XXV. The exchange-agents fhall be obliged to appear upon change every day, from ten o'clock in the morning, till one in the afternoon, except on Sundays and hollidays; nor hhall they be allowed to be abfent from it for any reafon whatfoever, except in cafe of ficknefs.
XXVI. They fhall every one of them keep a day-book: or regifter, which thall be numbered and marked with a fourifh, by the judges and confuls of the city of Paris; and his majefty commands them to regifter exactly in that book, all the bills of exchange, notes, and other commercial papers, and all merchandizes and effects-by them negotiated, without regitering any name, but diftinguifhing each particular article by a feries of numbers; and they mult deliver, to thofe who Thall employ them, a certificate figned by them of every negotiation they fhall bave tranfacted, which certificate muft be marked with the fame number, and the fame flamp with the folio of the regifter, on which it is entered.
XXVII. The exchange-agents Chall be admitted to give evidence and make oath before all judges, about the bufinefs they fhall have tranfacted, before which judges, as alfo before the arbitrators who may be appointed, they thall be obliged, when required fo to do, to exhibit and produce fuch article of their regitter, as may be difputed.
XXVIII. When negotiations of bills of exchange, notes to the bearer, or order, and merchandizes, thall be tranfacted upon change by the mediation of an exchange-agent, the fame agent may be employed by the drawer, the feller, and the buyer of merchandizes.
XXIX. As for the negotiations of commercial papers and other effects, they fhall always be tranfacted by the mediation of two exchange-agents; for which purpofe, fuch perfons as may be defirous to buy or fell commercial papers and other effects, Thall deliver the money or effects into the hands of the exchange-agents, before change time, upon their receipts, containing a promife to account for them within that day. However, it fhall not be lawful to the faid exchange-brokers to carry or receive any effects or money upon change, nor to tranfact their negotiations, otherwife than in the form hereafter exhibited, on pain of fuch, who fhall tranfgrefs againft the contents of this article, being removed from their employment, and paying a fine of 3000 livres, to be levied by diftrefs; half of which Shall belong to the informer, and the other half to the hofpital general.
XXX. When two agents fhall be agreed upon change, about any negotiation, they thall give each other their note, promifing to furnifh one another within the day, that is to Cay, one the effects negotiated, and the other the fum agreed upon for the faid effects: and each of thefe notes thall not only bee marked with the fame number under which the negotiation thall be regiftered in the book of the exchange-agent, who delivers the note, but alfo counter-marked with the number of the note, delivered by the other exchange-agent, that they may ferve as references and proofs to each other. Thefe notes mut be regularly difcharged on both fides within the day, upon pain of being conftrained to it by diftrefs, and even profecuted extraordinarily, in cafe of embezzlement of the money or effects.
XXXI. The exchange-agents fhall alfo be obliged, in clofing their negotiations with thofe who thall have employed them, to deliver to them the note, on the back of which fhall be the name of the exchange-agent, with whom the negotiation was tranfacted; and to fet down in the certificate they thall deliver of it, according to the 26 th article, the name of the exchange-agent, and the two numbers of the note, as alfo the nature and quantity of the effects bought or fold, and the price of the fame.
XXXII. His majefty does moft exprefsly forbid the exchangeagents to enter into any fociety or partnerfhip among themfelves, under wharfoever pretence it might be, or with any merchant, or trader; or even to execute any commiffion for foreigners or ftrangers, unlefs they be actually at Paris at the time of the negotiation, upon the fame penalty as mentioned in the 2gth article.
XXXIII.

## A GE

## A G E

XXXIII. His majefly further forbids them to make ufe, under any pretence whatfoever, of any clerk, factor, or manager, even of their own children, for the tranfaction of any bufinefs, of what nature foever, unlefs in cafe of ficknefs; and, even then, only to finith the negotiations already begun, but not to enter upon any new one, under the fame penalties as mentioned in article 29.
XXXIV. Nor fhall the exchange-agents, under the fame penalty, carry on any trade in bills of exchange, notes, merchandizes, commercial papers, or other effects, directly or idirectly, for their own proper account.
XXXV. No perfon fhall be admitted an exchange-agent, if he be book or cafh-keeper to any merchant, or other.
XXXVI. The exchange-agents fhall, in no cafe whatfoever, name the perfons for whom they are to tranfad bufinefs, but hall be obliged to keep an inviolable fecrecy, and ferve them aithfully in every circumftance of their negotiations; either with regard to the nature and quality of the effects, or their price: and thofe that fhall be convisted of prevarication, frall be condemned to make amends for the damage done by them, and fuffer the penalties mentioned in the 2gth article.
XXXVII. His majefty forbids all exchange-agents to negotiate any bills of exchange, notes, merchandizes, papers, and other effects, belonging to perfons, whofe failure fhall be known, under the fame penalties as above
XXXVIII. They are allo forbidden, under the fame penalties, to endorfe any bills of exchange, notes to the bearer, or order, or to promife to pay them, in cafe they be not paid, when due. It fhall only be lawful for them, when required, to certify the truth of the fignature, or fign of the drawers, accepters or endorfers, and of thofe who hall have made the bills.
XXXIX. The king forbids them alfo, under the fame penalties, to negotiate any where, but upon change, bills of exchange, notes, mercbandizes, commercial papers, and other effects.
XL. The brokerage to be paid to the exchange-agents for their negotiations of ready money, bills of exchange, notes to the bearer, or order, and other commercial papers, thall be 50 fols per 1000 livres, to be paid 25 fols by the buyer, and 25 by the feller, as is cuftomary; and, with regard to the negotiations for merchandizes, they fhall be paid upon the foot of one half per cent. of the value of thofe merchandizes, viz. one fourth per cent. by the buyer, and one fourth per cent. by the feller; nor fhall they, under any pretence whatfoever, demand any other or greater brokerage; upon pain of punifhment for extortion.
XLI. The names of the exchange-agents, who fhall have tranfgreffed againft thefe rules and ordinances, or who fhall have been deprived, thall be wrote upon a board, and pofted up upon change, that the public may be warned not to employ them any more.
The decree of the 24th of September 1724, concerning the eftablifhing an exchange in the city of Paris, and the creation of 60 exchange-agents by commifion, was very foon put into execution, with regard to the appointing of thefe new officers; and, on the 14th of October following, a fecond decree of council was publifhed, by which his majefty declared, that, having feen the certificates of the ten confiderable citizens and merchants, appointed to examine thofe who thould prefent themfelves as candidates to fill up the faid offices of exchange-agents by commiffion, the fixty perfons named in his decree fhould be admitted accordingly; and as fuch tranfact the negotiations of all bills of exchange, drawn from one place upon another, and upon places in foreign countries, notes to the bearer, or order, commercial papers, and other merchandizes and effects, on condition that the faid fixty exchange-agents be fworn before the lieu-tenant-general for civil matters in the city of Paris, whom his majefty appointed for that purpofe.

## Exchange-agents of Lyons, Marfeilles, and Bourdeaux.

Thefe three cities of France being, next to Paris, the places of the greateft trade in bank and exchange, Henry 1V, as has been obferved above, did not forget them in the creation of exchange-brokers, in the year 1595: twelve of them were defigned for Lyons, four for Marfeilles, and three for Bourdeaux. It does not appear, however, that thefe creations took place, or at leaft it is very likely that this eftablifhment did not continue long: for in 1692 thefe three cities had ex-change-agents erected, as it were, into municipal offices, and in fome cities they were, in a manner, hereditary. Lyons had forty brokers for bills of exchange, calh, remittances of money, buying of merchandizes and eftates. The perfons, who acted as brokers, took no patents from the king, but acted only under the commiffion of the provoft of the merchants and echevins, or aldermen, and had their brokerage and perquifites paid them, according to the tariffs drawn up by thofe officers of the city, and particularly by that of the 31 ft of December 1668.
The number of brokers for bills of exchange, merchandize, E'r, was greater at Marfeilles, and their functions were, in a
manner, more authorized. There were forty-fix of them, who, by reafon of a long poffeffion, looked upon their commiffions as real offices, and difpofed of them as of hereditary employments, made them part of their children's fortune, and alfo mortgaged them like real eftates.
Things wère very near upon the fame footing at Bourdeaux, and thefe commiffions were looked upon there as city employments.
All thefe commiffions were created and erected into fettled and hereditary offices, by three edicts of the year 1692, but iffued out in different months. They were not, however, fully executed, but with regard to Marfeilles and Bourdeaux, the exchange-agents and brokers of thefe two cities being exempted from the general fuppreffion made in 1705 , within which thofe of Lyons were comprized, like all the others in the kingdom.
The edict, by which that fuppreflion was ordered, having at the fame time created in6 new offices of king's counfeliors, exchange-agents, as has been obferved above, there were 25 of them appointed for Paris, and 20 for Lyons. But, the edict of May 1707 having again fuppreffed them all, except thofe of Paris, that of 1692 continued in force for the city of Lyons, and was reftored to its former authority; to which, however, an exception was made, with regard to the number of agents and brokers.
The brokerage fee of the exchange-agents in thefe three cities was continued upon the ancient footing, as it was paid to the commiffion-agents, except with regard to thofe of Lyons; whofe brokerage fee was increafed, and fettled at one half per thoufand, in the room of one third allowed by the tariff of that city, for money depofited, changing of the fpecies, drafts and remittances for foreign places, which is practifed at prefent.

## Exchange-agents of the city of Amfterdam.

The city of Amfterdam is one of thofe, which carries on the greateft trade in the world, either with regard to the large fums of money which its merchants and bankers remit to all foreign countries, either for their own account or by commiffion, or with regard to the almoft infinite quantity of merchandizes, with which its warehoufes are ftocked, and which are continually imported or exported, by the trade they carry on to the very extremities of the earth.
To render that immenfe circulation of commerce the eafier, there are in that famous city two forts of brokers, or agents for exchange and merchandize. They are called makelaers in Dutch. Some of them are fworn brokers, and others itinerant, or ambulatory brokers.
The fworn brokers are fuch by way of office, as it were, and, being chofen by the magiftrates, are fworn before them. Of thefe there are reckoned to be 375 Chriftians, and 20 Jews: and, when there happens a vacancy among them, it is fupplied by the burgomafter, whofe turn it is to take care of the trade of the city for fix months.
The itinerant brokers are thofe, who without having any patent or commiffion from the magiftrates, and without being fworn before them, perform the functions of agents and brokers, and act in negotiations, either for drafts and remittances of money, or for buying or felling merchandizes. Their number is greater than that of the fworn makelaers, or brokers; fo that, taking them both together, there are above a thouland perfons employed in brokerage, moft of whom are overloaded with bufinefs and negotiations. The only difference there is between thefe two forts of agents and brokers of exchange and merchandize is, that the fworn brokers are admitted to give evidence before courts of juftice in cafe any difputes happen with regard to their negotiations; whereas the itinerant brokers are not admitted to give evidence, and, in cafe of objection by one of the parties, bargains are rendered null and void.
The brokerage fees of agents and brokers of the bank and exchange are paid equally by thofe who give their money, and by thofe who receive it, or who furnifh bills of exchange, unlefs they agree to the contrary.
Thofe brokerage-fees have been regulated for Amfterdam, by the ordinances of January 1613 , and of the 22d of November 1624 , at the rate of 18 ftivers for 100 livres de gros, which amount to 600 guilders, or florins; that is to fay, three ftivers for every 100 guilders, to be paid, one half by the drawer, and the other half by him who gives his money. That the reader may eafier underftand this fubject of the brokerage of Amfterdam, and of the fees paid to agents and brokers, we fhall add here the following table.

For 1000 crufadoes
For 1000 florins bank money, againft current money
For an action of 1000 livres de gros of the Eaft-India company

Brokerage Fees paid to Exchange-Brokers in feveral cities of Europe.

At London $\frac{x}{4}$ for every 1001 . fterling, which makes $\frac{x}{8}$ for each of the parties.
At Venice ${ }_{3}^{\frac{2}{3}}$ per 1000.
At Genoa $\frac{1}{3}$ of a crown for 1000 crowns.
At Bologna one fol for 100 crowns.
At Geneva $\frac{2}{3}$ for 1000 .
AGIO, a bank term. (It is a Venetian word, which fignifies aid or affiftance.) In moft of the trading cities, where there are public banks eftablifhed, the word agio expreffes the exchange, or difference there is between bank money, and current money, or cafh. So that if a merchant, who fells his merchandize ftipulated to be paid, either 100 livres bank monè, or ios cafh, or current money, in fuch a cafe the agio is faid to be 5 per cent.
The bank agio varies in almoft every place: at Amfterdam it is ufually from 3 to 5 per cent. ; at Rome near 25 per 1500 ; at Venice 20 per cent. fixed; at Genoa from 15 to 16 per cent.
Agio is alfo ufed to exprefs the profit, which arifes from money advanced for a perfon; fo that, in this fenfe, the words agio and advance are fynonimous; they are ufed among merchants and traders; to fignify that it is not an intereft; but a profit for money advanced in trade. That profit is ufually reckoned at one half per cent. for a month, that is to fay, the rate of fix per cent. per annum.
It is alfo fometimes called exchange, though that word has no great affinity with it.
AgIo is alfo ufed; but improperly, to fignify the exchange of a furn negotiated, whethicr with lofs or with profit.
Some allo give the name of agio of infurance, in France, to what others call premium in England.
AGIOTAGE, a French word, hardly ever ufed but in a bad fenfe: it fignifies commonly an unlawful and Lufurious trade. AGIOTER is ufed, by the French, to fignify the lending money at high intereft, and carrying on an ufurious traffic in notes, bonds, government fecurities, and other luch like papers; of which the debts and incumbrances of the flate confift. See the next articte.
AGIOTEUR, a term eftablifhed among the French merchants, traders, bankers, and other people in bufinefs: it fignifies a perfon who puts out his money to high interefts by taking from the public, bills, promiflory notes, affignations, or bonds, and other fuch papers, at a very low price; to fell them out again at a very high one. Agioteurs are looked upon, in France, as public nufances, and profeffed ufurers, who under a good government fhould be exemplarily punifhed.
AGITO, which is alfo called GIRO, a fmall weight ufed in the kingdom of Pegu: two agitos make a half biza, and the biza weighs a hundred teccalis, that is to fay, 2 pounds 5 ounces heavy weight, or 3 pounds 9 ounces light weight, of Venice.
AGNUS-CASTUS, called alfo VITEX by fome, a plant or fhrub which tometimes grows to the height of a middle-fized tree. The agnus- caltus thrives beft on the banks of rivers and brooks, and in rugged and flony places, though it may alfo be cultivated in gardens. Its leaves refemble thofe of the olive tree; but they are longer and noore limber. Its trunk and branches are woody: the latter end in many boughs, which are long, flim, pliable, and intermixed with leaves, bloffoms, or feeds, according to the feafon. The bloffoms are of a purple colour, and fometimes white. The feeds, which are properly the fruit of the plants, are white at firft, and grow red by degrees. Many people call thofe feeds fmall or wild pepper; either on account of their figure, which is not unike that of the true pepper, or becaufe of their tafte, which is fomething fharp and aromatic. The beft feed of the ag-nus-caftus is that which is new, large, plump, and comes from hot countries; thofe of cold climates having much lefs virtue. It is ufed in phyfic for the cure of venereal maladies.
AGRA, the principal kingdom of the Mogul empire. It has Bando on the weft, Dely on the north, Sambal on the eaft, Gualear and part of Narvar on the fouth.
Agra, its capital, is a place of great traffic, being reforted to by merchants from China, Perfia, all parts of India, and by the Englin and Dutch.

## Remarks.

Great-Britain once had a factory here, but the long diflance to Surat, and the hazards and difficulties thry underweat in paffing thither, made them withdraw it, though they continue to trade here.
The Dutch, who have fill a factory in this city, trade chiefly in fcarlet, looking-glafles, filver, gold, and white lace, hardware, indigo, cloth of Jelapour, and fpices. They have
A. 10 f .

If. $\quad \infty$ f.
6 f. 00 f.
houles af feveral other towns, to which they fend factors once a year ; and have always fome perfons near the court, to pre-vent-being impofed on by the covetous tyrannical vice-roys and governors near their other fettiements.
The number of midians, where the public markets are bere kept for all forts of provifions; of covered bazars, where every merchant and artificer have theirquarters and their fhops, fome of which bazars ase near half a quarter of a league long; and of caravanferas, which they fay amount to above 80 : all of thefe are fufficient to convince us, both of the prodigious extent, and of the immenfe trade that is carried on in this city.
This trade is kept up by feveral caravans, which fet out from Amadabath, Surat, and other places, compofed commonly of 400 or 500 camels, which the Englifh, Dutch, Moors, Turks, Arabs, Perfians, and other nations, ufed to carry their merchandize to that capital, and to bring back from thence feveral others in return.
Befides the indigo of Agra, which is the beft in the world, they get from thence a great many ftuffs and linens; the latter of which are a fit commodity for the weft and the north.
Thither likewife are carried the merchandize from Bantam and Tartary; and here alfo arrive, in other caravans, the merchants from the inland parts of Indoftan, or the Mogul's dominions.
The charges on merchandize bought at Agra, for Surat, amount from 15 to 20 per cent. including the remitting of bills of exchange at 5 per cent. packing up, carriage, and the duties or toll for the roads, according to their feveral qualities.
It muft alfo be obferved, that, in all the dominions of the Grand Mogul, the penalty for defravding the cultom-houfe of the duties of importation, or exportation, is not the forfeiting of the merchandize, but only paying double the duty, when the fraud is difcovered.
The indigo thet is cultivated and prepared in the dominions of the Grand Mogul, particularly that of Agra, is always 20 per cent dearer than that of the other parts of the EallIndies : it is in round cakes or balls.

## Frauds in the Indigo of Agra.

As there are three forts of indigo; namely, that of the firft leaves, that of the fecond, and that of she third : the Indians endeavour to fell the one for the other, though that of the fecond leaves be worth 12 per cent. lefs than that of the firtt, and the laft 20 per cent. lefs than the fecond.
The impofition may be difcovered by the colour, and by breaking fome bits of the pafte ; that of the firf leaves being of a bluifh purple, more fhining and bright than the two others, and the fecond fort of a deeper colour than the laft. Another method they have of deceiving in the fale of indigo is this: when it is reduced into a palte, they dry it upon fand, fome of which always fticks to it, and encreafes its weight; or, when it is dry, they keep the pafte in a damp place. The adulteration, made by fand mixed with it, may be known by putting the indigo into the fire; the indigo will be confumed, and there will remain nothing but the fand.
Agra, a drug, a kind of fweet-fcented wood, found in the ifland of Hainan, on the coaft of China. The fineft is bought generally in Hainan, at the rate of 80 taels per foot, and fells at Canton for 90 . The fecond fort is commonly bought for 70 taels, and fells for 80 ; and the laft is bought for 45 taels, and fold for 60.
Agra-Caramba, a drug, is another fweet-feented wood, which alfo comes from the inland of Hainan, where it cofts about to taels per cati, and fells at Canton for 80 to 85 . This wood is proper to purge women: the Japanefe fet a great value upon it, and the Chinefe carry them a valt quantity of it,
AGREAGE, thus they call, at Bourdeaux, what is called courtage (brokerage) in other places.
To AGREE, in French commerce, is to approve, ratify, or confirm, a contract for delay of payment. They fay, by way of proverb, that the debtor muft either pay or ratify; that is, a debtor ought to fatisfy his creditor, either with money, or with good words.
AGRICULTURE, the art of tilling and cultivating the earth, in order to render it fertile, and make it bear piants, trees, fruits, \&c.
The principal operations in agriculture are manuring, plowing, fallowing, fowing, harrowing, reaping, mowing, \&c. And to thefe belong the management of the productions of particular places and countries; as hops, hemp, vines, tobacco, faffron, liquorice, woad, \&c. To the fame art belong alfo planting, traniplanting, pruning, engrafting; the culture of forefts, timber, coppices, \&x.

Remarks.
Agriculture confifts either in feeding or tillage, whereby are raifed ftore of catile, corn, and fruits, proper for food and traffic.
To begin with feedlog: and here I might enumerate the various forts of cattle raifed and bred by the care of the huf-
bandman;

## A G R

bandman; but the moft effential with refpect to our trade are, 1. The cattle for beef: Which, befides the excellency of it's flefh for nouifhment, affords many neceflaries for our trade, and is extremely ferviceable in tillare: with this we both nourih our inhabitants at home, victual our fhips for foreign voyages, and load them with the feveral manufaktures wherewith it doth fupply us: from the milk we make butter and cheefe; from the telh, beef; from the ikin, leather; from the fat, tullow; and of the horns feveral ufeful neceffaries : the overplus whereof, above our own confumption, we export, and fell in foreign markets.
2. The fheep; whofe golden flece being the bafis of our woollen manufactures, employ multitudes of our people; and the wool being of different lengths and finenefs, makes them of various forts; whereby thofe animals afford us a yearly crop, whilft living; and, at their deaths, we bave their flefh and their fkins for variety of ufes.
3. Horfes; whofe labour is fo neceflary, that we can neither carry on our husbandry or trade without them : befides their fitnefs for war, being efteemed the moft courageous in the whole world, and for thefe ules are alfo tranfported abroad, as a trafficable commodity. They are fent to our plantations in America; for, the laft to fome of our neighbouring nations: but their fefh is of no ufe, their fkins of little; the leather made of them being very ordinary, onif the longett of their hair is ufed in weaving hats for the ladies, and fome forts are ufed in perriwigs for the men.
There are fundry other forts of beaits, fome whereof require no care in raifing, others little; fuch as the ftag, the deer, the rabbit, the hare, the badger, the goat, and divers others, whofe flkins are neceffary for our trade, and ufeful in our manufactures.
Tillage is that whereby we raife our corn, by turning up and manuring the land; the feveral forts whereof are whear, rye, barley, peafe, beans, vetches, oats, Eic. all which not only afford nouriliment to ourfelves, and the beafts we ufe in labour, but ferve for confiderable articles in our commerce; 'as they give emplayment to our people at home, and are tranfported abroad according to the furplus of our domeffic confumption, and the want of our neighbours, beffes the large quantities ufed in our navigation
Thefe products are-all clear profit to the nation, being raifed from earth and labour: but their principal "benefit to the community arifes from their exportation by our merchants, either in their own kinds, or when wrougtit up, the remainder, which is fpent at bome, tending rather to fupply our wants thãn to advance our wealth; which exports being, more or leff, according to the price they bear in other countries, and thefe arifing from the proportion their lands hold with ours in their pearly rents, are not fo great in feecie as when wrought up. Butter fimply is the chief wherewith we fupply feveral foreign markets; and did formerly more, till by making it bad, and ufing fcandalous arts to increafe it's weight, England loft moft of that trade, and is now beaten out of it by Ireland, which,every year makes theirs better : befides, they underfell England in the price, as they do allo in beef, occafioned by the low rents of their lands.
It was the act of prohibition made formerly in England that firf introduced them into a foreign traffic, their fole dependence before that time being on the Englifi markets, and from hence they were fupplied with what 'they flood in need of; but, being thereby proltibited from bringing their cattle, and other provifions to England, they endeavoured to find a vent for them in other markets, which they did with good fuccefs, and to more advantage: the fweetnefs whereof gave a fpring to their induftry, and put them on the woollen manufactures, which they vended alfo where they exported their provifions; till, in time, it became fo great and foourifhing as to give us apprehenfion it would endanger ours.
As for corn, foreign markets are frequently fupplied therewith, both from thence, and from the iflands of the Azotes, cheaper than the rents of our lands willadmit; but the. Britinh plantations have fome dependance on England for our product; and, as the lands of Ireland rife in their yearly value, they will have more. We alfo raife, by agriculture, confiderable quantities of hemp and flax, both which are ufeful in our trade.
Among the feveral trees that adorn our fields, the oak, the elm, and the afh are the chief; thefe not only ferve for the buildings of our Chips and houfes, but allo furnifh us with materials, wherewith our artificers make great variety of things fit for our commerce: and it were to be wifhed, that better care was taken to preferve our timber, for the benefit of pofterity.
This gives us a fhort idea of the effects of hufbandry, which is apparently the original fource of moft of our treafures; the due cultivation of the earth being the great fountain of all materials for trade, and the arts of commerce render them the more valuable to their proprietors.
It is certain, therefore, that it will ever be gaod policy to eale the land, in order to promote trade; and to encourage the trading intereft, in order to promote the landed.
Every object of traffic requilite to the fuftenance of life being produced by the earth, the more our lands in general thall
Vol, 1 .

## A G R

be improved and cultivated, the greater plenty we thall have of vegetables and cattle of every kind, the more populous the nation in ufeful hands, and the more comfortably and happily will the people fubfint. As thofe productions augment, fo will the general confumption; the greater plenty, the cheaper will every thing be, whereby trade will flourilh, and money alfo grow proportionably plentiful in general circulation: and in luch cafe, lefs money will purchafe every thing in proportion as the plenty of land produttions Chall reduce the price, with refpect to the demand.
By the general improvement of the old, and cultivation of frefh lands to a degree requifite to render things in general cheap and plentiful, fuch plenty will foon be to mapnified, as to reduce the price of the neceflaries of life to dne half, if not one third what it is at prefent. This will reduce the general price of labour, that being regulated by the price of neceffaries of life. Will not this make all our fabrics and manufacture cheaper as well among ourfelves as foreigners, fince their value is conftituted according to the rate, at which artificers and manufacturers can fubfift? Will not this naturally extend our exportations, not only amongt our prefent foreign cuftomers, but attract new ones? Such new cuftomers who at prefent are incapable of purchafing our commodities, by reafon of their excefive dearnefs? Will not this prevent our competitors in foreign commerce, who are now ftudioully promoting every art of agriculture, from rivalling and fupplanting us in that which is the great fupport of the whole Britith empire?
In countries where the land cultivated does nor afford an ample competency of it's productions to make the whole plentiful, and therefore cheap, will not the people in general be inevitably diftreffed and miferable? Can any chains reftrain their tranfmigration, from country to country, till, with fome degree of confolation, they fhall be able to futtain the perpetual flate of labour? Where tris policy is difregarded, will it not tend to depopulation; where regarded, have the contrary effect?
If the rents of lands fhall be raifed above what the quantity of circulating money will enable tenants to pay, will not the money of a nation grow fcarcer and fcarcer? Where there is not a quantity of land effectually cultivated to reduce the rents, in proportion to the money, will not the fcarcity of money.at length grow fo great, as to leave little in the kingdom? For, where the rents are kept up beyond the proportion of money to pay them, will not every thing rife in it's price and value, commerce grow worfe and worfe, it's general ballance turn more to the difadvantage of the dearer nation, and at length the nation become ftri'pt of it's money as well as it's people?
Did not the demand for farms in greater proportion than they were to be had, firft raife their rents? Did not this deter people from encreafing the cultivation of frefh land, as the demand thows they would, as they encreafed in number? What could the furplus people do, but ftrike into trades-and proferfions? Whilft the neceflaries, the price of labour, rents of lands and manufactures have advanced amongt us, have not thole engaged in trade and profeffions alfofound it difficult to live? Will not more and more be daily undone, if the monftrous dearnefs of things continues as it does?, Can the gentleman flater himfelf with efeaping a proportionate injury with the reft of the people? lf, money becomes fearcer and fearcer, will not monopolizers, foreftallers, and regraters, multiply, to enhance fill more and more the prices of provifions, fince the produce of the earth at a cheap rate will not bring fufficient fupport to the farmer, and pay all charges to which he is liable ? Does not this increafe, inftead of leffen the evil?
To increafe the money, to keep up the payment of rents, can this be otherwife effected than by the increafe of fuch foreign commerce as will bring us in an increafed ballance? But how can this be expected, except by the decreafe in the price of our commodities, which only will or can encourage and enable foreign ftates and empires to buy them ?. Can this be effectually done, till the price of rents is reduced in proportion to the quantity of money?' This cannot be accomplighed, till a due quaptity of wafte land' is taken into cultivation. This meafure will make farms abound, the only natural way to lower rents in general.
Nor does it appear that gentlemen would be fufferers by lowering of rents, by fuch means. Let it be fuppofed, that all our lands chould be raifed 20 per cent. per annum ; fince that land cultivated would bear no more corn, grafs, nor cattle, \&oc. than it does at prefent, muft not the corn and cattle be advanced in proportion? Will not the neceffaries of life coft-the labourer more, and his wages be raifed accordingly? All things would certainly be raifed, if money could be found to circulate tr de at fuch an advance; and fince gentlemen as well as the labourer would buy every thing at fuch an advanced price how could they be advantaged by receiving 20 per cent. per anrum more, and paying the fame, or more, for what they ftood in need of?
If it thould be faid, that although this might be the cafe with regard to their expence, yet it would not be fo to their favings, they will be deceived. Suppofe a gentleman of ioool: pe annum, now fpends 500 l . and lays by 500 l . per annum : if effates were raifed 20 per cent. as fuppofed, he would then

## A J A

Spend 6001 . and lay by 6 ool. per annum. But how would he be the richer, fince the price of every thing is raifed at leaft in the like proportion? The neceffaries of life will coft the labourer more, and his wages mult be raifed accordingly. Timber for carriages, and other ufes, will coft more to fell and bew ; horfes to draw the produce of the earth will be more expenfive, and conlequently carriage, and every manufacture will coft more. All things in general will certainly be raifed, while money can be found to circulate trade at fuch an advance. Since then gentlemen themfelves, as well as others, would buy every thing at fuch a raifed price, how would they be benefited by receiving 20 per cent. per annum more, and paying that at leaft for all they wanted?
The purchafe of eftates being governed by tbe intereft of money, will be valued at as many years as if rents had not fallen; and though the fum for which they fell will be annually lefs as the rent thall be lowered ; yet the money will have, at leaft, all the fame effect, apply the fame as you pleafe. If the lands were raifed 20 per cent. per annum, this would not make them produce more, but perhaps lefs, than they now do, by putting it out of the farmer's power, in fome degree, to ufe fo much ikill and expence in cultivation as before rents were fo raifed : as this advance of rent would not tend to increafe the produce, all the produce muft be fold, not only for all the 20 pounds more, but there muft be profits likewife on all thole 20 pounds to enable the farmers to purchafe whatever they wanted at the higher prices, to which every thing will be enhanced from the general rife of things, as it paffed through every hand, comprehending the manufacturing part alfo; this would fill proportionably encreafe the profits on the firf raifed prime cofts, before they reached the confumer; and muft not he in the end, not only pay the advanced 20 pounds rent, but the enhanced profits arifing thereon, through all the feveral hands it paffed? And fince labour, which adds the greateft value to every thing, will in this cafe be enhanced too, it is apparent, that the fame quantity of produce muft be dearer by all the firft advanced 20 pounds rent, and by fuitable profits to all the feveral hands through which things pals, together with a greater charge of labour thereon. Whence it is evident that if the fame quantity of produce muft thus coft a great deal more than all the 20 pounds rent, by which it was enhanced, the feveral parts thereof muft coft more likewife in fuch proportion; fo that we may not fcruple to affert, that 140 l. could not in this cafe purchafe more then 100 l . did before the rife; whereby gentlemen, who are confumers in common with others, would become poorer for raifing their eftates : and therefore it fhould confequently feem manifeft that they would be the richer for lowering their eftates 20 or 30 per cent. per annum, byta due increafe in the cultivation of more land, fince it muft be no lefs certain that 701 . or 801 . would purchafe more in this cafe than 100 l . does at prefent, becaufe it is evident that 120 l . in the other cafe, would not purchafe fo much as 1001 . doth now. So that if rents fhould fall 30 per cent. by a larger land cultivation, every thing would certainly fall in the fame proportion, whereby gentlemen would lofe nothing but the nominal found of fo much per annum.
This obvious reafoning evinces why gentlemen cannot live fo well and hofpitably on the fame eftates, as their anceftors did, who had confiderably lefs nominal income than their fucceffors. If, therefore, gentlemen find themfelves ftreightened by raifing rents, above what the circulating money amongft them will enable them to pay; muft not this increafe the ftreights and difficulties of the people on whom fuch heavy rents are railed and account for their arrearages and badnefs of payments?
A JAN, a coalt and country of Africa has the river Quilmanci on the fouth; the mountains from which that river fprings on the welt; Abyfinia, or Ethiopia, and the ftreight of Babelmandel on the north; and the eaftern, or Indian, ocean, on the eaff. Going from fouth to north, along the coaft, we find the republic of Brava, the kingdom of Magadoxo, and that of Adel, and fome other more weltward within the land. The coaft abounds with all neceffaries of life, and has plenty of very good horfes. The kings of Ajan are often at war with the emperor of the Abyfins, and all the prifoners they take they fell to the merchants of Cambaya, thofe of Aden, and other Arabs, who come to trade in their harbours, and give them in exchange coloured cloths, glafsbeads, raifins, and dates; for which they alfo take back, befides flaves, gold and ivory. The whole fea-coaft, from Zanguebar to the ftreight of Babelmandel, is called the coaft of Ajan; and a confiderable part of it is filed the Defertcoaft. It's kingdoms, or provinces, are as follow:
r. Brava, the capital of a republic of the fame name, is fituate between two arms of the river Quilmanci, where it has a pretty good harbour. It is a pretty large city, and is inhabited by rich merchants, who trade in gold, filver, filks, Auff, $\xi^{\circ}$. and pay an annual tribute to the Portugueze. There is a great deal of ambergreafe on the coaft of Brava.
2. Magadoxo, or Madogaxo, has the kingdom of Adel on the north; the kingdom of Alaba on the weft; the territories of Brava on the north; and the eaftern ocean on the
eaft. This country abounds with batley, and other fruit, and feeds great numbers of horfes and other cattle.
To the capital city Magadoxo a great many merchants of Cambaya and Aden bring ftuffs, drugs, and ficices, which they exchange for gold, ivory, and wax.
3. Adel has Magadoxo on the fouth; part of the eaftern ocean, and that part of the coaft of Ajan which is called the Defert-coaft on the eaft; the freights of Babelmandel on the north, and the Galles, with the kingdoms of Dancari and Balli, on the weft.
The town of Zeila, feated in a gulph to the Youth-eaft of the mouth of the ftreight of Babelmandel, is extremely populous. The foil about Zeila is nothing but a dry, barren fand, and they are obliged to fetch freh water two days journey from the city: but, at that diftance, the country abounds with corn and fruit to fuch a degree, that the inhabitants cannot ufe it all, and the Arabs of Aden, and other neighbouring countries, come and make their provifions here. The country abounds alfo" with cattle; befides which, they have alfo here gold, ivory; frankincenfe, pepper, and great numbers of llaves, whom they buy, or fteal, in Abyflinia; all which they exchange with the merchants of Arabia and Cambaya for cloths, amber, necklaces, glafs-beads, raifins, dates, Eoc. The inhabitants of Quiloa, Melinda, Mortbafa, and other parts, come and buy horfes at Barbora, another fea-port town on this coaft.
4. Dancali, Dancale, or Dangale, lies to the weft of the Red Sea, to eaft and fouth of Abyffinia, and to the north of Balli and Fatagar. It has a fea-port town called Bailar. There is a place called the Land of Salt, becaufe it contains mines, out of which they dig vaft quantities of falt, which is carried into other countries on camels, and affords a confiderable trade. The foil here is almoft every-where barren, and produces no corn at all.
AIDERBEITZAN, or as the Perfians call it AZERBEIAN, or ASAPAIC AN, a province in Perfia, borders on the eaft to the province of Ghilan and Tabriftan; to the fouth on Perfian Irack; to the weft and north-weft upon Upper Armenia and the river Aras; and to the north, on Schirwan. The foil of this province is fruitful, and the climate healthy, though cold. It contains,

1. Tauris, a very large and potent city, being the fecond in Perfia, for dignity, grandeur, riches, trade, and number of inhabitants. The city contains 15,000 houfes, and as many fhops; for the houfes in Perfia are not in the fame place with their fhops, which ftand for the moft part in long and large arched ftreets 40 or 50 feet high, which ftreets are called bazars, or markets, and make the heart of the city; the houfes being in the out-parts, and having almoft all gardens belonging to them.
Thefe at Tauris are the fineft bazars that are in any place of Afia; and it is a lovely fight to behold their vaft extent, their largenefs, their beautiful cupolas, and the atches over them, the number of people that are there all day long, and the valt quantity of merchandizes with which they are filled. The grandeft of all, and where they fell their jewels and wares of greateft value, is octangular, and very facious, being called kaiferie, or the royal market-place. Their other public buildings are no lefs fumptuous, nor lefs populous. The houfes where they fell tobacco, coffee, and ftrong liquors, are anfwerable to the beauty of the reft. The inhabitants of this city amount to about 550,000 fouls, though feveral perfons there, fay there are no lefs than $1,100,000$. The number of ftrangers alfo, which are there at all times is very great; they reforting thither from all parts of Afia; nor is there, perhaps, any fort of merchandize of which there is not a magazine to be found at Tauris. The city is full of artifts in cotton, in filk, and in gold ; and feveral of the principal merchants there affirmed to Sir John Chardin, that there are above 6000 bales of filk wrought out in manu* facture every year.
The trade of the city extends all over Perfia and Turky, into Mufcovy, Tartary, the Indies, and over the Black Sea. Not far from the city, in the neighbouring parts, are to be feen great quarries of white marble, of which there is a fort that is tranfparent. The people of the country imagine it to be water of a mineral fountain, congealed and hardened by degrees: There are, indecd, not far from it, two confiderable mines, the one of gold, the other of falt; but there has been no working in the gold mine for a long time, becaule they always found that the profit never anfwered, to the expences of the labour.
The bazars at Ardebil, or Ardevil, are fine and well covered; but here they deal very little in gold ftuffs and jewels, as they are faid to have done formerly, and as they do in other places. Here are but three or four large ftreets where the chief fhops are; the reft are not worth fpeaking of: and, indeed, trade flags here very much. The meidan, or great fquare, is 300 paces long, and 150 broad, having thops all round it, which, when this city was in its flourifhing condition, were well ftocked with valuable commodities; but the richeft goods, fuch as jewels, gold, filver, filk, EF'. were
kept in another market-houfe, or exchange, which is a fquare building, arched over, and opens, at three gates, into three Jong flreets.
At Miana there is a kind of cuftom houfe, where the officers are faid to be very tyrannical in their exactions upon the meaner fort of people who travel that way.
Soltanaya, or Sultania, has fome bazars, but not confiderable; nor, indeed, can it be reckoned a trading- place.
AIDS of affizes of wood, are petty officers of the city of Pa ris, appointed by the provoft of the merchants, and the echevins, to meafure the wood for fuel which is proper to be meafured, and are landed on the keys. This they do in the prefence, and undet the orders, of the affizers of wood, whom they thus aid and affift in the exercife of thefe functions, which are the chief that belong to the office of affizers of wood.
Aids, or Aides, in French, is faid in general of all fubfidies levied by the prince's authority (and in England by the authority of the king and parliament) or of fuch as are voluntarily granted by the people, to aid and affift the ftate on urgent occafions. In France that word is particularly uled to fignify one of the king's general farms, which conift chiefly in the duties laid upon wine. They call ordonnance of aids an ordonnance of Lewis IV, iffued at Fontainebleau in June i680, which regulates the trade, fale, tranfportation, import; and export of wines, both within and without the kingdom.
AIGRIS, a ftone which ferves inftead of current coin among the Iffinois, a nation of Africa, on the coaft of Guinea, where the river Abbin runs, near the gold-coaft. It is there looked upon as a precious ftone, and yet it has nothing in it to make it very valuable. It is of a greenifh-blue colour, without any luftre; pretty hard, indeed, but it does not take a good polifh, or they have not kill enough to polifh it better. And yet they are very fond of it; and, when they buy it, they give its weight in gold for it. They make little bits of it, called betiquets, which are bored through in the middle, that they may ftring them on fmall threads, made of the bark of trees. Confidering the price of that flone, the betiquets mult be extremely fmall, fince two of them are worth but one penny French money. They cut fome in the form of cylinders, an inch long, and they are bored through length-ways. They ferve as ornaments for the beards of the kings and lords, making treffes of the hair, which they pafs through thofe cylinders. Akæfini, king of the Iffinois, had, in the 20 treffes of his beard, 60 of thofe cylinders, which were worth, at leaft, 20,000 crowns. But, for all that, this pretended precious ftone is not fo thining and bright as green rafade, which is brought them from Europe. 'I am pretty much inclined - to think, fays the Chevalier de Marchais, in his Voyage de - Guineé, tom. I. p. 26 i , that the aigris is the fame as the - flone called jade, or a kind that comes near it, but which is not well polilhed by the Iffinois, which is owing to their ' want of fkill.'
AIRESHIRE, in Scotland, is bounded on the north by the thire of Renfrew; on the fouth with Galloway; on the eaft with Clydddale; and, on the weft, with the frith of Clyde. This county is very populous, and the inhabitants are exceeding induftrious. It is divided into Carrick, Kyle, and Cunningham, which are reckoned the three great bailleries of Scotland.
2. Carrick is fruitful in pafture, and is abundantly furnifhed with commodities, both by fea and land. The chief rivers are Stincher and Girven, which abound with falmon and other good filh. The people towards the coaft are great fifhermen, though there is no confiderable port in this part of the country, and are employed by the merchants of Glafgow, and elfewhere, to catch herrings for them. The chief town is Maybole, which has a pretty good market, by reafon the coaft near it is full of people; but, though it ftands on the coaft, it has no harbour.
3. Kyle, is feparated from Carrick by the river Dun, and from Cunningham by the Irwin; both which, together with the river Aire, abound with falmon. It is more populous than Carrick, and the foil is better. It's chief town is
Aire, which ftands near the mouth of the river of its own name, has a very good harbour, and lies conveniently for trade ; but it is now fo declined, that the townfmen fay, from having been the fifth beft town in Scotland, it is now the fifth worft, which is owing to the lofs of its trade. But what was the reafon of the decay of trade in this place is not eafy to determine.
4. Cunningham, is a country rich and fruitful, abounding with fine paftures and inclofures near its capital town, which is
Irwin. Here they have a port, which was formerly in much better condition than it has been for fome years paft, the harbour being fo much decayed by length of time, and other accidents, that the trade of the town has declined; for the water not being confined to its proper channel, the harbour became fo choaked up with fand, that it was of little ufe to what it had been; fo that fhips of very fmall burden were frequently thut up for feveral months in the river, before they could fail out to fea'. At the fame time, the church, town-houfe, bridge, and other public works, being in a rui-
nous condition, an act of parliament was paffed, in i $_{736}$, tha ninth of George II. for laying a duty of two pennies Scots upon every Scots pint of ale or beer fold in the town of Irwin, and its liberties; and a duty of a penny flerling upon every ton of koals fhipped off for tranfportation, By which means the harbout is reftored to its priftine goodnefs, and the town to its former flourfhing condition. But thus much may be faid, that, notwithftanding the declining ftate of its harbour before this act paffed, it carried on a greater trade than moft of the ports between Aire and Dumfies. Their chief tráde is in Scots coal, which they export in great quantities to Ireland; the neighbouring hills abounding with this commodity.
AKOND, an officer of juftice in Perfa; before whom are brought all caufes relating to orphans and widow's, in regard to contracts, and other civil matters. He is the chief or the lawcollege, and reads lectures to all the inferior officers. He has his deputies in the feveral provinces of the kingdom, who, with the fecond fadra, conclude all bargains, agreements, and contracts. ALABASTER, a kind of marble, which is foft and eafy to cut. There are feveral forts of it: the moft common is white and fhining, and was formerly the leaft efteemed : that which is of a horn-colour, and tranfparent, was not much more valued. The moft precious was that which is yellowifh, fomething like honey, and fpotted with points, or fmall veins. The white alabafter feems to have the preference above all others at prefent. It is clofe, and very proper to make figures, ftatues, columns, ornaments, and veffels of feveral fizes. The antients ufed fuch veffels to put their moft admired perfumes ity. The countries in Europe, which abound moft with alabafter, are Germany, towards Coblentz; the province of Maconnois, in the neighbourhood of Cluni, in France; Italy, towards Rome, where that of Montaiout is particularly remarkable; not only for its whitenefs, but alfo for the bignefs of its blocks, fome of which are fo large, that fatues, as big as life, may eafily be cut out of them. F. Labat, in his journey to Italy (Voyage d'Italie, tom. VI. p. 64.) obferves, that there are quarries of alabafter in the neighbourhood of the village called de la Toffa, near Civita Vecchia : there is alfo alabafter to be found in fome places of Lorrain; but it is not much efteemed.
Cornelius le Bruyn, in his voyage to the Levant (Voyage du Levant, tom. V. p. 284.) relates, That he has feen mountains of alabafter, which are about 150 leagues weft diftant from Archangel. The inhabitants of the country call them pifoertje, that is to fay, ovens. They are fubterraneous grottoes, formed by nature, after a very particular manner. The chief entry feems to be fupported by pillars of rocks, in the form of pilafters; and there are feveral other by-ways, which lead into fmall grotoes. The fones are as white as common alabafter, but not fo hard; and yet feveral pretty pieces of work are made of them. Thefe mountains, which are half a league in extent, are feen for the fpace of two hours along the river Penda, and there are no grottoes beyond.
ALADULIA, a province of Anatolia, or Afia Minor, comprehends, in its largeft fenfe, Cappadocia Magna, and the Leffer Armenia. It joins to the country, or Beglebergate of Trebizond on the fouth, and is, by the Turks, called the Beglebergate of Munit, or Marafch. This diftriat is likewife called, by the Turks, Dulgadir, or Dulcadir. The territory of this province is unfit for tillage, but hath abundance of fine paf-ture-grounds, on which the inhabitants breed a prodigious number of cattle, efpecially horfes and camels, befides great herds of theep and goats.
I. Cappadocia, befides the great pafture-grounds, produces wines and fruits in great quantities; and the mountains, with which it abounds, efpecially that long and high chain of them called Antitaurus, have mines of filver, copper, iron, alum. Its chief cities are,
Marafch, which is large, and well-built, and drives a good traffic.
Cæfarea, now Caifar, a fair and populous city, the flage of all the caravans of the eaft, which here difperfe themfelves to their refpective cities. The bazars ate handfome and well ftored, and the inhabitants, who are quite polite, drive a confiderable trade in cotton.
5. Armenia the Leffer, the other province of Aladulia, fo called to diftinguifh it from the Greater Armenia, which belongs to Perfia, haș little or no trade, and, therefore, no place of note.
ALAMODE, in commerce, a thin, light, gloffy, black filk not quilled, or croffed, chiefly ufed for womens hoods and mens mourning fcarfs.
The fubtance of the feveral acts of pariament now in force that relate to this article, is as follows.
Alamodes and luftrings may not be imported but into London only; and upon notice firf given to the commiffioners of the cuftoms, of the quality, quantity, with the marks, numbers, and packages, the names of the importer, the fhip, and her burden, the mafter, the place where to be laden, and into which they are intended to be imported; and taking a licence under the hands of the faid commiffioners, or any three of them. 4 and 5 Will, and Mar. cap. 5. fect. 14. 9 and 10 Will. III. cap. 43. feet. I.

If they are imported into any other port than LonJon, or without norice, licence, and payment of duty, and not fealed or marked, are forfeited, or their full value. 4 and 5 Will. and Mar. cap. 5. fest. I4. 5 and 6 Will. and Mar. cap. 20. fect. 45. 9 and 10 WIll III, cap. 43. fect. 2.

Upon importation they are to b: marked and fealed, and regiftered in a particular book, by the officers of the cuiftoms, before delivered out of the cuftom-boufe warehoufe. 5 and 6 Will and Mar. cap. 20. fect. 45 - ' 9 and ro Will. III. cap. 43. feit 2. If the feals, or marks, are altered, counterfcited, or mifapplied, the offenders, and their aiders, *oc. are each to forfeit 500 l . and to fland in the pillory for the face of two hours. 5 and 6 William and Mary, cap. 20. fect. 45. 6 and 7 William III. cap. I8. fect. 30. 9 and 10 William III. cap. 43. fect. 5.
If they are imported without payment of duty, or being prohibited, or, by way of infurance, delivered, or agreed to be delivered, the importer, contractor, or receiver, may be profecuted, and a capias in the firft procefs, rpecifying the fum of the penalty may be iffued, and the offenders be obliged to give fufficient bail to appear in court, and, at fuch appearance, mult give fecurity to anfwer all forfeitures and-penalties, or elfe go to gaol. 8 and 9 Will. III. cap. $3^{6 .}$. fect. I. 9 and ro Will. III. cap. 43. fect. 8.

If they are fraudulently imported, knowingly received into cuftody, bartered, or fold, every perfon concerned is to forfeit 5001.9 and 10 Will. IHI. cap. 43. fect. 3 .
If they are bought, fold, or harboured, being fealed, or marked, with a counterfeit feal, or mark, the offenders knowing thereof, and not difcovering, are to forfeit the goods and 1001.9 and 10 Will. III. cap. 43. feat. 5.
They may be feized within the cities of London and Weftminter, and the bills of mortality, only by officers of the cuftoms, or perfons deputed by the Luftring company, having writs of affiftance from the court of Exchequer. 9 and ro Will. 3. cap. 43. fect. 5. 5 Ann. cap 20. fect. 3.
When feized, they are immediately to be carried to the cuftomhoufe warehoufe in London; and, if forfeited, to be there fold by inch of candle, on condition to be exported, and not to be delivered but in order to be put on hip-board, and until fecurity be given for the due exportation; which fecurity may be difcharged by certificate of the chief magiftrate of the place where they were delivered, or by oath that they were loft at fea. 8 and 9 Will. III. cap. 36. fect. 4. 9 and ro Will. III. cap. 43 . fect. 2.
If feized and forfeited, they are not to be confumed in GreatBritain, but mult be fold on condition only to be exported. 8 and 9 Will. III. cap. 36. fect. 4. 9 and io Will. III. cap. 43. fect. 2.

In difputes concerning their manufacture or importation, the proof is to lie on the importer, or claimer. 9 and ro Will. III. cap. 43. fect. 5 .
Officers conniving at the fraudulent importation of them, or collufively delaying profecution, are to forfeit 500 l . and rendered incapable of holding any office under his majefty. 9 and 10 Will. III. cap. 43 . rect. 6.
If they offend a fecond, or more times, after conviction, they are to forfeit double for each offence. 9 and no Will. III. cap. 43. feat. 7.
Commanders of thips of war, importing, or knowingly permitting, fuch goods to be unhipped, befides all other penalties and forfeitures, are to be rendered incapable of ferving his majefty. 9 and io Will. III. cap. 43. fect. 4.
Seamen belonging to fuch hips, difcovering the importation, or unfhipping, befides part of the forfeitures, are to be difcharged from their fervice, if defired. 9 and to Will. III. cap. 43 . fect. 4.
Before claim can be entered, the claimer is to give fecurity to pay full cofts of fuit, if he be caft; otherwife, the goods to be forfeited. 9 and 10 Will. III. cap. 43. fect. 10.5 Amn. cap. 10. fect. 4.
Information is to be commenced within two years after the offence. 9 and 10 Will. III. cap. 43. fect. 12.
Black alamodes and luftrings are not to be bought, fold, or dealt in, unlefs fealed, or marked, at the cuftom-houfe, or by the Luftring company, upoh forfeiture thereof, and 100 I . 6 and 7 Will. III. cap. 18. fect. 28.
But, if the buyer difccevers the feller within 12 months, he is difcharged, and is intitled to half the forfeiture of the feller. 6 and 7 Will. III. cap. 18. fect. 29.
Black alamodes and luftrings, wherefoever manufafured, found without the proper marks, or feals, are forfeited; and the perfons in whofe cuftody they are found forfeit iool. 6 and 7 Will. III. cap. I8. fect. 28. 8 and 9 Will. III. cap. 3 6. fect. 3 .
The diftribution of all penalties and forfeitures is two thirds to the king, and one third to the feizer, or fuer; but the charges of fuit and profecution muft be paid out of his majefty's part. 9 and 10 Will. III. cap 43. fect. 9.
ALBANIA, a province of Turky in Europe, lies between Macedonia on the eaft, and the gulph of Venice on the weft, having on the north-eaft, and north, a chain of mountains, called Monte nigro, or the black mountains, which divide
it partly from Macedonia, and partly from Servia and Dalmatra. On the fouth it is bounded by Epirus, which is fometimes called Lower Albania, as the province we are fpeaking of is ftiled Upper Albania, Its foil is fruitful, but more to wards the north than towards the fouth, and produces flax, cotton, and excellent wine; as alfo wax in the woods, and falt dug out of the mountains. The inhabitants make tapefity, which, with the other commodities, they vend abroad But this country has undergone the fame fate of all under the Turkih dominion, being almoft deftiture of commorce, and its coaft poffeffed by a kind of pirates, or rovers. Its chief places are,

1. Scutari, which is a confiderable trading town.
2. Dulcigno, fituate on the gulph of Venice, may contain 7 or 8000 fouls, fays Mr. Spon, and is an indifferent good fcale, that is to fay, in the Levant language, a city of traffic. The Franks have here a conful.
3. Durazzo, is a noted fea-port on the coaft of the gulph of Venice. The harbour of Dyrrachium lies to the northwett of Brundufum, now Brindizzi, and the paffage from the one to the other was eafy, fo that the former became one of the moft confiderable towns on the coalt of the Adriatic fea. Two circumitances concurred to make it flourifh; the one was, that the inhabitants gave every one a full Iiberty to fettle there; whereas, the Apollonians, their neighbours, drove all Atrangers out of their city, after the example of the Lacedemonians. The other was, that moff forergners who failed up and down the Adriatic fea, ufed, by the way, to put into this harbour. Meffeurs Boudrand, Maty, and Corneille fay, that this is fill a pretty large town, well fortified, and that it has a good harbour : whereas Mellieurs Spon and Wheeler affert, that it is now but a village, with a ruined fort. Thirty miles from la Valona, to the fouthward, there is a mountain, where rifes a fountain of pitch, which, being mixed with tar and water, ferves to careen veffels.
ALBERTUS, a gold coin fruck in Flanders during the adminiftration of Albertus, archduke of Auftria. It weighs four penoyweights; of the finenefs of 21 carats and 3 : It is worth about ${ }_{14}$ French livres, and yet it is received only for a mark at the mint in France, to be melted and made into Louis d'ors.
ALBE, a fmall piece of money in Germany, worth eight fenins of that country, or two creutzers; that is to fay, a fol and feven deniers French money.
ALBUS, a fmall coin, current in Cologne, and in the countries of the Lower Rhine. Four albuffes make four and a half creutzers, or a fimple blaffart, according to the regulations of the empire,
ALCANA, a drug ufed in Dying, which comes from Egypt, and from fome other parts of the Levant. The botanifts of the latter century called the plant which produces this dye, Liguftrum Ægyptiacum, or Egyptian privet; but they were miftaken: it is not a fpecies of that kind.
The colour, which is extracled from its leaves, is red, or yellow, according as it is prepared. It is yellow if the leaves are put to foak in water ; and red if put into vinegar, citronjuices, or alum-water.
The oil that is extracted from the berries of the alcana is of an agreeable feent, and of fome ufe in phyfic, efpecially for foftening of the nerves. It is called alfo oil of cyprus, and the plant fometimes cyprus.
ALCAVALA, a cuftom-Houle dufy, paid in Spain, and in Spanifh America. It is a duty of import, at the rate of five per cent. of the price of merchandizes.
ALE, a well known liquor in England, made of malt.
What chiefly diftinguifhes ale from beer, which is made from the fame ingredients, is the quantity of malt and hops ufed in it, there being more put into beer than into ale; wherefore the former is itronger and more bitter, and will keep longer. The duties on ale and beer make a principal' branch of the revenue in England. They were laid in the 12 th year of Charles II. and have been continued by feveral fubfequent acts of parliament to the prefent time.
By fat. I'2 Car. II. cap. 23. fect. I. There was to be paid to his majefty during life,
For every barrel of beer or ale above 6 s . the barrel, brewed by any perfon who fhall fell beer or ale, to be paid by the brewer, 1s. $3^{\text {d. }}$
For every barrel of 6 s . beer, or ale brewed as aforefaid, 3 d. Contirued for the life of his prefent majefty, by a Geo. II. flat. I. cap. I.
By ftat. 12 Car. II. cap. 24. fect. 15. There was to be paid unto the king, his heirs, and fucceffors for ever, as a part of the recompence for thie tenures and purveyance taken away,
For every barrel of heer or ale above 6 s . the barrel, brewed by any perfon, who thall fell beer or ale, to be paid by the brewer, is. 3 d.
For every barrel of 6 s. beer or ale, or under, brewed as aforefaid, 3 d.
Confirmed $1_{1}$ Car. II. cap. 7.
By fat. 4 Will. \& Mar. cap. 3. fect. 2. There was to be paid unto their majefties, during ninety-nine years, for beer and ale, by way of excife, above all other duties,

## A L E

For every barrel of beer or ale above $6 \mathbf{s}$. the barrel, exclufive of excife, brewed by any perfon who thall fell beer or ale, to be paid by the brewer, 9 d .
For every barrel of beer or ale of 6 s , the barrel, or under, 3 d . For every barrel of beer, ale, or mum, imported from beyond feas, to be paid by the importer before landing, 3 s .
Made perpetual I Geo. I. cap. 12. feet. 8. and the furplus, together with that of the duties on cyder, perry, brandy, fipirits, and metheglin, as expreffed in the fame act, appropriated to the aggregate fund.
By ftat. 5. Will. \& Mar. cap. 20. fect. 10. There was to be paid unto their majefties, for beer and ale, one moiety of the duties of excife granted for four years, by 2 Will. \& Mar. cap. 10. (viz.)
For every barrel of beer or ale, above 6 s . the barrel, exclufive of excife, brewed by any perion who fhall fell beer or ale, to be paid by the brewer, 9 d .
For every barrel of beer or ale, of 6 s , the barrel, or under, 3 d . For every barrel of beer, ale, or mum, imported from beyond fea, Guernfey, or Jerfey, to be paid by the importers before landing, 3 s.
Five fevenths of this duty, and alfo of the duty on cyder, perry, brandy, Eic. as is expreffed in the fame act, appropriated to make good a fund to the Bank, and two fevenths to pay annuities; and the furplus to the aggregate fund. I Geo. 1. cap. 12.

By ftat. 4 Ann. cap. 6. fect. 6. From the 17th of May 1713 , there was to be paid unto her majefty during the term of ninety-five years for beer and ale, above all duties impofed by former acts.
For every barrel of beer or ale above 6 s. the barrel, exclufive of excife, brewed by any perion, who fhall fell beer or ale, to be paid by the brewer, 9 d .
For every barrel of beer or ale of 6 s . the barrel, or under, 3 d . For every barrel of beer, ale, or mum, imported from beyond fea, or from Guernfey or Jerfey, to be paid by the importers, before landing, 3 s.
Theie duties, together with thofe on cyder, perry, brandy, Ec. as expreffed in the fame act, charged with annuities, and by I Geo. I. cap. 12. are made perpetual, and part of the aggregate fund. The South-Sea company are impowered to purchafe the annuities, by 6 Geo. I. cap. 4 .
By fat. 8 Ann, cap. 7. fect. 1. From the feaft of the Annunciation 17ro, there was to be paid unto her majefty during the term of thirty-two years, for beer and ale, above all duties by former acts impofed,
For every barrel of beer or ale (above 6 s . the barrel, exclufive of excife) brewed by any perfon who thall fell beer or ale, to be paid by the brewer, 3 d .
For every barrel of 6 s . beer, or ale, or under, id.
By fect. 3. For the barrel of two-penny ale, defribed in the feventh article of the treaty of union, there was to be only paid, by virtue of this ade, fuch a proportional part of 3 d . as 2 s . bears to 4 s . 9 d . above the other duties charged in the faid articles.
Made perpetual by the South Sea act, 6 Geo. I. cap. 4.
ALENTEJO, a province of Portugal, borders on the north on part of Eftremadura, and of the river Tajo ; eaftward on the Spaniifh provinces of Andalufia and Eftremadura; on the weif it is bounded by the ocean, and part of the Portugueze Efremadura; and on the fouth by the little kingdom of Algarve. This country is reckoned the fineft and moft fertile of all Portugal; and its inhabitants, who are chiefly farmers, are very wealthy and induftrious. It abounds not only with corn of all forts, wine, oil, and fruits, fufficient for its own inhabitants, but likewife fupplies fome of the adjacent provinces; and this exportation is very much facilitated by a number of rivers, which fall either into the Tajo, of Guadiana, which two lalt great ones run quite acrofs this province.
At Elvas, a city in this province, fituate on the banks of the Guadiana, the Portugueze have of late erected a woollen manufactory; and the undertakers of that project imagine, that they thall be able to make a good progrefs, and to fupply themfelves with broad cloths, fine druggets, and other ftuffs, fuch as they have principally from England; and that they Chould ufe all the oil of their own growth in this manufacture. But, as yet, they have only been capable of finifhing fome coarfe and ordinary things, rather worfe than the Englifh kerfeys, and which ferve chiefly for the clothing of the pooreft of the people.
The inhabitants of Portalegre, another city of this province, have likewife made the fame attempt as thofe of Elvas, and have fucceeded no better hitherto. The country, about this place, produces a very great quantity of oil.
At Estremos is a curious manufacture of red earthen ware, formerly much admired in England; and, though now out of fafhion among us, is fill in great vogue in Portugal. The potters that work it 'are very ingenious, and turn it into a vaft variety of curious utenfils; fuch as jars, bowls, tea-pots, and the like.
At Monte Novo is another curious manufacture of a particular earthen ware, efpecially of cups, pitciers, and drinkingbowls, adorned with bright ftones.

Vol. I.

## A L G

## ALFANDIGA, the name of the cuftom-houfe at Lifbon, the

 capital of Portugal. 'Tis here are paid the duties of import and export, as is practifed at the cuftom-houfes of other countries. All gold or filver lace, fringe, ribbons, and brocades, are there feized, as contraband goods; no perfon whatfoever in Portugat, being fufferad to have gold or filver wore or fpun upon his clothes or furniture.ALGARVE, a little kingdom within that of Portugal. It is wedged in by the ocean on the weft and fouth; on the eaft by the Guadiana, which parts it from Andalufia; on the north by the mountains called Serra de Algarve, or Colderao, and Serra de Monchique, which divide it from Alentejo ; fo that it is but 90 males in length, where longeft; and but 28 in breadth, where broadeft.
The country though very mountainous in moft parts of it, is yet very fertile. It doth not indeed produce any great quantity of corn, but abundance of wine, oil, figs, raifins, dates, almonds, pomegranates, and other fruits, though nor fo exquifitely tafted as thofe of Spain; and, as the palm-trees are here in great abundance, the poor people einploy themfelves in working the leaves of them into a variety of knacks; but, in the main, the country is nothing populous or wealthy, nor their cities and towns very remarkable for any tolerable hare of trade.
Lagos, one of the cities of Algarve, is about 110 miles fouth from Lifbon, and 25 eaft from cape St Vincent. It is feated on a large bay, that opens fouthward to the ocean, and where feverd fleets have anchored during our late war with Spain in queen Ann's time. Figs are one of the chief commodities of the kingdom of Algarve, and are fhipped off at Faro and Figuera in this bay, or near it. This country is exceeding fruitful, and the figs in particular are not only the beft, and the beft cured for merchandize of any we find, either in Spain, or on the coaft of Barbary, but there is the greatef quantity; for the Englifh, Dutch, Flemings, and Hamburghers fetch them in great quantities; and 'tis faid, that there are frequently 40 or 50 mips a year, which are laden with figs in this little country.
ALGIER, a kingdom of Africa, is bounded on the eaft by Tunis, from which it is divided by the river Suf-Gemar; on the welt by the kingdom of Fez , from which it is parted by the rivers of Malvia and Zah, or Zes; on the north it is watered by the Mediterranean, and on the fouth are the defarts of Numidia. This country enjoys a conftant verdure. In February the leaves begin to bud, in April they thew their fruit in full growth, which are moftly ripe by May. The grapes are fit to gather in June, and the figs, peaches, nectarines, olives, nuts, $g^{\circ} c$. in Auguft.
The foil is various, many parts of it being dry, hot, and barren; others fertile in corn and fruit, efpecially the mountainous parts on the weft of Tenez, Buggia, and Algier Proper. Others, as the northern part of Tremecen towards the fea, abound in excellent pafture grounds.
The towns in this kingdom, even along the fea-coafts, are but few and thinly peopled, except its metropolis. Thofe inland are ftill fewer and thinner, and inhabited by a fout and baughty pcople, who trade into Biledulgered, and the countries of the Blacks. The Algerines are very great pirates, and reckoned the moft dangerous of all Afric. They are extremely avaritious, and cruel to thofe that fall into their hands, efpecially to the Chrifians.
As we thall fpeak of this trade once for all, and not defcend to every minute province, which is not deferving our notice; fo, we apprebend, that the following brief and connected account may be more acceptable to the reader.
Algier Proper, which is bounded on the eaft by Bugia, on the weft by Tenez, by the Atlas on the fouth, and by the Mediterranean from the mouth of the Chinelaf to the northern confines of Bugia. The territory of Algier is fertile in fruits, and the plane of Moligia produces corn, barley, and oats, two or three times a year, befides other grain. The melons are of an exquifite tafte, fome of which ripen in fummer, and others in winter. Their vines are very large and thick, and the bunches of grapes commonly a foot and a half long. Its chief places are,
Algier, the capital of the whole kingdom. In this city are merchants of feveral nations: they are faid to be fo numerous, that they amount at leaft to three thoufand foreign families, which have fettled there on the account of trade, and keep about two thoufand fhops in the two bazars of the place.
The Jews, whofe number amounts to eight thoufand, dwell together in a particular quarter: almoft the whole trade here pafles through their hands. The manufactures of the filken kind are here carried on moflly by Andalufian and Granadan Spaniards.
The greateft commerce of the Algerines confilts in the merchandize which they obtain by the piratical plunder of the Chriftians over the whole Mediterranean, and in part of the ocean. The corfairs are continually bringing in prizes, with great numbers of Chriftian laves. Their marine is fo ftrong, that they fit out every year twenty-two, or twenty three veffels, with three or four hundred men each.

K
Every

Every Turkifh veitel, of what nature or bignefs it be, pays 20 piafters for anchoring in this harbour.
The Chritian thips, large or fmall, pay each 40 piafters, when cheir princes are at peace with the republic. They whof fovereign is at war with. Algier, may go thither, on payirg 80 piafters: they have nothing to fear, as foon as they are in the harbour; but at fea, either going thither, or coming from thence, they are liable to be taken, as ufual.
The produce of this duty for anchoring is divided between the dey, the grand writers, the aga-bachi, who is upon duty for fearching or vifiting the marine; the interpreter or linguift of the factory, under the protection of whom the veffel is, and the Spanifh hofpital; every one has a thare as fettled by the regulations. It is the interpreter's bufinefs to make the diffribution, and give every one' his proportion.
The duty of importation on all merchandize, belonging to Turks, Moors, or Jews, is $12_{\frac{x}{2}}^{\frac{1}{2}}$ per cent. and of exportation $2 \frac{1}{2}$,
The Englifh, fince the taking of Oran, have obtained a diminution of the duty of importation, and pay but 5 per cent. The French obtained the fame favour, by an article inferted in the ratification of the treaty of peace, concluded the 27 th of January, 1718 , by the commadore count du Queine. Money pays always 5 per cent for importation, except that which is defigned for the redemption of llaves, which pays but 3 per cent.
All brandies or fipituous liquors and wines pay, without any diftinction, four current piafters per cafk, for importation,
The company of the Battion de France is allowed the cargo of two barques every year, without paying any duty. See Bastion of France.
The coin, or fpecies current at Algier, and ftruck there, are the gold fultanins and the afpers: and a fmall coin called burbas, fix of which make an afper; and the doublas, a filver coin, worth a little above 3 livres French money.
Foreign fpecies current at Algier, are Venetian fequins, fultanins of Morocco, gold coin of Portugal, Spanifh piftoles, and piafters.
The currency of the coin is not fixed, but varies according as the government requires it, yet the difference is but fmall. Foreigners reckon the value of thofe fpecies, according to the price of bullion in Europe.
There is nothing fixed or fettled, but the patack chique, or patack of afpers, which is an imaginary money, always worth 232 afpers. The third part of a current piafter, which is commonly called patack gourde, weighs about two piafters and a half; but its weight is fometimes increafed or decreafed, arbitrarily, as the dey pleafes.
There are money-changers at every corner of the ftreets, who are Moors. They change other fpecies of coin for iafpers, without any profit but the bafe or counterfeit afpers, which they know how to flide amongit the good ones; and people do not take much notice of this, nor is it an eafy matter for others to diftinguin the good from the bad afpers. When a perfon receives a fum of money, he fends for one of thefe money changers, to examine the fpecies, in which they are very expert, by their daily practice and occupation.
The merchandize for importation, confifts in gold and filver ftuffs, or tiffues, damafks, drapery goods, fpices, tin, iron, copper, lead, quickfilver, fmall cordage, bullets, common linnens, fail-cloth, cochineal, tartar, alum, rice, fugar, foap, gall-nuts of Aleppo and Smyrna, cotton in the wool and fpun, copperas, aloes, Brazil wood, Campeachy, or logwood, cummin, vermilion, arfenic, gum-lack, anife of Malta, fulphur, opium, mafic, farfapariila, oil of afpics, common incenfe, gall-nuts, honey, wool, pafer, combs, cutler's ware by fets, old and new cards for carding, and dry fruit.
There is but a very fmall guantity of thofe merchandizes fold at Algier, though the country always wants them, becaufe there are duties to be paid ; and it is difficult to get one's money after the fales, the returns being uncertain, and infults and oppreflions very frequent.
They who have occafion for any of thefe commodities, wait till the laft extremity, being always in hope that fome prize will foon arrive, laden with what they want, which happens very often.
There is lefs hazard in carrying piafters thither, becaufe you may run them without much difficulty, and ftrike very good bargains with the dey, when there is a plenty of prizes.
Merchandize for exportation, confifts of oftrich-feathers, wax, leather, copper, rough wool, woollen coverlids, embroidered handkerchiefs, filk girdes after the Turkilh fafhion, dates, and Chriftian Raves.
We meet fometimes with all forts of commodities, brought in with the prizes.
The veffels whofe flag is free, that is to fay, whofe ftates are at peace with thofe of Barbary, neet fometimes at Algier with a cargo for Tetuan, Tunis, Tripoli in Barbary, Alex andria, Smyrna, or Conftantinople.
The trade, carried on for fome years paft at Algier, is but trifing. The French have had little; the company of the Baftion of France, who had the liberty to fend two cargoes thither every year, having fent none thefe feveral years, be-
caufe they could not procure payment of the laft merchandize they had imported thither.
I he Jews of Leghorn engrofled, for fome years, the finall remains of trade at Algier, by means of one of their nation called Solomon, and furnamed Jaguet, who lived a great while at Algier, where he died in the beginning of the year $172^{2} 4$. He was a very artful intriguing man, who, by many untair practices, has gained the confidence of the reigning powers, under a pretence of beitig very zealous for the dey's intereft. He fitted out fhips for cruifing, and was farmer of the wax; for it mult be oblerved, that the Turks, and even the Moors in the cities look upon that employment as a difgrace, and upon all farmers of duties or taxes, as publicans, or ulurers. He ulted to give notice of all that paffed in Chriftendom, and had managed fo well by his correfpondence, that the Chefftian flaves could hardly be redeemed by any other pertion but himfélf. This was to obtain advantageous commiffions, and fecure to himfelf all, the profit there was to be made, on the difference between the piaters of Algiers, and thole that are current in Europe.
When he knew there was a bargain on foot for the redemption of haves, he ufed to outbid the others till they were tired, and forced to apply to him. He was favoured therein, as in all other things, by the ftate, and was looked upon as one of the chief lupports of the country.
The Englifh conful, who is the only merchant of that nation at Algier, has the moft profitable trade : he fells to the republic, powder, thot, bullets, grenadoes, hatchets, anchors, cordage, and other warlike foores, when the wants them; and the dey gives him, in return, oil, corn, and other provitions, the exportation of which is prohibited to all others.
There is a French conful, under whofe protection the foreign Jews, the Greeks, the Armenians, and others, put themrelves, and apply to him in their feveral difputes. This conful is forbidden to carry on any trade, either directly or indirectly.
There was formerly a factory and conful for the United Provinces, but herretired in the year 1716 . The Algerine corfairs taking at that time hardly any prize, the militia caufed the divan to meet, and reprefented there, that they no longer met at fea with any fhips of the enemy; that all thofe they happened to fee were either Englifh, French, or Dutch; and that, the country not being able to fubfift without prizes, it was neceffary to declare war with one of thefe three nae tions by a majority of votes.
Accordingly it was declared againf Holland; whereupon they immediately ftopped a veffel of that nation, which was in the harbour, and the dey fent orders to do the fame in all the ports of the kingdom. He allowed to the Dutch conful as much time as he pleafed, to fettle his affairs; and affected to pity and folace him. This conful was a great friend of the dey, and bad a very fair reputation amonglt the Chriftians, the 'Turks, and the Moors,
I he principal provinces of trade in this kingdom are,
I. Bona province, bounded on the north by the Mediterranean, on the eaft by Tunis, on the fouth by Conftantina, and on the weft by Labez. This country is fertile in corn and fruit, particularly in the jubub-tree, which covers a great part of it. They breed likewife quantities of cattle, large and fmall, but are fo expofed to the continual incurfions and rapines of the Arabs, that only a fmall part of the mountains is inhabited. Six miles eaft of the town of Bona, is a fort called the Bation of France, and is kept by the French, who have their magazines of corn and other commodities, and apartments for thofe who are concerned in them. The road for hhips is very bad before the town of Bona, but a little farther weftward, where the Genoefe fort ftands, it is deep and fafe. On the eaft fide of the bay of Bona, the Genoefe have a coral fifhery.
2. Constantina province, borders on the eaft to part of Tunis and of Bona, having the kingdom of Labez on the weff; on the fouth the Atlas, and the Mediterranean and part of Bona on the north. It hath a fruitful foil, the low lands abounding in corn, fruit, Es. and the mountains with pafture grounds.
3. Gigeri, or Jijel province, reaches to the frontiers of $\mathrm{Nu}_{\mathrm{u}}$ midia, and upon the fea-coafts, having Bona on the eaft, Conquo and Algiers on the weff, and Labez on the fouth. It is muftly dry, mountainous, and barren, producing nothing but fome little barley, flax, hemp, and a few nuts. The inhabitants of this province are fo like a great many of our coafters in Cornwall, Suffok, E'c. that they fpare no wrecks at fea, let them be friends or foes; only, if the crew be Mahometans, they give them fome fmall viaticum, to bring them on in their way home; and even if the thips belong to the Turks, or to the allies and friends of the dey of Algier, he can fave nothing of it to the owners by any other means than a friendly compofition: whereas, on any other coalts but thofe of Gigeri, both the dey, his agas̀, and officers will interpofe their authority in favour of their friends, though it often happens even there, that their affifance comes too late to be of any fervice to the fufferers. The inhabitants of the town of Gigeri live chiefly on thefe wrecks. 4. Bugia pruvince, by the Africans called Buggeya, or

## A L G

## A L I

Buggin, lies alfo on the Mediterranean eaf of Algier, and has the mountains of Labez on the fouth, the Gigeri and part of Conftantima on the eaft. The foil is poor and dry, and bears but little wheat, but a good deal of excellent fruit and good pafture. The wealth of the inhabitants confifts in fruit, cattle, hempen and flaxen cloth. The money they ufe is made of pieces of iron, weighing about half a pound, and fmall pieces of filver of about 4 grains.
Labez kingdom, lies on the fouth of Bugia, baving Tunis on the eaft, Conquo on the weft, and Mezezeb on the fouth It is very mountainous and barren, having but little corn or fruit growing in it ; and in moft parts fcarce any thing but a kind of fword-grafs, with which they make their mats called by the Arabs, Labez, from which the country hath got the name. It is ftiled a kingdom, becaufe, having been formerly fach, it fill retains its antient tutle, though now only a tributary province of Algier.
6. $\mathrm{Conco}_{\text {, }}$ or Coneuo, is adjoining on the weft to that of Labez. It is inhabited moftly by the Bereberes and Azuages, who are fo fond of liberty, and afraid of being reduced to a hard flavery, like moft of their neighbours, that they chuf to lead a poor indigent life on their almoit inacceffible mountains, rather than pay fome fmall tribute to the government of Algier; and in all other cafes, avoid all traffic or commerce with them., The country produces plenty of fruit, hemp, flax, honey, wax, cattle, and corn enough for their ufe. The higher mountains have alfo mines of falt-petre and iron, and the king's revenue is computed at 700,000 ducats.
7. The province of Beni-Araxid, or Beni-Razid, is one of the dependencies on Algier; the fouth of which is a plain champaign country, and the north very mountainous, bus interlaced with fertile vallies, abounding with corn, honey, and pafture grounds, and the whole province producing plenty of jububs, figs, and other excellent fruits. One part of its inhabitants dwell in towns and villages upon the mountains, and cultivate their corn fields, vineyards, and fruits The other which inhabit the plains, range about from place to place like the Arabs, and are richer in cattle, camels, horfes, $\xi^{\circ} c$. The chief towns are,
Beni-Arax, which hath a great number of perfons of quality and wealth.
Calaa, hath a good number of merchants and artificers, who live very comfortably.
El-Mohafcar, hath a market every Thurfday, to which the Bereberes, Aruages, and Arabs repair to fell their cattle, corn, barley, dried figs, and raifins, honey, wax, oir, $\mathcal{E}^{\circ}$. and the merchants of Tremecen their cloths, Jinnen, camblets, brides, faddles, and other fuch commodities
The territory about Batha is covered with the fineft fruittrees, and very well cultivated.
8. Miliana, or Magnana province, is fituate on the fouth and eaft of Algier Proper, and joined on the welt to BeniAraxid; it is inhabited moflly by a rude people, whofe chief bufinefs is weaving of linnen cloths, and making of faddles after the Morocco fathion.
9. Tenez province, hath Algier Proper on the eaft; Tremecen on the weft, of which kingdom it was formerly a part ; the Mediterranean from the mouth of the river Chilef, or Cartena, to that of Affafran on the north; and on the fouth reaches quite to mount Atlas. The foil is generally very fruitful, producing plenty of corn, cattle, wax, honey, and variety of fine fruit; but the natives are uncivilized and morofe, though they drive a great commerce with ftrangers; whereas the Arabs, though very ignorant, are of a contrary difpofition. They are ftout and brave, and very impatient under the Turkifh yoke. There is over-againft the city of Tenez a fmall ifland, under which the veffels that trade to it fhelter themfelves in tempeftuous weather. The inhabitants have, in conjunction with the brave Arabs above-mentioned, made fome noble efforts to lhake off the Turkifh yoke, but hitherto in vain.
ro. Oran province, fands on the Mediterranean coaft, has Harefgol on the weft, 'Tenez on the eaft, and is bounded on the fouth by Tremecen; and is as fruitful as moft of the provinces.
The town of Oran ftands about a mulket-hot from the fea, and is well fortified.
ii. Tremecen province, reaches, in length from eaft to weft, from the confines of Anga to thofe of Fez, and, from north to fouth, from the fea to the defert of Atlas. The country is very well watered, and produces plenty of corn and variety of fruits and cattle, efpecially on the north fide : the reft towards the foath is more dry, barren, and fandy, and even the parts adjacent to the capital are mollly defert, which is the reafon why there is fo few towns in this province. But thofe that are in it, are generally well feated, builr, and inhabited, and the people in good circumftances. Thofe who live in the more defert parts of this province, own no fubjection to the deys of Algier, but ramble where they pleafe, and will trade with the Chriftians in a friendly manner. The merchants of this province trade chiefly into the country of the Blacks, where they exchange their merchandize for Tibar
gold, ambergreafe, mufk, civet, African bezoar, elephant's teeth, negro flaves, Ejc. and this traffic is fo advant geous to them, that two or three fuch journies are, fufficient to enrich a man; and fo it had need, confidering the length and diffculty of it through fuch valt landy deferts, and the danger: they run from the fands, heat, and drought, and efpecially from the plundering Arabs. The inhabitants of the towns here are well bred and courcoous. The chief town is,
Tremecen, fituate about 35 miles from the Mediterranean, which grew to a conliderable height of fplendor and opulence under its kings, but is much decayed, fince it hath been under the Turkith yoke. Within its circuit are fill made great quantities of oil, and excellent grapes dried, land fent abroad. In the city are variety of manufactures, efpecially thofe of weaving cotton, filk, and linnen carpets, $\mathcal{E}_{c}$. in the neatnefs of which they excel to a great degree, infomuch that fome of their mantles will fcarcely weigh ten ounces. They are likewife farmed for their fine faddles, ftirrups, brides, $\mho_{0}$. which are made after the Morefco fafhion.
ALIEN, is one born in a foreign country, under the obedience of a foreign prince and ftate, and, in regard to England, not fubject to its fovereignty.
Though aliens, according to the laws of England, are not of capacity to buy, or inherit, lands, or freeholds, yet they may purchafe houfes, or warehoufes, which are for accommodating them as merchant-ftrangers.
Yet, if they depart and relinquilh the realm, the king fhall have the fame; and fo it is if they have taken a leafe of meadows, lands, woods, or paftures: for the law provides them nothing but a habitation to traffic in, as merchants.
But, though aliens can have no action for, or concerning lands, they may fue perfonal actions, as on a bond; fo likewife for words: for the common law, according to the laws of nations, protects trade and traffic; and not to have the benefit of the law, in fuch cafes, iṣ to deny trade.
The fenfe of the fatutes now in force in relation to aliens, as traders, is as follows :
Aliens born, made denizens, are to pay fuch duties as they did before they were made denizens. Stat. 22 Hen. VIII. cap. 8.
Aliens or merchant-ftrangers, are to be ufed in this realm as merchants-denizens are in other countries. Stat. 9 Hen. III. cap. 3 o. 5 Hen. IV, cap. 7.

Aliens and denizens, coming into this kingdom, are to be well and honeflly intreated, with refpect to the payment of the duties. Stat. 12 Car. II, cap. 4 .
Aliens, or merchant-ftrangers, bringing in goods, muff give fecurity to the king's cuftomer and comptroller, to employ their money upon the commodities of this realm, or to put it in due payment here (their reafonable cofts excepted) and not to export the money received for the fame; upon forfeiture of all their goods, and to fuffer a year's imprifonment. Stat. 4 Hen. IV. c̀ap. 15.5 Hen . VV. car. 9. 27 Hen VI. cap. 3. 17 Edw. IV. cap. 1. 3 Hen. Vll. cap. 8.

A Britifh man, fworn to be fubject to a foreign prince, or ftate, is to pay ftranger's cuftoms : but, if he returns to GreatBritain, and there inhabits, he is to pay but Britifh duties, and to have a writ out of Chancery for the fame. Stat. I4 and $15^{\circ}$ Hen. VIII. cap. 4 .
An alien infant, under 21 years of age, cannot be a mer-chant-trader within this realm, nor can he enter any goods in his own name at the cuftom houfe. Stat. I3 and I4 Car. II. cap. 2.
Aliens, or perfons not born within his majelty's allegiance, or naturalized, or made free denizens, muft not be merchants, or factors, in the plantations, upon forfeiture of all their goods and chattels, one third to the king, one third to the governor, and one third to the informer. Stat. 12 Car II. cap. I8.

Aliens and their fons, not freemen, are to pay the duties of fcavage, \&c. in the port of London.
The merchant-ftrangers, who pay double fublidy for lead, tin, woollen cloths, flall alfo pay double cuftom for native manufactures of wool, or part wool; and the faid fltangers, are to pay for all oth ir goods, as well i inwards as outwards, rated to pay the fubfidy of poundage, three-pence in the poun', or apy other duty payable by Chata mercatoria, befides the fubfidy. Rule the 12 th for the advancement of trade, \&c. annexed to the rates of merchandize, under the aft of tonnage and poundage, paffed anno 12 Car. II. cap. 4. But, by 25 Car. H. cap. 6. fect. 1, 2, 3. and 9 Ann. cap. 6. fect. 3,5 . repealed, as to goods imported.

- This is the duty called petty cuftom, payable by merchantftrangers on all gonds mported liable to tonnage and poundage (unlefs where the original old fubfidy has been inturcly taken away) biti not on thofe lable to the fabfidy of tonnage, becaufe an equivalent is included in the old fubfidy.

Note, Charta mercatoria, which was furt granted by 31 Ed. I. was confirmed by 27 Ejw. HI. cap. 26. and the duty of three-pence per pound thereby granted, directed to be compued by the contents of the goods, accordiug to the oath of

## A L L

the importer, or letters of credence, without unfealing, or opening ; upon penalty of imprifonment by the officers, and quadruple damages to the party grieved, and as much to the king.
Aliens duty outwards taken off. 12 Car. II. cap. 4. 25 Car. II. cap. 6. 5 Ann. cap. 27. 6 Ann. cap. 10. 7 Ann. cap. 7. 9 Ann. cap. 6. 8 Geo. I. cap. 15.11 Geo. I. cap. 29.
When aliens are to be deemed natural born fubjects, fee Naturalization.
ALIQUAN $\Gamma$ PART, a term of geometry and arithmetic. It is fuch a part of a whole which does not meafure it exacly, but fome remainder will fill be left. Or, an aliquant part is that, which, being taken any number of times, will always be greater or leffer than the number, or quantity, of which it is an aliquant part. Thus 7 is an aliquant part of 30, becaufe it does not divide it exactly, but there remains 2 ; or, 7 taken four times, is lefs than 30, viz. 28 ; and, taken five times, is greater, viz. 35 .
ALIQUOT PARTS, alfo a term of geometry and arithmetic. An aliquot part is fuch a part of any quantity, or number, as meafures it exactly, without any remainder. Thus $1,2,3,5,6,10,15$, are aliquot parts of 30 , becaule each of thefe fmaller numbers meafure the number 30 exactly, without any remainder.
ALLEVEURE, the fmalleft copper coin that is ftruck in Sweden; it is not worth quite two denjers tournois of France. Two alleveures make a routing; eight rouftings a mark of copper; and 24 marks the common rixdollar, which is at par with the French crown of 60 fols, or five livres. See Sweden.
ALLAY, or ALLOY, a mixture of reveral metals, or of diverfe portions of the fame metal, of different finenefs.
Minters never frike any gold or filver coin without allay, and always mix fome copper with thofe two metals, according to a certain proportion, fettled by the rules of the mint, which, in France, cannot be altered but by the king's edicts, proclamations, or ordonnances.
Brals coin is made of an allay of copper, mixed with a few parts of fine filver, regulated alfo by the prince.
The jewellers, gold wire-drawers, and gold-beaters, and gold and filverfmiths, are obliged to ufe allay in the filver and gold they work; but it ought to be lefs than that of coin, to prevent their melting it, in order to ufe it in their works, which the French call billonnage, which is an unlawful melting of gold or filver coin.
The brals-founders, alfo, have their allay of copper, pewter, and tin. This allay differs aecording to what they defign to caft, either ftatues, guns, or bells.
Finally, the pewterers, in the making of their feveral veffels, difhes, plates, \&c. alfo make ufe of an allay of red copper, regulus of antimony, and fome other minerals.
There are two forts of allays practifed in the coinage of money: the one, when gold and filver are ufed that have not yet been coined; the other, when feveral fpecies of coins, or ingots of different finenefs, are melted together, to coin new money.
The proportion of the allay with the finer metal is eafy in the firt cafe; fince, when once the finenefs of the gold or filver is known by refining, it is only adding to it the allay of copper required by law to bring it to the legal ftandard.
In England the ftandard of gold coin is 22 carats of fine gold, añd 2 carats of allay, in the pound troy: and the French, Spanifh, and Flemilh gold are nearly of the fame finenefs. The pound weight is cut into 44 pieces and a half, each current for 21 hillings.
The flandard of filver is Ir ounces 2 pennyweights of filver, and 18 pennyweights of allay of copper. The allay in gold coin is filver and copper; and, in filver coin, copper alone. Whether gold or filver be above or below ftandard, is found by affaying. See Assay.
When feveral fpecies of coin, or ingots of different finenefs, are to be melted together, the operation, requifite to find the due proportion of allay to the fine metal, is more difficult: and yet it is one of the molt important articles a mafter of the mint ought to be acquainted with, and which all thofe alfo ought to know who work in gold and filver, that they may not be miltaken in the allay they are often obliged to make of gold or filver of different fandards.
All the authors who have wrote upon coinage, have given tables for making that reduction; and the arithmeticians have their rule of alligation, which may alfo be ufed. But the anonymous author of a fmall treatife, printed at the end of Monfieur Boiffard's edition of 172 t , has given us the ealieft method to practife that rule.
As that method will ferve both for gold and filver coin, we thall give but one inftance of it; but it muft be firft obferved, that the calculation for the allay of gold is performed by the 32 parts, which are wanting in, or exceeding, the ftandard of thofe metals defigned to be ufed; and that, with regard to filver, we reckon by grains of fire metal.
When any one would make that kind of allay, or tather evaluation of allay, in order to add, or diminih, what is wanting,

## A L L

or too much in the finenefs, you muft draw up a table of the metals to be melted, containing their quality, weight, and finenefs. This table is afterwards to be divided into two other, the one containing all the fecies which are below, and the other thofe that are above, the requifite degree of finenefs.
Each of thefe tables being calculated feparately, you may find, by the calculation of the firit, how much metals that are above the ftandard, exceed it; and, by the fecond, how much is wanted in thofe that are below it; fo that, by comparing thefe two products, or fums, together, we difcover exactly, by means of a fubtraction, how much, either of fine gold, or allay, muft be added, in order to reduce all thofe metals to the ftandard required for the new melting. Here follows the inftance, which the abovementioned anonymous author gives us :

| Numbers. <br> 1. | Marks. I. | Ounces. <br> 4. | Carats. <br> Jacobuffes, at 21 zo |
| :---: | :---: | :---: | :---: |
| 2. | 2. | 6. | Ingots, at $20 \frac{1}{2}$ |
| 3. | 1. | 4. | Ingots, at $18 \frac{3}{4}$ |
| 4. | 3. | 6. | Ducats, at $23 \frac{2}{3}$ |
| 5. | 1. | 4. | Nobles, at $23 \frac{8}{4}$ |
| 6. | 1. | 4. | Ital. Pift. at $2.1 \frac{1}{2}$ |
|  | 12 | 4 |  |

I have therefore, 12 marks and 4 ounces of gold, of feveral degrees of finenefs, which muft be-reduced to the finenefs of 21 carats and $\frac{3}{4}$.
Among the fix articles which compofe the firt table, there are three, viz. the firft, the fourth, and the fifth, which are above the ftandard; and three, viz. the fecond, the third, and the fixth, which are below it. I feparate them into two tables.

## High Gold.

The two fums compared.
Remains good 315.
Wanting 266.
Remains good $49-32 \mathrm{ds}$, for which muft be put 4 drachres and $\frac{1}{2}$ of copper, and then the whole will be of the ftandard of 21 carats and $\frac{3}{4}$ : the weights of the metals being confequently increafed to 12 marks and 4 ounces exactly, becaufe of the addition of the allay.
There remains only to know how you may calculate the proportion there is between 49.32 ds of fine gold, and 4 drachms and a half of copper. But the operation is eary, to one who is acquanted with the frit principles of arithmetic, and knows, alfo, that 696-32ds good are worth a mark of copper, or 64 drachms; and that, accordingly, 5.32 ds , and 5-8ths, are worth a drachm.
This example, which relates to gold above the flandard, may alfo ferve for that which is below it; but, in that cale, as many $3^{2}$ ds are to be added as were found wanting.
The chief.reafons alledged for the allaying of coin, are, 1. The mixture of the metals, which, when fmelted from the mine, are not perfectly pure. 2. The faving of the expence that it muft otherwife coft, if they were to be refined. 3. The neceffity of rendering them harder by mixing fome parts of other metals with them, to prevent the diminu ion of weight; which pieces of money might fuffer in time by, being often handled and rubbed. 4. The melting of foreign gold, or coin, which is allayed. 5. The charges of coinage, which muft be made good by the profit arifing from the money coined. 6, and laftly, the duty belonging to the fovereign, on account of the power he has to caufe money to be comed in his dominions. See Gold and Silver, and Refining.
The allay of copper for fatues, guns, or bells, has allo its proportions; but, as they are arbitrary, and depend on the tatte and experience of the founder, it is hardly poffible to afcertain the rules of it.
Mondicur Felibien pretends that the good allay for flatues,

## A L L

## A L L

bo brafs figures，ought to be made of one half of rofe cop－－ per，and half of yellow copper，or common brafs．Accord－ ing to others，and to Monfieur de St．Remy in particular， there ought to be four pounds of brafs，and eight of tin，in y 100 weight of red，or rofe－copper．Which of thefe opi－ nions is beft grounded，muft be left to thofe who have experi－ ence in the cafting and allaying of thofe metals for their va－ rious purpofes．
To make the mixture fit for great guns，mortars，and other－ pieces of artillery，the beft and fofteft tin of Cornwall is a ne－ ceffary ingredient fkilfully applied．There mult be 6,7 ，or 8 pounds of it to 100 weight of red copper，more or lefs， according as this laft metal happens to be of a better or worfe quality．
The allay for bells is ufually made of 20 pounds of the hardeft tin to 100 weight of rofe－copper．
The allay，or mixture for the feveral forts of pewter defigned for difhes，plates，and other houfhold utenfils，is commonly made of red copper，regulus of antimony，and bifmuth，or lead．The pewterers at Paris ufe the word alloyage inftead of alliage（allay）and have borrowed that word from their fta－ tutes，where it is faid that the founding pewter muft be（al－ loyé）allayed，with fine copper and bifmuth．See the article Tin，where you will find the methods of allaying or mixing the feveral forts of tin．
To Aliay，or Alloy，is to melt feveral metals together， in order to mix，or incorporate them with each other，that they may form afterwards but one and the fame matter． Gold and iron cannot be allayed，or duly incorporated toge－ ther by melting，nor even be foldered together，without the help of copper．Tin melted with gold becomes fo clofely united with it，that it is extremely difficult to feparate them， a fmall quantity being even capable to foil a whole cafting． See Assay．

## REMARKS．

Perfons who purchafe plate fhould be careful to deal with thofe of known honour and credit in their bufinefs，there be－ ing very great deceit and impofition therein，notwithftanding the laws，and the care of the goldfmiths company to prevent them．For the company have long complained that there are numbers who counterfeit the hall mark，becaufe their metal is worfe in point of quality，or has more allay therein than the law directs；and yet the buyer pays the fame price for it，as if the wrought plate was made according to the le－ gal ftandard．This is a great evil，and chould be guarded againf．
ALLIGATION，is a rule in arithmetic，which may be called the Rule of Mixture，or of compounding ingredients，be－ caufe it teaches how to mix feveral fpecies of fimples accord－ ing to any intent，or defign，propofed；on which account we fhall take notice of it．It is either medial or alternate． Alligation medial thews what the mean price of a pound， ounce， $8 x$ ．is worth，when feveral quantities of feveral va－ lues are mixed together，\＆oc．as per the cafe following． Alligation alternate fhews how much of various kinds of fim－ ples may be taken to make up any affigned quantity of a compound which will be worth a price propofed．

## Of Medial Alligation．

Cafe 1．A refiner，or goldfmith，hath gold $12 \xi$ at 4 I．per $\xi_{3} ; 8{ }_{3}$ at $1.45 ; 3 \overline{3}$ at 1.468 ；and 93 at 1.4134 per $\xi$ ：what is an ounce worth，fuppofe thefe be all melted down together？Anfwer，1． $475^{\frac{1}{2}}$ ．
Rule ．．．Multiply each quantity given by the price；then by diréct proportion lay，

As the fum of the quantities given，
Is to the fum of the faid products；
So is one ounce of the mixture，
To it＇s value．
See the work following：

|  |  |  |  |
| :---: | :---: | :---: | :---: |
|  |  | 4：－：－the produc |  |
| 8 | by | 4：5：－produceth | 34 |
| 3 | by | 4：6： 8 produceth | $\pm 3$ |
| 9 | by | 4：13： 4 produceth | 42 |
|  |  |  | 137 |

 and，by the fame rule，the value of any other quantity of that compofition is found ：as fuppofe 7 in the laft example， which is worth $29 \frac{31}{2}$ ．

For as $32: 137:: 7: 29 \frac{31}{32}$ ．
Cafe 2．To increafe or diminifh a compound proportion－ ably，by knowing the feveral quantities of the fimples in the compofition．
Rule．As the fum of the particular quantities of the com－ pound given，
Is to the whole quantity propofed to be augmented or leffened：
So is each particular quantity in the given compound， To the due proportion required of that fpecie，fine－

Vol．I．

Example．I would augment the compound in the laft cafe to $4^{8} \frac{3}{3}$ ；that is，I would add 16 to the 32 ；how muck muft I take of each fimple ingredient？See the operation．

| 12 | Then，as $32: 16:: 12$ 年 6 anfwer． |
| :---: | :---: |
| 8 | $32: 16: 88{ }^{2}$ |
| 3 | $3^{2}: 16: 3{ }^{16}$ |
| 9 | $32: 16: 9944^{\frac{5}{2}}$ |
| Sum 32 | Sum $=16$ |

| 12 | at | $4: 5:-$ |
| :---: | :---: | :---: | :---: |
| $4^{\frac{\pi}{2}}$ | at | $4: 6: 8$ |
| and $3^{\frac{3}{2}}$ | at | $4: 13: 4$ |

48 fum for proof in the whole．
Cafe 3．Having the fimples of any compound given，to find how much of each kind of fimple ingredient is in any part of that compofition．

Rule．As the total of the compofition，
Is to the quantity of any fimple in that compofition ：
So is the total quantity propoled to be proporionably compounded，
To the quantity of each fimple to be in that propored quantity．

Example．I would know how much of each ingredient（or price of gold mentioned in the firft cafe）is in a pound，or 123 of the $3^{2}$ ，being the compound given？The oparation．

$$
\begin{aligned}
& 32: 12:: 8 \text { 3 of } 4: 5:- \\
& 32: 12:: \quad 9 \quad 3 \frac{3}{8} \text { of } 4: 13: 4 \\
& \text { 等 } 12 \text { fum proof. }
\end{aligned}
$$

Cafe 4 ．The total of the compound of two fimples，with the total value of that compofition，and the value of an unis of each fimple being given；to find the quantity of each uim－ ple ingredient in the compofition．

Rule．．．Multiply the total quantity of the compofition（here 20）by the leffer price of the unit（here 4）then deduct the product from the total value of the compolition（here 82） and divide the remainder by the difference in value of an unit of the two fimples given（as here 5 s ．or $\frac{1}{4}$ of a pound） and the quotient is the quantity of the higher－priced fimple （here 8）whofe complement to 20 is 12 ；fo that the anfwer is 122 of gold at 41 ．per $\frac{3}{3}$ ；and $8 \frac{3}{3}$ at 41.5 s．per $\frac{3}{3}$ ． This canon，or theorem，is difcovered algebraically．

$$
\text { Gold at } 4 \text { l. per } \xi \text {. }
$$

Total of the $\}=20 \underset{3}{ }$ Total value 1.82
compofition $\}$
80

$$
\left.\overline{80} \quad 1 . \overline{\frac{1}{4}}\right) \quad 2(8
$$

Care 5．To find the quantities of each fimple ingredient （when thefe fimples are more than 2 in number）contained in a compofition，by having the totals of the quantity com－ pounded，and of the value；and alfo the value of an unit of each fimple ingredient．

|  | of gold，at 1.4 per $\boldsymbol{3}=$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | ditto， |  |  |  |  |
|  |  | at | 4 |  |  |
|  | dito， | at |  |  |  |

Total of the comparifon 32 Total value 1． 137
Rule．To thefe kind of queftions，as in thofe of alligation alternate，various anfwers may be given，and yet all true． You may beft do them by 2 at a tume，as in the laft cafe． I fuppofe the 2 firft－15 of the total mixture，and 63 of the total value，and fo I find 3 at 41 ．and 12 at $41 . \frac{1}{4}$ ：then the reft of the total compound is 17 ，and of the value 74 ；which， according to the 2 latter prices，gives 16 at $4 \frac{5}{4}$ ，and I at $4 \frac{2}{3}$ 。 But note，That you muft fo difcreedy divide the total quan－ tity and value，that，when the product of the firf in 1 of the 2 prices is taken from the latter，the remainder may not be fo much as（when divided by the difference of the prices） which give a quotient fo great as that part of the total quan－ tity of the ingredient which you fixed upon，or fuppofed，

For greater variety, fee the beft books wrote profeffedly on arithmetic.
ALLOCATION, the admitting or allowing an article in an account, and paffing it as fuch. It is alfo an allowance made upon an account, and is a word ufed in the exchequer; hence allocatione facienda is a writ directed to the lord treafurer and barons of the Exchequer, upon the complaint of fome accountant, commanding them to allow bim fuch fums, as he has lawfully expended in the execution of his office.
ALLOTTING, or ALLOTMENT of goods, is when a fhip's cargo is divided into feveral parts, which are to be bought by divers perfons, whofe names are written on as many pieces of paper, which are applied by an indifferent perfon to the feveral lots or parcels, and by this means the goods are divided without partiality: for every man has the parcel of goods, that the lot which his name is upon; is appropriated to. See Inch of Candie.
ALLOWANCES at the cuftom-houfe, to goods rated by $\dot{\text { weight, are two, draught and tare. }}$
Draught is to be firft deducted, and then the tare, where there is any cuftomary.
The manner of making the allowance for draught, is, for the weigher to call out the full and true grofs weight in the fcale; which is to be entered in the land-waiter's book, and an allowance made for each weigh or fcale, according to the following table.

10 to 18 C . $\quad$ - $\quad 7 \mathrm{lb}$.
Tare is the weight, or an allowance made in confideration of the cafks, bags, or other kinds of packages. For the accommodation of trade, there are in many cafes tares fettled and eftablifbed by cuftom and experience. See the article Tares, Tret, Custom-house, Bills of Entry.
Allowances on the delivery of thefe goods, which are chicfly linnens, are as follows.
If linnens are contented in Flemifh or Dutch ells, two ells in 120 are to be allowed for Chortnefs of meafure.
But if linnensare contented in Englifh ells, there is no allowance made to the importer.
Of French lockrams, two ells in every 120 are to be allowed. The following are the fettled allowances for wrappers.
On Hamburgh
and $\left.\begin{array}{l}\text { linnen; ; }\end{array}\right\}$
in packs and bales, $I$ ell in 40 , but to exceed 120 ells on any one pack, and allo let the pack be ever fo large.

## Heffens canvas

Dantzick linnens, 4 ells in every 120.
Flanders linnens, 3 ells in every 100.
Holland's duck, 4 ells in every 100 ; but, if brought loofe, there is no allowance. See the article Linnens.
Allowances on goods rated by meafures of capacity liquid or dry. Article 1. Allowances upon delivery.
Olives imported in large cafks are to be gauged, and $\frac{x}{3}$ of the contents allowed for liquor.
Every $\left\{\begin{array}{l}\text { Pipe } \\ \text { Hoghthead }\end{array}\right\}$ of wine, which fhall be run out,
And not above $\{9\}$ inches left therein, Thall he accounted and no fubindy paid for the rame. Anly for the merchant enters his wines filled, he pays duty only for the net wine contained in the calk, and has no allowance out of the duties for leakage: when wines are entered unfilled, duty is to be paid for the full contents of the cafk, though it may want confiderably of being full; but then the merchant is allowed 12 per cent. out of the duties for leakage. See Wines.

$$
\begin{array}{r}
\text { The Out Ports want } \\
\text { more than }
\end{array}\left\{\begin{array}{r}
66 \\
\frac{625}{106} \\
1025 \\
\frac{144}{1425} \\
6 \\
\hline 59
\end{array}\right\} \text { of being full, }
$$

The merchant lofes by entering them unfilled. In general if any cafks of wine, imported into the out-ports, want much more than one tenth of being full, 'tis for the merchant's advantage to enter them filled, otherwife unfilled.
Five flafks, or 7 and $\mathbf{1}$ half betties of Florence wine, are allowed to pals for a gallon. Five bottles of other wines, imported in bottles, are allowed to be reckoned to a gallon, unlefs the merchants or officers think proper to meafiure.
Jars of oil are allowed to pafs at 22,24 , or 26 gallons.
A cheft of oil ufually allowed at 8 gallons.
Barrels of mum, are allowed to pais at 48 gallons.
Kegs of fpruce beer, at 4 gallons.
In cafe of leakage, mum barrels and kegs of fpruce beer may be filled up, before computation is made.
Tar barrels are allowed to contain 3 I and I half gallons, and are to be filled up before computation is made for the duties. See the article Tar.
Awns of Rhenifh wines are allowed generally to pafs at $3^{8}$ and I half gallons.
For merchandizes which are rated by fuperficial and folid meafure, there are no allowances. See the article Timber. ALLUM, or ALUM, a kind of foffil falt, or white mineral, which is often mixed with earth, from which it is feparated, by wafhing it with water; and which impregnates itfelf with the eatire quality of the falt, acquiring thereby a tafte much like that of brine. 'This water is afterwards boiled to make it evaporate, as is done in the way of refining of falt-petre.
The principles which compore allum, are very clofely united. The chief ufe of allum is in dying, becaufe it renders the colours clear, bright, and lafting: it is, if I may fay fo, the tie of adhefion of the colours to the ftuffs, as ink, or other colours, upon paper. Were it not for the medium of allum, the ink would foak through the paper, and the effort of the air would foon feparate the dye from the Ruffs, or tarnifh their whole luftre. The effects of allum are to be afcribed to its ftyptic and aftringent quality, and therefore it pre-
ferves paper that has been dipped into allum, from finking, when written on.
There are three principal forts of allum ; namely, the allum of Rome, or Civita Vecchia; the allum of England, otherwife called rock allum, white allum, or ice allum; and the allum of Liege, or Meziers; befides that which comes from the Levant.
The Alium of Rome, fays F. Labat, is reddif, becaule the earth whence it is taken is of that colour. In order to have the beft, you nuft chufe that which has but little duft, is reddifh both within and without; and, above all, take care it be not counterfeit; for there are people, who know how to give a reddifh colour to the allum of England and Liege. The fureft fign by which you may know it to be counterfeit, is, when, by breaking it it is not fo red within as without.
The Allum of England, is in great pieces, or lumps, clear and tranfparent like cryital. It is more or lefs fine according as it has been well or ill purified. Sometimes there is allum found of a blackifh colour, and fomething moif. In order to chufe it good, it muft be white, clear, tranfparent, dry, with but little duft, or dirt.
F. Labat obferves, that there is another kind of allum made in England, which is alfo called roch, or ice allum; it is the fame as that we fpeak of in this article; but adds, that it is not by far fo good as that of Civita Vecchia. Monf. Lemery afcribes the famequalities to it as to the former, but obferves, that it is not of fo great ufe in phyfic, becaufe it is not fo ftrong. The Englifh rock, or roche allum, is made from a bluifh mineral ftone, which abounds in the hills of Yorkbire and Lancafhire. They calcine it on a hearth or kiln, and then fteep it fucceffively in feveral pits of water. Afterwards they boil it for about twenty-four hours, and then let it ftand for about two hours; the impurities fubfiding, and leaving a clear 1 i quor, which is put into a cooler, adding a due proportion of urine to it. In three or four days it begins to gather into a lump, which being taken out, wafhed, and purified over again, is fit for ufe.

## The Manner of difcovering and preparing Allum at Civita

 Vecchia.The ftone that produces allum is taken out of the open fields, and not out of quarries, as free-ftone is in France, and other countries. The workmen, who are ufed to fearch and rake for thofe ffones, know by certain tokens, and by a long experience, which are the places where they are to be found, without much raking or digging. In thofe places, which abound moft with allum, there commonly grow fmall fhrubs, called zgrifolios, in the language of that country. They are ever-greens, and much like the holms that are feen in Provence and elfewhere: but the agrifolios have their bark green as well as the leaves, which are broad, thorny, and of a darker green than the bark. In meeting with thofe fhrubs, either upon the mountains of Tolfa, or on the fides of them, or in the plane, it is a fure fign that there is allumftone underneath; and the more there are of thofe fhrubs, the more certain we may be of meeting therewith: There are fometimes met with allum-ftones fpread upon the furface of the earth. That fign cannot be equivocal ; it Thewing that you may dig without fear of being difappointed, and be certain that the bed or vein lies near, and is plentiful.
They employ commonly three forts of workmen, for the finding and raking of thofe ftones. The firf may be ftiled the difcoverers. They are thofe, who, by a long experience, are become expert in the knowledge of the figns, which point out the places where the allum-ftones lie. Thefe direct the work, in order to trace the vein, and not to be mifled, when any obftacle is in the way that may occafion a miftake. The fecond are thofe who break the rocks, which fometimes inclofe the good ftones, and cover or hide the veins. Befides pick-axes, iron wedges, and twi-bills, which they ufe, they are alfo often obliged to blaft them with gunpowder, as in metallic mines. The third workmen are thofe who pick and chufe the ftones; for thofe that are found in the fame vein, are not all true allum-ftones. 'Tis neceffary to have a perfect knowledge of them, not to be miftaken, otherwife the farmiers of them would be drawn into ufelefs, and often very confiderable, expences. The ftones are commonly whitifh, greyifh, or blue, or even mixed with thofe three colours. Thofe marks, however, are lefs fure than the grain, which feldom milleads thofe who are ufed to that fearch, and to the picking of the ftones.
When all thofe figns prove equivocal, they burn and calcine two or three wheel-barrows full of the ftones; and, by the confequence, they judge of what may be expected from the vein that is opened.
When the flones prove, good, they carry them to the kiln, and place a quantity rounds the fides of it, as when they defign to make lime; and they give them more or lefs fire, according to the quality of thie fone, and the nature of the place whence it was taken. That is to fay, if the fone is fofe and dry, and was taken from an open place on the top of the mountain, where it was expofed to the heat of the fun, it requires much lefs fire, than when it is foft but moift, being taken out of the bowels of the earth, where it had
nothing but moifture, and very little of the fun's heat. It is impoffible to prefcribe general rules upon this fubject, becaufe it depends very much from the circumfances, which muft be left to the capacity and honefly of the workmen, who have the direction of the work; but yet the mafter ought to know as much, or more than they, to prevent impofition. For the expence of this manufacture is very large; befides which, there mult be 30,000 crowns paid to the apoftolic chamber, to whom all the ground of thofe allum mines and the neighbouring woods belong.
When the fones are baked, and the kiin uncovered, they pick out the ftones a fecond time, and thofe which are fufficiently baked, are carried to the place where they are to be extinguifhed: they put into a feparate place of the kiln thofe ftones that are not enough, in order to bake them a fecond time with other frefl fones that are to be put into the kiln. They are called bif-cakes, becaufe of their fecond baking. They throw away as ufe'efs thofe that were burnt, inftead of being only baked; and thefe they call fcales.
The ftones that are fufficiently baked, are carried into a place furrounded with low walls, the foil or ground of which is well paved, and has little channels dug into it to gather the water. They make'a heap of thofe ftones between two channels, and make the heap commonly 15 or 18 feet long, and 5 or 6 broa 1 at bottom; and 8 feet high, and narrow at the top; and they take care that the fides be very fmooth and very clofe. Upon that heap of ftones, they throw water with fcopes in order to extinguifh the fire hid within the ftones, as is practifed in the burning of lime-fones. This work is continued night and day, during 25 or 30 days, and till the water, thrown upon the heaps, runs off perfectly cold. For till that time the ftones heat the water, that runs off after having penetrated them; and is fo hot in the beginning, that it perfectly boils. The-heat decreafes by degrees, as the ftones which have been fet on fire, begin to cool. That water is carefully kept, not only to extinguifh other ftones, but alfo to put it into coppers with the ftones that have been baked and extinguifhed: for that water could not pafs through the pores of the ftone, without béing impregnated with a great quantity of alluminous particles: fo that it helps to form the grains of allum in the moulds: they call that water lye.
When the ftones are entirely extinguifhed, and reduced to a foft, and as it were, a liquid mafs, they carry the whole into large coppers, wherein they pour a fufficient quantity of the water, which ferved to extinguilh them; and they kindle a very great fire under it, that is continued for r 6 , 18 , or even 20 hours: during this time they ftir the boiling matter with iron fhovels, to make the ufelefs ftones, earth, and other drofs, come to the top, which they ikim off, to purify the whole. They continue this work, till the matter, or, as they file it, the alluminous lye, be clear, clean, and thoroughly liquid.
When in that condition, they pour it into wooden gutters, which convey it into fquare wooden frames, made af ter the manner of inverted pyramids, about 4 or 5 feet high, and 2 feet and a half broad. The point of the pyramid is bored through, but they ftop the hole, when they pour the lye into it.
They leave it there to fettle and cool, for 10 or 12 days; during which time the alluminous particles unite together, and ftick to the fides of the frame, where they harden, and form an infinite number of various figures.
When they judge that the whole quantity of allum they can expect, is formed, they open the hole at the bottom of the frame, to let out what remains of the lye, that is not congealed; but, before they take the allum out, they pour more lye into the frame, to wath it and purify it from the drofs and filth that may fick to it's outfide: and, after having left the refidue a day or two to dry, they take it out of the forms, and lay it up in the warehoufes.
There are about 60 days required to perform that work, from the time the ftone was taken out of the quarry or vein, till the allum be fit for fale.
The farmers of this manufacture make confiderable profits by it, notwithftanding the high price they pay for their farms, and the expences they are at. They have warehoufes at Civita Vecchia, where it is weighed, and from thence it is carried in bags into the veffels of the purchafers, which are generally barques from Marfeilles.
ALLURE, or ALLEVEURE, a fmall brafs coin ftruck in Swe den, worth about 4 French fols, or about $2 \frac{1}{4}$ Englifh money. Two allures make a roufting, and 8 rouftings a mark of copper.
ALMADY, a fmall canoe, four fathoms long, generally made of the bark of trees; it is ufed by the negroes on the coaft of Africa, to trade among themfelves, and with the Europeans, who lie off the fhore for trade.
Almady, is alfo a veffel ufed in the Eaft.Indies; it is made in the form of a weaver's fhuttle, except that it is fquare at the ftern. Some of them are 80 feet long, and 6 or 7 feet wide. They carry great fore of merchandize, and with thefe veffels the richeft Indian merchants drive their greateft trade; whether
they load them on their own account, or let them out upon freight to the European merchants.
ALMENE, a weight of two pounds, ufed to weigh faffron in feveral parts of the continent of the Eaft-Indies.
ALMOND, a meafure in Portugal for oil. The Portugueze fell their oil by almonds, 26 of which make a butt, or pipe. Each almond contains i2 canadors, and a canador is equal to a mingle of Amfterdam. See the article Mingle.
ALMONDS, this kind of fruit, and the tree that bears it, are too much known to want a defcription.
The trade of almonds, which is carried on in France, is confiderable, both on account of their oil, and the large quantity of them ufed in Lent, either fhelled or unhelled; a great quantity of the fweet are ufed in fugar-plums, and of the bitter ones in bifcuits, confects, \&c.
The grocers and druggifts of Paris have both forts from the provinces of France, and the neighbouring countries, as Provence, Languedoc, Touraine, the county of Venaiffin, Avignon, \&e. They have allo fome from Barbary. "The beft are thofe of the county of Venaiffin; thofe of Barbary and Chinon in Touraine are the worft.
Almonds in the thell come from the fame places as thofe that are otherwife, even thofe which are called Florence almonds; to which they give that foreign name, with no other view but to make them more valued; for it would be more proper to call them almonds of Languedoc, or Touraine, from which provinces they are brought, than of Florence, from whence they do not come.
How to make a good choice of almonds, is pretty well known: neverthelefs, merchants who buy them in calks, chefts, or' bales, ought to examine whether they be the fame throughout: for, in this kind of merchandize, the beft are often placed at the top, in order to fell the better.
Two, forts of oil are drawn from almonds, either fweet or bitter, the one by the help of fire, the other without. That which is extracted by fre is good for nothing except to burn ; but the oil of fweet almonds, drawn without fire, is fit for feveral different ufes, either in phyfic or perfuming.
ALMOXARIFARGO, is a duty of $2 \frac{1}{2}$ per cent. paid ad valorem upon all bull's bides, to the king of Spain, in Spanifh; America, upon the exportation of thefe hides, which are fhipped on board European veffels. Befides this duty, there is allo another duty called that of the quinto, but only at the rate of four rials per hide.
This is alfo an old duty paid upon the Britifh woollen manufactures in old Spain.
All goods in Spain, it mult be obferved, are rated at the cuf-tom-houfe by maravedies, or rials; and the cuftoms are paid by one or other of thefe denominations.
The cuftoms called alcavalas, [fee Alcavalas] and fome others, are paid in vellon, or copper money; the old duty called almoxarifargo, and fome others, are paid three quarters in vellon, and one quarter in plata, or filver money.
The plate money is 50 per cent. better than the vellon money of the fame denomination. The merchants there always make up the accounts of their cuftoms in their own books in vellon, and therefore, make an addition of 50 per cent. 'for fuch part of it as is paid in plate.
Fifteen rials vellon are a piece of eight, and 34 maravedies make a rial.
The duty called almoxarifargo is in per cent. on fome of our woollen manufactures, on others not above 5 per cent.
On thofe goods where the almoxarifargo is in per cent. the old alcavalas is no more than I per cent. But where the almoxarifargo is no more than 5 per cent. the old alcavala is $5 \frac{1}{2}$ per cent.
So that the duties in Spain upon an 100 maravedies only will arife thus, even to the 1 coth part of a maravedy, on the goods which pay the higher almoxarifargo. - 100 maravedies are fuppofed to be the value of the goods.
II per cent. almoxarifargo, quarto plata.
2 Dos per ciento-quarto plata.
Uno y medio per ciento, with a premio, or addition of 5 per cent.
Uno per cent, noeva alcavala.
Uno per cent. donativo.
Dos per ciento-quarto plata.
Per ciento.
Per ciento.
Per ciento-quarto plata.
Old alcavala.
Per ciento-quarto plata.
$\overline{24}$ in all; fo that, by this account, the whole duties are $24 \frac{\mathrm{r}}{7}$ of 100 maravedies.
But here the reader muft obferve, that a quarter part of fome of thefe duties is paid in plata, which, as faid before, is 50 per cent. letter than vellon; and that there is alfo a premium, or addition, of 5 per cent on one of the duties. The addition then of this 5 per cent. and allo of the 50 per cent. will ftill fwell the account, and add to the forefaid $24 \frac{1}{4}$ per cent. that is to fay,

The quarter part of 11 per cent. almoxarifargo is $2 \frac{75}{105}$ maravedies, which, being puid in plata, which is $50^{\circ}$
por cent. better than vellon, the $\frac{x}{2}$ mar. 1001b part of a mar. of $2 \frac{75}{150}$ maravedies muft be added, viz.
The quarter part of three times dos per ciento paid in plata for the fame reafon muft be added
The premium of 5 per cent. on $\frac{x}{2}$ maravedies muft amount to -
1 $37 \frac{\pi}{2}$

The laft duty is $\mathrm{I} \frac{\mathrm{z}}{4}$ maravedies; and, the quarter of this being $31 \frac{1}{4}$ hundredth parts of a maravedy, the half of the fum fhould be added for it's being paid in plata; but to avoid fo inconfiderable a fraction, the merchants in their accounts add only the half of 30 - -

| In all | 0 <br> 2 | 15 |
| ---: | :--- | :--- |

The cuftoms, without thefe additions, amount to $24 \frac{1}{4}$ per cent. maravedies So that the whole cuftom is on every? 100 maravedies

But, where the almoxarifargo is no more than 5 per cent. the old alcavala is $5 \frac{3}{2}$ per cent. and the whole cuftoms as follow, viz.
5 per cent. almoxarifargo-quarto plata.
2 dos per ciento-quarto plata.
$1 \frac{1}{2}$ per ciento, with a premium, or addition, of 50 per cent. I per ciento nova alcavala.
I per ciento donativo.
2 dos per ciento - quarto plata.
$\frac{1}{2}$ per ciento.
I per ciento.
2 dos per ciento -quarto plata.
$5^{\frac{1}{2}}$ old alcavala.
$\underset{\text { x }}{\frac{x}{x}}$ uno y quarto per ciento. - quarto plata.
$22 \frac{3}{4}$ - fo that, according to this table, the whole duties are $22 \frac{3}{4}$ per cent. maravedies.
But in this, as well as in the former cafe, for the quartoplata and the premium additions mult be made, viz.

And the whole duty on goods, paying
but 5 per cent. alinoxarifargo, a-
mounts to - -
There duties of $\overline{26} \frac{60}{T O \%} \overline{\text { maravedies, }} \quad 24$ per cent. are reckoned in vellon, or copper money. maravedies per cent. are reckoned in vellon, or copper money.
But, to hew how much this a mounts to upon the real value of Britifh goods, it will be neceffary firft to fix the value of our goods, and then to fhew what gratias are allowed, or abatements made, to the merchants out of thefe cuftoms.
To begin with a comparifon of the cuftom-houle valuation, and the real value, and particularly in the cafe of Englifh bays. A piece of bays rated at ro,0co maravedies, pays 2,660 maravedies cuftoms.
The fame has been ufually fold for 20 ducats, or 220 rial's plate : to which add 50 per cent. for vellon, or copper money, and it will amount to $33^{\circ}$ rials; and thefe, multiplied by 34 maravedies, will produce $\mathbf{1 1}, \mathbf{2} 20$ maravedies; that is, $\mathbf{r}, 220$ more than the cuftom-houfe valuation.
Now 2,663 maravedies on 10,000 , is $26 \frac{3}{9}$, or $26 \frac{57}{\mathrm{Tcox}}$, per cent. but on $I I, 220$ is not quite 23 per cent.
But, in the next place, 33 per cent. is abated for the farmer's gratia; that is, in 100 pieces. of bays, the farmer of the revenue counts no more than 67, he receiving cuftom for no more; fo that the whole roo pieces pay only the cuftom of 67 pieces.
Upon the payment of thefe cuftoms there is alfo a quarter part abated for the king's gratia. A quarter part of 67 is $16 \frac{3}{1}$ : this reduced the cuftoms on 67 pieces to no more than the cuftom on $50 \frac{1}{7}$.
But other allowances are alfo made to the merchants, which brought the cuftoms on 100 pieces of bays down to 43 , or thereabouts, which make an abatement of 57 per cent. on the cuftoms, which has been fhewn were not above 123 per cent. of the real value of the goods, and reduced the, fame to about $9 \frac{6}{12}$ per cent. on our bays.
On other goods the deductions are greater. The farmer's gratia is 45 per cent. the king's gratia a quarter part of the remaining 55 , which amounts to $13^{\frac{3}{4}}$ per cent. and reduced the goods to $41 \frac{1}{4}$ per cent. of the quantity whereon the cuftoms were paid; which is the fame thing as abating $58=$ per cent. out of the cuftoms, and reduced the fame, on all goods paying the in per cent. almoxarifargo, to lefs than $9 \frac{1}{T}$; on
all others which paid but 5 per cent. almoxarifargo, to about $8{ }^{3}$ per cent.
ALNAGE, or AULNAGE, i. e. ell-meafure; the meafuring of woollen manufacuures with an ell, and the other functions of the alnager.

## Rem, AR K

All the attempts which our forefathers made for regulating of manufactures, when left to the execution of any particuIar officer, in a fhort time, refolved but into a tax on the commodity, without refpect to the goodnefs thereof.-As is moft notorious in the cafe of aulnage, which was intended for a proof of the goodnefs of the commodity; and to that purpofe a feal was invented, as a fignal that the commodity was made according to the flatute: which feals, it is faid, may now be bought by thoufands, and put on what the buyers pleafe. Sir Jofiah Child on Trade, p. 2, feq.
That impofitions of this kind upon foreign nations, have proved highly injurious to our woollen manufactures, by giving our rivals an opportunity to fupplant us therein, is well known to thofe who have any experience in the trade of Portugal and Spain.
ALNAGER, ALNEGER, AULNEGER, q. d. meafurer by the ell; fignifies a' fworn public officer, who, by himfelf, or deputy, is to look to the affize of woollen cloth made throughout the land; i.e. the length, breadth, and work thereof, and to the feals for that purpofe ordained.
There are now three officers relating to the alnage, or regulation of cloth; all which were antiently comprifed in one per-fon.-Thefe bear the diftinct names of fearcher, meafurer, and alnager.

## Remazks.

A duty being impofed on woollen cloths, for the maintenance of an office to look to that manufacture, and the loyalty, as they call it, of the ftuffs produced therein; the alnager, who had the direction of the whole, is now become only the collector of that duty, or fubfidy, granted to the king, though he fill holds the ancient denomination, becaufe the collection of that fublidy was committed to him.-Nor was he abridged of his meafuring and fearching, till, by his own neglect, it was thought proper to feparate the two offices. So that there is now a peculiar meafurer, diftinct from the alnager, or collector, to allow the affize of the length and breadth of every cloth made in England and Wales.
ALOES. That name belongs to three different things. I. To a very precious and fearce tree. 2. To a drug very ufeful in phyfic. 3. To a plant, from the roots and leaves of which that drug is extracted, which is their juice. Moft authors miftake the plant and the tree for each other ; becaufe, no doubt, we have but little knowledge of the tree; and the drug, which the plant produces, is much better known, and of a much greater ufe.
We may judge of the value and fcarcity of the aloes-trees by the fabulous origin which the Indians, and even fome European authors, have not not blufhed to afcribe to it, fuppofing it to grow in the terreftrial paradife, and not to be tranfmitted to us but by means of the waters which fometimes overflow that delicious place.
There ${ }^{-}$was no occafion to wait for the arrival of ambaffadors from Siam into France, in the year 1686, to be undeceived, and to explode thofe fables, to which no perfon of fenfe could give any credit, not even they who propagated them. But thofe ambafladors contributed very much towards giving us a true knowledge of thofe trees, of which hardly any thing but the name was known till then.
The aloes tree grows in China, in the kingdom of Lao, and in Cochinchina. It is about the fame height and form as the olive-tree: its leaves are alfo much like thofe of that tree; and its fruit is red, and differs but little from a cherry. The trunk of the aloes-tree is of three colours, which make three forts of different woods, names and properties. Immediately under the bark, it is black, compact, and heavy. The next wood is of a tanned colour, light, full of veins, and is like rotten wood. Finally, the heart is that precious wood of tambac, or calembac, which is dearer in the Indies than even gold itfelf; and which, in the opinion of the Siamefe, was the moft fcarce and moft valuable of all the magnificent prefents they brought from their mafter to Lewis XIV.
The calembac has a ftrong, but agreeable fmell. It ferves to perfume cloaths and apartments, is a fovereign cordial in fainting fits, and againft the pally. It is alfo ufed to fet the moft precious jewels that are worked in the Indies.
Of the two other woods, that which is next to the bark is black, and, for that reaion, the Portugueze have given it the name of Pao d'aquila, eagle-wood. It is no commodity for trade in France, where it is only to be found in the cabinets of fome curious perfons. The wood of a tan-colour, which lies between the eagle-wood, and the tambac, is nothing but the calembac, which is the only true aloes-wood that the druggifts at Paris are able to fell, the other two forts being too fcarce; and all that quantity of wood to which the name of aloes is given being without any virtue, and of no worth at all.

Vole $I_{t}$

The wood of calembac mult be chofen of a Chining yellow, and well veined without. It thould be porous, and of a yellowiht white within; light, of a refiny quality, and like rotten wood. It ought to be of a bitter tafte, like that of the drug called aloes, which, on that account, has communicated its name to it: when thrown into the fire, it ought to burn like wax, and yield an agreeable feent. The true calembac is generally in flat bits; which, ogether with its lightnefs, eafily diftinguifhes it from many other forts of wood people pretend to fell inftead of that.
The kingdom of Tonquin produces as nuch aloes as China and Cochinchina; and, after the filks, its greateft riches confift in that precious tree. The aloes of Tonquin is fo good, that fome of it is fold there 1000 crowns per pound, more or lefs, according as it has more or lefs greafe, or fat in it, that which bas none fells hardly for three crowns, being fit only for inlaid works, or for beads, fuch as are to be feen at Paris.
All the Eaftern people, efpecially they who let their beards grow, make a very great account of this perfume, becaufe of the cuftom which prevails in all the Eaft, not to receive in their houfes any perfons of note without the ceremony of prefenting them with perfumes; which is performed by covering their heads with a piece of cloth, or a large filk, or corton, handkerchief, under which they put a fmall pan, wherein they burn aloes, or fome other drug of an exquifite fcent.
Tavernier, in his account of Tonquin (Relation du Tonquin) afferts, that he faw at Ifpahan a $\log$ of aloes-wood, which was 6 feet long, and 2 in compais, which had coft 40,000 pardos, that is, 54,000 French livres.
Another account of the aloes wood If as follows:
The aloes is an aromatic wood, which comes chiefy from the kingdom of Champaa, a country fituated on the eaft of Camboia, called by the Chinefe, Triamfiaa, whofe king is tributary to the king of Cochinchina. He is obliged not only to give the beft pieces of the aloes-wood, which is called calembac, and comes from the heart of the tree, to the king of Cochinchina, by way of tribute, but alfo to fell him all the wood that is taken from it; of which he carries on a great trade, by fending moft of it to Japan. No perfon whatfoever can take any of that wood upon the foot, under pain of death. The Chinefe and other idolaters make a great ufe of it, confuming valt quantities thereof in their perfumes, and in their facrifices.
It is a large tree, which fhoots forth many branches. It grows here and there in the woods, and is moft carefully watched. The older the tree is, the more precious its wood becomes. I take it to be a kind of fig-tree, of which there are feveral forts in thofe countries, whofe fruit is not good to eat; but there is only one fort which produces the true calembac (it muft be called thus, and not calembouc.) The Arabs call it agallocum, and under that name it was known, and very much efteemed, by the ancients. The Greeks named it aloes, and xulo-aloes, that is to fay, the wood of aloes. The Hebrews ftiled it ahalon, and ahalos; fee Pfalm xiv. and Proverbs, ch. vii. The Arabs brought it anciently from Malaca, where they bought it to fell to the Egyptians, the Syrians, and the Greeks. Malaca was formerly the general mart, or ftaple, for all the nations of Afia, who ufed to repair thither for trading in the moft coftly merchandizes. Thither failed Solomon's fleet, which brought from thence, gold, aloes-wood, and other aromatic drugs. That trade of Malacca is dwindled almoft to nothing fince the Portugueze, and after them, the Dutch, have engrofled almoft all the trade of the Eaft-Indies.
The worft of aloes-wood is called eagle-wood, a name which the Portugueze gave it. There are leveral forts of it, which are of different degrees of goodnefs. All the trees which produce the eagle aloes are of the fig-tree kind. There are fome of them in the neighbourhood of Siam and Malaca, and even in fome of the Sundy illands, but they are much inferior to the calembac-wood. This latter is very much ufed in phyfic among the Eaft-Indians. It is reckoned excellent for Atrengthening the heart and the ftomach; for palpitations and fainting fits; for fhortnefs of breath, pains in the fomach, wind in the bowels, and other forts of cholics. The Indians rub a piece of that wood upon a rough ftone, on which they pour a little water, in order to feparate from the wood fome imall particles, a certain quantity of which is a dofe, which they give to fwallow with fome water, or arrack. True calembac is feldom to be met with in Europe.
The Indians have many fuperftitious notions concerning this tree. The name of this tree is commonly miltaken for that of a medicinal plant, called the aloe-plant. The former hould be wrote with an s , and the latter without an s , to diftinguith them.
The Aloe Plant, is that plant which is cultivated in the French king's gardens at Paris, and which feveral curious perfons alfo cultivate among their exotic plants : the druggifts alfo often adorn their thops with it.
It grows in many places of the Eaft and Weat-Indies; fome alfo grow naturally in Europe, particularly in Spain, in the

M
mountains
mountains of Sierra-Morena, where it grows to an extraordinary bignefs and height. Its leaves are green, thick, tough, and prickly: a kind of reddifh filk is drawn from them, which is proper to make lace. Some bits of that lace have been feen in France, which Monfieur Tournefort had carried thither from Spain. From the midft of the leaves there fhoots up a falk, which bears the bloffom and the fruit of the plant. It produces a kind of white feed, extremely light, and hemifpherical.
The aloe plants which have blowed feveral times in the royal garden at Paris, and particularly in the year 1664, have undeceived the world of a popular error, which had almoft prevaled, even among the learned; namely, that thofe plants blow only once in 100 years, and that the bloffom made a prodigious noife, when it opened. We are now ufed to fee it blow, and are affured that not only no terrible noife is heard at the opening of the bloffoms, but even no noife at all. Many of thefe plants are now cultivated in England, and fkilful gardeners can make them blow in a fhort time, by putting the pots, or boxes, wherein they grow, into a bed of tanners-bark.
The aloe which is ufed in phyfic, and which farriers alfo ufe to cure horfes, is the juice extracted from the root, or the leaves, of this plant, by incifions made into it ; which juice is thickened in the fun.
They diftinguifh three forts of aloe. The focotrine, or lucid, which is allo called fuccotrine, and ciccotrine; the citrine, and the cabaline; which yet are only the fame juice, more or lefs refined. The focotrine aloe is the moft beautiful, and the beft of all, and comes from the ifland of Zocotora, at the mouth of the Red Sea, or ftreights of Babelmandel, and from thence it has its name. The cabaline is the coarfeft, the molt earthy, and the worft of all ; it is only given to horfes, whence, perbaps, it has its name, viz. from caballa, or cavalla. The citrine is a medium for goodnefs between both. They prepare focotrine aloe in Jamaica, and fend it over into England in large gourds.
The focotrine comes in fmall bladders, extremely thin. It ought to be friable, refinous, pretty light, clear, tranfparent, and of a fine green colour; or black, or brown, fhining without, and of a citron-colour within, of a difagreeable, bitter tafte; and being reduced into powder, it muft be of a yellowifh colour, as though it were gilt.
It is the focotrine aloe that is ufed in phyfic; but it mult be ufed with great difcretion, it being a very ftrong purge. It is made ufe of in the compofition of thole pills which are called pills of Frankfort, or pills good for the appetite, and is allo the chief ingredient of thofe called angelic pills.
ALOSE, a fort of fifh, pretty much like the fardine, or pilchard, in fhape, but a great deal larger. Some will have it to be the fhad, but it is quite another filh, and is very fcarce in England. It is one of thofe filh which are called paffage filhes; or fifhes of a feafon, becaufe it never fwims out of the fea into rivers but in the fpring.
The roes of alofes are as much valued in the Eaft-Indies as thofe of fturgeon are in Ruffia; and the trade of them is not much lefs confiderable, they fpending every year many thip loads of them.
The alofe grows to the bignefs of a falmon. It is covered with large thin fcales, which are eafily rubbed off. Its head is, as it were, fqueczed in towards the upper part of its body: its mouth is peaked, and it has no teeth. There is, on the top of its head, over its eyes, a bone, or fcale, on each fide, which is fmooth and bright. Its tongue is blackih; its back white, inclining to yellow; its fidss and belly are of a filver colour. This fifh is fond of falt; and, therefore, they bait it by throwing handfuls of falt into the places where they perceive any. It is a delicious meat, and contains a great deal of oil and volatile falt. When this fifh is not very frefh, it has a fourifl tafte, which hurts the gums of thofe that eat it. There is, in its head, a flony bone, good for the flone and gravel, and for abforbing the acids, for it is an alkali. The ftomach of the alofe, being dried and reduced into powder, is proper to ftrengthen the ftomach, being fwallowed.
ALPAGNA, an animal much like the liamus and the vigognas, except that its legs are Chorter, and its muzzle thicker and flatter, fo that it fomething refembles a human face. The ithabitants of Peru reckon this animal among the beafts of burden, and make it carry 100 weight. Of its wool they make ftuffs, ropes, and bags; and, of its bones, tools. for weavers. They even make an advantage of its excrements, ufing it for fuel, both in their chambers and in the kitchen. The wool of the alpagna eafily paffes for that of the vigogna; and that of the latter, which comes from Peru into Spain, is almolt always mixed with the former.
ALPHABET, among merchants and traders, is a kind of index, with the 24 letters in their natural order, in which are fet down the names and firnames of thofe with whom open accounts are kept, and which refers to the folios of the ledger where thofe accounts are written in the form of debtor and creditor, ferving to find eafily, and without any trouble, fuch accounts as are neceffary to be turied to.
ALPHENIX, is cnly the white barley-fugar, or twitted fu-
gar, to which they give an extraordinary name, in order to render it more valuable.
This fugar, which is thought good for colde, is made of common fugar, which is boild till it becomes eafy to crack, when they pour it upon a masble table, greafed with oil of fweet almonds, and they mould it into various figures with a brafs crotchet. It is ealy to falfify it with ftarch.
ALQUIER; which is alfo called CANTAR, a liquid meafure ufed in Portugal to meafure oil: ir contains 6 cavadas, or canadors.. Two alquiers make an almude, or almonde.
Alquier is alfo a dry meafure for grain at Lifbon. It is very fmall; for no lefs than 240 alquiers are requifite to make 19 feptiers of Paris, or one laft of Amfterdam, or 38 bufhels of Bourdeaux : 60 alquiers make a muid, or buhel of Lifbon. From in 8 to 120 alquiers make a tun of Nantz and Rochelle, and 20 bufhels or io feptiers of Paris, the tun of Vannes, which is 125 alquiers : 60 alquiers is a moy, which contains about three Englifh quarters, and 2atalaikers is an Englifh bunhel.
The meafure of Oporto in Portugal is alfo called alquier, but is 20 per cent. bigger than that of Lifbon; fo that the tun yields but 87 alquiers of Oporto, which muft be underfood proportionably of the other meafures, the evaluation of which has been given above.
It has been obferved already, that 60 alquiers make a muid, or buhel, of Lilbon; but Monfieur Ricard, in his treatife of the commerce of Amfterdam, afferts that 54 only make that buthel.
The corn exported from the ifle of St. Michael into that of Madeira affords 4 alquiers advantage, or profit, per 60 ; and 60 at St. Michael's produce 64 at Madena, which is an advantage of $6 \frac{2}{3}$ per cent.
The alquiers are alfo in ufe in other places of the king of Portugat's dominions, particularly in the Azores iflands, and in the ille of St. Michael; and in thofe two places, according to the fame Monfieur Ricard, the muid, or bulhel, contains 60 alquiers there, and 240 alquiers make a laft of Amtterdam. ALQUFFOU, or ARQUIFOU *, as the merchants fpell it, is a fort of mineral lead ore, very heavy, eafly reduced into powder, and hard to melt. When it is broke it parts into fhining feales, of a whitifh colour. The potters ule it to give their works a green varnim: and in England it is commonly called potter's ore.

* The former way of fpelling that word is ufed by Lemery (Traité des Drogues Simples) under the word Plumbum. The fecond by Monfieur Afruc, in his Memoires pour 1'Hiftoire Naturelle de Languedoc, pag. 368.

The alquifous come from England in large lumps of various fizes and weights. It muft be chofen in large lumps, very heavy, the fcales bright, and refembling tin-glafs.
The pealants of Durfoit, in the diocefe of Alais in France, who work at the lead-mine which is near that place, give the name of archifou to the lead-ore they take out of it. The quantity they can get is not confiderable; and, there-' fore, they work at it only when they have nothing elfe to do. It is ufed for a varnifh in earthen ware. That varnifh is in great requeft among the potters, as being much finer and clearer than that which is to be found in Vivarez, which Monfier Aftruc thinks appears plainly to the fight. As for the fhining and cryftalline fone with which the archifou is mixed, it is of no manner of ufe.
Though there is fome archifou in Languedoc, as has been obferved, yet they fend a great deal thither from England. There is alfo a great quantity of it fent there from Leghorn, and fome from Barbary and from Sardinia.
ALSACE, a province formerly belonging to Germany, but almoft intirely yielded to France by the peace of Munfter. It is feparated from imperial Germany by the Rhine. It is bounded on the north by the palatinate of the Rhine; on the ealt the Rhine feparates it from the marquifate of Baden, and from the countries of Ortnaw and Brifgaw ; on the foulh it is bounded by Switzerland, and by the principalities of Montbelliard and Porentrai; and, on the weft, the mountains of Vouge, or Vofge, part of it from Lorrain.

## REMARKs.

There is not fo great a trade in this province as one might expect from the fruitfulnefs of its foil, and from the abundance of commodities proper for trade which are there to be met with. It is very probable that the inhabitants neglect applying themfelves to trade for no other reafon, but becaufe being naturally idle, and finding all the necelfaries of life within their own country, there are but few of them who care to trouble themfelves with the labour and cares which unavoidably attend an extenfive commerce, particularly that which is carried on with foreigners. And, indced, a gentleman well known for his integrity, and for the confiderable employments he has filled in Alface during thirty years, and by the military pofts to which his merit has raifed him by degrees, obferves, in the memoirs he was pleafed to communicate concerning the trade of this province, that the in-
dolence

## A L S

dolence of the people，or their love of reft and quietnefs，is fo great，that，during the wars，which continued for near half a century，without hardly any interruption，between Germa－ ny and France，none of the inhabitants would enter upon any undertaking for the French armies，though the fums em－ ployed for provifions，artillery，magazines for foldiers upon the march，extraordinaries of war，forifications， $\mathcal{O}_{c}$ ．amount－ ed yearly to above 8 or $10,000,000$ of livres．＇There were only a few bankers of Straiburg，the capital of this province， and thefe not very rich，who made fome remittances of mo－ ney for the troops．That gentleman adds，that it is from the fame principle of their natural indolence，that the inhabitans of Upper and lower Alface fuffer the peafants of Switzer－ land，who come thither every year，to gather their corn，cut their hay，and manage their vintage；though by that means great fums of money are yearly carried out of their country， which they might fave，had they but induftry enough to do their work themfelves．
Strangers，therefore，carry on the greateft part of the trade of Alface，importing fuch commodities as the province wants， and exporting great quantities of its produce．This trade ex－ tends very far into Germany on one fide，towards the Upper Rhine，and，on the other，into all the countries fituate from Strafburg to the mouth of that river．
The trade of Strasburg confifts in tobacco，brandy，madder， for dyeing fcarlet，faffron，leather，tallow，wood，and large cabbages．
Part of thefe commodities are carried to Mentz，and into Holland；and of cabbages only，which feems a very trifing article，there are fold in thefe two places to the value of above 30，000 crowns every year．
The manufactures are mockado and bergamo tapeftries，fmall woollen cloths，blankets，futians，and linnens of hemp and flax．There is likewife a copper－mill，and a mill for fpices． At Strafburg the magiftrates alone carry on the trade of wood for fuel，which they fell even to 8 livres per cord；nor will they fuffer any private perfon to have a warehoufe of fuch wood in the city，nor even in the neighbourhood．
It muft be oblerved，with regard to this trade of wood，that， though the province of Alface abounds with all forts of wood， yet moft of what is confumed at Straburg comes from the other fide of the Rhine，even in war time；by which means above the value of 200,000 livres is yearly fent out of the kingdom，without the leaft profit to the kings fubjects．
The tanneries are alfo pretty confiderable at Strafburg；but they fcarce tan any other but what they call fmall leather，as Thamois，goats，and fheep＇s fkins；on which the city takes a duty of 4 fols per $\mathbb{I k i n}$ ．
The trade of the reft of the province confifts，firft in timber， which Lower Alface produces in abundance，moft whereof is fit for chip－building，and is fent to Holland by the Rhine．
Secondly，In wine of Upper Alface，which is likewife ex－ ported into Holland，whence it is fent into Sweden and Den－ mark，where the Dutch fell it for rhenifh，or old hock．
Thirdly，In brandy and vinegar，which are made in thofe places whence they get the wine：thefe are defigned partly again for Holland，and partly for Germany．
Fourthly，In wheat，rye，and oats，which grow both in UP－ per and Lower Alface，and of which the Switzers buy up great quantities．
Fifthly，In hogs and other fattened cattle，which are almoft all confumed within the country．
Sixthly，In tobacco，of which they fell above 50,000 quin－ tals per annum，in Switzerland，Germany，Lorrain，and in the towns on the river Saar．
Seventhly，In faffron，turpentine，hemp，flax，tartar，tal－ low，gun－powder for fowling－pieces，chernuts，prunes，and other fruits，and alfo in all other forts of herbs and plants，as onions，cabbages，poppies，anife and fennel，and moft other kind of feeds．
The trade of all thefe commodities，and particulatly of feed， is very confiderable，France，as well as Holland，taking off a great deal．As for chefnuts，prunes，and other fruit，the greateft demand they have for them is from Cologn，Frank－ fort，and Bafli．

## Remarks．

It muft be obferved，with regard to the trade which thefe two laft cities have with Alface，that it is almoft entirely carried on by land－carriage，becaufe of the danger there is in fending merchandizes by water，it being very difficult to draw veffels along the banks of the Rhine，and the rapidity of that river rendering the navigation of it very dangerous．
There are a great many，manufactories in Alface，but not of any very dear or very fine fluffs；the moft confiderable are of tiretanies，half of wool and half of thread，of buckram，of canvas，and fome linnens．
The tiretanies and linnens are confumed in the province；the canvas and buckram are fent into England，Holland，and Germany．
There are in Alface mines of filver，copper，iron，and lead； but none，except the iron mines，are plentiful ：thefe lie to－

## A M A

wards Befort．The fitver，copper，and lead mines are at Gi－ romani，St．Maria of the mines，Aftembarc，and Muntter The filver mine of Giromani produces yearly about fixteen hundred marks of fine metal：that of copper，or rather of filver，which affords alfo copper，above twenty－four thcu－ fand weight of this laft metal．But the expence of working thefe mines is almoft equal to the advantage；and the duke of Mazarine，who owns them，does not get from them abore five or fix thoufand livres a year clear profit．For preparing and melting the iron ore of the mines of Befort，there are feve－ ral forges and furnaces in the neighbouring forefts，and for thofe of copper a great many furnaces and mills．
Monfieur Mackout of Hircheim，knighit of the military order of St．Lewis of the body of the nobility，and a magiltrate of the city of Scraiburg，fet up，in the year 1730，a manufactory of caft fleel．It is after a confiderable labour，and great ex pences，that this worthy magiftrate has carried that manu－ factory to a great degree of perfection：Nor was it without meeting with innumerable difficulties，and great oppofition but at laft he has demonfrated，that it is poffible to make in Alface as good fteel as that which they got iron Cerma ny，and which is made in Sweden，Sttiia，Carinthia，Ty rol，or any where elfe．The court of France being inform－ ed of the fuccefs of this new manufactory，the king has ho－ noured it with his royal protection，by granting to the Sieur Mackout an exclufive privilege for the whole province of Alface．
A L T IN，a money of account in Mufcovy．It is worth three copeecs， 100 of which make a ruble，worth about four thil lings and fix－pence flerling．See Russia．
ALTOM，a name given in feveral parts of the Grand Seig－ nior＇s dominions，particularly in Hungary，to what the Eu－ ropeans commonly call a fequin．However that name is feldomr given but to fequins ftamped with the Turkifh mo－ narch＇s ftamp．
ALUM．See Allum．
AMALGAMATION，a chemical operation，by which gold or filver is reduced into $\overline{\text { a }}$ kind of pafte by incorporat－ ing is with mercury or quickfilver，according to certain pro－ portions of weight or quantity．
To AMALGAMATE，is to diffolve fome metals by means of quickfilver．
All metals may be amalgamated with mercury，except cop－ per and iron；which being fulphureous and earthy，are too different from mercury to be incorporated therewith．
To Amalgamate gold is to reduce it into a pafte，by uniting and incorporating it with mercury．
Amalgamated gold，is faid，not only of gold reduced into a pafte，but alfo of water，or painter＇s gold，or gold reduced into a calx，mixed with mercury，for gilding metals，and particularly filver．The proportion of painter＇s gold and mercury ufed by gilders of metal，is of an ounce of mercury to a drachm of gold．
Gold is amalgamated by putting the thinneft plates of that metal that can be made，into a crucible，with mercury； and，after they have been both fet over a fire，the gold diffolves into fmall particles，like meal，and mercury being a moift fubftance，reduces it into a pafte．When the crucible is taken from the fire，and fufficiently cooled，the goid and mercury are poured into a veffel full of common water，whence it is taken out in the form of a white pafte．With this pafte filver and other metals are commonly gilt．
Gold takes of mercury，by amalgamation，three times as much as it＇s own weight．
The minters，refiners，and filverfiniths，alfo ufe the word amalgamate，to fignify the operation which is performed in the mill where they put their fweeps，as they call them，to walh off the earth and filth；in order that the mercury which is poured into the tub being well ground，may attract the imperceptible filver or gold particles that are mixed with the filth，and make them into a pafte．
AMAN，a fort of blue cotton cloth，which comes from the Levant by the way of Aleppo．
AMASIA，a province of Afia Minor，is bounded on the north by the Euxine Sea，on the eaft by Armenia，on the weft by Anatolia Proper，and on the fouth by Caramania and Aladulia． It is divided into three diffricts，viz．
Pontus Galaticus，Pontus Polemoniacus，Pontus Cappa－ dociæ．
Pontus Galaticus is fituate on thenorthern fide of Gala－ tia，having the Euxine on the north，and Pontus Polemonia－ cus on the eaft．The chief place is
Amasia，called by the Turks Amnasan，which，though ad－ vantageoully fituate on a navigable river，large enough to car－ ry fhips of the greateft burthen up to the town from the Eux ine Sea，has no confiderable commerce．The chief is a ma－ nufadure of red linnens，which are called Levantine cloths．
Pontus Polfmoniacus lies along the fame Euxine coaft， having the Galaticus on the weft，and the Cappadacicus on the eaft．It＇s chief city is
Naoc⿱㇒日勺aria，or Tocat，which was burnt down about the beginning of the prefent century，to the ruin of a great num－ ber of merchants，who had confiderable warehou＇es in it．

## Remarks.

The excellent fituation for trade is an effectual means to recover it from fuch a difafter. It is, indeed, rightly looked upon as the center of the Aliatic commerce. The caravans of Diarbeker come hither in 18 days (men on horfeback perform the journcy in 12). Thofe from Tocat to Sinope go it in 6 , and to Prufa in 20; and thofe that go hence to Smy:na, without turning to Prufa or Angora, take up about 27 days with mules, and 40 with camels. Thofe caravans carry on a very confiderable commerce into all thefe parts, as well as into Perfia. One of the chief manufactures of this place is the filken, in which are ufed valt quantities, not only of the Turkith, but alfo of the Perfian filk, in making light ftuffs, buttons, frogs, $\mathcal{F}^{\circ} c$. The next is that of leather, which is chiefly of the yellow colour, and is carried by land to Samfom, a fmall fea-port on the Euxine, and thence into all parts of Turkey and Europe. Some red limnens are likewife here manufactured, which, though inferior'to thofe of Perfa, are fent in great quantities into Murcovy, Tartary, and even into France. They are called Levantine cloths, but are chiefly made bere and at Amafia. But the moft confiderable manufacture of Tocat, is that of copper, which they work here in great quantities, and in variety of utenfils, fuch as pots, kertles, candlefticks, Egc. which they fend to Conflantinople, Egypt, and other parts. They have their copper from the mines of Trebizond and Caftamboul, the former about three, and the latter about 10 days journey from their city. About a mile out of Tocat is a large village, chiefly inhabited by chriftians, who are moftly employed in tanning of leather. The greateft part of the people about Tocat, even as far as 30 or 40 miles, are employed in the iron and copper manufactures.
Pontus Capradocicus extends itfelf from the Polemoniacus eaftward, quite to Colchis and the frontiers of Georgia; having the Lefler Armenia, and the river Euphrates, for it's fouthern, and the fame Euxine Sea for it's northern, boundadaries. It's chief place is
Trepizond, formerly one of the moft flourifhing cities of Afia, but now almoft in ruins, and it's harbour capable only of receiving faics; which, however, carry fone of the goods of Armenia and Perfia to Conftantinople from this port; fo that it may be yet faid to have the beft trade of any in the Black Sea.
The AMAZONS RIVER in America, begins at the foot of the mountains called Cordillera, about 8 or so leagues eaft of Quito in Peru. It runs firft from weft to eaft, turns afterwards fouth, and then, after many windings and turnings, holds it's main courfe eaft, 'tillitt falls into the Atlantic Ocean. It's fountains and mouths are very near under the equator, and the main of it's fream is under the $4^{\text {th }}$ and $5^{\text {th }}$ degrees of fouth latitude. The rivers which fall into it on the north fide, rife about one or two degrees north latitude, and thofe on the fouth fide begin fome of themin 10 , fome in 15 , others in 20 degrees fouth latitude. It's channel from Junta de los Reyes, about 60 leagues from it's head, till it is joined by the river Maranbon, is from one to two leagues in breadth. From thence it is from three to four, but grows broader, as it advances towards the Atlantic Ocean, into which it falls by a mouth 50 or 60 leagues broad, between Cape North on the coaft of Guaiana, and Cape Zaparate, on the coaft of Brazil. From the fpring-head to it's mouth it is 8 or goo leagues in a direat line, but the windings and turnings make it about 1200. The rivers which run into it on the right and left, have their courfe from 100 to 600 leagues in length, and their banks are well inhabited by multitudes of people. The nations who inhabit about this, and the other rivers that run into it, are reckoned one hundred and fifty; and their villages fo thick in many places, that they are within call of one another. Among thefe people the 'Homagues, who live towards the head of this great river, are moftly noted for their manufactures of cotton; the corofipares for their earthen ware; the Surines, who live between latitude 5 and 10 , for their joiners work. They make war upon one another, to purchafe flaves for their drudgery, but otherwife they treat them kindly enough. Their forefts afford materials for building the largeft ihips. They have many trees of 5 or 6 fathoms round in the trunk, and inexhauftible ftores of ebony and Brazil-wood, cocoa, tobacco, fugar canes, cotton, a fcarlet dye called rocou, befides gold and filver in their mines, and in the fand of their rivers. Among the rivers that fall into the great one, the Napo, Agaric, Puromaye, Janupape, Corupatube, and others, have gold in their fands. Below Corupatube, there are mines of feveral forts in the mountains. In thofe of Yaguare there are mines of gold; in Pieora there are mines of Gilver; on the river Paragoche there are precious ftones of feveral forts, and mines of fulphur, छ'c. near other rivers. On the Amazons river, about 200 leagues from the fea, there is a bofphorus, or ftreight, one mile broad, where the tide comes up, fo that it may ferve as a key to all the trade of thofe countries. But the Portugueze being already poffefled of Pora, on the fide of Brazil, Corupa, and Ethero, on the fide of Guaiana, and Cogemina, an illand at the
mouth of the river, they may, by fortifying the ifland of the Sun, or fome other place in it's chief outlet, be mafters of all the trade. The people know not the ufe of money but barter one thing for another, and will give 20 s . worth of provifions, छic. for a glafs-bead, or jews-harp. Sce Peru.
AMBASSADOR, is a public minifter, fent from one fovereign prince as a reprefentative of his perfon, to another. It is not confiftent with our work to take other nutice of this article, than as the fame may have affinity with commerce. Sir Thomas Challoner having been fent ambalfador to Spain, by queen Elizabeth remitted a complaint to the queen, that his chefts had been fearched : upon which the queen demanded the opinion of her council in the point, who upon the whole matter refolved the action into this Legato omnia $x-$ qui bonique ferendo dummodo principis honor non direftè violetur, the very words of Mr . Camden; an ambaffador mult bear all things patiently; provided that the bonour of the prince whom he ferves be not directly violated.

## REMARKs

The office of an ambaffidor does not include a proteftion private but public; for the king his mafter, not for any feveral fubjects otherwife than as it concerns the king and his public minifters to protect them, and procure their protection in foreign countries, in the nature of an office and negotiation of flate; therefore their quality is to mediate and profecute for them, or any one of them, at the council-table, which is as it wére a court of fate; but when they come to fettled courts, which do and muft obferve effential forms of proceedings, they mult be governed by them : and therefore in the cafe of Don Diego Serviento de Acuna, ambaflador leiger from the king of Spain, who libelled in the admiralty court, as procurator-general for all his mafter's fubjects, againft one Jolliff and Tucker, and fir Richard Bingley, for two hips and their lading of divers kinds, of the goods of the fubjects of the king of Spain generally, and not naming of them adduet. ad port. de Muntter, in the preface of the libel generally againft them all, and then proceeds and charges them feverally thus: That Jolliff and Tucker, captain piratæ, in alto mari bellicè dichas naves aggreffi funt, 8 per vim $\&$ violentiam took them, and that they were adductre in partes Hi bernix, and that, coming into the hands of Sir Richard Bingley, he converted them to his own ufe (not faying where) and, refufing to render them, being required, it was there held that a prohibition fhould go, for the matter is triable merely at the common law, and that fuch a procuration was not good, though to an ambaffador.
Don Alfonfo de Valefco, ambafiador from the Catholic king attached tobaccoes at land here, with one Corvero, a fubject of the king of Spain, brought hither, and the ambaffador by the libel fuppofed to belong to his mafter, as goods confifcated, as all other his goods were. Sir John Watts, the plaintiff in the fuggeftion, prayed a prohibition, which was granted accordingly, for the property of goods here at land muft be tried by the common law, however the property be guided.-See Admiralty; and it was likewile ruled, that if any fubject of a foreign prince bring goods into this kingdom, though they were confifcated before, the property thalt not be queftioned but at the common law of England. Don Alfonfo verf. Corvero. Mich. 9 Jac. Hob. 2 I2. Hill. 9 Jac. upon the like libel by Don Pedro Surega, ambaflidor for Spain.
By the civil law, the moveable goods of an ambaffador, which are accounted an acceffion to his perfon, cannot be feized on, neither as a pledge, nor for payment of a debt, nor by order or execution of judgment; nor by the king or ftates leave where he refides (as fome conceive), for all coaction ought to be far from an ambaffador, as well that which toucheth his neceffaries as his perfon, that he may have full fecurity ; if therefore he hath contracted any debr, he is to be called upon kindly, and, if he refufes, then letters of requeft are to go to his mafter *; fo that at laft that courfe may be taken with him, as with debtors in another territory: to fome this may feem hard, yet kings, who cannot be compelled, want not creditors. But the lord Coke feems to be of another opinion $\dagger$, for, as to contracts and debts that be good jure gentium, he muft anfwer here.

* Grotius, lib. ii. cap. 18.
$\dagger$ Coke 4 Intit. fol. 153. Certain it is, that none dareth prefume to meddle either with their perfons, goods, or fer vants without leave had, the contempt of which hath been punifhed with imprifonment. Lucas 4 . Vide ftat. 7 Ann. cap. $12 . \S 5$.

AMBER (YELLOW) or KARABE, or YELLOW SUC. CINUM, in Latin SUCCINUM CITRINUM. It is a kind of gum, or rofin of a tree, which is commonly found in the Baltic, on the coaft of Pruffia. The wind blows it on fhore, and the inhabitants, who are afraid left the Tea, which brought it hither, fhould carry it off again, go and gather it in the height of the ftorm.
Some authors pretend there is yellow amber that is a foffil;
and that in Sweden, as well as in Pruffia, there is fome found in the fands, at a very great diffance from the fea. And indeed, we read in the Hiftory of the Royal Academy of Sciences at Paris, for the year 1700 , that fome yellow amber has alfo been fometimes found in the clefts of fame rocks in Provence, the moft naked and the mott barren; which would incline one to think, that this gum is a mineral, and not a vegetable, and that the fea-amber of Dantzick falls not into the fea from fome tree, but is carried into it by fome lansflood.
Agricola reckons it among the bitumens; fome fuppofe it to be produced in the fands of a lake called Cephifick, in the neighbourhood of the Atlantic Ocean. There are many other opinions, but all fo improbable, that we may as well keep to the firft we have mentioned ; fince it is certain, that the greateft part of yellow amber comes from the Baltic and Pruffia : uniefs it be faid, that there are two forts of yellow amber, the one a mineral, and the other a vegetable gum.
It is very probable that this gum, or rofin, is formed at firft upon poplar and fir-trees, of which there are whole forefts on the coaft of Sweden, which is very high; and that it is driven into the fea, after being feparated from the coaft of Pruffia, which is very low. The flies, ants, and other infects, which are often inclofed within pieces of yellow amber, feem to prove that it is a production of the land, and not of the fea.
It is thought, that fome Germans have the art of mollifying yellow amber; and, after what manner foever the thing is performed, it is probable that thofe little animals may be the agreeable impofitions of art, rather than a work of nature. Yellow amber has the property of attracting fmall particles of ftraw, paper, or other light things; the caufe of which has not been fo fatisfactorily accounted for as could be wifhed. Yellow amber is thade ufe of in feveral precious and delicate pieces of workmanßhip: it feems, however, that it is not at prefent in fo high an efteem in France or England as it was formerly, efpecially with regard to necklaces, which, from the court ladies, have paffed to children and maid-fervants. But it has kept up its price in Auftria, and other parts of Germany, in Poland, in Hungary, and in fome parts of Italy. The beft worked amber comes from Poland and Hungary, where it alfo fells deareft.
It is of fome ufe in phyfic, provided it be the true karabe; many people having the art to counterfeit it with turpentine and cotton, or with yolks of eggs and gum arabic. Others fell gum of copal in the room of it.
From yellow amber is extracted a tinchure, a fpirit, volatile falt, and an oil: that oil ferves to make a varnifh with fpirits of wine.

An abftract from a letter of Mr. Sendelius, M. D. at Elbing, to Mr. John Philip Breynius, M. D. at Dantzick, concerning the amber of the Indies, wrote in the year 1722.
Extracted from the Bibliotheque Germanique, tom. y.
p. 12 I .

It is but a few years fince, that this amber is known in Europe; it was brought hither by the Dutch, from the kingdom of Benin, which is a part of Guinea. Mr. Breyn having received fome of this amber'; fent part of it to Mr. Sendelius, to examine it, and compare it with that of Pruffia. Here follows what is moft curious in the refult of his obfervations.
This amber, which is found in abundance in the kingdom of Benin, is a proof that that country, as well as Pruffia, is plentifully ftocked with that bitumen, unlefs one would fay that it is a vegetable production; which the author would not difpute, efpecially with thofe who have feen none. All the bits of this amber are not equally beautiful. There are fome, whofe brightnefs and tranfparency imitate that of cryftal or diamonds, if one does but never fo little take off the cruft, or moft coarle parts. Some others, on the contrary, are fpread over, either in the whole, or in part, with fmall clouds, which darken them, and in which you may perceive little animals, fome of which are like our infects, and others are peculiar to the country where that amber is found. There are other pieces which may be ftiled foul, becaufe there are earthy particles mixed with then, though in a greater or leffer proportion; among the latter, there are fome that have their laminx, or thin plates, placed over one another; which would incline one to think, that this new amber, like that of Pruffia, was liquid before it became hardened. This amber, when rubbed, but efpecially when burnt, exhales a fmell, which fhews that it contains a very fubtile volatile falt. This fmell, which is equal to that of the beft maftic, not to fay that it excels it, is not by far fo agreeable as that of the amber of Pruffia. But, if this new amber is inferior to that in this refpect, it may vie with it with regard to its attractive quality, or electricity. As for hardnefs, which is one of the chief properties of amber, and gives it a place among jewels, it refults from Mr. Sendelius's obfervations, that this amber of Benin is not of a very folid confiftency. He adds, that water, into which the amber of Pruffia is plunged, when it becomes hot by being worked, though it does not grow foft, has no efficacy upon this new amber,
and will not prevent its breaking: if would therefore be requifte to give this amber a bardnefs; which it has nor, in order to render it of a more general wie. But all the methods which Mr. Sendelius tried for that purpofe proved ineffectual; and he is apt to think, that this amber is nothing but a compound, or mixture, of gum and rofin. Fiis conjecture has even been confirmed by experience. Fot, havins made a difolution of this amber with fpirits of wine tartarized, he found, after decantation, a melligènous gum, to which nothing could rellore its former hardnefs, becaufe the efinous parts had been diffived by the operation. All this; together with the fmali variety obferved in its colouts, in comparion to that of Pruffia, does not feem very likely to bring it into any efteem. However, Mr. Sendelius is fitl in hopes of making burning glafles of this amber, becaufe of its great tranfparency. He has even, by the diffolution he made of it, got a varnifh, which, on account of its novelty, may perhaps ferve as a paint to the fair fex.
We have mentioned hitherto feveral opinions concerning the nature of yellow amber: let us obferve farther, that the author of the Spectacle de la Nature, tom. iii. p. 3 Ir, thinks it has the fame original with jer, which feems to be nothing but a black bitumen, mixed with particles of iron, and hardened like a flone: yellow amber baving the fame fmell, and the fame electricity, after it is heated by rubbing:
Mr. Hartman, a Pruflizn, in his diflertation inferted in the Abridgement of the Philofophical Tranfactions, tom. iv. p. 473, tells us, that people not only dived to the bottom of the fea, in order to gather amber along the coaft of Pruffid, whither it is carried by the violence of forms, from the beds where it runs, but that it is alfo found in the very ground, in fevera! places of Prufia, commonly lying among viriolic and bituminous matters; which lie in beds, or lays, one over the other, like fo many different thin leaves, which at the firf view one would take for wood. That amber is one of the beft revenues of the king of Pruffia, who appropriated the pofferfion of it to bimfelf.
The moft eaffern nations of Afia, and particularly the Japanefe, give a higher price for yellow amber than for ambergreafe, and value it even more than precious flones, of which, except coral, they make but little or no ufe. But; among all the feveral forts of amber, the yellow tranfparent amber, which is fo common, and fo little valued among the inhabitants of Europe, is that for which the Japanefe give the bigheft price, becaufe of its perfection, and the antiquity they afcribe to it. They defpife all the other forts of amber. This is what Kæempfer acquaints us with.
Liquid Amber, a kind of refin, that is cleat, reddif, and very liquid when new, but becornes very thick as it g-ows old. It is alfo ranked among balms. It runs from incifions made in certain trees, which grow in New Spain, and which the natives there call oçoçol. When it is new and fill liquid, it is called oil of liquid amber; and, when old and thick, balm of liquid amber. It comes into England in barrels. See the article Balm towards the end.
AMBERGRIS, of AMBERGREASE, a kind of grey guim, of a fweet and agreable frell. As much as this precious gum is known, by the great ufe that is made of it, and the high efteem it is in every where, as to its origin, it is but lietle known. What we are certain of is, that it is found on the rea-coaft in feveral places, efpecially when, afer fome ftorm, the agitation of the waves have caft it on the thore.

## REMARKs.

The places where there is cortimonly moft of it, are that part of the Alrican coaft, and of the neighbouring illands, which extends from the Mofambic coaft to the Red Sea; the ifles of St. Maria and Diego Ruis, which lie near the ifland of Madagafcar; the Manille illands, and the coaft beyond the Cape of Good Hope.
The ambergreafe of the Weft-Indies is generally thrown upon the coalt of the Bermuda Iflands, in the freight of Bahama; and upon the coaft of thofe inlands which lie very near the peninfula of Jucatan, between the gulph of Honduras and that of Mexico ; fome is alfo found in certain places upon the coaft of the Mediterranean.
Kœmpfer afferts, that there is ambergreafe found upon the coaft of Saxuma (which he writes Satzuma) and in thofe of the iflands of Riaku, as Kœmpfer calls them, which I take to be thofe of Liqueio, to the fouthward of Saxuma, in the kingdom of Japan. But there comes a greater quantity of ambergreafe from Khumano, that is to fay, from the fouthern coatt of Kiinokuni, and Iga (fpelt Isjc by Kømpfer) and fome other neighbouring provinces of the fame kingdom.
Mr . Neumann fays, that there alfo comes ambergreafe from the Molucca iflands, from thofe to the weft of Sumatra, from Borneo, and from Cape Comorin, near Malabar; as allo from the coaft of Ethiopia, which from Sofala to Brama abound with ambergreafe.
The Indians, who inhabit the iflands near the coaft of Jucatan, have a pretty curious way of gathering ambergreafe. When there has been a great ftorm, and it is probable that ambergreafe thall have been caft upon the flore by the waves,
thofe Indians, who are tributary to the Spaniards, run to the thore, to prevent certain birds, who are very fond of this gum, from eating it. They go againft the wind, till they fmell the ambergreafe, which, being frefh, extales a very ftrong fcent. When they do not fmell it any longer, they go back, and thus find it at laft upon the fand. It alfo happens pretty often that the birds, being drawn thither by the fent, Shew them where it lies.
There are feveral opinions concerning, the original of ambergreafe; but, though moft of them are tranfmitted to us from the antients, we are not much the wifer. Some affert that this precious gum is formed only of honeycombs and wax, which tumble down from the rocks*. Others fay it is nothing but the excrements of fome birds. Others again, that it is the fpawn, or fperm of a certain kind of whales, or fome amphibious fea-animal, but this is mere conjelure; for there have been fome times fuch large heaps, or collections of this ambergreafe found, that it is not natural to have recourfe to that explication. There are fome who maintain it is nothing but the fkum of the fea. However, all agree that thefe feveral matters become folid, and acquire their feent, by the agitation of the waves, by the faltnefs of the fea, and by the heat of the fun, which purifies and bakes them.
*This is the famous Monfieur J. B. Denys's opinion, in the fecond conference of the Journal de Sçavans for the year 1672 but it is refuted at large by Kompter, in his hiftory of Japan, Supplemeat, pag. $4^{6}$.
There is fill another opinion concerning the original of ambergreafe more modern than thofe already mentioned, and more probable. They pretend that this gum is nothing but a kind of bitumen, which, coming liquid out of the bowels of the earth, at the bottom of the lea, grows thick and condenfes in proportion as it rifes; and that this is the reafon why fuch large pieces of it are feen, which cannot be accounted for by the other hypothefis.
Kempfer maintains the antient opinion, according to which it is a kind of bitumen, or greafy fubterraneous fubitance, which acquires the like confiftency. And yet we have feen, that Monfieur Savary looks upon this opinion as the molt modern.
Its feent is thought to be natural, which is proved by feveral other ordoriferous gums, of which nature herfelf has beftowed their perfume.
The largeft piece of ambergreafe, of which we have had hitherto any knowledge, is that which was carried into Holland towards the end of the feventeenth century. It is almoft round, of above two feet diameter, and weighs 182 pounds. The duke of Tulcany had offered 50,000 crowns for it. It is ftill to be feen in the Ealt-India houfe at Amfterdam, and is looked upon by Virtuofo's as an extraordinary production of nature.
This is undoubtedly the fame piece of ambergreafe mentioned by Kœmpfer, which weighed 185 pounds Dutch weight. It was fold by the king of Tidor to the Dutch Eaft-India company, for II,000 rix-dollars. It is of a greyifh colour, and of a very good kind. Its figure is pretty much like that of a tortoire, whofe head and tail had been cut off. See Valentini Mufæum Mufaor. lib. v. cap. 28. The biggeft pieces of ambergreafe which had been feen till then, and were looked upon as being of a prodigious fize, did not exceed 40 pounds weight.
Several of our voyage-writers tell us that ambergreafe is thrown up by the fea on the coaft of India and China, but whence it comes is unknown: we only know that the beft of it is thrown upon the Barbary coaft, or upon the confines of the land of Negroes, towards Schar, and places thereabouts. It is of a bluin-white, in round lumps.
The inhabitants of this country have camels trained up to the bufinefs, which they mount, and go in fearch of it by moonfhine, and ride for that purpofe along-fhore. 'The camels are broke to this; and, as foon as they perceive a piece of ambergreafe, they bend their knees, and the rider picks it up. There is another fort, which fwims in great lumps upon the furface of the fea, almoft like the body of an ox, or a little lefs, and are very weighty. When a certain fifh of the whalekind, called Tal, fees thefe floating lumps, he fwallows the fame, and is thereby killed. The whale being feen floating upon the furface, thofe who are accuftomed to this kind of fifhery, and know when there whales have fwallowed ambergreafe, inflantly go out to him in their boats, and, darting him with iron harpoons, they tow him to thore, where they fplit him down the back, and take out the ambergreafe. What they find about the belly of the creature is commonly foiled, by contracting an unpleafant fcent; but that which has not been infected by ordure in the belly of the whale is perfectly goad.
Ambergreafe ought to be chofen very clear, thoroughly dry, very light, in fine pieccs, intirely grey without; of the fame colour, but fpotted with black fpots, within; of a fweet and pleafant fcent; and, above all, care muift be taken that it be not adulterated, or mixed with gums, or other drugs, by which means it is eafily counterficted. You mult beware of that which is moift, flabby, or foftilin, and foul.

Ambergreafe is ufed by perfumers, by phyficians and apothecaries in fome prefcriptions, and by confectioners in feveral forts of fweet meats : it is alio fometimes put into chocolate. There are likewife extracts, effences, and tinctures made of it. The beft effence of ambergreafe comes from Holland and Portugal.

## The Commerce of Ambergreafe at Amfterdam.

They fell at Amfterdam two forts of amber, namely ambergreafe and black amber.
Ambergreafe fells from 8 to 16 guilders per ounce. The difcount for prompt payment is i per cent.
The price of black amber is from 5 to 8 guilders per ounce, with the fame difcount, or deduction, for prompt payment.
AMBER-SEED, or MUSK-SEED, is the feed of a plant whicl grows in the Antiles iflands in America, and in Egypt. Its fmell is very much like that of true mulk. The perfumeis ufe it, and the pater-nofter-makers make bead-ftrings, or chaplets, of it.
Father Labat, in his Voyage to Wettern Africa, obferves, that the plant of amber-mufk grows in plenty perfecily well, and without any culture, throughout the whole country of Galam; that the negroes make no ufe of it, not cven the women, though they are very fond of fweet fcents. When this feed meets with a fat and deep foil, it grows to the height of 6 or 7 feet, provided it be near fome'tree to fupport it, to which it clings, by furrounding it; when it wants that fupport, it falls down, and creeps on the ground, as foon as it is about 2 feet bigh. Its ftalk is round, pretty tender, garnifhed with fmall, branched hoots; it is hairy and whitifh. Its leaves are always coupled, but they are unequal, the uppernoft being much larger than the undermoft. They are dented; and though the dentings are not deep, yet they form very acute angles, which makes them look as if they were garnifhed with points. They are flabby, flelhy, of a bright green on the upper part, and of a paler green on the lowermoft. It is pretended that thefe leaves, boled in water, and made into a cataplafm, are excellent for the cure of tumors, or fwellings.
The feed, which grows plentifully in the fruit of this plant, is hot to the firt degree, and is ufed with fuccefs in fome diftempers. It is faid that thofe who fell mufk increafe the quantity of it by an addition of thefe feeds.
AMBREADA. Thus, they call the falfe, or factitious amber, which the Europeans ufe in their trade with the negroes on the coalt of Africa, and particularly on the river Senegal. There are fome large and red.pieces of it, 1000 of which; making 20 ropes, or ftrings, weigh three pounds. There are others fmall, and alfo red, which weigh but two pounds and a half.
AMBULANT, or AMBULATORY. They give in France the name of ambulant commiffioners, to thofe commiffioners, or clerks, of the king's farms, who have no fettled office, but vifit all the offices within a certain diftrict, to fee that nothing be done in them againft the king's right and the intereft of the farm.
Ambulant, is alfo faid at Amfterdam of thofe brokers, or exchange agents, who have not been fworn before the magifirates. They tranfact bufinefs like the former, but their ceftimony is not received in the courts of jufice. See Agents of Exchange.
AMEND. To amend a work, is to correct, or reftify the faults of it. In France the regulations made with regard to the woollen manufactors order, that woollen cloths, and other ftuffs, that cannot be amended, fhall be cut into pieces two ells long, fometimes without a fine, and fometimes with. Among the artificers and handicrafts-men in France, thole works that are feized by the juries, and cannot bie amended, are liable to be confifcated.
AMENDABLE, what can be amended, eorrected, or rectified. That word is very much ufed in the flatutes of the companies, or corporations, of tradefmen in France, and is faid of thofe works feized by the juries, becaufe they are faulry, but which can be rectified, and, therefore, are not liable to be confifeated. At Paris it is the charmber, or court, of the police, that judges whether a piece of work is amendable or not.
Amendable, from Amende, a fine, is alio in France of thofe artificers, or workmen, who deferve to be fined for trangreffing againft the flatutes and rules of their corporations. AMERICA, the largeft part of the four the workd is divided into, lies to the weft of Europe and Africa, from which it is parted by the Atlantic ocean; on the other fide it has the $\mathrm{Pa}-$ cific, or South fea, which feparates it from Afia. This vaft continent continued unknown to the reft of the world for all the ages that paffed from the Creation ta the year of our Lord 1492, when it was firt difcovered by Chriftopher Columbus, a native of Genoa, employed for that purpofe by Ferdinand and Ifabella, king and queen of Spain.
Yet this brave adventurer had not the honour of giving his own name to this new world, but was robbed of it by America Vefpufius, a Florentine, who was fent in 1497 . by Emanuel, king of Portugal, to continue the difcaverues begun by Columbus.

## A M E

It is pretended, indeed, by the French, who are unwilling their own nation Chould be without a hare of the glory of the difcovery, that Columbus had the firf hint of this unknown world from one Betincourt, whom they make the firft difooverer of the Azores, or Tercera illands.
The Spaniards lay a claim, likewife, to this honour, and fay that one Captain Aldres, a countryman of theirs, who died at Madeira, had been, with two others, caft on the American coaft by a tempeft, and that he left behind him fuch directions and obfervatiohs as quite convinced Columbus, into whofe hands they had fallen, of the reality of fuch a continent, and the probability of finding it out.
We muft not omit that the Welfh affert a much more, antient title to it than either of the former; for it is related that prince Madoc, the fon of Owen Gwineth, was, with bis fleet, caft on the coalt of Florida, as early as the year 1190, or according to fome 1170; and that he fent for colonies from his native country, which fettled there. Though this is by many looked on as fabulous, yet it evidently carries fome marks of truth with it; for Meredith ap Rheife, who gives us the account, died feveral years, before Columbus fet about his expedition. And it receives no fmall confirmation from the affinity that has been obferved between the language of the Welh and fome of the Indian nations. Whether any of thefe ever returned, or whether they purpofely concealed their new fettlement from their own nation, it remained fill unknown to the reft of the Europeans till the time of Columbus.
The Spaniards gave it the name of the New World, and not improperly, it being fuch an immenfe tract that it exceeds any of the other three parts of the old one, and, indeed, is little lefs in extent than all the three parts put together.
It was called alfo the Weft-Indies, as being near equal in wealth with the other Indies, and was diftinguifhed by the name Weft in regard to its bearing that pofition from Europe, as the other do eaft.
As to the extent, it is fo prodigious, that, in two centuries and a half from its firf difcovery, we have not been able to alcertain its boundaries.
What has been hitherto traced of it extends from 78 degrees morth latitude, under which Sir Thomas Smith's bay lies, to 57 degrees fouth latitude, under which lies cape Horn,' the moft fouthern extremity of the American continent ; which, taken in a direct line, amounts to 8,100 miles in length, with a breadth, in fome parts, of 3,690 miles; though the ifthmus that joins North and South America is not 60 miles over: yet from thence both parts of the continent fretch themfelves out eaft and weff, till they make the breadth before mentioned.
In fuch variety of climates there muft neceflarily be a great vatiety of foil. The moft northern and fouthern pars are rendered more barren by the exceffive cold, but the reft, is an immenfe treafury of nature, producing moft of the plants, grains, fruits, trees, metals, minerals, Eic. known in the other parts of the world, and thofe in great plenty; befides an infinite variety of others, peculiar to itfelf, as not having yet been found in any other country. But the chief wealth confifts in the inexhauftible mines of gold and filver, which, though the labour and art of man has been continually endea ${ }^{4}$ vouring to drain for above 200 years, are yet fo far from being impoverifhed, that they feem rather to want frefh fupplies of hands to bring the fubterraneous treafures to light.
Nor are gold and filver the only rich productions; there have been fuch great quantities of pearls, emeralds, amethyfts, and other precious ftones found here, and brought into Europe, that the value of thofe commodities is confiderably diminilhed to what it was before.
To thefe may beadded a valt number of other commodities, which, though of a leffer price, are neverthelefs fill very valuable and ufeful. Of this fort are cochineal, indigo, anato, logwood, brafil, fuftic, lignum vitæ, fugar, rum, ginger, pimento, cacao, vanelloes, cotton, red wood, tobacco, turpentine, train oil, haval fores, furs of various forts, hides, ambergreafe, bezoar, ballams of Tolu, Peru, and Chili; jefuits Bark, mechoachan, faffafras, farfaparilla, caffia, tamarinds, and a wonderful variety of other drugs, woods, and plants; to fome of which, before the difcovery of America, we were either utter ftrangers, or forced to buy others at an extravagant nate from Afia.
The prodigious variety of excellent fruits which grow here, fuch as pomegranates, citrons, lemons, oranges, malicatous, cherries, pears, apples, figs, with all the culinary, medicinal, and other herbs, roots, ${ }^{\circ}$ c. would be endlefs to enumerate. Thefe are among the native productions of America; and its foil is fo kindly and fruitful, that it nourithes many of an exosic growth in the greateft perfection; which is very remarkable in coffee, cultivated here of late with furprifing fuccels. And though the Europeans, upon their firft landing, found no corn; yet all forts of grain are now produced equal in quantity and goodnefs to any in the world. To which may be added fleep, hogs, oxen, goats, cows, छoc. which have been tranfilanted from Europe, and have multiplied exceedingly.
Their feas abound with the greatelt plenty and variety of fifh,

## A ME

as do likewife their rivers, which are the largeft and longet in the univerfe; and, in comparifon whereof, thofe of Europe are no more than fmall brooks. The river of Canarla in North America is known to run more than $\mathrm{f}, 500$ miles, and is 90 miles over at the mouth. That of the Amazons in South America, which, rifes in Peru, waters feveral large kingdoms in a courfe of 3,600 miles; and, falling into the fea between Brafil and Guiaria, rolls with fuch rapidity, and with fuch a prodigious quantity of water, that rhey taxe it quite frefh out of the fea, at feveral leagues diftance from the mouth of it: That of Rio de la Plata is computed at leaft 150 miles in breadth at the place where it difcharges itfelf into the ocean: befides a great number of others, not much inferior to thefe.
Upon the difcovery of America, the Spaniards poffeffed themfelves of the largeft and richeft part of it. Hence they derive immenfe treafures yearly, and the kingdom of Old Spain may even be faid to depend wholly on the New for the fapport of her finances, and to owe all her opulence and grandeur to her extemfive colonies in thefe parts.
On the continent they have all South America, except Brafil, on the weftern ocean, which belongs to the Yortugueze; and except fome parts either of Chili, or in the Magellanic land, on the ifthmus of Darien, whofe inhabitants they have not yet been able to bring under their fubjection; and whom, on that account, they file Indios bravos, brave or courageous Indians: except, likewife, the vaft country of the Amazons, and almoft the whole country of Guiana, where the French and Dutch have fome fettlements, but the Spaniards very few, if any.
The Spaniards have an immenfe wealth from America; yet other nations partake thereof, as we Chall fee prefently; for the king of Spain has at leaft two mizlions stering per annum revenue from thence, including the indulto on the goods brought back in return for the cargoes fent out by the other merchants of the feveral European powers who trade there, as well merchandize as money; the Spanifh merchants have their commifion for the returns, and have oftenimes the profits made in New Spain, paying the fureign merchapts fuch a rate as they agree on for the goods at their go:ng out; and this is very great, and enriches the merchants of Cadiz, Port St. Mary, Seville, and other places to a very great degree.
The produce of the feveral countries in Spanifh America, are as follows: 1. gold and filver in Mexico. See Mexico. Silver and no gold in Peru. Sée Peru.-Gold and no filver in Chili, and in the government of Veragna and New Granada. -The quantities of gold and filver in all thefe parts of Spanifh America, are without meafure, and without tale.
N. B. In the general accounts which we have of New Spain, travellers make mines of gold and filver in almolt all the provinces of this great country: but we are affured that is a miflake; the gold comes chiefly as above : there may be fome godd found in the rivers, in the country about Carthagena, and St. Martha, but not in any other parts, that we have yet feen duly confirmed.
2. Sugar is another article, whereof there is an exceeding quartity, chiefly on the fide of the Bay of Mexico, Guaxaca, Ec, -But by the multitude of the inhabitants, and their luxurious way of living, the fugar is chiefly confumed in Mexico, and in the religious houfes, in chocolate, fweet-meats, preferves, and confectionary wares. The quantity, however, fent from Guaxaca and Guatimala, and other provinces to Mexico, and to Panama, is exceeding great; fo that it is a confoderable branch of home-trade.
3. Tobacco, this is a very fine fort, though different from that of the Brafils; 'tis generally made all into fnuff; of which the galleons bring great quantities. 'Tis chiefly had at St. Martha, Carthagena, and that fide of the gulph.
4. Cotton, which they manufacture at home, and drive a great home-trade in the goods made of it.
5. Indigo, efteemed the beft in the world.
6. Cochineal, a very valuable merchandize, chiefy found in the government of Tobafco.
7. Valuable drugs of feveral forts, as aloes, cortex peru, or jefuits bark, Paraguay tea, farfaparilla, balfams of divers kinds, and balm, fome of Carthagena, the other of Tolu, brimftone, pimento, green'fone for the gravel, cantharides, or Spanifh flies, caffia teftula, olcacafam, an antidote againft poifon, manna, amber liquid and folid, foap-root, myrrh, $\mathcal{O}_{i}$ : $E_{c}$ c. 8. Hides and fkins, brought from Buenos Ayres, and the Havannah.
9. Chocolate.
10. Jewels, as torquoifes, pearl, emeralds, coral, topaz, jafper. The produce of thefe greatly extended dominions, with refpect to trade, muft be farther diftinguifhed, as the feveral countries peculiarly diftinguilh them in their commerce. For here is a very confiderable circulation of trade among them. felves, as well as a return to Europe; and perhaps more than in any other part of the world, out of Europe, China excepted. It is, therefore, neceffary to dillinguifh between the produce of the country, which is fent to Europe as merchandize, and the produce carried from one part of America to another, for their home confumption. For example,

Wheat

Wheat and barley are fent in great quantitics from Ncoya, Guaxaca, Venczuala, Honduras, Coquimbo, Ifalcalla from Chili, to Panama and Lima, and alfo from New Bifcay, to Mexico. The laft town and country of Ifalcalla is called the granary of Mexico.-Guatimala allo has good wheat. Timber, pitch and tar, hemp and cordage fent from Guiaquil for Chip-building, to Panama, Lima and Acapulco. Moft of the great galleons for the South-Sea trade, are built at Guiaquil, where they have naval ftores; alfo at Chiapa, Tabafco, Trinidade-Cotton fpun and woven into feveral forts of manufactures, in Jucuman, Niguaragua-Cotton unwoven, and for others to work into manufactures, but more generally wrought among themfelves, at Vera Paz, Crudad Real, Guaxaca, and Mexico.
They have black cattle in New Granada and Carthagena, Venezuala, Jucuman, Coquimbo, which three latter places fupply the coaft of the South-Seas.-Nicaragua, Campeachy and Guaxaca, fend great quantities of black cattle to Mexi-co.-Chiapa, La Plata; have the beft horfes and mules.Nicaragua, Chili and Chiopa have fheep, which carry burdens, and travel all over Chili and Peru. - The fheep carry the filver from Potofi to the fea-fide.
They have a very great confumption of tobacco made into fnuff among themfelves; and it employs many fhips to carry it from one place to another. The largeft quantities of it are brought from the Havannah, on the ifle of Cuba, which is carried to La Vera Cruz and Porto Bello; and fold to the merchants of Mexico at the firf, and of Peru at the other.At Venezuala is the fineft tobacco in all New Spain.
Cocoa is alfo a very great article in their merchandize ; it is produced chiefly at Guatimala, Vera Paz, Soconafca, Crudad Real, and Guaxaca. The nuns have the chief trade of making it into chocolate: it is thought they drink more chocolate in the city of Mexico; than in all New Spain. Sugar is a general product in all the Spanifh colonies in North America, at Mexico, Nicaragua, Guaxaca, Crudad Real, Guatimala, Ifalcalla, \&cc. It is confumed in great quantities in Mexico, and the moft populous cities; and large quantities are carried to Panama, from whence they carry it by fea to Lima, to Guiaquil in Peru, and to Baldivia in the remoteft parts of Chili.-This is a confiderable article of their home trade, as before noticed.
They have fome manufactures among them too; for the people fpin cotton with great application, and they make abundance of neceflary things of it, which they could not have from Europe but at an extraordinary price; as particularly they make a coarfe ftuff for the poorer fort of people, called meftizas, with which they clothe themfelves, and of which they make hammocks to lye in.
They make alfo a kind of Segovia cloth, of Cheep's-wool, and cotton-wool, mixed together: and this is carried through the country on mules to be fold, like as the pedlars in Poland carry linnen from place to place. This cloth is generally bought to clothe the free Chriftian Indians, who live in great numbers in the villages, and even in the largeft cities, and drive trades according as they are brought up and taught when they are young; particularly, they are carpenters, mafons, hufbandmen, vine-dreffers, planters, \&c. Some of thefe have great farms, and are well turned for making of fugar and indigo. There are above 120,000 families of them in the city of Nicaragua, and the country adjacent, generally employed in feeding black cattle, and planting corn: with both which they fupply the greateft cities towards Ifalcalia and Mexico.
The feveral kingdoms of this country are fo vafly large, that great numbers of people, and of cattle, are employed to carry by land the growth of one country to another. The people of Nicaragua, and of the Honduras, employ 30,000 mules and horfes to carry corn, fugar, cocoa, and other goods into the inward provinces; they carry thofe things, as provifions, even to Mexico itfelf.
Every time the galleons arrive from Europe, there are an infunite number of people of all forts, as well Peruvians and Chilians as Spaniards, who come from the remoteft parts of the Spaniih countries to Porto Bello, with fervants, mules, guanicoes and other carriage, to trade for thofe European goods: and for the payment, they bring in the firft place the bullion, which, as it is heavy, and muft come at leaft overland from Panama, fo it requires abundance of cattle for carriage; others bring it by land carriage from the countries whence they come, as from Cufco and Quitto in Peru, over the mountains, and more fill from Lima; and fome come even from Chili itfelf, which is a ftrange journey for length. The latter of thefe, it is true, bring nothing but gold, and generally come from Baldivia and St. Jago by fea to Lima, and the reft by land: but then thefe convey the European goods, which are bulky rather than heavy, op the river to the lake of Nicaragua, and fo to Panama.
As there is a valt flux of trade thus between Porto Bello and Panama on this occafion, fo there is a very great trade from all the coaft of Chili and Peru directly to ''anama by fea; infomuch that on thefe occafions there fhall be feen in the bay and road of Panama, three or four hundred fail of hips at a time, againft the approach of the sair at Porto Bello.

In like manner, for carrying the treafure for the galleons from Mexicp, and the country of Paetneca, which is about 60 miles north from Mexico, to La Vera Cruz, when the galleons come from old Spain, the numbers of carriages, mien, and horfes, are incredible. The filver mines in and about that part of the empire of Mexico, are hardly to be reported, the account would be looked on as fabulous and impolfible.
The number of llaves, Indians and natives employed in thefe mines, is proportionably great, befides above 100,000 Spanih Indians, and Creolian Ludians or Mefliza's, that is to fay, begotten between a Spaniard and a Mexican; and befides 7 or 8000 families of real Spaniards, who live among, rule, and govern the reft. Add to thefe, the numbers of people, horfes and mules, employed to carry all the treafure and merchandize between Mexico and La Vera Cruz.'
The product of the country there is not fufficient to fupply thefe, and the city of Mexico cannot fupply them; therefore corn and cattle, and other provifions, are brought a long way for their fupport.
The carriage back again to other parts from La Vera Cruz, of the European goods which come by the galleons, is a very confiderable article of trade; and particularly the cárriage alfo of tobacco, fugar, and other produce of Guatimala; and the adjacent country of Guaxaca, which comes by fea to La Vera Cruz from the fouth coaft.-All this is faid to employ above 60,000 hotfes, mules, affes, and a proportioned number of men.
Cochineal is brought thus over the mountains from the country of Guadalaxara, north-weft from Mexico about three hundred and twenty miles. It is brought on horfes and mules, with which the country abound.
This account of the inland trade and land-carriage of NewSpain being fo confiderable an article of commerce, naturally brings me to fpeak of the trade of Acapuico on the South Seas, as it refpects the land part chiefly: but for this fee the article Acapulco.
In order to comprehend the whole of the trade of Spanifh America, we fhould take fome notice of the fupplies of all the goods they call for from Europe: For this we refer to Spain and Spanish America for a more particular account; we here contenting ourfelves.
We fhall, however, here give a fketch of the great value of the RETURNS made to Europe for this trade, from whence fome calculation may be made by it of the value alfo of the goods exported from Europe. That fome rational conjecture may be made of the magnitude of this whole trade in general, and the wealth of the Spanih dominions in America in particular, we fhall here exhibit the draught of a cargo of one of the leaft fleets or flotas from La Vera Cruz, that came fome years ago, and which confifted but of five galleons, and a pelache or advice boat that arrived at Cadiz in July 1723. It is as follows:

Pieces of Eight, 705,626 for the king $\}$ duely Ditto - - $7,62 \mathrm{I}, 586$ for the merch ${ }^{\text {ss }}$. $\}_{\text {regifter'd. }}$ Old Plate - $\quad 174,348$
Gold - - - 403,27.7 in piftolescoin'd \} alio
Ditто - - $-15,325$ in duft. $\}_{\text {regifterd. }}$

## 8,920,162

N. B. This is all what they called registered plate; the plate unregistered is fometimes equal to it, and always very confiderable.

Merchandize by the same Fleet.
Cochineal - 1,425 bales Coral - 8 chefts Indigo - - I,93I ditto Oilof M草rry 6 fifkslarge Cocoa - $920,000 \mathrm{lb}$. wt. Ointmentititto 57 ditto Venelloes - $70,000 \mathrm{lb}$. wt. Powder ofOxaca 22 ditto Jallap - - 458 bales Presents - 263 cheffs Cortex Peru - 67 ditto Chocolate 134 chefts LapisContrayerva 37 ditto China ware 18 dito. Ginger - - 27 cafks
After the arrival of the above Flota, came in the fame feafon two fhips from Buenos Ayres.

## Cargo.

Another Flota, which arrived in Spain in April ${ }_{17} 27$, being the fame which, at that time, lay long blocked up at the Havannah for fear of a war with England, confifted of 7 gal-
leons and 4 merchant-fhips, exclufive of one thip loft upon the Azores or weftward illands: this fleet was exceeding rich, and brought, befides private fums unregiftered, and befides merchandize,

14,316,794 Pieces of Eight in filver 123,840 _ in gold.

The thip loft had two boxes of coined gold, and 236,778 pieces of eight in filver. The merchants goods we had no eftimate of.
At the fame time the galleons blocked up in the harbour of Porto Bello, by Admiral Hofier, had on board no lefs than 26 millions of pieces of eight in ipecie, befides merchandize: at the fame time alfo an Englifh Thip called the Royal George, loaden there for the South Sea Company of London, had on board near a million of pieces of eight in treafure, befides merchandize ; and another South Sea fhip at La Vera Cruz had near as much.
Thefe are fure teftimonies of the immenfe wealth of SpA nish Amprica, and of the great extent of the commerce from Europe to them, of which the above were the returns. After this, no queftion need be afked, to what height fuch a commerce may not be carried. It has advanced not in confiderably fince; for though the trade of particular European nations may have declined, yet others have advanced, which has been, and always will be owing to the encouragement given thereto in Old Spain.
The iflands in America belonging to the Spaniards are St، Domingo, otherwile called Hifpaniola, which the French Mare with them at prefent; Cuba, Porto Rico, Canary iflands, St. Margaret, and fome other lefs confiderable, which the Spaniards vifit fometimes, but where they have no colonies:-See Spain, Spanish America, Acapulco, Mexico, Peru. Before the laft definitive treaty of $17 \sigma_{3}$, France had on the continent of America, Canada, where are Que. bec, Montreal, Port-Royal, Richliev, and Frontenac, the Mississippi, and Louisiana: but fince the faid treaty thefe are annexed to the crown of England, and the privilege of navigating on the Mrssissippt is allowed to England as well as France.
Before the war, France had the iflands of Martinico, Guadaloure, Desirada, Marigalante, St. Bartholomew, Santa Cruz, Granada and the Granadines, and they pretended a right to St. Vineent, St. Lucia, Dominica and Tobago; but fince the faid treaty, Granada and the Granadines, St. Vincent, Dominica, and Tobago, are annexed to the crown of England, and St. Lucia is given to France; and the former are their antient iflands, of which we difpoffeffed them in the laft war, and reftored to them at the laft peace.
Before the treaty of 1763 , the French poffeffed the fouthern part of St. Domingo, Cape-Briton or Louisburgh, the illand of St. John's, the ifland of Anticoste, the Madeline Islands, and others dependant on Cafiada. Since the laft peace, the French retain their part of St. Domingo; and Cape Breton, the ifland of St. John, the inland of Anticofte, together with the ifland of Madalene, and all dependencies on Canada are ceded to Great Britain, and the French have the illands of St. Peter's and MiqueLon ceded to them for the fhelter of their fifhermen, without the liberty of making any fortifications; and it is flipulated, that they are to keep a guard of 50 men only upon them for the police.
The Portugueze have in America the coaft of Brazil only, which extends from the river of the Amazons to that of St Gabriel, near the river Plate. That coaft is divided into 14 captainfhips, or governments, of which thofe that are beft known in Europe are Fernambuco, or Pernambuco, Santos or Baya da todos los fantos, i. e. the Bay of all Saints, and Rio Janeiro. The rich gold and diamond mines of this country afford the Portugueze a conftant fupply of wealth; and the trade they carry on thither is the fupport of their kingdom. The Dutch, who bave fo large a fhare in the Eaft-Indies, have but a very fmall one in thofe of the Weft. Their iflands are Saba, St. Euftatia, and a part of the ifle of St. Martin ; all thefe are the fmalleft and moft inconfiderable of the Antilles. But, to make the Dutch fome amends, they are in poffeffion of Bonaires, Aruba or Oruba, Curaflow, which is alfo Ipelt Curaçao. Thefe not lying any great diftance from Carthagena and Porto Bello, afford the Dutch frequent opportunity to carry on a very profitable contraband trade, which the Spanifh gavernors are ufed to wink at.
They have alfo Surinam, at the mouth of the river of the fame name, on the coaft of Guiana; befides Bamron, Aprenvace, and Berbice; all thefe are on the continent, and are, as it were, feparated by Cayenne, which belongs to the French. The Danes are fettled on the fmall illand of St. Thomas, where the Hamburghers alfo have a fmall factory. This ifland is not far from Porto Rico. They are allo in poffer fion of one of the fmall illands called the Virgins.
The duke of Courland, with his people formerly, as well as the Swedes, have alro made fome attempts to get a footing in this new world; the former in fome of the Antilles Vol.I.
and the latter in North America. But their projects mict with no fuccefs:
The fame may be obferved of the Scots, who in the begin. ning of the XVIIth. century; fetted in the ifthmus, and on the river of Darien, from whence they were driven by the Spaniards.

## REMARKS.

By this furvey of America, and of the territories belonging to the feveral European potentates, who thare this part of the world among them in colonies, a good judgment may be made how greatly the general traffic and mavigation of Europe depends on America. And, indeed, it is worth oblervation, that the trade from the feveral mother kingdoms interefted in America, to their refpective colonies theres, may be looked on in the light of their own branches of foreign trade, as being under their own tirection and regulation: and it mult be allowed, that experience hath hitherto fhewn, that thofe powers who moft wifely cherith their plantation trade and navi $\uparrow$ gation in America, in due fubferviency to the profperity of thieir particular mother-countries, are likely to have the greateft fhare of mercantile fhipping; the beft nurfery for feamen; and in a word; to be the beft capable of maintaining the dominion and fovereignty of the feas.
America, more efpecially its illands; depend greatly on Africa, which fupplies the feveral powers therein concerned with negroes, to do their flavery in their refpective plantations. To the Spaniards and Portugueze the Blacks are particularly ufeful in their gold and filver, and diamond mines; to the Englifh and the French in the production of their fugars, tobacco, rice, indigo, \&cc. \&tc. And in their illands particularly, is has been faid that the Europeans cannot fuftain that labour and fatigue in thofe climates equal to what the negroes are experienced to do: This, however, has been looked on by many wife and good men as a pretext to fubject that race of men to Navery;' for, if the Europeans were obliged to live as foberly as the negroes, they would be as able to undergo the real flavery the negroes do in fome plantations, efpecially in the French fugar colonies, where in order to raife their colonies as fuddenly as poffible, they regard no hardfhips they put on their negroe flaves: and by thefe means that rival nation firft fupplanted England in the fugar trade of mof parts of Europe. The communication between America and Afia, though far from being fo large as the circumftances of each will admit of, has, however, of late years, been carried to a pretty confiderable extent, and is produclive of mutual advantages to both. The commerce of the Philippine inlands depends in a great meafure on the two large fhips which arrive thither yearly from Acapulco, bringing to the value of $10,000,000$ of pieces of eight, in goods and fpecie; and the returns they make in all the choice products of the Eaft-Indies, are difperfed from Acapulco, fome in fmaller veffels to the fea-coafts of Petu and Chili; but the greater part to Mexico, by land carriage, which is 240 miles; whereby a great number of people, horfes, mules, and carriages are employed. Add to this; that the exports from America to the Philippines come chiefly from Mexico to Acapulco, by the fame land carriage. See Acapulco.
For the trade of America, as the fame telates to the intereft of the powers under whofe dominion the feveral colonies are, together with the peculiar laws and regulations made to render them more beneficial to thofe feveral powers; fee British America, Spanish America, Frenci America, Portugueze America; Dutch America.
The definitive treaty of $17^{63}$, having made a great alteration in the affairs of America, we fhall here infert the faid treaty at large; to which we fhall occafionally refer throughout this work.

The Definitive Treatiy of friendthip and peace between his Britannic Majefty, the moft Chriftian King, and the King of Spain, concluded at Paris the roth day of February, $\mathrm{I}_{7} \mathrm{O}_{3}$. To which the King of Portugal acceded on the fame day.
In the name of the moft Holy and Undivided Trinity, Father, Son and Holy Ghoft. So be it.
Be it known to all thofe to whom it fhall, or may, in any manner, belong.
It has pleafed the Moft High to diffufe the Spirit of union and concord among the princes, whofe divifions had foread troubles in the four parts of the world, and to infpire them with the inclination to caufe the comforts of pease to fucceed to the misfortunes of a long and bloody war, which, having arifen between England and France, during the seign of the moft ferene and moft potrnt prince George the Second, by the grace of God king of Great Britain, of glorious memory, continued under the reign of the moft ferene and moft potent prince George the Third, his fucceffor; and in its progrefs, communicated itfelf to Spain and Portugal : confequently, the molt ferene and moft potent prince George the Third, by the grace of God king of Great Britain, France and Ireland, Duke of Brunfwick and Lunenbourg, ArchTreafurer, and Elector of the Holy Roman Empire; the moft ferene and moft potent prince Lewis the Fifteenth, by the grace of God, Moft Chritian King ; and the moft fe-

## A ME

## A M E

rene and moft potent prince Chatles the Third, by the grace of God king of Spain and of the Indies; after having laid the foundation of peace in the preliminaries figned at Foun. tainebleau the third of November laft; and the mott ferene and moft patent prince, Don Jofeph the Firft, by the grace of God king of Portugal and of the Algarves, after having acceded thereto, determined to compleat, without delay, this great and important work. For this purpofe, the high contracting parties have named and appointed their refpective ambaffadors extraordinary and miniters plenipotentiary, viz. His facred majelly the king of Great-Britain, the mon illuftrious and moft excellent lord, John, duke and earl of Bedford, marquis of Tavifock, ©c. his minifter of ftate, lieutenant general of his armies, keeper of his privy feal, knight of the mott noble order of the garter, and his amballador extraordinary and minifter plenipotentiary to his Moft Chriftian Majefty ; his facred majefty the Moft Chriftian King, the moft illuftrious and moft excellent lord Cæfar Gabriel de Choifeul, duke of Praflin, peer of France, knight of his orders, lieutenant general of his armies, and of the province of Britany, counfellor in all his council, and minifter and fecretary of ftate, and of his commands and finances; his facred Majefty the Catholic King, the moft illuitrious and moft excellent lord, Dom Jerome Grimaldi, marquis de Grimaldi, knight of the Moft Chriftian King's orders, gentleman of his Catholic Majefty's bedchamber in employment, and his ambaffador extraordinary to his Moft Cbriftian Majelty; his facred majefty the Moft Faithful King, the moft illuftrious and molt excellent lord, Martin de Mello $\& z$ Caftro, knight profefled of the order of Chrift, of his Moft Faithful Majefty's council, and his ambaffador and minifter plenipotentiary to his Moft Chriftian Majefty.
Who, after having duly, communicated to each other their full powers, in good form, copies whereof are tranicribed at the end of the prefent treaty of peace, have agreed upon the articles, the tenor of which is as follows.
Article I. There fhall be a chrifian, univerfal, and perpetual peace, as well by fea as by land, and a fincere and conftant friendfhip thall be re-eftablifhed between their Britannic, Moft Chriftian, Catholic, and Moft Faithful Majerties, and between their heirs and fucceffors, kingdoms, dominions, provinces, countries; fubjects and vaffals, of what quality or condition foever they be, without exception of places or of perfons : fo that the high contracting parties fhall give the greateft attention to maintain between themlelves and their faid dominions and fubjects, this reciprocal friendfhip and correfpondence, without permitting on either fide, any kind of hoftilities by fea or by land, to be committed from henceforth, for any caufe or under any pretence whatloever, and every thing fhall be carefully avoided which might hereafter, prejudice the union happily re-eftablifhed, applying themfelves, on the contrary, on every occafion, to procure for each other whatever may contribute to their mutual glory, interefts and advantages without giving any affifance or protection directly or indirectly, to thofe who would caufany prejudice to either of the bigh contracting patties; there thall be a general oblivion of every thing that may have been done or committed before or fince the commencement of the war, which is juft ended
II. The treaties of Weftphalia, of 1648 ; thofe of Madrid, between the crowns of Great Britain and Spain, of 1667 , and 1670 ; the treaties of peace of Nimeguen of 1678 and 1679 ; of Ryfwick, of 1697; thofe of peace and of commerce of Utrecht, of 1713 ; that of Baden, of 1714 ; the treaty of triple alliance of the Hague, of 1717 ; that of the quadruple alliance of London, of 1718 ; the treaty of peace of Vienna, of 1738 ; the definitive treaty of Aix-la-Chapelle, of 1748 ; and that of Madrid between the crowns of Great Britain and Spain, of 1750; as well as the treaties between the crowns of Spain and Portugal, of the $13^{\text {th }}$ of February, 1668 ; of the 6 th of February, 1715; and of the 12th of February 1761 ; and that of the inth of April, 1713 , between France and Portugal, with the guarantees of Great Britain, ferve as a bafis and foundation to the peace, and the prefent treaty: and for this purpofe they are all renewed and confirmed in the beft form, as well as all the treaties in general, which fubfifted between the bigh contracting parties before the war, as if they were inferted here word for word, fo that they are to be exactly obferved, for the future, in their whole tenor, and religioully executed on all fides, in all their points which fhall not be derogated from by the prefent treaty, notwithftanding all that may have been fipulated to the contrary by any of the high contracting parties: and all the faid parties declare, that they will not fuffer any privilege, favour or indulgence to fubfift, contrary to the treaties above confirmed, except what thall have been agreed and flipulated by the prefent treaty.
IIl. All the prifoners made on all fides, as well by land as by fea, and the hoftages carried away, or given, during the war, and to this day, fhall be reftored without ranfom, fix weeks at lateft, to be computed from the day of the exchange of the ratification of the prefent treaty, each crown refpectively paying the advances which thall have been made for the fubilitence and maintenance of their prifoners, by the Covereign of the country where they fhall have been detained,
according to the attefted receipts and eftimates, and other authentic vouchers, which fhatl be furnifhed on one fide and the other: and fecurities thall be reciprocally given for the payment of the debts which the prifoners fhall have contracted in the countries where they have been detained, until their entire liberty. And all the flips of war and merchane veffels which thall have been taken fince the expiration of the terms agreed upon for the ceflation of hoffilities by fea, Thall be likewife reftored, Bona tide, with all their crews and cargoes: and the execution of this article fhall be proceeded upon immedately after the exchange of the ratifications of this treaty.
IV. His Molt Chriftian Majefty renounces all preteafione which he has heretofore formed, or might form, Nova Scotia, or Acadia, in all its parts, and guaranties the whole of it, and with all its dependencies to the king of Great-Britain : Moreover, his Mof Chriftian Majefty cedees aud guaranties to his faid Brtannick Majetty's in full right, Canada, with all its dependencies, as well as the ifland of Cape Breton, and all the other iflands and coalis in the gulph and river of St. Lawrence, and in general, every thing that depends on the faid councries, lands, iflands, and coplts, with the fovereignty' preperty, pafedion, and all fights acquired by treaty or otherwite, which the Mof Chrifian King and the crown of France have had til now, over the laid, countries, illands, lands, places, coafts, and their inhabitants, fo that the Moft Chriftian Kugg cedes and makes over the whole to the faid king, and to the crown of Great-Britan, and that in the moft ample manner and form, withour reftriction, and withopt any liberty to depart from the fuid cefiron afd guaranty under any pretence, or to dilturb Great-Britain in the poffefions above-mentioned. His Britannick Majefty, on his fide, agrees to grant the liberty of the catholiek religuon to the inhabiants of Canada : he will confequently give the moft precile and moft effectual orders, that his new Roman. Catholick fubjects may profefs the worthip of their religion, according to the rites of the Romifh church; as far as the laws of Great. Britain permit. His Britannick Majefty further agrees that the Fsench inhabitants, or others, who had been fubjecte of the Molt Chrufian King in Canada, may retire with all lafety and freedom, wherever they fhall think proper, and may fell their eftates, provided it be to fubjects of his Britannick Majeity, and bring away their effects, as well as their perfons, without being reltrained in their emigration, under any pretence what foever, except that of debts, or of criminal profecutions: the term limited for this emigration, thall be fixed to the fpace of eighteen months, to be computed frem the day, of the exchange of the satifications of the profent treaty.
V. The fubjects of France fhall have the liberty of filhing and drying on a part of the conats of the illand of Newfoundland, fuch as is fpecifed in the inth article of the treaty of Utrecht; which article is renewed and confirmed by the prefent treaty (except what relates to the illand of Cape Breton, as well as to the other iflands and coafts in the mouth and gulph of St. Lawrence) and his Britannick Majefty confents to leave to the fubjects of the Mofl Chrittian King, the liberty of fifhing in the gulph of St, Lawrence, on condition that the fubjects of France do not exercife the raid filhery, but at the diftance of three leagues from all the coalls belonging to Great Britain, as well thofe of the continent, as thofe of the iflands fituated in the faid gulph of St , Lawrence. And as to what relates to the fifhery on the coalt of the ifland of Cape Breton, out of the faid gulph, the fubjects of the Moft Chriftian King fhall not be permitted to exercife the faid fifhery, but at the diftarte of fifeen leaques from the coaft of the ifland of Cape Breton; and the fihery on the coafts of Nova Scotia, or Acadia, and every where elfe on of the faid gulph, thall remain on the foot of former treazties.
VI. The king of Great-Britain cedes the inands of St Pierre and Miquelon, in full right, to his Mof Chritian Majefty, to ferve as a Chelter to the French filhermen; and his faid Moft Chriftian Majefty engages not to fortify the faid inlamos, to erect no buildings upon them, but merely for the convenience of the filhery, and to keep upon them a guard of fify men only for the police.
VII. In order to re-eftablifh peace on folid and durable foundations, and to remove for ever, all fubjects of difpute wich regard to the limits of the Britifh and French territories on the continent of America; it is agreed, that, for the future, the confines between the dominions of his Britannick Majefty, and thofe of his Moft Chriftian Majefty, in that part of the world, thall be fixed irrevocably, by a line drawn along the middle of the river Miffifippi, from its fource to the river Iberville, and from thence by a line drawn along the middle of this river and the lakes Maurepas and Pontchartrain, to the fea; and for this purpofe, the Moft Chriftian King cedes, in full right, and guaranties to his Britannick Majefty, the river and-Port of the Mobile, and every thing which he poffeffes, or ought to poffers, on the left fide the river Miflifippi, except the town of the New Orleans, and the ifland on which it is Gituated, which thall remain to France; provided that the river Miffifippi thall be equally free, as well to the fubjects of Great Britain, as to thofe of Franje, in its whole breadrh

## A ME

## A ME

and length, from its fource to the fea, and exprefly that part, which is between the fatd ifland of New Orleans, and the right bank of that tiver, as well as the paflage both in and out of its mouth. It is further ftipulated, that the veffels belonging to the fubjects of either nation, fhall not be fopped, vifited, or fubjected to the payment of any duty whatfoever. The fipulations inferted in the $4^{\text {th }}$ article in favour of the inhabitants of Canada, fhall allo take place, with regard to the inhabitants of the countries ceded by this article.
VIII. The king of Great-Britain thall reftore to France the inlands of Guadaloupe, of Marie Galante, of Defirade, of Martinico, and of Belleifle; and the fortrefles of thefe illands fhall be reftored in the fame condition they were in, when they were conquered by the Britifh arms; provided that his Britannick Majefty's fubjects, who fhall have fettled in the faid inands, or thofe who thall have any commercial affairs, to fettle there, or in the other places reftored to France by the prefent treaty, fhall have liberty to fell their lands and their eftates, to fettle their affairs, to recover their debts, and to bring away their effects, as well as their perfons, on board veffels which they fhall be permitted to fend to the faid inlands and other places reftored as above, and which fhall ferve for their ufe only, without being reftrained on account of their religion, or under any other pretence whatfoever, except that of debts, or of criminal profecutions: and for this purpofe, the term of cighteen months is allowed to his Britannick Majefty's fubjects, to be computed from the day of the exchange of the ratifications of the prefent treaty; but as the liberty granted to his Britannick Majeity's fubjeeks, to bring away their perfons, and their effects, in veficts of their pation, may be liable to abufes, if precautions were not taken to prevent them; it has been exprefly agreed between his Britannick Majenty and his Moft Chriftian Majefty, that the number of Englifl veffels, which Chall have leave to go to the faid iflands and piaces reftored to France, fhall be limited, as well as the number of tons of each one; that they thall go in ballaft, thall fet fail at a fixed time; and hall make one koyage only, all the effects belonging to the Englifh being to be embarked at the fame time. It has been further agreed, that his Moft Chriftian Majefty fhall cauie the neceflary pafsports to be given to the faid vellels; that for the greater fecurity, it hall he allowed to place two French clerks or guards, in each of the faid veffels, which fhall be vifited in the land-ing-places and ports of the faid ifland, and places reftored to France, and that the merchandize, which fhall be found therein, fhall be confifcated.
IX. The Moft Chriftian King cedes and guaranties to his Britannick Majefty, in full right, the iflands of Granada, and of the Granadines, with the fame ftipulations in favour of the inhabitants of this colony, inferted in the $4^{\text {th }}$ article, for thofe of Canada; and the partition of the iflands, called Neutral, is agreed and fixed, fo that thofe of St. Vincent, Dominica, and Tobago, Ghall remain in full right to GreatBritain, and that of St. Lucia Mall be delivered to France, to enjoy the fame likewife, in full right; and the high contracting parties, guaranty the partitions fo ftipulated.
X. His Britannick Majefty fhall reftore to France the ifland of Goree, in the condition it was in when conquered: and his Mof Chrifian Majelty cedes, in full right, and guaranties to the king of Great-Britain, the river Senegal, with the forts and factories of St. Lewis, Podor, and Galam; and with all the rights and dependencies of the faid river Senegal, XI. In the Eaft Indies, Great-Britain Mall reftore to France, in the condition they are now in, the different factories, which that crown poffefled, as well on the coaft of Coromandel, and Orixa, as on that of Malabar, as allo in Bengal, at the beginning of the year 1749. And bis Moft Cbriftian Majefy renounces all pretenfion to the acquifitions which he had made on the coaft of Coromandel and Orixa, fince the faid beginning of the year 1749. His Moft Chriftian Majefty thall reftore on bis fide, all that he may have conquered from Great-Britain, in the Eaf Indies, during the prefent war ; and will exprefsly caufe Nattal and Tappanouly, in the inland of Sumatra, to be reftored; he engages further not to crect fortifications, or to keep troops in any part of the dominions of the Subah of Bengal. And in order to preferve future peace on the coaft of Coromandel and Orixa, the Englifh and French Mhall acknowledge Mahomet Ally Cawn for the lawful Nabob of the Carnatick, and Salabat Jing for Jawful Subah of the Decan; and both parties fhall renounce all demands and pretenfions of fatisfaction, with which they might charge each other, or their Indian allies, for the depredations, or pillage, committed on the one fide, or on the other, during the war.
XII. The ifland of Minorca fhall be reftored to his Britannick Majefty, as well as Fort Sc. Philip, in the fame condition they were in, when conquered by the arms of the Moft Chriftian King; and with the artillery which was there, when the faid illand, and the faid fort were taken.
XIII. The town and port of Dunkirk Mall be put into the ftate fixed by the laft treaty of Aix-la-Chappelle, and by former treaties. The cunetre fhall be deftroyed immediately after the exchange of the ratifications of the prefent treaty, as well as the forts and batteries which defend the entrance on the fide of the fea; and provifion thall be made, at the fame
time, for the wholefomenefs of the air, and for the heaib of the inhabitants, by fome other means, to the fatisfaction of the king of Great-Britain,
XIV. France thall reflare all the countrias belonging to the electorate of Hanover, to the landgrave of Helle, to the dukg of Brunfwick, and to the count of La Lippe Buckebourg, which are, or Chall be occupied by his Moft Cbriftian Majefty's arms ; the fortieffes of thefe different countries fhill be reflored in the fame condition they were in, when conquered by the French arms; and the pieces of arrillery, which hall have been carried elfewhere, thall be replaced by the fame number, of the fame bore, weight, and metal,
XV. In cafe the Itipulations, contained in the $13^{\text {th }}$ article of the preliminaries, fhould not be compleated at the tine of the fignature of the prefent treaty, as well with regard to the evacuations to be made by the armies of France, of the fortrefles of Cleves, Wefel, Guelders, and of all the countries belonging to the King of Pruffia, as with regard to the evacuations to be made by the Britifh and French a mies of the countries which they occupy in Wrefphalia, Lower Saxany, on the Lower Rhine, the Upper Rhine, and in all the empire, and to the retreat of the troops into the dominiz ons of their refpective fovereigns; their Britannick and $\mathrm{V}_{\mathrm{r}}$ of Chriftian Majefty's promife to proceed, bona fide, with all the dilpatch the cafe will permit of to the tuid vacuations, the entire completion whereof they fit ulate before the nfteenth of March next, or looner, if it can be done; and theif Britannick and Moft Chriftian Majefties further engage and promife to each other, not to furnih any fuccours, of any kind, to their refpective allies, who thal continue engaged in the war in Germany,
XVI. The decifion of the prizes made, in the time of peace, by the fubjects of Great Britain, on the spaniards, hall be referred to the courts of juftice of the admiralty of Great-Britain, conformably to the rules eftablibed among all nutuons, fa that the validity of the faid prizes. between the Britilh and Spanilh natcons, thall be decided and judgec, according to the law of nations ${ }_{2}$ and according to the treates, in the courts of juftice of the nation, who hall haye made the capture.
XVII, His Britannick Majefty @hall caufe ta be demolifhed all the fortifications which his fubjects thall have ereged in the bay of Honduras, and other places of the territory of Spain, in that part of the world, four months after the ratification of the prefent treaty : and bis Cathuiick Majefty thall not permit his Britannick Majefty's fubjects, or their workmen, to be difturbed or molefted, under any pretence whato foever, in the laid places, in their occupation of cutting, loading, and carrying away logwood, And for this purpofes they may build without hindrance, and occupy without interruption, the houfes and magazines which are neceflary for them, for their families, and for their effects: and his Catholick Majefy affures to them, by this article, the full enjoyment of thofe advantates and powers on the Spanifh coafts and territories, as above. ftipulated, immediately after the ratifications of the prefent treaty.
XVIII. His Catholisk Majefty defifts, as well for himfelf as for bis fucceffors, from all' pretenfions which he miay have formed, in favour of the Guipufcoans, and other his fubjects, to the right of filhing in the neighbourhood of the "fand of Newfoundland.
XIX. The king of Great-Britain thall reftore to Spain all the tertitory which he has conquered in the ifland of Cuba, with the fortrels of the Havanna; and this fortrefs, as weil as all the other fortreffes of the faid ifland, fhall be reftored in the fame condition they were in when conquered by his Britan, nick Majefty's arms, provided that his Britannick Majeity's fubjects, who thall have fettled in the faid illand, reftored to Spain by the prefent treaty, or thofe who fhall have any commercial affairs to fettle there, fhall have liberty to fell theis lands and their effates, to fettle their affairs, to recover their debts, and to bring away their effects, as well as their perfons on board vefiels which they fhall be permitted to fend to the faid illand, reftored as above, and which fhall lerve for that $\mu$ fe only, without being reftrained on account of their religion, or under any pretence whatfoever, except that of debts, or of criminal profecution: and for this purpofe, the term of eighteen months is allowed to his Britannick Majelty's fubjects, to be computed from the day of the exchange of the ratifications of the prefent treaty: but as the liberty granted to his Britannick Majefty's fubjects, to bring away their perfons and their effects, in veffels of their ration, may be liable to abufes, if precautions were not taken to prevent them; it has been expressly agreed, between his Britannick Majefty and his Catholick Majefty, that the number of Englifh veffels, which fhall haveleave to go to the faid inand reftored to Spain, thall be limited, as well as the number of tons of each one : that they fhall go in ballaft; Shall fer fail at a fixt time; and fhall make one voyage only: all the effects belonging to the Englifh being to be embarked at the fame time. It has been further agreed, that his Catholick Majefy fhall caufe the neceffary' patsports to be given to the faid veffels; that, for the greater fecurity, it fhall be allowed to place two Spaniih clerks or guards, in each of the faid veffels; which thall be vifited in the landing-places and ports
of the faid ifland, reftored to Spain, and that the merchiandize, which fhall be found therein, fhall be conficated.
XX. In confequence of the reftitution ftipulated in the preceding article, his Catholick Majefty cedes and guaranties, in full right, to bis Britannick Majefty, Florida, with fort St. Auguftin, and the bay of Penfacola, as well as all that Spain poffefles on the continent of North America, to the eaft, or to the fouth-eaft of the river Miffifippi. And in general, every thing that depends on the faid countries and lands, with the fovereignty, property, polfeffion and all rights, acquired by treaties or otherwife, which the Catholick King, and the crown of Spain have had, till now, over the faid countries, lands, places, and other inhabitants; fo that the Catholick King cedes and makes over the whole to the faid king, and to the crown of Great-Britain, and that in the moft ample manner and form. His Britannick Majefty agrees on his fide, to grant to the inhabitants of the countries above ceded, the liberty of the catholick religion : he will confequently give the moft exprefs and the mofl effectual orders, that his new Roman Catholick fubjects may profefs the worlhip of their religion, according to the rites of the Romifh church, as far as the laws of Great. Britain permit: his Britannick Majefty further agrees, that the Spanifh inhabitants or others, who had been fubjects of the Catholick King in the faid countries, may retire, with all fafety and freedom, wherever they think proper; and may fell their eftates provided it be to his Britannick Majefty's fubjects, and bring away their effects, as well as their perfons, without being reftrained in their emigrations, under any pretence whatfoever, except that of debts, or of criminal profecutions : the term limited for this emigration being fixed to the fpace of eighteen months, to be computed from the day of the exchange of the ratifications of the prefent treaty. It is moreover ftipulated, that his Catholick Majefty fhall have power to caufe all the effects, that may belong to him to be brought away, whether it be artillery or other things.
XXI. The French and Spanifh troops fhall evacuate all the territories, lands; towns, places and cafles of his Moft Faithful Majerty, in Europe, without any referve, which fhall have been conquered by the armies of France and Spain, and fhall reftore them in the fame conditiog they were in when conquered, with the fame artillery and ammunition which were found there; and with regard to the Portugueze colonies in America, Africa, or in the Eaft-Indies, if any change fhall -have happened there, all things thall be reftored on the fame footing they were in, and conformably to the preceding treaties, which fubfifted between the courts of France, Spain, and Portugal before the prefent war.
XXII. All the papers, letters, documents and archives, which were found in the countries, territories, towns and places that are reftored, and thofe belonging to the countries ceded, fhall be refpectively and bona fide, delivered or furnifhed at the fame time, if poffible, that poffeffion is taken, or at lateft four months after the exchange of the ratifications of the prefent treaty, in whatever places the faid papers or documents may be found.
XXIII. All the countries and territories which may have been conquered, in whatfoever part of the world, by the arms of their Britannick and Moft Faithful Majefties, as well as by thofe of their Moft Chriftian and Catholick Majefties, which are not included in the prefent treaty, either under the title of ceffions, or under the title of reftitutions, fhall be reftored without difficulty, and without requiring any compenfation.
XXIV. As it is neceffary to affign a fixed epoch for the reftitutions and the evacuations, to be made by each of the high contracting parties; it is agreed, that the Britifh and French troops fhall compleat before the r 5 th of March next, all that fhall remain to be executed of the 12 th and 13 th articles of the preliminaries, figned the 3 d day of November laft, with regard to the evacuation to be made in the empire or elfewhere. The ifland of Belleife fhall be evacuated fix weeks after the exchange of the ratifications of the prefent treaty, or fooner if it can be done. Guadaloupe, Defirade, Marie Galante, Martinico, and St. Lucia, three months after the exchange of the ratifications of the prefent treaty, or fooner if it can be done. Great-Britain Chall likewife, at the end of three months, after the exchange of the ratifications of the prefent treaty, or fooner if it can be done, enter into poffeffion of the river and port of the Mobile, and of all that is to form the limits of the territory of Great-Britain, on the fide of the river Miffiffippi, as they are fpecified in the 7 th article. The inland of Goree fhall be evacuated by Great Britain three months after the exchange of the ratifications of the prefent treaty; and the ifland of Miniorca by France, at the fame epoch, or fooner if it can be done : and according to the conditions of the 6th article, France fhall likewife enter into poffeffion of the iflands of St. Peter, and of Miquelon, at the end of three months after the exchange of the ratifications of the prefent treaty. The factories in the Eaft Indies flall be reftored fix months after the exchange of the ratifications of the prefent treaty, or fooner if it can be done. The fortrefs of the Havanna, with all that has been conquered in the inland of Cuba, thall be reftored three months after the exchange of the ratifications of the prefent treaty, or fooner if it can be
done: and at the fame time, Great-Britain chall enter iffo poffeffion of the country ceded by Spain, according to the 20th article. All the places and countries of his moft Fathful Majetty, in Europe, fhall be reftored immediately after the exchange of the ratifications of the prefent treaty; atd the Portugueze colonies, which may have been conquered, fhall be reftored in the fpace of three months, in the Weft Indies, and of fix months in the Eaft Indies, after the exchange of the ratifications of the prefent treaty, or fooner if it can be done. All the fortrefles, the reftitution whereof is ftipulated above, fhall be reftored with the artillery and ammunition, which were found there at the time of the conqueft. In confequence whereof, the necefiary orders thall be fent by each of the high contracting parties, with reciprocal paffiforts for the Chips that Chall carry them, immediately after the exchange of the ratifications of the prefent treaty.
XXV. His Britannick Majefty, as Elector of Brunfwick Lunenbourg, as well for himfelf, as for his heirs and fucceffors, and all the dominions and poffeffions of his faid majefty, in Germany, are included and guarantied by the prefent treaty of peace.
XXVI. Their facred Britannick, Moft Chriftian, Catholick, and Moft Faithful Majefties, promife to obferve fincerely, and bona fide, all the articles contained and fettled in the prefent treaty; and they will not fuffer the fame to be infringed, $\mathrm{d}_{1}-$ rectly or indirectly, by their refpective fubjects; and the faid high contracting parties, generally and reciprocally, guaranty to each other all the fipulations of the prefent treaty. XXVII. The folemn ratifications of the prefent treaty, expedited in good and due form, fhall be exchanged in this city of Paris; between the high contraeting parties in the fpace of a month, or fooner, if poffible, to be computed from the day of the fignature of the prefent treaty.

## L. S.) Bedford C. P. S. <br> (L. S.) Choifeul duc de Prallin. <br> (L. S.) El. Marq. de Grimaldi.

AMMUNITION fignifies all forts of warlike fores and pro. vifions, more efpecially powder and ball.
By the ift of Jac. II. cap. 8. §. 2. ammunition, arms, utenfils of war, or gunpowder, imported without licence from his majefty, are to be forfeited, and treble the value.
Sect. 2. Such licence obtained, except for the furnifhing of his majefty's public ftores, is to be void, and the offender to incur a pramunire, and be difabled to hold any office from the crown.
Ammunition or gunpowder may be prohibited to be exported at the king's pleafure, by 12 Car. II. cap. 4. §. 13 .
AMOUNT, a term in arithmetic and book-keeping. It is faid of the total, which feveral fums added together produce. Ex. See what is the amount of all thofe articles, or what thofe articles amount to. The firft fide of the expences amounts to 500 l. the fitting out the London privateer will amount to to 5001.
50001.
AMPHISCII, in geography and aftronomy, the people who inhabit the Torrid Zone.
They are thus denominated, as having their fhadow turned fometimes one way, and fometimes another, i. e. at one time of the year to the north, and at another to the fouth.
AMPHORA, the largeft meafure ufed at Venice for liquids. It contains 4 bigorzas, the bigorza being 4 quarts, the quart 4 fachies, and each fachie 4 leras; but by wholefale the amphora is 14 quarts, and the bigorza $3 \frac{1}{2}$ quarts.
AMPLIATION, fignifies, in French, the duplicate which is taken or given of a receipt, an acquittance, an account, or the like. Thus they fay, to fign a copy by ampliation, that is to fay, to fign a duplicate thereof. In this fenfe they allo call ampliation a copy printed upon paper, of a contract of fale of annuities on the city of Paris, engroffed upon parchment. Notaries, when they deliver the engroffed contract to the annuitant, ought alfo to deliver him an ampliation upon paper, which he is obliged to produce to the paymafter, with his receipt annexed to it, the firf time he has a mind to receive his annuity or rent.
AMPLITUDE of the fun or ftars, in aftronomy and navigation, is an arch of the horizon intercepted between the true eaft and weft point of it, and the center of the fun or ftars at their rifing or fetting.
Amplitude is of two kinds, eaftern, or ortive, and weftern, or occafive. Eaftern, or rifing amplitude, is the diffance between the point wherein the flar rifes, and the true point of eaft, wherein the equator and horizon interfect.
Weftern, or fetting amplitude, is the diffance between the point wherein the ftar fets, and the true point of weft in the equinoctial. The eaftern and weftern amplitude are alfo ca!led northern and fouthern, as they fall in the northern or fouthern quarters of the horizon.
To find the fun's amplitude, either rifing or fetting, by the globe, bring the fun's place to the horizon either on the eaft or weft fide, and the degrees from the eaft point, either north or fouth, are the amplitude required.
To'find the fun's amplitude trigonometrically, having the latitude and fun's declination given-Say,

As the co-fine of the latitude is to the radius, fo is the fine of the prefent declination to the fine of the amplitude. Suppofe, e. gr. the latitude to be 51 deg. 30 min . and the dechnation of the fame il deg. 50 min .

Then, to the ar. co. of the co-fine of $50^{\circ} \cdot 30^{\prime} \cdot \cdot 0,2058503$ Add the fine of
Sum is the fine of $\qquad$
Which is the amplitude required.
Magnetical amplitude, is an arch of the horizon contained between the fun at his rifing or fetting, and the eaft or welt point of the compals; or, it is the difference of the rifing or fetting of the fun from the eaft or weft point of the compafs. It is found, by obferving the fun at his rifing or fetting, by an amplitude compafs.
amyantus. See Amiantus.
ANA, a term of pharmacy and phyfic, very well known to phyficians and apothecaries. The fignification of it is as follows.
The phyficians in their prefriptions, wherein feveral drugs are to be ufed, if it happens that the fame quantity, weight, or meafure, of one, two, or more of thofe drugs are to be mixed, fet down only the names of thofe feveral drugs, but not the quantity that muft be taken of them, till after the laft, putting the word ana before that quantity. Thus for inftance, R. Rhubarb, fena, caffia, ana four drachms, fignifies that four drachms of each of thefe drugs muft be taken; which the apothecary feeing, he underftands it immediarely.
The word ana has feveral other fignifications, but, as they do not relate to trade, fo they are foreign to the purpofe and defign of this Dictionary.
ANACOSTE, or ANASCOTE, a fort of woollen diaper ftuff, manufactured after the manner of ferges of Caën, but not fo woolly, and made of better wool. It is made at Leyden in Holland, at Brages and Aerfchot in the Auflian Netherlands, at Ypres, and in its neighbourhiod in French Flanders. This fuff is a French ell broad, like the ferges of Caen, and about twenty ells long It is generally fent white or black into Spain, where there i, a great demand for it. They have lately began to manufacture fome of them in France, efpecially at Bourges, where they imitate them perfeally well, and the merchants of that city fend great quantities of them into Spain.
ANAGROS, a meafure for grain, ufed in fome cities of Spain, particularly at Seville. It contains fomething more than the mine of Paris: fo that 46 anagros make 19 feptiers, meafure of Paris, and 19 feptiers of corn are reckoned to be equal to about $10 \frac{1}{4}$ quarters of London.
ANANAS, vulgarly called by us the pine-apple, becaufe of its refemblance with the cones of pines and firs, is a fruit which grows in the Antilles iflands, and in feveral other places of the Indies, as well as in South Guinea, and other parts of the world. This fruit was for a long time no otherwife known in Europe, than by the agreable defcriptions which travellers, as it were, vying with each other, frove to give of it. A few years fince they have brought us fome preferved ananas, by which we may be able to judge, how far the defcriptions of travellers are true or exaggerated. And they are now raifed to good perfection in England, as well as in other parts of Europe.
All the authors who fpeak of the ananas, ftile it the king of fruits: they fay, that, befides its excellent tafte, which makes it deferve that name, it carries on its top the enfigns of the royal dignity, in a kind of crown, compofed of flowers, or bloffons, and indented leaves of a bright and chining red. The fruit grows on a ftem full a foot high,' furrounded with 15 or 16 leaves, as long as thofe of cardoons, and in fhape like thofe of the aloe-plant; being peaked at the end, fomewhat hollow in the middle, and armed on both fides with very fharp thorns.
The fruit arifes from the middle of thofe leaves, and is fometimes of the fize of a melon. Its form is pretty much like that of the pine-cone, as has been already obferved, its rind being raifed in compartments made fcale-fathion. Nothing can be more magnificent than the colours it is painted with. lts fcales are green, bordered with a carnation colour; the ground is yellow, and, to adorn it the more, from each fcale arifes a fmall flower of a purple colour, which falls off as the fruit ripens: on the top is the crown, the enfign of its royal dignity.
The pulp of this fruit is fo agreeable to the fight, and of fo exquifite a tafte, that, in order to give fome notion of it, we fhould unite in our conception a compound of the flavour of the moft exquifite fruits. It is faid to have fomething of the peach, the ftrawberry, the mufcadine grape, and of the rennet apple; which all together compofe a tafte for delicacy beyond expreffion. Its pulp is fomething fibrous, but yet it melts in the mourh.
The ananas is propagated neither by its roots, nor by a kind of fmall and almoft imperceptible feed, that is mixed with its pulp, but only by its crown, which, being put into the ground, takes roat, fhoors out leaves, and a ftalk, or Aem, and prefents a new king of plants and fruits.
Vol. I,

There are three forts of ananas, diftinguinhed by their colourr, their figure, and their tafte. I The white ananas: though this be both larger and more beautiful than the onther forts, yet it is not of fo exquifite a tafte; it fets the teeth on edge, and makes the gums bleed. 2. The peaked, or fugar-loaf ananas: this is of a more agreeable tafle than the former, but makes the gums bleed. 3. The rennet apple: this, though the fmalleft, is the moft excellent of all. It bas the fmell and tafte of the remet apple, whence it has its name. It does not fet the teeth on edge. Profe: :or Boerhaave reckons fix kind of ananas. An excellent liquid confection, or fweet meat, i made of all thefe feveral forts. Some are alfo preferved whole, and, being taken out of fyrup, are iced over with fugar. 11 his fort of fweet-meats is fent over into Europe from the Antilles illands.
The wine made of anatuas is almolt equal to malmey. At the end of three weeks it turns. But, if it be kept as many weeks longer, it becomes better than ever, but is more heady. The ananas fupplies alfo the phyfin itn with fovereign remedies. It exhilerates the mind, flengthu is the heart and fomach, creates appetite, is good againtt the gravel and ftranguary, and is even an admirable antidote againft poifon.
The water diffilled from it has the lame priperties; but, as it works quicker, and is alfo very corrofive, it flauld not be ufed but by the prefcription of the molt prudent phyifians. The excellency of this fruit is not too highiy extolifed by' travellers, notwithftanding what $M_{r}$. Savary fays to the contrary, after having tafted it preferved at Paris. Father Labat is juft in his obfervation, when he fays, that the anana's preferved is a fine fight in Europe, at. the top of a pyramid of fweet-meats, but that its natural tafte and Havour are only to be found in America, they botblying in the juice; whach cannot be altered by heat and fugar without its entire diffipation, and confequently the natural tafte and flavour muft be loft alfo. He adds, that he brought fome into France, which he had caufed to be prepared in Martinico with all imaginalle care, but that they feemed to him no better than fwectened flax, in comparifon to what they were in their natural ftate. It is certain, that no one can well judge of the goodnefs of this fruit, if he has not often tafted it on the fpot of its grow th. With great difficulty they have been produced, by the means of hot-beds, in Holland, England, and in the French king's gardens; but they could never produce this fruit either of the like bulk or flavour, which it naturally has about 12 degrees diffance from the equator.
The flavour of this fruit, when at its maturity, is fo fweet, juicy, vinous, and refrefhing, that it is ear with great pleafure in hot countries, notwithtanjing the want of appetite. It greatly helps digeftion, by reafon of its vinous and fermentative quality, which operates efficacioufly in the diffolution of our food. It is efteemed, therefore, the beft fruit that can be eat at the end of a meal. It itrengthens a weak fomach, and creates an appetite. The fick are fr quently cured with it, by ufing it with moderation, and according to the nature of their illnefs. It is, in a word, the moft wholefome of all the fruits of the earth.
As they do not eat fo much of it in the Indies as in Europe, by reafon of the heat, and becaufe few fit down to fupper there; I eat it often of an evening, as many others did, with a pretty quantity of bread, without experiencing the leaft detriment. It is true, that there is in fome forts of the ananas a certain acidity, that is not very perceptible to the tafte, but it makes the lips fmart, efpecially of thofe whofe lips are tender, and who are not ufed to this fiuit; and, fometimes, it makes the gums of fcorbutic people bleed.
This has made many European travellers unwilling to eat much of it, from an apprehenfion that its acrimonious quality is prejudicial. What has ftrengthened this fufpicion is, their obferving that the knife with which it is cut grows black, from the ftrength of its juice, which penetrates the iron, and diffolves a part of it into a matter as black as ink.
The fame is related in Mr. de la Loubere's Voyage to Siam, and in that of Labat to the American iflands. Notwithftanding this, as long experience has verified the goodnefs of this fruit, a mere fufpicion of its being otherwife hould not prevail, Labat himfelf declaring, that, although he had very often eat of it, yet he had never found the leaft injury thereby, Thofe Europeans who frruple to eat this fruit crude, by reafon of its concealed acidity, which affects the lips and gums, think to correct it, by fleeping it fliced in wine and fugar, for an hour, in a covered plate. This preparation is vely good, but is more agreeable to my tafte when I eat it alone, tole:rably ripe, fays Labat, for then it does not affect the lips or gums; fo that this acidity of the ananas ferms to be owing only to its fate of crudity, which is natural to other fruits, and not to any pernicious quality whatever, when nature has got the better by a due maturity.
The Javans give it a little green, in flices with fugar, to children, for the worms. To be the more efficacious, it muft be a little green, but in that fate it is injurious to women with child. Perfons in a fever, or under any inflammation; hould avoid it, by reafon of the feverity of its ferment, yet it is good to diflipate obftructions in chronical cales. It is very proper alfo to prevent the generation of the ftone in the

P
bladder,
bladder, and perhaps to diffolve it in time. It is probable, that to the ufe of this fruit we may afrribe it, that the Indians are fearce ever troubled with the flone or gravel.
This excellent fruit makes part of the refrefhment wherewith the Indians, and Africans near the line, entertain the European mariners, and barter is for toys and baubles, which they are fond of. And the Europeans are very glad to have a fruit whofe light and tafte are fo very delightfuit to them, for trifles.
ANATTA, or ANNOTTO, a fort of red dye brought from the Weft-Indies. It is made of red flowers, which grow on : bufhes, or fhrubs, 7 or 8 feet high. It is thrown, like indigo, into large tubs, or cifterns, full of water, with this difference, that nothing but the flower is ufed, the leaves of which are ftripped off, as is done with regard to rofes. Thefe remain in the water till they are rotten; and when, by much ftirring, they are reduced into a thick liquid fubftance, it is expofed to the fun to dry, and afterwards made into rolls, or cakes.
There are none but the Spaniards who now cultivate this plant, and prepare the dye in any quantity, the plantations thereof which the Englifh of Jamaica had at St. Angel's being ruined. The Englifh dyers make more account of this drug than of indigo; and accordingly the merchants of Jamaica, who have it from Porto-Rico, buy it 25 per cent. dearer; for they pay but three rials per pound for indigo, and 4 for anatta. The Europeans who trade in this drug have, at prefent, the greateft part of it from the bay of Honduras. ANATOCISM. This word is but very little ufed in trade; however, as it fometimes occurs, it was thought proper to mention it. It fignifies the taking of ufurious intereft for the loan of money. This is when the lender extorts compound intereft, or joins and accumulates together the interefts of feveral years, and requires a new intereft to be paid for them, as for the firft and true principal.
ANATOLIA, or ASIA MINOR, is bounded on the north by the Euxine Sea; on the north-weft by the fea of Marmora; on the weft by the Thracian Borphoras, the Propontis, and Archipelago; on the fouth by the eaftern part of the Mediterranean; and, on the eaft, by the Eupbrates, which divides it from Turcomania and Diarbeck, or Diyarbeckr. It is divided into four parts, viz. I. Anatolia, properly fo called, on the weftern. II. Caramania, on the fouthern. III. Aladulia, on the eaftern; and, IV. Amafia on the northern part. This whole country is naturally rich and fertile, though the Turkifh tyranny hath almoft reduced it into a defert. The few plains and dales that are cultivated, though after the Turkih method, in a carelefs, flovenly and artlefs manner, do yet yield excellent corn of feveral forts, fruits of all kinds, exquifite grapes and wines, the faireft olives, citrons, Jemons, oranges, figs, dates, \&c. befides abundance of coffee, rhubarb, balfan, opium, galls, and other valuable drugs and gums. To which we may add their twifted cotton, filk, grogram, yarn, goats-hair, carpets and tapeftries, calicuts, cordavans of feveral colours, and quilted coverlids, which are brought into Europe from thence.
I. Anarolia, properly fo called, is divided into the following diftricts: Y. Bithynia. 2. Myfia. 3. Æolis. 4. Ionia. 5. Caria. 6. Doris. 7. Lydia. 8: Phrygia. 9. Galatia. Io. Paphlagonia.

1. Bithynia, the neareft province to Turky in Europe, is parted from it by the rmall ftreight called the Thracian Bofphorus. Prufa, called by the Turks Burfa, fill preferves a great hare of its antient opulence, though fome fay that its traffic is much decayed, and the great concourfe of merchants fo much leffened, that the place is going to ruin; but this feems to be a miftake, fince there is a caravan that goes every two months from thence into Perfia; befides its being a flage for feveral others that go from Aleppo, Conftantinople, \&c. to Ípaban.
The bereftine is a large edifice, well built, and filled with warehoufes and Chops, which exhibit to fale all kind of merchandizes, which are brought hither from the Levant, befides thofe which are manufactured in the city itfelf. It is well known that the Bithynian filk, which is by far the fineft in all Turky, is, for the moft part, manufactured here, befides a great deal which is brought bither from Perfia, which, though much inferior in finenefs to theirs, is yet wrought in great quantities by the Prufan workmen, who are allowed to be the beft in all Turky for weaving of hangings, tapeftry, carpets, \&c. which are from thence carried into all parts of Europe, and are there in great requeft.
Nice, called by the Turks Ifnich and Nichar, though much fallen from its ancient grandeur, hath a convenient haven on the fea of Marmora, over-againft Mefampola. The country about it affords very good fruits, and excellent wines. It contains about 10,000 inhabitants, including Greeks, Armenians, and Jews, as well as Turks, who all drive a confiderable commerce in corn, fruit, fine cloth, tapeftry, and other Levantine manufactures.
Nicomedia, by the Turks named Ifmia and Ifmigimid, is a large and populous city, with rich and beautiful bazars, or warehoufes, markers, halls, and other public edifices. It is fituate on a fruitful and delicious hill, the corn, wine, and
fruits that grow thereon being reckoned inferior to none in
Turky. It is computed to contain about 30,000 inhabitants, Turks, Jews, Greeks, and Armenians, all driving a confiderable traffic in manufactures of filks, cottons, woollen and linnen cloths, earthern ware, and glafs of all forts, which make it one of the moft trading cities in thefe parts. Befides all thefe, the greatelt part of the faics, barques, and other trading veffels belonging not only to this city, but even to the merchants of Conftantinople, are built here.
Chalcedon was once a city of great traffic and opulence, hut it is now dwindled almoft to nothing.
2. Mysia and Lesser Phrygia, have the Propontis for their northern boundary ; the Hellefpont on the weft; Phrygia Major on the eaft; and Lydia and the Archipelago on the fouth. The Marmora iflands abound with corn, wine, fruits, cotton, and pafture grounds, whereon are bred great quantities of cattle. Praconeffus, the largeft of them, is famed for its marble quarries.
Lampfacus, now Lampafco, was formerly celebrated for the excelient wines it produced; and the territory about it is ftill covered with fine vines and pomegranates, which the Turks cultivate under pretence of preferving the raifins, but, in fact, make good wine and brandy of them.
3. Eolis, has Phrygia Minor on the aorth; the Жgean, or不olian fea on the weft; Ionia on the fouth; and Lydia on the eaft. Nothing occurs here under the article of trade.
4. Ionia, is the next province to $/$ Eolis, about the boundaries of which geographers differ. Its only confiderable city is the following;
Smyrna, by the Turks called Ifmyr, is one of the fineft ports in the Levant, being fituated at the bottom of a bay capable of containing the largeft navy in the world; and, by its general and flourifhing trade, being one of the greateft and richeft cities in the Affatic Turky. The commodioufnefs of its harbour hath rendered it the common rendezvous of the greateft mercantile fhipping in all the four parts of the world, and the ftaple of their merchandize.
It was very confiderable in the time of the Romanr, and hath been all along famed for its great commerce wish il nations, efpecially the Englif, many of our confiderable sacthants refiding in it, and having a conful to protét them.
This city is reckoned to contain 15,000 Turks, 10,000 Greeks, near 2000 . Jews, befides Armenians, Franks, $\xi^{\circ} \mathrm{c}$. The Perfian caravans pour in their merchandizes all the winter months; that is, from the beginning of November to that of May, confifting, communibus annis, of about 2000 bales of filk, befides other cloths of linnen, cotton, $\xi^{\circ} \mathrm{c}$. drugs, gums, $\mathcal{E}^{\circ} \mathrm{c}$. From England, France, Italy, and Holland, are imported cochineal, indigo, brafil-wood, campeachy-wood, copperas, fpices of all forts, tartar, vitriol, paper, tin, fteel, enamel ; all forts of cloths, furs, Delft and Ancona ware, and a great quantity of other commodities. From thence, in return, is brought Perfian filk, mohair, cotton, fine and coarfe wool, wax, gall-nuts, rhubarb, opium, fcammony, aloes, tutty, galbanum, tacamahac, gum tragacant, ammoniac, arabic, myrrh, frankincenfe, zedoar, caffiamunair, Eec. befides great variety of tapeftry.
The whole traffic is here, as well as in all Turky, managed by the brokerage of the Jews, the Turks never tranfacting any bargain with Chriftians in any cafe, but leaving it to thofe fubtle brokers, who make a great hand of it, and are all wealthy, and live very handfomely, and fome of them fplendidly, by it. The whole town is a continued bazar, or fair, where nothing that can be wifhed for is wanting, either for cloathing, fuftenance, or pleafure; becaufe all the beft commodities of Afia and Europe are brought hither, and fold at cheap rates.
The territory about Smyrna is very fertile with fine olive-trees and vines; and the wine made here is excellent. The confuls of England, France, and Holland live here in a very ftately manner.
5. Caria, is bounded on the north by Ionia and the river Mxander : on the eaft by Great Phrygia and Lydia; and, on the fouth and weft, by the Icarian fea.
6. Doris, projects into the fea, and is furrounded by it on all three fides, and is only joined to Caria on the north. It hath the ifland of Scio, or Cos, and that of Rhodes, on the fouth and fouth-weft.
7. Lydia, alias Mironia, borders to Phrygia on the eaft, to Myfia on the north, and to Caria on the fouth, but its limits, ftriatly fpeaking, lie between Æolis on the fouth-weft, Myfia on the north-weft, Caria on the fouth, and Phrygia Major on the eaft. In this province is the river Pactolus, famed for its golden fands, and the mountain Tmolus, celebrated for its faffron and excellent wines.
The country round 'Ihyatira, called by the Turks Akifher, is covered with cotoon-trees and corn-fields, and a part of it, though uncultivated, with tamariks. Here are fome inferior workmen in the cotton-work, which is the chief manufacture of the place.
Magnefia ad Sipylum, called by the Tuks Surleteffar, is reduced from a once large and populous city to an ordinary, trading town, and fublifts chiefly on the manufacture of cot-ton-yarn.

Laodicea,

## A N C

Laodicea, once one of the moft confiderable trading towns of Alia, efpecially for the exchange of money, is now nothing but a valt heap of ruins.
Dinghifly is large, and well-peopled, and drives a confiderable trade.
8. Phrygia Major, has Pamphylia on the fouth; Myfia on the weft ; Bithyaia on the north; and Galatia on the eaft. This country would be vally truitful, if well cultivated. Cotyæum, now Chiutaia, is a large, populous, and flourihing
town.
Syunada, was antiently much famed for its fine marble, which was of a beautiful whice, fpotted with red and purple, and of a great price.
9. Galatra, by the Turks now called Chiagare, hath Phrygia Major on the weft; Paphlagonia on the north; Pamphylia on the fouth; and Cuppad cla on the ealt. This country was antiently efteemed a rich, fertile one, and was famed for producing the amerhyft ftone in great quantities.
Ancyra, called by the Turks Angouri, formerly the capital of Galatia, and a noble city, is ftill a populous, trading place, chiefly in camblets, and fuch light fuffs.
The city of $A_{p}$ bion, or Aphium, has its name from the quanlites of opium which are made in and about it, the whole territory pioducing great crops of poppy, from which that excellent drug, called by the Turks aphon, is extracted.
10. Paphlagonia, by rome made a part of Galatia, togethr $r$ with Ponius, lies on the north of Galatia, is dirides on the eaft from Cappadocia by the river Halys; on the wett by that of Parthenius. At prefent it is called, in the iurkifh, the country of Pender, or Boli.
Heraclea Ponti, now Penderachi, of Eregri, is quite funk from its antient fplendor and commerce.
Amaftris, now Amaftro, from beirig a famed lea-port under the Roman and Greek empires, is now dwindled to nothing by reafon of the lofs of its commerce.
Teurhrania, now Tripoli is ftill a good port-town.
Sinope, now Sinabe, is at prefent a place of good trade, and maintains a very profitable fifhery. The country about it is fertile, if it was well cultivated; witnefs the many olivetees of confiderable bignefs that grow in it. Strabo long fince obferved, that, in all the coalts from this city quite to Bithynia, there grew great numbers of trees, fuch as olive, maple, and walnut, with fome of which the inhabitants ufed to build thips; and of others, fuch as the maple and walnut, they made fine tables, cup-boards, and other utenfils. The fame is done at prefent, except that, inftead of tables, which the Turks do not ufe, they make fophas, and other forts of flooring, wainfcoting, and other houfhold ornaments. Junapolis, now Cinopolis, formerly a good trading town, is now quite inconfiderable. See Amasia, and Aladulia.
Anatrum, which is more commonly fpelt Anatron, the fcum of glafs, which fwims in the crucible when the matter is in fufion. That fcum which appears variegated with divers colours, efpecially with grey, white, brown, and blue, contains a kind of falt proper to fatten fheep, and which is alfo given to pigeons. When it is reduced to powder, and left expofed to a moift air, a part of it diffolves, and the remainder that is found coagulated at the bottom of the vefiel differs but little from common falt.
ANCHOR, an effential material belonging to a thip. It is a very large and heavy iron inftrument, with a double hook at one end, and a ring at the other, by which it is faftened to a cable. It is caft to the bottom of the fea, or rivers, where taking its hold, it keeps fhips and veflels from being drove away by the wind, tide or currents.
The parts of an anchor are, I. The ring to which the cable is faftened. 2. The beam, or thank, which is the longeft part of the anchor. 3. The arm, which is that which runs into the ground. 4. The flouke, or fluke, by fome calied the palm, which is that broad and peaked part, with its barbs, like the head of an arrow, which faftens into the ground. 5 The ftock, a piece of wood faftened to the beam near the ring, ferving to guide the fuke, fo that it may fall right, and fix in the ground.
There are feveral kinds of anchors. 1. The largeft is called the theet-anchor, and is never ufed but in violent ftorms, to hinder the fhip from being drove afhore. 2. The two bowanchors, or bowers, which are lefs, and are ufed for thips to ride in a road, or harbour. They are alfo called the firit and fecond bower, or beft and fmall bower. 3. When a veffel is to be brought up or down a river by the winds, though the tide be contrary to it, the feamen fet their forefail, fore-top-fail, and mizen-fail, and let her drive with the tide. If fhe comes $t 00$ near the Chore, they have a little anchor ready, which is called the rodger, or redgo-anchor, with a hawfer faftened to it fiom the fhip; and this they drop in the middle of the current, by which means they wind her head about; after which they take up the anchor again. 4. The ftream anchor, is a fmall anchor, made faft to the ftream-cable, for a fhip to ride by in gentle ftreams and in fair weather. 5. The grapnel, is an anehor for a fmall fhip or boat.
Merchants, traders, and others, who fit out fhips for fea, cannot be too careful with regard to the goodnefs of anchors, fince upon them chiefly depends the prefervation of fhips and cargoes, and even the lives of all thofe who are on board.

## A N C

They ought, therefore, to take care that the iron of which the anchors are made be neither too foft nor too brittle, both thefe defects being very dangerous. If the iron be brittle, the anchor is apt to break; and, if it be too foft the anchor will bend. In order to make anchors of a good quality, it is fometimes the pradice to conjoin the britte iron with foft and tough iron; and, for this reafon, the Spanim or Swedifh iron ought to be preferred, and united together, the former being foft, and the latter brittle. - Aubin, in his Marine Dictionary, obferves, that the anchors of a large veffel are made fmaller in proportion than thofe of a fmall veffel. The reafon of which, fays he, is, that though the fea exerts an equal force againft a large fhip as againft a fmall one, fuppofing that they both have an equal extent of wood in the water, which gives room to the water to act equally againft an equal extent ; yet the fmall veffel, on account of its lightnefs, has not the fame ftrength with the great one, to refift the force of the water, which muft be fupplied by the weight of the anchor
From thefe, and other bydroftatic principles, which are not neceffary to trouble the generality of traders with, the following table has been formed; wherein is thewn, by means of the fhip's breadth within, how many feet the beam, or fhank, ought to be long, giving it four tenths, or two fifths, of the fhip's breadth within; by which proportion may be regulated the length of the other parts of the anchor. In this table is reprefented likewife the weight an anchor ought to be for a fhip from 8 feet broad to 45 , increafing by 1 foot's breadth.

The inhabitants of the inland of Ceylon ufe large round ftones inftead of anchors. And, in fome other places of the Indies. the anchors are a kind of wooden machines, loaded with ftones. Some pretend that veffels faftened with thofe forts of machines keep fteadier than thofe that have iron anchors, or only a ftone*.

* They who are defirous of ftudying this fubject more thoroughly may read the Difcourfe upon Anchors, wrote by Dr. John Bernouilli, LL. D. which, in the year 1737, carried the prize in the Royal Academy of Sciences at Paris.
Anchors in France, pay duty on importation 50 fols per hundred weight.
ANCHORAGE, a fea-term, lignifying in general a place where a thip may caft anchor.
It fignifies alfo a duty which mafters of merchant-men pay in feveral ports of France to the king, or the admiral, for the liberty of anchoring in thofe ports. Thi duty is not reckoned part of the average; and infurers of mips are not bound to make it good. It is due, and paid by the mafters of thips, according to the ordomance of the marine made in the year 168 i.
Anchorage in England, alfo denotes a duty taken of thips for the pool of the haven, where they caft anchor. The ground in all ports and havens being the king's, no man can caft an anchor into any port, without paying for it to the king's offi-

## A NC

cer appointed by patent. It muft be confidered, that in whatever port, haven, or barbour, an anchor is caft, it thould be commodioully fituated, with a proper depth of water, and convenient battom for anchorage.
ANCHOVY, a very fmall fea fint, which fome take to be only a kind of fprat, and others miftake it for the fardine, or pilchard. But, if we are to judge of it by its figure and tafte, it may be affirmed that it is a particular fifh in its kind, which has but a fmall refemblance of the fprat and fardine, but nothing befides like them.
The anchovies are fifhed on the coaft of Provence, in the months of May, June, and July, at which feafon thoals of this filh regularly come into the Mediterranean, through the ftreights of Gibraltar. They are fent to Paris from Nice, Cannes, Antbes, St. Tropez, and fome other places in Provence. Vaft quantities of them are alfo exported into foreign countries. They are likewife found in plenty in the river of Genoa, as alfa on the coaft of the ifle of Gorgone, which lies over againft Leghorn; thefe are reckoned the beft. There is, befides, a great quantity of them that comes from Sicily. It is remarkable that anchovies are feldom filhed but in the night-time. If a fire be kindled on the poop of the veffels ufed for this filhing, the anchovies will come in greater numbers into the nets; but then it is afferted, that it has been found by experience that anchovies taken thus by fire are neither fo good, nor fo firm, and will not keep fo well, as thofe which are taken without fre.
When the fifhery is over, they pull off the heads of all the anchovies, gut them, and afterwards range them in barrels of different weights, the largeft of which do not weigh above 25 or 26 pounds, and they put a good deal of falt in them. Some alfo pickle anchovies in fmall Deift, or earthen, pots, made on purpofe, of 2 or 3 pounds weight, more or lefs, which they cover with plafter, to keep them the better.
Anchovies fhould be chofen fmall, frefh pickled, white on the outfide, and red within. They muft have a round back; for thofe that are flat, or large, are often nothing but fardines. Befides thefe qualities, the pickle, on opening the pots, or barrels, muft be of a good tafte, and not have loft its flavour. ANCONA, a marquifate in Italy, is bounded on the north and eaft by the Adriatic fea, and by the Abruzzo and Ombria, and the duchy of Urbino, on the weft. Its foil is fertile, and its chief manufactures are flax and wax, which are whitened here to great perfection.
The city of ANCONA, ftanding on the Adriatic fhore, over againft Dalmatia, is very conveniently fituated for carrying on a traffic into all the countries on the oppofite fhore. It was anciently very famous for it, and flourifhing, but is, very much decayed fince Venice has ingroffed all the trade of this fea. However, pope Clement XIL, by a decree, dated February 16, 1732 , erecting it into a free port, has endeavoured its recovery. The harbour is a very good one, and, tho' built by the emperor Trajan, the marble of it looks as frefh as ever. The trade at prefent chiefly confifts in filk ftuffs and dreffed leather. The Jews are almoft the only people that carry on the bufinefs here, which greatly enriches them. They have built themfelves a very fately fynagogue.
There is no money coined in this city; but all foreign coin is received there upon the foot of the Spanifh piftole, which is reckoned worth 3 r julios; the julio, at the rate of 7 fols, $x$ denier and $\frac{7}{6}$ French money (about 3 pence Englifh) the piftole at the rate of II livres, and the crown at the rate of 60 fols.

Gold Coin.

## Of Weights and Meafures.

The pound weight at Ancona is but 9 ounces and $\frac{3}{5}$ of the Paris pound; fo that 100 pounds weight of the former make but 60 of the latter. Their gros weight is a quintal of an 100 lb . and makes about 73 lb . weight of London.
The length of the bracciata, or fathom, is I foot 11 inches and 6 lines of the royal foot at Paris: fo that 100 fathoms of Ancona make about 54 ells of Paris, and 100 ells or auns of Paris make 128 yards $\frac{1}{4}$ of London.
Their meafure for linnen and woollen is the brace, and is about $27 \frac{1}{2}$ inches of Londen.

Their monies and exchanges in general being the fame as at Rome, we refer to that general head for an ample account thereof.

The erecting of the port of Ancona into a free port by a decree of pope Clement XII, dated February 16, 1732, extracted from the Supplement au Corps diplomatique du droit des gens, tom. ii. part 2. art. 154.

By that decree his holinefs abolifhes and fupprefles all duties, impofts, and taxes, which uled to be paid till then in the faid port and city, and beftows upon them the following privileges:

1. Commanders and mafters of thips, and merchants of all nations, fhall freely enter the port of the city with their veffels and effects, to trade and difpofe of them there as they thall think fit, either by wholefale or retail, and thall afterwards have liberty to depart from thence in perfect fafery 2. In order to remove all apprehenfions merchants might be under of being detained too long, in cafe any difpute fhould arife concerning their merchandizes, his holinefs confents that the confuls of merchants fhould take cognizance of the matter, and confirms all the privileges formerly granted to them, to enjoy them after the fame manner as the confuls do in the Levant and in Portugal; and for the greater eafe of the merchants of the Levant, or of Portugal, and that they may not lofe their time or their money before other tribunals, in cafe they be not fatisfied with the fentence of their own confuls, 'his holinefs orders that they fhall bring no appeal but to the confulfhip of merchants, to whofe fentence they fhall be obliged to fubmit.
2. The merchants and workmen who thall fettle in the faid city, thall be free, during to years, of all taxes called bene ftante, (or taxes upon land, as is Caid in Savary; but it hould rather be taxes upon people in good circumftances) and of all duties of importation of foreign wine and oil for their own ufe and confumption.
3. All fhips laden with merchandizes that fhall land in the port of Ancona, Chall have liberty to fell and negotiate them to the beft advantage; as alfo to unload their effects, and lodge them in the common warehoufes of the city, and to fend them out of town by water, without paying any duty or impoft, except with regard to grain and mafferizie, or houlhold goods and furniture from foreign countries, which thall not be imported without a fpecial licence.
4. To prevent all diforders with refpect to merchandizes already prohibited, as woollen cloth, filk, brocadoes, laces of gold, filver, filk, or thread, $\mathcal{F}^{\circ}$ c. and others, the importation of which into the ftate of the Church might be prohibited hereafter, his holinefs commands that it fhall be free to export them out of the faid city, and for that purpofe a place fhall be appointed, where they may be fafely kept till the hips be ready to export them out of the dominions of the Church, or to fuch other places where they fhall not be prohibited: and, for the faid warehoufe-room, there fhall be paid only 5 bayoccos for a cart-load of the faid merchandizes, which thall be freely carried out of the barbour, without paying any duty or impoft.
5. The lazaretto, or peft-houfe, of Ancona, fhall be thoroughly cleaned, and the infpectors of health thall take all porfible care of the public fecurity.
6. No perfon thall perform the office of a broker without being firf examined, and procuring a certificate from the confuls, and the number of brokers thall be fixed.
7. For the encouragement of all traders, and preventing all difputes among them, his holinefs orders that the effects that fhall have been fold, or negociated, in the free city and port of Ancona, fhall be immediately fubject to the ufual and public duties, by paying the fmall tax abovementioned, without any alteration; which is to be underftood, both with regard to the effects exported by water, and to thofe imported or exported by land.
8. There fhall be people appointed on purpofe to pack and unpack the merchandizes, whofe falary fhall be fixed.
9. The duty of anchorage for all veffels entering the free port of Ancona within the following diftrict, namely, from the point di Falconara, in a ffrait line to the rock della Volpe, whether thofe veffels be loaded, or only in ballaft, and from what place foever they come, fhall be as follows:

For frall veffels, failing in the gulph of $\}^{\text {crowns. bayocc. }}$
Venice, of the bulk of 50 migliaia, or $\}$
50
For larger veffels, in proportion to their
bulk, to 200 migliaia, or 300 rubbia
For fmall veffels, failing without the gulph, of 50 migliaia
$I$
For larger, in proportion, to 200 migliaia $\qquad$
0
For all other large veffels failing both within and without the gulph, namely, fhips, patachias, flutes, brigantines, pinks, and other fuch veliels, of 200 migliaia, or 300 rubbia
$\begin{array}{lllll}\text { Hor thofe of } 300 \mathrm{migliaia} \\ \text { For thofe of } 450 \mathrm{miggliaia}\end{array} \quad-\quad \begin{array}{lll}10 & 0 \\ \text { For all larger fhips }\end{array}$
11. The captains or mafters thall on their arrival declare to the caftoralio (or regiler), or to his clerks, the quality and quantity of the effects they have on board, the Rerfons' to whom they are dirested, for the fake of preventing all difore ders, particularly with regard to prohibited goods:
12. All captains and neaters are forbid to unlofd any ballaft, or to throw any dirt in the harbour, under the penalty of 200 crowns, and a place is appointed where ballaft may be caft.
13. According to the cuftom practifed in all ${ }^{\prime}$ ports, the veffels which fhall lie in that of Ancona, fhall be obliged to provide themfelves with bifcuit, falt, fiefh, wine, $\xi_{c}$. as they thall have occafion for.
The erecting of Ancona into a free port was looked upon with an evil eye by the Venetians, becaufe it draws thither the merchants from the Levant, and from the north, who were ufed to go to Venice.
The other principal places of trade in the marquifate of Ancona, are;
The city of Loretto, whofe whole traffic confifts in pilgrims ftaffs and dreffes, crucifixes, images, beads, medals, $\xi^{\circ} c$. and is very confiderable, on account of the valt confluence of ftrangers hither.
Recanati, is reckoned a good trading city, and has a fair in September which lafts 55 days.
The city of Tolentino, likewife is much reforted to by merchants of all forts, on account of its fairs.
ANCONY, at the iron works, a bloom wrought into the form of a flat iron bar, about three feet long, with two fquare rough knobs, one at each end.
ANDALUSIA, a province in Spain, is divided on the north from Eftremadura and New Caftile by the chain of mountains called Sierra Morena; on the eaft from Portugal by the river Chauca, and from Algarve by the Guadiana; on the fouth it hath the ocean, the mouth of the ftreights of Gibraltar, and part of the Mediterranean; and along the fouth-eaft it hath the kingdom of Granada.

## Remarks.

No part of Spain exceeds this in wealth and fertility, in commerce from without, and plenty of every thing within themfelves; the former is owing to their maritime fituation, and commodious harbours; the latter to the richnefs of their country, and the number of its inhabitants; the furprifing quantities of wheat, wines, and oil it produces, is almott beyond credibility; and we have been well informed of one fingle town which hath been known to make 75,000 pipes of wine, and the fame quantity of oil in a year. They abound allo with numberlefs cattle throughour the whole province.
It is allo neediefs to mention the fo well known exquifite oranges, citrons of Seville, and fine raifins, almonds, figs, pomegranates, Eic. that are the natural growth of this province. Here is likewife a great plenty of curious white falt, the beft of fugar, fine fcarlet berries for dying, and, in a word, every thing that can make a country wealthy and delightful.
They have alfo rich mines of gold, filver, and bafe metals, which have been wholly neglected fince the difcovery of America. Nor fhould we omit their molt celebrated breed of horfes, fo famous in all ages and nations; for it is certain that thofe of the river Guadalquivir, or the famed Bcetis of the ancients, have always exceeded all other parts of Spain for the fineft and fleeteft; and the city of Cordova fill retains its ancient reputation, for being the beft breeders of that noble and ufeful creature.
i. Seville, or Sevile, is the capital city in this province, and the greateft next to Madrid. It is feated in a moft fruitful plain, on the river Guadalguivir, which is navigable for large veffels near 40 miles from the mouth of it, and over which it hath a flout bridge of feventeen boats, which joins the city to a large fuburb on the other fide, called Triana, which is well filled with inhabitants, and variety of tradefmen of all denominations.

Remarks.
The Cara de Contratacion, or India Houfe, was erected here in the year 1513 , for the regulation of every thing that relates to the Spanifh Weft India trade: and a royal court anno 1556, confifting of a regent and eight judges.
The exchange, which was built here for the accommodation of merchants, is faid to have coft a million of ducats. The mint keeps here 180 officers in pay, and, when it works, can coin 700 marks, each containing eight ounces of gold and filver, in a day. The cuftom-houfe maintains 257 officers, whole falariess amount to 54,000 ducats per ann.
Here the great heat of the fummer is fully recompenfed by the pleafantnefs of the three other feafons, as well as by the abundance of all things for fuftenance and delight; and more
Vol. $I_{\text {。 }}$
particularly by the neighbouring wood, called the hyorace of the farm of olives. This delightful place, which extends 27 miles in compafs, doth produce feveral thoufand tons of oil annually, whillt the adjacent plains and vallies do yiehd no defis a plenty of corn and wine
Among the manufactures that are carried on in this city, thofe of the fllk and filver fuffs are the miof confiderable. In the fuburb of Triana, on the other fide of the river, there are 50 workhoufes of feveral forts of curious earthen ware, particularly of glazed tlles for chimnies, like thofe made in Holland.
Here is likewife made an excellent foap, of which 15,000 hundred weight is tranfported into other ports of Spain, or exported into foreign countries. Without the city are falt-pits, and rich quarries of the fineft jafper marble, and cther curious ftones. But the moft confiderable branch of trade here has been that of the Weft Indies, which Roderigo Caro caft up out of the books of the India-Houle, taking the returns from thofe countries, as cntered at Seville, from anno 1492 to anno 1592, that being the firt century after their difcovery, and found it to amount to the value of five thoufand millions, in gold and filver, pear!, and other products of Spanifh America. This was only what was entered, and what was not is reckoned ftill more ; and, wore the entries examined of the next century, from anno 1592 to 1692 , there is little doubt but it would greatly exceed the other. But the trade of Spanilh America is now carried on by the way of Cadiz, of Cales, in this fame province.
All along the river are many curious and commodious keys, where veffels of good burthen may fafely lie. The convenience of this navigable river, from the mouth of which, keys are diftant about 36 miles, brings hither a vaft concourfe of merchants hipping, who have flately houles in the city and fuburbs, and live in a fplendid manner; which is always found to be the cafe wherever commerce flourifhes in any tolerable degree.
2. Cordova is the next city in dignity to Seville in this province. It flands on a fertile and delicious plane, at the foot of one of the mountains of Sierra Morena, and in a pleafant wholefome air. Befides the extraordinary fruitfulnefs of its foll round about, which fupplies it with plenty of the beft wheat, wine, oil, fruits, and every thing that can render it delightful and opulent, it carries on a great variety of trades and manufactures, and particularly the woollen and filken of the fineft kind, and in very great perfection; and alfo that of a curious gilt leather, in great requeft there as well as in foreign' countries.
But, above all, it is famed for its fine breed of horfes, which are reckoned the moft fleet and mettlefome, as well as the beft difciplined and moft warlike in Europe.
3. Cadiz is the next in rank of the royal citics in this province: The advantageous fituation of this city for maritime traffic, drew in formerly a feries of other nations, fuch as the Fhernicians, Babylonians, Egyptians, Phocians, and other Greeks, and afterwards the Carthaginians and Romans, who were all poffeffed of it by turns, though the Romans longer than any other. The fpacioufnefs of the harbour, its being furrounded by the fea, feated upon the ocean, fo near the Mediterranean, and within fo fhort a paffage over to Afric, made it of fuch confequence, that whatever nation was poffelied of it; did ftill endeavour to add fomething to its ftrength and grandeur.
What renders Cadiz the more confiderable at prefent, is its convenient fituation for the reception of all merchandizes fent by the feveral European nations thither, in ofder to go by the galleons and fota to Spanifh America afterwards; thefe Spanifh bottoms being only authorized by his Catholic majefty for that purpofe.
The council of the Spanifh. Weft-Indies at Madrid has the fole controul of this important affair; and they appoint the tribunal of contractation refident at Seville, for the due care and infpection of the galleons and flota at Cadiz, at their outfet to, and return from, America, in order to prevent all frauds in the royal revenues of Spain. See the articles Galleons and Flota, and the trade of Spanish America.
4. Xeres de la Frontera, is another city in this province; feated on the banks of the little river Guadaletta, about 6 miles from the fea, and about 50 fouth from Seville. Its territory is fo rich and fruitful, that, befides valt quantities of whear, fruit, cattle, and provifions of all forts, it yields annually $60,0 c 0$ pipes of the wine we call therry. It has likewife been' reckoned to breed in thofe plains about 2000 horfes every year, till of late.
5. Gibraltar, a famed and well-known fea-port on the mouth of the Streights.

Remarxs.
Since the Efrglifh have been mafters of this town, it is become a place of confiderable trade, which it was not before, efpecially between the coaft of Barbary and this place: the Englifh mercharrs here having great warehoufes of all kinds of goods of the growth of Barbary; fo that they furnifh the merchants of London on as good terms as they ufually had them in Barbary; and, by the convenience of hipping, can fend them to England in fmaller quantities than by loading Q

## A N E

## A NG

veftels wholly, as they were obliged to do before. They had a great trade here by barco longos, and open veffels, with the Barbary coalt, when we had war with the emperor of Marocco; fo that the trade is never fhut up: and Gibraltar is now the market for the wax, copper, almonds, drugs, and other products of Barbary, which they fell to the Spaniards, cipecially wax, in very large quantities.
The city is reckoned impregnable on the land fide, and is extremely ftrong to the fea alio, and has proved of the laft importance to Great-Britain, in wars with Spain or France. Nor portance lefs importance to the Englifh in cafe of a war with the Mcors of Sallee, or with the Turks of Algiers; here being generally, on fuch occafions, men of war fationed to cruize upon thofé rovers, and to convoy our merchantmen in time of danger. See the article Mediterranean, for the importance of Gibraltar to Great-Britain.
6. Ezija, or Ecija, feated on the Xenfl, a little above where that river falls into the Guadalquivir, and on a fertile and delightful plain, producing immenfe quantities of corn, wine, oii, filk, and efpecially cotton and fine horfes.
7. San Lucar is a city and port fituate at the mouth of the Guadalquivir, 45 miles below Seville, and ferves as a port to that celebrated city, and well known throughout Europe; but was much more confiderable before the Spanifh and WeftIndia fleets were allowed to fet out from, and return to, Cadiz.
8. Lucena is as delicioully feated as any city in Europe, no fpot of ground producing greater plenty of generous wine, fine oil, and choice provifions, than this territory doth.
Thefe are the chief cities in this province of Spain, which are any thing remarkable for trade. And as the others abound in the like productions, it is needlefs to make repetitions.
ANDIRA, or ANGELYN, a tree of Brazil, the wood of which is hard and fit for building. Its bark is of an afhecolour, and its leaves are like thofe of laurels, but fmaller: it produces blackifh buds, from which arife a great many bloffoms in a clufter, which are odoriferous, and of a fine purple and blue colour. Its fruit is of the fize and figure of a hen's egg ; it is green at firft, but becomes black by degrees, and has a future, or feam, on one fide: it is extremely bitter, and has a very hard chell, and in the infide there is a yellowifh feed, or kernel, of a bad tafte, fomething bitter, and aftringent.
That kernel, being pulverized, is given for killing worms, but the quantity taken muft be lefs than a fcruple; for they fay it would be a poifon if too much of it was taken.
The bark, the wood, and the fruit of this tree, are as bitter as aloes; and herein it differs from another andira, which is like it in all refpects, excepting its tafte, which is infipid. The wild beafts eat of its fruit, which makes them grow fat.
ANEE, or ASNE'E, a meafure for grain, ufed in fome provinces of France, particularly in Languedoc and Maconnois. It is not, however, a real meafure, fuch as the minot may be at Paris, but rather a collection of a certain number of other meafures.
At Lyons, the anée contains 6 bichets, which make a feptier, and 3 bufhels (boiffeaux) of Paris. At Mâcon the anêe is of 20 meafures, which amount to a feptier and 8 bufbels of Paris.
With regard to foreign meafures, 4 anées of Lyons make 7 muids of Amfterdam, which contain but 3 anées of Mâcon. ANE'E alfo fignifies, at Lyons, a certain quantity of wine, which is the load an afs can carry at once; (from whence that name was taken; for ane, or afne, fignifies an afs. in French) that load is fixed at 80 pots (or Englifh quarts, wine meafure). The bichet of Lyons weighs 60 pounds, and the afné 360 . The weight of Lyons is 16 per cent. lighter than that of Paris, by 15 marks per 100 pounds weight, the mark weight.
An anée and a bichet make at Marfeilles 17 fivadieries; 100 anées make 131 loads and a quarter; and one anée is one load and I $^{5}$.

The feveral meafures from Lyons to Gray in Franche Comté, and their proportions to the anee of Lyons.
The meafure from Neuville to St Genis, within a league in a flrait line, is 2 per cent. fmaller than that of Lyons. At Trevoux, and as far as Montmerle, and acrofs the country as far as St. Trivier, ioo neuvaines make y 12 anées of Lyons.
Frum Montmerle to Brief de Davannon, and acrofs the country to Thoiffey, 100 anées make $13^{5}$ of Lyons. As Pont de Vefle, and Pont de Bage, to Pont de Vaux, 100 anées make 137 of Lyons.
At Màcon as in the foregoing article.
At Tournus 100 bichers make 120 anées of Lyons.
At Chalons 100 bichets make 85 anées of Lyons.
At Verdun the bichet is equal to the anée of Lyons.
At Beaune 100 bichets make 114 ances of Lyons.
At Seurre 100 bichets make 107 anées of Lyons.
There mult be $10 g$ of them at Nuits.
100 bimines of St Jean de Laune make 126 anées. At Auflone 222, and at Maxilli 250 .
At Marnaud 100 anées make in 2 of Lyons.
At Lovaur 100 carteaux make 118 anées of Lyons.
At St. 'Trivier 100 bichets make 120 anées oil Lyons.

At Belleville and at Montmerle, the anée is of 17 meafures, which ought to make 17 bichets ar Lyons.
The faid anée weighs $\div 40$ pound Lyons weight, and 380 pounds mark weight.
ANEGRAS, a meafure for corn ufed at Seville and Cadiz in Spain. Four anegras make a cahis; 4 cahis make a fanega; and 50 fanegas the laft of Amfterdam. See weights and meafures, under the articles of Spain and Holland, reduced to the Englifh ftandard.
ANGEL, called in French ANGELOT, a gold coin ftruck in England, where fome few are fill to be feen in the cabinets of the curious. It had its name from the figure of an angel reprefented upon it. It was 23 carats $\frac{3}{3}$ fine, and weighed 4 pennyweights. Its value in ${ }_{1} \mathrm{Hen}$. VI. was 6 s . 4 d , in 1 Hen. VIII. 7 s .6 d. in 34 Hen. VIII. 8 s . in 6 Edw. VI. it was ios. in 2 Eliz. Ios. and in 38 Eliz. ios. And the half angel, or, as it was fometimes called, the angelet, was worth one half of this, and the quarter angelet in proportion. There have alfo been angels of gold coined in France, on which was reprefented the figure of St Michael, holding a fword in one hand, and in the other an efcutcheon with three fleurs-de-lis, and trampling a ferpent under his feet.
The filver angels, or angelots, which the Englifh, while they were in poffefion of Paris, under the reign of Charles VI. and in the beginning of that of Charles VII. caufed to be ftruck, had alfo the figure of an angel, but holding in his hand an efcutcheon with the arms of England and France, Henry VI, filing himfelf king of thofe kingdoms. Thefe filver angels were worth 15 fols.
ANGELICA, called alfo ARCHANGELICA, or the ROOT of the HOLY GHOST, in Latin angelica, or radix Syriaca, a medicinal plant, higbly efteemed, becaufe it is thought to be an antidote againft poifon, for which reafon it is ufed in the compofition of Venice treacle.
This plant grows on the higheft mountains, and is particularly found in great plenty in thofe of Bohemia. Its root forms a kind of knot of the bignefs of a walnut, from which iffue many fmall blackifh threads, a foot long, pretty much like black' hellebore. The root is white within, of a thin fubftance, a fharp tafte, and an aromatic fcent. The ftalk which fhoots out of it, grows about a cubit high, it is hollow, and has feveral knots. It is of a reddifh black. Its leaves are of a dark green, long and indented, and its bloffoms or flowers, which form a kind of umbrella, are white, and produce a flat feed, of a lenticular figure.
The roots of angelica fhould be chofen whole, thick, long, brown without, and white within : they muft not be wormeaten, which they feldom efcape, when kept. Their fmell and tafte muft be agreeable, aromatic, and fomething bitterifh. They contain a great deal of exalted oil and volatile falt. This root is brought dry from feveral places. Thofe that come from Bohemiaia are better than thofe of England and Holland. Care muft be taken, above all, not to be impofed upon by the roots of maon, a plant which comes from Burgundy: but the impofition may cafily be difcovered, for the root of angelica is like that of black hellebore, and the root of maon like that of common parfley.
ANGELOT, a fort of fmall cheefe, very fat and excellent. It is made in the country of Bray in Normandy, whence it is called angelot of Bray. This fort of cheefe is commonly prefented upon table in little moulds, either fquare, or in the form of a heart.
ANGLESEY, an ifland and county in North Wales, encompaffed by the Irifh Sea on all fides, except on the fouth-eatt, towards the continent of Britain, where it is divided from Carnarvonfhire by the narrow frith of Menen, which in fome places, at low water, is fordable, from Beaumaris on the eaft, to Holyhead on the weft.
The foil is more fruitful than could be imagined, it appearing ftony, rocky, or mountainous. Giraldus extolled it for the moft fruitful country for wheat in all Wales, infomuch that, in his time, it was proverbially called the mother or nurfe of Wales, by reafon, when other countries failed, this had fuch plentiful harvefts, that it ufed to fupply all Wales.
It is at this time generally very rich in corn, particularly in wheat, faid to be the beft in Wales, as allo in cattle, fifh, and fowl: it produces likewife great plenty of mill-ftocies and grind-fones, and fome allum.
r. Beaumaris is the chief town, and has a good harbour for Ghipping; their market is well fupplied with provifions, and it is the ufual town for the reception of pafiengers from London to Ireland, before they take fhipping for Holyhead.
2. Holyhead is the fation for the packet-boat to Ireland; it lies oppofite to Dublin, to which it is the fhorteft and the fafeft paffage over St George's channel. The packer-boats from Dublin arrive here three times a week, if the wind permits, and are larger than thofe to Holland and France, as they ought to be, confidering that St. George's channel is io boifterous, efpecially in the winter.
ANGOLA, a kingdom, which is reckoned part of that of Congo, on the coatt of Africa. Angola, though it extends not above 25 or 30 leagues along the coaf, furnihes, neverthelefs, the Europeans with the greateft number of flaves, and thefe the bett of all Alrica, it is true that this kingdom ex-

## A NG

## $A \mathrm{NG}$

tends very much in length and breadth within land, fo that it is not much lefs than 150 leagues broad, and as many long. It's capital is Loanda fan Paolo.

## REMARKS.

Though the Portugueze are extremely powerful in the inland parts of the kingdom of Angola, and though moft of the negroes of this province, which they have fubdued, are, as it were, vaffals to the crown of Portugal, to which they pay every year a tribute in flaves; yet the trade of negroes, which is carried on at that coaft, has always continued free and open to the other European nations; and the Englifh, French, and Dutch, fend thither yearly a pretty large number of hips, which carry off feveral thoufands of thofe poor wretches, and convey them to their own colonies in America, or to thof of the Spaniards.
The Portugueze, however, carry off the greateft number; and it is a wonder they have not yet difpeopled the country, confidering that almoft every year they buy there no lefs than 15,000 negroes, whom they fend into the Brazils, to work in their gold and diamond mines.
The villages, or, as they are called in the kingdom of Angola, the libattes, of Cambamba, Embaco, and Muffingomo, are thofe which furnifh the greateft number of flaves to the Portugueze merchants who carry on that trade.
The commodities which they give in exchange, are woollen cllths with broad lifts, ftriped feather beds, crimfon filk, ftuffs, jinnens, velvets, gold and filver lace, broad black ferges, Turkey carpets, thread of all colours, filk for fewing and quilting, Canary wine, brandy, oil of olives, feamen's knives, fpices, refined fugar, large fifhing-hooks, large pins an inch long, and others of feveral fizes, needles, \&c.
'The Portugueze have alfo a fettlement in Benguela, a froall kingdom under the dependency of Angola, where they have fome trade; but that place is unwholefome, and more proper to be inhabited by the condemned criminals, whom the tribunal of Lißon banifhes thither, than the dwelling-place of free perfons, who follow the profeffion of merchants.
Our author fpeaks, after this of Loango, Malimbo, and Cabindo, as three places lying on the coaft of Angola; but we find, according to the beft maps, and the moft accurate geographers, that Loango is a kingdom by itfelf, though part of Congo in general, and lies a great way to the north of Angola, Congo, properiy fo called, lying between thofe two kingdoms. As for Malimbo and Cabindo, [or Malemba and Cabenda, as we fuppofe our author meant,] we not finding them in the maps, nor in any of the geographical work we have been able to confult under his orthography. However that be, we fhall make no alteration.

Remarks.
The negro trade which is carried on in thofe three places (Loango, Malimbo, and Cabindo) on the coaft of Angola, is none of the leaft confiderable, which the Englifh, French, and Dutch, drive on the coaft of that part of Africa, with segard both to the number of flaves they meet with there, and to their groodnefs and ftrength. The Europeans prefer them before all others, and the inhabitants of the colonies in America always give a better price for them, as being more capable to undergo the labour and fatigue of cultivating and manufacturing fugar, tobacco, indigo, and the other hard work to which thefe poor wretches are commonly put.
At Loango de Boario they reckon by macoutes and hundreds; each macoute is worth 10 , fo that 10 macoutes make 100. In order to make that account, they agree with the fellers of flaves about the number of macoutes each fort of merchandize is to be valued at. For inftance, 2 Dutch knives are reckoned worth one macoute; an annabaffe, or coverlet, with broad flripes, three; a copper bafon, weighing two pounds, and 12 inches in diameter, alfo three; a mulquet 30 ; a barrel of gun-powder weighing io pounds, 30 likewife; a piece of blue falampouris (linnen cloth made on the coaft of Coromandel) 120 macoutes, which the negroes reckon 1200, and fo of the reft.
The price of the merchandizes being thus agreed upon, they afterwards agree about that of the flaves, which is reckoned by hundreds; fo that, if you buy a negro, Piezas de India *, for 3,500 , you muft give 350 macoutes in merchandizes, according to the foregoing valuation, or eftimation,

* See the article Assiento Treaty.

Obferve, that it feems flaves are paid for fomething cheaper to the king or queen, or the chiefs, than to private people ; becaufe the blue falampouris, which are valued at 1,200 , to common merchants, are rated but 600 to the king and queen; which may allo be jald of fome other merchandizes; but yet, upon the whole, it amounts almof to the fame.
The price of negroes is fettled otherwife at Malimbo and Cabindo. They reckon there by pieces, which is eafier than the account by macoutes: but yet there is no difference upon the whole, each fort of merchandize being valued at fo many pieces.

When the thips of the Frencii Aftiento company went thithetr for the firit time, to annabaffes were worth one negro, of Piezas de India; a mufquet the fame; a barrel of gun-powder the fame; a piece of falampouris four negroes, or Ficzas de India; ten copper bafons, one; a piece of chintz, one; and to of the reft:
The long meafure ufed at Loango is called pau. There are three forts of it ; the queen's pau which is 28 inches long, and valued at three macoutes: the pau of the fidalguo's, whicti is of 24 inches; and that of private perfons, which is but 16 inches and $\frac{1}{2}$.
The duties paid at thefe three places for the liberty of trading are not the fame, being fomething higher at Loango, than at Malimbo and Cabindo, or Malemba and Cabenda. As to the merchandizes, the fame forts are proper for thefe three places We fhall give hereafter an account of thofe duties.
Befides the duties agreed upon, there are allo prefents to be made to the negro kings or priaces on that coaft, in order to obtain an audience; for it is an eftablihhed rule never to appear before them, without prefenting them with fomething. The prefents which the French Affiento company made in 1703 , to have an audience of the queen of Loango, confifted in ten annabaffes, a barrel of brandy containing eighteen quarts, and a pau and a half of fearlet cloch.
Prefents are alfo made to the fidalguo's, or lords; there were at that time three of them, and the prefent to all three confifted in fifteen annabaffes, a barrel of brandy containing 18 quarts, and a pau and a half of fcarlet cloth.
Boke-neale, is a province of Africa, fituate to the north of the kingdom of Lioango, to which it is tributary.
It is reckoned that this province muft be above 150 leagues diftant from the coaft, becaule the negroes who come from it to trade on the coaft, are ufed to fpend above three months in their journey.
Moft of the ivory which the people of Loango fell to the Europeans, comes from Boke-neale ; they barter it commonly for falt, which they fend thither in bafkets, and which their flaves carry on their heads. The Eurcpeans alfo give in exchange large knives, fmall drinking-pots, palm-oil, and featherbeds, which they barter for pieces of ftuff called libongos.

## Remarkg.

The duties or fees, which were paid by the French Affento company, were of five forts, viz. I. To the queen. 2. Td the fidalguos. 3. To the king's mother and to the king's fon. 4. To the captain of the coatt. And, 5. To the interpreter. The duties for the queen were fettled at 40 annabafies, 2 pieces of blue falampouris, or baftas; 2 barrels of gun-powder; $3^{0}$ copper-bafons; two fmall pewter pots to drink out of; as many earthen ones; $3^{6}$ padlocks, 48 knives; 2 barrels of brandy, containing 18 quarts each; 3 paus of fcarlet cloth; as many of blue cloth; 2 mulquets; 24 fmall bells.; 4 looking-glaffes with black frames; 2 nicanees; 2 pewter difhes; 4 pounds of black glafs beads; 2 fabres; 2 pieces of white falampouris; 2 pieces of coarfe blue cotion cloths ftriped, and as many of painted linnens, and 2 trumpets: all which, according to the manner of reckoning of the negroes, amounted to 10,000 or 11,000 , that is to fay, 1000 or 1100 macoutes.
The duties to the three fidalguos amounted to about 22 or 23,000, which was 7500 for each of them, which; reduced into macoutes, made 750 macoutes.
The interpreter had about 3000 , that is', 300 macoutes.
The king's mother and the king's fon 2800 , or 280 mas coutes; and the captain Manabaza, commander of the coaft, about half, which amounts to 1400 , or 140 macoutes.
Befides thefe large duties, there is another fmall fee or prefent, confifting in one annabaffe and two knives, which are given to each of the merchants who bring the flaves.
All thefe duties are paid in merchandizes, redaced into macoutes.
The price of the flaves is alfo rated in macoutes: and, in the year 1;04. the price of negroes was fettled as follows: the negroes of the queen, and of Macouda, her chief favourite, at 2500 per negro-man, Piezas de India; at 2230 per ne-gro-woman, alfo Piezas de India; and the nesro boys and girls in proportion; that is to fay, the former at 250 , and the latter at 230 macoutes.
As to the flaves you trade for with the private merchants, their price is not fixed; you give as few macoutes for them as you cas *.

* But fince the French Affento, not only the price of flaves, but that of gold, ivory, sc. is advanced 2 or 300 per cent. more ; the candes of which will appear under the head of the English African Company.

ANGOUMOIS, a province of France, is bounded by Poictou oa the north, Limofin and La Marche on the eaft, Perigord on the fuath, and Saintonge on the weif.
This provinice produces abundance of corn, wine, and excellent fruit. The fruit and corn which grow here moft plentifully, are wheat, rye, barley, oats, another fort of grain,

## A NG

which the French call baillorge, and is pretty much like barley, Spanifh wheat, faffron, wine, walnuts.
Wines are the chief and moft important branch of the trade of Angoumvis. The wines in the greateft repute, and fold preferably to all others, are thofe of Cogniac and its diftrict, and the next in quality are thofe of Argoulerme.
The red wines are fold in Limofin and Poictou, and the white wines ferve to make brandy.
The fale of brandies differs according to the times. During the wars they are bought up by the French commiffioners of the ftores, for the ufe of the armies in Flanders and Germany. They are firft carried by land to Châtelleraud, where they are embarked on the Vierne, to go afterwards by the Loire to Orleans, from whence they are fent to the places for which they are defigned.
In time of peace the fale is eafier, quicker, and in greater quantity. They are then fent to Charente below Rochfort, where the Englifh and Danifh fhips come and take off great quantities, efpecially of the Cogniac brandies. At Charente is a duty to be paid, which is thought to do fome prejudice to the trade.
La Marche. Notwithfanding the great occafion they have for falt in thofe four provinces, yet the profits on that commodity are very inconfiderable, both on account of the duties that are to be paid at the office of Tonne-Charente, which fwallow up the greateft part of them, and of the feveral tolls belonging to many lords, whofe eftates are fituated upon that river; all which together leave hardly any profit to the trader.
As to the paper and brandy made at Angoulefme, we fhall fpeak of them prefently.
We refer likewife to the fame article, for what relates to the woollen manufactories of this city; we fhall only obferve that there are few other manufachories there of any note, except that of clock and watch making; which was formerly in great repute, but is at prefent hardly kept up, becaufe the beft workmen are gone to Saintes, Blois, or Poictiers.
We queftion, whether we ought to reckon, amongit the merchandizes made in this city, the water which from its excellency is called the water of Angoulefme, and ferves to beautify the complexion. The care which the Jadies take of their beauty, occafioned for a long time a great demand for that water; but whether it be, that people have been at laft undeceived with regard to its qualities, or difgufted by the high price, it is certain that the demand for it is greatly abated.
ANGOUMOIS and LIMOSIN. We fhall join thefe two provinces under one article, as in the original, they being under the fame generality.
Limofin, has Angoumois and Perigord on the weft, La Marche on the north, Auvergne on the eaft, and Quercy on the fouth. Though Angoumois and Limofin border on each other, yet they are very little alike with regard to the fruitfulnefs of the foil, or the plenty of things neceflary for the fupport of life, proper for trade.
Angoumois, as obferved, produces abundance of corn, wine, and excellent fruit; Limofin, on the contrary, is barren and cold. It produces wine in fome places only, and that very indifferent too; wheat hardly any where; rye, barley, and chefouts are the materials which the inhabitants chiefly ufe to make their bread.
There are in both thefe provinces a great number of papermills, the manufactory of which is very much efteemed. The paper of Angoumois, that at leaft which is proper for printing, is chiefly defigned for Holland, which is the reafon why in molt of their manufactories they put the arms of Amfterdam upon it; they likewife fend fome paper to Paris. That of Limofin is not lefs excellent for the printing of books; it is, above all, admirable for pints of copper-plates; but it is feldom ufed for writing, not being fufficiently gummed for that purpofe.
The manufatories of woollen ftuffs are not very confiderable in this generality. At Limoges (the capital of Limofin) they hardly make any other ftuffs except bays. At Angoulefme they make ferges and ftamines : of Jean d'Angeli, ferges and broad-cloths : at Nerac, woollen cloths and ferges: at la Rochefoucault, ferges: at Santereune, cloths: at Cogniac, ftamines : at St Leonard, very coarfe woollen cloths: and, faftly, at Brioes and Tulle, bays.
All thefe fuffs are partly ufed in the places where they are made, and partly fent to Bourdeaux, Limoges, and Angoulefme.
The faffron that is máde in Angoumois is no inconfiderable object of trade for that country; and, though it be not quite fo good as that of Gatinois, yet they fend great quantities of it to Bourdeaux, where the Englifh, Dutch, Swedes, Danes, and other northern nations, come and buy it; as they alfo do the brandies of Cogniac, which are in great efteem, particularly in England and Holland.
They have in Limofin fuds of horfes, which fucceed pretty well; the greateft part of them are fold at the fairs of Chalus. The barrennefs of Limofin, and the inhabitants inclination for labour, are the reafons why feveral thoufands of them leave it every year, and difperfe themfelves throughout the whole kingdom of France, wherever they can get work, and re-
turn home a little before the winter, bringing to their families fuch affifance as they could not meet with in their native place: this is to them infead of trade, and by which othe: provinces grow rich.
The chief income of Upper and Lower Limofin arifes from the trade of cattle, chiefly of black cattle, which are fold partly to the traders of the neighbouring proviaces, and partly to thole of Paris, who buy up great quantities of them every year. The latter are ufed to have the cattle fattened in Normandy, before they bring them to Paris; for they grow very lean on the road, becaufe of the length of the journey. As long as the French had armies in Italy, moft of the oxen fent thither for the fuftenance of the troops were bought in Limofin, which increafed that trade very much.
They alfo feed flocks of theep in Limofin; but, as their feih is not very good, and their wool but indifferent, they bring up fo many only as are fufficient for the demands of that province; and the little wool they afford is employed in the woollen manufactories mentioned hereafter.
The trade of horfes is not lefs confiderable than that of oxen, if it be not more fo. Moft of them are fold at the two fairs of Châlus, one of which is kept on St. George's day, and the other on Michaelmas-day ; and at the three fairs of Limoges, which are kept in the months of May, Joly, and December. Ot thefe five fairs, that which is kept at Chalus on St. George'sday is the moft confiderable. Moft of the horfes fent thither are bought, when they are colts, to be afterwards brought up in that country, in Angoumois and in Perigord.
The horfes of Limofin are very much efteemed; they laft long, and work very hard. They reckon that one year with another they fend out of that province between 1,500 , and 2.000, colt, fince the ftuds, which had been neglected by Monfieur de Louvois's death, have been pur again upon a good footing, and fince they have brought thither fallions from Spain and Barbary; it appearing from experience that they fucceed there better than any other.
The land in Limofin is almoft every-where covered with chefnut trees, the fruit whereof ferves for food to the countrypeople, but not, as has been afferted by fome, reduced into flour proper to make bread ; the flour, or meal, that could be made of chefnuts, being not good to make dough, as that of wheat is; but that fruit really ferve them for food inftead of bread. Their manner of preparing chefnuts for food is as follows: they take off the firft peel, or rind, when they are dry: then they boil them a little, to take off the fecond peel; and afterwards they boil them intirely to reduce them into a kind of pap. It is a food to which people can eaflly ufe themfelves; it gives ftrength and vigour even to thofe who ufe no other fuftenance, which is the cafe of moft of the peafants. Chefnuts will keep a great while, if they be dried in the flrade; but, when they have been thus kept, they are more infipid and lefs nourifhing than thofe which are freff, or of the fame year's growth.
The open fields of Limofin produce pretty good rye; but, though they be never fo well manuied and cultivated, they can never be brought to produce wheat. Befides rye, which none but the richeft country-people feed upon, they allo fow fome buck-wheat, and a kind of thick turnip, which, together with the chefnuts, are all the food of the pooreft fort.
The country of Angoumois differs very much from the former. Its foil is proper for all forts of crops; and, though generally fpeaking, the crops be not very plentiful, and the produce be defigned only for home-confumption, yet it is not fo much owing to the barrennefs of the foil as to the want of a proper cultivation.
The fruit and corn, which grow there moft plentifully, are wheat, rye, barley, oats, and baillorge, which is pretty much like barley, as obferved; alfo Spanifh wheat, faffron, wines, walnuts, and all forts of fruit.
Angoumois is not, indeed, at prefent quite fo flourifhing in regard to the wine trade, as it was formerly; for that commodity being cultivated in fome other provinces of France, particularly in Orleannois and Gattinois, this has confiderably leffened the demand for it ; the fale of it being reckoned to amount formerly to above 100,0001 , per annum. Another reafon of the decay of trade here is, that the faffron which grows here is not reckoned fo good as that of the other provinces above-mentioned.
However, they fend pretty large quantities of it into Germany, and to Lyons, whence it is carried into Hungary, Pruffia, and other northern countries, where it is very much ufed.
Another confiderable article of the trade of Angoumois is its forges, particularly thofe of Rancogne, Planche-Mênier, and Rouffines; the iron of which is very foft, very eafy to melt for caft work, and very fit to be worked with the hammer. Moft of it is ufed in making great guns, bombs, and bullets, for the king's arfenals of the marine, and particularly for that of Rochfort.
Laftly, the manufacture of paper, though it has lof very much of the reputation it formerly had in foreign countries, particularly at Amfterdam, yet they fill furnifh the Dutch with pretty large quantities of it in time of peace; the beft printers in Holland always lamenting the want of the paper of Angoulefme, which the Dutch have never been able to imitate per-
fecly,
feetly, whatever pains they have taken, and whatever expence they have been at, for that purpofe.
We have feen a memorial, wherein the author afferts, that the abovementioned decay of the paper-trade was not fo much owing to the long wars, whicir took up almoft the whole reign of Lewis XIV, as to the duties that were laid on that commodity, or on the materials of which it was made, fince the year 1656 : namely, the ftamp-duty, at the rate of 6 fols per ream of fine paper, and 4 fols per ream of comman paper; the duty of exportation at Tonne-Charente, on each bale of paper, which amounts to 4 fols per ream; another duty of importation, eftablifhed likewife at Tonne-Charente, of 10 fols per 100 weight on all the rags, and on the gum that comes from Poictou, which again raifes the price of paper a fol per ream. The author of that memorial is of opinion, that, if thofe duties were leffened by one half only, the manufactory and trade of paper would foon revive; and that we might fee at prefent, as it was formerly, 60 paper-mills at work in Angoumois, inftead of 16 only which remain, and even thofe are not always employed.

## Manufactories of Stuffs

At St Jean D'Angeli, they make woollen cloth, a French ell wide, and ftamines. They are fent to Bourdeaux and to Limoges.
At Nerac, they make woollen cloth and ferges; they are fent to the fame places as thofe of St Jean d'Angeli.
At Angoulesme, they manufacture ferges and ftamines. They are all fold on the foot.
At La Rochefoucault, there is a manufactory of ferges. They alfo make gloves there.
At Limoges, Tulle, and Brine, they manufacture bays.
At St Leonard, they make coarfe and thick cloths, proper for clothing the foldiers and pealants.
At Aubeterre, there are no woollen manufactories; but they make there coarle linnens, and paper, which they fend to Bourdeaux, Rochelle, and Touloufe.

The particular Trade of Limoges and Angoulefme.
Limoges, is fituated on the river Vienne, which runs along its fuburbs on the eaft fide: but that river affords it no great conveniency for trade, becaufe it is hardly navigable, except for floats of timber, on account of the rocks which ninder its courle.
This defect of the Vienne, and the great diftance at which Limoges is from the fea, make it impoffible for the inhabitants to carry on fuch a trade as the towns fituated near the fea-coaft have occafionally with foreisners; for which reafon they have, by their induftry and great labour, opened to themfelves a pretty confiderable trade with the inland parts of the kingdom, by the correfpondence they keep up there, and by making their town a kind of faple for the merchandizes which are fent from Paris to Touloufe, or from Touloufe to Paris; as well as for thofe which go from Lyons to Bourdeaux, and from Bourdeaux to Lyons.
Limoges is, likewife, the ftaple for the falt of Brouage, which is ufed in Auvergne; and it is, allo, by the merchants and factors of this city, that the trade is carried on from Auvergne and Lyons to Rochelle.
Befide this ftaple-trade, if we may call it fo, there are a great many manufactories, either within the city of Limoges, or in its neighbourhood, which afford it a trade either within the country, or with the neighbouring provinces, and even as far as Paris.
Thefe manufactories are woollen ftuffs, mentioned above; hides, for which there are feveral tan-houfes on the banks of the Vienne, the water of which is proper for drefling leather; gloves, of which great quantities are made at St . Junien, and in fome other neighbouring places; paper, which is made.in the mills of St. Leonard ; nails, particularly foŗ horfe-fhoes, a great quantity of which is fent to Paris, where they are in good efteem; pins, which employed formerly above 20 mafters and 500 journeymen; iron-wire, very foft and malleable; laftly, a vaft quantity of filk and thread-buttons, the manufactory of which fuffered, indeed, a great deal, as long as the ftuff-butions were in falhion; but it has begun to revive again, fince the wear of thofe' buttons has been feverely prohibited.
They alfo make at Limoges enamel of copper, the colours of which are extremely beautiful and lively, becaufe the water of the Vienne is proper for diluting and mixing the colours; but the defigns are fo ill contrived, that fkilful judges make no account of them; they fell, however, pretty well in the neighbouring provinces, and there are even fome fent to Paris, Angoulesme, the capital city of Angoumois, ftands on a high twill, at the foot of which runs the Charente; the neighbcurhood of that river does very much contribute to the commerce of this city, and ferves to carry abroad the commodities of Angoulefme, and to convey thither fuch as the people have occafion for. The commodities fent abroad, as obferved above, are chiefy brandies and paper; and they import, amongft other things, falt, which is brought from Saintonge in boats to Angouletine, whence. it is carried in carts and on mules, into Auvergne, Limofin, Perigord, and la Marche,

Vol. I.

ANHALT, a principality of Germany, has Mifnia on the fouth, the duchy of Magdeburg and the principality of Hato berffadt on the north and north-welt ; the duchy of Saxony on the eaft, and Thuringia on the welt. Its cheef trade is in beer.

1. Dessan. Its trade is in excellent beer, which is tranfoorted all over the country
2. Zerbst, is remarkable for the fame frong beer-brewery ag at Deflaw, but it is faid to excel it ; infomuch that, in Franconia, it fells dearcr than wine.
ANIL, a plant, or fhrub, of whofe falk and leaves the indiga is made, which is fo much ufed in dyeing. See Indigo.
ANIMATED. The French give the name of animated gum to a fort of yellowibh and tranfparent gum, which drops by incifion from fome trees in New Spain.
ANINGA, a root which grows in the Antilles iflands, and is pretty much like the China plant. The root of the aninga is now ufed by fugar-bakers, for refining the fugar, and is more effectual and lefs dangerous than the fublimate of mercury and arfenic, that were ufed formerly, before it was found that the aninga-root was proper for that ufe.
ANJOU, a province of France, bounded on the north by Maine; on the weft by Britany ; on the fouth by Poictou; and, on the eaft, by Tourain
The trade of this province confints almoft intirely in wines, flax, and hemp, of which they make a great deal of thread and linnen; in flate from the quarries, and coals and iron from the mines; in blanching linens and wax; in refining fugar and falt-petre ; in the forges and glafs-houfes: and laftly, in ftamines and druggets of all forts.
Part of the wine is fent to Nantes', by the river Loire ; the reft is difilled into brandy, of which the people of Nantes likewife buy up a great deal ; but they fend alfo a pretty confiderable quantity of it to Paris, by the canal of Briare.
The chief flate quarries are in the neighbourhood of Angers, and in the paribes of Hotellerie, Flee, Ia Jaille, and Magne in the election, or diftrict, of Chateau-Gontier.
The coal and iron mines are more plentifully found in the parifhes of Courfon, St. George, St. Aubin, Luigné, Chateaudefons, Chalonne; and Montejan-fur-Loire, than any where elfe.
The forges, furnaces, and founderies for feveral iron-works, are at Chateau- $\mathrm{I}_{d}$-Calliere, and at Paonnée.
The glafs-houles are at Chenu in the foreft of Vefin, and in fome other places; but that at Chenu is the moft confider able.
There are two fugar-bakers houfes in this province; the one at Angers, and the other at Saumur, in which laft city there is allo one for refining falt-petre.
There are io bleaching-grounds for wax, namely, 7 at Saum mur, and 3 at Chateau (iontier.
There are, alfo, in thefe two cities, bleaching-grounds for linnens, and fome likewife in other places; but the former are by far the moft famous, both with regard to the beauty of the bleaching, and to the great quantity of linnens that are bleached there.
At Angers, they make very fine ftamines of wool upon filk, with gold ftripes; fine camblets, razes, and other forts of ferges.
At Lude, they make druggets and ftamines, which are very much efteemed; they are called after the name of the place where they are, manufactured.
At Chateau-Gontier, befides the fame forts of fuffs as are made at Lude, they make allo quilted ferges.
Laftly, there are ftamines, ferges, and druggets made at la Fléche, Reaugé, Doué, Montreuil-Eelay, Beaufort, and Durtal.
All thefe ftuffs, except thofe made at Angers and Lude, moft of which are fent to Paris, are ufed within the province, and are fold at Lude, Lavat, Saumur, and Angers.
As for the linnens of Anjou and Touraine, the beft manufac. tories, and where the greateft quantity of them is made, are at Chateau-Gontier, Beaufort, and Cholet.
The linnens of Chateau-Gontier are fent to $\mathrm{St}_{\mathrm{t}}$ Malo for foreign countries; and thofe of Cholet are fold in Poictou, at Rochelle, and at Bourdeaux.
Thofe of Beaufort, which are commonly bleached at Doué in Anjou, are defigned partly for the French iflands in America, and partly, if they be coarfe, for making fmall fails for dhips, and for packing up merchandizes.
They alfo make at Cholet a great many fine Ariped limnens for which they have a confiderable demand; they are commonly made of raw flax, and ferve to make waiftcoats, and linings for men's cloaths, and fummer night-gowns for women. They manufacture, likewife, at Cholet, thote lipnens called platilles.
The greateft trade of thread, of all forts, either for fewing of for weaving, is carried on as the market of Craon.
The manufactories of cloth, and other woollen ftuffs in the province of Anjou.
Angers, the capital city of Anjou. They make in this city flamines of feveral prices, and a firt of ferges, all of the wool of the country. They make, one year with another, in on

12,000 pieces of thefe ftuffs; and there are above 1000 made in other places, marked at the hall. Three quarters of all thefe ftuffs are uled within the province: the reft are fent to Paris. This manufacture employs go looms and 4 fullers. They make, alfo, in that citv, a great quantity of bats, and tan a great deal of leather of all forts. There are above 20 freemen of the batters company, and 12 of the tanners.
Chateau-Gontier. The fuffs manufaclured here are ftamines and druggets after the manner of Lude, and quilted ferges. The druggets are fold to the merchants of Lude, and the other ftuffs to thofe of Angers and Laval.
There are 23 mafters, who have 50 looms at work, and make about 1,100 pieces a year of the three forts of ftuffs abovementioned. Three fullers are employed to clean and full thofe ftuffs. There are here, alfo, 4 hatters, and 9 tanners.
La Fléche. The produce of this manufactory amounts only to 400 pieces of fuffs per annum ; but, befides, there are about 300 pieces maje in other places, marked at the hall here. The ftuffs made in this town are ftamines and ferges, wherein they ufe no other wool but that of this province. Thefe fuffs are fold at Saumur and at Angers.
There are 60 looms emploped in this manufactory, and but one fuller. They alfo drefs here fome leather.
Beavee'. The manufactory of this town is, in almoft every thing, like that of the former, with regard to the kind of ftuffs that are made, their number, the quantity of foreign pieces marked here, the number of looms, and the places where the fluffis arc fold.
There are 4 batters employed in the manufacture of hats. They have, likewife, here a pretty good trade in wine, com, and cattle.
Saumur. There are marked yearly, at the hall of this city, 4. or 500 pieces of ftuffy made in other places. Thofe which they manufacture here are ftamines, ferges, and druggets of thread and wool, wherein they ufe none but the wool of the councry. They do not make much lefs than 200 pieces per annum, though there be but 32 looms in the town, under the direction of five mafters. There is only one fuller to full and clean the fluffs.
They have a pretty confiderable trade in hats, in which manulactory fix mafter-hatters are employed.
There are feven tanners, who drefs both large and fmall leather.
Lude. They make, in the manufactories of this place, between 4 and 500 pieces of druggets and famines yearly, which are fent throughout the whole kingdom, and particularly to Paris. There are 25 looms, under 10 mafters only.
Boué. The mapuatures of this town confit in ftamines, ferges, and dra,gets, wherein they ufe only the wool of the country. They make yearly above 200 pieces, which employ $1+$ looms and io mafters. Thefe fluffs are fold in the province, and at Saumur.
The tanner's trade is confiderable here ; there are 15 maftertanners who carry it on. The leather they drefs confifts partly in ftrong bides, and partly in fmall leather, all which are fold in the neigbbouring provinces, and fometimes they fend fome to Paris.
There are nine hatters: the hats they make are pretty much efteemed; they are moft of them fold within the province.
Montreuil-Bellay. They make here the fame forts, and the fame number, of ftuffs as at Doue. There are 13 mafters, who employ 15 looms, and two fullers to clean the ftuffs, which are all fold within the province.
Beaufort and Durtal. In the former of thefe places they-make 183 pieces of fuff yearly, and in the latter 200: they are flammes, ferges, and druggets, all of the wool of the country. At Beaufort, there are nine mafter-weavers and 1.4 looms; and, at Durtal, 14 mafters, 20 looms, and two fullers.
There are alfo tanners in thefe towns, fix in the former, and II in the latter.
NISE, or ANIL, a greyifh wood, that comes from the Indies in thick logs, or billers, and which is called anife becaule of its fcent, which comes pretty near that of the plant which bears that name, and grows very commonly in the gardens in France, and elfewhere.
The anife-wood is ufed in inlaid-work, and turners ware. The druggifts alfo fell the feed of it, difguifed under different names, calling it fometimes anife of China, of Siberia, of the Philippine inlands, and of the Indies; but, to give it more reputation, they call it moft commonly the feed of Badian, or the feed of Zingi.
This feed, which is contained in a fmall pod, very hard and thick, in the form of a far, is perfectly like that of the coloquintida, except only that it is of a tarmed colour, and fhining, and that it has a pretty good Imell.
Ihe Chinefe ufe it with their tea, and the Dutch in the Eaft Indies, after their example, alfo put fome into that liquor, and into their fhurbet, pretending that it gives it a more pleafant flavour. The ufe of it is not introduced in France, nor in England, that we know of.

Anise is alfo a kind of oblong feed, or grain, pretty much like that of fmallage, and has an aromatic ficent and tafte. This feed comes from an umbelliferous plant, of the fame name, too much known to need further defcription.
Anife-feed is part of the conmmodities in which the corporation of merchant-druggifts trade at Paris. They import a great deal of it from Alicant and Malca, by the way of Marfeilles. They get alfo a vaft quantity from Tours and Chinon in France, which, though greener than that of Alicant and Malta, is neverthelefs not fo much efteemed.
The good qualities anife-feed ought to have are as follow: it muft be frelb, large, plump, newly dried, of a good fmell, and of a biting and aromatic tafte, without any bitternefs, which that of Chinon is apt to have.
Anife-feed is of a hot nature, good to expel wind out of the ftomach and bowels. It is often ufed in medicines, and is judged proper to qualify fena. The confectioners ufe a great deal of anife-feed in fugar-plums, which they fell under divers denominations.
There is extracted from anife-feed, by difillation, a kind of white oil, called effence, or quinteffence, of anife, of which that which comes from Holland is the moft efteemed. That oil, to which the phyficiaus and aporhecaries afcribe great virtues, is of a very flrong and penetrating fcent; for which reafon it is ufed with difcretion. Perfumers mix fome of it with their paftes and pomatums, to give them a fweet foent. They alfo put fome of it in certain mixtures of aromatics.
Whilft anife-feed is diftilling to extract the oil from it, there comes a clear water from it, which is called anife-water, the effects of which are much the fame with thofe of anife-oil.
That oil muft be chofen white, clear, tranfparent, of a ftrong fcent, as eafily liquified by the leaft heat as congealed by the leaft cold.
Anife-feed affords, likewife, another fort of oil, quite green, which is got by exprefion, to which the fame virtues are afcribed as to the white oil, but the effects of it are neither fo ftrong nor fo quick. It is to Monfieur Charas that, in France, the difcovery of this laft fort of nil is owing.
ANKER, a liquid meafure at Amfterdam. It is the fourth patt of an aem, and contains two frekans. A ftekan is 16 mingles, and a mingle two pints of Paris, or about two quarts winemeafure in England: fo that an anker contains 64 pints of Paris, or about 32 gallons Englifh meafure. See Azm.
ANABASSES, ANNABASSES, a fort of covering made at Roan in France, and alfo in Holland; they are commonly $\frac{7}{8}$ in length, by $\frac{3}{4}$ in breadth, and are ftriped with blue and white equal fripes, about an inch broad.
This is one of the beft commodities for the Guinea trade, and, in particular, for that on the coaft of Angola, a kingdom in Africa.
At Loango, or Boaria, the capital of the kingdom alfo called Loango, in Africa, they reckon by macoutes and by hundreds; and an anab ffe is reckoned three macoutes, that is to fay, $3^{\circ}$, each macoute being worth 10 . See Angola.
ANNUITY, a yearly rent or income, paid either for the term of a perfon's life, or for a term of years only, or in fee, or for ever.
Annuities upon lives, being daily bouyht and foid, is now become, as it were, a kind of difting branch of bufinefs, and therefore fhould not be wholly omitted in a work of this kind. Dr. Halley was the firft, who attempted to put this matter on its true balis for computation. There have been many other ingenious writers fince who have built upon his foundation, and whofe further oblervations are not to be difregarded, by thofe who would enter very deeply into this point.
Dr. Halley's calculations are drawn from the bills of mortality at Breflaw, the capital city of the province of Silefia. It is fituate on the eaftern bank of the river Oder, near the confines of Germany and Poland, and very nigh the latitude of London. It is very far from the fea, and as much a mediterranean place as can be defired; whence the confluence of frangers is but fmall, and the manufacture of linnen employs chiefly the poor people of the place, as well as of the country round about; whence comes that fort of linnen we ufually call your Silefia linnen, which is the chief, if not the only, merchandize of the place. For thefe reafons the degrees of mortality in the city feem moft proper for a ftandard, and the rather, for that the births do a fmall matter exceed the funerals: the only thing wanting is the number of the whole people, which in fome meafure I have endeavoured to fupply, fays the Doctor, by comparifon of the mortality of the people of all ages; which is traced out from the curious tables of the births and funerals drawn up monthly by Dr. Newmann of that city.
It thence appears, that, in the five years from 87 to 9 inclufive, there were born 6193 perfons, and buried 5869 ; that is born per annum 1238, and buried 1174, or of about a 20th part; which may perhaps be balanced by the levies for the emperor's fervice of his wars. But this being contingent, and the births certain, I will fuppofe the people of Breflaw to be increafed by 1238 births annually. Of thefe it appears by the fame tables, that 348 do die yearly in the firf year of their

## A N N

age, and that but 890 do arrive at a full year's age; and likewile, that 193 do die in the five years between 1 and 6 complete, taken at a medium ; fo that but 692 of the perfons born do furvive 6 whole years.
Irom this age the infants, being arrived at fome degree of firmnef., grow lefs and lefs mortal; and it appears that of the whole people of Breflaw there die yearly as in the following table; wherein the upper line chews the age, and the next under it the number of perfons of that age dying yearly.

7-8.9...14.... 18...21.. 27.28... 35 $11 \cdot 11 \cdot 6 \cdot 5_{\frac{1}{2}}^{2} \cdot 3^{\frac{1}{2}} \cdot 5 \cdot 6 \cdot 44^{\frac{1}{2}} 6 \frac{1}{2} \cdot 9 \cdot 8 \cdot 7 \cdot 7$ $36 \ldots 42 \ldots 45 \cdots 49 \cdot 54 \cdot 55 \cdot 56 \ldots 63 \ldots$
 70.71. $72 \ldots 77$...81...84...90:91.98.99 14.9.11.9.6.7.3.4.2.1.1: I. ○. $\frac{1}{5}$ 100

And, where no figure is placed over, it is to be underfood of thofe that die between the ages of the preceding and confequent column.
From this table it is cvident that, from the age of 9 to about 25 , there do not die above 6 per annum of each age, which is much about one per cent. of thofe that are of thofe ages: and whereas in the $14,15,16,17$ years there appear to die much fewer, as 2 and $3 \frac{1}{2}$, yet that feems rather to be attributed to chance; as are the other irregularities in the feries of ages, which would reclify themfelves, were the number of years much more confiderable, as 20 inftead of 5 .
And by our own in Chrift-Church hofpital I am informed,
there die, of the young lads, much about one per cent. per ann. they being of the forefaid ages. From 25 to 50, there feem to die from 7 or 8 , and 9 per ann. of each age: and after that to 70 , they growing more crazy, though the number be much diminifhed, yet the mortality increafes, and there are found to die 10 or II of each age per annum. From thence the number of the living being very fnall, they gradually decline till there be none left to die: as thefe may be feen at one view in the table.
From thefe confiderations the adjoined table is formed, whore ufes are manifold, and give a more juft idea of the tate and condition of mankind, than any thing yet extant that I know of. It exhibits the number of people in the city of Breflaw of all ages, from the birth to extreme old age, and thereby fhews the chances of mortality at all ages ; and likewife how to make a certain eftimate of the value of annuities for i:ves, which hitherto has been only done by an imaginary valuation: alfo the chances that there are, that a perfon of any age propofed does live to anyage given; with many more, as I fhall thew. This table does fhew the number of perfons that are living in the age current annexed thereto.
And although thefe tables are built upon five years obfervations only in the city of Breflaw, and have been now communicated to the public near fifty years; yet they have hitherto ftood the teft, and bave proved the foundation of thofe divers curious rules, canons, and theorenis, which the learned Doctor himelf, and the ingenious Monf. de Moivre fince, have inveftigated therefrom, according to an elegant algebraica! and geometrical method of reafoning: and without which, indeed, it was not poffible to difcover thofe rules: nor, without fome knowledge in thefe fciences, can any one comprehend the reafon and demonftration of them.

Dr. Halley's Table of Osservations, exhibiting the Probabilities of Life.

| Age cur. | Perfons | Age cur. | $\left\lvert\, \begin{aligned} & \text { Per- } \\ & \text { rins } \end{aligned}\right.$ | $\begin{aligned} & \text { Age } \\ & \text { cur. } \end{aligned}$ | Perrons. | $\begin{aligned} & \mathrm{A}_{2} \\ & \mathrm{cosi} \end{aligned}$ | fons. | $\begin{aligned} & \text { Age } \\ & \text { cur. } \end{aligned}$ | Per- <br> 10ns | Age cur. | Perfons. | Age. | Perfons. |

| $\widehat{\text { Age }}$ cur. | $\begin{aligned} & \overline{\text { Per }} \\ & \text { fons } \end{aligned}$ | $\overline{\text { Age }}$ cur. | $\left\lvert\, \begin{aligned} & \text { Per } \\ & \text { rons } \end{aligned}\right.$ | Age cur. | $\begin{aligned} & \text { Yer- } \\ & \text { fons- } \end{aligned}$ | $\begin{aligned} & \overline{A_{4},} \\ & \text { cur } \end{aligned}$ | cer- | $\begin{aligned} & \overline{\text { Age }} \\ & \text { Car. } \end{aligned}$ | Per fons. | As | Per- fons. | 56 63 | 2194 1694 |
| 43 | 417 | 50 | $34^{6}$ | 57 | 272 | 64 | O2 | 71 | 13 L | 78 | $5^{8}$ | 70 | 1204 |
| 44 | 407 | 51 | 335 | 58 | 2.2 | 65 | 192 | 72 | 120 | 79 | 49 | 77 | 692 |
| 45 | 397 | 52 | 324 | 59 | 252 | 66 | 182 | 73 | 109 | 80 | 41 | 84 | 253 |
| 46 | $33 ;$ | 53 | 313 | $6{ }_{6}$ | 242 | 67 | 172 | 74. | 98 | 81 | 34 | 100 | 107 |
| 47 | 377 | 54 | 302 | 61 | 232 | 68 | 62 | 75 | 88 | 82 | 28 |  |  |
| 48 | 367 | 55 | 292 | 62 | 222 | 69 | 152 | $7^{6}$ | 78 | 83 | 23 | Sum | 34000 |
| 49 | 357 | 56 | 282 | 63 | 212 | 70 | 142 | 77 | 68 | 84 |  |  |  |

Thus it appears, that the wholo people of Breflaw does confift of 34,000 fouls, being the fum total of the perfons of all ages in the table:
The firt ufe hereof is to thew the proportion of men able to bear arms in any multitude, which are thofe between 18 and 56 , rather than 16 and 60 ; the one being generally too weak to bear the fatigues of war, and the weight of arms; and the other too crazy and infirm from age, notwithtanding particular inftances to the contrary.
Under 18, from the table, are found in this city 11997 perfons, and 3950 above 56 , which together make 15947 . So that the refidue to 34000 , being 18053 , are perfons between thofe ages. At leaft one half thereof are males, or 9027: fo that the whole force this city can raife of fencible men, as the Scotch call them, is about 9000 , or $\frac{9}{37}$, or fomewhat more than a quarter of the number of fouls; which may, perhaps, pafs for a rule for all other places.
The fecond ufe of this table is, to fhew the differing degrees of mortality, or rather vitality, in all ages : for if the number of perfons of any age remaining after one year, be divided by the difference between that and the number of the age propofed, it thews the odds that there is, that a perfon of that age does not die in a year. As for inftance, a perfon 25 years of age has the odds of 560 to 7 , or 80 to I , that he does not die in a year: becaufe that, of 567 living of 25 years of age, there do die no more than 7 in a year, leaving 560 of 26 years old.
So likewife for the odds that any perfon does not die before he attain any propofed age, take the number of the remaining perfons of the age propofed, and divide it by the difference between it and the number of thofe of the age of the party propofed; and that thews the odds there is between the chances of the parties living or dying. As for inftance: what is the odds that a man of 40 lives 7 years? Take the number of perfons of 47 years, which in the table is 377 , and lubtract it from the number of perfons of 40 years, which is 445 , and the difference is 68 ; which fhews, that the perlons dying in the 7 years are 68 , and that it is 377 to 78 , or $5 \frac{1}{12}$ to 1 , that a man of 40 does live 7 years. And the like for any other number of years.

Ufe III. But if it be required at what number of years it is an even lay, that a perfon of any age fhall die, this table readily performs it: for if the number of perfons living, of the age propofed, be halfed, it will be found by the table at what year the faid number is reduced to half by mortality; and that is the age, to which it is an even wager that a perfon of the age propofed fhall arrive, before he die. As for inftance: a perfon of 30 years of age is propofed, the number of that age is 53 I , the half thereof is 275 , which number I find to be between 57 and 58 years; fo that a man of 30 may reafonably expect to live between 27 and 28 years.
Ufe IV. By what hath been faid, the price of infurance upon lives ought to be regulated; and the difference is difoovered between the price of infuring the life of a man of 20 and 50 , for example: it being 100 to 1 that a man of 20 dies not in a year, and but $3^{8}$ to 1 for a man of $5^{\circ}$ years of age.
Ufe $V$. On this depends the valuation of annuities upon lives; for it is plain, that the purchafer ought to pay for only fuch a part of the value of the annuity as he has chance that he is living; and this ought to be computed yearly, and the fum of all thofe yearly values, being added together, will amount to the value of the annuity for the life of the perfon propofed.
Now the prefent value of money payable after a term of years, at any given rate of interefl, either may be had from tables already computed, or, almoft as compendioully, by the table of logarithms: for the arithmetical complement of the $\log$ arithm of unity, and its yearly intereft (that is, of 1,06 for 6 per cent. being 9,974694 ) bing multiplied by the number of years propofed, gives the prefent value of one pound payable after the end of fo many years. Then, by the foregoing propofition, it will be, as the number of perfons living after that term of years, to the number dead, fo are the odds that any one perfon is alive or dead. And by confequence, as the fum of both, or the number of perfons living of the age firft propofed, to the number remaining after fo many years (both given by the table) fo the prefent value of the yearly fum, payable after the term propofed, to the fum which ought to be paid for the chance the perfon has to enjoy fuch an' an-

## A N N

nuity fo many years. And, this being repated for every year of the perfon's life, the fum of all the prefent values of thofe chanyes is the true value of the annuity. This will, without doubt, appear to be a mon laborious calculation; but it is one of the principal ufes of this fpeculation, from whence the learned Dr. Halley, after no ordnary number of arithmetical operations, has formed the following table, which fhews the value of annuities for every fifth year of age, to the 70 th, as follows:

| Age. | Years <br> Purchafe. | Age <br> Years <br> Purchafe. | Age. | Years <br> Purchafe. |  |
| ---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | $\mathbf{1 0 , 2 8}$ | 25 | $\mathbf{1 2 , 2 7}$ | 50 | 9,21 |
| $\mathbf{5}$ | $\mathbf{1 3 , 4 0}$ | 30 | 11,72 | 55 | 8,51 |
| $\mathbf{1 0}$ | 13,44 | 35 | 11,12 | 60 | 7,60 |
| 15 | $\mathbf{1 3 , 3 3}$ | 40 | 10,57 | 65 | 6,54 |
| $\mathbf{2 0}$ | $\mathbf{1 2 , 7 8}$ | 45 | 9,91 | 70 | 5,32 |

Ufe VI. Two lives are likewife valuable by the fame rule: for the number of chances of each fingle life, found in the table, being multiplied rogether, become the chances of the two lives. And, after any certain term of years, the product of the two remaining lums is the chances that both the perfons are living; the product of the two differences, being the numbers of the dead of both ages, are the chances that both the perfons are dead; and the two products of the remaining fums of the one age, multiplied by thofe dead of the other, Shew the chances that there are that each party furvives the other; whence is derived the rule to eftimate the value of the remainder of one life after another.
Now, as the product of the two numbers in the table for the two ages propofed, is to the difference between that product, and the product of the two numbers of perfons deceafed in any fpace of time; fo is the value of a fum of money to be paid after fo much time, to the value thereof under the contingency of mortality: and, as the aforefaid product of the two numbers anfwering to the ages propofed, to the product of the deceafed of one age multiplied by thofe remaining alive of the other; to the value of a fum of money to be paid after any time propofed, to the value of the chances that the one party has, that he furvives the other whofe number of deceafed you made ufe of in the fecond term of the proportion. To furch who are acquainted with the algebraic method of analyfis, this perhaps may be better underflood, by putting N for the number of the younger, and $n$ for that of the elder, $\mathrm{Y} y$ the deceafed of both ages refpectively, and $\mathrm{R} r$ for the remainders; and $\mathrm{R}+\mathrm{Y}=\mathrm{N}$, and $r+y=n$; then Thall $\mathrm{N} n$ be the whole number of chances, $\mathrm{N} n-\mathrm{Y} y$ the chances that one of the two perfons is living, $Y y$ the chances that they are both dead, $\mathrm{R} y$ the chances that the elder perfon is dead, and the younger living; and $r \mathrm{Y}$ the chances that the elder is living, and the younger dead.
Thus two perfons of 18 and 35 are propofed, and after 8 years thefe chances are required: the numbers for 18 and 35 are 610 and 490 , and there are 50 of the firft age dead in 8 years, and 73 of the elder age; there are in all $610 \times 490$, or 298,900 chances; of thefe there are $50 \times 73$, or 3,650 , that they are both dead. And as 298,900 , to 298,900 , 3,650 , or 295,250 , fo is the prefent value of a fum of money to be paid after 8 years, to the prefent value of a fum to be paid, if either of the two live. And, as $560 \times 73$, fo are the chances that the elder is dead, leaving the younger; and, as $417 \times 50$, fo are the chances that the younger is dead, leaving the elder. Wherefore as $610 \times 490$, to $560 \times 73$, fo is the prefent value of a fum to be paid at 8 years end, to the fum to be paid for the chance of the younger's furvivance; and as $610 \times 490$, to $417 \times 50$, fo is the fame prefent value to the fum to be paid for the chance of the elders furvivance. This poffibly may be yet better explained, by expounding thefe products by rectangular parallelograms ; but thofe who do not underftand the algebriaic, will hardly underftand the geometric demonftration. Wherefore we fhall proceed to Ufe VII, If three lives are propofed, to find the value of an annuity during the continuance of any of thofe three lives, the rule is, As the product of the continual multiplication of the three numbers in the table, anfwering to the ages propofed, is to the difference of that product, and of the product of the three numbers of the deceafed of thofe ages in any given term of years; So is the prefent value of a fum of money to be paid certainly after fo many years, to the prefent value of the fame fum to be paid, provided one of thofe three perions be living at the expiration of that term. Which proportion being yearly repeated, the fum of all thofe prefent values will be the value of an annuity granted for three fuch lives.
But to explain this, together with all the cafes of furvivance in three lives, let N be the number in the table for the younger age; $n$ for the fecond; and $v$ for the elder age: let $Y$ be thofe dead of the younger age in the term propofed; $y$ thofe dead of the fecond age; and $v$ thofe of the elder age; and let $R$.be the remainder of the younger age; $r$ that of the middle age: and the remainder of the elder age. Then Thall $\mathrm{R}+\mathrm{Y}$ be equal to $\mathrm{N} ; r+y$, to $n$; and $\rho+v$, to $v$; and the continual product of the thres numbers $\mathrm{N} n$, fhall be
equal to the continual produck of $R+Y \times r+Y \times \rho+y_{p}$ which, being the whole number of changes for three lives, is compounded of the feven products following. (i.) $\mathrm{R}_{\mathrm{F}}$, which is the number of chances that all three of the perfons are living; (2.) $r, Y$, which is the number of chances that the two elder perfins are living, and the younger dead; (3.) $\mathrm{R} y$, the number of chances that the middle age is dead, and the younger and elder living; (4.) R $r^{v}$, being the chances that the two younger are dead, and elder living; (5.) $r, \mathrm{Y}^{v}$, the chances that the younger and elder are dead, and the middle age living; (6.) Ryv, which are the chances that the younger is living, and the two other dead; (7.) Y $y$, which are the chances that all three are dead; which is :er, fubtracted from the whole number of chances $N n^{\nu}$, leares $N n^{v}$, the fum of all the other feven products, in all of which one or more of the three perfons are furviving.
I fhall not apply this in all the cafes thereof, for brevity's fake; only to fhew in one how all the reft may be performed, let it be demanded, what is the value of the reverfion,of the younger life after the two elder propofed? The proportion is, As the whole number of chances, or $N v v$, to the product $\mathrm{R} y^{\mathrm{v}}$, So is the certain prefent value of the fum payable after any term propofed, to the value due to fuch chance as the younger perfon has to bury both the elder, by the term propofed ; which he therefore is to pay for. Here it is to be noted, that the firft term of all thefe proportions is the fame throughout; $\mathrm{N} n v$. The fecond changing yearly according to the decreale of $\mathrm{R} r \rho$, and increafe of $\mathrm{Y} y^{\mathrm{v}}$. And the third are fucceffively the prefent value of money payable after one, two, three, \&c. years, according to the rate of intereft agreed on.

The prefent value of one pound per ann. for any number of years not exceeding 100 , intereft at four per cent.

For all the variety of tables of this kind, and the reafon and nature of their conftruction, fee the article Interest Simple and Compound.

A further illuftration of Dr. Halley's foregoing table, by the ingenious Mr. De Moivre.

Suppore that by this table we would know what the probabilities are for a man of 30 to live $1,2,3,4,5, \& \mathrm{c}$. years. Look for the number 30 in one of the columns of age, and under it you will find $31,3^{2}, 33, \& \mathrm{sc}$. and oppolite the number $3^{\circ}$, in the next adjoining column on the right-hand, you find 53 I , under which are written $523,515,507$, \&ce. correfponding in order to the numbers in the column of ages; the meaning whereof is that, out of 531 perfons living of the 30 years old, there remain but $523,515,507,499$, \&c. that attain the refpective ages of $3 \mathrm{r}, 32,33, \& \mathrm{c}$. and who confequently, from that term of $3^{\circ}$, do live $1,2,3,4$, \&ic. years refpectively.
In order to compute the value of an annuity upon a life of a given age, let the quantities $A, B, C, D, E, F, \& c$. reprefent refpectively the perfons living at the age given, and the fubfequent years.
Now it is obvious, that there being A perfons of the aga given, and one year after B petions remainin'g, the proba*
bility which the perfon of the given age has to continue in life, for one year at leaft, is reprefented by the fraction $\frac{B}{A}$, and that the probability which it has to continue in life, for two years at leaft, is reprefented by the fraction $\frac{C}{A}$, \&c: and that therefore, if money bore no intereft, it would be only neceffary to multiply thofe probabilities by the fum to be received annually, which is fuppofed here to be $=1$, and the fum of the products would exprefs the prefent value of the annuity. But, as money bears intereft, let $r$, reprefent the amount of 1 . with its intereft at the year's end, then the prefent values of the fums to be received annually would be refpectively $\frac{\mathrm{I}}{r}, \frac{\mathrm{I}}{r r}, \frac{1}{r^{3}}, \frac{\mathrm{I}}{r^{4}}, \& \mathrm{kc}$. And, therefore,' multiplying thefe fums by the probabilities of obtaining them, we hall have the value of the annuity exprefled by the feries

$$
\frac{\mathrm{A}}{r}+\frac{\mathrm{B}}{r r}+\frac{\mathrm{C}}{r^{3}}+\frac{\mathrm{D}}{r^{+}}+\frac{\mathrm{E}}{r^{5}}+\frac{\mathrm{F}}{r^{3}}+\frac{\mathrm{G}}{r^{7}}+\frac{\dot{H}}{r^{3}}, \& \mathrm{c}
$$

which muft be continued to the end of the tables.
But let us fuppofe, that, inftead of an annuity upon a life whofe age is given, there fhould be the expectation of a fum, which we will call ( I ) payable once for all whenever it happens, that the life ceafes within a limited time. It is plain that the probability of the life's ceafing after one year is A-B
$\frac{A-B}{A}$, and that the probability of its continuing one year, and dropping the next, will be $\frac{B}{A} \times \frac{B-C}{B}$, or barely $\frac{B-C}{A}$, and that again the probability of its continuing two years, and dropping the third, will be $\frac{C-D}{A}$, and foon; and that
therefore the value of the expectation founded on the contingency of the life's falling within a limited time, would be $\frac{\mathrm{A}-\mathrm{B}}{\mathrm{A} r}+\frac{\mathrm{B}-\mathrm{C}}{\mathrm{A} r r}+\frac{\mathrm{C}-\mathrm{D}}{\mathrm{A} r^{3}}+\frac{\mathrm{D}-\mathrm{E}}{\mathrm{A} r^{4}}+\frac{\mathrm{E}-\mathrm{F}}{\mathrm{A} r^{5}}+\frac{\mathrm{F}-\mathrm{G}}{\mathrm{A} r^{6}}, \& \mathrm{c}$.
Let it now be fuppofed, for inftance, that the party on whofe life this expectation depends is io years of age, and that the age limited, as a condition of obtaining the fum ( I ), is 21 ; hence it is plain that, the difference between 21 and 10 being II, we ought to limit ourfelves to ir terms of the foregoing feries, and then, confulting Dr. Halley's table, we fhall find the numbers $A, B, C, D, E, \& c$. to be refpectively $66 r$, $653,646,640,634,628$, \&c. and that therefore $A-B_{\text {; }}$ B-C, C-D, D-E, E-F, \&c. will refpectively be 8, 7 $6,6,6, \& c$. and that confequently the prefent value of the expectation will be $\frac{8}{66 \mathrm{I} r}+\frac{7}{66 \mathrm{I} r r}+\frac{6}{66 \mathrm{I} r^{3}}+\frac{6}{66 \mathrm{I} r^{4}}$ $+\frac{6}{66 \mathrm{I} r^{5}}+\frac{6}{66 \mathrm{I} r^{6}}+\frac{6}{66 \mathrm{I} r^{7}}+\frac{6}{66 \mathrm{I} r^{8}}+\frac{6}{66 \mathrm{I} r^{9}}+$ $\frac{6}{661 r^{20}}+\frac{6}{661 r^{12}}$

Let it be further fuppofed, that this expectation is not given but fold to a purchafer, who intends to make 5 per cent of his money, then $r$ ftands for 1,05 , and therefore the fum, which purchafers ougbt in juffice to pay for their expectations, is the fum of the numbers here annexed, which is abou $\frac{2}{25}$; and therefore if the fum, called ( 1 ) before, ftands for an eftate whofe prefent real value is 20 years purchafe, the adventurer ought to pay no more for the confideration of his chance than $I \frac{3}{5}$ years purchafe.
$0.0115260-1$ $0.0096054-2$ $0.0078412-3$ $0.0074678-4$ $0.0071122-5$ $0.067735-5$ $0.0064510-7$
$0.005 \mathrm{r} 438-8$ $0.005^{8} 512-9$ 0.0055726 - 10 0.0053072 - 11 0.0796599

It is not intended here to calculate other intervening chances which might defeat this expectation, fuch as that of an heir male, which might live to the age of 21 ; for, there being not any tables * of obfervations concerning a man's marrying and getting an heir male between 16 and 21, what could be added on that fubject would be barely conjectural, which would not be of a piece with what has been faid; however, it is eafy to conceive, that this muft confiderably diminifh the value of the expectation.

- If any tables of that kiod Rould be calculated, there cannot, perhaps, be a better foundation to proceed on than that of Dr. Arbuthnor, concerning the regularity in the births of both fexes, publifhed in the Philofophical Tranfactions, No. 328.

## PROBLEMII.

Suppofing the probabiftices of life to decreafe in arithmetic progrefion, when confidered from a term given, to find the value of an annuity on a life of a given age.

SOLUTION.
Let $P$ reprefent the value of an annuity certain of $I \mathrm{l}$. for as
VoL. I .
many years as are intercepted between the age given, and the extremity of old age, fuppofed at 85, and let that interval of life be called $n$, then the value of an annuity upon fuch a life would be expreffed by $I-\frac{r}{n} P$ , fuppofing, as
before, that $r$ flands for the amount of the principal and intereft of i I. in one year.
Thus fuppofing an age of 50 , and that the intereft of money be eftimated at 4 per cent. then $n$ will reprefent 36 , and $r$ for I.O4, for which reafon looking into tables of 4 per cent; which fhew the worth of an annuity certain for $3^{6}$ years, being 17.9083, this being multiplied by $\gamma$, that is, by r.04, the product will be 18.624632 ; and this being divided by $n$, that is, by 36 , the quotient will be . 0.517351 . Then this being fubtracted from unity, and the remainder, 0.482649 ; being divided by $r-1$, that is, by 0.04 , the quotient will be found 12.066 I , which is very litte more than 12 years purchafe for the value of an annuity on a life of 50 .
But, for the fake of thofe who are not fo well verfed in decimal fractions, it may be proper to exprefs the rule as follows: Multiply the annuity certain, as found in the tables, by the amount of 1001 . joined with its intereft in one year, that is, in this cafe by 104, and let the product be divided by 100, then let the quotient be fubtracted from 25, which thews how maty years purchafe a perpetuity of 100 l . is worth, and the remainder will fhew how many years purchafe the annuity upon the age given is worth in ready money.

## PROBLEM III.

Suppofing a fictitious life, whofe number of chances to continue jearly be conftantly equal to $a$, and the number of chances to fail conftantly equal to $b$, fo that the odds of ite continuing, during the face of any one year, be to its failing in that fame interval of time conftantly as $a$ to $b$; to find the value of an annuity upon fuch a life.

## S OLUTION.

Let i be the annuity; $r$ the amount of il. joined to its intereft in one year, make $a+b=s$ :
It is plain from what has been faid already, that the prefent value of the firft year's rent is $\frac{a}{s r}$ of the fecond $\frac{a a}{s s t r}$, of the third $\frac{a^{3}}{s^{3} r^{3}}, \& c$ which terms conftituting a geometrical pros greffion, the fum of them all will be $\frac{a}{r_{s}-a}$; thus if $a$ reprefented 2 r , and $b \mathbf{i}$, then $s$ would reprefent 22 ; fuppofing alfo that $r=1.05$, then the denominator $r s-a$ would be 23.1 - 21 or 2.1, and, dividing the numerator 21 by the denominator 2.I, the quotient will be io, which fhews that the life would be worth io years purchafe.

COROLLARYI.
An annuity upon a fictitious life being given, the probability of its continuing one year is alfo given; for let the value of it be $=M$, then $\frac{a}{r_{s}-a}=M_{\text {; }}$ therefore $\frac{a}{s}=\frac{M r}{M+1}$.

## COROLLARYII.

If a life whofe value, as deduced from the tables of obferva* tion, or from the preceding problem, be worth io years purchare, then fuch a life is equivalent to a fictitious life whore chances for continuing one year are to the chances of its failing in that year as 25 to I .

## COROLLARYIII.

Wherefore having calculated a life from the tables of obfervations, or from Problem the IId, we may transfer the value of that life to that of a fictitious life, and find the number of chances it would have to continue or to fail yearly.

COR OLLARYIV.
And the combination of two or more real lives will be very near the fame as the combination of fo many correfponding fictitious lives; and therefore an annuity granted upon fo many correfponding fictitious lives, and the values of the reverfions granted upon the real lives, will be very near the fame as thofe granted upon the fictitious lives.

## PROBLEMIV.

The values of two fingle fictitious lives being given, to find the value of an annuity granted for the time of their joint continuance.

## SOLUTION.

Let the values be refpectively M and $\mathrm{P}, r$ the rate of interef ; then the value of an annuity upon the two joint lives will be exprefled by $\frac{M P r}{\bar{M}+\mathrm{I} \times \overline{\mathrm{P}+\mathrm{I}-M P} \text {. }}$

## A $\mathrm{N}^{\prime} \mathrm{N}^{\prime}$

## DEMONSTRATION.

Let $x$ and $y$ reprefent the refpective probabilities of the lives continuing one year together, then $x y$ will exprefs the probability of their joint continuance for that year ; and $x^{2} y^{2}$ the probability of their joint continuance for two years; and $x^{3} y^{3}$ the probability of their joint continuance for three years, \&c. twherefore the value of an annuity for all the time will be expreflible by the following geometric progreffion, viz.
$\frac{x y}{r}+\frac{x^{2} y^{2}}{r r}+\frac{x^{3} y^{3}}{r^{3}}+\frac{x^{4} y^{4}}{r^{4}}$, \&c. where the fum is $\frac{x y}{r^{2}-x \cdot y}$; but, by the firft corollary of problem the third, $x=\frac{M_{r}}{M+I}$, and, for the fame realon, $y=\frac{\mathrm{Pr}}{\mathrm{P}+\mathrm{I}}$, and, therefore, the value of the two joint lives is $\frac{\mathrm{MPr}}{\mathrm{M}+1 \times \mathrm{P}+\mathrm{I}-\mathrm{MPr}}$.

PROBLEMV.
The values of two fingle lives being given, to find the value of an annuity upon the longeft of them; that is, to continue fo long as either of them is in being.

## SOLUTION.

From the fum of the values of the fingle lives, fubtract the value of the two joint lives found by the foregoing problem, and the remainder will be the value of the annuity required.

## DEMONSTRATION.

It will be fufficient to thew what will be the value of the firft year, fince the values of all the fubfequent years is found in the fame manner.
Let, therefore, $x$ and $y$ be the refpective probabilities of the lives continuing one year together, then $I-x$ and $1-y$ are the refpective probabilities of their dropping in that year, and, confequently, the product of $1-x$ by $1-y$, viz. $x-x-y+x y$ is the probability of their both dropping in that year; and, this being fubtracted from unity, the remainder $x+y-x y$ will exprefs the probability that either one or the other, or both, out-live the year ; which is fufficient for the purchafer of the annuity to eftablifh his right of receiving the firft year's rent, whofe prefent value is, therefore, $\frac{x}{y}+\frac{y}{r}-\frac{x y}{r}$.
And, therefore, one may fee at fight that, the expectation of the other years being founded on the fame principle, the value of an annuity upon the longeft of two lives will be the fum of the values of the fingle lives, wanting the value of the joint lives.

## PROBLEMVI.

The value of three fingle lives being given, to find the value of an annuity upon their joint lives.

## SOLUTION.

Let $x, y, z$ refpectively reprefent the probabilities of the lives continuing one year, then the probabilities of their continuing all three together for one year will be $x y z$, and the probability of their continuing together for two years is $x x y y z z$, \&c. and, therefore, the value of an annuity upon the three joint lives will be $\frac{x y z}{r}+\frac{x^{2} y^{2} z^{2}}{r^{2}}+\frac{x^{3} y^{3} z^{3}}{r^{3}}+\frac{x^{4} y^{4} z^{4}}{r^{4}}$, \&c.
which conftitutes a geometric progreffion, whofe fum is $\frac{x y z}{r-x y z}$ : now in the room of $x, y, z$, writing their refpective values, $\frac{\mathrm{M}+\mathrm{I}}{r}, \frac{\mathrm{P}+\mathrm{I}}{r}, \frac{\mathrm{Q}+\mathrm{I}}{r}$, the fum of the three joint lives will
 pofing as we have done in the preceding problem, that $M$, $P, Q$, reprefent refpectively the values of annuities upon each fingle life.

PROBLEMVII.
The value of three fingle lives being given, to find the value of an annuity upon the longeft of them.

## SOLUTION.

Let $x, y, z$, reprefent the refpective probabilities of the life's continuing one year ; then the product of 1 - $x$ by 1 - $y$, and of that again by $\mathrm{I}-z$, that is, $\mathrm{I}-x+x y-x y z$, will exprefs

一 $y+x z$

- $z+y z$
the probability of their all failing the firt year, and, this being fubtrakted from unity, the remainder will exprefs the probability that either they will all fubfift one year, or, at leaft, that they will not all fail in the year: which being the

## $A \mathrm{~N} \mathrm{~N}$

foundation of receiving the firft year's rent, and the ather years following the fame law, we may draw this conclufion; that, if from the fum of the values of the fingle lives we fubtract the fum of the values of the joint lives taken two and two, and to the remainder add the value of the three joint lives, we fhall have the value of the annuity upon the longef of the three joint lives.

## PR.OBLEM VIII.

To find the value of one life after another.
By the value of one life after another, is meant what a màn muft pay in prefent money to purchafe the expectation of an annuity for his life after the failing of another, with this reftriction; that, if the expectant dies before the prefent poffefior no confideration is to be given to the heirs of the faid expectant.

## SOLUTION:

Since the expectation of the purchafer is grounded on the failing of the life in poffeffion, and of the continuation of his own life, it follows, that, if we fuppofe $x$ and $y$ to be the refpective probabilities of the lives continuing one year, then $\mathrm{I}-x \mathrm{X} y$ or $y-x y$ will exprefs the probability of the firft life's dropping in the ycar, and of the fecund's out-living the year; from whence we may draw this confequence, that, if from the prefent value of the cxpectant's life be lubtracted the value of the two joint lives, there will remain the value of the expeciation.
This may be made plain another way: for, fuppofe I were the purchafer, I might begin to pay the proprietor of the annuity the full value of my hife, but then I would expect back the value of the two joint lives of the prefent polleflor and my felf, fince $I$ am to receive nothing whilft we are both living. To this may be added, that, fuppoling that the proprietor is to be paid for the longeft of the two lives of the prefent poffefor and myfelf, my thare of the purchare ought to be unly that part of it which would remain if the life of the prefent poffeffor was deducted out of 15 , which will give the fame conclufion as before.
But, if the expectant were to have the reverfion abfolute for himfelf and his heirs after the deceafe of the prefent poffeffor, it is plain that there being nothing interpofed between his prefent circumftances and the poffefion of the eftate, but the life of the prefent poffeffor, then from the value of the perpetuity ought barely to be fubtracted the life of the poffeffor, and the remainder will be the value of the expectation.

## PROBLEMIX.

To find the value of one life after two.

## SOLUTION:

From the value of the longeft of the three lives, fubtract the value of the longeft of the two firft lives, and there will remain the value of the expectation of the third life.
But, if the expectation be above the abfolute reverfion, then from the perpetuity fubttact the value of the longeft of the two firft lives, and there will remain the value of the third. And the fame rule may be extended to as many lives as may be affigned.
Though thefe queftions may, at firft fight, feem to have a great degree of difficulty, yet there is reafon to believe that the fleps taken to come at their folution, will eafily be followed by thofe who have a competent fkill in algebra, and that the chief method of proceeding therein will be underftood by thofe who are barely acquainted with the elements of that art.
For thofe, however, who may not be acquainted with this method of reafoning, I fhall fubjoin what may be more generally intelligible, and, therefore, more generally acceptable. The common method of purchafing annuities is at a certain number of years purchafe; for which reafon, the following tables may be ufeful to fhew how long the annuitant mult live, to be reimburfed his principal money, with intereft, at any given rate.
The table is very plain, as appears by this example.
Suppofe Ix years purchafe is given for an annuity;

## A N N

$A \mathrm{~N} N$
The fractions of the year are made in days, for the greater exactnefs, though it is common for annuities to be paid either half yearly or quarterly.
A Table to calculate the value of Annuities upon Lives at 4 l . and 5 l. per cent. continuance of the lives to reimburfe the annuitants their purchale-money.

We have feen to what ufeful purpofes the bills of births and burials at the city of Breflaw, the capital of Silefia, have been applied, by a very learned and fagacious member of the Royal Society of London; as it is well known, alfo, what curious obfervations have been made, both moral, phyfical, and political, by Sir William Petty, upon the fame argument, feveral years before, and Dr Arbuthnot, and others, fince.
The learned Mr Kerffeboom, likewife, has obliged the world with fome very ufful remarks upon the fame topic. The induffrious author has not only confulted thofe obfervations made by the beforementioned gentlemen, our countrymen, but has acquainted himielf more particularly with thote of Mr King, in Davenant's Eifays, \&cc. in order to render himfelf more capable of making a juft eftimate on this delicate fubject.
To which end, he begins with the number of inhabitants in the two provinces of Holland and Weft Friezland; thefe he makes, viz. 1738, to amount in all to 980,000 and obliges us with the following table of the particulars. It exhibits the number of people of all ages, living at the fame time, from the birth to extreme old age; which, becaufe it fhews the chances of mortality within the ages mentioned, he calls the Table of Contingencies of Life and Death.

| Of above 90 years old there are of go 86 inclufive | 500 |
| :---: | :---: |
|  | 2,500 |
| 85 81 | 6,500 |
| 80. 76 | 13,000 |
| 7571 | 20,300 |
| 7066 | 27,300 |
| 65 to 61 | 34,300 |
| 6056 | 40,800 |
| $55 \quad 5 \mathrm{~F}$ | 47,000 |
| 5046 | 53,000 |
| 4541 | 57,800 |
| $40 \quad 36$ | 62,500 |
| 35 3 | 67,600 |
| $30 \quad 27$ | 58,400 |
|  | $49 \mathrm{c}, 500$ the fam above ì y years, |
| of $26 \quad 21$ | $94,300$ |
| 2016 | 83.400 |
| 15 to 11 | 87,200 |
| 106 | 91,800 |
| 5 to birth | 131,8co |
|  | 488,500 fum under 27 years old, |
|  | 491,500 |
|  | 488,500 |
|  | 980,000 fum of all the inhabitants. |

This table is founded upon three principles, viz. correct obfervations upon the tables of affignable annuities in Holland, which have been kept there for above 125 years; wherein the ages of the perfons dying are truly entered : upon a fuppofition that there are yearly born in the provinces 28,000 fiving children : and, lafly, that the intire number of inhabitants in any country is to the number of the births as 35 to 1.
From this table it appears, (I.) That about half the number of people in the two provinces are above 27 years old, and, confequently, that near the other half are under that age. (2.) Then, by following what hath been obferved for more
than 100 years in England, and particularly in London, ow of 35 chiddren born, 18 of them are boys, and 17 girls, the people in thefe two provinces will confift of

$$
\begin{aligned}
& 504,000 \text { males, } \\
& \frac{476,000 \text { females. }}{940,000}
\end{aligned}
$$

He farther remarks, that it appears from the afficnable an nuities for lives, mentioned before, the fomales have, in al! accidents of age, lived about 3 or 4 years lorger than the fame number of males; which he looks upon to be appointed as a compenfation for the continual excefs there is in the bith of the males above the females.
Having confidered the quantity, he then comes to take notice of the quality of thefe 980,000 inhabitants; and $f a$, o fees no reafon to differ from the proportion or M K Kisc , it Davenant's Effays, who hath divided the reople of England in this manner :

The proportion for every 100,000 inhabitants is,
Married men and women
Widowers -
Unmartied young men and chilaren

If this proportion be admitted; then the numh rof earh fort in Holland and Weft Friezland w 11 e ${ }^{\prime}$ 'lows. . 1 ds, that the faid provinces can raife at thu $6 . .$. bodied men, deducting ${ }^{\frac{1}{T}}=$ for difeafes, an othen infirmities. But then he admits at 16 wars of age, whereas Dr lif liey admits none till 8 , perfons under that age being generally too weak to bear t.te fatigues oi war. and the weight of arms, He then proceeds to rectify the $m$ ft.kes of the learned Ifaac Voflius, who makes but 5 ro,000 in Holland and Weft Friezland, and difallows Sir William retty,'s account of the number of people in London; becaufe he miakes them alone equal to the inhabitants of Holland and welt Friezland together. He clofes the whole with a table of the prefent value of annuities upon lives, in proportion to the ordinary, or common bonds, charged upon thofe provinces, and fubject to the extraordinary taxes raifed at this time, viz. 1738. You will find annexed the degrees of mortality, faid to be in the Hague and Haagambagt, as allo the numbers and conditions of the inhabitants of Amfterdam, Harlem, Goudas, and the Hague, not omitting London at this prefent time.
 The fatality of the quarters.

The fatality of the months for 31 years; one year with another。

Hence it appears, that March is lefs fatal at the Hague and Haagamoagt, than April, and April than May and June; that May is the moft fatal month of ali; that the remaining months are nearly equal. It appears further, that three parts, or feafons of the year, are very nearly equal; but that the other quarter, or feafon, beginning at the vernal equinox, is more fatal than any of the reft by the one fifteenth part.

## The ufe of this table.

Queftion. Let it be defired to know the prefent value of an annuity for life, for inflance, of 90 guilders a year, which was granted in the year 1703, upon a life then of three years old.
Anfwer. The life now (in 1738) is between 37 and 38 years old; hence the number between 40 and 36 gives 1334, for the prefent value of an annuity of 100 guilders; hence $\left(\frac{1334 \times 90}{100}=\right) 1200$ guilders is the prefent value of the annuity for that life.
Thus the reader has a/connected fummary of what fome of the moft able mathematicians have favoured the world with on the fubject of annuities upon lives; and, if thefe principles and their application are underfood, whatever elfe has been, or may be communicated to the public on this topic, will eafily be underftood too, without our dwelling longer on this matter.
To ANNUL, with book-keepers, and in regard to double entries, is to render an article void, fo as that it may be reckoned for nothing, In order to annul an article which bas been wrong entered in the books, either in the day-book or ledger, one or feveral o (cyphers) are wrote in the margin, by fome, next to that article; or, as others do, the word vanas is wrote in the margin, which is a word corrupted from the Latin, and fignifies vain, or null. When an article is pofted in the ledger to the debit, which ought to have been to the credit, or to the latter inttead of the former, it is commonly wrote off on the oppofite fide-as To or By an error wrote off per contra.
In books of account properly kept, all rafures fhould be moft carefully avoided; and, if miftakes are committed, it looks with a better face of juftice and honour to let the miftake remain, and to repeat the words I fay, \&c. and rectify the miftake in right words or figures, rather than to let any rafures appear in a fett of books.
ANONYMOUS, that which bas no name. Partnerfhips in trade in France are fitied anonymous, when they are not carried on under any particular name, but wherein each of the partners trades vifibly on his own account, and in his own name; after which, all the partners give one another an account of their profit or lofs in trade. Thefe forts of partnerfhips are concealed, and known only to the partners themfelves.
Anonymous partnerhips in trade, in France, are fuch, alfo, wherein perfons of fortune and quality depofit fums of money, in order to thare of the profit and lofs. To this end, thofe who furnifh the capital have no trouble in the carrying on the trade, nor do their names appear to be any way interefted therein.
The firt foundation of thefe kind of partnerfhips in France, was grounded, fays Mr Savary, in the Complete Trader, upon the following principles, viz.
I. That perfons who were not of the mercantile profeffion might make ufe of thefe meafures to employ their money, without being guilty of ufury; for that, by their running the hazard both of traders and trade, they were jufly and honour-

## A N O

ably intitled to a fhare of the profits of the commerte, fince they were to ftand to their thare of the loffes.
2. That perfons of great and plentiful fortunes might have an opportunity of employing their money to the advantage of the national traffic, which otherwife would lie dead in their coffers. 3. That the fons' of perfons of family, well qualified for trade, though not of competent fortunes wherewith to carry it on, might eftablifh themfelves in the world, and exert their talents and induftry for the benefit of the community; which, for want of money, would remain ufelefs to the ftate.
4. That princes might find their account by encouraging fuch policy, becaufe, the more manufactures and commerce flourifh in their ftates, the larger become their revenues, by duties on imports and exports on trade.
That thefe partnerfhips might not be deemed difhonourable to perfons of condition, nor derogatory, even to the nobility, it is urged, that, fince fuch only advanced their money, and had no perfonal concern in the commercial tranfactions, it could not polfibly demean, or any way difhonour them; and more efpecially fo, fince thofe adventures were generally made with merchants, or wholefale dealers, and not with retallers. That this practice might not be judged difhonourable in Frańce, Lewis XIII. iffued ani ordorinance in January 1627 to countenance and encourage it.
Befides this ordonnance of Lewis XIII, it may not be amils to obferve thofe extraordinary letters patents, which were granted by Lewis XIV, for the eftablifhment of feveral woollen manufactures, whereby the undertakers are ennobled, and upheld in their pobility, as well as thofe who were interefted with them as partners.
The firft is that of July 1646. It relates to the eftablimment of a manufacture of cloth in the city of Sedan, in imitation of that of Holland, in favour of Sieurs Nicholas Cadeau, Jean Binel, and Zuill de Marfeilles, merchants of the ciey of Paris. The patent fays, That, in conffderation of this eftablifhment, the French king ennobled thofe merchants, and their defcendants, without imputing the leaft derogation to their nobility, or that of their pofferity, by realon of their being concerned in trade or manufactures: they were even granted, likewife, all thofe privileges and immunities which were enjoyed by thofe of noble extraction, with the right of committimus.
Another inftance is that in the month of October 1665. It concerns the eftablifment of a woollen manufacture in the city of Abbeville, in imitation of thofe of Spain and Holland, in favour of the Sieur Joftua Vanrobais, a Dutch merchant. He was permitted to take into partneribip in the faid manufacture whomfoever he pleafed ; the king exprefsly declaxing, in his patent, that it fhould be no derogation to any of the nobility to be concerned with him therein, on pretence of their being interefted partners in that commerce.
A third inftance is that of December 1698, relating to a new cloth manufacture, and of cloth with filk and wool, of all colours, in the province of Champagne, in the cities of Chalons and Rheims, in favour of the Sieurs Sauvage and Champagne, and company; which patents were granted to the fame effect as the former.
The French king, therefore, declaring it no dilhonour whatfoever to perfons of quality in France to be privately interefted with traders in their enterprizes, has proved greatly inftrumental to extend the commerce of that kingdom.

## Remarks.

Perfons of fortune, who would thus hazard their money in traders hands, fhould caft their eye upon an honeft, as well as a fkilful man, "and one of unblamable conduct and behaviour, it being upon his fidelity and induftry that he grounds his hopes of advantage.
It fhould be well confidered, alfo, by him that advances the money, whether the branch of trade propofed by the merchant, \&c. to be carried on, has a good face, and a reafon able profpect of profit attending it; whether the capital propofed be competent to profecute the fame with every advantage : whether the trade defigned to be carried on be domeftic or foreign, and whether the trader has a fuitable correffpondence for the purpofe, as well as a thorough knowledge in all the circumftances relating to fuch trade, in order to carry it on fuccefsfully.
The conditions of agreement are next to be weighed: as,

1. Whether he that advances, the capital hould have any cer tain intereft for a part, or the whole, of his money, befides receiving a proportion of the profits, or bearing the like Thare of the lofs.
2. Whether the trader is only to undertake the fole conduct of the bufinefs; or whetiser, befides, he fhould not advance a part of the capital, the better to engage him in the common intereft; and what thare of the profits he fhall have for his $\mathrm{k} i l l$ and conftant attendance on the bufinefs.
3. Whether the perfon who finds the money is fikely to hazard more than the fum he adventures, and how he is to guard againft accidents of this kind; by the ill condict or misfortune of the trader.
This muft be a matter of the greateft delicacy, and cannot
be too cautioully guarded againft in England, left the moneyed man fhould be drawn in as a partner in aftairs which he has never confented to, or approved of. It is to be confidered, therefore, whether it may not be more eligible to lend a trader money at legal intereft, than to be deemed a partner with him, in cafe of the accidents of trade, and the fecret negociations he may carry on befides thofe which are known to one that is only an anouymous, and not an active, partner in the trade.
Nor thould fuch an one, interefted in the trade, omit to ftipulate a free accefs to all letters, books, and accounts, at all times, in order to judge how the bulinefs goes on.
But, in this cafe, the advancer of the money will be as much at a lofs as if he had not this toleration, unlefs he is perfectly well acquainted with mercantile accountanthip; for nothing is more ealy than to perplex and confound one who is ignorant thereof.
Upon the whole: there is great danger attending fuch kind of tranfactions, unlefs the moneyed man afs with the utmoft circumpection, and, indeed, is full as knowing in the pracical arts of commerce as the trader himfelf.
There are, alfo, different kinds of aṇonymous partnerfhips among traders, which may be well worthy fome readers attentive confideration.
Suppofe, for example, that a merchant of Marfeilles underderftands that there is a fhip, laden with various forts of merchandife, coming from Smyrna, and he receives an invoice of the merchandize therein contained; fuppofe, likewife, that fuch merchant does not care to run the hazard of the whole, and writes to a correfpondent at Paris, acquainting him that there is fuch a cargo, and, fending him the invoice thereof, he defires to know whether he chufes to be interefted with him in any part of the faid cargo.
The merchant of Paris, having perufed the invoice, and finding there is profit to be made, engages to take part, one half, a third, or a quarter, profit or lofs, of the fhip's cargo, and writes to his correfpondent at Marfeilles accordingly, that he may either draw upon him for fuch part of the prime coft and charge, or that be will remit him.
The merchant of Marfeilles, having received this anfwer from him at Paris, purchafes fuch merchandifes that were contained in his correfpondent's letter, which gives birth to this partnerfhip, that is diftinguifhed by anonymous, it taking place only pro tempore, by virtue of letters, and is unknown to the public. The merchant of Paris, by letter, obliges himfelf to be anfwerable to him at Marfeilles for the part he has engaged for, and to abide by the profit or lofs; and the merchant of Marfeilles, by purchafe of the merchandize, accepts the partnerihip, and obliges himfelf to render an account, and make good the profits which thall accrue on the fales thereof, and to fuiftain his fhare in the loffes which may arife thereon. But, in this cafe, the merchant of Paris is not anfwerable either to the mafter of the fhip, or to the owners of the merchandifes, for what the merchant of Marfeilles fhall have bought; fo that, if the merchant of Marfeilles fails beiore he has paid for fuch merchandife, no remedy can be had againft him at Paris.
The reafon thereof is, becaufe the Marfeilles merchant treats, in this cafe, in his own name only, with him who fells him the merchandife, and who acknowledges him alone for his debtor. In fhort, the feller can have no more remedy againft the Paris merchant for what he fold to the Marfeilles merchant, than the Paris merchant can againft him, if he demanded, in his own name, the execution of what the Mareilles merchant was to have performed on his patat towards him.
It is the fame thing, likewife, in regard to the fale, as to the purchafe, of merchandifes; for, if this merchant of Marfeilles fent the goods bought by him to be fold by the merchant of Paris, it is clear that he at Marfeilles could maintain no action againft the buyers at Paris, under pretence that he was a party interefted in fuch goods, the debtors there acknowledging no body their creditor but the merchant at Paris, of whom they purchaled thele merchandifes: fo that, if the merchant at Paris fails, he at Marfeilles can only come in as a creditor with the reft, for fuch proportion of the bankrupt's effects as fhall be divided among the creditors. This is the univerfal law and cuflom of merchants; and, if duly confidered, will be found to be well bottomed on the laws of nature and reafon, for the fupport of univerfal commerce: for, in this cafc, the anonymous, or unknown partner, depends on the fidelity of bim to whom he configned the goods for fale; and, was not this the cafe, there would be no fecurity in trade.
However, the cuftom and ufage of merchants are different, if the two anonymous partners immediately divide the merchandife bought between them, according to the fhare and proportion of each, and that the merchant at Mareilles fhould fend his part to him at Paris, to be difpofed of with his mark, and for his proper account, by commifion: in this cafe the bankruptcy of him at Paris happening, be at Marfilles may lay claim to the merchandife which fhall be found intire, and in the fame condition as fent, in the poffefion of the merchant at Paris; but, with regard to what hall be fold, tee canoot cl im that of the buyers, although they fall not Vol. I,
have paid for the fame; becaufe the merchandife, having changed hands, becomes the abfolute property of the purchafer. Thus he at Marfeilles can have no action againft thofe buyers for payment, although they remain debtors to the bankrupt, and he can only act towards them as debtors to the merchant of Paris; who has debited them in his books to merchandife fold them in his proper and private name, and not under that of the merchant of Marfeilles; fo that the merchant at Paris on!y is the debtor to him at Marfeilles. This is an eftablithed ufage among merchants.
The fecond kind of anonymous partherfhips is, when tradefmen and merchants refort to eftablifhed fairs and markets, with intent to buy or fell merchandifes. Thofe who have occafion for the fame fort of goods, in order to prevent rating the price by the diftinct number of buyers, agree, three or four, or more, together, to join in an anonymous partnerfhip for that time, for the purchafe of goods during the fair, \&c. one of them only appears in the conduct; after which the goods are divided according to what each individual agreed for, and paid for to the feller 'by the vifible purchafer only. As thefe fort of partnerfipips are only occafional and unforefeen, they are made upon the fpot verbally only among the parties concerned, from which agreement they very rarely deviate. The Dutch factors who refide at Nantz in France, often make this kind of añonymous affociations, in the purchafe of wines and brandies, and by that means, as it were, put their awn price upon them; for traders muft act through them as their brokers; who having once offered a price, if they are not taken at a word, another will come afterwards, and offer lefs; which fometimes fo greatly difappoints the fellers, that they decline coming to the public fairs and markets. On the other hand, when goods are fcarce, the fellers, in their turn, will enter into thefe anionymous combinations. The moft eminent traders will enter into the like agreements, and, having, bought up all the goods of the petty dealers in the country, they carry them to the public fairs and markets, and fet their own price thereon; for by this means all buyers muft purchafe of them, or return without what they came for. This fort of affociations is a kind of monopoly, and of public detriment, and often defrops the aconomy, and reftrains the freedom, of commerce. There things frequently happen at fairs and markets: the fellers combine to flick to a price, and the buyers will give only a middling. price; fo that all bufinefs thall be, as it were, at a ftand, and difconcerted; and all of a fudden, on the laft day of the fair, or marker, both buyers and fellers come to a reafonable refolution; ' and fometimes,' by thefe meafures, the buyers, fometimes the fellers, become the dupes. Thefe, and many others, are the fiueffes of commerce, which are hard to be prevented.
Another fpecies of thefe anonymous, or unknown agree ments in commerce, is between traders who obferve, for example, that in France corn is extremely dear, by reafon of the badnefs of the hativelt for two or three years, which has occofioned a fcarcity; and that at Dantzick, or in England, or fome other part, there is a great plenty of corn: in confequence of thefe obfervations, three or four merchants of fortune fhall unite together to buy, and import the fame into France, and depute one only to be the vifible and known purchafer.
Nor are thefe forts of anonymous temporary partneribips practifed only among merchants, and other traders, but there are perfons of quality who in France will often take thare in thofe occafional affociations with traders eminent for their difcernment and worth; they being wife enough not to think it the leaft difparagement or degradation to their honour and dignity to promote the commerce of their country, in concert with their private intereft. And certainly there is no way of gain more honourable, or more lawful, than what is obtained in this manner, becaufe they rifk their money upon an uncertainty of profit or lofs.
What renders this kind of partnerhips the more eligible by perfons of fortune is, that they run no hazard in France quatenus a partner.
Great eftates may be acquired by merchants from this practice, judicioully managed, and that with a middling fortune; which fhall be fully thewn under the article of PartnersHips foreign and domeftic.
To ANSWER for another, fignifies to be bound for him, to be bis furety. It is a common faying among the French, that he who anfwers, pays. Tbis happens but too often in trade, where fuch anfwering, or binding one's felf for another, caufes very rich and fubftantial merchants to break, whofe failure is occafioned by nothing but their too great readinefs in anfwering for others. This has been very fatal to many in England, in regard to the revenue in particular.
ANTARCTIC Pole, in geography, is the fouthern'pole, or end of the earth's axis: fo called, becaufe oppolite to the arctic, or norih pole.
The ftars near the antarttic pole never appear above our horizon. Antarctic Circle, is one of the leffer circles of the fehere parallel to the equator, at the difance of 23 degrees 30 mi nutes from the fouth pole. It takes its name from being oppofite to the ardtic circle.
ANTEDATE, a fallified date, a date fet down before the
true one. Antedat ${ }^{\text {es }}$ are of a very dangerous confequence in matters of trade.
To Antedate, is to fet down a falle date, to date from a day prior to that on which the bufinefs is tranfacted, the note, or bill, drawn, or letters written, 8ic.

## Remarks.

In France it was formerly the ill cuftom to leave blank orders In France it was bills of exchange; that is to fay, to indorfe them by writing only one's name, fo that they could eafly be antedated, which might occafion very great abufes, ofpecially from thofe who happened to break: for they who fell under that misfortune, and had bills of exchange drawn at two ufances, or payable in the payment of Lyons, which were to order, in blank, might antedate the order, and make them thus be received under borrowed names, or give them n payment to fuch of their creditors as they wanted to favour, to the prejudice of others'; by which means thofe bills could not be demanded to be added to the bankrupt's effeals, becaufe, the date of their order feeming to be prior to the time of the failure, it could not be urged that they were negociated within the time wherein the perfon became a bankrupt.
The regulation for commerce in France, made in the year 1673, has provided, that it is not now fo eafy to antedate orders on the back of bills of exchange: for, in the 22d article of tit. 5. it is ordered, that the fignature, or name figned, on the back of bills of exchange, thall ferve only as an indorfement, and not as an order, unlefs it be dated, and contain the name of the perfon who fhall have paid the value in money, merchandife, or otherwife: and, by the 26th article of the fame title, it is ordered, that, whoever antedates orders, thall be punifhed as guilty of forgery.
To ANTICIPATE a payment, is to pay it before the tinae be expired, when it is to become due.
ANTILLES ISLANDS, lie in America, fituate in the Atlantic ocean, between 59 and 63 degrees of weft longitude from London, and between it and 18 degrees of north latitude. Some call thefe illes the Caribbees, from the firf fettlers, though this is a denomination that moft geographers confine to the Leeward Inands, with regard to the ufual courfe of the European thips from Old Spain, or the Canary Inands to New Spain; in which courfe they muft necelfarily pafs between fome of thofe illands.
They are commonly diftinguifhed by the Great and Little Antilles. Befides the original natives, they are inhabited by Spaniards, or Englifh, French, or Dutch, as they have happened to be poffeffed by them. We thall take them as they are ranged on the north fide of the north fea, from weft to eaft, and on the fouth fide of it from eaft to weft, let them belong to whom they will.
The firft that we come to from the Bahamas, are Cuba, Jamaica, Hifpaniola, and Porto-Rico, which, with fome fmall ones, as it were appendent to them, go all by the name of the Great Antilles.
I. Cuba. This ifland, which begins on the eaft fide, at latitude 20.20, touches on the north at the tropic of Cancer, and extends from longitude 74 to 85 . 15 , about 11 degrees from ealt to welt, or 660 miles from Cape St Anthony on the welt, to Cape Maize on the eaft; but is very narrow in proportion, being, in fome parts, not above 12 or 14 leagues in breadth, and, at moft, but 120 miles in length. It lies to miles to the weft of Hirpaniola, 25 leagues to the north of Jamaica, 100 miles to the eaft of Jucatan, and as many to the fouth of Cape Florida, and commands the entrance of both the gulphs of Mexico and Florida, and the Windward Paffage: fo that the Spaniards, by their poffeflion of this ifland, may, with a tolerable fleet, not only fecure their own trade, but annoy their neighbours.
'Tis faid to have generally the beft lands, for fo large a country, of any in America, and to produce moft of the commodities known in the American illands, particularly ginger, long pepper, and other fpices; caffia, fiftula, maftic, aloes, large cedars, and other odoriferous trees; oaks, pines, palm-trees, large vines, cotton-trees, and tobacco. They have fruit-trees of various forts, large walks of cocoas, good fugar-works, and are faid to make the beft fugars in the Weft-Indies, though in no great quantity, for want of hands to cultivate the canes. They have mines of copper, which furnifl the Spaniards in America with metal for their brafs founderies, for the making of cannon, \&cc. Gold duft allo being found in the fands of the rivers, it is conjectured there are gold mines, if not of filver, in the mountains, of which there runs a ridge from the eaft to the weft of the ifland.
But the Spaniards have not yet opened thefe mines; perhaps from not having yet difoovered them, or from policy to prevent an invafion, as is faid to be the cafe at Florida, where, though 'tis certain they have mines towards the north fea, they do not work them, but rather employ themfelves in others farther up the country, though the carriage by land to Mexico is much more expenfive.
This ifland has many very good ports and harbours of great advantage to Mipping for the fafe paling the gulph, and when the Spaniards keep Guarda Cofta, plying off and on between
the weft end of Cuba and Hifpaniola, it is ccarce pofible for any Englifh fhips from Jamaica to efcape them.
Here are great conveniencies for making falt, and catching filh, which are chiefly barbel and thad. They have mules, plenty of horfes, fheep, wild boars, hogs, and cattle of a larger and better breed than any other part of America; they have wild fowl, partridges, and large tortoifes. They have quarries of flints and fountains of bitumen, which is ufed for fhips infead of pitch, and alfo for medicinal ufes.
Their black cattle are fo numerous, that they run wild in the woods for want of people to confume their flefh : many fine fat beafts are left to rot upon the ground, though great numbers are killed, purely for the hides that are fent into Spain. The flefh being cut into pieces is dried in the fun, and ferves as provifions for Chipping.
Abundance of tobacco, both in leaf and fnuff, is exported to New Spain, Cofta Ricca, the South Sea, and Europe in general. Another of its trading commodities is Carmpeachy wood for dyeing, which the merchants of this ifland import from the bay of that name, and the bay of Honduras, and put the fame on board the flota for Spain, together with their hides and tobacco. Upon the whole, it is moft advantagecully fituated for the general trade of the Spanifh Weft-Indies, and may be defervedly called the Gibraltar of America, and therefore a place of as much importance to Spain, as the other is to Great-Britain.
But the Spaniards, by their fhocking butchery of the natives, have depopulated the illand, fo that their improvements are not fo general, nor fo good, in their nature and tendency, as in our iflands. Here are more churches than farms, more priefts than planters, and more lazy and luxurious bigots than ufeful labourers. To which it is owing, that this large and well fituated illand, with a luxuriant foil, befides great plenty of food for its inhabitants, does not produce, for exportation, near the value of our little ifland of Antigua.
Its harbour for fhipping is fo large, as to admit a thoufand fail of fhips to ride there commodioully and fafely, as it were without either anchor or cable, no wind being able to hurt them. It is fo deep withal, that the largeft veffels anchor at a fmall diftance from the fhore, and there is commonly fix fathom water. The entrance, which has no bar or fhoals to obflruct it, is by a channel about three quarters of a mile in length, but fo narrow, that only one ihip can go in at a time.
This ifland is of the greateft importance to the Spaniards of any of their fettlements in America, the Havanna here being the place of rendezvous for all their fleets in their return from that quarter of the world to Spain; and lying at the mouth of the gulph of Florida, through which they are all obliged to pafs. The Spaniards therefore, not without reafon, call it the Key of all the Weft Indies, to lock up or open the door or entrance to all America: and, in effect, no Ahips can pafs this way, without leave from this port.
But, however impregnable this place may be thought at prefent, yet even the Englifh Buccaneers, under Capt. Morgan, took it in 1669, and would have kept it, could they have had the king of England's protection. Had this been the cafe, our poffeffions in the Weft-Indies, as well as our trade thither, not only to and from our colonies, would have been duly fecured, but our fair and bonourable trade, by the way of Old Spain to New, would have been far more extended; for, while the key of the Weft-Indies was in Britilh hands, the Spaniards would always have found themfelves under the neceffity of encouraging our trade thither, preferably to that of our rival nations.
Jamaica, lying between Cuba, Hifpaniola, and the continent, is liable to be invaded from thefe three quarters at once; and, its fecurity is the more precarious, as the French are poffefted of the weft part of Hirpaniola. On the other hand, it is very plain, that if the Englifh were poffeffed of the $\mathrm{Ha}-$ vanna, our fhips, both here and at Jamaica, would be always ready to pick up the ftraggling fhips of the Spaniards, which they would not be able to keep in a body without the help of this port, it being as impoffible for their unweildy hips to turn up through the Windward Paffage from the bay of Mexico, or Porto Bello, without feparation, as it would be for them to pafs the gulph of Florida, Ihould they lofe the Havanna, where they always rendezvous, viqual, water, and provide all neceflaries for their return to Spain.
II. Jamarca, extends from longitude 75. 57 welt of London, to longitude 78.37, and from latitude 17.48 , to 18.50. This illand, reckoned bigger than all the other Britifh fugar iflands put together, Barbadoes excepted, is fo far from being wholly cultivated as fome of them are, that it has as much land uncultivated as would produce about three times what it does at prefent, were encouragement given for the cultivation of the reft.
The general produce of this illand is fugar, rum, ginger, cocoa, coffee, cotton, pimento, or Jamaica pepper, feveral kinds of woods, fome medicinal drugs and tobacco, but of fo ordinary a fort, that it is only cultivated to ferve the negroes, who could fcarce live without it. Fruits grow here in great plenty, the Seville and China orange, the common and fweet lemon, haddocks, cirons, pomegranates, mamies, four-fops,
papas, pine-apples, cuftard-apples, flar-apples, prickly pears, Alicada pears, melons, pompions, guavas, and feveral forts of berries, which are to be found in the woods every-where.
The fugar-cane is the glory and treafure of Jamaica, as well as of Barbadoes, Antigua, St Chriftopher's, Nevis, and all our new colonies annexed to the crown of England by the Definitive Treaty of 1763 ; and, as it is the principal article of the Britilh commerce in our American illands, we hall give an ample account of that manufacture from the cane, unider the article of Sugar.
The confumption of fugars in Great-Britain, one year with another, has been computed at 70,000 hogheads, each containing twelve hundred weight: and, according to a computation we find in a treatife, faid to be written by Mr Alhley, late deputy-duditor of Barbadoes, and well acquainted with this trade, intitled, The importance of the Sugar-colonies to Great-Britain, they all produce, on an average, 85,000 hogTheads of fugar in a year; the neat profits of which the author fuppofes to be fpent in England by the proprietors of eftates in the Weft-Indies, who refide here, or are fent out annually in the Britifh manufactures, either directly to the fugar-colonies, or to the Guiney coaft, to purchafe negroes for their ufe. The author reckons, that there are three hundred fail of hips fent every year to our fugar-colonies from Great-Britain (not to mention thofe from other places) which are navigated by about 4500 feamen : that the freight for the fugars brought hither amounts to 170,0001 . a year, and the duty, commiffion, \&c. to little lefs than 200,000 . more.
As to the exports from hence to our fugar-colonies, it appeared by the cuftom-houfe books in 1726, that all the Britifh manufactures exported to Barbados, all the Leeward-Ifands, and Jamaica, put together, the latter of which generally takes as much for the Spanifh trade, \&c. as all thofe other inlands, amounted to $234,785 \mathrm{I}$. 17 s .
The Jamaica fugar is faid to be the beft in all our plantations, and made with the greateft eafe; for Dr. Stubbs fays, it cures fafter here in ten days, than it does in fix months at Barbadqes, efpecially in thofe places where it rains for months together. There were about fixty mills in Jamaica in the year 1670, which were computed to make about two millions of pounds weight of fugar; and fome writers fay, they now make ten times as much as they did then.
Indigo was formerly produced in great quantities in this ifland. In the parilh of Vere, where it was chiefly cultiyated, the profits of the planters were fo great, that 300 gentlemen's coaches were reckoned at its parilh-church every Sunday. But whether it was owing to the want of feafons, or, as the planters themfelves fay, to the high taxes that were laid upon that commodity, there is not at prefent a ftalk of indigo to be be found there, nor any other veftiges of the former profperity of that parifh. The tax laid by the Britifh legillature on that commodity was 3 s. 6d. a pound, which might have been borne, when a pound weight of it was worth ios. but upon its falling to 4s. was infupportable.
We became fenfible of this too late, and not only took off all duty upon indigo of our own growth, but have invited foreighers to bring it to us duty-free, and even in their own thips. There have been fome attempts of late to revive this manufacture in Jamaica, but without fuccefs, the people there having quite forgot the art : however, in the year 1743, Mr Macfarlan made a fnall quantity of very good indigo in the parifh of St Thomas in the Vale; whether he has profecuted his defign fince we cannot learn, but are pretty fure that all, or moft of the indigo imported from our fugar-colonies, is the produce of our neighbouring French and Spani/h plantations. See the article Indigo.
There are few colonies in America fo well-ftored with cattle as this: their horfes, affes, and mules, are very cheap, and there would be much greater quantities of black cattle, only the Englifh here, who mind planting more than grazing, have thereby fo leffened the ftock, that they are fupplied with flefh from the northern colonies, as well as the Leeward Illands. Their fheep are generally large and fat, and the flefh good, but the wool, being long and full of hairs, is worth nothing. Their bays, roads, and rivers, abound with excellent fiff of almoft all' the European and American kinds; but the tortoife is by much the molt valuable, both for its thell and filh, the latter being counted the moft delicious, and withal the moft wholfome in the Indies, and efteemed as one of the niceft dainties at the table of our nobility and merchants, to whom they are often fent as prefents from the governors and chief planters of this and the neighbouring inlands.
The chief trade of Jamaica is with Great-Britain ; for the illanders wear, eat, and drink, fcarce any thing but what comes from thence, except Madeira wine, and rum punch. The mof faleable goods here are ofnabrugs, check linnen, white linnen, both coarfe and fine : laces, cambricks, hats, fhoes, fockings, broad cloths, filks, platilloes; all forts of iron ware, foap, candles, butter, cheefe, falt beef, pork, herrings, dried cod- 6 ih, bifcuit, beer, ale, cyder, \&c. all which bring at leaft 50 per cent, to the importer.
The general trade of this, and the ifland of Barbados, is much alike, but in fome articles it differs; as in moft of the
dyer's woods from the bay of Campeachy, which the Barbados people cannot to eafily come at as the Jamaicans, who are only at the charge of cutting and carrying it off, though the Spaniards, even before the breaking out of the prefent war, did fo much to hinder that trade, that the logwood-cutters were forced to have guards, and fight for their prize, the Spaniards reckoning this an illicit trade, and that the Englifh have no right to trade in the bay of Campeachy, but the Englifh have afferred the contrary. See the article Log-wood Trade. The Jamaica trade has, in the general, the advantage of that of Barbados, and particularly in bringing us bullion; fo that fome years, 'tis faid, it has exported no lefs than 300,000 pieses of eight to Great-Britain.
Notwith tan ang all the care that the courts of England and Spain have hitherto taken, to prevent a clandefline trade being carried on from Jamaica to the Spanifh main, they have not been able to fupprefs it. For the Spaniards are as fond of it as the Englifh, though they run no lefs hazard in buying the merchandize, than the Englifh do in felling it to them, as appears by their way of managing it, which is thus: The ship, being furnifhed at Jamaica with negroes and dry goods, commonly makes to the coaft near Porto Bello, and no fooner arrives, but a perfon who underftands Spanifh, is fent off to give notice of it to the dealers about Porto Bello, who appoint the time and place for the fhip's canoe to attend them; when, having bargained for, what part of the cargoe they want, they return to the town for the money, which they bring aboard, and take the goods.
Sometimes the Spanif dealers come to trade over the Ifthmus from Panama, travelling like peafants, with mules laden with jars of meal, in which they conceal their filver, for fear of meeting with the king of Spain's officers; and therefore they generally travel through woods and by-ways. The floop trade from Jamaica to the Spanifh Wefl-Indies, under the protection of our men of war, has heretofore been reckoned at 200,000 1. a year, till 1702, that an order came to the governor of Jamaica to prevent $i t$, on account of a treaty betwixt us and the Dutch, who afterwards went into it themfelves at Curaffau.
The importance of this ifland to Great-Britain, not only for its trade but fituation, is very great. For, it lying in the very center of the Spanilh acquifitions in America, no veffel can farce come to, or go from, the continent of New Spain, but mult neceffarily fail witbin fight of Jamaica, or fall into the hands of fuch of our cruizers as are itationed there; for every fleet that comes from Carthagena puts into Hifpaniola, from whence it cannot fail for the Havanna, the general rendezvous of the Spanifh galleons and flota, without paffing by one end or the other of Jamaica.
Here alfo are many fine bays which are convenient for fhipping, fome whereof might be improved to excellent purpofes, and a fleet might lie in them with the greatelt fafety, and watch the motions of thips from the Havanna.
Port Royal. The harbour, which is eleven miles by land from Spanilh-town, and fix by water both from thence and from Kingfton, is about three leagues broad, very deep, and perhaps one of the beft in the world. So that 1000 fail of the largeft thips may ride in it fafe (the hurricanes always excepted) from every wind.
Kingston is about 5 miles from Port-Royal by water, but not lefs than 15 by land. It is the refidence of the moft confiderable merchants, whofe hips load and unload here, which makes it a place of valt trade; and there are never lefs than two or three hundred veffels in the bay before it. The harbour is facious, and the fhips lie land-locked; but the peninfula that covers them from the fea, being low and narrow, they are not altogether fafe from frorms.
Spanish-town, the chief city of the ifland, being an inland place, its trade is inconfiderable, yet feveral wealthy merchants, and moft of the gentlemen of eftates, have houfes in it, where they live after a very gay manner.
All fhips bound to Jamaica from Great-Britain, or Ireland, or the plantations on the American continent, or from the coaft of Africa, inftead of attempting to pals through the gulph of Florida, where the current is ftrong againft them, or through the ftreight called the Windward Pallage, which would be altogether as impracticable and hazardous, always thape their courfe fo as to fall down fo far foutbward, till they arrive fomewhat eaft of the Caribbee-iflands, in a parallel latitude with Jamaica; and for this end they generally make the ifland of Antigua, or others in that neighbourbood, from whence they alter their courfe to due weft, and bear away with the trade-wind to Jamaica.
But when fuch thips are homeward bound to Europe, or the northern colonies on the American continent, they have their choice of two courfes, viz. either through the Windward Paflage, or through the gulph of Florida.
The current of this gulph is an hindrance to the paffage of hhips from Europe to Jamaica, and, by confequence, it will drive them homewards, or towards Europe.
From clearing the weft point of Jamaica to the wefl of cape St Antonio, in the illand of Cuba, the flip has the advantage of the trade wind upon ber ftarboard quarter all the way,

## A N T

which from Port-Royal, the place fhe is fuppofed to fet out from, is in all a run of about 200 , Jeagues: but when fhe doubles cape St Antonio, and changes her courfe to bear 2way for the gulph of Florida, which is in the teeth of the trade-wind, the then lofes much more time and way than the had gained in her quick paffage from Jamaica to the leeward of Cuba : and, while fhe is thus beating againtt the wind, between the coalt of Cuba and the gulph, ihe is in great danger from the Spanifh guarda cofta's from the Havanna; and fuppofing fhe efcapes them, and is juft entered the gulph, fhe is ftill in greater perils, from the current and coalt of Florida.
This homeward paffage through the gulph being fo very precarious, there remains no other courfe but that of the Windward Paflage.-Now the extent of this paffage is about 160 leagues from cape Morant to the north fide of Crooked Inand; and, reckoning from Port Royal, 'tis above 180 . The tradewinds blowing continually from eaft to weft, the moft difficult part of this paflage is the courfe from Port-Royal Point to Morant, which is direclly againft the wind, and has very often detained fhips for a month or fix weeks together; and, indeed, after that, many have been forced to return to PortRoyal, after fuffering great damage.
Some ihips that fet out betwixt December and May, have had the good fortune to turn that point in one night's time, by taking an advantage, which does not always offer, of the trade-winds, and currents flackening in that feafon towards the evening, and of the frong breezes then rifing from the land ; but this cannot be done from May to December, becaufe then the trade-winds and currents are the ftrongeft.
Befides, in the intervening months, they have fuch fiery fea breezes, efpecially in July, Auguft, and September, that no thips ftir out of port: therefore, the fafef time for them to leave Jamaica, is obferved to be betwixt December and May. And, even when fhips have doubled the cape of Morant, they are expofed to the danger of meeting with the French and Spanifh guarda cofta's of Hifpaniola, by being neceffitated, for fafery only, to fteer ás near as poffible to that inand, till they pafs Crooked Inand, for fear of being drove to the leewiard between Jamaica and Cuba, where it is all a flat thallow bottom. Nor indeed are they fafe from thefe enemies, when they are got to the north of Crooked Inland; for the Spaniards have, in time of peace, frequently pretended to as great a right to vifit our lhips hereabouts, as if they were within mufquet-fhot of Cuba, or Hifpaniola. But, was the ifland of Cuba unce poffeffed by Great-Britain, it would prove not only the beft fecurity of our navigation from Jamaica, but of the whole illand to the Britifh nation.
III. Hispaniola, or St. Domingo, is the greateft, next to Cuba, of all the Antilles Illands. It -ijes in the middle between Cuba and Jamaica, on the north-weft and fouth-weft; and Porto Rico on the eaft, and is feparated from the laft only by a narrow channel.
This ifland belongs partly to the Spaniards, and partly to the French. It is allowed to be the moft fruitful, and by much the moft pleafant in the Weft Indies, having valt forefts of cabbage-trees, palm, elms, oaks, pines, the jenipah, caramite, acajou, and other trees taller and larger, and the fruit more lovely to the eye, and better tafted than in the other iflands; particularly ananas, bananas, grapes, oranges, lemons, citrons, toronias, limes, dates, and apricots.
Here are all the fowl common to the Wef-Indies. In the favannahs, there are innunerable herds of black cattle; horfes enough in the French part of it to fupply all their neighbouring colonies, befides wild horfes and wild hogs of the breed brought over by the Spaniards.
There is farce a country in the world better watered either by brooks, or navigable rivers, which are all full of nifh, as the coaft is of crocodiles and tortoifes. Gold dult is found in the fands of their rivers, and it has many mines of gold, filver, and copper.
The chief general commodities of this ifland are hides, fugar, indigo, cotton, cocoa, coffee, ginger, tobacco, falt, wax, honey, ambergreafe, and varicus kinds of drugs, and dyeing woods.
The French here are faid to equal, if not out-number, the Spaniards, though both together are very thort of what the extent and fertility of the ifland is capable of maintaining.
Before the Spaniards here murdered, in cold blood, no lefs than three millions of the inhabitants, men, women, and children, the natives were innocent and happy in their own way. While the natives enjoyed their poffeffions, they cultivated their lands for them, fupplied them with fin, and with fome quantities of gold. By which the Spaniards lived much more happily, and in greater affluence than they have ever done fince; whereas now the far greater part of what the Spaniards claim, rather than poffefs, is defert, and yields them little or nothing.
As this illand was the firt of the Spaniards difcoveries, fo it was the conter of their commerce in America. After their conquefts in Peru, they flighted this ifland; which encouraged the French, about the middle of the laft century, to fix themfelves on the weft part of the inland, where they have improved their fettlements to fuch a degree, and are grown fo
powerful, that they may make themfelves mafters of the whole illand, whenever they pleafe, and doubtlefs will, when the proper time prefents; which will render our poffeffion of Jamaica the more precarious.
Its principal trade conifited for many years in tobacco, in which there have been from 60 to 100 thips employed, but that funk to nothing in the eftablifhment of an exclufive farm of this commodity in France, and fugar afterwards became the ftaple commodity. Some think it is the beft that is made in the Weft-Indies.
'Twas computed in 1726, that there were 200 fugar works here, that at an average they made annually 400 hogheads, each of 500 weight, which did not bring lefs than 200,0001 . fterling per ann. to the French. The indigo was reckoned to produce half as much. At'prefent, 'tis thought, the trade is rather in a better than worfe condition, in regard to thefe articles, to the great injury of the Britifh colonies, and benefit of the French.
IV: Porto Rico, heloriging to the Spaniards, is the laft of the Great Antilles Illands, whofe trade remains to be defribed. This ille extends from long. 65 to 67 . and from lat: i 8 to 18, 40.
The foil is extremely fertile, abounding in fine meadows, and well focked with wild cattle. 'Their pork is excellent, fo is the fleth of the kids, but their mutton is poor dry food. They have 'good thip-timber, and variety of fruit-trees, cocoas'; pine-apples, mameys, guavas, papays, bananas, plaintains, palms, mufk-melons, oranges, limes, plums, figs, wild grapes; pomegranates, citrons, pimento, caffia, fiftulet, the fenfitive plant, and the baftard cinnamon, together with rice and Indian corn.
The principal commodities in which its traders deal, are fugar, ginger, hides, cotton thread; or raw cotton, caffia, maftic, Éc. They have allo great quantities of fait, and make a confiderable profit of their oranges and lemons; ais fruit, and in fweetmeats. They have many good veffels, in which they trade to various parts of America:
The genius of the people, ${ }^{2}$ and the convenient fituation' of the inand, would render it the moft flourifhing of all the Spanifl colonies, were it not for the mifchiefs to which they are frequently liable, from great droughts, hurricanes, and the defcents of privateers, whereby their fea-ports have been of, ten ruined.
The other places of any note, which lie near Porto Rico, are a clufter of very foll iflands, called the Virgin's Illands. The only one which deferves our notice, is that diftinguinhed by the Danes ifland, St Thomas's. It is faid by our viyage- writers, to abound with potatoes, millet, mendioca, it moft forts of fruit and berbage, particuln I!y fugar and tui.cco, oranges, citrons, lenons, guavas, bananas, and fig-trees. They have hares and black cattle, but are furnithed with flefh enough from Porto Rieo. They bave excellent fifh, and all forts of wild fowl; yet fuch is the plenty both of people and money, that provifions are dear. Here is a fafe commodious harbour, which is a free port, and finctuary for privateers.
All the trade here is carried on by the Dutch in the name of the Danes, and is pretty confiderable for fo fmall a place, particularly in time of peace, where 'tiș the ffaple for that traffic, which the French, 'Englifh, Dutch, and Spaniards, dare not carry on publickly in their own illands. In time of war, privateers bring their prizes into this, as it were, always neutral illand, for fale. Many veffels alfo trade from hence along the coaft of Terra Firma, and always full of all forts of goods.
The voyage between there illands, in which there is a plentiful fihery, is the moft pleafant, fays Father Labat, that can be made, and compares it to a'paffage through a large meadow, with groves of fine trees on each free.
ANTIMONY, a mineral fubftance, pretty much of a metallic nature, except that it is not ductile or malleable. It is found in mines of various forts of metals, and particularly in thofe of filver and lead; which made fome chymilts imagine, that it contains all the principles of thofe metals.
As it is taken from the mine, it is in flones of feveral fizes, in figure pretty much like mineral lead, except that it is lighter and harder.
Hungary was formerly the only country where mines of antimony were found; but a great many of them have been fince difcovered in France, particularly in Poictou, Auvergne, and Britany.
The antimony of Britany and Poiciou is the moft valued, that of Auvergne being judged to abound more with fulphur. There has been antimony of Hungary in cakes of 3 or 4 pounds weight, made up, as it were, of fmall needles, interlaced together, of a yellow colour, inclining to gold, upon a white ground, as it were, of filver; it was of a quality furpaffing all the other forts of antimony; but it is become fo fcarce, that there is none of it to be feen at prefent.
There is crude antimony, and prepared antimony.
Crude Antimony, as it comes from the mine. But that, to which the druggifts give that name, bears it but improperly; fince it has been melted, and caft into cones or needles, which are larger or fmaller, according to the provinces from whence it comes; thofe of the antimony of Puictou being beautiful,
long, broad, white, and hining ; thofe of Britany fmaller, but very weil purified.
Prepared Antrisony is that, which has paffed through the hands of the chymifts to be purified, who bave invented many different preparations of it, and have alfo given it feveral names, either out of whim, or with regard to the different effects thev afcribe to it : fuch are the following appellations. Regulus of antimony, glafs of antimony, flowers, butter, faffron, oil, calx, golden fulphur of antimony, imperial powder, crocus metallorum, rubine of Antimony, polycreftes, emetic wine, diaphoretic antimony, powder of algaret, bezoar mineral, and many other names, which the curious may meet with in the difpenfatories, and in the works of the chymifts.
No remedy ever underwent a more inconflant fate than antimony has done with regard to phyfic. It was fcarce got out of the darknefs of its mines, towards the 12 th century, by the affiftance of the monk Valentine, but the ill fuccefs of the trial he made of it upon his own unfortunate brethren, the monks, (if the fact be not a fabulous itory) threw that mineral again into its former obfcurity. About 3 oo years after this, Paracelfus brought it a fecond tinue to light, and it begun to gain reputation; when, in the year 1566 , it was thunderftruck by a decree of the parliament of Paris. In 1637 , it was received by public authority, among the purgative drugs at leatt. In 1650, a new decree cancelled that of 1566 , and antimony was reftored to its former credit. Since that time, a full liberty was granted to the doctors of phyfic to prefcribe it , with prohibition to all other perfons to ufe it without their advice. This may be faid to hiave compleated the triumph of antimony, at leaff in France, where it meets no longer with any adverfaries, and is become, as it were, the laft refource in all diftempers, which feem to have none left. Nicholas Lemery has publifhed a Treatife of Antimony, which was printed at Paris in the year 1707 , in 12 mo . a commendation of which may be feen in the Acta Eruditorum Lipfienf, for the year 1708, p. 122.
In general, moft of the preparations of antimony are either emetic or diaphoretic. The regulus confifts chiefly, according to its phyfical mixture, I. In a metallic vitrifiable earth. 2. In an arfenical fubftance. 3. In a phlogific fpirit. Thefe three fubftances do particularly conftitute the form of that metallic mixture. The metallic earth is the bafis and principle of the diaphoretic virtue. The emetic and dangerous property, which the regulus, and other emetic preparations of antimony occafion, is produced by the arfenical fubftance; and the phlogiftic principle, is the metallic and fhining appearance, both of that regulus, and of copper, iron, tin, and lead. According to the different preparations and additions, may be compofed either moft excellent or moft dangerous remedies. It is with refpect to this, as with refpect to mercury. The regulus of antimony is ufed by feveral tradefmen, as by pewterers, letter-founders, filver-fimiths, minters, and afpewers; as alfo to make burning-glaffes, $\sigma^{\circ} c$. As to the feveral chymical preparations, which are very numerous, for their procefs and manner of ufing them, the curious may confult Stahl, Hoffman, and the excellent public lecture on antimony by the late Mr. Newmann, printed at Berlin, in the German tongue, in the year $173^{\circ}$.
In France they fend into the country, by the king's order, antimonial remedies, well prepared, but often different ways, and of which they who ufe them, cannot know the feveral virtues. Mr Geoffroy undertook to regulate this, as much as poffible, as the curious may fee, in the Hiftory of the Royal Academy of Sciences at Paris, for the year 1720 and 1734. Upon the whole, the various preparations of antimony fhould be ufed with the greateft precaution, according to the prefcription of an able phyfician.
Crude Antimony pays a duty of 5 fols per hundred weight on importation in France, and of 60 fols prepared.
For the duty paid in England, fee Drugs,
Antimony is clafled by that great phyfician and eminent chymift Dr Boerhaave, amongft the femi-metals. It is ufed in metallurgy, and in medicine as a drug.
The method of fmelting antimony from its native ore is as follows, viz.

## APPARATUS.

x. Chufe a melting crucible, or an earthen-pot unglazed, that may contain fome pounds of the ore of antimony, and let it be broken into fmall bits of the bignefs of a hazel-nut : bore at the bottom of it a few fmall holes, two lines in diameter: this may be eafily done with a common wimble, or, if this cannot do by reafon of the hardnefs of the pot, with a fmall wedge, which mult be moved circularly with the left hand, and mean while inceffantly ftruck with a bammer in the right. Let the bottom of this veffel be received by the orifice of a fmaller one, upon which it muft be put, and, when the ore is put into it, let it be covered with a tile; and all the joints be ftopt clore with a proper luting.
2. Put thefe veffels upon the pavement of the hearth, and put fones all round them, at the diffance of fix inches: fill this intermediate fpace with afhes, fo high as that the inferior pot be covered to the upper brim. Then put frefh and buraing coals upon it, and with a pair of hand-bellows excite the fire, Vol. I.
till the upper veffel grows red-hot: take off the fire a cuarter of an hour after, and, when the veffels are grown cold, open them. You will find that the antimony has run through the holes made at the bottom of the upper veffel, and nakes in the inferior one a kind of regulus, from the proportion of the weight whereof with that of ore, you will be able to know how much may be got out of one hundred weight.
This may enable gentlemen who have eftates in antimony, to judge of the yielding of the ore of matter fit for fale, and confequently to know what profit the working the fame in large quantities will yield; provided the fame method of operation is made ufe of in the aflay, as in the great works. This is the way that is generally ufed to prepare antimony from the ore, either for the ufes of metallurgy, or medicine. For the former, in fome cafes, it undergoes further methods of refining; and, in the latter, the proceffes in regard to this mineral are very different.
The pharmaceutical method of preparing the effential medicaments from antimony, after its being fimelted from the ore, is, according to the fentiments of the ableft chymifts, as follows, viz.

PROCESSI.

## Artimony diffolved in aqua regia,

Take pure antimony, broke from the top of the cone; reduce it to fine powder; put a pound thereof into a low capacious glafs veffel, with a wide mouth; fet the veffel under a chimney, that carries up fumes well, and pour to it a pound and a half of aqua regia. A violent effervefcence arifes, a great heat, thick red fumes, and a hiffing, all which foon after ceafe. There now remains at the bottom a matter of a grey and yellow colour, moift, thick, pappy, which is to be dried over a gentle fire, by keeping it fonetimes ftirred with a ftick.

## The USE.

This is called the humid calcination of antimony, whereby the foffil, which before was neither emetic nor purgative, now acquires very violent virtues. The yellow matter incorporated amongt this calx is the true fulphur of antimony, which the acid not diffolving, it is feparated from the other metallic part of the antimony, which diffolves in aqua regia; whence we have both a calcination, and feparation in this procefs; which is fubfervient to the following operations.

## PROCESSII.

## The true fulphur of antimony.

Take the calx of the preceding procels, wafh and fhake it with water, pour off the thick into another veffel ; put on frefh, and continue thus, till the yellow lighter matter, difperfed in the water, is feparated from the more ponderous metallic matter, which is to be kept apart ; the fulphureous part, which falls to the bottom, being freed from the whitifh water, floating above it, may be thrown away. Then dry the powder by a gentle fire, and it will be true fulphur. If fomewhat larger pieces of antimony were put into aqua regia, and the folution thus performed, larger pieces of fulphur would be obtained; becaufe the aqua regia feeks out and diffolves the larger metallic parts concealed in the fulphur, and fo makes the maffes of fulphur more vifible.

## The US E.

Hence it appears, how fecretly fulphur may lie concealed between metallic fhoots; and how extraordinarily aqua regia can find out metal, through the body of fulphur; and again, how unchanged the nature of fulphur may remain. This is the fulphur of antimony, which Helmont orders to be extracted, and which he fays fcarce differs from the common, which, we prefume to fay, is a very great miftake in that learned chymift, we having difcovered eflential different properties, which we fhall take particular notice of under the article of Sulphur.
We fball for the prefent give one inftance, which we do not remember to have met with in any of the chymical writers, either antient or modern.
To inftance in regard to the making of the glafs of antimony. The common methods thereof, as given us by the learned Boerhaave, Stahl, Homberg, and all the chymifts of the higheft reputation, are by a tedious calcination for many hours over a gentle fire: whereas what thefe great men perform in many hours, may be performed in near as many minutes, by virtue of its own antimonial fulphur. Thus:

## PROCESS III.

Let a pound of crude antimony be melted in a common crucible, and put to it gradually the quantity of one quarter of a pound of its own fulphur per $f e$, and ftir it as put in with a tobacco-pipe, and the whole will, as it were, inftantly become vitrified.

## A N T

The reafon which led à priori to the trial of this procefs, was, from obferving that the vitrifying quality lies only in its fulphur, when duly excited by the external heat. And by this means may be eafily vitrified all the inferior metals, and divers minerals; and indeed, when properly applied, moft metalline fubftances, excepting gold and filver. Thefe are properties very different from common fulphur, in regard to metallurgy: and, with refpect to medicine, the antimonial fulphur is an emetic and fudorific, whereas the common brimftone is chiefly laxative. So that not only Helmont, but other learned chymifts, feem to have miltaken the qualities of this antimonial fulphur, and therefore, perhaps, may have mifapplied the fame in many cafes, in medicine as well as metallurgy.

## RROCESS IV.

The regulus of antimony.
Take half a pound of clean iron flings, heat them in a crucible, gradually put thereto a pound of antimony pulverized, being firft well dreed: keep it in a ftrong fire, fo that it may flow thin: pour it into a cone, and, when quite cold, ftrike off the fcoria at top of the cone, the regulus lying at the bottom. And, if the regulus is not fufficiently purified for the purpofe intended, you muft re-melt it, with a ftrong fire, with about four ounces of pure, dry, and hot pulverized nitre; then pour it again into a cone, as before. There will thus be obtained about feven ounces and a half of regulus as bright as filver; but this is more or lefs, according to the quality of the antimony*.

* This procefs may be performed at one operation, by throwing in the nitre gradually after the iron and antimony are well melted down. Or the regulas may be feparated by a competent quantity of nitre alone.

## PROCESSV.

If you would obtain the fulphur of antimony, boil the fcoria of the preceding procefs in common water, till it is all diffolved; the folution will be almoft feentlefs : drop vinegar into it; and there inftantly rifes a very fetid ftercoraceous odour; and the liquor that before was thin, becomes very thick. Continue the addition of more vinegar, and ftir the matter, till nothing more precipitates. Let the matter reft; the precipitate will gradually fall : pour off the liquor, wafh the precipitate in feveral waters, till it becomes perfectly infipid; dry it gently; and this is called the golden fulphur of antimony. It has a mild emetic virtue, $\xi^{\circ}$. and is called the golden fulphur, becaufe, when rubbed upon filver, it gives a gold colour thereto.

## PROCESSVI.

## A diaphoretic antimony with nitre.

Take one part of antimony, and three of nitre reduced to powder; throw them by little at a time into an ignited crucible; they will deflagrate. Continue them till all the powder is put in; with care not to add frefh, till the former is perfectly deflagrated. Keep the matter for a quarter of an hour in the fire, that the crucible may remain ignited: let all cool ; there will remain a white and hard mafs, which being taken out, and reduced to powder, is the diaphoretic antimony with nitre.
This matter, thus rightly prepared, being taken in the quantity of half a drachm, fcarce occafions any fenfible change, excepting that it moderately opens on account of the fixing nitre adhering thereto; whence it may prove ferviceable in acute cafes. In this tate the chymifts call it diaphoretic, and judge, that the arfenical poifon of the antimony is fixed by a large proportion of nitre; but there was nothing emetic in the antimony before, though taken in the quantity of feveral drachms crude, or without any nitre; whereas an equal proportion of nitre excites this vomitive virtue.

PROCESS VII.

## Common diaphoretic antimony.

Reduce the calcined antimony of the preceding procefs to fine powder; wah it with hot water; mix it with a ftick; whereby the adhering fixing nitre will be diffolved, and a white calx fubfide by ftanding. Pour off the faline liguor, add freh water, and edulcorate the calx, fo that no fenfible tafte of the nitrous falt may remain; then dry the powder, and it will be white, infipid, and ponderous, or the common antimonium diaphoreticum.
This is an indolent, noxious calx, fays the learned Dr Shaw upon Boerhaave, without any activity difcoverable by oblervation; and lofes all the vircue it had before. It only acts fenfibly when mixed in a double proportion with purgatives, the virtues whereof it actually excites, as appears by fure examples in the pulvis Cornachini ; but 1 recommend it for no other ufe.

## PROCESS VIII

## Nitrum antimoniacum

Put the filtered waters of the preceding procefs into a glafsurinal; evaporate to drinefs, and keep continually ftirring; at laft there remains a white faline matter, of a particular tafte, not uhgrateful, not nitrous, but mild; and this is called nitre of antimony.
Hence we fee the nitre is changed into a new falt, by detonating with antimony. This falt is gently aperitive, and, in denfe inflammatory blood, excellently refolves without violence: it fuccefsfully promotes perfipiration, fweat, and urine; hence cools and becomes ferviceable in the fmall-pox, meafles, pleurify, and peripneumony: it is therefore wrong to throw this water away as noxious; which is commonly done.

## PROCESS IX.

## The fixed fulphur of antimony.

To the filtered nitrous liquor of the preceding procefs, whilft it remains hot, and contained in an urinal, drop ftrong diAtilled vinegar; the liquor will prefently turn milky, and a very white and fine powder precipitate. Shake the glafs, continue to drop in vinegar, and fir the liquor till it appears no longer turbid; then let it reft till all the powder is fallen: afterwards pouring it off into another veffel, perfectly edulcorate the powder with water, dry it, and it will be exceedingly white and fine: this is called the fixed fulphur of antimony. The acetous, nitrous liquor, that floats above the precipitate, has extraordinary virtues in all acute, feverifh diforders, as well on account of the vinegar, as of the mild nitre, now fet free from its lluggifh fulphur; and thus the beft things are often thrown away (as in this cafe fays Dr Shaw) in chymiftry. In thefe feveral proceffes, we fee how wonderfully fulphur may be diffolved, lie concealed, and be raifed again in various forms and colours.
Thefe are fome of the principal proceffes of antimony, as they have relation to practical medicine. Whoever would fee all the variety of medicinal preparations propofed to be made from this mineral, may confult the feveral authors beforementioned.

## Of the application of antimony to metallurgy.

What the regulus of antimony is capable of performing in the way of improving metals, we may learn, fays Dr Stahl, from Kern der Alchymie, who informs us, (i.) That the fimple regulus being mixed or melted along with filver, and then evaporated, leaves the filver enriched with a few grains of gold; and, (2.) That the crocus metallorum, or the fcoria, obtained in the preparation of the fimple regulus, being edulcorated and cemented with filver, and laftly melted into it, by a continued fufion of feveral hours, renders the filver fomething of a golden nature.
This reguline fubftance of antimony may likewife be commodioully employed in the extraction of the metallic fulphurs, as they are called, and their purification from all terreftrial heterogeneous faces; whence the compound metallic regulus's, viz. the martial, the venereal, and the jovial, arife. There are fome who queftion, whether thefe compound regulus's do actually participate of any thing from the metal wherewith they are prepared; and fufpect there is no more performed in this cafe, than a bare abforption of the fulphur abounding in the antimony, upon which the reguline part fubfides alone. The meaning whereof is this, that the reguline fubfance, confufedly intermixed with a large proportion of adhering fulphur, is what makes antimony; and that, if this fulphur be taken away, the remainder becomes regulus again: whence, as the fubjects which eafily take away this fulphur from antimony, are 'alkalies, iron, copper, tin, and lead, any one or more of there, being added to antimony in fufion, ought, upon that fuppofition, only to receive or imbibe the fulphur, and leave the regulus pure and unmixed, collected in a metallic form at the bottom.
This opinion is overthrown, by numerous experiments and inftances to the contrary. For example, if any fuch metallic regulus, though made ever fo pure, be fimply evaporated by the blow-pipe, upon a coal, it leaves a pure grain of metal behind it, which, upon the proof, is found to be gold or filver. So likewife the martial regulus in particular, being melted in a crucible, with the addition of coals, or common fulphur, and detained for fome time in the fire, a ruddy powder or flowers evaporate or fublime from it, which nearly approach to the nature of cinnabar: and, if digefted with a menftruum conifting of three parts difilled vinegar, and one of aqua fortis, it affords a green extraction: but nothing of this kind happens in any of the cafes, when only the fimple regulus is employed.
This extration of the pure metallic fulphur deferves to be the more attentively confidered, becaufe Becher * exprefsly advifes us to beware of ufing corrofive, faline menflruums for

* Miner, Arenar. p. gız.
this purpofe, as they might eafily, together with the ufeful part of the regulus, or rather of the iron or copper, corrode and extrdet alfo the ufelefs, earthy, and fyptic part; which, upon melting them together, would again accrete to the ufeful part, and conceal or difguife is under its former ignoble veil.
But this feparation is excellently performed by the regulus of antimony itfelf; there being no danger that this thould imbibe any of the terreftial, ityptic fu flances. But if there be any fufpicion, that fuch a compound regulus fhould fill contain fomeching of the crude fubftance of the metal, as we ufually find to be the cafe in the martial regulus, melted in a ftrong heat, and fuddenly poured into the cone; or if the antimony employed contained but little fulphur, or only fo fmall a proportion was ufed as could not totally corrode the metal; whence the regulus becomes porous, lefs leafy, and lefs bright and Chining, but rather appears difcoloured and grey, and of itfelf indifpofed to flow, unlefs the fire be made very intenfe; and whence alfo the venereal regulus turns ruddy or livid in the fpace of a few days: in there cales the regulus is to be beat again, mixed with its own, or a half more than its own weight of crude antimony, and thrown into a well ignited crucible, and fufed with a very good heat, fo as to make the matter run very thin, in which flate it is to be directly poured out ; and, by this means, the antimony again imbibes all the crude metal that fill adhered to the regulus, and thus at a fingle operation renders it highly pure and bright: an effect, which in the common way with nitre, is not obtained without a deal of trouble.
It mult be further obferved, that this regulire fubftance of antimony is convertible into various forms and thapes. Thus, for example, 'tis turned to a fixed, to a volatile. and to an intermediate fubftance, in the different preparations of diaphoretic cerufe, bezoar, mineral flowers, mercurius vita, glafs of antimony, छic. from all which the regulus may not only be recovered again, but any one of them may likewife be converted into any other, or made to travel fuccefively through all the various forms of the reft.
If the regulus of antimony be reduced to fine powder, and calcined in an open veffel, fo as that the bottom may remain ignited for feveral hours, this is turned into a kind of grey powder.
And here there occurs a remarkable phænomenon, which has occafioned much fpeculation among the chymifts, viz. that the regulus, notwithftanding its conflant evaporation, or fublimation, in the form of a fine fume, is found to gain in weight; fo that, for example, if an ounce of the powdered regulus were thus committed to calcination, it becomes, at the end of the operation, heavier by half a drachm, or a drachm, than it was at firf ; and this at the fame time that it is contracted in its bulk. And, if the powder thus clacined be melted with a fufficient degree of heat, it turns to a kind of purple glafs, fomewhat purer than that prepared from common antimony.
If a quantity of charcoal, in grofs powder, be added to this glafs, and the method of reduction practifed in a clofe veffel, with a fire of fufion continued about an hour, more or lefs, according to the quantity of the matter; when, after this, the veffeil comes to be broken, the glafs will be found reduced to metalline regulus again.

The ufe of antimony in regard to gold.
All the metals, except gold, are fubject to an attenuated refolution by antimony; fo that, if any thing of gold be contained in the other metals, it may by this means be feparated from them.
The feparation, thus procured by antimony, Becher confiders barely as the effect of gravity; on account whereof he thinks the antimony comes to refolve and collect together all the metals, which, being lighter than gold, continue to float above it.
But this opinion is not without its difficulties. For, (I.) when nothing but pure gold is melted along with antimony, the antimony fill lets go the gold in the fame manner; though, by the fuppofition, it fhould only do this upon the mutual fufion of other metals along with the gold. (2.) But the principal objection is, that gold will fubfide in antimony, without mixing at all confiderably therewith; whilf the fame antimony remains moft tenaciounly interfperfed in the bodies of all other metals, where it does not act by its bare gravity alone, as we evidently fee in the cafe of lead: for, if lead be found along with antimony, and little plates of filver be thrown into the melted mafs, the lead will not, by that means, be precipitated, but rather the filver freely fubfides into the regulus, which is no way touched by the antimony; whilf the antimony detains the lead, a matter whereto it may adhere more firmly than to the filver.
It is however true in practice, that, when antimony is melted with iron, for inflance, either alone, or according to the other methods beforementioned; the iron thus fubtilly diffolved may be brought to enrich the body of the filver, or to depofit a grain or two of gold therein; as may be difoovered by edulcorating the fcoria, fratifying it with filver plate, and cermenting them both together for fome hours in a clofe veffel, the
fire at length being fo far increafed as to make the matter flow for fome hours longer; after which it is to be taken out, beat from its fcoria, refined, and proved by the depart.
The reafon of which effect proceeds hence, that the latent gold naturally contained in iron, being now very fubtilly divided and diffufed therewith, comes, in the courfe of this long continued fufion and eoullition, to be a thoufand times toffed and agitated every-where abour therein, fo as of neceffity fometimes to impinge upon, and unte with, the parficles of the filver, which now make part of the mixture; and, being once lodged among them, they cannot afterwards be touched either by the antimony or the iron; fo that the gold, thus defended, wants only for its manifeftation to be perfectly feparated from the fcoria, and collected together in its natural form, by the proper operations for that purpofe, See the article Refining.
But it is alfo apparent at the fame time, that the fcoriz here formed by the antimony corroded with the metal, whence they come to be joined together, are lighter than the reft of the metal which remains corroded, and floats above it in the nature of fcum.
The theory of Becher, therefore, may very well be admitted in this fenfe, that all the metals, but gold, being corroded by antimony, that metal, on account of its fuperior fpecific gravity, falls to the loweft place.
This explanation may be further illuftrated by the following experiment. To an ounce of melted filver throw two ounces of antimony; and, when they have flowed very thin together, pour them out; upon-which the antimony will be found at top, together with about a dram of the filver it has corroded, in the form of a fpungy fooria, whilft the reft of the filver that is not thus diffolved, remains clofe and heavy, like a regulus, at the bottom.
The ultimate refinement of gold is by fufing it thin with thrice its own ueight of antimony; wherein the antimony fears away and imbibes the fubltance of all the other metals, but leaves the gold untouched; which, therefore, as the heavier body, falls like a regulus to the bottom of the melting cone. It is remarkable in this operation, that a very little portion of antimony, fo little as can fcarce alter the weight of the gold, atheres tenacioully to the furface thereof, and covers its native colour with a whitenefs; whence it is commonly faid, that the fume of the antimony here turns the gold white. The regulus is again to be purged from this accretion by the blaft, which will drive the litcle additional matter off in fcoria, or exhalation.
Thefe are the chief ufes wherein antimony is applied in metallurgy. In what cafes it is further ufed we fhall fhew under their refpective heads.
ANTIPODES, in geography, are fuch inhabitants of the earth as live diametrically oppofite to one another, that is, in parallels of latitude equally diftant from the equator, but one north, the other fouth, and under the fame meridian, though $180^{\circ}$, or juft half that meridian, diftant from one another.
ANTISCII, in geography, are the people who live in two places oppofite to one another, one on the north, the other on the fouth fide of the equator, fo that their fhadows at noon fall different ways, one direally oppofite to the other.
ANTOECI, in geography, are fuch inhabitants of the earth as dwell one againft another in the fame femicircle of the fame meridian, and in the fame degree of latitude, but one north, the other fouth. Thefe have noon and midnight at the fame time, but the feafons of the year are contrary; as, when the northern antoeci have their fummer, the fouthern have winter, and vice verfâ. In a word, they live under the fame meridian, but oppofite parallels.
ANTWERP, a remarkable city in the Netherlands, on the river Schelde, and is the capital of the province, which is called the marquifate of the holy empire.
Though the trade of this city be fill very confiderable, yet it is certainly at prefent but the fhadow of that which flourifhed there formerly. The ftately and famous houfe of the Eafterlings, or, as the natives call it, of the Oofterlingen, fhews the extent of that trade. It was built in the year 1568 , for the conveniency of the merchants coming from the Baltic. It is a fquare ftone building, 250 feet broad, with warehoufes on the top for dry goods, and cellars below for wet. In the middle ftory, which has a gallery quite round the fquare, are 300 lodging rooms for merchants. But now this noble ftructure is turned into a horfe-barrack; the cellars ferve for fables, and the rooms above for hay-lofts. The vaft warehoufes in that building, which are perhaps the largeft in the world, wherein each nation depofited their merchandizes, will be an everlafting teftimony of that extenfive commerce, which, though divided between Amfterdam, Rotterdam, and the other trading towns of the United Provinces, is yet fufficient to enrich them all, and give them the reputation of driving the greateft trade in Europe.
There are kept at Antwerp feveral free fairs, which draw thither merchants from all parts of the world. The moft confiderable of thefe fairs are, that which is kept at Whitfuntide, and that which they bold between the feftivals of St Remigius and St Bavon.

The bleaching-grounds in the neighbouthood of this city are in very great repute; and the opinion people have, that the waters of the little river Schenith are more proper than any others for the bleaching of limen, is the reafon why they fend linnens thither from the remoteft parts of the Auftrian Netherlands.
The manufactories of wrought tapeftries are very famous. They alfo continue to excel here in the art of printing; and, though it be certain that this art is much decayed here fince the famous Plantin, who had almoft brought is to a degree of perfection, yet it is certain that the printers of Antwerp are not unworthy to be filied the fucceffiors of fo great a man. The moft confiderable manufaclory eftablifhed at Antwerp, and which chiefly fupports its trade, is that of thread-lace, fo well known every where under the name of Mechlin lace. It is hardly poffible to imagine what vaft quantities France and Holland buy yearly of this commodity, as well as of all forts of thread, the fpinning of which is excellent in this city, and in its neighbourhood.
The merchandizes which foreigners, and efpecially the French and the Dutch, fend thither, and which fell beft, are, All forts of gold, filver, and filk fufts; broad cloths, and other woollen ftuff; ficices; pot-afhes and lees; wines and brandies; falt from France, Spain, and Portugal; herrings and flock-finh; oil of olives, train oil, and feeds; painted linnens and muflins; fugars, either refined, or in powder. There are two forts of money; both at Antwerp and throughout all Brabant and Flanders; or rather it is the fame under different denominations. The one is called money of exchange, and the other current money.
According to this diffinction, the patagon, or rixdollar, is worth 8 fchellingen, or 48 ftivers, exchange-money, and but 7 fchellingen current money: and a pound grofs of 6 guilders exchange-money, makes 7 guilders current money: fo that you mult pay 116 guilders and $\frac{2}{3}$ current money to make 100 guilders exchange money; and 116 pounds grofs and $\frac{2}{3}$ current money to make 100 pounds gtofs exchange-money.
Merchants keep their accounts at Antwerp in pounds, fchellings, and groots grofs Flemifh. The pound grofs is of 20 fchellings, and the fchelling 12 groots; the groot is half a ftiver.
The pound at Antwerp is about 5 per cent. lighter than that of Amfterdam and Paris: fo that Ico pounds weight at Antwerp make but 95 and $\frac{1}{4}$ in thofe two cities; and 100 pounds of thefe two cities make 105 pounds at Antwerp.
As for long meafure, 100 ells at Antwerp make roi $\frac{1}{4}$ at Amfterdam ; and 100 ells of Amflerdam make $98 \frac{\frac{5}{8} \mathrm{~T}}{2}$ at Antwerp, or very near $9^{83}$.
They draw from Amfterdam upon Antwerp, and from Antwerp upon Amflerdam, in pounds grofs, and in guilders, commonly at a few days date, and fometimes at one or two ufances, or months. The exchange is often at par, and oftner ftill at 2 or 3 per cent. lofs for Antwerp.
ANVIL, a large mafs of iron, ufed by feveral handicraft, who work and forge, or hammer metals, particularly by the filverfmiths, blackimiths, lockfmiths, farriers, armourers, \&c. There are two forts of anvils: fome are forged, and others caft ; the former are made by the blackfmiths, and the latter are caft in the founderies. The beft are thofe which are hammered, and the upper part of which is fteel.
APHRONITRE, a kind of natural falt-petre, gathering, like an efflorefcence, on old walls, now commonly called falt-petre of the rock. See Salt-Petre.
APIARY, a place where bees are kept, furnifhed with all conveniences neceffary for that purpofe. It ihould be fheltered from high winds on every fide, and well defended from poultry, \&c. whofe dung is offenfive to bees.
APOCYNUM. See Beid.
APOTHECARY, one who prantifes the artof pharmacy, which is that part of phyfic confifting in the choice, the due preparation, and mixture of medicines.
This is a very genteel bufinefs, and has been in great vogue of late years, there being, as has been computed, upwards of 1000 in and about London. There are, in this profeffion, various degrees, as to employ and extent.
Some do little elfe but make up medicines, according to the prefeription of the Difpenfatory (compiled by the order of the College of Phyficians, for their direction) and thofe of particular phyficians, befides vifiting their patients.
Others not orily prepare almoft all kinds of medicines, as well Galenical as chemical, but likewife deal in drugs; with all which they fupply their brethren in trade, and fo become a fort of wholefale dealers, as well as apothecaries.
Others, asain, praatife furgery, man-midwifry, and, many times, even officiate as phyficians, efpecially in the country, and often become men of very large practice, and eminent in their way. There is another branch, alfo, many of them fall into, which is that of curing lunaticks, \&c.

Remarks.
A youth intended for this profefion fhould be a pretty good fcholar, and have a tolerable knowledge in the Latin tongue at leaft, that he may be better able, in due time, to read
fome of the beft authors who have wrote upon the fubjects of botany, pharmacy, anatomy, and medicine ; though it muft be owned there are, at prefent, almolt innumerable helps in our mother-tongue.
In London they are one of the city companies, and were firft incorporated with the grocers in the year 1606, in the reign of King James I. but not alone till 1617 .
They have a hall, where there are two fine laboratories, out of which all the furgeons chefts are fupplied with medicines for the ufe of the royal Britifh navy.
In the year 1712, the 1oth of queen Anne, an act paffed for reviving and continuing feveral acts therein mentioned, one whereof was for exempting the apothecaries from ferving the offices of conftables and fcavengers, and other parifh and ward-offices, and from ferving upon juries: which act was made perpetual in the 9 th year of George I.
The apothecaries in England are obliged to make up their medicines according to the formula's prefcribed in the Difpenfatory of the College of Phyficians, and are under an obligation to have the medicines there enumerated always ready in their fhops; and their thops are liable to be vifited by the cenfors of the college, who have it in their power to deftroy fuch medicines as they judge not to be good.
The apothecaries of Paris make but one corporation with the merchant-grocers, which is the fecond of the fix corporations of merchants.
By a regulation of the 15 th of October 1631 , all the apothecaries of Paris are probibited to give any medicine to patients, unlefs by the order, and with the advice, of a regu-lar-bred phytician, or of a perfon approved by the faculty; nor are they to make up any prefcription, given, or drawn up, by any perfon ftiling himfelf an empiric phyfician, or operator.
Among the good regulations made in Denmark, that which the apothecaries are obliged to obferve is reckoned one of the beft: for no perfon can have leave to follow that profeffion unlefs he be approved by the college of phyficians, and confirmed by the king himfelf. There are but two apothecaries allowed for the city of Copenhagen, and but one in every other confiderable town. The magiftrates, attended by the doctors of phyfic, vifit their thops and drugs twice or thrice a year, and thofe drugs that are either ftale or bad, are feized, and publicly thrown upon a dunghil without the city; and this is a ftain upon the charaEter of fuch apothecary, as is fcarce ever wiped off. The price of all drugs is fixed, fo that one may, without fear of being impofed upon, fend even a child for any drug to an apothecary's fhop, where nothing is fold but what is good, and at a reafonable price.
All drugs are fold for ready money, and yet the apothecaries are obliged to regifter in a book what they fell, to whom, and by what phyfician's prefcription. So that there feldom happens any accident by poifon, either accidentally, or with delign: and, if any fuch thing happens, it is eafily found out, and quickly punihhed. Prefent State of Denmark (in French) by Des Roche, 1730 , tom. ix. p. 431 .
In France they give, by way of contempt, the name of apothecary without fugar, to any apothecary, or merchant, whofe fhop, or warehoufe, is not well furnifhed with drugs or merchandize.
They alfo file fuch exorbitant bills, or accounts, of tradefmen, or others, upon which full one half muft be deducted, apothecaries bills: but this is only a proverbial expreffion.
The cuftom of the Chinefe on this occafion is well deferving our notice. They have a ftone, which is ten cubits high, erected in the public fquares of their cities, and on this ftone are engraved the names of all forts of medicines, with the price of each; and, when the poor ftand in need of any relief from phyfic, they go to the treafury, where they receive the price each medicine is rated at.
APPEAL, a law term, alfo pretty much ufed in trade by merchants. It fignifies to bring a caufe before a fuperior and lawful court, or judge, when a perfon thinks himfelf aggrieved by the fentence of an inferior judge, or court. There is nothing more authorifed than appeals, both by the civil and canon law. They fay, in traders affairs, fuch a perfon has appealed from the fentence of the confuls to the parliament, if in France, or to fome other proper court in other countries ; as in England, for inftance, there lies an appeal from the high court of chancery to the houfe of Lords. Appeals are often the refource of thofe whofe caufe is bad, when they would gain time. But then their appeal is often fet afide, the former fentence confirmed, and they condemned to pay coft. There is a limited time, within which the appeal mult be lodged, which time being elapfed, no appeal can be lodged. That time differs according to the feveral courts, or jurifdictions.
APPENZEL, one of the cantons of Switzerland, has the town and abbey of St Gall on the north, the county of Tockenburg on the weft, part of that county, and the bailiwic of Gams in the Grifons country, on the fouth, and Rheinthal on the eaft. It is filled with cattle, which yield great quantities of butter and cheefe, by the fale of which, and their linnen manufacture, the people chiefly fubfift.
APPIOS, the feed of a plant that comes from the Levant, par-
ticularly
ticularly from the ife of Candia. Its falks are very thin, and reddifh: its bloffoms are pretty much like thofe of rice Its feed, which is very fmall, is one of the commodities fold by the wholefale grocers in France and Holland.
Appios pays in France 50 fols duty of importation per 200 weight.
To APPRAISE, is to rate, value, and fet a price on goods. This is chiefly done, efpecially in France, when any merchandize, wares, or other goods, cannot be paid for, or produced in kind, in which laft cafe the value, according as it is appraifed, muft be paid.
APPRAISER, one who. rates, or fets, a value upon goods, \&c. He mult be a fkilful and honeft perfon. It is not a bufinefs of itfelf, but generally performed by brokers of houfehold furniture, to which fet of men the word was formerly, and I believe ftill is, chiefly applied ; yet now alfo uphollteyers, and other brokers, are employed, or even any perfon or perfons who are fuppofed to be filled in the commodities they are to appraife, or fet a value on.
They are employed in cafes of death, executions brought in upon goods, or of fock to be turned over from one perfon to another, or divided between copartners; and have the name of fworn appraifers, from their taking an oath to do juffice between party and party.
They fometimes appraife jointly, each party agreeing to have the fame appraifer, or appraifers; fometimes in oppofition, 'each party chufing one, or more, of a fide; and fometimes by commilion, or deputation, of truftees, mafters in Chancery, \&c.
Their manner is, each one for himfelf, to take an inventory of every article, and mark its value with his own private characters. When they have gone through the whole, they give their eftimates in a grofs fum, very rarely of particulars. When they value againft one another, if they happen to differ much, they reconfider, and at length moft commonly bring it to an average; and, in fome cafes, they are obliged to take the goods at their own valuation, if the parties fhall think proper to relinquifh them.
At Bourdeaux they call appraifers (appreciateurs in French) thofe clerks of the cuftom-houfe and of city duties, who appraife and rate the merchandizes which are imported or ex ported, in order to regulate upon what footing the duties of importation or exportation ought to be paid.
The cuftom-houfe at Bourdeaux is called the convoy, and the office of the city duties is called comptablie. The city duties are fuch as were granted by the French king to certain cities, eicher to pay their debts, or for their particular occafions.
The office of thofe appraifers confifts in the following parti culars.

1. They are obliged to keep a regifter, or memorandum book, marked and numbered by the director of the office, and to trancribe and enter into it all the declarations which are delivered from day to day at the office for receiving the city duties, without augmenting or diminifhing any thing in them but by the exprefs order of their fuperiors.
2. To deliver carefully as many receipts, or bills of entry, as there are articles in each declaration.
3. The merchandizes being entered and carried into the faid cuftom houfe, according to the order of thofe receipts, or bills of entries, the appraifers are obliged to open and vifit them, when the merchants require it, in order to know the quality and quantity of them; which being' found to agree both with the declarations and the bills of entries, the appraifers make a true eftimate, or evaluation, of each merchandize in particular, according to the market price of them.
4. They muft enter into their regifter their eflimate both of the weight and of the quality and quantity of the merchiandize, as they found them by their fearch, or vifit. And, as to thofe merchandizes which are weighed in the cuftomhoufe, the appraifers expedite them upon the report of the warehoufe keeper.
5. They are obliged, after appraifing the merchandizes, to deliver a fecond receipt, or bill of entry, which ferves the merchants to clear their merchandizes, either at the cuftomhoufe, if any duty be owing there; or at the office of the city duties; as allo what may be due for brokerage.
6. They ought to write the faid bills of entry upon the regifter of importations by fea; and, if there be grocery, they muft alfo regifter them in the regifter of receipts defigned for that purpofe, that the merchants may pay the duties owing for them at the cuftom-houfe, according to the printed tariff. And, with regard to the merchandizes that come from the weftern inles, the faid appraifers are obliged to regifter them all indifcriminately, in a particular regifter, as well as in the regifter of importations, by fea, with their appraifed price, except fugars, which are not regittered in the regifter of importations by fea, nor in that of the city duties, but only in a particular regifter kept by the receiver of the cuftom-houfe, as weil as that of the weftern inles
7. As for thofe merchandizes which are not carried to the cuftom-houfe, as deal-boards, and other timber coming by fa, the faid appraifers expedite them upon the report, and after the examination, of the fearchers of outward-bound fhips. Vol. I.

And, with regard to tar, gum, pitch, train-oil, herting: pilchards, \&xc. they expedite them according to the bill of lading: and, as for green or dried fifh, the appraifers expedite it according to the report of the cletks who were prefent at the unloading and landing of it.
8. At the end of every quarter they draw up an alphabetical lift of all the merchandizes imported by fea, that have been cleared at the ciuftom-houfe.
9. Finally; with regard to the merchandizes that come by land, the appraifers have feveral things to obferve, viz. as to thofe that come from the inland country by the boats of Thouloufe, Agen, and other places, they follow the fame rules and methods as with regard to thofe that cone by. Sea, excépt that they do not deliver bills of entries for thofe merchandizes, which is done by the clerks of the office of the city duties, after receiving the declarations.
As for thofe that come by the ftage-coaches, by carriers, by waggons, or other carriages, they clear them upon the certificates, or acquits, given by the clerks of the cuftom-houfe offices through which they paffed.
APPRECIATION, the eftimate made of things by expert people, when they declare the real value, or price of them. It is commonly faid in France of corn, provifions, and moveables only. Debtors are obliged to pay the things they owe, either in kind or in money, according to the appreciation, or valuation, made by knowing and experienced perfons.
APPRENTICE, a youth placed and bound with a merchant, tradefman, \&c. for a certain time, in order to learn commerce, trade, merchandizing, \&c. and all that relates to then, that be may, in time, become capable to fullow the profeffion of a merchant, trader, \&c.
Apprentices fhould obferve the ftricteft fidelity and fubmiffion to their mafters, and an inviolable fecrecy'in all their affairs. They fhould apply themfelves diligently to obtaih a knowledge in the feveral forts of merchandize wherein their matters traffic, and to be able to judge of their feveral qualities, their goodnefs, and their defects; to learn whence they came, how they were manufactured; whether at home or abroad; how bought, and at what price; and whether at firf hand, for ready money, or upon credit. And they are, alfo, perfectly to acquaint themfelves with the feveral weights and meafures of their own, and other conntries, refpecting their particular branch of trade; as alfo to perfect themfelves in all accountanthip requifite for therr employment. Moreover, it efpecially concerns them to obferve a civil and obliging deportment towards thofe with whom cheir mafters are concerned.

## Regulations of Apprentices in France.

Apprentices are obliged to finifh the time for which they were bound with their mafter. In France children of merchants and tradefmen are reputed to have finifhed their apprenticefhip, when they have actually lived till the full age of 17 years with their father of their mother following that profeffion, art. I. of tit. I. of the ordonnance of 1673 .
By the ftatutes of the fix corporations of merchants and traders at Paris, the time during which the apprentices are obliged to ferve their mallers is differently fettled. With hofiers they are obliged to ferve three years; with grocers, wax-chandlers, druggifts, and confectioners, alfo three years : with apothecaries, who make but one corporation with the three laft mentioned, four years: with trading jewellers thrce years: with kinners and fell-mongers four years: with capmakers and glovers five years; and with working-jewellers eight years.
In France all apprentices to traders of either of the fix corporations muft be bound before a notary-public, and none can take above one apprentice at a time.
When an apprentice is a candidate to be made free, of either of one of the fix corporations of merchants, or of fome one of the companies of arts and trades, he muft be of proper age. No man can be a' candidate to be admitted a merchant, unlefs he be full 20 years old, and produce his inderiture and the certificates of his' apprenticefhip, and of the mafters, or freemen, whom he ferved afterwards. If the contents of thofe certificates fhould not be true, the afpirant, or cardidate for his freedom, is for ever excloded from being made free, and the mafter with whtom he was bound, and who fhould have given fuch a certificate, would be condemned to pay a fine of 500 livres, and thofe who gave the other certificates, 300 fivres.
He who arpires to the freedom muft be examined upon the keeping of books and regifters, with fingle or double entries, upon bills of exchange, the rules of arithmetic, the parts of the ell, the pound, the marks upon meafures and weights, and upon the qualities of merchandizes, as much as is requifite for that branch of commerce which he defigns to follow. Private perfons and corporations are forbilden to take, of receive, from the afpirants any prefents for their admiftion, or any other fees, but fuch as are ordered by the flatutes, under any pretence whatoever, upon pain of a fine, which muft not be lefs than 100 livres. The afpirant is alfo forbidden to give any treat to any of the members, upon pain of having his admifion made abfolutely yoid.

X
Befdea

## A P P

Befides thefe general regulations, extracted from the third, fourth, and fifth articles of the firft title of the ordonnance of the year 1673, each of the fix corporations of merchants has particular ftatutes, or by-laws, for regulating the time of apprenticelhips, and that of ferving with mafters, or freemen, as alfo with regard to their mafter-piece of workmanhip; but few of them are fubject to thofe by-laws; and, as they are not mentioned in the ordonnance, it was judged that the reader would not be difpleafed to meet with them in this place, that he may fee, as it were with one view, all the obligations which thofe lie under who afpire to the freedom in every one of thefe corporations.
In the corporation of the draper-hofiers, which is the firft of thofe fix corporations, the alpirants, or candidates, for the freedom are not obliged to make a mafter-piece; it is fuffcient that they have ferved a merchant-draper three years as apprentices, and two years after their time was up, which make but five years in all.
Though the apothecaries, grocers, druggifts, confectioners, and wax-chandlers, make but one corporation, which is the fecond of the fix, yet the afpirants are obliged to different things, according to the trade they defign to follow in that body.
They who afpire to pharmacy, or the apothecary's trade, muft ferve four years as apprentices, and fix as journeymen, with fome mafter or freeman, to years in all: befides which, they muft be examined, and perform a mafter-piece.
As for thofe who afpire to be admitted druggifts, grocers, wax-chandlers, or confectioners, they need not ferve above three years as apprentices, and as many as journeymen, fix years in all ; nor are they obliged to make a matter-piece.
In the corporation of wholefale merchant mercers-jewellers, which is the third of the fix, the aspirants are not bound to any mafter-piece; it is enough, in order to be made free of the company, that they ferved a merchant-mercer three years as apprentices, and three years more as journeymen.
Befides the apprentices belonging to the fix companies of merchants, there are alfo apprentices to all the companies of arts and trades, viz. the feveral mechanics, in the city and fuburbs of Paris. They muft all, as well as the former, be bound before a notary-public; and they are obliged, after their time is expired, to ferve their malters a little longer as journeymen. The time of their apprenticefhip, as well as that of their ferving as journeymen, differs according to the different fatutes of thofe feveral companies. Nor is the number of apprentices a mafter may have at a time fixed, fome trades having more, others lefs.
No apprentice can obtain his freedom, unlefs he has required, and performed, his mafter-piece of workmanfhip.
The widow of a freeman may continue to keep the apprentices who began their time under her hufband, but fhe cannot take a new one.
In feveral companies, a widow who marries an apprentice makes him free of her late hufband's company.
The apprentices, in thofe cities where there are fworn mafters of companies, can be made free of their company at Paris, by performing a mafter-piece, after they have worked fome time with a freeman, more or lefs, according to the fatutes of each company.
The reader may fee, in the articles which treat of the feveral arts and trades of Paris, what difference there is among them with regard to apprentices.

## REMARKs.

The cuflom of the French, in regard to apprentices, is worthy the imitation of other nations.
Their obliging them to ferve as journeymen a number of years, after the expiration of the term of their apprenticeihip, the more gradually qualifies them to become their own independent mafters; whereas, when a young raw fellow, juft out of his time, commences mafter at once, and takes full poffeffion of his fortunes, we daily fe them plunge themrelves into inextricable calamities; which, in all probability, they would have avoided, had they been obliged by the law to have ferved as journeymen to their refpective mafters a few years firt, and by that means have been infenfibly habituated to liberty, under their care and controul.
Wherefore, for a young man to ferve lefs time as an apprentice to particular employments, in order to ferve a few years afterwards as a journeyman, feems to be policy better calculated to preferve youth from dangers, than the cuftom of England, of obliging them only to be apprentices, and not journeymen at all, unlefs at their own option.
One-and-twenty years of age feems to be too foon for a young man to have the uncontroulable management of an handfome fortune in trade, efpecially by immediately coming from a ftate of fervitude to that of felf-maiterhip.
The commerce of a nation depending on the excellency of its manufactures, and thofe again on the Ikill, ingenuity, and dexterity of its manufacturers and artificers of every kind; on thefe confiderations we may prefume, that the French have made fuch fevere laws, to oblige their artifts to make themrelves thorough malters of their refpective trades, and to ex-
clude them from the freedom of the feveral corporations of arts and trade, unlefs they are capable of performing with their own hands what they call a malter-piece of workmanfip; that is, fuch a piece of workmanhip that will fhew a young man mafter of his bufinefs; and this muft not be done in a corner, but in the prefence of thofe fworn for that purpofe.
Nor is any kind of treat, or entertainment, to be made, that might in any thape influence or corrupt the heads of thofe corporations, to connive at want of ikill, and to grant the honour of the freedom, except to thofe only who really merit it, both by their ingenuity in the bufinefs, and by their faithful and diligent fervitude during the time of their apprenticefhip: fo that, to obtain the freedom in thefe companies, is not a matter of form and expence only, but a demonftration of true merit, and attended with great advantage to the arts and manufactures of the kingdom, as well as credit and reputation to the artifts themfelves. It is no wonder, therefore, that by thefe, and fuch like wife meafures, the commerce of this neighbouring kingdom fhould grow to fuch a height within the compafs of little more than half a century.
The national benefit of this policy will further appear, from confidering the difadvantage Great-Britain muft inevitably fultain in her commerce, were her manufacturers to degenerate in their ingenuity and dexterity. -This lofs is not foon retrievable. This would prove no lefs injurious to the kingdom than tranfporting themfelves out of it to other nations. Notwithftanding the apparent advantages which attend the nation from the fkill of its artificers and manufacturers, we have no kind of public encouragement for them, either to keep them from going abroad, or to reward them for excelling at home.
It is in every one's mouth, what advantages Scotland and Ireland have reaped of late years by their infant manufactures, in the donation of fmall premiums to roufe and excite their manufacturers to excel. But, in England, we are vain enough to imagine that we have no improvements to make; that we have arrived at our acmé of perfection. 'Tis to, be wifhed that this felf-fufficiency may not make us degenerate. To prevent which, fome fmall public premiums, beftowed annually on our artifts and manufacturers, might not a little conduce. Whatever advances in trade are made in England, muft be done by private people, upon the ftrength of their own ability, or the nation muft go without them.
Though thefe fuggeftions are chiefly relative to the rifing generation of our manufacturers and artifans in general, yet every man of fenfe will naturally make the tranfition from thofe to ranks of young people bred to trade in a different and in a fuperior clafs: we mean fuch as are bred merchants, wholefale dealers, fhop-keepers, warehoufemen, \&c. for the clerks and apprentices of thofe ftand in as much need of being fpurred up to excel, as thofe of the manufacturers and mechanics.
However fight fome people may make of thefe confiderations upon apprentices, yet the breeding up our young people properly to trade, in every branch of it, feems a matter of the laft confequence to a trading nation; and may, one time or other, be found worthy fome people's thinking of, when they are once convinced of this important truth, that traders alone are the great fource of all their treafures, and confequently of all their fplendor and magnificence.

## Condition of a bond that an apprentice fhall perform, \&c.

( Whereas by indentures of apprenticelhip, bearing date the ' 20th day of May now laft paft, Adam Aif the younger, one ${ }^{6}$ of the lons of the above-bounden Adam Afh the elder, is

- become bound as an apprentice to the faid Bryan Bufh, in
- the trade, art, or employment of a hofier, for the term; or
- Space, of feven years, from the day of the date thereof, as
< by the fame indentures may appear. Now the condition of - the above-written obligation is fuch, that, if the faid Adam - Afh the fon thall and do, from time to time, and at all - times during his faid apprenticelhip, well and truly obferve, " perform, fulfi, and keep, all and every the articles, cove' nants, claufes, and agreements whatfoever in the faid re-- cited indentures contained, and which, on his part, are to - be obferved, performed, fulfilled, and kept, and fhall and - do, from time to time, and at all times during the faid - term, be faithful and juft to the faid Bryan Bufh, his exe-- cutors, adminiftrators, and affigns, in all his the faid Adam - Afh the fon's buying, felling, accounts, reckonings, re' ceipts, payments, and all other his doings and dealings in - any wife relating to the faid trade or employment, or the ' affairs or bufinefs of the fame, and in all ohher matters and
- things wherein as an apprentice, or fervant, he fhall, or may, - be employed by, or concerned for, on the behalf of, ' the faid Bryan Buih, his executors, adminiltrators, or - affigns; then this prefent obligation to be void, and of none ' effect, \&c.' Horfman's Precedents in Conveyancing, vol. i. p. 282.

APPRENTICESHIP, the time during which apprentices are obliged to continue with the merchants or tradermen with whom they are bound. Their indentures ought to be recorded in the regifter of the company, or body, to which

## $A Q U$

their mafters belong; and their time does not begin but from the day on which the indenture is regiftered. No one, in France, can be admitted a tradefman, unlefs he produces his indenture, and the certificates of his apprenticeflip. Art. 3. of tit. I. of the ordonnance of the year 1673.
The French give the name of apprentife to a maiden, or woman, who binds herfelf for a time with a miftrefs, before a notary-public, in order to learn her art, or trade, almoft after the fame manner as apprentice-boys.

## British Laws relating to apprentices.

And with os it is enacted, by ftat. 8 Ann. cap. 9. fect. 32. that there fhall be paid the duty of fixpence for every pound, of every fum of 501 . or under, and twelve-pence for every twenty fhillings of every fum more than 501 . which for five years fhall be paid, or agreed for, in the putting out any clerk, apprentice, or fervant, to learn any profefion, trade, or employment; and proportionably for greater or leffer fums, to be paid by the mafter or miftrefs.
Sect. 35. The full fum given, or agreed to be given, with an apprentice, \&c. fhall be written in words, at length, in the indenture, \&c. which muft bear date on the day it was executed, upon pain that every mafter or miftrefs, offending in thefe particulars, fhall, for every offence, forfeit double the fum given, or agreed to be given; one moiety to the crown, the other, with cofts, to him who will fue within one year after the time limited for fuch clerk, or apprentice, to ferve his mafter, \&c. is expired.
Sect. 37. All indentures, \&c. of apprenticefhips, which fhall be executed in any other part of Great-Britain, thall, within two months after they are executed, be brought either to the head office, or to fome collector of the famp duties; and the duty thall be paid; and, in cafe the payment thall be made to the receiver-general, the indenture fhall be famped; and, in cafe the payment thall be made to a collector, he fhall endorfe in words, at length, a receipt of the money paid to him, and fubfcribe his name.
Sect. 38. Every indenture fo indorfed, if it is executed within 50 miles of London, thall, within three months after date, but, if executed at a greater diftance, then within fix months after date, be brought to the faid head office, where (the fame being produced with a receipt indorfed) it fhall be ftamped. Sect. 39. Indentures wherein the full fum agreed on hhall not be inferted, or the duties not paid, or not ftamped, or tendered to be famped, thall be void, and the clerk, or apprentice, thall have no privilege of freedom, or ufing his trade. Sect. 40. Money given to put out apprentices, either by parifhes or public charities, fhall not pay any duty.
Sect. 41. Forging the ftamps, or any receipt for monies pay'able by this act, is felony, without benefit of clergy.
SeCt. 43. No indenture, \&c. thall be admitted in evidence in any fuit to be brought by the parties thereunto, unlefs he for whom it, fhall be given in evidence firt makes oath, that, to the beft of his knowledge, the fum therein mentioned was all that was paid, \&c. on the behalf of the apprentice, for the benefit of the mafter, \&c.
Sect. 45. Where any thing fhall be given to a mafter, not being money, the duty fhall be paid for the full value thereof.
AQUA FORTIS, and the fpirit of nitre, are the fame, and differ only in the manner of making. The former is diftilled with vitriol and colcothar, the other with clay, bole, oil of vitriol, brick-duft, \&sc.
The generality of aflay-mafters ufe aqua fortis, as being more eafily prepared, by reafon that a quantity of vitriol much lefs than the terreftrial mixture before-mentioned, and with lefs fire, feparates the firit out of the fame quantity of nitre.

## The difillation of aqua fortis is performed as follows, viz.

Put vitriol into an earthen, or iron pot : if you make a fire under it, the vitriol begins to melt and fmoak; by increaling the fire gradually, it thickens, and affumes an afh colour. Let it be ftirred with a twig jut before it becomes folid, till it be perfectly dry; but let it be taken as yet boiling out of the pot, for, if it grows cold therein, it will ntick fo faft that you will hardly be able to get it out. Pound to a fubtile powder three pounds weight of this calcined vitriol, and mix them well with four paunds of nitre well dried, and pulverized very fine. Put thele together in a cucurbit, or retort, or an iron pot, and then put it in a furnace.
At firft let the fire be made not much greater than is neceffary to boil water. When the recipient grows warm, continue the fame degree of fire, till all the phlegm is expelled, which you will know from the diminution of the heat of the recipient: increafe the fire gradually, till you fee a few yellow vapours arife. Keep up the fame fire for an hour or two, and make it fo ftrong as to warm the veffels moderately. Continue this for fome hours, and, letting the veffels cool, pour the liquor, now emitting reddifh fumes, out of the recipient into a glats veflel, having a glafs ftopple: this liquor, thus prepared, is your aqua fortis.

## $A Q U$

## Remarks

On the ure and application of aqua-fortis in divers cales.

1. In this operation you mult always proportion the duration of the degrees of your fire to the quantity of the matter to be diftilled.
2. For fecurity's fake you muft leave, in the clofure of the recipient and veffel that contains the matter to be diltilled, a hole, which may be ftopped and opened with a wooden peg: for, if you happen to exceed the juft degree of fire, efpecially in the beginning of the operation, the firft and more fubtile pirits, which are very elaftic, come forth; the opening, herefore, of the hole may give them a paffage, left the veffels thould burtt, which would be very dangerous.
3. The better your nitre is refined, the better will the aqua fortis be. Avoid carefully the mixture of fea-falt therewith, for the reafon we thall give, when we treat of aqua regia. 4. There are many other ingredients ufed in the making of aqua fortis, fuch as burnt allum, fand, and the like; the reafon whereof is, to hinder the fpecies, which may happen not to be fufficiently calcined, from foaming, and from breaking the veffel with great violence. But, when thefe fpecies are duly calcined and dried, thefe additions are quite needlefs; and, indeed, by overfwelling the mafs to be difitiled, require veffels of a fize proportionable.
4. There are many other needlefs and noxious ingredients ufed by fome in the making of aqua fortis. Thefe are blood-ftones, unflaked lime, plume allum, \&c. all which fhould be avoided, they making a much worfe, as well as a more expenfive, aqua fortis. Water thus made, therefore, fhould never be ufed in docimaftical operations, before it has been accurately tried: for, aqua fortis being tainted with thefe heterogeneous matters, the major part of it confumes away, and becomes frequently fo fixed, that the ftrongeft fire is hardly able to take off any of it. Nothing fhould be ufed befides calcined vitriol, intimately mixt with nitre, there being no need of any thing elfé.
5. However, bole, clay, and brick-duft do expel aqua fortis out of nitre, which then is called the fpiritus nitri; but you muft add four times as much of thefe, in proportion to the nitre : confequently, this method, requiring larger veffels and more fire, cannot be fo profitable as without thefe ingredients.
6. As the extracted fpirits of nitre are with difficulty condenfated into drops, efpecially in fultry weather, it will be proper, by reafon of the calcined ingredients, to pour into the recipient one quarter part of pure water, or rather of the phlegm, extracted out of the aqua fortis; by which means the Spirits will be much eafier received.
7. Aqua fortis diffolves and corrodes all gritty flones, and the feveral kinds of thofe that are vitrificable, and not confumed by fire; but it has no power on flints nor fand.
8. It alfo diffolves iron, copper, lead, filver, mercury, regulus of antimony, bifmuth, and zink; tin imperfectly; gold not at all.
9. Common aqua fortis, when poured on filver, generally grows troubled in the beginning of the diffolution; and, a little after it is perfect, a precipitation of a whitifh powder is made.
If this powder, taken by itfelf, melts in the fire with pot-afh, you will find a regulus of filver collected. This fometimes melts with difficulty in the fire, and has all the charaEteriftics of calx of filver precipitated from aqua fortis, by oil of vitriol.
This happens, becaufe the aqua fortis has been extracted by too great and too long a fire, or becaufe too great a quantity of calcined vitriol has been ufed, or becaufe the mixture of the nitre and vitriol has not been rightly made: for, in thefe cafes, there appear, when the diftillation draws at an end, opaque, milky, vitriolic fumes in the recipient; which phænomena fufficiently manifeft the caufe of the aforefaid precipitation. The abovementioned calx very feldom proves fluid in the fire; it afterwards turns into horn-filver, and fhews that the impure nitre, bought for the diftillation of the aqua fortis, was intermixed with marine falt, which adulteration fhould be carefully guarded againf.
II. As the diflolution of filver, efpecially that by which gold is feparated from filver with aqua fortis, is confiderably bindered, and made very uncertain, by this kind of precipitation beforementioned; that part of the oil of vitriol, and of the firit of falt, which fpoils the aqua fortis, mult be feparated; which is done in the following manner.
Pour about one thirtieth, or one fortieth, part of the aqua fortis to be purified, into a fmall cucurbit, and over a gentle fire diffolve filver in it, so fuch a quantity as may fully faturate the aqua fortis. If in the beginning of the diffolution the troubled aqua fortis looks milky, it wants purification: then pafs through a filtre the warm diffolution, which, being clear, pour drop by drop into the relt of the aqua fortis that is to be purified: this will become milky, as before; continue to inftil the aqua fortis till the dropping in of the fmalleft drop doth
not at all difturb it, or render it milky. Let it reft for fome hours, that the precipitated calx may fubfide; which done, again let'a drop fall, and repeat it conftantly, till at laft the milky cloud is no longer produced by the falling of the drop. Decant ine pure and limpid aqua fortis from the calx which fubfided at the bottom, or ftrain it gently through a four folded filting paper, which ought to be fmall, left it hould break, by being over-loaded with too much of the aqua fortis. The remaining calx is fuch as we have mentioned in remark 10 , and the aqua fortis is perfectly purified for ufe.
10. Some are wont to cmploy common filver mixed with copper, or copper alone, for the precipitation of the fpirit of marine, or vittiolic falt, from aqua fortis: but this does not marine, or witrione firit of marine falt is to be precipitated, becaufe this being mixed with aqua fortis diffolves copper perfectly. The oil of vitriol is, indeed, expelled from the aqua fortis by means of the copper, in the form of a whitifh duft, but not fo perfectly as by filver; otherwife it appears in this operation that the precipitating body adheres to that to be precipitated, and finks to the bottom together with it, and therefore cannot be a proper precipitator on this occafion.
11. The beft aqua fortis is ofen tinged with a greenifh colour, occafioned by being expofed for fome days to the open air, and thus deprived of its fuming red fpiit, by pouring upon it fome frch frong aqua fortis, ftill emitting its fumes; or by being diluted with water.
That you may be certain this colour does not proceed from copper, pour a litile of the liquor into a fmall cucurbit, and add to it as much of an alkaline diffolution, or fpirit, as is fufficient to facurate the acid: if there is ever fo little copper, the colour becomes of = very dark azure, with a cloudy precipitation; becaufe the nitre has been thereby.regenerated, which docs not difiolve copper fo much as aqua fortis does: but, if there is no copper, the colour vanifhes intirely.
12. Aqua fortis, prepared and corrected according to what has been faid, mult be concentrated to a certain degree: for, if it is too weak, it either retards the diffolution, or often does not even affect the filver.
If, on the contrary, it is too ftrong, it vanifhes into fumes which rufh violently out of the veffels, though fufficiently deep, hurrying part of the filver along with them; but, if there is any thing of gold in the filver, it is corroded into a duft, the perfect collection of which is afterwards very diffcult. The firft fault is remedied by pouring the aqua fortis into a deeper cucurbit, and by extracting the phlegm out of it, over a gentle fire, till you fee yellowifh fumes appear ; but, to find out whether it is too frong, you are to ufe the following method:
Melt together one part of gold and four parts of filver, of which make a plate, which you are to cut into three, or more parts; roll up each part, that it may more conveniently be introduced into a fmall cucurbit: when rolled up, and flightly heated at the fire, put this fmall plate into the faid cucurbit; pour upon it aqua fortis, about the triple of the weight of the metal, and put it on a gentle fire: if then the filver is eroded from the gold, fo that the gold remaining retains the very fame figure of the plate rolled up, and there appears no reddifh duft at the bottom of the veffel, then the aqua fortis has the proper degree of ftrength : but, if the diffolution has been made with fo much violence that the powder of the gold was eroded, or the plate almoff broken, the aqua fortis is too ftrong. In this cafe, you muft dilute it with one tenth or eighth part of pure water, or rather of weaker aqua fortis, or of the phlegm that was extracted from it: which done, you muft repeat the trial of the diffolution of a like fmall plate feveral times over, till the filver be difolved without the leaft diminu. tion in the gold, whereby you may be fure of the requifite degree of ftrength in your aqua fortis.
13. Aqua fortis is excellent when it comes again after having been by fire expelled out of diffolved metal, becaufe it may be almoft intirely fetched out of it by diftillation. In order to this, you introduce into a middle-fized glafs cucurbit, adapted to an alembic, with an hole in it, one pound; or one half pound, of the fame diffolution, and diftil it into' a large recipient, that the drops may fall one after the other, at the interval of fome feconds : when the phlegm of what remains thall be drawn off to fome ounces, let the like quantity of a frefh diffolution, gently warmed, be put anew into the cucurbit, and be drawn off again; and let the pouring on of the freft diffolution be reiterated in the fame manner; , till it is all grown thick.
This muft be done in a fmall cucurbit, feveral times over ; left a large veffel being overcharged with too great a quantity of the diffolution, fhould burf all of a fudden, and the aqua fortis and metal be loft at once. When, ifter the extracting of all the phlegm, yellowifh fumes begin to appear by increafing the fire a little, let a drachm, or half a draim, of fuet be added, left the remaining metal, being dried up, thould fo ftrongly adhere to the fides of the veflel as' that it could not be taken off: when at laft the mats thall be quite dry, let is be put on the fire till it becomes red hot. The cilx of metal which remains at the bottom of the cucurbit mult be collected, and melted with pot-afh, or borax.
14. When pure fine filver is difflved in proof aqua fortis, the liquor will be pellucid: but, if any allay, or copper, femain mixed with it, the folution will have a bluifh; or greenifh caft. If this folution of perfectly pure filver be difuted with fair water, it will fill remain pellucid, without letting any thing precipitate. But, if any faline matter be contained in the water, the whole will now turn thick, or milky. The folution of pure filver, properly weakened with water occalionally, may be commodioully ufed for ftaining the ikin, or other animal fubftances, black; and if white, grey, or red hair be moiltened with it, the hair will foon become of a beautiful brown, or jet-black colour; for which purpofe it may be ufed with fafety, care being taken not to touch the Ikin therewith, for thus a blacknefs wauld be occafioned, that requires many days before it goes off again; but it difappears at length, by the fcarf. Niv fcaling off, without caufing pain, or leaving any fore behind.
15. The folution of pure filver has an intolerable bitter tafte, though by the eye it be not diftinguifhable from fair water: whence we have an eminent inftance how metals may be concealed from the fight, or remain lodged in unfufpected liquors, and thence be introduced invifibly into other fubftances; whence the greater caution fhould be ufed with all pretenders to the melioration and tranimutation of metals.
16. This folution of filver is the foundation of feveral medicinal and chemical preparations, as the vitriol of filver, the lunar cauftic, the filver pill, E*
17. The filver is recoverable from this folution, barely by fufpending a copper-plate therein: for, copper being more eafily diffolved by aqua fortis than filver, the filver is therefore precipitated to the bottom, in the form of a powder, and, being wafhed and melted, comes into a metalline lump again.
18. Fafchius fays, in treating of the fediments of depart-waters*, that if gold, by quartation, be mixed with filver, and again feparated from it with aqua fortis, it will conftantly be found to have increafed its weight; which increafe he attributes to the filver adhering to the gold ; but it fill remains for experiment to decide, whether this additional weight be truly owing to the filver, or whether it be an' iucreafe of real gold. For more matter hereon fee the articlés Refining and Gold and Silvier.

* Probier-Buchlein, page 64- ed. 1678.

22. Agua fortis is alfo ufed as an infrument in gilding. See
the article Gridivg. the article Gitiding.
It is applicable to the art of dyeing likewife. See the article Dyeing. The fipit of nitte is found to heighten and improve the rich colour of cochineal into the brightnefs of burning fire, but then its acrimony muff be rectified with a proper application of tin, after which it neither hurts wool nor fllk, yet retains all its brightnefs.
Agua Secunda: it is aqua fortis which has loft part of its diffolving quality, after being ufed in the parting of metals.
Aqua Regia, or Aqua Regalis, or Aqua Regis, as fome call it, is a ftrong corrofive firit, which diflolyes gold. The method of making it is as follows, viz.
When the firitit of nitre is duly prepared, as under the head aqua fortis, the firit of fea-falt muft alfo be prepared. See. that article under Salt.
When thefe two fpirits are mixed together, the mixture is called aqua regia. Or, to have it excellent, put into a glafs retort aqua fortis of the beft kind, well proved, and of the requifite ftrength, according to what has been faid under aqua fortis; add to it half the quantity of common falt, perfectly dry, and pulverized; in a fand-bath force up the fpirits, firit by a flow, and afterwards by a ftrong diftillation. Or, if you put into aqua fortis one quarter part of falt-ammoniac, it immediately affumes a yellow colour, and emits abundantly the white vapours of the fpirits of falt, which foon produces true aqua regia.
However, you are to take care, in this fecond method, that the veffel containing the mixtore be not prefently thut up clofe, for in that cafe it would burff. Befides, this mixture muft be made under the chimncy, left the fuffocating firits fhould pread all over, and fill the laboratory, and prove injurious to the operators.
Aqua regia diflolves perfectly iron, copper,' tin , gold, mercury, regulus of antimony, bifmuth, and zink : it diffolves even lead more than 'piritt of falt daes; it becomes, however', fomewhat troubled in the operation.
If it has its requifite degree of ftrength, it does not diffolve filver; but, if you have put into the mixture a quantity of falt-ammoniac, or of marine falt, or of firit of common falt, not fufficient, it then corrodes filver, nay, it even diflolves it in part, this aqua regia being imperfect.

## RemARKs.

The realon is then felf evident why, in the feparation of fiver and gold by aqua regia, it is better to ufe a quantity of firit of falt, or of marine falt, or of fals-ammoniac, exceeding,

## $A Q U$

## A R A

than one hort, of the right meafure: nor is it lefs evident thence, whly an exact feparation of filver and gold is better effected with aqua fortis than with aqua regia; as the former never corrodes gold, whereas the latter corrodes filver frequently.
The folution of gold by aqua regia is yellow, or gold coloured, and tinges the fin purple, as we have obferved, under the article aqua fortis, that the folution of filver ftains it black. It may be further added, that, if the folution of gold be precipitated with falt of tartar, and the powder be carefully dried, it makes the aurum fulminans, fo called from the violent explofion it goes off with, when heated beyond a certain degree. See the article Gold.
If gold be diffolved in aqua regia, made by diftillation from equal parts of: falt-ammoniac and nitre, either with or without powdered brick, or calcined fints, and the folution be digefted, and reveral times cohobated, with the addition of frefh liquor, Becher affures $\mu s{ }^{*}$, the gold will thus become totally volatile.

- Rofet. Chymic. exp. $x$. page 192.

A fimilar, or ftill more potent menftruum, is given us by Caffus $\dagger$; who, mixing pure nitre with oil of vitriol, thence diftils a fpirit, and, obtaining another in the fame manner from common falt, he joins the two fpirits together. In this fpecies of aqua regia he diffolves gold, then draws off the menffruum, till a melaginous fubftance remains behind, to which he again adds as much of the aqua regia as makes up the former quantity; then again abftracts, and fo repeats this cohobation thrice. Laftly, he mixes, along with the remaining melaginous matter, twice its weight of well-dephlegmed ail of vitriol, and, by diftilling it in a ftrong heat of fand, there afcend, as he expreffes it, moft elegant rubies; which exprefion is not fo extravagant as it may appear: for Kunkel $\ddagger$ allo tells $u s$, that, by pouring a little oil of vitriol into a folution of gold, and diftilling it over with a ftrong fire at laft, a portion of the gold will not only afcend in the form of red drops, but alfo fublime to the top of the cucurbit, in the appearance of feathers, or Howers, tinged of a moft beautiful red: but, if thefe flowers are touched by the open air, they again run into a yellow-coloured liquor.
$\dagger$ And. Caff. Tractat. de Ayro, pag. ror.
$\ddagger$ Contra non entia Chymic. non eins. 13. p. 10j. See alfo Boyle's Abridgment, vol. i. p. 458,459 , 8cc.
The fame Caffius $\oint$ likewife adrances a quicker method of volatilizing gold, by means of the fmoaking fpirit $\|$, which in the fpace of an hour, fublimes it into yellow flowers. In order to this, he evaporates a folution of gold made with aqua regia, till it leaves only a little purple cake behind; upon this he pours the fmoaking fpirit : then, clapping the head upon the cucurbit, be diftils in hot fand; and, as foon as ever the matter comes to be agitated by the heat, the fmoaking firit very impetuoully carries up the particles of the gold, and fublimes along with them into yellow round flowers.
${ }^{5}$ Caff. de Aure, pag. 101, 102.
II See pag. 218, 219 .
There are certain other powders, or crocuffes, prepared from gold, called croci folis, being principally of three different colours, and having four different ufes.
The firft is a black, or dufky powder, that ferves for extemporaneous gilding. The fecond is of a faffron colour, being made with aqua regia by exhalation, commonly called the calx of gold, and ferving for various purpofes of amalgamations and extractions; but becomes the third, when made with aqua regia by precipitation: 'tis of a yellow colour, and called aurum fulminans, which is of ufe in medicine: and the fourth is a purple powder, made of the aurum fulminans.
The manner of preparing the firft is this: having made a folution of gold in five or fix times its quantity of common aqua regia, let clean limnen cloths be dipped therein, and dried, continuing, or repeating, the operation till all is foaked up. Then put the cloths into a little crucible, and burn them with a fmall and gentle ignition, and keep the remaining matter for ule, under the form of a fine black powder; a little of which being taken up with a wet cork, and rubbed upon a plate of filver, will immediately gild over the metal; though it muft be obferved, that more gold is confumed in this way than in the common one of gilding by amalgam. See the article Girding.
The fecond, or faffron-coloured calk of gold, is made by diftilling, or evaporating to drynefs, a folution of the metal made in aqua regia; the fire being at laft increafed fo as gently to ignite the remaining matter.
The third, or yellow calx of gold, is prepared by gently pouring oil of tartar per deliquium into a folution of the metal made with fuch aqua regia as contains falt-ammoniac, by which means the gold is precipitated in the form of a yellow powder. After the liquor, therefore, has ftood a proper time to fublide, the clear part thereof that floats above the powder is decanted, and the fediment feveral times edulcorated with hot water, and at laft permitted to dry with a very foft and gentle heat.

Voi. I.

If a little of this powder be laid upon an iron, or any other metalline plate, placed over a candle, or a parcel of burning coals, it takes fire, and goes off with a very finart report, and fo ftrong an impetus, as to frike a remarkable cavity in the plate. From which phenomenon fome have imagined that this powder had a tendency, contrary to that of fire, downwards, though, in reality, the explofion is made quaquaverfum, or in all dimenfions alike *.

* See Boyle's Abridgment, vol. ii. page 519 ; and Memoires de P'Acad. de Scienc. an. 1719.

The fourth is made by mixing, or gently grinding, common fulphur, or the flowers of it, along with this aurum fulminans, and afterwards melting the mixture with a foft heat, which at laft is to be fo far increafed, as to fet on fire, and burn out the fulphur, whence a purple powder will be left behind.
Aqua Simplex, or fimple water, is aqua fortis that has been diftilled, and has nothing left but phlegm. It is ufed in the mint and by filverfmiths, in order to begin to foften the grains of filver.
Aqua Extincta, or extinguifhed water, is aqua fortis into which fome river water has been poured, in order to qualify it and render it lefs corrofive. Its ufe is to get the filver from the aqua fortis that ferved to part gold from it.
Aqua Marina, a precious ftone found along fome parts of the coalt of the ocean. It is of a pretty beautiful fea-green, which it is thought to acquire by being tofled up and down on the fand by the tide's ebbing and flowing. It is almoft as hard as the oriental amethyft. See Amethyst.
AQUA. VITA, is commonly underfood of what is otherwife called brandy, or firit of wine, either fimple, or prepared with aromatics.
Some, however, dilinguilh between them, appropriating the term brandy to what is drawn from wine, or the grape, and aqua vite to that drawn after the fame manner from malt, $\xi_{c}$.
ARABIA, is bounded on the eaft by the Arabian, or Perfian gulph, and part of the Arabian Sea; on the weft by the Red Sea; on the north by Paleftine and Syria Propria; and, on the fouth, by part of the main ocean.
The whole country is by the moderns, as it was by the anncients, divided into
I. Arabia Deserta, or Desert.
II. Arabia Petrafa, or Stony.
III. Arabya Foelix, or Happy.

The product of Arabia is aloes, caffia, fpikenard, frankincenfe, myrrh, manna, and other valuable gums, cimnamon, pepper, cardamum, dates, oranges, lemons, pomegranates, figs, and other fruits; honey and wax in plenty: and in their feas they have a great quantity of the beit coral and pearls. The people here have no fettled habitations, except on the rea-coafts, where their cities and towns are more regularly built and inhabited, and more given to traffic. Some of them, near to Syria, are a little more orderly than the reft, and get a living by making of pot-afh.
Though the far greater part of the nation live in a wild favage manner, and addict themfelves to plunder, yet there are many of them, efpecially fuch as live in towns, that apply themfelves to trades and commerce, and to arts and fciences, in which they generally excel. The Ifhmaelites had formerly fpread themfelves over moft part of Arabia, and had fallen very early into the way of trading into Egypt, and carrying thither fpices, balm, frankincenfe, myrrh, opium, and other rich commodities; and thele are likewife obferved to bave gone in troops, or caravans, and to have ufed camels for their carriage, as the merchants do at this time of day. But, as there was but a fmall number of them that carried on any fuch trade, fo the reft lived, like fome of the prefent Arabs, upon plunder and rapine, and were, like them, a vagabond race of men.
Having premifed thus much of Arabia in general, we fhall now fpeak of it more diftinetly, with refpect to its threefold divifion.
I. Arabia Deserta, according to the modern geography, is bounded on the eaft by the province of Diarbeck, or Mefopotamia, and the Perfian territory of Hierak; on the weft by Paleftine, or Sowrieal, Souriftan, and Arabia Petrea; on the north by the river Farat, or Euphrates, which parts it from Diarbeck, and by Palmyrene, or part of Syria; and, on the fouth, by Arabia Foelix, from which it is divided by a long chain of mountains. This is properly enough called the Defert, it being almof every-where interfected by high barren mountains, many of its planes being nothing but great fands and heaths, through which thofe that travel mult not only cary provifions, but fteer by the ftars and mariner's compafs. Guiland Melchior, who had gone through fome of them, tells us that there are neither men, beafts, birds, or trees, grafs, or pafture to be feen, or any thing but vaft rolling fands and craggy mountairs: but that the lands that lie on the eaft fide along the Euphrates afford both plants and food for the inhabitants of divers cities and towns feated in that part. There are, likewife, fome planes and vallies, that feed a great number of heep and goats, and other fuch fmall catrle which love to browfe upon fuch dry lands.

## AR A

The whole Arabia Deferta is divided into three principalities, viz.
: Anna, whofe chief cities are, Anna; on the Euphrates, the capital; Mefcheid-Ulfin, Sumícabac, Thema, Anna on the Aftan, Balfora, and Tangia.
2. Argia, whole chief towns are, Argla, the capital, Faraa, Maaden, Thaalabah, Aladi Dhath-Aliantin.
3. Chavabeda, whofe chief towns are, Chavabedah, Tangia, Merah, Megiarah.
Anna, was formerly a famed mart-town, but now not much frequented. It flands on the river Euphrates, in a fruifful and pleafant foil, and hath but two freets, which are divided thereby: that on the Mefopotamian fide is about two miles long, but thinly peopled, and by none but tradefmen and journeymen; that of the oppoftre fide is above fix miles in length, and it is there that the principal inhabitants of the city dwell. Every houfe hath fome ground belonging to it, and thefe grounds are loaded with noble fruit trees, as lemons, oranges, citrons, quinces, figs, dates, pomegranates, olives, \&c. very large, and in great plenty. Some of the flat grounds are fown with corn, and other grain, which yield likewife a confiderable crop. This city is one of the thoroughfares through which the caravans muft pars that go to and from Aleppo, Tripoli, Damafcus, Bagdad, \&c. It is tributary to the Turk, and it is to him that all the merchants pay cuftom for the commodities they carry through it.

## REMARKs

Baliora, was once famed for a market-place, fill fanding, to which all the Arabian merchants for a good way abjut ufed to refort, as to an exchange, which made trade to flourith. The prince of Balfora gives full liberty to all nations to come and trade to this capital, where they are fo civilly ufed, and ro good an order kept, that one may go fafe through the ftreets at all hours of the night. The Dutch bring hither their fpices, and the Englinh fome pepper and cloves; but the Portugueze trade is quite abolifhed, and the Auguftine friers that were fettled there have been obliged to go off. The Indians bring hither alfo feveral of their commodities, and one may meet here merchants from all parts of Turky, Egypt, \&c. to buy the Indian commodities that are brought to the place, and which they convey to their refpective marts on young camels backs, which are allo bought here. Some are carried up the Tigris, but they go but flowly, becaufe towed by men againft a rapid ftream, who cannot go above 7 or 8 miles a day, nor move at all, when the wind is contrary. The cuftoms paid at this place amount to almoft 5 per cent. The prince of it, who is tributary to the Turk, hath his chief revenue from the exchange of money, for the horfes and camels fold there, but chiefly from his palm-trees, of which he hath a plantation reaching almof 90 miles in length, and no foul dares touch a date of them till they have paid him a certain cuftom. The horfes which are bred here are in great requeft, and fell at a valt rate. The income of the prince, from the forementioned branches of money, horfes, camels, and dates, is fo great, that he is able to lay up $3,000,000$ of livres every year, all the other charges of his tribute and government defrayed.
Balfora, hath been under the Turks ever fince ann. 1668. and, like all other cities tributary to that dominion, is governed by a cadi, who is appointed by the prince. There are in it three forts of Chriftians eftablifhed, viz. Jacobites, Neftorians, and Armenians: but others of all forts are permitted to trade here. It fwarms with veffels from all nations of Afia and Europe; the Englifh and Dutch have their factorics here, which are very confiderable, and maintained by their Eaft-India company to carry on their commerce with China, Japan, and other parts of India, and for the difpatch of their letters from all parts into England and Holland by the way of Damafcus and Aleppo; and thefe are carried by Atabs hired for the purpofe, who are very fwift of foot.
The Portugueze have likewife a factor here, but he hath but little to do, lince their trade has dwindled away. Moft of the commerce is carried on by Armenians, Indians, and Perfians; and the caravan of it is one of thofe, which brings all the richeft merchandizes from India as well as Europe. What fill increafes its trade and opulence is, that the Perfians, in their caravans or pilgrimages to Mecca, take this city in their way, and not only pay confiderable duties to the government, but exchange many rich commodities here, which they bring with them for others they carry off in their return. But there is among others one great abufe, which is yet winked at both by the Porte, and the bahha, or prince, becaufe it brings a confiderable profit; and that is, the bafenefs of the money coined here, which, being loaded with greater alloy than that of other nations, is exchanged by the merchants at a great difadvantage.
The principality of Argia, and
The principality of Chavabeda, are in all refpects unknown to us, but in the Arabian tables.
II. Arabia Petrita, the moft weftern of all the three Arabias, is now called Das-lik Arabiltin by the Turks, and Barraah Arabittan by the natives, and by others Bathalabah, but
bioft commonly the beglebergate of Bofra, fo named from that capital. It is bounded on the north by Syria and Pa. leftine, on the eall by Arabia Deferta laft defcribed, and part of Arabia Foelix, which likewife bounds it on the fouth; and on the weft by the Red Sea and the ifthmus of Suez or Egypt. The northern part is poorly inhabited and full of barren mountains, and is under the Turks in the beglebergate of Cairo; but the fouth is both fertile and well peopled; and governed by its own princes, except fome places along the coaft. It is allo more frequented on actount of trade. Though in moft refpects it much refembles the Deferta laft defcribed for its ftony, fandy, and barren grounds, yet it yields in fome parts fufficient nourithment for cattle, whofe milk and camel's flefh is the chief food of its inhabitants: but there are fome others which are quite uninhabited, and impaffable. Shur, now called EL Torre, hath a good harbour, and about 400 houfes inhabited by fome Chriftian merchants, Jews, and Moors. Goods are here unladen to be carried by land to Suez, on the ifthmus, 120 miles north-weft at the end of the weft gulph, which is not navigable for large veffels any farther than Tor, by reafon of the rocks. Near this place is the garden, which they fay Mofes calls Elim, which is planted with palm-trees, and the monks make fome tolerable profit of the dates, which are the beft in that country.
In the way from Tor, or Morah, to mount Sinai, the vallies abound with caffia-trees, which produce the frankincenfe. Among other trees that grow on theie mountains, there is a fort which bears a kind of wool like cotton, though neither fo fine nor fo white.
III. Araibia Foelix, by far the largeft and moft confiderable of the three provinces, is by the inbabitants called Yeman, Yaman, and Hayaman, from one of the largeft diftricts in it, which hath given name to all the reft. It hath had the title of Foelix, from its extraordinary fertility and conftant verdure ; but was anciently called Saba, Sabea, and Seba, from Seba the fon of Cufh, the grandfon of Ham, who was properly the founder of a city of that name, anciently celebrated for its opulence, and efpecially its plenty of gold and filver. The antients were not content to give it the title of Happy, but added that of Sacred to it, on account of its fine aromatic gums and fragrant woods, which were ufed in facrifices, fuch as frankincenfe, myrrh, aloes, nard, cinnamon, caffia, cedar, and other odoriferous woods, which are here in fuch plenty, that the natives ufe them for common fuel. And indeed, if we were to judge of this Arabia by what the antients have launched out in its praife, we fhould imagine it the richeft and moft delightful land in the whole world.
According to them, it produced not only all the fine gums and plants we have already mentioned, befides an infinite variety of precious drugs, medicinal fhrubs, herbs, \&c. but likewife abundance of gold and filver, befides bafer metals and minerals; diamonds, rubies, fardonix, and a vaft number of other precious ftones, of exquifite beauty and variety of colours. (Pliny.)
The fea likewife furnifhed it with the greatelt quantity of fhells and richeft pearls. It likewife exceeded all others in the fertility of its foil, and its vaft produce of corn, wine, oil, and the moft exquifite fruits and fpices of all forts. Corn was there fown twice a year, and yielded a prodigious increafe (Strabo) and fo did every thing elfe in proportion. It had a vaft number of rich and opulent cities, befides towns and villages, and was reckoned the moft populous province in all Afia. What is faid of the trading'towns, might indeed be true then, 'but is quite altered fince. The Red Sea was very much frequented by merchant-fhips, before the Cape of Good Hope, and the paffage by it to the Indies were found out; and Arabia was the market where all the commodities brought fromIndia, China, and all the eafterniflands, were fold to the merchants of Egypt and Barbary, and brought by the latter over land to Cairo, and other ports in the Mediterranean, whither the Englifh, Italians, and other European nations came to take them off their hands. But, now the goods from India and Perfia are brought to us directly by fea, the commodities of Arabia are become lefs ufeful, and our commerce with it confequently is confiderably decreafed. If the account which the ancient writers give of it be true, it fufficiently fhews how furprifingly it mult have been altered, fince they wrote; for, at this time, nothing like that fo much exaggerated fecundity; much lefs in that great number of cities and inhabitants, appears except in fome few fpots here and there, which bear but a very fmall proportion with the reft; the midland being either fandy or mountainous, all dry and barren ; fo that the fea-coafts, and the lands along the banks of the rivers, are the only places that deferve the name of fertile or happy, except where put into the fale with the defert and ftony.
In this refpect indeed, it may well enough deferve thofe tithes, if it were but for its fine fpices, and odoriferous plants, and more efpecially for its frankincenfe, which is peculiar to it, and found in great abundance almoft every-where in it. To this we may add the coffec-trees, which we are told (Atlas Geograph.) are to be found only in three or four diftricts of the province of Yemen, properly fo called, and which grow in the mountainous parts of it.

## A R A

It likewwife produces abundance of fine fruits, and enjoys a conftant verdure all the year round; but, even in this noble province, fome parts of it are almoft as barren as the Petrea or Deferta; and produce nothing for 30 or 40 miles together, efpecially where it runs contiguous to the Red Sea:
Arabia Foolix, is now by moft modern geographers divided into i3 provinces or diftricts, fome ftiled kingdoms, others principalities, as follow:
The principalities of I. Baharein, 2. Hagiaz, or Higiaz, and 3. Jemama, 4. The kingdoms of Adan or Mocha; 5. Of Seger or Alibinali, 6. Aman, Zirifden, or Oman, 7. Fartach, 8. Yemen, 9. Malcalat, io. Ormus, ir. Xael, or Hadramut, 12. Zibith, 13. Territory of Tehaman.
But we fhall, for the greater conveniency of our readers; divide thefe territories into maritime and inland.
On the fea-coaft are thefe that follow.
It The kingdom or principality of Mecca.
2. The maritime Tehamah al Dbafar.
3. The principality of Zibih, Zebeth, Zaba, or Saba.
4. Of Mocha, or kingdom of Aden.
5. Of Xael, or kingdom of Hadramut:
6. Seger, or Alibanali.
7. Yemen principality:
8. Vodane.
9. Mafcalat.

In. Barbaim.
In the inland are the principalities or kingdoms of

1. Jemamam.
2. Haggiaž, or Hagiaz, or Higiaz:
3. Tehama.
4. Fartach.
5. Oman.

Remarks.
To thefe we might add the kingdom of Ormus, which formerly had fome large territories on the Terra Firma; but as it has been long fince conquered by the Perfians, the kingdom wholly deftroyed, and the ifland now become quite inconfiderable, from which it took its thame; we fhall fpeak of this latter among the illands on this coaft, according to its prefent fate. But as we have made it a conftant rule to range the conquered dominions under the heads to which they originally belonged, and the main part of the Ormian kingdom being in this Arabia, we hall now give a tranfient account thereof before we enter into the reft, that we may avoid breaking the thread and order in which we have marfhalled them above; and we are the more induced to give a fhort defcription of that monarchy, as both our Englifh and other European nations have formerly had fome confiderable intereft in it.
Seyladin was the 26th monarch of it, when the Portugueze in 1507 feized on it, and made a fettlement there. At this time we had the following account. The natural genius of the Ormians is a mixture of the Perfic and Arabian. They are abundantly fupplied with all kinds of neceflaries by their neighbours, and by the merchants that come thither from Arabia, Turky, Perfia, and India, but the greateft part comes from Armenia, Perfia, and Venice; thefe laft being extremely fond of the precious fones which are brought thither from India, and which they convey from Ormus to Venice by land. Befides, there are commonly fold great quantities of carpets from Perfia, Dias, Coracou, \&c. Turky camblets, Arabian hetbs and medicinal drugs, particularly manna, myrrh, frankincenfe, fandragan, \&c. fine horfes from the province of Bahraim, peatls from that of Mafcalat, and feveral forts of dried raifins; all which are brought to Ormus by two cafilo's of caravans of merchants which come hither from Aleppo, and pafs through Tripoli, which is about three days journey from this inland, and who exchange them for others that are brought thither from other parts of the world; all which traffic brings an extraordinary gain to the governor of it. But the Portugueze were after driven out by Schach Abbas king of Perfia, by the affifance of the Englifh, who had fome confiderable immunities granted them as a reward, and among others one half of the cuftoms of Gambroon, which yielded them about 40,0001 . a year for 50 years. But, in the wars with the Great Mogul, the company fold it, referving only 3000 I. a year.
2. The principality of MECCA, is bounded on the north by Arabia Petraza, and Teham or Tabam on the fouth, its eaftern extent unknown, and the Red Sea on the welt.
The traffic in Mecca confifts in religious relics, which the pilgrims buy at Eafter, when there is likewife a great fair kept, in which the richeft merchaindizes of the Indies, Perfia, sic. are expofed to fale. The vaults of the mofques, and the thops round them, are filied with a prodigious quantity of the richeft commodities, particularly precious fones, and frehted, and other aromatic powders; and; at all fuch feafons, even the caves in the adjacent mountains are turned into fhops.
Jodda, Gioddah, Gidda, Guidda, Geda, and Zieden; is a noted fea-port, where the Turkifh gallies, which are wont to winter at Suez, at the bottom of the Arabic gulph, come to difembark the goods which they bring from Egypt; Syria, \&ec. and

## A R A

to take in new ones; fuch as leather, efpecially the Morocco; coffee, gums, and other drugs from Arabia. It is likewife the flaple of the caravans, which go by fea from Gaid-hab, a city in Egypt, to Mecca. The Chrifians are not fuffered to fettle in it, by teafon of its nearnefs to Mecca, but yet are permitted to drive a confiderable commerce with it, it being the place where the fhips that come from the Eant-Indies are wont to fop. The Porte keeps about 30 veffels on thefe feas, to tranfport the metchandifes that come from thence, and which, though large enough to carry between 90 and 100 guns, are yet without any. The great refort of chips and other paffengers to this place, make every thing very dear in it, even water, which is brought hither from a fpring in miles off, and fells for three-pence per pint:
2. Maritime Tehamah, or Dhafar. This territory hath the principality of Mecca on the north, the kingdom of Mocha on the fouth, the Red Sea on the welt, and Yemen Proper on the eaft. The territory of Dhafar has feveral forts of fruits, that are not elfewhere found ; fuch as thofe efpecially; which are called the nargil and tambul; which are, according to d'Herbelot, the cocoa and betel. Befides thefe, we are told, that frankincenfe is peculiar to this territory and province. 3. The principality of Zibet, Zibith, or $Z_{A B A}$, has the Red Sea on the weft, Tehamah, or Dhafar on the north, Mocha on the fouth, and Yemen on the eaft. This country is remarkably rich in balm, which is reckoned fome of the beft in Arabia; as alfo in manna, myrrh, caffia, and other rich drugs, efpecially frankincenfe. It is gathered in fpring and autumn, and is fold to all nations.
Zibet, is rich, populous, and the greateft mart in the world for frankincenfe, myrrh, aloes, and other precious drugs; gums, \&c. of this country. The neareft port where the veffels, which come from other parts of Arabia, Ethiopia, and India, can eome in either paffage, is near the fortrefs of Galafsca, or Chalafsca, which is about 40 or 50 miles from' Zibet : however; that hinders not its being a city of great commerce. At Galafsca is one of the moft confiderable ports on the Red Sea, fince we find in both of them, not only all the drugs, and other fine commodities from the Indies, but likewife fome of the firft china-ware brought from thence. Zibet was once the center of the trade of Ethiopia, Egypt, and China; and all agree, that it drives ftill a good trade in fugar, feice; and a variety of fruits.
4. The kingdom of Mocha is bounded on the north by Tahamah, or Zibet; by the Atreights of Babel-mandel, which is the mouth of the Red-Sea, on the fouth; by the fame fea cn the weft, and the principality of Hadramut on the eaft. This country abounds with manna, myrth, frankincenfe, caffia, balm, and gums of feveral forts, which are fold here very cheap. Mocta is a large and populous city; and a fpacious and commodiots port feated at the entrance of the Red Sea, and a very confiderable trading place; of which we have this account from the merchants that trade annually between it and the Eaft-Indies. Numerous caravans arrive here annually from Turky and Egypt, as likewife the great fhip Manfouri, fent hither by the Sultan, which arrives in September, and brings with it a vaft cargo of the richeft European merchandizes, and carries back the return in fpices, callico, filk, and other India goods. The fhips that ufed to unlade at Aden, do likewife come hither to meet the caravans; all which muft needs render the place exceeding populous, as in fact it is; at leaft one half of the year, from March to September, which is the time of trade. The chief commodity pur fhips fetch from thence, is coffee, which grows in the neighbouring country, and is the beft to be met with in thefe parts.
Aden, is yet a confiderable trading port, but its vaft traffic hath been in a great meafure removed to Mocha. 'Till then it was a place of great refort, and was efteemed one of the faireft and wealthieft cities of Arabia, being the center of commerce between the eaft and weft; the Perfian gulph and the Red Sea.
5. The principality of XaEl; has Mocha and Aden on the weft, the Arabic fea on the fouth, the mountains of Yemen, or Gebel al Arad on the north, and the kingdom of Seger on the eaft. The fandy deferts here produce great quantities of aloes, which they there call fabr al' Hadrd, to diflitg ivilh it from that of Succotori, which we ftile Succotrine, and is much the better of the two. In the mountain of Schibbam in this principality, are produced fome of the fineft onyxes and agate ftones.
6. The principality of SEGER, is contiguous on the weft to Xael; has the Arabian fea on the fouth and eaft, and the country of Gadter on the north. It produces a good deal of frankincenfe and aloes, but the latter is nothing near fo good as that which grows at Succotora. The town of Dhofar, or Dhafar, is a confiderable fea-port in this province.
7. The kingdom of Jemen, or Oman, under which name the Arabians comprebend the greateft part of Yemen, or Arabia Folix; from the city of Aden, quite to that of Malcat on the gulph of Ormus; or, in other words; from the Perfic to the Arabic gulph. We have followed the more recent geographers, who confine this kingdom within narrower bounds, fince, according to the Arabian ones, it would have contained thofe of Xael and Seger already mentioned, as well as the

Parge territories of Gadter and Mahre, which lie between them and the kingdom we are now feaking of. According to the modern boundaries, it extends itfelf from 48 to 58 degrees of eaft longitude, but from north to fouth only from $22 \frac{1}{2}$ to 26 of latitude, where it juts fartheft into the Perfic gulph, but in other parts not above 1 degree at the moft. But of the true limits, or foil, of thefe remote countries, we know very litde. The ines of Zohar, north of cape Rofaate, were the chief places of trade to the eaft, till the commerce was transferred to the city of Ormus.
Oman, feems formerly to have been a place of no fmall traffic, but, as to its prefent fate, we are altogether in the dark.
Mascat, is a confiderable fea-port, town, which the Portugueze made choice of, after the lofs of Ormus: whilft they held it, it was a place of great profit to them; but, being beaten out by the Arabian princes, both place and trade are gone to decay. At preient, the inhabitants are a mixture of Moors, or native Arabians, fome Indian Pagans, fome Jews, and a few Portugueze, who carry on a trade with Ormus, and other places on the Arabian and Perfic coafts. The town is pretty much frequented by the Al Arabs, as they emphatically file themfelves, who come from the inlands, when they hear any fhip is arrived at Mafcat, whither they bring a great deal of poultry, dates, and horfes, which they exchange for rice, drabs, and other commodities they want. Mafcat is fuppofed to be the place where fhips anciently fet out from Arabia o China.
We are obliged to pafs by feveral other kingdoms, principalites, and provinces in this part of Arabia, both maritime and inland, as there is nothing worth notice related, concerning them, or their traffic. All we know of Gadter and Mahseh, or Mahrah, is, that the latter produces fome frankincenle, which is gathered here, and fent into other provinces. Sanaa, in the territory of Tehamah, is populous and wealthy, and traffics more in money than merchandizes. El'-Katif, in he kingdom of inland Oman, is a place of trade, and the ihhabitants filh for pearl about the neighbouring coaft. On the mountain Shebah in the country of Naged, are dug feveral curious fones; fuch as the agate, cornelian, and efpecially that called, in Arabic, Gezz Allemani, which is the Arabian onyx, and much efteemed for its beauty.
ARAC, or ARRAC, or RACK, a kind of firituous liquor or brandy, made by the Tartars of Tungulia, who are fubject to he czar of Mufcovy.
This fpirituous liquor is made of mare's milk, which is left to be four, and is afterwards diftilled twice or thrice, between two earthen pots clofely ftopped, whence the liquor runs through a fmall wooden pipe. This kiquor is very ftrong, and intoxicates more than brandy difilled from wine.
Arac is likewife an excellent fpirituous liquor, which the Englifh get from Batavia or Malacca to make punch. The Chinefe are thofe who make arac in the Indies by diftillation. They make 3 forts of it, extracted, the one from the cocoatree, the fecond from rice, and the third from fugar. The firt is the beft, and moft in ufe. They make it of the liquor which iflues from the bloflom-bunch of the cocoa-tree. For which purpofe they tie the bunch, whilft ftill wrapped up within its cod or membrane, with a piece of packthread, and then with a knife they make a crofs-cut in that bunch, a little above the place where it is tied, and adapt a pitcher to it, to receive the liquor, which is vinous, palatable, and fweet. It is called touac, or fouri. Others ufe a bamboe-cane inftead of a pitcher. Having thus drawn the liquor, they let it ferment, and afterwards diftill it to make arac. They have a prodigious demand for it all over the Eaft-Indies.
The Dutch alfo import fome into Holland. It is fomething fweeter, and lefs intoxicating than common brandy; for which reafon, the Englifh think it more fit to make punch. The author of the Spectacle de la Nature was miftaken in aflerting, that the liquor of the cocoa-tree was drawn by making an incifion in the lower part of the trunk of the tree, for it is certain that none would come that way.

## A further account of arac.

The nature and compofinion of this celebrated liquor has been much controverted. Mr Lockyer tells us, that the name of arac is an Indian word for ftrong waters of all kinds; for they call our fpirits and brandy, Englifh arac. But what we underftand by the name arac, is really no other than a fpirit procured by diftillation from a vegetable juice called toddy, which flows by incifion out of the cocoa-nut-tree, like the birch-juice procured among us.
The toddy, adds Mr Lockyer, is a pleafant drink by itfelf, when new, and purges thofe who are not ufed to it; and, when ftale, it is heady, and makes good vinegar. The Englifh at Madrafs ufe it as leven to raife their bread with. Goa and Batavia are the chief places for arac. At Goa there are divers kiuds; fingle, double, and treble difillied. The double diftilled, which is that commonly fent abroad, is but a weak firit in comparion to Batavia arac: yet, on account of its peculiar and agreeable flavour, it is preferred to all other aracs of India. This is attributed to the earthen veflels, which
alone they ufe at Goa to draw the firit: whereas at Batavia they ufe copper-ftills.
The Parier arac made at Madras, and the Columbo and Quilone arac at other places, being fiery hot firits, are but little valued by the Europeans, and therefore feldom imported, though highly prized among the natives.

## British Laws, relating to Arac.

By fat. 2 Geo. I. cap. 30. Arac on board a thip within the limits of any port of Great-Britain, or found unfhipping or unbipped before entry, may be fearched for and feized, tozether with the package, by the officers of excife, in like manner as by the officers of the cuftoms.
Upon an excife-officer's fufpicion of concealment of arac, made before the commiffioners or a juftice of the peace, they may impower him to enter fuch fufpected places, and feize the liquors, with the calks, "c.
If the officers are obftructed, the penalty is 1001 .
Arac is not to be fold but in warchoufes, and entered as directly by 6 Geo. I. cap. 2I. upon forfeiture, and the caiks, $\Psi^{\circ} \mathrm{c}$.
If permits are not returned which are granted for the removal of arac, or if the goods are not fent away within the time limited, the penalty is treble the value.
If the permits are not returned, and the decreafe is not found to be fufficient, the like quantity is forfeited.
Permits are not to be taken out, but by direction in writing of the proprietor of the ftock, or his known fervant, upon forfeiture of 501 . or three months imprifonment.
By ftat. 9 Geo. II. cap. 35. If arac is offered to fale without a permit, or by any hawker, pedlar, $\xi^{\circ} c$. with a permit, the perfon, to whom it is offered, may feize and carry it to the next warehoufe belonging to the cuftoms or excife, and bring the perfon offering the fame before any juftice of the peace, to be committed to prifon, and profecuted for the penalties incurred by fuch offence.
The perfon feizing fuch goods may profecute in his own name; and, on recovery, is intitied to $\frac{x}{3}$ part of the grofs produce of the fale. And the commifioners are (if defired) upon a certificate from the juftice of the offender's being committed to prifon, to advance to the feizer is. per gallon for he arac fo feized.
Arac (except for the ufe of the feamen two gallons each) found in any hip or veffel arrived from foreign parts at anchor,: or hovering within the limits of any port, or within two leagues of the fhore, and not proceeding on her voyage (unlefs in cafe of unavoidable neceffity and diftrefs of weather, notice whereof muft be given to the collector or chief officer of the port upon the fhip's arrival) is forfeited, with the boxes, cafks, and other package, or the value thereof.
ARAINS, ftriped or checked armorines or taffeties, which come from the Indies.
ARANEA, a filver ore found only in the mines of Potofi, or in the fingle mine there of Catamito. It owes its name to fome refemblance it bears to a cob-web (a fpider being called aranea in Latin, and aragnee in French) being compofed of threads of pure filver, which to the fight appear like a filver lace, when burned to feparate the filk from it. It is the richeft of all kinds of filver ore.
ARARES, a name given by the Indians to that kind of fruit which is called, in Europe, citrine mirobolans. This fort of mirobolans is thought proper to purge the gall.
ARATE, a weight in Portugal. See Arobe.
ARBITER *, or ARBITRATOR, an extraordinary judge, or commifioner, in one or more caufes, between party and party,
chofen by their mutual confent.

The civilians make a difference between arbiter and arbitrator: though both ground their power on the compromife of the parties, yet their liberty is diverle: for an arbiter is tied to proceed and judge, according to the forms, cuftoms, and ufages in the law: an arbitrator is permitted wholly to ufe his own difcretion in accommodating the controverfy committed to him, according to what feems juft and equitable agreeable to his own judgment.

The ordinances in France direct, that all differences among merchants in relation to their trade, and among partners in relation to their partnerfhips, be determined by arbitrators: which gives unto the arbitrators, who are named for all thele forts of differences, a right to terminate them with all ponible diligence, in order to avoid the delays of judicial proceedings; and alfo a right to qualify the awards which they give on affairs of that kind, with fuch temperaments of equi$t y$, as they fhall find that the facts and circumftances may deferve.
In England, although there is no particular obligation laid on parties to refer their differences to arbitration, as the cuftom is in France, in fome cafes; yet the thatutes recommend thefe references to the fubject, and more particularly to merchants and traders, as an ufeful expediens to end their differences with the greater eafe and expedition. And, in order to give more weight and efficacy to the award of the arbitra-
tors,
tors, the parties are allowed to agree among themfelves, that their lubmiffion of the fuit to the award or umpirage of any perfon, or perfons, may be made a rule of any of his majefty's courts of record, that the parties may be thereby finally concluded.
Star. 9 and ro Will. III. cap. 15. fect. 1. After the 1 ith of May 1698, all merchants and others, defiring to end any controverfy (for which there is no remedy but by perfonal action, or fuit in equity) by arbitration, may agree that their fubmiffion of the fuit to the award or umpirage of any perfons thall be made a rule of any of his majefty's courts of record, which the parties fhall chufe, and may infert fuch their agreement, in their fubmiffion, or the condition of the bond or promife: and upon producing an affidavit of fuch agreement, and upon reading and filing fuch affidavit in the court fo chofen, the fame may be entered of record in fuch court, and a rule of court thall be thereupon made, that the parties fhall fubmit to, and finally be concluded by, fuch arbitration or umpirage; and, in cafe of difobedience thereto, the party negleaing or refufing thall be fubject to all the penalties of contemning a rule of court, and procefs fhall iffue accordingly ; which thall not be ftopped or delayed by any order, छ̋c. of any other court, either of law or equity, unlefs it appear on oath, that the arbitrators or umpire mibehaved themfelves, and that fuch award was corruptly or unduly procured.
Sect. 2. Any arbitration or umpirage procured by corruption or undue means fhall be void, and fet afide by any court of law or equity, fo as fuch corruption or undue practice be complained of in the court where the rule is made for fuch arbitration, before the laft day of the next term after fuch arbitration made and publifhed to the parties,
The power of arbitrators is to be regulated by the compromife between the parties, as to what concerns the differences which they are to determine, and whatever they decree beyond that, is of no effect.
Arbitrators, in their proceedings, are to oblerve the five following points, viz.

1. That the award made be given up in writing within the time limited, by the bonds of compromife between the parties.
2. That there be appointed by the award fome reciprocal act to be done by each party to other, which the law requireth to be quid pro quo, albeit never fo fmall.
3. That they make a final end, and do determine upon all the points or differences produced before them by fpecification, if they be required fo to do, and authorized thereunto.
4. That they do not award any of the parties to do or perform any unlawful act or thing prohibited, and againft the law.
5 . That they do not award any thing, whereby any matter already determined by decree in Chancery or judgment at the common law, or any fentence judicially given in the caufe, be infringed or meddled withal.
After a definitive fentence is given, the function of arbitrators ceafes, and they have not power to retract or alter it.
No matters wherein the public is concerned, or befides thofe of a private nature, which regard property between perfon and perfon, can be fübmited to the decifion of arbitrators.
Befides the differences among merchants relating to their trade, and among partners in relation to their partnerhips, thofe touching the partition of inheritances among near relations, accounts of guardianfhips, and other adminiftrations, the reflitution of marriage portions, and of dowers, mult in France be referred to arbitrators : and it is ordained that, in cafe any of the parties refufe to name arbitrators on their part, the judge fhall name them.
Or , in cafe of death or long abfence of one of the arbiters, the parties concerned muft chufe another, or upon their refufal the judge is to name one. So if the arbitrators differ in opinion, and are not able to agree among themfelves, the judge is to appoint a fuper-arbiter.
All articles of partnerihips fhould contain a claufe, by which the partners bind themfelves to fubmit to arbitrators, in the difputes that may arife between them,
And the fame fhould be obferved in contracts or policies of aflurance.
ARBITRARY, that which is left to the choice or determination of men, or not fixed or fettled by any pofitive law or injunction. As arbitrary fines are mulcts ufually called amercements.
To ARBITRATE, to adjudge or act as an arbiter : to award or give fentence.
The French ufe the word arbiter in another fenfe alfo; it fignifies to eftimate a thing in general, without entering into particulars. In this fenfe they fay, the judges-confuls have arbitrated (ont arbitré) the coft, damages, and interefts, at fuch a fum : that is, they have calculated them fo much. Arbiters, or common friends, have attributed to what fum the decay of fuch merchandizes may amount.
ARBITRATION, a jurifdition chofen voluntarily, by parties at variance, to have their difference terminated and adjufted by perfons impowered by them, and who are filed arbiters, or arbitrators. It is alfo laid of the fentence pronounced by the
VOL. .
arbiters. As for inftance. Thefe merchants have referred their difpute to an arbirration, i. e. to be decided by arbiters. Thefe perfons are very much employed in arbitration; that is, are often chofen arbiters. This caufe has been determined by arbitration, i. c. by the fentence of arbiters.
Arbitration, in matters of the Foreign Exchange, is the mot beneficial, as well as the moft delicate, branch of exchange to be thoroughly informed of.
Before any one applies himfelf to the fudy of this fubject, it is neceflary that he fhould be well ikilled in all the practical operations, in regard to the reducing of the fterling money of England into the foreign monies of exchange, and of account, of all places throughout Europe, according to the direct courfes of exchange, eftablifhed for thefe purpofes, and vice verfâ. Alfo,
5. That he flould be acquainted with the methods of converting fterling money into the monies of exchange, and of account, of all other places of commerce, wherewith England has no direct eftablifhed courfes of exchange, but is under the neceffity of making ufe of the intermediate exchange of other places: together with, the nature of the agios, and the manner of converting their bank monies into current, and the reverfe. 3. The manner of calculating all the foreign monies throughout Europe into thofe of every other diftinct country, either according to the direct, or intermediate exchange; which makes a much greater variety of cafes, than thofe, who are not thoroughly acquainted with this extenfive fubject, can imagine. See the article Exchanges.
6. It is previoufly neceffary, alfo, to the entering upon a knowlege of the arbitration of exchange, to know the intrinfic value of foreign monies, according to the moft accurate affays, which have been made for that purpofe.
7. Lafly, it is requifite to underftand the general natural caufes of the rife and fall of the courfes of exchange between nation and nation, or between one trading city and another in the fame nation.
That I may communicate my meaning with the greater perfpicuity, it may be proper, for the fatisfaction of wrhers, as well as practical merchants and remitters, to premife, That as the advantages to be made by underftanding how to arbitrate the exchange at all tumes, and in refpect ro all places, depend on the general rife and fall of the prices of exchange between one nation and another ; fo that rife and fall depends on the ballance of trade being either in favour, or againft a nation.
That the courfe of exchange is the criterion of the ballance of trade, has been allowed, not only by great fatefmen and fpeculative politicians, but by the moft ikilful and fagacious practical traders.
As this matter is put in a very rational and familiar light by thore able and diftinguifhed merchants of the city of London, who were infrumental, in conjunction with the late ever memorable Earls of Hallifax and Stanhope, in defeating the French treaty of commerce, in the year 1712 ; I fhall quote their reafoning upon this point, from the Britih Merchant. In confequence of which, the practical application of what we thall communicate on the topic under confideration, will appear the more intelligible:

- Suppofe, fay they, the tenant in Wilthire is to pay for rent - IOO1. to his landlord in London; and the woollen-draper in - London is to pay the like fum to his clothier in Wilthire : - boch thefe debts may be paid, without tranfmitting one far-- thing from one place to the other, by bills of exchange, or
< by exchanging one debtor for the other thus: That is,
- the tenant may receive the landlord's order to pay 100 l . to ' the clothier in the country; and the woollen-draper may re-- ceive his clothier's order to pay the like fum to the landlord - in town.
- Thefe two orders are properly called bills of exchange; the 6 debts are exchanged by them; that is, the woollen-draper ' in town, inftead of the tenant in the country, is become - debtor to the landiord; and the tenant in the country, in-- ftead of the woollen-draper in town, is become debtor to - the clothier : and, when thefe orders are complied with, the - two debts between London and the country are difcharged,
- without fending one fhilling in fpecie from the one to the - other.
- In like manner, the warehoufe-man in London is indebted - in 1001 . for ftuffs to the weaver'in Norwich; and the lin-- nen-draper in Norwich is indebted in the like fum to the
- Hambuigh merchant in London; both thefe debts may be
- paid by bills of exchange, or by the exchange of one debtor
- for the other, by placing one debtor in the other's ftead:
- that is, the warehoufe-man may receive the order of his - weaver, to pay iool, to the Hamburgh merchant; and the - linnen-draper may recive the order of the Hamburgh mer-- chant, to pay the like fum to the weaver.
- Thefe orders arc bills of exchange; the debtor in one place - is changed for the debtor in the other : and thus borh debts ' may be paid, withour fending one fingle fhillng in fpecie, - from the one city to the other.
- But, if the debts due from both places are not equal, then - only the fame quantity of debes on both fides can be paid - by bills of exchange. The bultance muat be fers in moncy 2

## $A R B$

${ }^{8}$ From the city, from whence the greatef lums are due; For - example:

- If, by the trade between London and Norwich, the former : owes 10,0001 . to the latter, and the latter no more than - goool. to the former; it is manifeft, that only the debts - of 9000 l . on each fide can be difcharged by bills of ex-- change; the ballance of 10001. muft be fent either from - London, or fome other place indebted to London, to even - the ascount between both the ciries.
- Let us fuppofe then, that to fend and infure 1000 l . in - fpecie to Norwich would coft 5 1. or 1o s. per cent. which - of the debtors in London would be willing to be at this - charge? It is natural to believe, that every one, will en-- deavour to fhift it off from himfelf, that every one will en-- deavour to pay his money by a bill of exchange; it is na-- tural to believe that every one, rather than ftand the coft - and hazard of fending rool. in fpecie, would pay rool. - 5 s. in London for a debtor in Norwich, upon condition ${ }^{6}$ that the Norwich debtor fhould pay an 100 l . for him in s that city.
- By which means the Norwich debtor would pay his debt of - rool. in London with lefs than that fum, while the London - debtor would be obliged to give more than that fum for the ' payment of 100 l . in Norwich. And, if fuch for years 6 together were the courfe of exchange between London and - Norwich, there could be no queftion to which of the two - cities a fum muft be fent in fpecie to pay the ballance; 6 that city undoubtedly pays the ballance, that gives more c than the par; that undoubtedly receives the ballance, that * gives lefs than the par for bills of exchange.
-The courfe of exchange, in this cafe, would fufficiently - decide that the ballance of trade is on the fide of that city,
- that procures bills of exchange upor the moft eafy terms.
- I have taken examples from two Englifh cities, where the
* money is of the fame denomination; and the fame quan-- tities are equally at par in both. But the cafe is the very - fame between two cities, where the denominations of the - money are different, as long as any certain quantity of ' money in the one can be reduced to a par or equality with ( any certain quantity of money in the other.
For example, the old French crown was juft equal or par to $54^{*}$ pence Englifh; and $444 \frac{4}{5}$ of thele crowns were - juft par, or equal to an 1001 . flerling; every farthing given more or lefs than 54 d . for a crown, in a bill of ex-
change between London and Paris, amounts to 9 s .3 d . up-
- on 444 crowns, or upon fo many times 54 d .
* This was in the year 1713 . But what is the cafe at prefent, See the article Coin, where the affays, weights, and values of foreign filver and gold coins is given! by which it will ap pear, whether England or foreign countries have the advantage by exchange, according to the intrinfic value of fuch coins.
a Suppofe then the courfe of exchange between London and - Paris ftood thus heretofore. If a man in Paris; indebted - to London, paid a farthing lefs than the par for a bill of - exchange upon London to pay 54 d , there; the Parifian - paid his debt to London of rool. by a bill of exchange that - coft him in Paris 9 s . 3 d. lefs than that fum : and if a - merchant in London gave a fartbing more than the par for - a bill of exchange upon Paris, to pay a French crown, the - Londoner gave 9 s .3 d . more than 1001 . for a bill of ex-- change to pay that fum in Paris.
- If fuch was the courfe of exchange between London and - Paris: if the firlt gave above the par, and the fecond lefs - than par for bills of exchange to pay their refpective debts, - there can be no doubt that bills of exchange were more
- eafily to be had in Paris thain at London; and confequently,
- that greater fums were due from the latter than the for-- mer; and that we paid a ballance upon our trade to that - kingdom. And as the price rofe here to a penny or two
* pence above the par, or fell there fo much below it; it - fhewed fo much the greater fcarcity here, and the greater - plenty there of bills of exchange; and that fo much the - greater ballance of bullion was going hence, by means of " our trade to that country.'
Here let the intelligent practical merchant and remitter, \& cc . make his obfervations on what we mean by the intrinfic arbitration of the exchanges, which need not be further enlarged upon, if he confiders the due application of what has been faid; this fingle cafe being as good as a multitude.
The foregoing reafoning may be further carried on thus:
If the city of Bourdeaux owes 100,000 ounces of filver at Paris, and fends wines and brandies to Holland for 100,000 ounces: and if Holland fends fpecie to Paris for 100,000 ounces, due to the bankers at Bourdeaux; and with thefe the fpecie-merchants at Paris femit and pay the 100,000 ounces they owe to Holland: in this cafe the exchange between Bourdeaux and Paris, Bourdeaux and Holland, and Paris and Holland, will be at par; there will be no variation, but what proceeds from the commifion of the negotiators concerned in the returns.
But in regard that the coin of France is reckoned by livres,
fols, and deniers; and in Holland, by forins, flivers, and groots; that the coin in ufe in Holland differs in the ftandard, bulk, and mark, from that ufed in France; the computation of the exchanges is made by the exchanging fo many Dutch groots, for a French exchange crown; and, although this at firft view does not feem to denote that the exchange is fo much per cent over or under par, yet in reality it is fo; and the banker, concerned in the Dutch exchange, knows how to calculate this par in the tale of French cruwns, and Dutch groots.
So that the exchange between London and Paris, and Paris and Amfterdam, \&c. is, in effect, carried on juft as it is between London and Wilthire, or London and Norwich; only with this difference, that the accounts are kept in another gibberifh; and that the charge and rikk of fending money from London to Paris, or from-Paris to Amfterdam, is greater than that of fending it from London to Wilthire, or Norwich; and when the ballance of trade with Amfterdam is againft Paris, the exchange at Paris will be from 5 to 6 per cent. above the par by bills on Amfterdam; whereas it will feldom exceed an half per cent. above par between London and Norwich,
Whether France pays livres, fols, and deniers, for ryals of plate, and marvedees, new or old in Spain; for crufadoes, or mitrees in Portugal ; for guilders, rix-dollars, or marks-lubs, in the north ; for pounds, fhillings, and pence fterling; for marks, piafters, and ducats, in Italy; the par of the exchange is always ounce for ounce of filver, or rather of gold, that being of eafier carriage, and moft commonly is tranfported in the ballance of trade; and the computations and evaluations of the exchange will fquare every-where with our firlt examples.
If France owes a ballance in trade to Flanders of 100,000 ounces; Flanders to Holland of 100,000 ounces; Holland to England of 100,000 ounces; England to Spain of 100,000 ounces; Spain to Italy of 100,000 ounces; Italy to Germany of 100,000 ounces; Germany to France of 100,000 ounces; the exchange may be carried on at par between all thefe countries, without any tranfportation of gold or filver. But as the ballance of trade grows due gradually from one country to any other, by an importation of commodities, the variation of exchanges follows the fame proportion.
And it is the bufinefs of the judicious general merchant, and the fagacious remitter, to fpeculate where the ballance of trade lies, among the European nations at all points of time; for by that means he may embrace his opportunities of advantage, and thefe almoft daily between fome nation or other, provided his credit and correfpondence are duly eftabliihed to admit thereof.
From what has been faid, the reader may obferve the utility of knowing the intrinfic arbitration of exchange, by comparing the courfes with the real value of money. For more matter relating to which, fee the article Exchange.
Another method of confidering the arbitration of exchanges, is founded upon comparing the various occafional prices of exchange together between nation and nation; in order to difcover at all times, whether certain courfes continue in an equality of proportion, or how far they deviate therefrom : by which means the advantage to be made by fuch a comparifon of exchanges may be exactly afcertained, for the government of the merchant or remitter to take his meafures accorringly, and not to let the advantageous occafion elcape his cognizance. And this muft neceflarily prove the cafe, provided a perfon is not accomplifhed in this branch of the exchanges.
Before I enter upon the illuffration of this matter by examples, it will be proper to oblerve, that, in a comparifon or combination of the courfes of exchange of reveral places together, it is rase, very rare indeed, that they happen to ebio and flow in an exact equality of proportion; the realon whereof mult be obvious to every one, who confiders that the ballance of trade differs between different nations, and confequently, from what has been faid, the courfes of exchange will be in favour, or otherwife, of fome nations, when compared with others. This is fo plain, that it needs no further animadverfion
This being the cafe, the judgment of the exchange-negotiator confifts in vigilantly obferving, from a due comparifon of the courfes, where the greateft inequality of proportion lies; for there lies the greatelt profit to be made by drawing and remitting to certain places preferably to others.
But the greateft profit to be made this way does not always happen to arife, from a comparifon of thefe courfes only where the general currency of a trader's bufinefs lies: on the contrary, from the circumftances and the nature of the trade of fuch countries, the rife and fall of the courfes may generally continue in fuch an equality of proportion, as only occafionally, or feldom, to admit of any extra profir by the exchange. Whence it is, that thoie, whoare unacquainted with the niceties of thefe computations, think there are little or no advantages to be made to other places, with which they do not bappen to have any tranfactions. This is an egregious miftake: nay, if a merchant has dealings with two or three different nations, it is very rare, but confiderable advantages are to be made, by

## $A \ddot{R} B$

knowing how to arbitrate the exclianges with accuracy : and the more general his correfponderice is with various nations, the greater opportunities he has of reaping benefit by his fuperior fkill in this branch of mercantile fcience.
To the end that my meaning may be the more readily comprehended, the following diagram may be neceffaty.

## Lifbon

Let it be fuppofed, that the exchange between Lonidoni and Amfterdam is at $34: 6$, and between London and Paris at $31 \frac{3}{4}$. What is the proportional arbitrated price between Amfterdam and Paris?
The moft concife method of difcovering the proportional arbitrated price is by a numerical equation, in the algebraic way of analyfis: Thus,

| $\dagger$ Signifes addition |  |
| :---: | :---: |
|  | fubtractio |
| x - . - multiplicati |  |
| $\div-$ - - - divifion |  |
| $\because$ - - - - therefore |  |
|  |  |

Say 1 cr. Paris $=31 \mathrm{dd} . \frac{3}{2}$ fferling
24 od . fterl. $=34: 6=414$
-.- multiplication
$\because-$ - - - therefore
The right-hand fide of the equation conflitutes a general dividend, the left-hand fide a general divifor.
But as the fractional parts make it troublefome for moft to $x$ and $\div$ them, who are not well acquainted with fractions both vulgar and decimal ; and as thefe are fometimes too tedious for men of bufinefs; the moft eafy and concife practical way is to reduce thefe equations, according to the following axioms, viz.
(1.) Equal quantities multiplied by equal quantities, their products are equal. And (2.) Equal quantities divided by equal quantities, their quotas are equal ; that is to fay, the numbers refulting therefrom remain proportionally equal.

Examples as above.

$$
\begin{array}{r}
x=3 x^{3} \\
\frac{340}{4}=474 \\
\hline 4=127 \\
80=48 \$ \\
2 \times 69 \\
\because \quad 127 \times 69 \\
\hline
\end{array}
$$

$80 \times 2=$ to the anfwer. That is to fay, that if you multiply 127 by 69 ; and divide the product thereof by that of 80 multiplied by 2 , you have the true anfwer required, which you will find to be $54 \frac{123}{163}$, the neareft practical fraction in common bufinefs being $\frac{3}{4}$.
However, the calculation muft be made with the utmoft accuracy, or you will not fo well know what you are about.
This is only an abbreviation of the operation upon the preceding axions. As r. You $\times$ the $31 \frac{3}{4}$ by 4 , which gives 127 placed under the line, and a 4 fet on the other fide to ballance it from the firf axiom.
Then, as there don't happen to be more fractions, I proceed to abbreviate the work further by divifion.-Thus I find at one glance of the eye, that 240 and 414 will both divide by 3, which produce for quotas 80 and 138 , which numbers, as they are done with, are cancelled. I next obferve, that 4 and 138 will both divide by 2 , which give 2 and 60 . So that the refult is, that 127 multiplied by 69 , and that product divided by 80 multiplied by 2 , which remain uncancelled, will give the anfwer required.
But if any other divifor could be found, which would meafure both the dividend and the divifor, the abbreviation might be carried on ftill further, and v.ry often till we have the true anfwer without further trouble.
The foregoing example admits of three cafes: thus,

## A R B

London
Paris on Amfterdam at $54 \frac{12}{125}$. And on London at $31 \frac{3}{4}$ : What is the proportional arbitrated price between Londori and Amfterdam?

OPERATION.

| $\begin{aligned} & \text { I l. }-\cdots \\ & \underline{z} \end{aligned}$ | fterling. $x \nmid z$ |
| :---: | :---: |
| $33^{4-}=$ | $54 \times 898$ |
| $1 \% \%$ | 4 |

1. $54 \times$ by r6o, and take in the numerator, gives 8763 ; to ballance which, place the 160 on the left hand fide, and cancel $54 \frac{123}{1860}$.
2. Then $\times 3{ }^{1} \frac{3}{4}$ by 4 , and take in the 3 the numerator, and that gives 127; to ballance which, place the 4 on the righthand fide, and cancel $31 \frac{3}{4}$.
3. I find that $160^{\circ}$ and $24^{\circ}$ will divide by 10 , which leaves I 6 on the left-hand fide, and 24 on the right.
4. I find that'16 will divide by 4 , and 24 by 4 , which leave 4 on the one fide, and 6 on the other. And
Laftly, Finding two 4's on each fide, they cancel each other. -So that the conifequence of the whole is, that $8763 \times 6$, and the produch divided by 127 gives the anfwer, 414 grots, or 34 : 6, the exchange between London and Amfterdamy as required.

The third cafe。

London
Amfterdam on Paris at $54 \frac{123}{80}$. And on London at $31_{4}^{2}$. What is the arbitiated price between London and Paris?

> OPERATION.

I Crown Paris $=\$ 4 \frac{\alpha \neq 3}{\alpha \beta \nexists g}$ grots.

| 4 4 | \% 40 d. |
| :---: | :---: |
| $\chi \varnothing \varnothing$ | \$ 176 |
|  | 38 |
| ${ }^{2} 8{ }^{\text {d }}$ | $z^{\prime}$ |
| 46 | 2921 |

$$
\because \cdot \frac{2921}{46 \times 2}=\text { Anfwer, i. e. } 9^{2}\left|\frac{461}{46 g \mid}\right| 31 \frac{69}{92}=\frac{3}{4}
$$

Thefe three cafes prove the truth of the method, in regard to each other.
Another example derived from the firf diagram.

Lifbon

## A R B

Suppofe London exchangeson Amiterdam 34 : II. And on Libon at $5: 5$ 5. What is the arbitrated price between Amitterdam and Lilbon?

OPERATION.
${ }_{1}$ Crufade of Lirbon $=4 \not \subset \varnothing$ rees Portugal.
r $\phi \phi \phi$ rees - $\quad-=\phi \delta \mathrm{d} \frac{\phi}{\phi}$ ferling.

| 740 d. fterling - = $34: \not 2 y=419$ grots Amf. |  |  |
| :---: | :---: | :---: |
| 8 | B75 | 419 |
|  | 4 |  |
| 48 | 10\% |  |
| x | \% 1 |  |
| 2 | 7 |  |
| 4 |  |  |

So that, after all the abbreviations which can be made, the num-
bers which remain uncancelled, are $419 \times 7=\frac{2933}{8 \times 2 \times 4=64}$ $=45$ grots $\frac{53}{6} \frac{3}{7}$ of Amfterdam per crufade of Lifbon, which is the true anfwer.

This example allo admits of three cafes: thus,

Cafe (2.) Amfterdam exchanges on Lilbon at $45 \frac{53}{64}$. And on London at 34:11. What is the arbitrated price of exchange between London and Lifbon?

OPERATION.
, m milree - - -

$$
4 \rho \phi \text { rees }-\quad=1 \text { - } \quad=1
$$

$$
\text { I cruf. }--=4 s \frac{8 x}{64} \text { grots Amfterdam. }
$$

$$
419 \text { grots Amf. }=\neq 4 \phi \mathrm{~d} .
$$

$$
\begin{array}{cr}
464 & 2933 \\
\hline 64 & 15 \\
16 & 5
\end{array}
$$

Anfwer $\frac{2933 \times 15 \times 5}{419 \times 8}=65 \mathrm{~d} . \frac{5}{8}$ fterling as above.
Cafe 3 d of the 2 d example.

Lifbon exchanges on Amfterdam at $45 \frac{53}{6}$. And on London at $5: 5 \frac{5}{8}$ What is the arbitrated price of exchange between London and Amfterdam?

## A R B

OPERATION.

| I. | $=\ddagger 48 \mathrm{~d}$. ferling. |
| :---: | :---: |
| 68 5 : | $=r \varnothing \phi \phi$ rees Portu |

$\frac{4 \phi \phi \text { rees Portugal }-=}{45 \frac{83}{\phi 4} \text { grots Amfterdam. }}$

So that, after all the abbreviations which can be made, the anfwer comes out exactly the 419 grots of Amfterdam, without any further divifion or multiplication; which is equal to 34 : 11.-This will frequently happen to be the cafe. So that the operation may this way be generally done upon the thumb nail, on the exchange, when people grow expert at it. If you fuppofe Hamburgh to fland in the center of the firft diagram, you may obferve how the examples will multiply. Thus:

The firf additional example will be London; Hamburg, and Lifbon; the fecond will be Lifbon, Hamburgh, and Paris; the third will be London, Hamburgh, and Amfterdam; the fourth will be Hamburgh, Paris, and Amfterdam; the fifth will be Hamburgh, Paris, and London; the fixth will be Amfterdam, Hamburgh, and Lifbon, \&c. And the reader will obferve, that each of thefe examples has three diftinct cafes of operation: fo that, if you multiply places in the circumference, it will be found that there is a furprifing variety of changes to be rung upon the capital places of trade in Europe; all which ought to be equally well underftood by the fkilful general merchant, or he can never be capable of reaping thefe conftant advantages, which are to be made by being able readily to arbitrate the exchanges.
And yet by this comparifon of three places only, from the examples given, thefe are but fimple arbitrations; but, when they come to be compounded in the combination and comparifon with more places, the variety of difinct cales will multiply extraordinarily, in order to become an univerfal mafter of this moft advantageous branch of the foreign exchange. But how greatly the variety of queftions in the arbitration will multiply, appears from another diagram, where London is fuppofed to be the central place of exchange to all thofe in the circumference of the circle; and where a triangle is formed from the center, London, to any other two places in the circumference, there arifes a fimple arbitrational queftion; which queftions multiply in proportion to the number of places wherewith London has direct courfes of exchange : and, each of thefe queftions, as before obferved, admitting of three diftinct cales of operation, the variety is very great ; and, confequently, the opportunities of profit are great in proportion to the London merchant, or remitter, provided he is fufficiently ikilled to embrace all thofe opportunities which, we will prefume to fay, almoll daily offer.

For the further fpeculation of the ingenious merchant, remitter, and moneyed man, we will give a few more examples from the London courfe in the preceding large diagram, and upon fuch places where the profit is feldom lefs than what follows, viz.
Suppofe London on Amftetdam at $34: 10$, and on Paris at $31 \frac{7}{3}$, the arbitrational price between Amifterdam and Paris will be found to be $55 \frac{{ }_{3}^{3}}{63}$.
But fuppofe A mitterdam advifes that the exchange for Paris is $54 \frac{3}{4}$, which is below the arbitrational price, the queftion is, how much per cent, profit prefents?
Draw 100 I. fterling on Paris at $3^{1} \frac{7}{8}$, it will debit you at Paris crowns $752: 5^{6}: 5$. And remit to Amfterdam 1. $98: 12: 5$ at $34: 10$, credits you at Amfterdam guilders 1030:11:12 bank-money: fo that the profit to be made between thefe places is $1.1: 7: 7$ per cent.
The money received for your draught furnifhes you with the money to pay for your remittance; and your debit at Paris will be paid by your credit at Amfterdam, exchange at $54 \frac{3}{4}$ : for, if $54 \frac{3}{4}$ grofs will pay i French crown, guilders 1030: 11: 12 bank-money will pay crowns $752: 56$ fols, and 5 deniers.
But if, on the other hand, Amfterdam advifes you at London, that the exchange for Paris is $56 \frac{1}{4}$, which is above the arbitration price of exchange, then,
Draw on Amfterdam 1. roo fterling at $34: 10$, which debits you at Amfterdam guilders 1045 bank-money, and remit to [aris $1.98: 13: 10$, at 3 1 $\frac{7}{3}$, which credits you at Paris crowns $743: 6: 8$; fo that the profit which prefents is l.1:6:2 per cent. And

The money you receive for your draught furnilhes you with the money to pay for your remittance: your debit at Amfterdam will be paid by your credit at Paris, exchange at $56 \frac{1}{4}$ : for, if I French crown will pay at Amterdam $56 \frac{1}{4}$ grofs, $743: 6: 8$ will pay guilders 1045 bank-money.

This proves to demonflration that, let the advifed price be either above or below the arbitrational price, there is always an advantage to be made by drawing and remitting.
From what has been faid, it very feldom proves that the advifed price is exactly the fame with the arbitrational one; and, the greater the difference is between them, the greater is the advantage.
advantage.
In the foregoing queftion the difference is fuppofed to be no In the oregoing queftion $55 \frac{3}{6} \frac{3}{4}$ and $54 \frac{3}{7}$, in the one cafe; and, in the other, that between $55 \frac{33}{37}$ and $56 \frac{1}{2}$, which is very fmall, and yet it yields a pretty profit, when it is confidered how many times this may be reiterated in a year, and, as it were, without the advance of one fhilling in money. Verbum fapienti.
Again. Let it be fuppofed that London exchanges on Amfterdam at $34: 10$, and on Hamburgh at $33: 5$, the arbitrational price will be found to be $33 \frac{1+3}{4 \rightarrow-3}$ between Amfterdam and Hamburgh.
Now let the advifed price be either above or below the arbitrational price, what profit is there to be made?
If the advifed or real price of exchange between Amfterdam and Hamburgh is at 32 , which is below the arbitrational price, then
Draw on Hamburgh 1، 100 at $33: 5$, debits you at Hamburgh marks 1253:2, and remit to Amfterdam 1.95:18:7, at $34: 10$, credits you at Amfterdam guilders 1002: 10 bank-money; fo that the profit which prefents is $1.4: 1: 5$ per cent. and
The money you receive for your draught furnifhes you with the money to pay for your remittance, as before;
And your debit at Hamburgh will be paid by your credit at Anferdam, exchange at 32 : for, if 1 dollar of Hamburgh Amfterdam, excharge Amtterdam, marks lubs 1253:2, of will pay $3^{2}$ fivers at Amfterdam, marks lubs 1253:2, of
Hamburgh will pay guilders 1002: 10 bank-money of Amfterdam.

But if, on the other hand, Amfterdim adviles that the ex change between thamburgh and there is at 3.4 , which is above the arbitrationat price, then
Draw on Amfterdam 1. ico flerlug, at 34 - 10 , lebits you Amfterdam guikers 1045 bank money, and remit to Ham arth 1. $97: 7: 10$, at $33: 5$, credits you at Hamburgh arks lubs 1220:7:6; to that the profir which prefents is 2:12: : per cont. and
The money you receive for your draught pays that for your remittance - rour debit at Amfterdam will be paid by your credit at Hamburgh, exchange at $34^{\frac{1}{2}}$ : for, if 1 dollar of mourgh will pay $34 \frac{1}{\text { flivers at Amferdam, marks lub }}$
 1220: $7: 6$ will pay guilders 1045 bank-money at Amiter-
dan. Thefe examples alfo prove argain to demonfration, hat, let the real or advifed price of exchange be either below or above the arbitrational price made by the fpeculator, there is always advantage to be made on draughts and remittances, rovided the merchant, or temitter, is well flilled in the argtrations of exchanges, and takes all his meafures with due judgment and fagacity.

REMARKS.
Thofe who are well frilled in this matter generally agree to upport their correfpondence commiffion free on all dides; wherefore, when it is confidered what opportunities the merchant, or remitter, of a general credit and correfpondence has, he benefits, by a judicious combination, or comparion of the exchange throughout Europe, are far more conliderable than molt; than 99 out of 1oo, nay, than 999 , periaps; out of 1000 , are duly appriled of.
Thofe who are not thoroughly acquainted with the fubject of exchanges, are apt to imagise that there is nothing more in it an the mere converfion of the monics of one country into thofe of another. This is tiking a very fuperficial view of fo nice and important a bufnefs; yet in this light, and this only, it is confidered in all fichools, and, indeed, in mott counting-houfes: but the complete knowledge of the bufinefs of exchange is no fuch conteniptible matter. It is truly a fience by iffelf, and has its prisiples and clements; whore proper application to the various occureences, which naturally offer themielves in the courfe of merchandizing with foreigin countries, affords no little benefit and advantage.
Thave heard it faid by fome, whom I could wih knew better for their own fakes, that thefe things are rather points of corious fpeculation than bencficial in practical commerce. This is certainly a vulgar crror, and I an fory it is fo univerfally prevalent.
In favour of this miftaken opinion it has been faid, that the exchanges might, and do, frequently vary betore orders can be duly executed. 'Tis true, the exchanges may vary from the time of orders to that of execution; fo may the price of all other commodities, as well as that of bills of exchange, (for at prefent I confider them in the fame light) in which cate the orders given are not complied with, if they cannot be executed according to the intention of the principal.
But if the merchant who gives the orders is well acquainted with the ftate of the trade of thofe places which he has his eye upon, with intent to advantage himieff by his ikill in the aroitration, "tis as likely that the courfes may vary equally, if not more to his advantage, than he at fritt found them, and which induced him to give fuch orders at all: for prices qually proportionable to thofe from whence he made his com utation, will anfwer the like degree of proft to him.
If a correfpondent happens to be ignorant of your intentions, and of thofe fecret calculations, which are the rudder of your conduet, 'tis no great dificulty to give him fuch varicty of proportional prices as may direct him to the end aimed at Yet for the knowing and fkilful merchant to have to do with the mere mechanical or the unfliful, is difadvantageous to his interefts, where knowledge and fagacity are required, though it may be otherwife upon other occalions; for merchants, as well as others, fometimes play upon the ignolane of correfpondents lefs knowing than themfelves.
Thofe, however, who are Chrewd cechazers themfelves, generally make choice, upon the negociations, of correfipondents not lefs fo; and then they are certain of the gain definned, or that their orders fhall remain unexecuted till the dvantagcous crifis happens to fall out.
But there is a rifque in all this, fay others, who are as wife as the fornier. Wherein, I afk, is the greater rifque, in trufting a man with a thoufand runds worth of goods to fell for your account, or a thounad pounds in money, by ordering him to draw that fum on you by exchange? If the fales and returas of goods are made within the year, or two, c: more, 'tis well; but, if A orders B to draw a ro001. on him at ufance, or double ufance, he mayorder C to draw in B by way of remburfement, or might have been obliged, from the circumfances of his trade and affairs, to have fuffered C to have drawn on him, or have been obliged to have remitted C.
sides, fuch is the fhortncfs of time, which bills of exchange un, in comparifun to twe time before the returns for grods

are, in the geteral, fir lefs hazardous than conling in goo: a , hlupping, or infurancing. Thete are, however, meafures to be taken to render the hazard in traffic by exchange less than moft people, who have not duly confflered this fubject, may be acquainted with. But it is not my buffuefs to intruct my fuperiors; thefe admonitions a:c chictly intended for the riling generation of young merchants, whom, in particular, we thatl always be ambitious to profit. The fanstion and authority, alfo, that a bill of exchaye carries with it, ftll effen the hazard in dealing therein.- This may deferve atention.
Of all the reafons I have heard given by way of objection to the fludy and practice of this part of exchange, theie is one, I think, very weak and contemptible: it ", that, if there are any extraordinary advantages to be made by this myftery of exchange, the Jews are the chiff who have engroffed this bufinefs to themeives.
Whatever honour this may be to the fagacity and penetration of the Jew merchenss and remitters, it is no meat credit to the Chiffian one, that the Jews hould prove sheir fuperiors herein. Ah! but the Jews have a mote general correfpondence atmong one another, and better intelligence, and, therefore, can carry on this feecies of commercemeth more eate and fecurity. How fo? Can't Chriftinn merchants obtain as univerfat and beneficial a correfpondence as Jews with Jews, if they are cqually capable to fupport it? When a merchant has, by his fill and conduct, his integity and fortune, duly cftablithed a reputation at home and abroad, there is no end of his correfpondence, with Jews as well as Chriftians and Turks, \&ic. for foreigners, who are complete merchants and exchangers themetves, fejoice at meeting with a coriefpondent of the like flamp, by' reafon of his'greater ability to promote their reciprocal interelts:
Thefe obicetions, and othets of the biee 1 ind, I muft prefume to fay, betray nought but downight ighorance in the fubject of exctanges, if the people migun'zs they feak; and demonftrate that fuch peifons are really utacquainted with the very clements of the proftable purt of exchange.
The only cacule can be nade for fome people $i$, that they are not in earneft when they alk in this manner, but ufe theie objectiorit, as an artifce to keep oithers out of the like gainful way of traffic. If this be the cafe, I would only cblerve, that, the more knowing ererctrants and exchangers in genesal are in this branch, as well as all others relating to commerce. the more will they enrich themfeives, is well as the nation : and the better able fhall we be to give bread to the poor, and make the who'e human fpecies happy, by dint of a fair and honourable commerce. And this I ferioully aver is the rroft prevalent motive to dedicate my life to the cultivation of arts, which liave fo defirable a tendency: and, as my endeavours have already ftirred up others to the like applications, fo I hope the nuraber will daily encreafe; to whom I Thall gratefully acknowledge my obligations for any information they may pleafe to communicate to me, or for their candid rectification of any muitikes which I may be liable to ; defiring them to confider, that, as the fuljoc: I am engaged in is fo univerfal, we are liable fometimes to be attended with mifinformation.
Nor is this knowlege in the exchange neceffary only to the pretty confant dealers in monies and bills; for, as I have obferved lately upon another occalion, 'Whoever trades. as a ' merchant, that is to day, as an exporter and importer, in - Europe, muft of necefiny have to do with drawing and re' mitting ; and, if fo, he twould by no means be unacquainted ' with thofe arts of makng the beft advantage by fo doing : 6 but this is not poffible to be done withour being tho' roughly fikilled in their abitration to a demonfrative ex-- actitude.

- The more general the trade of a merchant is, the more - univerfal fhould his knowledge in this particular be. And ' thofe who may have vicws in dealing largely by exchange, - will certainly find their account beyond expectation in bec ing fundamentally grounded in this extraordinary fubject: - for a trader of a good general foreign correfpondence may, ' by this means, gain more by dirt of credit and fill, than 6 others unacquainted herewith can do by dint of hard ' money *.'
* See The Merchant's Pullic Counting houfe: Or, New Mercantle Intitation, by fuelachy Poitlethwayt; pinted for John and Paul Knaptor, p.ges !2, 19.

This I have demonftrated to thofe who underftand me; and it will appear more and more confpicuous throughout the whole fcope of this work.
It does not always fall cut, that the interef of private traders coincides with that of the nation in gemeral; but, in the prefent cafe, it does a for while our merchants of ingenuity are gaining advantages to then:flyes by their fkill in the exchanges, they neceffarily contribute to rule and contron the courfes of exchange: in general, more and more in the favour of our conatry than otherwife they ceult be, if thefe practices are purfucd by merchants in forcign conetries, and arglected, thategh wats of thel, by thole in our own

## AR C

and, the more the exhaness are, by this means, kept in our favour, the greater will the general b-llance of trade turn in the favour of the nation, or the lefs to its difalvantage, in the ballance of trade with particular nations. For, as 1 have clicred in my tefore-cited treatife, in the cafe ct Sir Thomas Grefon, ' When the exchange is againt a nation, the - goods experted from that nation are fold for fo much lef's - and roods imported from the other dearer, as the exchang 6 is above the par; fo that the exchange, buing once ajalizit - a nation, contritutes to kecp itielf fo. The exchange with - Holiand, being generally againff England in time of peace as 6 well as war, affects this kngdom of Great-Britain more, - perhaps, than has been fo thoroughly weighed and confider-- ed as could be defired: for, as Amfiterdam in made the center - wi commercial correfpondence between the feveral parts of - Eurose, the rate of exchange between us and Holland - muft proportionally affect that between us and other coun6 tries with which we have dealings; more efpecially with - thofe we negociate bills with always through the medium ' of holdad".

- See the Nexchant's Public Countinghoufe : Or, New Mar conde Inlituiirn, p. Gi. Or the article Mercantile College in th": Dictionary.

From what has been faid in regard to the prasical bufinefs of our Bitilh merchants, and our forcign mo:ey-negotiators in geoctil, it is apparent, that it is always in the power of thofe weful fulfeels of thefe kingoms not only to fecure the advanthecs of the cxchanges to themelves, but greatly to contritute to make the Lendon courfe of exchange influence thofe of all turope, to the gencial benefit of the nation, as Amfterdam bas done for near half a century, to the unfpeakable cmolument of that fate.
For more mater on this head, fee the article Exchanges, and the capital cities of trade and exchange throughout Europe, under their refpective provinces, principalities, duchies, countice, \&c. according to the general difpofition of this work.
ARBITRATOR. See ARBITER
ARCHETYPE, the name given at the mint to the original wereht, or ftandard, which is kept there, and by which all other weights ought to be examined and adjufted.
ARCHIL ()U, Sec Alquifou.
ARCHIPELAGO, fignithes a clufter of iflands. The ancients knew bardly any other archipelago but that of the Fegean Scd, which is part of the Mediterranean. But the voyages which the moderns have taken to the Eaft-Indies round the Cape of Good Hope, and the difcovery of America, have acquainted us with a great many more archipelago's, as thofe of it. Lazarus, of the Maldives, of the Philippines, of the Moluccoes, of the Mariannas, or Ladrones, of Mexico, and fone others.
We fpeak in their proper places of the trade that is carried con in all the illands of the Archipelago's of Afia and America; but, as to the trade of the Archipelago of the Fgean Sea, which it very much concerns the European merchants to be acquainted with, it being, as it were, in their neighbourbood, we prefume the reader will not be difpleafed to meet with a particular account of it in this place. We refer, therefore, the reader to the particular articles of the Ladrones, Moluccoes, Philipines, and other iflands, for an afcount of their trade, and we thall confine ourfelves here to the illands which compofe the Archipelago of the Fgean Sea; but we thall fpeak of fuch only as are confiderable enough t) be vifited by the fhips of the European nations, for there are fome which are inhabited by a few fifmermen only, and others which ferve but as a fanctuary to fome caloyers, or Greck monks, more wretched fill than the fifhermen.
For the reader's conveniency we fhall fet down here thefe jllands, not according to their geographical lituation, but in an alphabetical order; but we fhall obferve firf, that all thefe inlands lie between the 35 th and 40 th degrees of north latitude. Some of them are called Cyclades, becaufe they form as it were a crown, or circle, round the ifle of Delos; the others are called Sporades, becaufe they are difperfed here and there, and lie without any order between fifia and the ille of Candia.

The illands of the Archipelago in the Ægean Sea, and their trade.

Anorgos.

## Ardros.

Antiparos.
Candia, a large ifland in the Mediterranean, fituated at the entrance of the Archipelago. It was anciently known by the name of Creta, and is about 1600 miles diftant from Marfuilles, 6 on from Confantinople, 400 from Damieta in Egypt, roltom Cyptis, soo from Milo, and 40 from Cerigo.
The trade whech is carried on in this inland is confiderable and mott of the Chilitian nations who traffic in the ports of the Lovant have confuls bere. The towns in this ifland which have the gentet irade sic, Canea, Retmo, Cardia, and

Girspetra. Tha Fiench conet reates at Cance, and rat there are met above 10 or 12 merhents of that maton tcailed tinie.
The country abour this town, as well as the reft of theiland, is coveced with olive trees, which in a maner never die, becaufe it never freezes bere. The oil made of the fru:t is very rood, and the chat article of the trade of the iflam. When Were is a gord ciep of olives, they con make about 300,000 meanes of oil, in the y ar if. 9 the perple of Provence butht 200,000 racalures for theii tare only; and in 700 , after the crop was gethered in, oil was worth but from 3 , to 40 parats per meature, cr, at moth, 44, rec.ionang the parat at the rate of o lards Fench money (uhich at that time amounted to about $s$ fathings (ighifh) and the meafure, at the rate of 8 ocos and $\stackrel{y}{\xi}$, the oco weigening 3 pounds ard a - It rofo, inded, aftewards to 60 and 6 , parats, by the eagernefs of the french traders, who out-bid each other.
This oil is proper for the fode maters of Marille, efpecially when the oll of Provence happons to fal. I he beft in the ifland is thar of Canea and of Resino; that of Girapetra is black and muddy, becaure the inhabitunts of this lalt place are ufed to flir the oil and the lees together with a fick, before they pour it out of the jars, in order to fell all to ethe:
There is afo bought in Candia a great deal of wine and malmey. The malmey of Retimo is reckoned the but. The French keep a vice-conful in the laf-meptioned town. The othor commodities of this inand are gum abagant, hudanum, wool, fill, boney, wax, checie, cotton, and fefamum. One might alfo buy wheat there, which is excellont, particularly about the town of Canidia; but the exportation of it is often prohibited.
Chio, or Scro. This inand, which the Turks, who are at prefent in poffelfon of it, call Salzizadaki, or Sachezada, that is to fay, the ine of muitic, is one of the largeft and betr-pcopled in the Alchipelago.
its commerce is very coniderabie, but yet much lefs fo than might be reafonably expected from the great number of its inhabitants, and the cueral-mechandizes wh.ch grow, or are manufactured there.
li ine, butter, filh, coton, turpentine and matic, from whonce it took its new name, are the chief productions, which make the Europuans go thither, efpecially the Engififa and French, who have confuls here, as being one of the mole important ports of the Levant.
It is reckoned that there is above 100 crowns worth of fpin filk bought here every year, befides a great many fuffs made in the infun, and amongtt others, damaks, fattins, and laffaties, or luthin, s, which are carried to Cairo, as well as to all the other towns on the coafls of Barbaly and Anatolia, and particularly to Contuatinople:
The cotton is either in the wool, or fpun; a great deal of it is alfo ufed in manufakuring fuftians and dimaties, whoh an reckoned pretty good, and defigned for the f. me places as the fli-fuff.
As for the manic, wherein conffis the chief trade of this illand, it being hardly to be met with any-where elfe, the belt of it is deligned for the Grand Seignior, or rather for the ladies of his feraglio; fo that what the Europeans buy there can be nothing but the refule, which the officer, lent thither by the Porte to watch the gathering of this precious gum, did not judge fine cnough to be fent to Confantinople. We mention in another place the plant which produces the maftic, its ufe and its trade.
We fleall add to this the account which Mr Tournefort gives us of this inand, in the fecond volume of his voyage into the Levant, letter 2.
The wine of Chio is pleafant and ftomachical. There are three forts of it: the one has fomething of that tartiefs which afterwards turns into ftrength : the next is lufcious, or fwect and the third has fomething of both.
The grapes of which they make there three forts of wine aro cut in Auguf. After they bave let them dry 7 or 8 days, they piefs them, and then let them fland in tubs to work, the cellar being all the while clofe fhut. In order to make the len wine, they mis with the black grapes a kind of white grapes, which are of the form of a peach-fione: but, in making nectar, whicis fill goos under that name in Chio, the w ile another fort of aras, fomewhat fyptic, which maites it difficult to fallow tiem when one eats them: bus that ftyptic tafte tums afterwards into fweetnefs, when mined with common grapes.
They do not gather much above $2 \times 0$ muids, or lin fieads, of oil at Chio, each muid weighing 4000000 , at the fatio of 3 pounds 2 cumes per oco.
The French expert alfo honey and wax from this illor l: but the mof conmeraile commensy of tie country is i. . . if which they make yearly 60,000 maffes, which, at hat a pound per mals, amounts to 30,002 pounds French weinle (or to $32, \% 00$ pounds avoirdupois, 100 pounds in France making rog pounds Englifh weight). That fik is almoit all ufed in the ifland, in the manufaluring of velvers, damals, and other fults, Whered for Afia, Foypt, and Earberr: they fomentes mix gold and filver with fik ta thele tiuth. Jech pows of hik pays at the cuftom-houle a cuy of tox t tomins, that is to fag, 20 fols Frouli moncy. it is fod

## A R C

fometimes for 35 tomins per pound; befides whicit the buyer is obliged to pay the duty.
The other commodities of this inland are wool, cheefe, figs, and malfic: thefe figs they rear by caprification.
The Turks and the French (I fuppofe it fhould be Franks, i. e. Erropeans) pay 3 per cent. on all the merchandizes of the illand; the Jews and Armenians pay 5 per cent.
Metelin. This is the celebrated Lerbos of the ancients: It produces good wheat, excellent oil, and the beft figs in the Archipelago. It affords alfo a great deal of wine, which has loft nothing of its former reputation. Here grow, likewife, abundance of fir-trees, of which they make mafts and boards, for which there is a large demand throughout all the Levant.
Milo. Before the king of France had forbidden his fubjects to cruife againft the Turks in thofe feas, the ille of Milo was the moft common retreat of thefe honeft corfairs, and, as it were, a continual fair, where they came and fold their prizes: and, as this made the ifle abound with all forts of commodities, it had almoft banifhed all other trade from it.
But, at prefent, they bave a pretty confiderable commerce in wine, oil, falt, fulphur, allum, cotton, fefamum, coloquintida, and all forts of pulfe.
Salt is fold there for a trifle.
The fulphur of Milo is extremely fine, and has a greenin and fhining caft. It is to be found in large pieces, by digging the ground, and in deep veins in the quarries, whence mill-ftones are taken.
Cotton is very fine here, and fells well : one may buy it, however, for a fequin per 100 weight, when it is fill in the pod, that is to fay, wrapped up within the fruit ; and for 10 or II florins, when it is picked, and without the pod.
There is alfo at Miio a kind of chalk, fit to be ofed inftead of foap. It is as good as the Cimolean earth, that comes from Argentiere.
They have alfo here a prodigious fale of mill-ftones, and furnifh not only all the other iflands of the Archipelago with them, but even Conftantinople, the kingdom of Cyprus, and a great part of Egypt. The quarries are fo plentiful, that they afford, one year with another, a revenue of above 50,000 livres to the Grand Seignior.
This ifland furnifhes almoft all the fhips that fail in the Mediterranean with pilots, none being better acquainted with that fea than they are.
Micone, and, in the Franc language, or lingua Franca, Miconi. Its harbour is very good, and its foil produces abundance of commodities proper for trade. The feamen of Mi cone are reckoned the beft of all thofe of the Archipelago, and feem to vie with thofe of Milo; and, indeed, the inland of Micone alone can furnih 500 mariners, and above 100 veffels, for the trade of thofe iflands, and 40 or 50 large ketches for that of Turkey and the Morea.
The trade to Turkey confifts in leather, particularly in Morocco and Cordovan leather, which they go and lade at Siagi, near Smyrna, and at Scalanova. The trade to Morea confifts chiefly of wine: the people of Micone make, one year with another, from 25 to 30,000 barrels, each barrel weighing 50 ocos, that is to fay, 150 pounds French weight. Every ketch can carry 7 or 800 barrels.
Befides the French conful, there are alfo in this ifland an Englifh and a Dutch conful, though the two laft-mentioned nations fend few fhips thither, but the Greeks who trade there, put themfelves under their protection.
The French Chips, defigned for Smyrna and for Conftantinople, always pals through the canal of Tine and Micone. Befides thefe veffels, which touch at Micone, there come often hither barques of Provence, that lade corn, filk, cotton, and other merchandifes of the neighbouring illands.
Naxia. Though there be hardly any harbour in this illand, yet they have a pretty good trade. The chief commodities bought here are barley, wines, figs, cotton, filk, flax, cheefe, falt, oxen, fheep, mules, emery and oil.
There is alfo laudanum to be met with here, but it is full of filth, goat's-bair and wool, the inhabitants not taking care to gather it with whips as they do in Candia, cutting only off the hair, or wool, of the animals which have rubbed themfelves againft the fhrubs that produce it.
Olive-oil is very cheap in Naxia; falt is cheaper ftill.
Ennery is found in feveral parts of the illand by the hufbandmen, whence it is carried to the fea-fide to be embarked at St John Triangata. The Englith often take it in for ballaft; and it cofts them commonly but a crown the 20 quintals, each quintal weighing 140 pounds.
The marble of Naxia is very much valued. The French keep a conful in this inland.
Paros. This ifland was formerly very famous for its white mable, which the fculptors, for their bufinefs, preferred before all other forts of marble; and fome pretend that moft of the ancient flatues which have been preferved till this time were made of the marble of Paros.
The modern fculptors are not of the fame opinion with the ancients; and the moft fkilful agree, that the marble of Italy is preferable to that of Greece, the latter being of too coarfe a grain, and apt to fplit, or fly, when it is working;
whereas the former is foft, and feems to yield to the chif fel.
It is thought that the quarry of marble in Provence, between Marfeilles and Pehnes, is of the fame grain with that Grecian marble.
The trade of Paros confifts in wheat, barley, wines, fefamum, and cotton-cloth. It produced alfo formerly abundance of oil; but, during the war of Candia, the Venetian army burnt almoft all the olive-trees in this ifland.
Patinc, or Pathmos. This ifland is very fmall; but it is become very famous by being the dwelling-place of St Join the Evangelift, who is commonly thought to have written his Revelation here.
This inland produces hardly any thing proper for trade, the wheat, barley, and figs which grow there being bardly fufficient for the fupport of its inhabitants. But then they have ketches, and a great many other fmaller veffels, which they ufe to fetch corn from the main land, and even from the coaft of the Black Sea, wherewith to lade the French fhips.
There is in this ifland a vice-conful from France.
Policandro. This is a fmall, parched, ftony ifland. Its inhabitants are very poor, and have but little trade, all the corn, wine, and oil they gather being for their own ufe.
Their only trade, which is any thing confiderable, confifts in cotton-cloth, fit for napkins, which is extremely cheap.
Samos. They drive in this ifland a pretty confiderable trade. The cuftom-houfe duties, indeed, are farmed out but for 10,000 crowns; but then the aga who demands them gets as much more, which he does not account for.
The mufcadine grapes are the fineft and beft fruit in the ifland; but the wine made with them is none of the moft excellent, which is thought to be owing to the bad method of making it: that which is made for the ufe of the Europeans fettled at Smyrna, is commonly pretty good, becaufe they are more careful in making it, and mix no water with it, as moft of the Greeks are ufed to do.
The Greeks who buy the wine in the illand pay 4 or 5 per cent. duty on exportation according to the cuftom-houfe officer's fancy: the French pay but half of that duty. Moft of the wine is carried to Chio, Rhodes, and Napoli de Romania.
The oil of Samos is pretty good, but the inland does not produce plenty of it, the beft crops hardly amounting to 8 or 900 barrels. The Greeks pay 4 per cent. duty of exportation on this commodity, and the French but two.
They dry figs at Samos, for the ufe of the inhabitants only; they are very white, and three or four times bigger than thofe of Marfeilles, but not fo delicate. They make no ufe of caprification here, as they do in moft of the other iflands of the Archipelago.
This illand can alfo afford yearly 400 quintals of pitch, which fells for a crown per quintal, and pays 4 per cent. duty of exportation.
Another commodity of this inand is velami, called velamda by the modern Greeks (it is the fiell of a fort of acorn) which is ufed to tan leather. They lade a great quantity of it for Venicé and Ancona.
Lafly, they export from thence filk, honey, wax, fcammony, wool, feveral forts of bole, and emery.
The fcammony of Samos is not very good; it is reddifh, hard, and tough, and confequently not eafily reduced into powder: it is alfo found to purge too violently. This drug is ufed in Anatolia, and not fent into Europe. It pays no duty.
A mongft the boles, that of the neighbourhood of Bavonda is reckoned the beft; it is of a deep red; very fine, and very dry. It is a kind of natural faffron of Mars, or crocus Martis.
Oker is very common here; it becomes of a pretty fine yellow, when Ilighty expofed to the fire, and of a reddifh-brown, when left longer expofed to it. This kind of earth is infipid, and gives naturally a fillmot colour.
There is to be found near Carlovaffi another bole yery black, and much finer ; they ufe it to dye black with.
Santorini. This ifland is properly nothing but a large rock intirely of pumice-ftone. The French conful refides at Sca, ro, a fmall town built in the bottom of the harbour. The inhabitants are extremely laborious, and very fond of trade The commodities which they afford their neighbours are barley, wine, cotton, and lemons.
The wine is of the colour of Rhenifh, but very ftrong.
They prune the cotton-bufhes there, as they do the vine.
Thefe bufhes or fhrubs grow pretty much to the fize and fhape of our currant-bufhes, and yet the cotton they produce is of the fame kind with that which the botanifts call herb-cotton, and which they diftinguifh from the fhrub-cotion.
As for the calicoes, the fineft are made by nuns, either of the Latin or Greek rite. Thofe that are quilted are chiefly valued, great quantities of which are exported to Candia, to Morea, and throughout the whole Archipelago.
Sikino. The trade of this inland confilts chiefly in $\nabla^{-}$deat, which is reckoned the beft in the Archipelago. The tartanes of Provence lade large quantities of it, and have almoft en-
groffed

## A R C

grofled this whole trade, fince that of Cape Negro on the coaft of Barbary has been difcontinued. The Turks, indeed, are not very well pleafed to fee their corn carried away, and often reckon it amongft the commodities, of which the exportation is prohibited; but it is eafy to corrupt their cuftomhoufe officers.
The other commodities of Sikino, are wine, fome cotton, and figs; the latter are excellent here, when freh; but it is otherwife, when they are dried, becaufe they put them into an oven to preferve them from worms.
There is a conful of the French nation in Sikino.
Siphanto. This inand is but fix miles diftant from Milo. The commodities exported from hence are oil, capers, filk, calicaes, figs, wax, honey, and fefamum.
There are two forts of calicoes; that called efcamite, which is plain; and the other dimitty, which is quilted; the latter is much the fineft, and there is a large demand for it.
This ifland produces alfo plenty of cotton, but it is all ufed on the fpot for the manufactory of there calicoes, and they are even obliged to import a great deal from the neighbouring iflands.
The filk is pretty fine, but there is but little of it.
Sxyros. Its whole trade confifts in wheat, barley, wine, and wax. The French lade here fome barques with wheat and barley; the wine is carried to the neighbouring iflands, and is fold at Skyros but for a crown per barrel. As for wax, they feldom gather above a hundred quintals per ann. here is alfo excellent cheefe.
Sxra. The commodities it produces, which are proper for trade, are excellent cheefe, but in fmall quantities, a great deak of barley and wine, figs, olives, and cotton.
Thermia. This is one of the iflands of the Archipelago, where the French keep a conful. The chief trade of the inbabitants confifts, in filk, which is reckoned full as good as that of Tinos, another illand of the Archipelago.
The other commodities exported from Thermia, are wine, honey, wax, wool, and cotton, of which they make feveral forts of linnens, and particularly a kind of very pretty yellow gawz, of which the women in this ifland make veils.
Tinos. This fmall inand lies pretty near that of Andros.
The chief commerce of Tinos confitts in filk.
This filk is the beft prepared of all that is fold in the Archipelago, and, except that it is not proper for making fuffs, it may be ufed in all other forts of works, as knit ftockings and gloves, ribbonds, and fewing filk.
The French buy up almoft all the filk of this inland : they who lade it for Venice, pay no duty of exportation: but they muft give fecurity, and their fureties are obliged to pay the duty, if it be found that the filk was carried to any other place.
This ifland belongs to the Venetians, and the French have a conful there.
Tinos produces wine, figs, olives, wheat, and barley. But, except barley, of which they have a pretty good trade, the reft is hardly fufficient for the occafions of the inhabitants.
$Z_{1 A}$. Its commodities are wheat, barley, wine, figs, filk, and a great deal of velani, a fort of acorn.
The filk of Zia is pretty good; when the inhabitants would fpin it, they commonly meet feveral together, and fit on the edge of their terraffes, to let the fpindle run down into the ffreet, which they afterwards draw up again by winding the filk.
Pliny and fome other authors aflert, that the making of filk ftuffs was invented in this ifland. But M. de Tournefort, in his Voyage into the Levant, pretends that it can be eafily proved this invention is owing to the inhabitants of the ille of Cos.
They make at Zia cloaks or riding-coats of goat's hair, which are very good againtt the rain, and can hardly be wet through; the ftuff of which they are made is very thin, and flabby, when it comes from the loom; but, after it has been welted and fulled on the fand and with fea-water, the threads become fo clofe and tight, that it is, as it were, impenetrable to rain. That the threads may clofe uniformly, and that the ftuffs may not Mrink, they ftretch them in the fun upon poles, with weights of ftone at the bottom.
There are two forts of figs at Zia, which are cultivated as in moft of the other iflands of the Archipelago, by giving them that kind of dreffing which the ancients did, and the moderns do ftill, call caprification.
Salonichi, anciently Thessalonica, is a fea-port, fituated in the cod of a gulph of the fame name in the Archipelago. This port is pretty much frequented fince the beginning of this century. There are a French and a Dutch confulhere. There come hither a great many fhips of all nations, particularly from Marfeilles, Leghorn, Genoa, and even directly from Holland; but chiefly from the three former places, efpecially when corn is fcarce or dear in France or Italy, provided the Grand Seignior does not prohibit the admiffion of thofe hips. However, there is a great deal of corn exported by ftealth, not indeed from Salonichi, but from its neighbourhood, as Vollo, \&c. It is paid for in Spanifh piafters, in rofo-piafters, in fequins, or any other coin that is current at
Vol. I.

## A R C

 figned, change thofe pieces for curent money of the coun try, which are folette-piafters. Thefe metchants fend a clerk, or any other trufty perfon on board the veffel, to affift the captain or fupercargo to get in bis lading, at feme of thofe places, of wheat or barley, according as he has occafion for either.The other commodities exported from Salonichi, ate tobacco, either common, or that fort which they call carada, of which thips or barques do frequently take their entire lading: corton in the wool, more valued than that of Smyrna; yellow wax, a great quantity of which is brought thither from Turkifh Walakhia; undreffed fheep's wool, of feveral qualities. Salonicas, otherwife called abats, both broad and fmall: thefe are very coarfe ftuffs of white wool, proper to cloath peafants and foldiers; thefe they fend fometimes into Piedmont, and great coats for feamen.
The commodities fent thither are indigo, cochineal, ginger, pepper, cinnamon, cloves, nutmegs, brazil wood, logwood, and Japan wood ; fugars, lead, tin, tinned iron, double or fingle ; Englifh broad cloth, other cloth after the manner of England, narrow and broad; Dutch coloured cloths, forted, French paper, almonds, verdigreafe, and fometimes coffec from the American illands.
The Sevillane piafter is worth at Salonichi 212 arpers, and the Roulpi fequin 4.52 .
The quilot makes about half a fac of Leghorn, the ocos three pounds and a half of the fame town, and the pic about one Dutch ell.
N. B. It may be obferved here, that the French are fo careful of their trade, as to keep confuls even at feveral of thefe fmall illands, where no other power does.
ARCHITECT, he who draws plans and defigns of edifices, directs the works, and commands the mafons, carpenters, tilers, and other workmen, who work under him.
Though there is a great difference between an architect, and a mafter builder, the one profeffing a liberal art, and the other exercifing a trade; yet in France they are often taken the one for the other, becaule they can both be equally admitted among the experienced and fworn architects of the king, created by the edicts of May and December 1690, and by the declaration of Auguft i6gr.
Thefe architect officers are of two forts. The one are filed fworn expert citizens or burghers, and the other fworn expert undertakers. There are thirty of each.
The functions, attributed to them by the above-mentioned edicts and delaration, are, that they alone, and no others, Ihall, within the city, provoffhips, and vifcounty of Paris, and in all other towns and places within the kingdom of France, make all vifitations, evaluations, and eftimates, both amicably, and by order of a court of juftice, in all matters relating to partitions, adjudications of buildings, either by auction or by law, houles or other buildings, ftanding out of the proper row, imminent danger of buildings coming down; and to works of mafonry, carpenters, joiners, tilers, fmiths; fculpture, gilding, painting, furveying, and meafuring of land, and generally all things in which fkill and experience are rer quired.
ARCHITECTURE, the art of erecting buildings of every kind, confiftent with the principles of geometry.
The plan or projection of an edifice is commonly laid down on three feveral draughts.
The firft is a plan, which exhibits the extent, divifion, and diftribution of the ground into the various apartments and other conveniences propofed.
The fecond reprefents the fories, their heights, and the external beauties and appearances of the whole building : this is ufually termed, by furveyors, the defign or elevation.
The third is commonly diftinguifhed by the fection, and fhews the internal parts of the fabric.
From thefe three diftinct plans, the furveyor forms a computation of the charges of the whole erection, and alfo of the time, wherein the fame may be completed.
Our work being intended for the practical, rather than the mere fpeculative life, it is not confiftent with the tenour of our defign to enter deeply into the theories of arts, there being variety of performances of this kind already.
However, where we cannot fo fatisfactorily communicate our intention, we hope to be excufed from touching upon the rational principles, on which fome arts are founded, and referring only to the beft authors, who have excelled in their peculiar próvince. This method of conduling our work, we prefume, may have its ufes, more efpecially with novifts, who would be gladly informed of the beft authors, who have exprefsly written upon any particular branch of art or fcience, that they might neither lofe their time in reading what may be ufelefs and give them a wrong turn, nor fend their money to no purpofe.
In architectural compofitions, the column, being the principal figure, fhould be perfect in its proportions, as they are taught by the ancients, who founded the art on natural and geometrical principles. Accordingly they inftruct us, that the height of the columin hould be meafured by iss diameter

Bb
without

## A R C

without any fraction or remainder, according to the different proportions of each order.
Of thefe orders there are five, none exceeding ten diameters in height, nor Jefs than feven: thole of eight and ten are efteemed perfect, the reft are inferior.
Their names and proportions are as follow, including bafe and capital:
The Tufcan is in height 7 diameters.
The Doric - 8 diameters.
The Ionic -9 diameters.
The Corinthian - $\quad$ Io diameters.
The Roman, or Compofite 10 diameters.

The rules for the proportion of columns being fettled, the entablatures muft bear a proportion to them in each order. For this Palladio has given a rule, which cannot undergo any great change, without altering the unalterable proportion of columns. He makes the entablatures of the Tufcan and Doric to be to their columns as one to four, and the lonic, Corinthian, and Compofite, as one to five. The proportion of the entablature in each order is explained as followeth :
One diameter and $\frac{7}{4}$, is the height of the entablature of the Tufcan order; which is $\frac{1}{4}$ of feven diameters. Two diameters form the beight of the entablature of the Doric; that being $\frac{1}{4}$ of eight diameters. One diameter and $\frac{4}{8}$ is the height of the entablature of the Ionic; which is $\frac{1}{5}$ of nine diameters. Two diameters make the height of the entablature of the Corinthian order; that being $\frac{1}{5}$ of ten diameters. The entablature of the Compolite has the fame proportion with that of the Corinthian.
The entablature being a part proportionable to its column, and the pedeftal an addition to both, it fhould be confidered as a part of the column and entablature taken together; therefore, the height of the column and entablature being divided into four equal parts, one of them fhall be the height of the pedeftal. This rule is to be obferved through all the five orders, by which the pedeftal will have an agreeable effect with the whole and all its parts.
The pedeftal may be made lower when neceffity requires, but not otherwife.
Thofe who would be practically informed in the principles of this art, may confult the works" of the ingenious Mr James Gibbs, in his rules for drawing the feveral parts of architecture, in a more exaft manner than has been heretofore practifed, by which all fractions, in dividing the principal members and their parts, are avoided.
Therein they will find the general proportions of the feveral orders geometrically delineated. Alfo the feveral pedeftals, entablatures, cornices, and architraves, $\mathcal{F}^{\circ} \mathrm{c}$.
In that ufeful work, the learned author has explained the arcades and intercolumnations of each order, and laid down a familiar rule for placing orders above orders.-Likewife rules for drawing doors, gates, windows, and chimney-pieces of different kinds, cornices and their profiles, architraves, bafes, impofts, furbafes, frames for pannels or pictures in rooms, and other forts of mouldings, and the proportions of ballufters; as alfo fcrolls, frets, or guilochis, and pannelling for cielings, both flat and circular.
In dividing and adjufting his orders, Palladio has, doubtlefs, excelled the reft who have wrote upon this fubject; and therefore Mr Gibbs has followed that celebrated architect. Palladio bas divided the diameter of his column, which he calls his module, into fixty minutes, and fubdivided them into feconds, thirds, and fourths.
This is fuppofed to be the method of the ancients in comporing their defigns; but it is very difficult to tyroes, and fuch who are but meanly fkilled in arithmetic: and certainly the parts, confifting of fo many fractions, may occafion miftakes in thofe who copy the orders of Palladio; befides the diffculty of dividing thefe fmall parts with compaffes, for practical bufinefs. But, according to Mr Gibbs's method of dividing the orders mechanically into equal parts, fractions are entirely avoided; which will be found to be fo beneficial to workmen in drawing any part at large, that, when they are once accuftomed to it, they will never follow any other: which is the reafon for our recommendation of the works of this nodern architect.
The rules of architecture require, That, in a fabric judicioufly and elegantly crected, there fhould be folidity, convenience, and beauty; to which, according to the tafte of fome of our moft refined mafters, are added, order, difpofition, proportion, decorum, and ceconomy. And thefe eight are efteemed, by the beft judges, to conftitute the neceflary parts of architeclure.
Solidity, implies the choice of a good foundation, and good materials to work with. Convenience, confifts in fo difpofing the various parts of a ftructure, that they may not crowd and embarrafs each other, or appear difagreeable to the infpecior. Beauty, is that engaging form and pleafing appearance, which captivate at one glance, as it were, the fight of the fpectator.
Order, gives each part of the building a proportionate extent, adapted to the magnitude of the whole.

Difpoftion, is the due ranging and atreatite union of all the parts, in order to render tue whole agreeable at all times.
Proportion, is the relation that the whole work has to its conflituent parts, and which each part hath to the complex idea of the whole: for, among buildings that are perfect of their kind, from any particular part, we may make a good judg. ment of the goodiefs of the whole: for example, the diameter of a pillar, or the length of a triglyph, gives us a right ides of the whole with which they have connexion. To exprefs the relation that many things have to one another, as to their magnitude, and the variety of their parts, Vitruvius, the great architect, indifferently ufes the words proportion, eurythmy, and fymmetry; the two laft whereof are pretty fynonymous with the firt.
Decorum, or decency, confifts in making the whole afpect of the fabric fo correct, that nothing thall appear but what is founded upon the principles of geometry, and delicacy of judgment. Thefe have regard to defign, cufom, and nature. Defign induces to chufe other difperitions for a church than a palace. The regard we pay to cuftom, inclines us to decorate without the entrance of fuch houfes, which are fumptuous and magnificent within. 'The regard we have to the nature of places; from an inherent tafle, perhaps, natural to mankind, makes us pitch upon different profpects for different parts of an edifice; thus we chufe to expofe bed-chambers and libraries to the morning fun; winter apartments to the weft, and clofets of paintings to the north, they requiring a pretty equal light.
Oeconomy, inflructs the architect, to have regard to the expence to be made of his defign, the quality of the materials, near the places where he builds, and take his whole meafures judicioully, for the order and difpofition.
Architecture is commonly divided into civil, or military, and naval, or marine.
Civil Architecture, is the art of defigning edifices of every kind, for the ufes of civil life in every capacity, as habitations for dwelling, churches, meetings, fynagogues, colleges, halls, palaces, $\mathcal{F i c}_{\text {c. }}$
Military Architecture, is properly the art of fortification, or that of raifing of forts and caftles, to fcreen and protect from the hoftilities or invafion of enemies; and depends, as the other does, upon the principles of geometry.
The defign hereof is to thew, how a place may be fortified with ramparts, parapets, moats, and other bulwarks and defenfible contrivances, with an intent that a frmall number of men, within fuch a place, may be capable to defend themfelves againft the affaults of a more numerous army.
This part of architecture is either regular or irregular, and either of a durable or of a temporasy nature.
The regular, is that which is built on a regular polygon, the fides and angles being equal, and equi-diftant from each other.
The irregular, is that where the fides and angles are not all uniform, nor equi-diftant, nor equal to each other.
The durable, are thofe works which are raifed for continuance.
The temporary, is that which is erected occafionally on particular emergencies: fuch are thofe works, which are raifed for the feizing or maintaining of a port or paffage, circumvallations, contravallations, redoubts, batteries, trenches, E".
Thofe who have excelled in the military architedure, are Coehorn, Pagan, Vauban, Scheiter, Blondel, from whom all who have wrote fince, have chiefly derived what they have communicated to the world.
Though this part of architeflure, as well as the others, fhould by all means be duly cultivated in thefe kingdoms; yet the wifert men have allowed, that the fafety and defence of Great-Britain principally depends upon her
Marine, or Naval Architecture, or the art of Chip-building, which is not only founded upon the due application of geometrical principles with great judgment and delicacy, but on thofe of hydroftatics, as the honourable Mr Boyle obferves. So that to be thoroughly filled in this ufeful art requires a perfon to be well informed in all the curious problems, theorems, and paradoxes, with which that great man, and others, have favoured the world upon that fubject.
In order to complete the art of fhip-building, it has been obferved by fome ingenious practical artifts in this branch, that hydroftatical experiments, in regard thereunto, fhould be made upon falt-water, and not frelh, as the chief of them have been.
It has been faid by others alfo, that the fhipwright fould be as good a mariner, as marine architect, and know as well how to fail, as build a fhip: the reafon given for this is, that, in practical navigation, the ingenious hipwrigbt, fkilled therein, will remark variety of particulars, which will guide him in his architecture, which the mere hipwright can iorm no idea of.
It is not for want of genius in fhipwrights, that the praclical part) of hip-building is not carried to a greater perfedion: but for want, I am afraid, of their not beng fo rezularly bred in thefe kingdoms, as could be defired; condiucting that

## A R C

our whole commerce and navigation fo greatly depends upon that art: for the qualifications, requifite to render a perfon a complete mafter of this art, are really fo many, as well in regard to the theoretic as practical part, that it is very rarc, in deed, that fuch qualifications are concentrated in one man. It has been obferved thetefore by fome wife and great men, that our fuccefles by fea have been more owing to the ftrength of natural genius in our mere practical fhipwrights, or rather to chance, than to any competent knowledge in thole parts of the mathematics and philofophy, which are indifpenfably neceflary to excel in that art.
From the year 1617 to 1656 , fhips of three decks were from 38 to 40 feet broad; the St Michael by Sir John Tippets, but 41 fect 8 inches; the London by Jonas Shifh but 44 feet, and carried 100 guns: fince that, feveral hips, of 48 feet broad, have been obliged to be girdled.
The Monk by Sir John Tippets, the Rupert by Sir Anthony Dcane, the Mary by Mr Pett, the Dreadnought by Sir Henry Johnfon, all third rate men of war, belonging to the royal navy of England, and but 36 feet 6 inches broad; the Cambridge by Mr Shifh but $3^{8}$ feet, and the Royal Oak no more than 40 , and each of them carrying 70 guns; and, fince them, wo deck fhips of 42 feet broad have mifcarried.
The Royal Catharine was contrived by the Royal Society, and yet was girdled; the double-keeled experiment was alfo made by that fociety.
Since mifcarriages in our fhip building are often attended with very injurious, and may be with very fatal confequences to the nation, this art cannot be too judicioully cultivated, nor too zealoufly promoted.
It has been oblerved by fome, that a hip ought to be confidered three principal ways. (I.) By trying her body below the deepeft draught of water, whether the thape be truly circular or not, according to the courfe of the water, and not by horizontal parallels, which will enable us to form a true judgment, whether the will fail fwift, or not. (2.) By obferving the fhape or frame of the ribs, which will inform us, whether Ihe's well contrived to bear the fail you defign; which is to know, according to the phrale of the fhipwright, whether the be ftiff, or tender-fided. (3.) By confidering the due connexion of fuch a machine. Which three obfervations being fkilfully made, it is faid, by fome, will form the hull of any thip perfect and complete.
Others have been of opinion, that the refiftance in the water is according to that crofs fection, which is made by the midthip, or the largeft part of the thip, only confidering the angle of incidence; and that every fhip principally refifts the medium'at her broadeft part; alfo that the mafs of water which refifts a hhip, is not refifted by her until it is pafled by her biggeft part; and that, if two fhips were formed ever fo various, the one ever fo acute, and the other as obrufe as poffible, yer, if their cubic inches under the furface of the water, and the power that drove them was equal, the trim indifferently confidered, their velocities would be equal.
For a more minute and fatisfactory account of this art, we refer the reader to Sucherland's Ship-builders Agiftant, and to Britain's Glory, or Ship-building unveiled, by the fame ingenious artif.

## REMARKs

In regard to civil architecture, it is certain, that thofe nations which have no ftately and magnificent buildings in general, are always poor and uncivilized. As land Atructures and edifices of every kind give employment to prodigious numbers of people, whatever has a tendency to improve in the art of building, fhould be duly encouraged by thofe whofe fortunes and diflinction will admit of it; and that not only for the fplendor and magnificence of the ftate, but for the promotion of ufeful arts, as well as the benefit of their landed eftates: for this art gives birth to the immenfe confumption of timber, bricks, fone, and mortar, iron-work, $\mathcal{F}^{\circ} c$. all which tend to the private advantage of the landed intereft; as does likewife the well furnifhing of thofe fumptuous edifices, when they are erected; which alfo gives daily bread to an infinite number of other mechanics and artificers. Thefe mechanic arts give Atrength, wealth, and grandeur to a nation, and gradually train up and fupport a conftant race of practical artifts and manufacturers, who thereby become the great inftruments of bringing trealures into the ftate, by the vent of our native commodities to foreign nations.
Nor is it politic for the great and opulent to contemn mechanics in general, as too many, perhaps, are wont to do. It is faid, that, when the great Heraclitus's fcholars found him in a mechanic's fhop, into which they were afhamed to enter, he told them that the gods were as converfant in fuch places as in others; intimating, that a divine power and wifdom might be difcerned in fuch common arts, although they mif. takenly overlooked and defpifed them.
We know how the late Czar Peter efteemed and careffed artificers and mechanics of every rank and degree, and behold the extiaordinary effecis of fuch policy in that wife prince; who, by thofe meafures, has converted a generation of favages into men.

There are fome who are too great encouragers of buildings, they ruining themfelves, as well as the workmen they employ, by gratifying that itch beyond the limits of their fortunes. In confequence of this boundlefs profurion, we too frequintly fee, before the expiration of half a century, very ftately and magnificent feats, which have colt immenfe fums, run to decay for want of being inhabited, or, according to a modern cuftom, levelled to the ground for fale by piece-meal: thus ftructures that have coft fome hundred thoufand pounds fterling, have not produced one twentieth part of the prime coft to executors. So that with the money funk in the erection of thofe fuperb edifices, and the expence which attends the fupport of them with fplendor equal to their ftatelinefs, fome great families have been reduced to great indignity. This is a melancholy confideration to the proprietor, though this practice gives employment to workmen, to whom it fometimes has proved ruinous, as well as to the families of fuch who have had an usgovernable tafte for building.
The French have an academy for the due cultivation of architelqure, eftablifhed by Monf. Colbert.
And, while other nations are affiduous in the improvement of the art of fortification, it may not be for the intereft of England wholly to neglect it, as we have experienced upon fome late occafions.
And it will be thought needlefs, by every true friend to the intereft of the trade and navigation of Great-Britain, to urge a word in favour of the ftudy and improvement of an art, upon which our all feems to depend, both as a free and a trading people: I mean that of marine architecture, or the admirable art of Siap:building, more of which fee under that article.
ARCTIC, in aftronomy, a name given to the north pole.
ARCTIE circle, (in aftronomy) is a leffer circle of the fphere drawn on the globe, parallel to the equator, and at $23 \mathrm{deg} .3^{\circ}$ min. diftant from the north pole of the world, from whence it takes its name. This, and its oppofite the Antarctic, are called the two polar circles. They may be conceived to be defcribed by the motion of the poles of the ecliptic round the poles of the equator, or the world.
AREB, a money of account ufed in the dominions of the Grand Mogul, particularly at Amadabat. Four arebs make a crow. A crow is worth a hundred lacs, and a lac 100,000 rupees.
ARECA, or ARECK, a famous fruit of the Eaft-Indies, wherein they drive an incredible trade, and make a prodigious confumption thereof, there being farce any perfon, even from the richeft to the pooreft, who does not make ufe of it.
The tree which bears the areck is tall, ftraight, thin, and round. It is of the palm kind, and has no branches: but its leaves are charming to the fight : they form a round tuft at the top of the trunk, which is as ftraight as an arrow. It grows to the height of 25 , or 35 feet, and is a great ornament in gardens. The fhell which contains the fruit is fmooth without, but rough and hairy within, in which it pretty much refembles the fhell of the cocoa-nut. Its fize is equal to that of a pretty large walnut. lit , kernel is as big as a nutmeg, to which it bears a great refemblance without, and has allo the fame whitifh veins within, when cut in two.
In the center of the fruit, when it is foft, is contained a greyith and almoft liquid fubftance, which grows hard in proportion as it ripens. The fruit, when ripe, is aftringent, but' not unpalatable, and the thell is yellowifh.
The chief ufe that is made of areck is to chew it with the leaves of betle, mixing with it a chalk in a red pafte, made of fea-fhells*. In order to chew it they cut the areck into four quarters, and take one quarter of it, which they wrap up in a leaf of betle, over which they lay a little of that chalk: afterwards they tie it, by twifting it round. This bit prepared for chewing, or maftication, is called pinang, which is a Malayan word, ufed all over the Eaft-Indies. The pinang provokes fpitting very much, whether it be made with dried or frefh areck: the fpittle is red, which colour the are=k gives it. This maftication cools the mouth, and faftens the teeth and gums. When they have done chewing the pinang, they fpit out the grofs fubftance that remains in the mouth They are under a miftake who imagine that frefh areck melts intirely in the mouth. Nor is it lefs a miftake to think that the teeth always continue of a red hue. As foon as they have done chewing the pinang, they wan their mouth with frem water, and then their teeth are white again. The Europeans who Jive at Batavia, at Malacca, and in the Sunda and Molucca iflands, ufe pinang as much as the Indians do; and, by wafhing their teeth; they preferve them white.

- Cornelius le Bruyn afferts that they rub the leaves of betle with a red drug of Siam, or with white chalk.

Some pretend that areck ftrengthens the fomach, when the juice of it is fwallowed, as moft of the Indians do. Another property, afcribed to it, is its curing, or carrying off, all that might be unwholeforne or corrupt in the gums.

## A R I

## A R I

The Siamefe call areck plou in their language.
The beft areck of the Indies comes from the ifland of Ceylon.
The Dutch E.ft-India company fend a great deal of it in their flips into the kingdom of Bengal. There grows in Malabar a fort of red areck, which is very proper for dyeing in that-colour. The fame company fend fome of it from time co time to Surat and Amadabat, for the ufe of the dyers in the dominions of the Grand Mogul. Under the fpecies of areck are comprehended fix different forts, two of which are the beit for mantication.
ARGYLESHIRE, in Scotland, has the Irih Sea, and the frith of Clyde on the outh, Perthfire on the eaft, Lochabar on the north-eaft, and feveral ifles on the north-weft.
'Tis mountainous, and the inhabitants live moftly by hunting and finhing; for its feven great loughs, with other leffer ones, abound with all forts of filh. The coaft is full of high rocks, and black mountains, covered with heath, which feed great numbers of black cattle, deer, and wild beafts. Their cattle generally run wild, but are excellent mear, and their fat boiled continues fome days like oil.
i. Cantyre, or Kintire, or the Land's-Head, the mof fouthern divifion of this fire, is a peninfula, according to Pont's map, 37 miles from north to fouth, and 7 in breadth. 'Tis a very fruitful, populous tract, inhabited both by lowlanders and highlanders, though for moff part by the former, brought bither by the Argyle family, who have taken more than ordinary care to civilize their higblands.
2. Knapdale is divided on the eaft from Cowol, by Lochfyn; is bounded with Cantyre on the fouth, Lorne on the north, Braidalbin on the north-eaft, and the weftern illands on the weft. This part is full of lakes, and, in general, is fitter for pafture than corn; but that part of it toward Lochew is fruitful both in corn and pafture.
3. LORNE, is a plain country, the pleafanteft and fruitfuleft part of Argylefhire, efpecially in barley.
Argyle Proper has a great herring-fifbery.
There is a river called $A w$, which falls into the weft fea, overagainft the ifle of Mull, and abounds with falmon.
For more matter relating to this fhire, fee Scotland.
ARISH, a Perfian long meafure, containing 3197 Englifh feet.
ARITHMETIC, the art of computation by numbers.
We fhall not trouble our reader with a prolix account of its origin and progrefs, but endeavour to give him the fundamental principles of the whole art, both in theory and practice, in few words, and a familiar manner.
The principal rules of arithmetic are addition, fubtraction, multiplication, and divifion.
multiplication, and divifion.
Before any. progrefs is attempted herein, the reader fhould become ready and expert in thefe feveral operations; which can only be obtained by the repeated practice and exercife of thefe rules.
Thofe who have been neglected in their youth in this highly neceffary and ufeful part of education, or may have forgot what they have once learnt, which is ealy to do for want of a little continued practice, need only fpend an hour, or half an hour, a day, for three weeks, or a month, in the reiterated practice of the fundamental rules; and they will foon, by any good book of arithmetic, grow expert in the application of thefe rules to the reduction of things, either afcending or defcending: that is to fay, either to reduce pounds into pence by multiplication, or pence into pounds by divifion; and fo of weights and meafures, or the like.
From hence they may with great facility advance to the rule of proportion, or that which is commonly diftinguilhed by the direct rule of three :
Which is no more than to difcover, that, as 4 is to 8 , how is 8 to a fourth number, or what proportion will 8 bear to fuch unknown number.
Now 'tis obvious at firft glance of the eye, that 4 is the half of 8 ; and, therefore, 8 will be the half of the number required, which is 16 .
The common rule given for this operation is to $x$ the fecond and third terms together, and $\div$ the product thereof by the firft:

$$
\text { As } 4: 8:: 8 \text { to } 8 \times 8=\frac{64}{4}=16:
$$

That is to fay, to read the fame in words at, length (which we would ufe our readers to avoid for brevity's fake); as 4 is to 8 , fo is 8 to 8 , multiplied by 8 , and that product divided by 4, the firft number.
The reafon and demonftration of this common rule depend on this propofition; that, if 4 numbers are geometrically proportional, the rectangle, or product made of the means, will be equal to that of the two extremes, according to the elements of Euclid, lib. vi. prop. 16. from whence it will be eafy to deduce the reafon of the rule given. For grant that 4 is in proportion to 8 as 8 is to a number unknown, for which fubfitute $x$, then the propofition will fland thus:

4:8::8: 8 ;

That is, to be read in plain words, as 4 is to 8 , fo is 8 to the unkhown number: therefore, from the foregoing propofition of Euclid, the product of the two extremes is equal to the produft of the means. Or,

$$
4 \times x=8 \times 8
$$

That is, the number 4, one exfreme of the proportionals, multiplied by $x$, the other extreme, is equal to the product of 8 , one mean, multiplied by 8 , the other. Or,

$$
\begin{aligned}
& 4 x=64 \\
& \because x=\frac{64}{4}=16
\end{aligned}
$$

If then the product of the firl number multiplied by the fourth number, or that which is propofed to be found, be equal to the product of the fecond and third, it is very obvious that the product of the fecond and third, divided by the firf, muft neceflarily give the fourth, or that which is propofed to be found; becaufe it is axiomatically obvious that the produce of the quotient, multiplied by the divifor, muft give the dividend, the quotient thewing how often the divifor is contained in the dividend.
Or , the demonffration of this rule may be deduced from the following felf-evident truth, viz.
That the fourth number, or that propofed to be found, containeth the third fo often as the fecond does the firit.
$\because \frac{8}{4}=\frac{x}{8}$, that is, $\frac{3}{4}$ of 8 is equal to one eighth of $x$, or
$\frac{1}{2}$ of 16 , which is 2 .
From this clear and fimple demonftration, it is further eafy to conceive the reafon why, according to another part of the common rule, the firft and third numbers thould be of the fame denomination; and confequently, if they are not fo, that they fhould be fo reduced till they are.

## Of the fingle rule of indirect proportion.

From what has been faid, 'tis apparent by the nature of direat proportion, that, as the fourth number required muft always turn out greater than the third, as the fecond is greater than the firf: $i o$, on the contrary, in this rule of indirect proportion, the greater the third number is, the lefs is the fourth; and, the lefs the third is, the greater is the fourth; - for which reafon it is very properly diftinguifhed by the name of indirect, or reverfe proportion.
And, whereas in direct proportion the product of the firf and fourth, or the extremes, is equal to that of the fecond and third, or of that of the means; in this indirect, or reverfe, rule of proportion, the product of the third and fourth is equal to that of the firft and fecond numbers.
The ftating queftions in this proportion is the fame with direct ; but, to find the anfwer required, the rule is different. Thus:
Multiply the firf and fecond numbers together, and divide the product by the third, and the quote is your anfwer.
A familiar rule to judge whether a queftion which occurs is to be antwered either by the direct, or indirect, rule of proportion.
State naturally your numbers, according to the direct rule; then coinfider, from the plain nature of the queftion, wheiher the third number requires more or lefs than the fecond number: if more, the leffer extreme muft be your divifor; but, if lefs, the greater extreme muft be the divifor.-And fo often as this leffer and the great extreme happen to be the third number, or that next the right hand, fo often is the proportion indirect: but, when they are the firlt number, the proportion is direct.
A thort example will make this matter plain, with little attention.
If a board be 9 inches broad, how much in length will make a foot fquare?
Say, if 12 inches broad require 12 inches in length to make a foot fquare, what length will $g$ inches broad require to make a foot fquare?
Certain it is to every capacity that it will require more length, becaufe there is lefs breadth.

Therefore, as $\begin{aligned} & \text { in. br. long. in. br. } \\ & \text { 2 } \\ & \text { : } \\ & \text { 2 }\end{aligned}$
:12:9
$\frac{9 \longdiv { 1 4 4 }}{16}$ inches in length.
From the definition of this rule before given, the product of the firt and fecond numbers is equal to that of the third and fourth: from whence the demonftration of the reafon of the rule will appear. For

12: $12: 9:$ :
Therefore ${ }_{3}$

## A R I

Therefore, according to the definition,

$$
\begin{aligned}
12 \times 12 & =9 \times 2, \text { or } \\
144 & =9 \times
\end{aligned}
$$

that is, the rectangle of the two firft numbers, 12 by 12 , is equal to that of $x$ by 9 .
If then $144=9 x, x=\frac{144}{9}=16$ : that is, if 144 is equal to $9 x$, it follows that $x$ is equal to one ninth part of $144=16$. According to the fame rules; and the fame fimple demonftrations, the reafon of the double rule of proportion may be explained, fo as to be intelligible to any underftanding.
And thefe rules are the bafis of all vulgar arithmetic in whole numbers: for all the others are natural derivations from them, they all depending on the application of the plain principles of proportion.
I hall now, with the like brevity, fhew the reafon and foundation of fractions, both vulgar and decimal.
A fraction is one, or more, parts of an integer, according as the fame is divided.
Every fraction confifts of two parts, a numerator and denominator; the latter thews into how many parts the integer is divided, the former how many of thofe parts are fignified by the fraction:
Thus $\frac{1}{4}, \frac{1}{3}, \frac{2}{5}, \frac{7}{8}, \frac{9}{10}, \frac{5}{16}, \frac{11}{12}, \frac{21}{37} ; E^{\circ} c$.
The number above the line is the numerator, that below the denominator.
Fractions are diftinguifhed by arithmeticians into

1. Proper; which is, when the numerator is lefs than the denominator, and expreffes lefs than an integer, as the examples before given.
2. Improper; which is. when the numerator is greater than the denominator, as $\frac{11}{5}, \frac{21}{9}, \frac{16}{3}, \frac{176}{12}$, छc. .
3. Simple or compound.-Simple is when the fraction is immediately that of an integer.
4. A compound fraction, is a fraction of a fraction, as $\frac{I}{3}$ of
$\frac{1}{8}$ of a pound fterling, of an hundred weight, or the like:
or $\frac{1}{7}$ of $\frac{1}{9}$ of $\frac{1}{12}$ of $\frac{5}{21}$; $\xi^{\circ} c$.
As the addition, fubtraction, and the other rules of fractions, cannot be underftood without a knowledge of their reduction, it is neceflary that fhould precede them.

## Reduction of vulgar fractions.

1. When a mixt number, or that compounded of integers, and a fraction annexed thereto: to reduce the fame to an improper fraction, the
Rule is, multiply the integers by the denominator of fuch annexed fraction, and take in, or conjoin therewith, its numerator, and the product is a numerator to the denominator of fuch fraction.
Example. Reduce $185 \frac{7}{8}$ inta an improper fraction.

$$
\frac{8}{1487} \quad \frac{1487}{8} \text { is the anfwer; for, if you }
$$

divide the numerator 1487 by 8 , the product will be $185 \frac{7}{8}$; the one being fractionally expreffed, the other not,
Confequently, when it is neceflary that an improper fraction thould be reduced to a whole, or mixt number, the rule is, divide the numetator by the denominator, and the quote gives the whole number: if any thing remains, that is a numerator to the divifor, as is plain from the preceding example.
When fractions differ in their denominators, in order to be added or fubtracted, Eoc. they muft firf be reduced to the like denominator, and the work is eafy.
The rule for this is, multiply the numerator of every fraction into the denominators of all the reft, and the product is a new numerator to fuch fraction; and, by multiplying all the denominators of fuch fractions together, the product gives you a new denominator, common to them all.
Example. Reduce the $\frac{5}{8}$ and the $\frac{2}{3}$ of a pound ferling, or of any thing elfe, into two fractions, whofe denominators fhal be one and the fame.
$5 \times 3=15$, for a new numerator to the fraction $\frac{5}{8}$, and $8 \times$ by $3=24$; for a new denominator to the fame fraction: fo that $\frac{15}{24}$ of a pound, $\xi^{\circ} c=$ to $\frac{5}{8}$. And, with regard to the $\frac{2}{3} \times$ the 2 by $8=16$, for a new numcrator, and the $8 \times 3$
Vol. I.

## A R I

$=24$, for a new denominator: fo that $\frac{16}{24}=\frac{2}{3}$.
The reafon of this rule.
The defign of this rule being to make the denominators the fame, and the numerators proportioned thereunto, if both the numerator and denominator are multiplied by one and the fame number, the fraction refulting therefrom will be exaally equal to that fo multiplied, becaufe the fame proportion fubints between the numerator and denominator as did before.

If you would exprefs fractionally $\frac{T}{2}$ by any number of fractiotis equal to it, it is felf-evident, that, if you $X$ the $I$ by 2 , and the 2 by the fame, $\frac{2}{4}$ of any thing, will be equal to the $\frac{1}{2}$ of that thing, becaufe 2 bears the fame proportion to 4 as I to 2.
In like manner if you $x$ the fame by $3,4,5,6,7,8,9$, E®. $\frac{3}{6}, \frac{4}{8}, \frac{5}{10}, \frac{7}{1+}, \frac{8}{16}, \frac{9}{18}$, are all equal to one $\frac{1}{2}$, becaufe the numerators of each of thefe fractions bear the fame proportion to their refpective denominators as I to 2.
Now the rule before given, to reduce any number of fractions of different denominations into one and the fame, is founded upon the fame plain axiom, or felf-evident truth. For,
By multiplying all the denominators together, it is elear that you multiply them all by one and the fame number; and, by multiplying the numerator of each frataion by all the other denominators, excepting its own, it is clear that you multiply every diftinct fraction by one and the fame number; and confequently, the fractions refulting muft be equal to thofe fo multiplied.
From the fame principles, alfo, it is, equally eafy to conceive the reafon for reducing of fractions into their loweft terms wherein they can be expreffed. For,
If you divide both the numerator and denominator by one and the fame number, without any remainder, the fraction refulting from fuch divifion will be equal to the fration fo divided ; becaufe the numerator and denominator of the refulting fraction are in the fame proportion to each other as thofe divided.
Example. Reduce the abovementioned fractions of $\frac{2}{4}, \frac{3}{6}$, $\frac{4}{8}, \frac{5}{10}, \frac{7}{14}, \frac{8}{16}, \frac{9}{18}$, into their loweft terms.
'Tis plain, at firl fight, $\frac{2}{4}$ will divide by 2 , and produce $\frac{1}{2}$, which cannot be expreffed in lower terms.
In like manner the $\frac{3}{6}$ will divide by 3 , and produce $\frac{1}{2}$, and fo the reft by $4,5,6,7, \mathrm{E}^{\circ} \mathrm{c}$.
From bence you will naturally obleive, that, let your fraction be ever fo large, if you can fird any numbers that will divide both the numerator and denominator of them, without a remainder, you may oftentimes carry on fuch divifion till you exprefs very large fracions by two figures.
Example. Reduce $\frac{7695}{15390}$ into its loweft terms.
To do this expertly, you need never confider any divifor above 12, becaufe that you may eafily carry in your head:
Therefore place your fraction thus:

$$
\left.\frac{7695}{15390}\left|\frac{1539}{3078}\right|^{3}-\frac{513}{1026}\left|\frac{3}{342}\right| \frac{19}{38} \right\rvert\, \frac{9}{\frac{1}{2}}
$$

I. I oblerve that both numerator and denominator will divide by 5 , the refulting fraction by 3,3 , or by 9 , and 9 , and afterwards obferving that the numerator is exactly the balf of the denominator, they will both divide by 19 , and produce one half, which is the loweft terms to which it can be reduced.
And, from what has been faid before, you will eafily difcover that all thefe fractions are equal to $\frac{T}{2}$, becaufe their refpective numerators bear one and the fame proportion to their denominators.

To reduce compound fractions to their fimples.
The rule. Multiply the numerators together for a numerator, and the denominators for a denominator,
Example. Reduce $\frac{1}{2}$ of $\frac{2}{5}$ into a fimple fraction.
The anfwer is $\frac{2}{10}$, or, reduced to its loweft terms, $\frac{1}{5}$.
The reafon of the rule.

## A R I

A compound fraction is nothing but the fubdivifion of the parts of an integer. Let the line A B, as above, be fuppofed the integer, and divided into 5 equal parts, which reprefents the denominator of the fractions towards the right-hand in the exprefing thereof; each of thefe 5 parts being again divided into two parts, according to the denominator of the fraction
towards the left-hand; each of which parts being $\frac{1}{2}$ of $\frac{1}{5}$,
the whole line, or integer, becomes divided into 10 of thefe parts; which is the reafon why the denominators are multiplied together, as 2 and 5, in order to reduce the fraction of a fraction into the fraction of an integer, or a compound to a fimple, which is the fame thing.
And the realon of multiplying the numerators together is becaufe that Thews the proportional number of thofe parts exprefied by the denominator, and fignified by the compound fraction.
So that if an integer be divided into any number of parts, and thofe fubdivided again and again, the fame general rule will hold good.
Example, Reduce $\frac{1}{9}$ of $\frac{7}{8}$ of $\frac{11}{12}$ into a fimple fraction.
$1 \times 7 \times 15=77$, and $9 \times 8 \times 12=864$, anfwer $\frac{77}{864}$.
How to find the value of fractions, whether of coin, weight, or meafure.
Rule. Multiply the numerator of the fraction by fuch a number of the units of the next inferior denomination, which is equal to an unit of the denomination, whereof the fraction is

## A R I

part, and divide the product by the denominater, and the quote will anfwer the queftion; but, if there is any remainder, reduce that to the next inferior denomination, and divide as before.
Example. What is the ${ }_{8}^{7}$ of a pound ferling?

$$
20 \mathrm{~s} .=1 \text { pound }
$$

8) $\begin{array}{r}7 \\ \boxed{40} \\ \hline\end{array}$

77-4-i. c. 4 hillings, which is 48 pence, which, divided by 8, gives 6 pence. Anfwer, 17 s .6 d .
The reafon of this rule is plain: for, fuppofe a line divided into 20 parts, as $(a x)$ below, which will reprefent I pound, and the 20 parts 20 fhillings : fuppofe alfo that there is a fraction whofe value is required, as $\frac{7}{8}$ of a pound fterling. - Draw another right line, of equal length with the line ( $a x$ ), as ( $y z$ ), parallel thereto, which divide into 8 equal parts, reprefenting your denominator, and, right againft 7 of thofe parts, in this line will fand 17 and $\frac{1}{2}$; which fhews that $\frac{7}{8}$ of a pound fterling are equal to 17 fhillings and fix-pence; for as 8 , the whole line ( $a x$ ), or denominator of the fraction given, is in proportion to 20 s . (the whole line $y z$ ) : fo is 7 the numerator, or number of parts given in the fraction (as in the lower line) to $17 \frac{1}{2}$, the value of the faid fraction: and, therefore, you multiply and divide according to the rule before given.

Addition of vulgar fractions.
Cafe i. When fimple fractions are to be added to fimple fractions.
Rule. If fuch fractions are not of the fame denomination, you mult reduce them to the fame, according to what has been before thewn, and add the numerators together for the fum total to the common denominator.
Example. Add $\frac{3}{10}$ and $\frac{7}{10}=\frac{10}{10}$, or one integer, and foo of all others of the like denomination.
Example. Add $\frac{5}{8}+\frac{3}{5}$.
It is plain that you cannot fay the fum of $\frac{5}{8}$ and $\frac{3}{5}$ makes either $\frac{8}{8}$ or $\frac{8}{5}$; and, therefore, till they are reduced into the like denomination, you cannot add them.
Proceed thus, therefore, $5 \times 5=25$, and $8 \times 5=40 \because$ $\frac{25}{40}=\frac{5}{8}$; and $3 \times 8=24$, and $5 \times 8=40 \because \frac{24}{40}=\frac{3}{5} \because$. $\frac{25}{40}+\frac{24}{40}=\frac{49}{40}=\mathrm{r}$ integer $\frac{9}{40}$, the anfwer.
The reafon of this rule being demonftrable from what has been faid, it is needlefs to enlarge upon it.
Cafe 2. When compound fractions are to be added to fimple. Rule. Reduce the compound to a fimple, and follow the foregoing rule.
Cafe 3. When mixt numbers are to be added.
Rule. Work with the fractional parts, according to what has been faid, and add the fum of the fractions to that of the integers, if they amount to an integer, and you bave the anfwer.

Subtraction of vulgar fractions.
Cafe 1. When a fimple fraction is to be fubtracted from a fimple fraction
Rule. If they are of the fame denomination, it is only fubtracting one numerator from the other.
Cafe 2. If they are of different denominators, reduce them to one, and deduct the numerator of the fubtrahend from the other, and place the remainder for a numerator to the common denominator, and you have the difference. The reafon of which is evident, from what has been faid in regard to addition.

> Multiplication of vulgar fractions.

Cafe 1. When you are to multiply a fimple fraction by a fimple.
Rule. Multiply the numerators into each other, for the numerator of the product, and alfo the denominators for the denominator of the product.

Example. Multiply $\frac{1}{3}$ by $\frac{2}{5}$. Anfwer, $=\frac{2}{15}$.

## The reafon of this rule.

The effect of the multiplication of fractions deferves peculiar attention, it being different from that of whole numbers; for the product in the fraction is always lers than the multiplicand, though more in whole numbers : the reafon is, that of fractions is the multiplying of the parts into which the integer is divided, which muft needs make the parts lefs than thofe given: whereas the multiplication of integers, or whole numbers, muft neceflarily increafe the number; for the former decreafes the parts of an integer to infinite littlenefs; the latter augments the number of integers ad infinitum.
Now the reafon of the rule is, that, if a fraction be multiplied by a fingle integer, or I, it can produce no more than itfelf, for once itfelf can neither add to, nor diminifh from, it ; and, therefore, if it be multiplied by $\frac{I}{2}$ of I , or $\frac{I}{4}$ of I , or $\frac{\mathrm{I}}{8}$ of I , the product can be no more than $\frac{1}{2}$, or $\frac{1}{4}$, or $\frac{1}{8}$ of fuch fraction: wherefore it is plain, that the multiplication of fractions muft be confidered in the fame light as fractions of fractions, or compound fractions : and, if fo, the fame rule that holds good for the reduction of compound fractions into fimple, will hold good for that of their multiplication. For the reafon thereof, we refer to what has been already faid upon that head.
Caie 2. When you multiply a whole number by a fraction.
Rule. Multiply the integer by the numerator of the fraction and the product placed over the denominator is the anfwer which is nothing different from the firft cafe, if you place an unit under the integral part, putting it into a fractional form. Example. Multiply ${ }^{1751}$ by $\frac{7}{9}$ or $\frac{1751}{1}$ by $\frac{7}{9}$. The anfwer is $\frac{12257}{9}$ or $1361 \frac{8}{9}$, from what has been fhewn; for if ${ }^{1} 751$ be multiplied by 1 , it can produce no more than itfelf; and, confequently, if it be multiplied by $\frac{7}{9}$ of I , it can only produce $\frac{7}{9}$ of itfelf, $\varepsilon^{\circ} c$.

Divifion of vulgar fractions.
Cafe raf. When you would divide a fimple fracion by 2
fimple.
Rule. Multiply the numerator of the dividend into the denominator of the divifor, for a new numerator; and multi-
ply the other numerator and denominator together for a new denominator.
Example. Divide $\frac{11}{12}$ by $\frac{3}{5}$. The anfwer is $\frac{55}{36}$ for the quotient; for, if you $\times \frac{55}{36}$ by $\frac{3}{5}$, the product will be $\frac{165}{180}=\frac{11}{22}$; for as 165 is to 180 ; fo is 1 't to 12 : or the product of the extremes is equal to that of the means, from what has been demonftrated from the rule of proportion.-Or, by abbrevi-
ation, $\frac{165}{180}=\frac{11}{12}$. Thus, $\left.\frac{\frac{5}{165}}{180} \cdot \frac{33}{36} \right\rvert\, \frac{3}{12}$
The reaton of this rule appears from hence.-Reduce the foregoing fractions into one denomination, they will be $\frac{55}{60}=\frac{11}{12}$ and $\frac{36}{60}=\frac{3}{5}$. Expunge the denominators, as being the fame, and the anfwer will be $\frac{55}{3^{6}}$, or 55 divided by 36 , which is the fame thing, by a different mode of expreffion. Cafe. 2. When you divide a whole number by a fraction. Rule. Place an unit under the whole number, to put it into the fractional form, and proceed as before.
Cafe 3. When you divide a fimple fraction by a compound. Rule. Reduce the compound to a fimple, and work as in the firtt cafe.
The reduction, addition, fubtraction, multiplication, and divifion of vulgar fractions being explained, it is quite needlefs to fay any thing of the rule of three, or the other rules of proportion in fractions, fince it is only to be obferved, to multiply and divide in the fractional manner, inftead of that of whole numbers.

## Of decimal fractions.

When, or by whom, this admirable invention of decimal arithmetic was firft introduced, is uncertain; but doubtlefs the improvements thereto made, and the perfection to which it has arrived, are owing to latter times.
A decimal fraction differs only from a vulgar in this: that, whereas the denominators of vulgar fractions are various, thofe of decimals are always either 10 , or fome power of 10 , as $100,1000,10000,100000, \xi^{\circ} c$. fo that the denominator need never be expreffed, it being always underftood to increafe in a decuple, or tenfold proportion, ad infinitum.
Thus, $\frac{5}{10}, \frac{7}{100}, \frac{9}{1000}, \frac{56}{10000}, \frac{769}{100000}$, Es.
Now thefe denominators being known, need not be fet down, but only the numerators; and thefe are diftinguifhed, or feparated from whole numbers, by a point, or a comma.
Thus 8,4 is $8 \frac{4}{10}$, and 0.9 is $\frac{9}{10} ; 76.07$ is $76 \frac{7}{100} ; 985.009$ is $985 \frac{9}{1000^{\circ}}$.
Whence it may be obferved, that, as in whole numbers, every degree from the place of unity increafes towards the left-hand by a ten-fold proportion: fo in decimal parts, every degree is decreafed towards the right-hand, by the fame proportion. Wherefore whole numbers, being divided into decimal parts, are more homogeneal with whole numbers than vulgar fractions; for all plain numbers are in effect but decimal parts one to another.
That is, fuppofe any feries of whole numbers, as $777, \xi^{\circ} c$. The firft 7 towards the left hand is ten times the value of the 7 in the middle, and the 7 in the middle is ten times the vaIue of the laft 7 to the right of it, and but the tenth part of that 7 on the left, Evic.
Therefore all, or any of them, may be taken either as whole numbers, or parts thereof: if whole numbers, then they mult be fet down without any comma, or feparating point between them, 777. But if whole numbers, and one a part or fraction, put a comma betwixt them thus, 77,7; which fignifies 77 whole numbers, and 7 tenths of an unit: if two places of fractional parts be required, feparate them with a comma, thus, 7,77; which fignifies 7 whole numbers, and 77 hundredth parts of an unit, ${ }^{2} c$.
From hence it will be eafy to conceive, that decimal parts take their denomination from the place of their laft figure.
That is, $\left\{\begin{aligned}, 7 & =\frac{7}{10} \\ , 98 & =\frac{98}{100} . \\ , 098 & =\frac{98}{1000}\end{aligned}\right\}$ parts of an unit, E\%c.
Cyphers annexed to decimal parts do not alter their values. As $, 90,900,9000,90000$, E'c. are each but 9 tenths of an unit; for $\frac{99}{100}=\frac{9}{10}$. And $\frac{900}{1000}=\frac{9}{10}$. Or $\frac{9000}{10000}=\frac{9}{10}$,
according to what has been demionftrated in regard to vulgat fractions.
But cyphers prefixed to decimal parts decreafe their value, by removing them further from the comma.
Thus $\left\{\begin{aligned}, 9 & =9 \text { tenths. } \\ , 09 & =9 \text { parts of } \\ , 009 & =9 \text { parts of }\end{aligned}\right.$ $\begin{aligned} &, 09=9 \text { parts of a hurdred. } \\ &, 009=9 \text { parts of a thoufand }\end{aligned}$ , $0009=9$ parts of ten thouland, छ'c.

Confequently, the true value of all decimal parts is known by their diftance from the unit's place; which being rightly underftood, the reft will be very eafy.

Addition and fubtraction of decimals.
In fetting down the propofed numbers to be added, or fubtracted, care muft be taken to place every figure directly under thofe of the fame value (as is done in whole numbers) whether they be mixed, or decimal parts only. To do which due regard muft be had to the place of the comma, or feparating points, which muft fand in a direct line, the one under the other; and to their right-hand carefully place the decimal parts, according to their refpective values, or diftances from unit. Then,
Rule. Add, or fubtract them, as if they were all whole numbers; and from their fum, or difference, cut off fo many decimal parts as are the molt in any of the given numbers.

## Examples in addition.

Suppofe it be required to find the fum of the following numbers, viz. $78,5+96,7+976,9+6754,8+5,5+63$, which, being properly placed, will ftand thus:

78,5
96,7
976,9
6754,8
5,5
$\begin{array}{r}63,0 \\ \hline 7975,4\end{array}$
The fum required $\overline{7975,4}$
Suppofe alfo the fum total of $29,768+97,527+256,0976$ $+125,0007$.

The fum required \begin{tabular}{c}
29,768 <br>

| 97,527 |
| :---: |
| 256,0976 |
| 508,3933 |

\end{tabular}

Examples of fubtrataion.
Suppofe the difference be required between 97,698 and 25,976. That is,

| Example I. | Example 2. | Example 3. |  |
| :---: | :---: | :---: | :---: |
| From 97,698 | From 592,5 | From | 1597,69075 |
| 25,976 | Subtr. ${ }_{\text {97,964 }}$ | Subtr. | 919,52 |
| 7, 72 | Rem. 494,536 | Rem. | 678 | Rem. $\frac{71,722}{2}$

Rem. $\overline{494,536}$
Rem.
678,17075

## Multiplication of decimals.

Whether the numbers to be multiplied be pure decimals, or mixed, multiply them as if they were all whole numbers, and, for the true value of their product, obferve the following
Rule. Cut off, or feparate with a comma, fo many places of decimal parts in the product, as there are in both the multiplier and the multiplicand taken together.

The reafon why fuch a number of decimal parts muft be feparated in the product is plain, it differing nothing from that given in the multiplication of vulgar fractions; for, by multiplying the fums given together, you multiply the numerators; and, by feparating as many decimal places as both the multiplicand and the multiplier contain, you multiply the denominators, and divide that of the numerators by the product of the denominators. Thus to multiply $\frac{1}{2}$ by $\frac{3}{4}$ is the fame as, 75 by, 5 , and 100 by 10 ; viz. $\frac{75}{100}$ by $\frac{5}{10}$, for 5 times 75 is 375 ; and 10 times 100 is 1000 : fo the product is $\frac{375}{1000}$, or ,375 decimally expreffed.

## Divifion of decimals

Is performed in the fame manner as in whole numbers: all. the difficulty therein is to know what number of decimal
places to feparate towards the right-hand of the quotient: for which obferve what follows. The quotient of a divifion fhewing how often the divifor is contained in the dividend, the divifor multiplied by the quotient gives the dividend: now, as you know how many places of decimals the dividend and divifor contain, it is eafy to know how many the quotient muft contain, becaufe therein the divifor and quatient muft be equal to thofe in the dividend.
'Iherefore when the work is finifhed, feparate as many decimal parts in the quotient to the right-hand, as the dividend exceeds the divifor in: but, if fo many places be not in the quotient as that difference is, fupply that deficiency, by prefixing cyphers towards the left hand.
Take the foregoing example in multiplication :

> Divide 447,900544 by 5,824
> $5,824) 447,900544(76,906$
> 402269,0
> 5274
-3.
As the dividend contains 6 decimal places, and the divifor three, the quotient muft contain 3 feparated to the right-hand. All the cafes which can happen in the divifion of decimals, are reducible to the following, viz.
Cafe i. When the decimal parts in the divifor and dividend are equal, the quotient will be whole numbers. The reafon is, becaufe, from what has been faid, it can contain no decimal parts.
Care 2. When the decimal places in the dividend exceed thofe in the divifor, feparate the excefs for decimal parts, as before Mewn.
Cafe 3. When there are not fo many decimal places in the dividend as are in the divifor, annex cyphers to the dividend, to make them equal., Then will the quotient be whole numbers, as in the firft cafe.
Cafe 4. If after the divifion is finifhed, there are not fo many figures in the quotient, as there ought to be places of decimals by the general rule, prefix a competent number of cyphers to fupply the deficiency.

## Reduction of decimal fractions.

To reduce a vulgar fraction into a decimal.
Rule. As the denominator of the vulgar fraction is in proportion to its numerator: fo is the denominator of the decimal, $100,1000,10000,8 \mathrm{cc}$, to the numerator of the decimal required, whofe denominator is $100,1000,10000$, \&c. Therefore, according to the common rule of proportion, $x$ the fecond and third numbers, and divide by the firft, the quotient is the decimal required. Or, which is the fame thing, and more concifely expreffed,
Annex cyphers to the numerator of the vulgar fraction, and divide by the denominator, the quotient will be the decimal parts equal to the given fraction ; or at leaft to approximate fo near as is requifite for all bufinefs.
Note. When the laft figure of the divifor (that is, the denominator of the propoled vulgar fraction) happens to be one of thefe figures, viz. $1,3,7$, or 9 , then the decimal parts can never be precifely equal to the given fraction; yet, by continuing on the divifion, you may approach very near the truth. As in this example: Suppofe it be required to reduce $\frac{3}{7}$ into decimal parts.
7) 1,000
, 142857142857442 , \&c. ad infinitum.
From hence it may be obferved, that, in thefe imperfect quotients, the figures return again, and circulate in the fame. order as before.
Thefe things being underftood, there will be no difficulty to find the decimal parts equivalent to any known part, or parts, of coin, weights, or meafures, \&c, if you firft reduce the given parts of the coin, \&c. into a vulgar fraction, whofe denominator is the number of thefe known parts contained in the integer, and the given parts its numerator.
Let it be required to find the decimal of 8 s .6 d .
There are 102 pence in 8 s .6 d . therefore $\frac{102}{240}$ of a pound is the vulgar fradion which expreffes 8 s .6 d , which convert into a decimal, thus: $\quad 240$ )røt. $\phi \phi \phi(.425=8 \mathrm{~s} .6 \mathrm{~d}$.
. 8 800
$1 \neq 0$
Or thus: To the 6 d. add cyphers, and divide by 12 , and then prefix the 3 s . and divide by 20 .

$$
\frac{12!6,000}{2 ! 0 \longdiv { \frac { 8 , 5 } { 4 2 5 } }}
$$

This is a much more concife method, and will hold good for weights and meafures, \&c. without reducing them into vulgar fractions.
All the various rules of proportion being performed the fame decimally as in whole numbers, it it quite needlefs to multiply examples of them; nor is it neceffary to enlarge more on arithmetic; fince, if what has been faid in fo narrow a com-
pals, is thoroughly underfood, as it may eafily be, with little attention, the reader will be duly prepared to comprehend any of the books of arithmeric with pleafure; becaufe he here has the rational principles and foundation of numbers in the feweft words, and in as familiar a manner as could be well conveyed.
Political Arithmetie, is made ufe of by ftatefmeh and politicians, in order to judge of the ftrength, the wealth, and the power of ftates and empires. To which end, nothing more naturally and more certainly conduces, than a thorough knowledge in the trade and navigation of ftates and empires, by reafon that the landed and monied interefts of countries is governed by the fate of their trading interelts; for, if that flourifhes, the others neceflarily muft. This Dictionary of Commerce furnifhing a great variety of materials to enable us to pais a good judgment of the trade of all nations, it cannot but be very ufeful in the ftudy of political arithmetic.
Thofe who are efteemed to have wrote the beft upon this fubject, are Sir William Petty, Dr Davenant, Mr King, Erafmus Philips, Efq; and the anonymous author of a tract wrote in French, intitled, Effai politique fur le commerce, 12 mo , publifhed in $573^{6}$.
ARITHMETICIAN, a perfon well fkilled in arithmetic, or whofe profeffion is to teach it others.
ARMADA, a Spanifh word, which formerly fignified a number of fhips of war, as appears by a law in the book called Las Partidos; but of late years it not only comprehends a navy compofed of hhips of war; but a fota of merchant-men under their convoy.
There is a royal armada, or navy, to fecure the navigation of the galleons from Old Spain to the Spanifh Weft-Indies. There uled to be armadas, or convoys to the fleet, for the Firm-land, which there is not at prefent ; and there was an armada for Honduras.
In the year I 52 I , on account of the pirates that infefted the coalts of Andalufia and Algarve, lying in wait for the fhips homeward bound from the Spanifh Indies, it was refolved that an armada, or convoy, confifting of four or five fhips, fhould be fitted out ; the charge whereof thould be defrayed out of the gold, filver, and merchandize, brought to the ports of Andalufia, from the Indies and Canary-lilands; whether belonging to the king or private perfons, at the rate of a fhilling per pound, which was accordingly put in execution. In the year 1522, the feas being ftill infefted with pirates, it was refolved that another fquadron fhould be fitted out, the expence whereof was to have been defrayed as that of the former ; and to cruize, not only on the coaft, but as far as the illands Açores. This was the origin, not only of the armada appointed to fecure the navigation of the Weft-Indies, but of the haberia, or duty for convoys, and other things thereunto relating : the firft impofition towards defraying this charge was one per cent. but, that not being adequate to the expence, it came at length to five per cent.
One of the principal duties of the committee of war, which is conflituted of the council of the Indies in Spain, is, to give the neceffary orders, for fitting out of armadas and flotas; and, as the dangers increafe, fo to make the more effectual provifions againft them.
The laws of trade in Spain direct, that, provided there be no fpecial order to the contrary, two flotas be fet out; the one for the Firm-land, the other for New-Spain, and the armada to convoy them; but this name of armada was meant of the admiral and vice-admiral only, which were fighting fhips; and, at firft, there was one man of war to convoy the reft; her burden being 300 tons, and carrying eight brafs cannon, and four iron guns: and till that time, the merchant-men carried 100 tons lefs than their burden, and thirty foldiers each, becaufe they had no convoy of men of war.
The times appointed for thefe flotas to fail, were, for that of New Spain in May, and that of the Firm-land in Auguft, both of them being ordered to fail with the firf fpring tides. The galleons were appointed to be out in January, that they might coalt along the Firm-land, and arnive about April at Porto-bello, where the fair would be over, that they might take aboard the plate, and be at the Havanna about mid June, where the New Spain fleet would foon join them, and they might come together fafer to Spain. To which end, the vice-roy of Peru is to take care, that the plate fhould be at Panama by the midde of March. The plate is fifteen days in carrying from Potofi to Arica; cight days generally from thence by fea to Callao, and twenty from Callao to Panama, taking in, by the way, the plate at Paita، and Truxillo.
To prevent the fleet being detained by contrary winds, as has fometimes been the cafe, it was propofed by the court of Spain to fit out the galleons, in the river of Seville, in Augutt and September, and then fend them away to Cadiz, where they might go out with any wind, and need not wait for any foring tides.
The reafons why it was judged abfolutely neceffary, that the flota from the Firm-land fhould fail in September, were, becaufe that was a fafe featon to thip off the goods; for, they coming to Porto-belio at a healthy fealon of the year, the merchandize was conveyed over to Panama at a cheaper rate,

## A R M

and with lefs danger of receiving damage. Moreover, by this means the merchants had leifure to fell their goods; the buyers had a fit feafon to travel to Peru with fafety, and the armadas and flotas to return to Carthagena and the Havanna, to get clear of the channel of Bahama, and to return to Spaill in the beft month for the fea. In fine, it is found by experience, that the month of September is, all circumftances being duly weighed and confidered, the fitteft for the fleets to fail; and, although feveral accidents retard them till October or November, yet that feafon is fitter than March.
ARMADILLA, thus they call, in Spanifh America, a fmall fquadron, confifting commonly of 6 or 8 men of war, from 24 to 50 guns, which the king of Spain keeps, for preventing foreigners from trading with the Spaniards or Indiars, both in time of peace, and in time of war. This fquadron has even power and orders to take all the Spanifh trading vef fels, which it meets on the coaft, and which have no licence from the king of Spain. There is an armadilla botio for the South Sea and for the North Sea. The latter keeps commonly at Carthagena, and the former at Callao, which is the port of Lima, the capital of Peru.
ARMAGNAC, a province in Frarice, is bounded by Languedoc on the eaft ; by Agenois and Condomois on the north; by Gafcony, properly fo called, on the weft; and by Comminges on the fouth. In this province they make brandy, which they fend to Bayonne and Bourdeaux. They trade alfo in wool and flax. There is a minie of falt in the town of Laverdan; and, at Auch and Mauvefin, they make about fourfcore or 100 quintals of falt. The country befides is very fruitful in corn and wine.
ARMENIA, a large kingdom in Afia. After feveral revolutions, the biffory of which is foreign to the purpofe of this Dictionary, it is fallen partly under the dominion of the Turk, and partly under that of the king of Perfia.
For the trade of that part of Armenia which belongs to the latter, fee the article Persia.
As for that part of the country which is under the Grand Seignior's dominion, we thall here prefent the reader with fuch particulars of its trade, as we could colleci together, or, at leaft, of its two chief cities, which feem to have engroffed and divided between themfelves the trade of all the reft of the kingdom.
Erzerum, the capital of that part of Armenia, which belongs to the Grand Seignior.
The trade of this city is very confiderable, and confifts chiefly in brafs and copper ware, furr, gall-nuts, cayiary or caveer, and madder.
The brafs and copper wares are made by the Jews of Sinope, who ufe the copper that is brought from the neighbouring mountains. As moft of them are braziers, and their bufinefs is very noify, they are, as it were, confined to the fuburbs; for the Turks are too great lovers of reft, to fuffer fuch traders amongtt them.' Thofe wares are carried into Turkey, Perfia, and even into the Great Mogul's dominions.
The furrs are the fkins of a kind of marten, which are very common in that country, where they are called jardava, or zerdava. The browneft are reckoned the fineft, efpecially the tails, which are almolt black : and, with that part of the animal, are made the moft precious furrs, which makes them come very dear, becaufe a great number of tails are required to line a veft therewith.
The gall-nuts are brought to Erzerum, from a place diftant five or fix days journey from it, where there are a great many oaks: the bafha gives very flrift orders to preferye them, that a commodity, fo ufeful for dyyeing, may not be loft, Caviary, or caveer, as it is more ordinarily called, is nothing but the pickled hard roes of fturgeon, which are prepared in feveral places, fituated near the Cafpian fea. That which is fold at Erzerum, is abominable.
Laflly, madder, of which great quantities are fold here, where it is called boya, is brought hither from Perfia: the inhabitants ufe it in dying leather and linnens.
Befides all thefe merchandizes, mof of which are to be met with in the neighbourhood of Erzerum, there are alro in that town all the commodities which come from the EaftIndies; as filk, cotten, drugs, and printed calicoes; Erzerum being, as it were, a flaple town for them; but they only pafs through it, few of them being' fold by retail.
The commodities imported into this province, or exported out of it, pay three per cent. and fometimes double that fum; but gold and filver fpecies, efpecially, are fubject to heavy duties. The filk of Perfia, whether it be fine or not, pays a duty of 80 crowns per camel's load, which is from eight hundred to a thoufand pounds weight.
The caravans, which fet out from Erzerum for Teflis and Tocat, do commonly keep themfelves ready during the whole month of June.
At fuch times when the Arabs are feized of the countries about Aleppo (in Syria) and Bagdat, all the caravans of the Levant, even thofe which are bound for the Eaft-Indies, pals through Erzerum.
The Englifh drive a confiderable trade in that city, and keep a conful there, who is in great cublt and efteem, if his conduct is deferving.
Vol. 1.

## A R M

Tocat, is the fecond trading town in Turkifh Armenia.
This place is to be confidered as the center of the whole trade of Leffer Afia, there being continually caravans, cither arriving thither, or fetting out from thence. Thofe from Diarbekir come here in eighteen days, and thofe from Erzerum in fifteen. The caravans which fet out from Tocat for Sinope, are fix days on their march, and thofe for Bufa twenty days. The caravans which go direcily to Smyrna, without paffing through Angora or Burfa, fpend twenty days in their journey, when they confift of mules only, and fity when they ufe camels. Laftly, there are alfo caravans, which go only from Tocat to Angora.
The greateft trade of Tocat confifls in copper or brafs ware, fuch as coppers, mugs, candlefticks, lanchorns, \&c. which are made very neatly by the workmen of this town. Thefe commodities are fent to Conftantinople and Egypt. The copper they ufe comes from the mines of Gumifcana, three days journey diftant from Trebifond, and from thofe of Caftamboul, ten days journey diftant from Tocat, towards Angora, They drefs at Tocat a great deal of yellow leather, which is fent to Samion on the Black Sea, and from thence to Cala, a port of Walachia. They alfo lend thither red leather but this the merchánts of Tocat have from Diarbekir and $\mathrm{C}_{4}$ ramania. The yellow leather is dyed with a fort of fumach, and the red with madder.
The printed calicoes are alfo a great branch of the trade of Tocat. They are not indeed fo beautiful as thofe of Per[in, but the Mufcovites and the Crim Tartar, for whom they are defigned, like them well enough. Some of thef calicoes are alfo fent into France, where they go under the name of printed linnens of the Levant.
Laftly, they have at Tocat a confiderable trade in filk; but none of that which is gathered in the neighbourhood of this town, is fold to foreigners, it being all employed in the manufactures of the country; wherein, befides their own filk, they ufe every year eight or ten loads of Perfian filk; which is all ufed in making flight fuffs, fewing filk, and buttons.
ARMENIANS, nation who inhabit Armena. But that name is alfo given to thofe who were tranfported into teveral parts of Perfia by Shah Abas; and more particularly to that celebrated colony of Armenians who dwell at Zulfa, one of the fuburbs of If pahan.
The Armenians are civil and polite, and have a great deal of good fenfe and honefty: they apply themfelves very much to trade, which they make their chief bufinefs, or rather, their only occupation. They are not only mafters of the whole trade of the Levant, but have alfo a great thare in that of the moft confiderable towns in Europe; for it is yery common to meet with fome Armenians at l.eghorn, at Venice, in England, and in Holland; whillt on the other fide they travel into the dominions of the Grand Mogul, Siam, Java, the Philippine illands, and over all the eaft, except China. And it is not long fince feveral of them were fettled at Marfeilles. It is not agreed among the learned, under what Abas, king of Perfia, the colony of Zulfa was tranfported to ! Ppahan, and fettled where it now is. But it is very certain that shah Abas the Great, contemporary with Henry IV, king of France, in order to fecure the conqueft of Armenia, which he had taken from the Turks, removed into Perfia the firf Armenians, who ever fettled there; and about thirty thoufand families of them were tranfported into the province of Gbilan only, from whence the fineft Perfian filks come: he alfo caufed all the inhabitants of Zulfa, a large city of Armenia, to fettle at Ifpahan, whence the new Zulfa of Perfia took its name.
This laft Zulfa is now the center of all the commence of the Armenians; and it is to the fame Shah Abas there people owe, if we may fay fo, their genius and capacity for trade, which did but very little appear, till their tranfmigration into Perfia. As Abas the Great had no other view but to enrich his country, and was fenfible he could not compafs that defign but by the means of trade, he çaft his eyes upon filks, as the moft precious commodity, and upon the Armenians, as the moft proper people to difpofe of it: in a word, the Armenians, who were but hufbandmen, were by him turned into merchants, and thefe merchants are become very able and ikilful traders in the world.

Remarks.
In order to begin that trade, this wife prince trufted the moft undertanding men among the inhabitants of Zulta, with a certain quantity of bales of filk, to cranfport them in cara, vans into foreign countries, and efpecially into Europe; on condition that they themfelves fhould go with them, and that on their return, they fhould pay for thofe bales fuch a price as they hould have been rated at before their departure by judicious perfons, giving up to them all the profits they could make upon them above the fettled price.
The fuccefs anfwered the expectations both of the prinogend of the merchants. Shah Abas did, in a manner, chan nature of trade throughout the whole earth; and the Arreer nians by their rich reiurns, after having carried into the weft the molt beautiful commodities of the eaft, hewed allo in the eaft whatever the weft afforded moft coftly and curious.
When the trade of the Armenians was fufficiently eflablimed, the kings of Persia did no longer meddle with it. The citi-

## A R M

zens of Zulfa alone continued to fupport it, and by the affiffarce of their brokers or agents, who are of the fame nation with themfelves, they diftribute through the whole world the $\mathrm{f}_{1}$ )eft and richeft commodities of Afia.
Thefe agents undertake, for a very moderate profit, to conduct the merchandizes to the very places they are defigned for, to take care of them during the march of the caravans, to difpofe of them to the beft advantage they can, and to give afterwards a faithful account to thole by whom they are intrulted. We cannot fufficiendly exprefs how faithful thole agents are, what care they take to preferve the merchandizes they conduct, not fearing even to run the danger of perifhing themfelves, in order to fuccour the camels, and other beafts of burden that carry them, at the croffing of rivers, or at the difficult paffes of mountains.
Their charity for each other is unfpeakable; and, when thofe who are fettled in fome town are acquainted with the coming of a caravan, they do not fcruple to undertake a journey of a day or two, in order to go and meet them, and carry refrehments to their brethren.
When the caravans make any flay in towns, the Armenians who attend them join feveral together, that they may live cheaper. In Afia, they fell upon the road hard wares of Venice, France, and Germany, in order to get provifions. In Europe, they get them for muik and fome fpice. In a word, there is no nation comparable to them with regard to fubriety, good hufbandry, and honefty.
It is true, indeed, that, when their affairs prove unprofperous in thofe foreign countries where they trade, they feldom return home, not daring, fay they, to appear befure creditors, whofe confidence they bave abuled. But it muft be owned, that this happens very feldom : it being extremely uncommon to fee an Armenian become a bankrupt.
There is nothing more extraordinary, and at the fame time more pleafant, than the manner of friking bargains among the Armenians. They begin with putting money upon the table; after which, they cavil or difpute as much as they can about the price, the buyer and the feller prefenting and repulfing alternately the pieces of money, which they add to the price offered, or which they abate from the price demanded ; which is always done with fo much noife and ill humour, that one would think they are going to devour each other: all this, however, is nothing but grimace and affectation: and, when the broker, who is always prefent at this comedy, judges that things are pretty near the value, he fqueezes the feller's hand with fo much violence, that he makes him cry out, but he does not leave him till be accepts the buyer's offer. The farce ends with reciprocal jokes, each laughing on his fide, thinking that he has the beft of A the bargain.
RMOISIN, a filk fluff, or kind of taffety, of an indifferent goodnefs. It is made at Lyons, and in feveral places in Italy. There are half armoifins (demi-armoifins) made at Avignon, which are of an inferior quality, and lefs price than the others. They manufacture alfo armoifins with three threads. Armoifins of all colours are imported from the Eaft-Indies, and particularly from Cafembafar, by the way of Bengal. See the next articie. Some pretend that the word armoifn comes from the Italian armefino; or that thofe filks were thus called, becaufe there were coats of arms delineated upon the cloth in which they were wrapped up.
Armoisin of the Indies. It is a taffety manufactured in the Eaft-Indies, but flighter than thofe that are made in Europe, and of an inferior quality. Their colours, and particularly the crimion and red, are commonly falle, and they have but little glofs, and no brighenefs at all.
There are two forts of them, the arains, which are taffeties, either ftriped or checkered; and the damaras, or flowered taffeties. Their length is from 7 French ells to 24 , and their breadth from $\frac{7}{16}$ to $\frac{5}{6}$ of an ell.
The Indian armoifins have fold at Amfterdam from 18 to 20 guilders per piece. When you do not buy them of the company, that is to fay, at fecond hand, you may ftipulate to pay for them either in current or bank-money, or to deduct the difference.
The armoifins of Lucea have fold at Amfterdam from 7 to 9 fols de grofs per ell. They who fell them again, buy' them by deducting the intereft of the money for 18 months, they not being obliged to pay for them but after thofe months are elapfed: they alfo deduct 1 per cent. for prompt payment. But, when they fell them to retailers, they deduct but 2 per cent. upon the whole for prompt payment; that is, they are atlowed fo much difoount for the payment of ready money. It muft be obferved that all the filks of Italy are fold after the fame manner.
ARMONIAC, or AMMONIAC, a kind of falt, or falt alkali, volatile, urinous, and penetrated with an acid. There is a great confumption of it in moft countries.
There are two forts of falt armoniac, the natural and the artificial, which differ very much in figure, though their properties are pretty much the fame.
The natural falt-armoniac is again fubdivided, as it were, into two fepcies. The one, which is the true fort, and was known to the antients, was nothing, as they fay, but the

## A R M

urine of camels chryftallifed, and reduced to a white mafs by the heat of the fun, and to which the burning fand of Arabia, and of many other dry and defert places in $A$ fra and Africa, where thofe animals live during the long journies of the caravans, ferved as a matrix to bring that fale to perfection. It is called ammoniac (according to the opinion of the ancients) from the temple of Jupter Ammon, or Hammon, in che road to which it was found in abundance.
This falt is white, and taftes pretty much like common falt. One may obferve in it fmall cryftallifed needies, like refined falt petre; and, when it is the true fort, you may fill perceive among it part of the fand in which it was fublimated by the heat of the fun. This falt-armoniac is fof farce, that it is no commodity for trade, the cusious only having it in their cabinets.
The other natural falt-armoniac is not much more common than the true one. It is a kind of falt earth, or foum, which is worked like falt-petre. It is found in fome places of the Eaft-Indies, paricularly in old caverns, and the clefts of rocks, between Lahor, Tenaffar, and Trerbint (it fhould be perhaps, Sirina, inftead of 'Trerbint).
Monfieur d'Herbelot, in his Bibliotheque Orientale, obferves, that there is a grotto in the little country of Botam in Afia, where the true falt-armoniac is to be found. There arifes continually in that grotto a kind of vapour, which looks like finoke in the day-time, and like a flame in the night. It is from this vapour condenfed the falt-armonac is produced, which, in the language of that country, is called nufchader. That vapour is of fo malignant a nature, that, if thofe that work in it do not ufe the umoft precnutions, and make not all the hafte they can to gather the falt, they are in danger of their lives. For which reafon thofe workmen are dreffed in a very thick ffuff, to prevent the impreffion of the vapour; but, without the grotto, the condenfed vapour has no longer any malignant quality.
The fcarcity of thofe two forts of falt-armoniac, and the neceffity there is of ufing that drug in feveral operations and works which cannot be performed without it, have obliged the chemifts to imitate it; and it is this artificial falt-armoniac of which fo great a confumption $i$ made.
It is extraged, by means of fublimatory veffels, from all forts of urine, of men and beafts, mixed with common falt and foot. Some pretend that it may alio be extracted from all forts of blood. Whatever it may be made of, it comes commonly from the Ealt-Indies by Venice, or rather by the fhips of the Dutch Eaft-India company. It is brought in maffes, or lumps of divers colours, made in the form of the cover of a pot, and weighing 14 or 15 pounds. It was formerly in the fhape of a fugar-loof, and of a quality much fuperior to what it is at prefent.
This is, doubtlefs, meant of the falt-armoniac that came from Egypt, the loaves of which weighed 4 or 5 pounds; and, whatever Monfieur Savary may fay, Monfieur Geoffroy, in the Memoirs of the Royal Academy of Sciences for the year 1723, obferves, that their confiftency is very near the fame, which fhews that they are produced by a fublimation almof equal. A great deal of it is imported from Egypt to Marfelles and Leghorn.
Salt-armoniac muft be chofen whit?. clear, tranfparent, dry, and without filth, and, when broke, it muft appear as if full of needles.
The ufe of this falt is very confiderable in medicine: and feveral artificers ufe it, who could hardly firifh their works without it: fuch are, among others, the dyers, filverfmiths, pin-makers, farriers, \& c . The latter ufe it, after it is reduced to an impalpable powder, to eat up, or cure, the pearls or webs that grow in the eyes of horfes; and, as for the dyers, they reckon it among their not-colouring diugs, that is to fay, fuch as by themfelves produce no colour, but prepare the filk, thread, or woollen ftuffs, to receive the colour they defign to dye them with.
Its firit is fo fharp, that, when mixed with aqua fortis, or fpirit of nitre, it compleats the diffolu'ion of gold, which thofe two powerful diffolvents could not effect without it. See Aqua Fortis and Agita Regia.
This falt, being purified by fire and filtered, is reduced into a very white falt, which is ufed to provoke urine and fwearing, \&c. It is allo reduced into flowers, by means of common falt decrepitated, or calcined, or by fteel-filings. They alfo extract feveral firits, and a kind of oil, from it. Fit nally, they fix it with egg-fhells, or live-chalk and fire. Salt armoniac pays duty of importation in France 10 fols per 100 weight, according to the tariff of the year 1664: and, by a decree of the council of ftate, of the Isth of Augult 1685 , it pays 20 per 100 of its value, if it be not imported directly into France, but was landed any-where in foreign countries.
Armoniac. There is a gum alfo called by fome Gum Armoniac. ARMOR, or ARMOUR, a defenfive hatit, commonly of iron or fteel, which warriors and foldiers ufed formerly, ta defend and fecure the body againft the offenfive arms of the enemies. The complete armor was conspofed of a helmer, or head-piece, a neck-piece, or gorget, a cuiraffe, taftes, braffets, gantlets, cuiffes, and covers for the legs and feet, to which

## A R M

Were alfo faltened the fpurs．This was called armor cap－do pee；and thus the horiemen，or knights and men of arms， were dreffed．
The infantry wore but part of this armor．The murrian was to them inftead of a helmet ：they had alfo a cuirafle and taffes， but all this very light，and fuch as the pikemen in the regi－ ment of guards，and in tome other regiments in France，fill wore towards the end of the feventeenth century．Laftly， whe horfes themfelves had their armor，wherewith to cover the head and breaft．The curious may fee all thofe kinds of ar－ mor in the tower of London．
Of all this warlike furniture，fcarce any thing is now ufed except the cuiraffe；the gorget，which the officers ftlll wear， being at prefent nothing but a mark of honour，or diftinction， by which the foldiers know th $m$ ，but which is of no defence． Intead of a helmet，or murrian，they ufe fonetmes an irou or fleel bonnet，or cap，under the hat；and none lut the if giments called cuiraffiers fitil ufe the fimple cafk，or helmer． The folly，or，if you like the word better，the gallantry，of going to the battle naked，as it were，that is，without any defenfive arms，had prevailed to fuch a degree among the French nobility，that it was thought proper to reftrain it by ordonnances；and during the wars，which were almoft con－ tinsal under the long reign of Lewis XIV，the general offi－ cers，and all the officers of the horfe，were commanded to ute the cuiraffe again；which，though ftill but indifferently obey－ ed，has kept up in France the manufacture of that part of ancient armor，of which in the next article．
ARMOURER，he that makes arms．
The armourer－heaumiers（or belmet－makers）were formerly a numerous corporation at Paris．They were called armourers from the armour they made，and heaumiers from heaume，or helmet，which is the chief and molt honourable piece of the whole armour．Some vocabularies confound them with the gun－fmiths（in French arquebufiers）who are alfo ftiled ar－ mourers，though that name was never given to the gun－fmiths in therr fatutes，and belongs only to the helmet－makers， who are a body intirely diftinct from the gun－fmiths，of whom an account will be given in their proper article．
The firft fatutes of the armourers－heaumiers were given them by Charles VI．who，in the year 1409，erected them into a body－corporate．Thefe ancient ftatutes being neglected and almoft demolithed，new fatutes were made for them in the year 1562，which being examined and approved by Marfhal de Briffac，then governor of Paris，and afterwards by the lieutenant－civil，and by the king＇s attorncy at the court of the Chatelet，who gave their opinions upon them the 23 d of July，they were at laft approved，confirmed，and authorifed by letters－patents of Charles IX，iffued at Houdan that fame year，in the month of September，and regiffered in the parlia－ ment in March following．
Thefe laft ftatutes contain，in 22 articles，the whole difci－ pline，or form of government，of that corporation． Four jurats，or wardens，two of whom are chofen yearly， watch over the prefervation of their privileges，and take care that their flatutes be oblerved．
Every freeman of that company can have but one apprentice at a time，who mult be bound before a notary－public，and admitted by the wardens．
The apprenticelhip，without which no man can be made free of the company，is of 5 years，and even freemen＇s fons are not exempted from it；but they may ferve their time either with their father，or with others；with this difference，how－ ever，that，if they be bound with a ftranger，they are looked upon as apprentices，and fo prevent the taking any other； but，if a freeman＇s fons ferve their father，whatever be their number，he may take another apprentice befide them．
The mafter piece is given by the mafters，to whom but 8 livres Parifis are due for his right of affiftance：but freemen＇s fons are not obliged to make their mafter－piece，nor even to undergo a trial．
Widows，who continue fuch，enjoy the fame privileges their hufbands had，except that they cannot take a new apprentice， but only continue to keep him who was bound to the hufband， and has not finifhed his time．
The works and merchandifes of foreigners are liable to be vifited，or examined；which muft be done by the jurats，as foon as it is required，under a penalty of 20 livres Parifis，to be paid by them，befides an indemnification to the merchants for faying beyond their time．
The materials proper for the manufaciure of armour，that is to fay，iron，fteel，\＆xc．are alfo to be vifited，and muft be divided into lots among the merchants who have occafion for them．
No freeman can keep above one work thop．
Every piece of armour is to be marked with a puncheon，which is delivered by the jurats，and the impreffion of which upon lead ought to be kept in the chamber of the king＇s attorney． Journeymen，who have been apprentices at Paris，ought to be preferred before ftrangers，provided they be fatisfied with the fame wages．
The works that can be manufactured by the freemen of the armourer，helmet－maker＇s company，according to their fta－ thies，are all forts of armour for men，and efpecially corflets，

## AR O

cuirafies，gorgers，taffes，braffets，gantlets，cuifes，and all covers for the legs；head－pieces，burganets for horfemen，bur－ ganets and murrians for the infantry，both Aight，and thot－ proof；and all kinds of armour for jufts and tournaments． The armourers－helmet－makers company in France bave St George for their patron，the fraternity or brotherhood of which is eftablifbed in the parifh of St．James＇s，where that faint is reprefented at full length，armed cap－⿺夂丶－pee，with an armour of polifhed ftecl，and mounted on a horfe caparifoned after the ancient manner，with its harnefs alfo of fteel．
This company，formerly one of the moft numerous in Paris， was，towards the end of the fixteenth century，already dwin－ ded to 60 freemen only，and，at prefent，it confifts of 2 free－ men only，who are brothers，and fons to the famous Drouart， the laft jurat of that company，whofe anceftors for above 200 years，had the reputation of making the beft and richeft ar－ mour in Europe，not excepting that of Milan，which was al－ ways very much efteemed．
$?$ he manufacture of cuiraffes ufed by the French cavalry is at prefent eftablifhed at Befançon；fome，however，are imported from Switzerlaind．
As to the two freemen of the company of armourers－helmet－ makers who are fill left at Paris，they contnue to file them－ felves the only armourers－helmet－makers to the king，the prin－ ces，and the great lords；and they do accordingly furnith them with the cuiraffes they want，keeping up with honour their father＇s reputation．
Armourer，is alfo faid of a trader who fells armour，though he does not manufacture it．That name is allo given to thofe who trade in all forts of arms．
Armourers company in London．The arms and creft of the brothers and fifters of the fraternity，or guild，of bt George， of the myftery of the armourers of the city of London（as they were ftiled in their charter）were anciently borne by the faid corporation，but afterwards declared and confirmed to them by Thomas Howley，（larencieux，by patent under the feal of his arms and office， 3 and 4 Philip anc Mary， 1556.
Their arms are argent on a chevron，guite：；a yantlet，bè－ tween four fwords in faltier，on a chicf，lable；a buckler， argent，charged with a crofs，gules，between two helmets of the firft．
Their creft is a man demi－armed at all points，furmounting a torce and a helmet．Their motto，Make all lure．Their hall is in Coleman－ftreet．
ARMS，all weapons that ferve to attack an enemy，or defend one＇s felf．
Of all contraband merchandifes，there are none the exporta－ tion of which，without licence or paffert，is more ftricily prohibited，and more feverely punifhed，than that of arms， by the ordonnances of the kings of France．The penalty mentioned in the ordonnance relating to the five large farms publifhed in February 1687，is，the forfeiting of fuch arms， together with all the horfes，carts，carriages，and equipages， which ferved to carry them；as alfo of all other merchandifes which may be found with thofe arms，or were hid under them， befides a fine of 500 livres，to be paid by the merchants and carriers，or carmen；without prejudice to the corporal pu－ nifhment mentioned in the ordonnances．according to the na－ ture of the offence，and as the cafe hall require．
Under the general name of arms the tarifts comprehend，be－ －fides defenfive and offenfive arms，all forts of ammunition，in－ ftruments，and other warlike ftores，mentioned in the follow－ ing lift：
A lift of the merchandifes，the exportation of which is pro－ bibited throughout the whole extent of the kingdom，terri－ tories，and dominions of the king of France，in an alpha－ betical order．
Balls，
Balls，Granadoes，
Belts of all forts， Gun－powder，

Bomb－fhells， Gun－powder， Carriages for guns， Cuirafles， Fafcines，
Fufees，
Helmets，
Javelins，
Matches for guns，
Mortars，
Arms，arquebuffes，piftols，harneffes，braftets，mulquets，bar－ rels for fire－arms，and other arms of iron，pay duties of im－ portation in France，at the rate of 40 fols per 100 weight． In England arms and ammunition，and all utenfils of war，or gun－powder，imported without licence from his majefty，are forfeited，and treble the value，r Jac．II．cap．8．feet 2．－ Such licence being obtained，except for the furnihing of bis majefty＇s public ftores，is void，and the offender incurs a prex－ munire，and is difabled to hold any office from the crown， i Jac．II．cap．8．fect． 3.
AROBE，which fome fpell and pronounce ARROBE，in Spanifh arroba，and，in the language of Peru，arroue，a weight ufed in Spain，in Portugal，at Goa，and throughout all Spanifh America．The Portugueze ufe it alfo in Brazil，where，as well as at Goa，it is fometimes called arate．All thefe arobes are fearce any other ways like each other but in name，being very

## A R R

## A R S

different in weight, and in their proportion to the weights of other countries.
The arobe of Madrid, and almoft over all Spain, except Seville and Cadiz, weighs 25 Spanifh pounds, which do not make quite 23 pounds and $\frac{1}{4}$ Paris weight: fo that the common quintal, which is of 4 arobes, makes but 93 pounds Paris weight.
The arobe of Seville and Cadiz is alfo of 25 pounds, but thefe make 26 pounds and $\frac{1}{2}$ at Paris, Amfterdam, Strafburgh, and Befançon, where the pound is equal; 4 arobes make the common quintal, that is to lay, 100 pounds; but there mult be 6 arobes to make the quintal of Macho, which amounts to 150 pounds Seville and Cadiz weights, which may be reduced to the Paris weight upon the foot of the reduction of the arobe of thofe two cities, made above.
The aroue, or arobe, of Peru, weighs 25 pounds French weight. It is chiefly ufed to weigh the herb of Paraguay, of which the Spaniards and the Indians, who ufe it like tea, make fo great a confumption, that there is wanted for Peru alone above 75,000 aroues yearly. See Paraguay.
The arate, or Portugueze arobe, weighs much more than the Spanifh arobe ; it being $3^{2}$ pounds of Lifbon, which amounts to near 29 pounds Paris weight.
AROUE, a-weight ufed in Spain and in Spanifh America. See Arobe.
AROUGHCAIN, an animal found in Virginia, which intirely refembles the beaver, except that it feeds and leaps upon trees like the fquirrel.
The Englifh value its furr pretty much, which makes a branch of their trade with the Indians who live near their colony.
ARPENT, a certain meafure of land, which is greater or leffer, according to different countries and provinces. But, as to the furveying, or meafuring, of foretts and coppices fold in France, the arpent muft be the fame throughout the whole kingdom, according to the king's ordonnance of Auguft the 13th, 1669, article 14 of the title which relates to the policy and prefervation of forefts, of which here follows an extract: No meafure fhall be admitted, nor ufed, in the king's woods and forefts, nor in thofe held in coparcenery, in eyre, in appennage, mortgage, ufucaption, or held by ecclefiaftical community, or rrivate perfons, without exception, but that of 12 lines per inch, 12 inches per foot, 22 feet per perch, and 100 perches per arpent, upon pain of a fine of 1000 livres, notwithflanding all cuftoms and pofleffions to the contrary. It mult be obferved that the ordonnance, mentioning ico perches per arpent, mutt be underfood of roo fquare perches. The arpent is commonly divided two ways; the one into an half, a quarter, and half a quarter'; and the other into a third, half a third, sec. of an arpent.
ARQUEBUSE, or HARQUEBUSE, a fire-arm, of the fame length with a fufee, or mufquet, which is commonly cocked with a fpring-lock. This kind of arms was formerly very much ufed boib in war and for hunting; but, at prefent, it is hardly any otherwife ufed than for the defence of befieged places; but it has given name to a confiderable company of tradefmen at Paris, called arquebufiers, that is, gun-fmiths. ARQUIFOUX. See Alquifoux.
ARRACAN, or ARRACKAN, a fmall kingdom in the EafIndies, has the country of Ava, beft known by the merchants under the name of Pegu, on the eaft, and fouth-eaft; Tipra on the north; and the bay and country of Bengal on the weft and north-weft. There are many cities, towns, and villages in this kingdom; fome whereof are extremely populous, which is afcribed to their polygamy, and to their avoiding, as much as in their power, war and iea voyages. Their longeft voyages are, when they make war with their hips againft their neighbours of Bengal or Pegu.
The country has woods, and is full of orchards and gardens that are verdant all the year, and produce all the ufual fruits of the Indies. It has timber for building, fome lead, tin, fticklack, and elephants teeth; with all forts of corn, except wheat and rye. Their ordinary money is fhells, or little ftones, 80 of which they value at about 9 d . fterling, and they have a filver coin worth about 2 s . apiece, for which they have 1660 hellis in exchange; fo that, when they carry this fort of money to market, it is a porter's load. The Moors here are the greateft traders. Many of their rivers have tides, which rife from 12 to 20 feet high, fo that they perform great voyages in a little time. The chief towns are, r. Arracan, the capital, which, Schouten fays', is as large as Amfterdam, but much more populous; and its fuburbs are fome leagues in extent. On the ridges of the rocks are many itreets, full of thops ; where may be had the richeft goods of all Afia, which are brought and carried away on the backs of elephants, fo tame, that they are commonly governed by boys, who ride on their necks. The Dutch have a factory in the neighbourhood. Here are feveral fpacious bazars and piazzas ; and fome of the Mogul's fubjects trade hither, and meet fometimes with good bargains of diamonds, rubies, and other precious ftones, and gold roupees. The mouth of its noble fpacious river is large, and deep enough to accommodate fhips of the greatefl burthen into a hatbour, large enough co hold all the fhips in Europe.
2. Orietan, is frequented by, merchants from moft parts of the eaft.
3. Dobart, has a good harbour and trade on a ftream, that runs fouth from Arracan.
4. Chedabe, or Cabubel, is alfo a town of trade, with a good harbour.
5. Dianga, is another noted town on the coaft, 120 miles north of Arracan, which fome place in Bengal, but Father Tofi makes it one of the chief cities of Arracan : moft of the inhabitants are fugitive Portugueze, who have great privileges. Moll places a Dutch factory on the river of Arracan, 60 miles north-eaft of that city; but we have no other account of it.
6. Peroem, or Prom, is another town of great trade, and has a good capacious harbour.
7. Rama, is another city of the fame rank. The fea on this part of the coaft is dangerous, being fubject to fudden tempefts.
The fea-coaft of this kingdom cxtends from Cape Negrais to Xatigam in Bengal, about 400 miles; but is not much inhabited, becaufe of the valt numbers of wild elephants, buffaloes, and tygers : only fome illands in the fea are peopled with poor fibhermen.
ARRAGON, in Spain, is the next kingdom in dignity to that of Navarre. It is bounded on the north by the Pyrenees, which divide it from France; on the wefl it has Navarre, and New and Old Caftile; on the fouth the kingdom of Valentia; and, on the eaft, part of Valentia, and the principality of Catalonia.
The country is mountainous, but full of delightful vales, and extraordinary fertile, which produce great plenty of wheat, wine, oil, faffron, and fruits of the moft delicious kind. They breed alfo great quantities of cattle, and abound with all forts of fowl, both wild and tame.
The mountains are faid to have mines of gold, filver, and other metals, bat little is made of any of them, except iron. Here are likewife very confiderabie rivers, and plenty of good filh; the moft remarkable river is the Turio, which fertilizes a great part of the country, not by an overflow like that of the Nile, but by its flow and gentle courfe, which gives opportanity to the hufbandman and gardener to cut channels from it to water their lands; infomuch that we are told, their trees will bear fruit three, and often four, times in a year; and not only in great plenty, but in fuch variety, that they reckon no lefs than 400 forts produced in this kingdom. Their orchards, gardens, and pafture grounds, are likewife much admired for their continual verdure and fertility.
I. Zaragoza, alias Saragossa, is the metropolis of this kingdom, and is rich and populous, and carries on a great commerce, and a confiderable number of trades and manufactures both within and without the walls.
2. Terkazana, is another city in this kingdom, which cairries on a confiderable trade much in the fame way as Saragoffa does.
3. Val de Tena, or Sallent, is a remarkable town in the very beart of the Pyrenees. Here is a large traffic carried on in the produce of the country all the fummer, though the great quantities of frow which cover thefe mountains, make the country impaffable near fix months in the year. Their trade is occafioned by two paffes leading into France, the one on the welt, over the river Gallego, towards Beam in Gafcony, and the other on the eaft over a cleft of the mountain Forqueta.
ARREAR-CHARGE, thus the French fille intereft upon intereft, or compound intereff, according to Furetiere ; but thatexpreflion is little ufed in trade.
ARREARS, the remainder of a fum due, or money remaining in the hands of an accountant.
It fignifies alfo, more generally, the money, that is due for rent, unpaid for land or houfes; as likewife what remains unpaid of penfions, taxes, or any other money payable yearly, or at a fixed term. The French call it arrearages.
A merchant is alfo faid to be in arrears, or behind-hand, when be does not regularly pay his bills of exchange, promiffory notes, bonds, or any other debts, when due, and leaves them, as it were, behind-hand. Monfieur Savary fets it down as a maxim, in his Complete Merchant, that when a trader is once in arrears, or behind-hand, he is almoft irretrievably loft, and does feldom recover his credit, unlefs by a very great chance, and an extraordinary good luck,
To leave a payment in arrears (arrierer un payement, as the French fay) is not to pay it when due, to delay it and put it off.
ARSCHIN, a long meafure, ufed in China, to meafure fluffs, It is of the fame length with the Dutch ell, which is of 2 feet 1 I lines, which amounts to ${ }_{7}^{4}$ of a French ell. So that 7 arfchins of China make 4 ells of France.
The ell of Amfterdam makes $\frac{3}{4}$ of a yard of London, fo that, four ells of Amfterdam, or four arichins of China, make three yards of London. So that, to reduce the arlchins to the yard of London, you muft fay, If four arfchins make three yards, fo many arichins (thirty for inflance) how many yards will they make? Anfw. $22 \frac{1}{2}$. And, in order to reduce the
yards
yards into arcinins, fay, if three yards make four arfchins, fo many yards (as 3 jo for intance) how many arfchins will they make? Anf. $46 \frac{2}{3}$.
ART, the rule and method of doing a thing well, and as it ihould be.
Art fignifies alfo a profeffion, or trade. And in this fenfe there are two forts of arts, the one called liberal arts, fuch as painting, architecture, $\& \mathrm{c}$. the other called mechanic arts, fuch as the trades of turners, carpenters, \&c.
ARTS and TRADES. In France they thus fille the companies of tradefmen or artificers, erecled into bodies corporate, which have wardens, mafters or freemen, apprentices, and jurats, or examiners. They are diftinct from what they call the fix bodies of merchants.
ARTICLE, a fmall part of an account contained in the journal, invoice, \&c. Thus it is faid fuch an account contains fo many articles of debtor, and fo many of creditor. The memorial, the invore of the merchandizes I have fent you, contains fo many articles, which amount to fo much In my inventory, the article of the ferges of Aumale amounts to fuch $a$ fum.
An able book-keeper ought to be very exact in pofting into the ledger, to every one's account, either as debtor or creditor, every article that has been fet down in the journals and cafh-book, \&c.
Article is alfo faid of the claules, terms, and conditions, agreed upon in partnerhips, bargains, and treaties, and alfo of the things adjudged, or determined, by arbitrators. In this fenfe, they fay, it is agreed by fuch an article of our partnerfhip that the houfe-rent fhall be paid out of the common flock. In the bargain we have made together there is an article, by which you are bound to fuch a thing. This is according to an article of our treaty. Our arbitrators have determined fuch an article in my favour.
Article fignifies, likewife, the feveral heads contained in the ordonnances and regulations, particularly when they are quoted. This agrees with fuch an article of the ordonnance in France, of the year 1673 , or with fuch an article of the regulations concerning the dyers, \&c.
ARTIFICER, or ARTISAN, or MECHANIC, is a perfon who carries -on any handicraft, or mechanical trade. This clafs of people is not only very numerous in all great trading ftates and empires, but is of more real importance to fuch communities, than, perhaps, is generally confidered by thofe in more exalted conditions of life.

## Remarks

As things are conflituted at prefent, amongft the trading countrics of the world, thofe which fubfift themfelves upon their natural productions, or merely by bartering and exchanging thofe productions againft the commodities of other countries, make no figure themfelves as a trading people.
The Indians in North America, as well as the Negroes in Africa, are plain inftances of the truth hereof.
Were the Chinefe, and the Eaft-Indians, in general, to be deprived of their ingenious artificers, or, if you pleafe, manufacturers (for they may be as reafonably called the one as-the other, perhaps, though cuftom among us has made a diftinction) they would, very probably, degenerate into the like favage difpofitions with the wildeft Africans, or American Indians. And this, we may prefume, would prove the cafe alfo among the Europeans, For,
Thefe are the arts which keep the mafs of the people in ufeful action, and their minds engaged upon inventions beneficial to the whole community: and this is the grand prefervative againft that barbarifm and brutality which ever attend an indolent and inactive ftupidity.
The due cultivation, therefore, of pra\&ical manual arts in a nation, has a greater tendency to polifh and humanize mankind, than the mere fpeculative fcience, bowever refined and fublime it may be: and thefe practical arts are not only the moft naturally adapted to the bulk of the people, but, by giving real exiftence to their ideas, by their practical inventions, improve their minds more fenfibly and feelingly than any ideal contemplation could do, which may have no other being but in the mind of the fpeculator.
Moreover, it is obfervable that perfons who excel by their new inventions and difcoveries in the practical mechanic arts, are commonly men of general good underftandings. Whether this may not be attributed to the conftant exercife of the intellectual faculties in matters which they SEE and FEEL, may deferve the confideration of fuch who fhall think of the miore natural way of improving the undertanding. The delicate mechanifm of a watch by thofe great artifts a Graham, or an Ellicot, demoftrates the utility of fuch artizans to a trading country, when their workmanfhip is admired amongit all the civilized world. It is the fame by other artificers, who excel in their peculiar branch. This not only brings credit and honoir, but treafures, into a nation, in proportion as they are flocked with fuch celebrated mechanics, or artificers.
Nothing is more obvious than that the commerce and navigation of this nation principally depends on the daily improvements made by our artificers, in that infinite and amazing variety in our mechanic and manufactural arts. Wherefore

Vol. I.
artifts of this kind, who frike out new inventions, or who imptove the old mechanics and manufactures, are deferving of fome public regard and encouragement more than what they acquire to themelves by dint of their peculiar profefion only. Daily experience manifefts the extraordinary effects of thofe fmall rewards which have been given in Scolland and Jreland, for the improvement of their manufactures; nor do the prea miums, perhaps, operate fo powerfully as the motive of emulation; for that credit and reputation which attends a man's excelling in his employmen', has, fometimes, a far greater influence upon the induftrious and ingenious mind, than pecuniary rewards only.
Yet thefe are not to be neglected in trading nations; fuch being the cafe, that new inventions, or new improvements, made by one, for the benefit of trade, are foon enjoyed equally by all, the inventors very rarely being able to preferve the benefit of their inventions any time to thernfelves; fcarce ever long enough to recompenfe them for the time and expence they have generally been obliged to beftow upon them Huw the ingenious Britih artificer might be rewarded by the public, we have taken the liberty to fuggeft elfewhere, in our Remarks under the article Asphaltum, which wereoc. cafioned by the encouragement given by the French king to the Sieur de la Sabloniere upern that occafion. See alfo the article Patents granted in this nation for the encouragement of new inventions and difcoveries.
But, befides the public rewards and encouragement which might be given to our artifts in the fhape therein humbly propofed, there is another way of promoting our artificers, and thereby the commerce of the $k$ ingdom in general ; and whis $h$, though it is not attended to, may not prove leís beneficial so the community, if it once becomes fafhionable amongft us. What I am about to intimate, is derived from confidering the neceffity under which our noblity and gentry conflandly lie, to ufe fome corporal exercife and recreation for the tenefit and prefervation of their healths: whence it is that they are obliged to ride, hunt, fhoot, play at tennis, cricket, \&c. But it is to be earnefty wifhed and defired, that, at the fame time when thefe noble and honourable perfons were exercifing themfelves for their health's fake, they would fo contrive their exercifes as even to render them ferviceable to the public interefts: and this, I humbly apprehend, might be eafily done, could thefe perfonages be prevailed on to entertain themfelves with the perufal of thofe celebrated works of the inimitable lord Bacon, and that excellent tract by the honourable ${ }^{\circ} \mathrm{Mr}$ Boyle, on the Ufefulnefs of Experimental Philofophy; as allo that admirable performance written afterwards by the learned bifhop Spratt, intitled The Hiftory of the Royal Society of London, for the improving of natural knowledge.
Was it fafhionable once for perfons of diffinction to devote a proportion of their rural retirement to practical or experimental philofophy,' it' might not only prove a falubrious bodily exercie to modividuals, but a great beneft and advantage to our artificers in general, and, confequently, to the general traffic of the kingdom. For,
As the learned author of the hiftory before-mentioned obferves, 6 The mechanic inventions are improveable by others - befides the common artificers themfelves. This will appear c undeniable, fays he, if we will be convinced by inftances; - for it is evident, that divers forts of manufaclures have been - given us by men who were not bred up in trades that re-

- fembled thofe which they difcovered. I fhall mention three,
${ }^{6}$ that of printing, powder, and bow-dye. The admirable art
- of compofing letters was fo far from being ftarted by a man - of learning, that it was the device of foldier: and powder, ' to make recompence, was invented by a monk, whofe courfe - of life was mof averfe from handling the materials of war.
- The ancient Tyrian purple was brought to light by a filher; ' and, if ever it hall be recovered, it is likely to be done by - fome fuch accident. The fcarlet of the moderns is a very - beautiful colour, and it was the production of a chemift, - and not of a dyer.
- One principal help, fays that great man in another place, - that the Englifh nobility and gentry enjoy for the promotion 4 of thefe ftudies of peace, is the prefent conflitution of our * government. The chief defign of the anciert Englifh was - the glory of fpreading their victories on the continent: - but this was a magnanimous miftake; for by their very - conquefts, if they had maintained tbem, this illand had been - ruined, and pad only become a province to a greater empire. - But now it is rightly underfood that the Englifh greamers c will never be fupported or increafed in this age by any - other wars but thofe by fea; and for thefe the fervice of the - multitude is fitter than of gentlemen. This we have beheld s practifed thefe laft 20 years, wherein our naval ftrength has - more than trebled itfelf; for, though fome few gentlemen - have flill mingled themelves in thefe gallant actions, yet the - grofs of our fleets have confifted of common men, and of - mariners, who are bred up in the rude toils of fuch a life. * As this oblervation may raife us to the greater admiration - of their valour, that fuch magnanimity hould be foond - among the meaneft of the people, fo it thould alfo fug-- geft to our gentlemen, who by this means are at liberty

E E

- from
* from the employments of the greateit danger, that they - ought to undertake thefe, which will give them as great, - though a fecurer honour.
- Nor will it be a difgracs to them, that the fighting for their - country is caft on men of lower ranks; if, in the mean - time, they fhal! frive to enlighten and adorn, while the " other defend it: for the fame is ordained by nature itfelf, - in the order and offices of her works; the heavenly bodies, - appear to move quietly above, to give light, and to cheriih' - the world with a gentle influence; while inftruments of - war and offence are taken out of the bowels of the earth.
- For the improvement of thefe arts of peaceable fame, they 6 have, indeed, another privilege, which can fcarce be equalled © by any kingdom in Europe; and that is the convenience - and benefit of being fcattered in the country; and, in truth, ' the ufual courfe of life of the Englifh gentlemen is fo well - placed between the troublefome noife of pompous magnifi6 cence and the bafenefs of avaricious fordidnefs, that the true c happinefs of living, according to the rules and pleafures of 6 uncorrupt nature, is more in their power than any others.
- To them, in this way of life, there can nothing offer itfelf 6 which may not be turned to a philofophical ufe. Their 6 country-feats, being removed from the tumult of cities, give " them the beft opporcunity and freedom of obfervation. Their * hofpitality, and familiar way of converfing with their neigh-
- bourhood, will always fupply them with intelligence. The
c leifure which thefe retirements afford them is fo great, that
either they munt fpend their thoughts about fuch attempts,
6 or in more chargeable, or lefs innocent, divertifements, \&c.
- When a general turn for the ufeful inventions, in regard to

6 trade, has once taken root among our nobility and gentry,
let them go on to the other kirids, which purpofe the ftrik-

- ing out of new mechanics. The warmth and vigour which
* attend new difcoveries, is feldom wont to confine itfelf to
c its own fphere, but is commonly extended farther, to the
cornament of its neighbours. The ordinary method where-
- in this happens, is the introduction of new arts.
- It is true, indeed, the increafe of tradefmen is an injury to c others, that are bred up in particular trades, where there is c no greater employment than they can mafter: but there can
- never be an overcharge of trades themfelves. That country
is ftill the richeft and moft powerful which entertains moft
artificers and manufacturers.
The hands of men employed are true riches: the faving of
6 thefe hands by inventions of arts, and applying them to
- other works, will increafe thofe riches. Where this is
- done, there will never a fufficient matter for profit be want-
- ing ; for, if there be not vent for their productions at home,
- we fhall have it abroad; but, where the ways of life are
- few, the fountains of profit will be poffeffed by few; and
' fo all the reft mult live in idlenefs, on which ineuitably - enfues beggary: whence it is manifeft, that poverty is - cauled by the fewnefs of different trades, and not by - the multitude.
- Nor is it enough to overthrow this, to tell us, that, by - this addition [of new artificers and manufacturers] all things - will become dearer, becaufe more muft be maintained : for - the bigh rate of things is an argument of the flourifhing, - and the cheapnefs of the fcarcity of money, and ill-peopling
- of all countries. The firf is a fign of many inhabitants, - which are true greatnefs; the fecond is only a fit fubject for - poets to defribe, and to compare to their golden age; for, - where all things are without price or value, they will be - without arts, or empire, or ftrength.
- I will explain all this by a familiar and domeftic inftance. - It is probable that there are in England a hundred times ' more [or different fpecies of] trades, than the Saxons, or - the Danes, found here in their invafions; and, withal, the - particular trades live more plentifully, and the whole nation - is wonderfully ftronger, than before. This alfo may be
- feen in cvery particular city: the greater it is, the more - kinds of artificers it contains; whofe neighbourhood and - number is fo far from being a hindrance to each other's gain, - that flill the tradefmen of moft populous towns are wealthier
- than thofe who profefs the fame crafts in country markets.
- In England it has of late been a univerfal murmur, that trade decays; but the contrary is evident, from the perpetual " advancement of the cultoms. Whence then arifes the com6 plaint? From hence, that traders have multiplied - Above the proportionable increase of trades: - by which means all the OLD ways of gain are overstocked, which would soon be prevented
by a constant addition of NEW.
6 The want of a right apprehending this has always made - the Englifh averfe from admitting of new inventions, and - fhorter ways of labour, and from naturalizing of new peo"ple: both which are the fatal miftakes that have made the
"Hollanders exceed us in riches and traffic*: they receive ' all projects, and all people; we have kept them out, and - fupprefled them, for the fake of the poor, whom we thereby do certainly make the poorer.
* It munt be obferved that the bihop wrote in the reign of
king Cbarles II.
( And indeed thofe perfons, fays the judicious prelate elfewhere, who are not peculiarly converfant about any one fort 6 of arts, may often find out their rarities and curiofities fooner c than thofe who bave their minds wholly confined to them.
- If we weigh the reafon why this is probable, it will not be
c found fo much a paradox as perhaps it may feem at the firf ${ }^{6}$ reading. For
- The artificers themfelves, having had their hands directed - from their youth in the fame methods of working, can' not, when they pleafe, fo eafily alter their cuftom, and 'turn themfelves into new roads of practice. Befides ' this, they chiefly labour for prefent livelihood, and, there-- fore, cannot defer their expectations fo long as is com* monly requifite for the ripening of a new contrivance. - But efpecially having long handled their inftruments in ' the fame faifion, and regarded their materials with the 6 fame thoughts, they are not apt to be furprized much with
6 them, nor to have any extraordinary fancies or raptures - about them.
- Thefe are the ufual defects of the artificers themfelves: - whereas men of freer lives have all the contrary advantages.
- They do not approach thefe trades as their dull, and una-
' voidable, and perpetual employments, but as their civer-
- fions. They try thofe operations, in which they are not
- very exact, and fo will be more frequently fubject to com-
- mit errors in their proceeding; which very faults and wan-
- derings will often guide them into new light, and new con-
- ceptions. And, laftly, there is alfo fome privilege to be al-
- lowed to the generofity of the fpirits of gentlemen, which
- have not been fubdued, clogged, and fhackled, by any con-
- ftant toil, as the mere artificers.
- Invention is an heroic thing, and generally placed above
' the reach of a low and vulgar genius. It requires an active,
'a bold, a nimble, a reflefs mind: a thoufand difficulties
- muft be contemned, with which a mean heart would be
- broken; many attempts mult be made to no purpofe;

6 much treafure muft fometimes be fquandered, without any

- return ; much violence and vigour of thoughts muft attend
' $\mathrm{it}^{2}$, that would hardly be pardoned by the fevere rules of - prudence. All which may perfuade us, that a large and an
- unbounded mind is likely to be the author of greater pro-
- ductions than the calm, obfcure, and the fettered endeavours
- of the artificers and mechanics themfelves : and that, as in
- the generation of children, thofe are ufually found to be moft
- fprightly that are the ftolen fruits of an unlawful bed, $\mathrm{fo}_{\mathrm{o}}$
- in the generations of the brain, thofe are often the moft - vigorous and witty which men beget on other arts, and not 6 on their own.
- Whence it follows, that the fureft increafe, remaining to be - made in manual arts, is to be performed by the conduct of ex-- perimental philolophy. This will appear undenable, when - it thall be confidered that all other caufes of inventions are - defective; and that for this very reafon, becaufe the trials - of art have been fo little united with the plain labours of " men's hands."
And this was the origin of that moft ufeful and glorious inftitution the Royal Society of London, from whence all others of the like kind in Europe have taken their rife, to the wonderful improvement of the mechanic arts and manufactures, and, indeed, of univerfal commerce.
- It is fhameful that the greateft part of our arts and inven-- tions, before thefe noble inftitutions, fhould have been pro-- duced either by luxury, or chance, or neceffity; all which ' muft be confeffed to have been mean and ignoble caufes of - the rational mechanics.
$s$ The firt of thefe has been that vanity and intemperance of
- life which the delights of peace, and greatnefs of empire,
' have always introduced. This has been the original of very
- many extravagane inventions of pleafure, to whofe promo6 tion it is not reqnifte that we hould give any help, feeing - they are already too exceffive. And, indeed, if we confi' der the valt number of the arts.of luxury, compared to the 6 found and the fubftantial ones of ufe, we fhall fird that the - wit of men has been as much defective in the one, as re6 dundant in the other.
' It has been, continues the bilhop, the conftant errors of ' men's labours in all ages, that they have ftill directed them to ' improve thofe of pleafure, more than thofe of profit. How ' many, and how extravagant, have been the ornaments ' about coaches? And how few inventions about new frames ' for coaches, or about carts and ploughs? What prodigious expence has been thrown away about the fathions of cloaths?
But how little endeavours have there been to invent new ' materials for cloathing, or to perfect thofe we have? The - furniture and magnificence of houfes is rifen to a wonderful beauty within our memory, but few or none have thoroughly fludied the well-ordering of timber, the hardening of - ftone, the improvement of mortar, and the making of ' better bricks, \&ic.
c The like may be fhewn in all the relt : wherein the folid
- inventions are wont to be overwhelmed by gaudinefs and
- fuperfluity; which vanity has been caufed by this, that the
artifts have chiefly been guided by the fancies of the rich, or
6 the
- the young, or of vain humourits, and not by the rules and - judgments of men of knowledge.
- The fecond occafion that has given help to the increafe of - mechanics, has been chance: for in all ages, by fome cafual - accidents, thofe things have been revealed which either men - did not think of, or elfe fought for in vain. But of this - the benevolence is irregular, and moft uncertain: this, in - deed, can fcarce be ftiled the work of a man. The hart - deferves as much praife of invention for lighting on the - herb that cures it, as the man who blindly ftumbles on any - profitable work, without forefight or confideration.
- As to neceffity, that has given rife to many great enter-- prizes, and, like the cruel flep-mother of Hercules, has - driven men upon heroic actions, not out of any tender af - fection, but hard ufage. Nor has it only been an excellent - miftrefs to particular men, but even to whole ftates and king-- donss; for which reafon fome have preferred a barren foil - for the feat of an imperial city, before a fruitful, becaufe ' thereby the inhabitants being compelled to take pains, and to live induftrioully, will be fecure from the dangerous in-- chautments of plenty and eafe, which are fatal to the beginnings of all conmmonwealths. Yet the defects of this - fevere author of great works are very many.'

From the fentiments of this zealous promoter of the ufeful arts, for the benefit of commerce, it is manifeft that he makes the profperity of a trading nation to confift in the multiplying of the number of new trades; that is to fay, in the multiplying of the different fpecies of mechanics, artificers, and manufacturers: for want of this it is, that all the old ways of gain become overfocked, as has been obferved, and then people complain for want of trade, when the true caule is owing to the want of art, or to the want of the invention of a number of new trades and new arts, in proportion to the increafe of people among ourfelves, and in proportion as other rival ftates frike into the fike trades and arts which we have been long ufed to.
And, whoever has dipped any thing into the philofophical tranfactions of the learned amongft the feveral nations in Europe, for near a century paft, will find, that the greateft improvements, in manufactural and mechanical arts, have been more owing to the real inventions of the learned, or to fuch hints which they have, from time to time, communicated, than to the mechanics, manufacturers, and artificers themfelves.
But, although the commerce of Great-Britain fo apparently depends upon the increafe of new ufeful arts and inventions, yet, as an ingenious French writer obferves, 'When our - reafon firf begins to open, we are talked to for fix years together about the future in $r u s$, and the fupine in um, without hearing one word of the perfection and uffefulnefs of the arts, or the induftry of people that follow employments, by which our lives are fupported.

- When our reafon begins to acquire more ffrength, it is put
- under the direction of mafters, who, after great preparation,
demonftrate that we have a body, and that there are other
bodies round us: or fpend whole days in proving, that, of
- two propofitions, contradictorily laid down, concerning a - poffible future, which may never happen, the one is deter-
minately true, and the other determinately falfe. The
- learning to difinguifh rightly the productions of the globe
which we inhabit, the ties whereby all the people dwelling
6 on it are united, and the various labours that are therein - employed, are things the moft neglected.
- We daily fee the fails of a wind-mill, and the wheel of a
' water-mill in action : we know that thefe machines grind
corn, and reduce the bark of trees to powder; but we
- know nothing of the flructure of them, and can hardly
- avoid confounding a carpenter with an bewer of wood. We
all carry watches in our pockets, but do we know the me-
chanifm of the fuzee, round which the chain is wound?
Do we underftand the ufe of the fipiral line, which accom-
panies the ballance?
- It is the fame with regard to the moft common trades: we
- know the names of them, and no more. Inftead of endea-
- vouring to gain a reafonable knowledge of commerce and
*mechanics, which are the delight and ornament of the fo-
- ciety wherein we are to fpend our lives, we pique ourfelves
on attaining all the niceties of quadrille, or bufy ourfelves
- in ufelefs, and too often in enthufiaftic fpeculations.'

The fentiments of this French author bring to my remembrance alfo what our learned countryman, Dr Spratt, fays in favour of an experimental education: ' I will venture to " propofe, fays he, to the confideration of wife men, whether * the way of teaching by practice and experiments would not - at leaft te as beneficial as the other by univerfal rules; 6 whether it were not as profitable to apply the eyes and the - hands of children, to fee and to touch all the feveral kinds - of fenfible things, as to oblige them to learn and remember - the difficult doctrines of general arts? In a word, whether

- a mechanical education would not excel the methodical?
- This certainly, continues his lordfhip, is no new device:
- for it was that which Plato intended, when he enjoined his
- fcholars to begin with geometry; whereby, without quef-- tion, he deligned, that his difciples fhould firf handle ma: terial things, and grow familiar to vifible objects; before
they entered on the refined fpeculations of other more $a b-$ - Aracted fiences.
- The principal thing that ought to be improved in Great-- Britain is their induftry. This, it is true, has of late years - been marveloufly advanced, as may be thewn by the en-- larging of traffic, the fpreading of many fruits, the plantation of trees, and the great improvement of manual arts.
6 But it is evident, that it may fill admit of farther warmth - and activity, as we may conclude, by the want of employment for younger brothers, and many other conditions of - men, and by the number of our poor, whom idlenefs, and - not infirmities do impoverifh.
- The way to compafs this, is not alone by a dis of parliament, - and good laws, whofe force will foon be evaded by prefent - craft and interpretation, or elfe will be antiquated by time. - This, perhaps, our country has found above all others: if - our labourers had been as diligent as our law-givers, we had - proved the moft laborious nation under heaven. But the true method of increafing induftry is by that courfe which the Royal Society of London has begun in philofophy, by works and endeavours, and not by the prefcriptions of words, ' or paper commands.' This, and this only, is the way to increafe our mentions and improvements in the manual arts, and thereby to increafe the number of new trades, new manufactures, mechanics, and artificers, in an infinitely greater variety than we at prefent have
By the fixth article of the firft title of the ordonnance publifined in France in the year 1673, it is ordered, that all artifans, as mafons, carpenters, tilers, fmiths, glaziers, plumbers, paviours, and others of the like quality, thall be obliged to demand payment within the year after performing, or delivering, their work.
In England, artificers in wool, iron, fteel, brafs, \&c. contracting to go out of the kingdom into a foreign country, thall be fined, not exceeding 1001 . and fuffer three months imprifonment. And artificers going abroad, not returning on warning given by our ambaffadors, \&cc. fhall be difabled to hold lands by defcent, or devife, be uncapable of receiving any legacy, \&c. and be deemed aliens. Stat. 5 Geo. I. c. 27.
ARTILLERY, comprehends all forts of large fire-arms, as mortars, cannons, bombs, petards, carbines, mufquets, as well for the naval as military fervice.
Since the att of war has been improved, by the means of thofe fatal inventions of gunpowder and artillery, the manufactory of artillery is become an extenfive branch of bufinefs, and employs no fmall number of hands; though, where the art has given fupport to one, it has, perhaps, taken away life from thoufands.
The larger pieces of artillery depend upon the bufinefs of foundery, the other upon fmithery. The former is commonly called ordnance, the other fmall arms, \&c.
To carry on manufactures of ordance with fuccefs, there are various circumftances which are requifite to be well weighed and confidered, or the undertakers may be foon undone.

1. The fituation of the place for cafting of ordnance of iron fhould be very near ore and fuel, and water, not only for fale and carriage, but for the conveniency of working of bellows for their cafting part, and forging hammers for the working up the heads of their cannon, and other fuperfluous caft iron, which is feparated therefrom.
2. The price of labour, as well as that of fuel, ore, and carriage, hould alfo be calculated, in order to be able to judge of the profits of the manufactory, according to the views and expectations of vent for the fame.
3. Thefe things confidered, the next is that of hiring, or erecting fúrnaces, forges, and water-mills, and all otherconveniencies neceflary for the purpofe.
If hiring, or building, be the intention, due regard fhould be had to the ffructure of furnaces, not only that they may be properly built for the occafion, but adapted to the quantity of ore defigned to be fmelted at a time; and that the bellows be fo hung as to give the neceffary continued blaft. Thefe things depend on the care and fkill of able and experienced workmen, or rather upon the mafter-founder himfelf, who has the conduct of the whole.
4. But, let his judgment and experience be ever fo great yet if the feveral workmen, the operators in the various claffes, are not equal to their refpective parts, the undertakers may foon be ruined; for there is fuch a delicacy in the cafting of large pieces of ordnance, that I have known 17 pieces out of 30 not ftand proof upon trial, though caft at one of the beft founderies in the kingdom; which proved a great lofs to the proprietors.
5. There is much in this art that depends upon a careful and ingenious mould-maker; and more on the method of preparing the ore, and fmeling it with fuch fluxes as will render the metal conftantly fo tough as is neceffary to ftand all proof. When this is fkilfully done, thofe accidents beforementioned can very rarely happen; as no little defect in the moulds could change the general texture, compactnefs, and toughnefs of the metal; little exuberances in the moulds could neve have that effect as to prevent fuch metal ftanding proof, if that itfelf was as good as it ought to be.

Theie accidents, to which our iron founderies are liable in the cafting of ordnance, feem to indicate that this art is not yet brought to its laft perfection.
Under the articles Iron and Foundery, we fhall fhew the methods of fmelting the various fecies of ores for ordnance, and other matters, which are madenof caft.iron; and endeavour to point out the caufes of thofe mifcarriages, which may, in fome meafure, poffbly, contribute to prevent their frequency.
And, in regard to the making of brafs ordnance, that will be reprefented under the articles Brass and Foundery.
The art of war, at prefent, depending fo much upon the goodnefs of deftructive artillery, and other'nations pluming themfelves on the fuperior excellency of theirs, it feems prudential from the principles of felf-defence only, that we fhould not be behind them in what fo nearly concems us.
That other nations are making all the advances they can in this art; we had an account about two years ago from the Aufrian camp at Boxtell, that proof was made there of 8 pieces of cannon, made of hammered or forged iron, of a new invention; each piece fring 100 times in 15 minutes, without requiring to be cleaned once. Befides the advantages of quicknefs in firing, the touch-holes, it was faid, fuffered not in the leafl by the number of difcharges that were made. Within a few months after this, to flew that the French would not be behind hand with the Auftrians in that point, we had the following repeated account from Paris in all the foreign papers.
We learn from Paris, that certificates have been produced there from the officers of the marine in feveral parts of Normandy, in relation to the excellence of the new-invented artillery, made of forged iron; by which it appears that one of thefe pieces, carrying a ball of 12 pounds, proved equal in every refpect to one of brafs, and another of caft iron of double the weight; and that thefe new-invented cannon may be managed by half the number of hands.
As the officers of the French marine made this report, we may prefume this new-invented cannon was chiefly intended for the royal navy; and, if the French Should ever be capable of doing the fame execution at fea, with one half the weight of metal, that we are, it does not require the gift of prophecy to judge of the confequences.

## Another account we had from Paris, July 4, 1750 .

The Sieur Dedorean, mafter of the iron works in Picardy, has found the fecret of compleating a fort of cannon, by the help of which very extraordinary execution may be done, far fuperior to any thing of the like kind. It is compofed of hammered iron plates, foldered together, which make the piece lighter than ordinary, without being fubject to burft ; or, if by accident it fhould fy, it may be immediately repaired on the foot, with the help only of the bammer, and folder.
Monfieur de la Valiere, lieutenant-general of the artillery, very much commends this invention, a proof of which is to be made in the arfenal. The inventor flatters himelf that he thall be able, with the affiftance of one man only, to forge and compleat 50 of thofe guns in a year.
Were other nations agreed to lay afide thofe inftruments of violence, fo horridly deftructive of the human fpecies, we might then, with equal fafety, lay them afide alfo; but, as felf-defence and prefervation render it neceffary to be upon a level with enemies, improvements of the like kind fhould not be neglected on our part.
As artillery comes under the articles of arms and utenfils of war, $\mathfrak{G c} c$. it is proper to obferve, that it cannot be imported without licence from his majelty; and, if otherwife, the whole is not only forfeited, but treble the value. I Jac. II. chap. 8. fec. 2.
Such licence being obtained, except for the furnithing of his majefty's public ftores, is void, and the offender ingurs a promunire, and is difabled to hold any office from the crown.
ARTOIS, a country in France, is bounded by Flanders on the north, and partly on the eaft, on which fide it borders allo on Hainault and Cambrefis; and it is bounded by Picardy on the fouth and on the weft. The chief trade of this country confifts in grains, flax, hops, wool, oil of cabbage and turnipfeed, and linnen cloths made at Bethune, Aire, St Venant, $\mathrm{La}_{\mathrm{a}}$ Gorgue, Bapaume, and in their neighbourhood, which is the only manufacture they have in Artois.
The revenue of the flates of Artois arifes from the taxes, or duty laid upon cattle, and all forts of liquors, as beer, wine, and brandy; thefe taxes amount to 400,000 livres per ann. The extraordinary funds are levied by a general impofition, or tax, taid upon all real eftates, and called the hundredth penny; which, when it is fully paid, amounts to 215,000 lives a year. The Spaniards laid this tax in the year 1569 . All real eftates, of what kind foever, as arable lands, paftures, woods, houfes, both in cities and the country, were then valued by commilfaries appointed for that purpofe, who drew up rolls of all the effates, with an exact account of their value; thefe rolls have been fince re examined, collated, and verified, with the utmoft accuracy, fo that there is not one fingle piece of land omitted.

Every proprietor is obliged to pay yearly one hundredth part of the value of his entate, as it is fet down in thofe rolls, which are the fixed and conftant rule of that kind of tax. However, when any eftate comes to be lefs valuabie, by fome accident, to which the proprietor has not in the leaft contributed, the ftates take it into confideration, and make fome allowance for it: but if the diminution of the value of any eitate bappens through the negligence, ill conduct, or bad management of the proprietor, the flates pay no regard to it. This tax is increafed according to the neceffity the fates are under to raife more money; fo that the fubjects have paid twice, three times, or even fix times, in a year, the hundiedth penty, or the hundredth part of the value of their eftates: with this difference, however, that the houfes and lands which the clergy and nobility occupy, or cultuate with their own hands, pay the hundredth penny but once a year, whereas they are obliged to pay every bundredth penny that is laid, for all the lands they farm out to others.
The city of, Arras is inhabited by wealthy traders and artificers, who make fails and tapeftry-hangings, elpecially the latter, which art was invented here.
The people of St Omars have fome trade, feveral fmall veffels coming up here from the fea, through Gravelines, by the river A .
At Bethune, is made an excellent fort of cheefe, and fold in all the neighbouring countries. It is a place of fome trade, and has two annual fairs.
As, fignifies at Amfterdam the divifion of the pound, mark weight; $3^{2}$ as's make an engel, 10 engels a loot, and 32 loots a pound.
ASBESTOS, or ASBESTUS, thus the Greeks call their incombuftible cloth, mentioned by Pliny, whom Monfieur Mahudel criticifes upon, as he does upon Pomet, in his differtation quoted in the article Amiantus. He obferves, that it is no longer neceffary to look for it in the Indies, in Japan, in China, or in Egypt, whence it was got formerly, that mineral being now fo common that it is to be met with in feveral illands of the Archipelago, and in thofe of Cyprus, Negropant, and Corfica. It is likewife found in feveral parts of Italy, efpecially on the mountains of Volterra, near Seftro, in Liguria, in Bavaria, in the illand of Anglefey in Wales, in Spain, on the Pyrenean mountains, in France in the county of Foix, and near Montauban. All thefe feveral countries afford afbeftos, wherein are obferved remarkable differences. Monfieur Mahudel teaches the manner of fpinning it ; but, as the cloth made of it would be of very little ufe, we fhall only refer the reader to that learried 'man's curious differtation.
Natüralifts and philofophers generally reckon the afbeftos among the ftones, whence its appellation of lapis afbeftos. But Dr Plot rather judges it a terra lapidofa, or a middle fubftance between fone and earth. As to its generation, the fame author takes it to be a mixture of fome falt, and a pure earth, without fulphur, coagulated in the winter, and hardened by the heats in fummer. The fult, J. Heffus fays, is a liquid allum, of a milky fubftance, inclining to yellow, that fweats out of the earth, and fmells like rotten cheefe.
The lapis abbeftos is really a fort of native foffile ftone, which may be fplit into threads, or filaments, very fine, brittle, yet formewhat tractable, filky, of a greyih filver-colour, not unlike talc of Venice. It is almof infipid to the tafte, indifoluble in water, and, when expofed to the fire, it neither confumes nor calcines. A large burning glafs, indeed, reduces it into little glafs globules, in proportion as the filaments feparate; but common fire only whitens it.
The filaments, or threáds, are of different lengths, from ono inch to Io. The ftone is ufually found inclofed within other very hard ftones, though fometimes growing to the furface of the earth, and fometimes detached and feparated from any.
Notwithftanding the common opinion, that fire has no effect on the afbeftos, yet, in'two trials made before the royal fociety, a piece of incombullible cloth made of this ftone, a foot long, and half a foot broad, weighing about in ounce and a half, was found to lofe above a dram of its weight each time.
The ableftos, applied to any part of the body, excites an itching; and yet we read that it was anciently prefcribed for difeafes of the fikin, and particularly for the itch, unlefs it were rather the alumen plumofum, or plume allum, that was meant thereby; for even at this day they are frequently confounded. The induftry of mankind has found a method of working this untoward mineral, and employing it in divers manufactures, particularly in cloth and paper. This manufacture is certainly difficult enough. Pliny calls the afbeftos, inventu rarum, textu difficillimum, not eafily found, and moft difficult to weave. Wormius afferts that the method of making cloth of afbeftos is now intirely loft. And, indeed, one would fcarce think it pofible, without a mixtwre of fome other pliant fubftance, as wool, hemp, or flax, the threads of the abeftos being, as it feems, too coarfe and brittle to make any work tolerably fine.
However this be, Bapt. Porta affures us, that, in his time, the fpinning of afbeftos was a thing commonly known at Venice. Signior Caftagnatta is faid to have carried that manufacture to
fuch a degree of perfection, that his arbeftos was foft and tractable, much refembling lamb-fkins dreffed white. He could make it thicker or thinner, as he pleafed, and thus produce either a very white fkin, or a very white paper.
Marco Paolo, the Venetian, gives us the method of manufacturing the incumbuftible cloth, or linnen, from the afbeftos found in the province of Chincbintelas in Tartary, from one Curficar, a Turk, fuperintendant of the mines in that country, as follows:
The lanuginous mineral, being firft dried in the fun, is then pounded in a brafs mortar, and the earthy part feparated from the woolly, which is afterwards well walhed from filth. Being thus cleaned, it is fpun into thread, like other wool, and afterwards wove into cloth, which, if foul or fpotted, they cleanfe, he fays, by throwing it into the fire for an hour's time, whence it comes out unhurt, and as white as fnow. This very method, according to the account given us by Strabo, feems to have been ufed in manufacturing the Cretan amiantus, or afbeftos, with this addition, that, after it was pounded, and the woolly part feparated from the earthy, the wool was combed; and Agricola fays the fame.
Signior Campani defcribes four forts of the incombuftible cloth, whereof be had fpecimens in his mufrum ; the firft fent him from Corfic, the fecond from Seftri di Ponente, the third coarfer and darker than the reff, and the fourth from the Py renean hills; and oblerves, that, though he kept it three weeks in a glass-houfe-fire, yet he found it unaltered, though he could not preferve a fitick, wrapped in it from the fire. He proceeds afterwards to explain the manner of fpinning it, and weaving it into cloth, which is thus: he firft laid the ftone in water (if warm the better) to foak for fome time; then he opened and divided it with his hands, that the earthy parts might fall out of it, which are whitif, like chalk, and ferve to bind the thready parts together; this makes the water thick and milky. This operation he repeated fix or feven times, with frefh water, opening and fqueezing it again and again, till all the heterogeneous parts were wafhed out, and then the flax-like parts were collected, and laid in a fieve to dry.
As to the fpinning, he firft fhews a method difcovered to him, which is as follows: lay the afbeftos, cleaned as above, between two cards, fuch as they ufe to card wool with, where let it be gently carded, and then clapped in between the cards, to that fome of it may hang out of the fides; then lay the cards faft on a table, or bench; take a fmall reel, made with a little hook at the end, and a part to turn it by, fo that it may be eafily turned round. This reel muft be wound over with white thread; then having a fmall veffel of oil ready, with which the fore-finger and thumb are conftantly to be kept wet, both to preferve the 1 kin from the corrofive quality of the ftone, and to render the filaments thereof more foft and pliant, by continuing to twift about the thread on the reel, in the afbettos hanging out of the cards, fome of the latter will be worked up together in it, and by little and little the thread may, with care, be woven into a coarfe fort of cloth; and, by putting it into the fire, the thread and oil will be burned away, and the incombuftible cloth remain.
But, finding this way of uniting the fone with the thread very tedious, inftead of the thread, he put fome flax on a diftaff; and, by taking three or four filaments of the afbeftos, and mixing them with the flax, he found they might be eaflly $t$ wifted together, and the thread thus made much more durable and ftrong. So that there is no need of carding, which rather breaks the filaments, than does any good; only open and reparate the filaments, after wahhing on a table, and take them up with the flax, which is fufficient.
As to the making of paper he obferves, that, in the wafhing of the fone, there will remain feveral hort pieces at the bottom of the water, of which paper may be made in the common method.
He concludes with the beft way of preferving the cloth, or any thing made of the afbeftos, which, by reafon of its exceffive drynefs, is very apt to break and twift. It confifts in keeping it always well oiled, which is the only prefervative.
When the cloth is put into the fire, the oil burns off, and the cloth comes our white and purified.
ASCII, in geography, are thofe inhabitants of the globe, which, at certain times of the year, have no fhadow. Such are the inhabitants of the torrid zone, to whom the fun is fometimes vertical.
ASEM, or AZEM, or ACHEM, or ACHAM, a kingdom in the Eaft-Indies, has independent Tartary and Boutan on the north ; Tipra on the fouth; part of China on the eaft, and of Mogul on the weft, from which it is divided, according to fome maps, by the river Arracan. This is one of the beft countries of Alia, producing all the neceffaries for life, befides mines of gold and filver, fteel, lead, iron, the beft of gumlarque, and ftore of coarfe filk, fpun by worms that live all the year on their trees; but, though it has a good luftre, it foon frets. Though it has plenty of provifions, dog'sflefh is fold in their monthly markets as the greateff dinty. They have very good grapes, of which when dried, they make aqua vita, but no wine. They make good falt of the lol. I.
green fcum at the top of their ftanding waters, after being dried and burnt, and the afthes boiled in a cloth. They make another fort from the afhes of the leaves of Adam's fig-tree, which is fo tart, that they fir it twelve days together in water, ftrain it through a cloth, and then boil it. Of the fame afhes they make a lee, which renders their filk as white as frow ; but they have not leaves enough to blanch half their filk. The king requires no fubfidies of his people; and, though he is proprietor of all the mines, employs none to work in them but flaves, fo that the reft of his fubjects live at eafe. They fuffer no gold to be exported, but make it up in ingots, which pafs in trade. Their filver is coined into pieces about 2 s . value. They export great quantities of their lacque to China and Japan, to varnifh cabinets, छ' $^{\circ}$.
ASIA, one of the four parts of the world, is divided from Europe by the Archipelago, the Black Sea, and the Palus Mocotis, and thence by a line from the river Tanais, or Don, almoft to the river Oby in Mufcovy; from Africa it is feparated by the Red Sea; and from America, by the great South Sea, or Pacific Ocean. It is bounded on the weft by the Black Sea and the Mediterranean ; on the fouth and eaft by the Arabic, Perfian, Indian, and Chinefe Ocean; and on the north by the Frozen Ocean:-but how far it reaches that way is not known. Afia is, next to America, the largeft quarter of the four. It extends itfelf quite from the equator to the polar circle, or perhaps to the pole itfelf: fo that the climates are very various, as well as the peculiar productions of each. Of thefe we fhall give a particular detail in fpeaking of the feveral parts in their proper places, and oblerve only in general, that it comprehends all the temperate, the bigger half of the torrid, and great part of the frigid zone: yet if we except fome parts of Arabia and Tartary, and fume of the more northern tracts, the whole country is rich and fruitful, and fome parts of it exceedingly fo. Its lengch from eaft to weft may be computed at 4800 miles, and its breadth, as far as it is known, from north to fouth 4300 .
In the general confideration of the trade of Afia, we fhall throw it under two grand divifions. I. That which is carried on chiefly under the dominion of the Turks, viz. in Afia Minor, and its iflands, Syria, Paleffine, Diarbeck, Turcomania, Georgia, \&c. as alfo in fome parts of Arabia and Perfia; and which, with refpect to Europe, is called the Turkey trade. 2. That which is included under the general term of the Eaft-India, viz. the trade of the coafts of Arabia and Perfia, the kingdoms of Mogul, China, Japan, the Indian iflands, \&c.
The foil of that part of Afia which is under the dominion of the Turks, is naturally the moff fertile, though the tyranny of its prefent poffeffors has rendered it almoft a wildernefs. The greater part of the fields are every-where over-run with weeds and brambles, whilht the few that are cultivated, though in a moft fhameful and flovenly manner, do yet yield excellent corn and fruits, grapes, olves, citrons, lemons, oranges, figs, dates, befides coffee, rhubarb, balfam, opium, galls, and other valuable drugs and gums; and are a fufficient proof of the richnefs of thofe countries, if they were in the hands of fuch as would improve, rather than injure and deftroy them.
The Turks have no lefs averfion to the arts of commerce, than to thofe of agriculture, being the greateft difcouragers of trade, by their indolence and haughtinefs, defpifing manufactures, and utterly neglecting the conveniencies which their happy fituation might afford them: fo that the whole trade of this part of the world is carried on by merchants from other nations, who are continually pouring in to fettle among them. From the eaftern parts are generally Greeks, Jews, Armenians, and Georgians; from the weftern are chiefly Venetians, Englifh, French, and Dutch, with Jews alfo, moftly Italian.
The principal articles of commerce, in this part of Afia, are, raw filk, cotton, wool, and yarn, grogram, goats hair, carpets, tapeftries, calicuts, cordavans, and feveral other rich manufactures of filk, \&c. befides a valt variety of drugs, gums, dye fuffs, earths, fruits, \&c.
All thefe are tranfported to Europe, and confitute a great part of what is called the Levant trade; which, as oblerved above, is carried on by.foreign merchants fettled at the ports on the coafts of Syria and Afia Minor. Hence they have an inland communication by means of caravans over the whole Afiatic Turkey, into Arabia, Perfia, and even into the Indies; whence they convey many of the rich commodities of thofe countries to England, Holland, France, and Italy-
The merchants who carry on this inland traffic, are chielly Armenians, a very fiilful and honeft people, and by whom the producls of all thefe parts are fpread likewife, over the Black Sea and the Calpian, into the European Turkey and Mufcovy. So that this part of Afia is the center of a prodigious commerce, though greatly declined, fince the European fhips have difcovered the way to the Indies by the Cape of Good Hope : for, before that time, all the commodities of the Good Hope : for, before to Europe through rhis channel.
The trade of the other grand divifion of Afia may be comprehended under the general term of the Eaft-Indies, in which are included all the countries and dominions, from the gulph
of Mocha quite to China, and all the iflands from Maddgalcar to the Philippines: this general term is more reconcileable to us, at leaft in England, as the charter of the Eaft India company takes in the whole under the fame denomination; and the trade from Europe to all or any of thofe countries, as well as from thofe countries to Europe, is called the Eaft-India trade.
In giving a circumftantial account of the trade of the Indics, when we confine ourfelves to the peculiar products and growth of the feveral countries, as well in regard to their particular branches of home trade with one another, as to their exportations to other parts of the world; thofe feveral countries will be fooken of feparately. At prefent, we fhalt ouly give a general and promifcuous view of the productions of this part of Afta, and juft point out the great channels of its commerce.
Nature has been furprifingly bountiful, in ftoring this quarter of the world, not only with all thofe ineftimable commodities which fhe has imparted in common to othere, but has added abundance befides, which have been either fparingly communicated, or utterly denied to the reft of the world.
Among the vaft variety of choice productions, are diamonds, pearl, coral, gold, filver, copper, iron; fulphur, red earth, falt-petre, allum, quick-filver, potter's earth (of which is made the porcelain) raw filk, cotton, tea, fago, coffee, nutmegs, mace, cloves, cinnamon, pepper, indigo, china-root, aquila-wood, rhubarb, mulk, vermilion, fticklack, borax, lapis łazuli, dragon's-blood, cubebs, frankincenfe, faffron, myrrh, manna, ambergreafe, and many other of the valuable drugs and gums. And, as the inhabitants of this part of the world are furnifhed with the richeft materials for manufactures, fo have they infinitely furpaffed all others in the excellency of their pefformances, which their inimitable wrought filks, rich callicoes, mullins, and other ftuffs, their admirable works in gold and filver, china, and lacquered ware, do fufficiently teftify.
Thefe feveral commodities, produced in the valious parts of the Indies, afford an infinite fund, both for their home and their foreign commerse.
The coafting trade carried on partly by the nations of India one among another, and partly by the Europeans, Englifh, Dutch, French, Portugueze, and Spaniards, with them feparately and apart, is in itfelf very great, and confifts of the feveral branches following.
The Turks carry on trade from Aden into the gulph to Mocha, and all along the Red Sea to Suez, from whence their coffee and other goods are carried to Egypt, to Alexandria, and thence by fea, or land, or both, to Conftantinople, Aleppo, Smyrna, and other places.
The trade of the Arabians and Perfians up the gulph of Ormus, now called the gulph of Perfia, to Baffora, by which they fupply the great caravans with Perfian and Indian goods of all forts, to be carried by the Euphrates and Tigris to Bagdat, and thence to Trepizond on the Black Sea, one way, and over the defarts upon camels to Aleppo, another way. The coafting trade of the European merchants and Indians promifcuoully, upon the welt fide of the coaft of India, viz. that of Guzuratte, India, and Malabar, and the like coafting trade of the fame European nations, upon the other fide of India, viz. the coaft of Coromandel, Golconda; and Bengal. The trade into, and a great way up, the river Ganges, in which there are feveral factories and fettlements of the Furopean nations, befides the trade of the natives, who bring goods down the ftream of that mighty river from very rempte countries.
The next trade, on this fide of India, is that of Achin, on the north point of the illand of Sumatra, and from thence two ways fouth. (I.) Along the weft fhore of that great inland to Bencouli, and to the flraits of Sunda, which is the fouth point of the fame ifland ; and thence on the weft hore of the ifland of Java, whither the European Chips generally go for provifion, efpecially black cattle, and where there is a very great plenty; and from thence ftill fouth to the fraits of Bailly, and the iflands of Timor and the Moluccas. (2:) In the infide, or eaft fhore of the ifland of Sumatra, and the coaft of Malacca, and to the port and city of Malacca, now in the hands of the Dutch, and from thence, through the ftraits of Sincapore, to the north fide of the illand of Borneo.
Here the courfe of trade divides itfelf two ways, and in direet contrary channels, in both very confiderable; and a third way alfo, though not of fo great extent as the two other.
The firft is north, to the eaftern coaft of Afia, the utmoft extent of the known world on that fide, viz. to the great gulph of Siam : the coaft of Camboyda: to Cochin China and Tonqueen: and laftly, to the empire of China, and even to Japan. Upon all thefe long extended fhores, there is a very great coafling trade carried on by the Chinefe and Malayans.
The fecond courfe of trade is fouth from Borneo to the Dutch fettement of Batavia, on the ifland of Java, as alfo to the whole coaft or that great ifland; where the Javans, and other nations, drive a confiderable trade from port to port, and from ifland to inand, particularly to the iffand of Borneo. This trade takes yet another courfe from Borneo; and that is
farther eaft, namely, to the innumerable inlaids of thofe rear, called the Indian Archipelague; and this reaches not only to Ternate, Tydore, Celebes, Gillolo, and all the iflands wheie the Dutch are not too powerful, and will admit them, but even to the Philippines.
Thefe are in general the coafts and countries which the $\mathrm{E}_{\mathrm{u}}-$ ropeans are more particularly acquainted with, the knowlege of which is chicfly owing to their commerce among the pebple of the feveral nations inhabiting thofe countries. But there are yct other inland branches of commerce among thern, and thofe very confiderable, which we camot come at a particular defcription of. We are affured, that the Chinefe in particular have an immenfe inland traffic, by its many canals and navigable rivers, and efpecially by that inimitable canal near 1000 miles in length, which traverfes the whole Chinefe empirc from Canton to Peking.
Having thus given a fummary account of their home trade, as it is carried on coalt-wife, we are to confider the trade between the Eaft-Indics and the reft of the world, taken in its largeft extent.
The trade of the Red Sea to Suez, and from the coaft of India and Malabar, into the gulph of Perfia and up to Baffora, has been already mentioned. It is neceflary to obferve, that the former was anciently the only way of commeree, whereby the fpices and rich goods of India were conveyed to Alexandia, and thence into the feveral parts of Europe; but it has been entirely cut off, fince the Portugueze made the paffage by long fea. By the latter, a large quantity of the fine callicoes, rich wrought filks, fpices, druge, diamonds, and particularly pearl, are fill conveyed to Aleppo, and thence to England, France, Holland, \&c. as well as to Trepizond on the Black Sea, and to to Comfantinople.
Anather branch of the northern commerce from India, is by land from the upper part of the Mogul empire to Armenia and Georgia, and thence over the Cafpian Sea. This courfe of trade is very improveable; and the late Czar of Mufcovy intended to eftablifh a communication this way, between his own dominions and thofe of the Great Mogul. And, at prefent, the goods of the provinces of Upper India are to be found in many of the provinces that border upon the Cafpian. There is allo a third intercourfe of trade by land between India and Europe, viz. the paflage by land from China to Mufcovy. This has not only been performed, but is fill practifed, and the tea, wrought filks, and other goods that are not too bulky, are carried yearly this way from China to Europe, in pretty great quantities.
But the grand channel of commerce between Europe and the Indies, is by fea from England, Holland, France, and Denmark, round the Cape of Good Hope, and fo to all the feveral parts of India and China. This is managed by exclufive companies, and free mercbants tolerated by thofe companies, to carry on the coafting trade, no nation admitting private adventurers to be otherwife concerned therein. The feveral fettlements thefe have in the Indies, together with their powers and privileges, will come under the beads of the refpegive companies, viz. the Englifh-Eaft-India company, the Dutch, the French, $\& \mathrm{c}$.
Afra is certainly extremely rich and fertile in its natural productions, but it is rendered fill infinitely richer by the prodigious numbers, and inimitable diligence and application of its inhabitants, who are fo happily circumftanced as to ftand in need of nothing from the other parts of the world; and their induftry and unwearied labour is fo great, that they are able to fill the whole worid with their manufagures and produce. By this means, the flate of trade between Europe and Alim ftands thus, viz.
Europe calls for a valt variety of goods from Afia.
Afia calls for more money than any thing elfe from Europe. Yet there feems to be a kind of peculiarity in this trade, to the infinite advantage of the Indian and Chinefe commerce, and the great difadvantage of moft, if not all, the nations in Europe. For the trade of Afia drains the whole weftern world of their ready money, in return for their mere products and manufactures.
Whether this is fuch difadvantage to Europe, as fome are inclined to think, will be confidered under the article of the East-India Trade. Seé America.
In the interim, we would only obferve, that fome great politicians have looked upon gold and filver in no other light than as commodities; and ought to be as freely exported and imported, except in our own coin, as any other whatfoever. And, if Europe at prefent contained all the gold and filver that Africa and America have ever produced, it is to be queftioned, whether fhe might be faid to be e'er the richer, by reafon that gold and filver would then be, as was faid of Solomon's time; as plenty as the fones in the flreets, and therefore of little or no value. So that a commerce which takes off from the Europeans fome proportion of its filver, may be as neceflary as any other, to keep up its value equally with that of gold, the latter always finding its value, according to the quantity of the former.
For a particular and diftinct view of the trade of Afia, in all its capital branches, we fhall reprefent it, under thofe particular and diftinct heads, which will be enumerated in our in-

## A S I

A S I
dex of reference for that purpofe, under the ENGLISH, French, and Dutch East-fndia Companies, \&ic. \&c. ASIA MINOR ISLANDS: 'Thefe illands, in the flourifhing times of Greece and Rome, were very confiderable for their fertility, opulence, and the number of inhabitants, trade, product, and many other advantages, moft of which they have in a great meafure loft, fince they have unhappily fallen into the hands of the Turks. The moft confiderable on the wefternicoafts'are, i. Tenedos. 2. Leibos. 3. Chios. 4, Sammos: 5. Nicatia. 6. Patmos. 7. Clatos. 8. Leria. 9. Coos. 10. Aftypata. II. Carpathus; befides a geeat number of fmall ones. On the fouth coaft, 1. Rhodes. 2. Cyprus, and fome fmall ones about them.

1. Tenedos, is famed for the moft excellent Mufcadine wines it ' produces.
2. Lesbos, fince called Mytilene, from its capital town, and now Metelin, and Metelino, is in many parts of it fruitful, producing plenty of corn, wine, fruit, \&c. The fea likewife affords plenty of fih, efpecially large quantities of oyfters, which are conveyed bence to Smyrna. The fruits here, efpecially the figs, are the beft in the Archipelago, and the wines very rich; the mountains are covered with trees, efpecially pines; and many of them have quarries of jafper, and feveral forts of marble.
The chief trade of the ifland confifts in grain, wine, fruits, butter, cheefe, bjack-pitcl, which is gathered from the pines above-named, whillt the boards that are fawed from them, are made ufe of to build fmall veffels. The tribute that is paid to the Grand Seignior, is computed at above 18,000 piafters.
Mytilene, the capital, now Caftro, hath a very good port; as likewife l'etra. Other harbours for thips are Caloni, Siguri, Jero; befides feveral other ports and creeks, which are motlly haunted by pirates. The city of Mytilene made formerly a much more confiderable figure, with refpect to its tuade and opulence; but it hath been reduced fo low, fince it hath been under the Turkifh yoke, that its inhabitants are moftly poor. However, here is a good magazine for ftores for the gallies, which are continually employed in cruifing againft the pirates that infeft thofe feas.
3. Chios, Chius, now Scio, and by the Turks Sakisacudi, is moftly mountainols, ftony, and in great want of water, having but few fprings and little rain, which is no finall check to its fertility; however, the ground is naturally fo rich and good, that it produces plenty of corn, fine wine, oil, honey, fruits of all Corts, variety of gums, efpecially that of maftich, out of the lentifk-tree in great abundance, and yields a valt profit to the inhabitantc. The people are generally very rich and numerous, and carry on the filken and fome other manufactures; and the Greeks, who fwarm here, have much larger privileges than in any of the Grand Seignior's dominions. The ifland is fo very conveniently fituated for commerce, that its fea-port, though none of the beft, is the rendezvous of all the fhips that fail either to Conftantinople, or go from thence to Syria, Egypt, \&cc.
Here is generally kept a fquadron of Turkifh gallies, to fcour the coafts from pirates; notwithftanding which, and the valt refort of other flips, the mole is fuffered to run to decay. The time for gathering the gum maftich is in Auguft, and September. 'The chief cuftom houfe officer is 'received' at that feafon, at Scio, the capital, with mufic and feaftiog, and receives all that is gathered for the ufe of the Grand Seignior, part of which he fends to Conftantinople, and the reft he fells to the merchants; they call it fackes, and fome chew it, and others mix it with their bread; but it is very dangerous for any Chriftidns here to keep it by them. This inand is faid to pay to the Grand Seignior double what any other in the Archipelago doth. All the Turks in this ifland are computed to amount to about 10,000 , the Latins to 2000 , but the Greẹk are thought to come up to near 100,000. Befides Scio, the capital places, are
Callimachia, their principal maftich town, which is large and populous.
Cardamita, famed for the richnefs of its territory, which produces ${ }_{1} 70$ tons of good wine, one year with another.
Cambia, noted for its pines, with which the Turks build their gallies.
The neighbourhood of Volifto produces 5000 weight of filk every year, with which the people pay their tribute.
Armolia, one of the maftich villages.
Mefta, celebrated for its Arvifian fields, which produce the vine that yields nectar.
4. Samos, is fo naturally rich and fertile, that nothing can be planted in it but will grow, and yield a plentiful crop. It was, during the time that Greece was in its glory, fo well peopled and cultivated, that it vied with all its neighbouring iflands in every thing but bignefs. Vines, in particular, feem generally more natural to its foil, than to the reft; and it is famed efpecially for its excellent mufcadine, which is no way inferior to that of Tenedos. This, together with a fine fort of onions and garlic, and alfo an ordinary kind of earthen ware (which however ufed formerly to be finer and more famed) great quantities of raw filk of a good price, oil, fruits, honey,
faffron, fome minerals, drugs, a fine red bole, emery, oker, and a black infipid earth, of great ufe for dyeing black, are the chief products of the illand, and what they commonly vent aproad to Scio, Smyrna, 8 cc . But the inhabitants are fo much oppreffed by the Turks, and fooften infefted by pirates, that they are very thin and poor, and the greater part of that fine land lies uncultivated, The chief misfortune both of tee iflund, and its capital Samo, is, that they have two ftaightr, one on the weft, the other on the eaft, perpetually hat ned by corfairs, which, by cruifing on the fhips that pals on eithe. way between Contantinople atd Syria, Egypi, \&c, have quite obftructed its antient commerce, whilft th. Turks iuffer thoie free-booters to rove about, without ruking fuch propur means to fupprefs them, as the Venetans did.
Vati, once a confiderable and facious fea-port, is dwindled into a poor town, though it bas flill the moft commodious harbour in the ifland, and is the refidence of the French viceconful.
5. Icaria, now Nicaria, for want of harbours for firpping, is altogether incapable of commerce. Here are the fineft winter grapes that can be found in the Levant. The inhabitants live by felling of planks of pine and oak, for building and fuel. They are fo poor, that neither pirates think them worth plundering, nor can the Turks make them pay any confiderable tribute.
6. Patmos, now Patmosa, or Patino, hath many and convenient ports, from which it has formerly drawn great advantages, by the whole Venetian fleets lying there to winter. But it has fared much worfe, fince it has fallen under the Turkilh yoke, and is now as low and poor as any of the reft. The port of de la Scala is reckoned the beft in the Archipelago. But that, with the reft, has been to infelted with corfairs, that the inhabitants have been forced to retire from it tu the monaftery of St John, two miles up a hill, which is a kind of a citadel. There are neither Turks nor Latins in this ifland, but the adminiftration of civil affairs is entrufted to one or two Greek officers; whofe chief bufinefs is to fee after the capitation, which amounts to 8000 crowns, and the land-tax at 2000 more per ann.
7. Claros, has nothing worth notice.
8. Leria, is well inhabited both by Turks and Greeks, and furnifhes the neighbouring country with alocs.
9. Coos, or Cos, by the Italians Lango, or Isola Longa, and by the Turks and Greeks Stanchio, hath' a pleafant and fruifful foil, and rifes on the eaft part wich grateful mountains, which yield a noble profpect, as well as good pafure, rich wines, fruit, and other trees, particularly the turpentine and cyprefs, befides a great variety of medicinal, as well as other ufeful plants. From thsfe mountains flow likewife a number of rivers and fprings, which water the flat grounds, and make them fertile in corn, wine, olives, and every neceffary of life. The Turks are here very careful of their cyprefs-trees, and will not fuffer them to be cut down.
Cos, or Stanchio, the chief town of this illand, hath a good convenient haven, fecured by a mole, and well guarded ag inft pirates by gallies, as well as by a good flout catle, which commands both it and the port, and all kept in good repair by the Turks. The thips that go to and from Conflantinople, to Syria, Egypt, \&c. do generally touch here.
io. Astypata, now Stampalia, not worth notice.
if. Carpathus, now Scarpanto, yields nothing conliderable but marble. It is poorly inhabited, being mountainous and barren, and the ifland is fo infefted with pirates, that few care to live in it. Scarpanto has a pretty good harbour; and the town was formerly well fortified, when under the knights of Rhodes and the Venetians, who both ufed it as a curb on the trade between Conftantinople and Egypt, which made the Turks eager to get it into their hands.
On the Youth coafts of Afia Minor, are, 1. Rhodes, 2. Cyprus.
I. Rhodes, formerly an ifland of great fame, made an early figure at fea in the times of the Romans, and their power and government was fo great, that they commanded the neighbouring feas, and their laws ufed to decide maritime caufes and differences, till fucceeded by thofe of Oleron: it is now well inhabited, and makes as confiderable a figure as the Turkifh tyranny permits any place to do, that is fílen under its yoke. It was no lefs famed for the richnefs and fertility of its foil, producing the beft wines, and all forts of delicious fruits. The city of Rhodes, though much decayed from its ancient luffre, yet continues fill to be a very handfome city, and a convenient fea-port. It hath two harb:urs, the fmaller whereof is for the gallies, of which there is always a fquadron kept bere, to cruize on the fhips of Malta. Moft of the inhabitants in this ifland are Greeks, but miferably oppreffed and poor. The Jews who live here, came originally from Spain, and fare fomewhat better, being al lowed to dwell in the city, and even in the caftle, whilft the Chriftians are only permited to live in the fuburbs.
The country in general, efpecially that about the city of Rhodes, abounds with wheat, honey, wax, olives, citrons, figs, oranges, \&c. and the mountains with iron, copper, and
other minerals. The chief manufaciures are foap, camblets, and tapeftry, for which the town is a common mart, as well as for all other merchandizes of the Archipelago; fuch as conn, wine, fruits, raifins, wax, cordevants, cotton, with yarn and fuffs of it, damafk and other filk ftuffs, vermilion, \&c. See Oleron and Rhodian Laws.
The illand is soverned by a balha, who hath the revenue of it for his maintenance, and that of the gallies.
10. Cyprus, was formerly a rich, fruitful, and tourihhing illand. Its foil produced plenty and variety of corn and other grain, excellent wines, oil, fugar, honey, faffron, cotton, wool, feveral metals and minerals, and abundance of other ufeful commodities; though its climate is none of the moft temperate, being exceffive hot and fultry in fummer, infomuch that it fometimes dries up all the fprings. The country likewife is much infefted with locufts, which hover in the air like clouds during the hot feafon, and fometimes devour all their corn and fruit; but are often driven into the fea by the northerly winds.
On thefe accounts, as well as the feverity of the Turkifh government, the country is thinly peopled, and poorly cultivated in molt parts; though, where it is near the cities, it not only produces every thing neceflary and delightul, but feems to enjoy a perpetual fpring. The chiefeft manufactures are thofe of cotton and wool, which are here the beft in all the eaft; they have likewife fome filk, but nothing fo good in proportion. They had formerly great quantities of fugar, till one of their batha's cauled all the canes to be burnt up. The common people make a good livelihood in catching great quantities of a kind of bird, of the fize of our larks, which they pickle with vinegar and falt, efpecially in the months of September and October; and thefe they fend to Venice, where they fetch a good price. They fend fome thoufand barrels of them in a year thither, and are paid ready money for them. Famagufta, a fair city and fea-port here, was very rich and fourifing before the Turks took it, and a great check to their power both by fea and land.
Nicofra, now the metropolis of the ifland, when in the hands of the Venetians, was compared to Florence for beauty and opulence, and is ftill a handfome town, though much reduced.
Larneza, Larneça, is a commodious fea-port, and the concourfe to it is great from other parts of the ifland; infomuch that the French and Venetians have a conful refiding in it. The inhabitants are three parts Chriftians, Europeans, and Grecks, and the reft Turks; and it hath a good many Englifh, Dutch, and other merchants, that refide in a neighbouring village. The chief commodities laden here are cotion and cotton-yarn, and courfe wool for quilts and mattraffes. Ceremes, is the place where people take hip to fail to the continent, but a fmall balf ruinated city.
ASLANJ, which is alfo, but fomewhat improperly, called ASSELANI, is the Dutch dollar or piafter, which is very current in all the ports of the Levant. The Turks, who call a lion allani, have given, that name to this coin, becaufe there is the figure of a lion ftruck on both fides of it.
There are two forts of allani, that of Holland, and that which is ftruck at Infpruck, in the county of Tyrol. The Dutch dollar is not only of a lefler degree of finenefs than that of Infpruck, but, if we may believe Sir John Chandin, fo famous by his travels, and by the agreeable and accurate account he has given of them, the money or coin, which the Dutch carry to the Levant, is very much mixed with falfe pieces; the quarter piafters, chiefly, are either entirely counterfeit, or have at moft but one half of fine filver. The Arabs, who miftake the tion for a dog, call them abukefbi. The allani is worth from 115 to 120 afpers, and fometimes but 80 afpers, or 24 sjains. The leewendaelder, or lion piater of Holland, is fometimes equal to the current piafter, and is fometime worth $33^{\frac{\pi}{2}}$ per cent more, as it was towards the end of December 1729 , when the agio of the piafters of 8 reals was 65 per cent.
ASPE'E, a meafure of corn in Lyonnois and Màconois. It is alfo faid about Lyons of a certain quantity of wine, which is an afs's load.
ASPER, a fmall filver coin, fruck in the dominions of the Grand Seignior, throughout which it is current. It is worth fomething more than 6 deniers Tournois of France. When it is good, they give 120 of them for a French crown of 60 fols (worth about 32 d . Englifh) but as there are a great many falfe afpers, which' the balha's and the Jews caufe to be Aruck in the remote provinces, they are feldom received but at the rate of 4 deniers per afper, fo that 160 make a French crown. The parats, or meidins, are worth 3 afpers.

An evaluation of the feveral coins that are current in the Grand Seignior's dominions, according to the arper, reckoning the alper at the rate of 6 deniers French.

120 afpers are worth 60 fols of France.
A fequin of Venice and Turkey, 414 afpers, or liv. Io. 10 s. French.
The piafters of Peru and Mexico, of 506 grains French weight, go for 208 to 210 a/pers.

A ryal, or rix-dollar of the empire, 82 afpers. In proportion to the fequin, this ought to be about I 30 afpers.
The Dutch rix-dollar, 70 afpers, ditto 200 afpers.
Asper is allo a money of account, and the books are kept at Conltantinople, and in all the ports of the Levant, in pialters or Abouquelb, medins, and afpers.
ASPHALTUM, or BITUMEN of JUDEA, otherwife Jew's Pitch. This bitumen, or pitch, is taken from the Arphalite lake, or Dead Sea, in Judea.
That lake, fo famous in the Holy Scriptures, and which is ftill a dreadful monument of the juft punifiment of Sodom, Gomorrah, and the other cities that were deftroyed by fire from heaven, does nourifh no kind of fifh, and, even by the ftench of its exhalations, kills the birds that fly over it. But, on the furface of its waters, fwims a kind of blackifh greafe, which the Arabs gather, and ufe to pitch their hhips with, inftead of tar and pitch, which are ufed in Europe.
This greafe is the true afphaltum, which the Jews employed formerly to embalm their dead bodies, and is ftill pretty much ufed in France, and in other countries, either in medicine, where it enters into the compofition of Venice treacle, or to make that fine black varnifh which fo well imitates that of China.
The afphaltum is of a thining black, heavy, and of a very frong fmell, fo much like the black tar of Sweden, that nothing but the bad fmell, and the hardnefs of the afohaltum, can make any difference between them.
It is fometimes adulterated by a mixture of pitch, and this is called artificial piffarphaltum; and it is alfo by the fetid fmell, and the nafty black colour of this drug, that the cheat is difcovered.
Afphaltum pays duty of importation in France at the rate of 5 livres per 100 weight.
Asphaltum, is alfo a kind of ftone, or mineral water, found in the valley of Lydim in Afia, near ancient Babylon; a mine of which was found, fince the beginning of the eighteenth century, in the county of Neufchatel in Switzerland.
This mineral afphaltum has feveral properties.

1. Being prepared with other matters, it makes an excellent cement, which neither the air can corrupt, nor water penetrate.
2. With the oil of it, which is eafy to extract, is made a fort of pitch, proper to caulk hips and veffels with, both for the fea and rivers, and which preferves them better from worms, and more effectually refifts the impreffions of falt or frefh water than any other caulking commonly ufed. And with this. it feems of late, the French caulk much of their hhipping, to their great advantage,
3. Finally, its oil ufed alone, or mixed with fome topical remedies, has feveral particular properties, which make it to be ufed with fuccefs in feveral medicinal and chirurgical cafes, for the cure of feveral external diftempers, efpecially ulcers, and all cutaneous difeafes
The afphaltum of Switzerland differs from that of Judea, in that it is of a dark colour, like roafted coffee, more mixed with earth, and lefs fhining. By its fmell and weight it refembles very much the piffafphaltum of the ancients, which is a foffile pitch. See Bibliothique Italique, tom. i, p. 120. It is very probable that the bitumen, with which Herodotus, and all the ancients after him, thought they had made the cement of the ftones of the celebrated walls of ancient Babylon, which were reckoned among the feven wonders of the world, was nothing but the afphaltum of Lydim, which was fimply called bitumen, on account of the bituminous and oleaginous quality of the cement which they made with it. This Afiatic, or Babylonian afphaltum, is pretty fcarce in Europe, efpecially in France, where that which is imported pays the fame duty as the afphaltum of Syria, otherwife bitumen of Judea, mentioned in the foregoing article.
With regard to the afphaltum lately difcovered in Switzerland, if it really has all the properties expreffed in the petition prefented to the king's council in France, by the Sieur de la Sablonniere, for obtaining a privilege to carry on an exclufive trade of that commodity throughout the whole kingdom, which properties have been mentioned above, it is very probable that they will no longer have any occafion in France for foreign afphattum, to which that of Switzerland may be fubftituted, and even with confiderable advantages. In the decree of the council of ftate, iffued February 2 1, 1720, upon that requeft of the Sieur de la Sablonniere, it is obferved, that, ' his majefty taking into confideration the advantages - that may accrue from that afphaltic mine, feveral experi-- ments of which were made before him, gave permiffion to ' the faid petitioner to import into the kingdon, during the ' term of io years, beginning the ift of May following, up-- on certificates figned by him, fuch quantities as he fhall think - proper of the mine of the afphalitic ftone, burnt or unburnt, - prepared or unprepared, as alfo the oil extracted from that - ftone, without paying any duties at the cuftom houfe of-- fices on the borders, or within the kingdom. His majefty - likewife gives him leave to caufe the faid ftones, ceinent, - pitch and oil of afphaltum, to be fold by fuch perfons as t he fhall think fit, who fhall not be molefted by any mer' chants, or other perions, on account of fuch a fale.'

The place in the county of Neufchatel, from whence this bitumen is taken, is called Val-Travers, and is 4 leqgues diftant from the city of Neufchatel. It is a mountain, which is full of that mineral. Monfieur de la Sablonniere, who has ftill the exclufive privilege to import it into France without paying any duty, gets large quantities of it every year from the mine.
They make a great ufe of afphaltum throughout the whole fovereignty of Neufchatel and Valengiá, They make particulariy a perfume of it, by throwing fome of this mineral upon live coals. This perfume is excellent for the cure of rheumatic pains, and for purifying ftalls of ftables, ftom bad air, occalioned ${ }^{-b y}$ the diftempers of cattle. Several trials have beeh made of this, which faved the lives of many cattle during the contagious diftemper that had Begun to rage in that country.
In order to reduce the fone afphaltum into powder, it muft be calcined. The ftone, being broke into fmall bits, muft be put into a pan of iron, or fome other metal, and, being placed over the fire, it muft be flirred with a fpatula, till the whole be reduced into a kind of earth, which it will be eafy to grind in a mortar, when fill hot.
They make an ointment of it, which is excellent for thie cure of all the difeafes of the fkin, chilblains, \&c. as alfo for all forts of wounds, bürnings, fcaldings, ftrains, bruifes, impoit-, humes, and rheumatic pains. This afphaltum, and all that is extracted from it, is fold by Mr James Faverger, a free citizen, at Neufchatel, who gives with it printed directions, in which is explained how it is to be ufed, the method of making a cement of it, \&c.

## Remík kis.

Thefe encouragements, given in France to whatever has the afpect of promoting any kind of commerce, will naturally account for the extraordinary rife and profperity of the trade of that great and flourifiing kingdom. And throughout this work it will appear, from facts inconteftable, that the meafures which they have taken, and fill continue to take; upon the plan of that able ftateffinan Colbert, muft inevitably advance the trade and navigation of that nation to the height they aim at.
Their policy, in regard to the prombtion of trade, when it comes to be fully difplayed, will be found worthy the imitation of all other ftates, which are well circumftanced for general traffic.
It is certainly a great truth that no perfori, foreignef of native, who has any abilities truily ufeful for the advancement of their trade, goes unencourzged, or unrewarded for his ingenuity and induftry: this naturally draws number's from other nations in Europe, who are able to do that kingdom great and important fervices; and this will appear to have been one great and principal fource of their power and grandèur.
I know not from what caufe it happens, but true certainly it is, that general complaints are made in this nation that there is not due encouragement given to men of abilities to ferve their country, by the advancing of arts and commerce. On this account, it is to be feared, that numbers of our mot ingenious artifts and manufachurers, and thofe who are tappily turned for new important inventions and difcoveries for the intereft of trade, daily withdraw from this nation into France, and elfewhere, where they are carefled and encouraged fuitably to their merit.
If this is really matter of fact, it is certainly very bad policy in Great-Britain. People, indeed, who meet with dilappointments, are apt to complain, however juftly they miay deferve them: Rumor, res, fine tefte, fine judice, maligna, fallax. There are, doubtlefs, many idle, roguifh, and enthufiaftical projectors, who have no other foundation for their pretenfions than whim and knavery: But, although ignorance and roguery do too often hew themfelves under the mafk of wifdom and integrity, yet, where the latter are real, the former having happened fhould by no means prevent due regard and encouragement from being given to true merit. When this proves the cafe, the really honeft and modeft inventor of new arts and difcoveries for the benefit of trade is difcouraged, and he either declines his purfuits, or withdraws with them to other countries.
The conftant fupport of trade depends on a conftant fucceffion of new arts, on the improvement of the old manufactures, and the difcovery of new (as I have fully obferved under the article of artificers); as well as of whatever elfe has a tendency to leffen the price of labour. Yet fo weak or wicked are many, that whoever attempts any thing of this kind, is immediately branded with the name of a projector; and, inftead of encouraging him, he is by calumny and maltreatment forced our of the nation; his native country lofes the benefit of his induftry and ingenuity, and rival lates enjoy the advantage of them.
It was a faying of the great fatefman Colbert, that his friends could difpleafe him in nothing more than by concealing from him one perfon of true merit, who was able to promote the trade of his country; by reaton, in that cafe, he Voc, I.
was deprived of the opportunity of rewarding him fuitably to his deferts.
6 There is a jult occafion of lamenting, fays the leamed " bifhop Spratt, the ill treatment which has been moft com' monly given to inventors. Nor do they only meet with - rough ufage from thofe that envy their honour ; bur even - from the artificers themfelves, for whofe fakes they labour: - while thofe that add fome fmall matters to thines begun, - are ufually inriched thereby; the difcoveters themfelves have - feldom found any other entertainment thán contempt and - impoverifhment. The effects of their induftry are wont - to be decried, while they live : the fruits of their fludies are - frequently alienated from their children; the little trader: trien confpire againft them, and endeavour to fop the fprings t from whence they themfelves receive nourifhment. The - common titles with which they are wont to be defamed are - thofe of cheats and projectors.

- I cannot dehy but many fuch do mingle themfelves in the ' noble throng of great inquirers: as of old there were fome ' thiat imitated philofophers only in beard and aufterity: fo I * grant at this time there may falfe experimenters and inven-- tors arife, who will ftrive to make themfelves amends by - theit loud babbling and boafting, \&c.-But, though the - folly of fuch pretenders cantot be avoided, we muft not - therefore reject the fober and judicious obfervers. It is bet* ter fometimes to endure vanities, than, out of too müch ${ }^{6}$ nicenefs; to lofe any teal invention. We ought to do with ' philofophical works as minifters of ftate with intelligence. - It is the wifeft courfe to give encouragement to all, left, by - fhewing burfelves too fcrupulous of being impoled on by - falfhoods, we chance to be deprived of the knowledge of - fome important truths.'

It cannot be fuppofed that men in power fhould facrifice their time in liftening to every idle fcheme and invention that they may hear of, or that may be thrown in their way; but, when any thing comes to their knowledge which is nationally ufeful, it is then their duty to order proper inquiry to be made into its meirits, that nothing eftimable might be tranfported to other countries, for want of due regard to our own.
I have often thought, therefore, that it would be to the eternal glory of any minifter of ftate in this kingdom, who fhould be inftrumental in making fuitable parliamentary provifion for 'all new' ufeful inventions and difcoveries, to be daly inquired into by thofe who are judges of them.
And, with all humble fubmiffion, I think no body of gentlemen fo proper to be appointed for that purpore as that moft learned and illuffrious corporation the Royal Society of London: for, as they are, or ought to be, conftituted of a number of the moft learned experimental philofophers in the nation, proper committees might be always chofen from among them, to examine into the merits of whatever fhould be referred to them by the Lords Commiffioners of Trade, or by any other authority appointed fot that purpofe.
But this examination fhould be effectual, by giving whatever is offered, that has a reafonable foundation for it, a fair and an équitable trial. Aht, as this would be attended with a conftant expence, that honourable fociety fhould be allowed a parliamentary fund, to enable them to carry into execution a defign fo much for'the intereft of the commerce and navigation of thefe kingdoms:
'Although this might be attended, for the firft few years; with an expence to the public, yet the public might foon be exonerated therefrom, by a very natiral expedient, which is no more than this:-That, fince thefe new inventions and difcoveries would be faitly and effectually tried by the fociety, at the public expence, if they proved fucceffful, the propofer, or the inventor, fhould be obliged to reimburfe the fociety double the fum which they may have expended upon fuch trial: Againf this no one, it is apprehended, could reafonably objeet ; for as, if the defign proved abortive, the fociety would be at the expence; fo, if. it fucceeded, the proporer ought to be at it; and the reafon why fuch propofer obould contribute double the fum expended, is gradually to raife a fund for the makirgig of fuch trials as hould miftarry; which would free the public from the expence, and fix it upon thofe who were the private gainers' by the inflitution.
Moreover, it is little to be doubted but fuch a defign would meet with large donations fromi other quarters: As its foundation was the improvement of ufeful arts and inventions, for the emolument of trade and navigation, the opulent merchants and tradefmen would not be wanting in their liberality on fuch occafions; and other perfons of diftinction, who were zealous friends to trade, would not be backward to give teftimony of their regard to a defign which would prove an inexhauftible fund of treafure to Great-Britain.
In regard to charitable inftitutions of every kind; there feems no want of the fpirit of benevolence amongft us: and, as this would be a charitable inflitution not only for the benefit of men of ingenuity and induftry, but fo apparently beneficial to the community in general, it would the better enable us to fupport thofe numerous charities, which are fo laudably fet on foot.
And, ferhaps, this would be the moft effectual way not only
to keep our inventors at home, but our artificers and manufacturers of every kind; becaufe thefe new arts would always furnith them with full employment, as well as our merchants and tradefmen, in the vending and exporting what they invented.
ASPIC, a plant which grows in plenty in Languedac in Provence, and efpecially on the mountain of St Baume in France. It is a kind of lavender, pretty much like that which grows in our gardens, both with regard to its flowers, which are blue, and to the figure and green colour of its leaves. The botanifts call it male lavender, lavendula mas, in Latin. They alfo give it other names, as fpica nardi, pfeudo-nardus, \&c.
The oil of afpic, that painters, farriers, and other artificers ufe, and which is likewife of fome ufe in medicine, being employed in feveral Galenical compofitions, is extracted from the flowers and fmall leaves of this plant. That oil is very inflammable, and, when once on fire, it is almoft impoffible to extinguifh it.
The true oil of afpic is white, and of an aromatic fcent. It is the only diffolvent of fandarac, by which, means it may be eafily diftinguihed from that which is counterfeited, and which is nothing but oil of turpentine, mixed with a little oil of petroleum.
Mr Savary is miftaken in afferting that the oil of afpic is the only diffolvent of fandarac; that gum is perfectly, and very eafily, diffolved in fpirits of wine; and they even make a very pretty varnifh with 12 ounces of firts of wine, 4 ounces of fandarac, $\frac{1}{4}$ of an ounce of gum elemi, and the fame quantity of camphire; the whole put into a bottle, and only expofed to the fun, or put over hot ahhes.
The author meant, perhaps, that nothing was more proper than the true oil of afpic to diffolve karabe, or yellow amber; and it is even after that manner that the varnifh of one Martin, who has a great reputation in Paris, is compored. We may, in fome cafes, diffolve yellow amber, or karabe, in fpirits of wine; but, for that purpofe it muft be tartarifed, which is performed by rectifying that fpirit with tartar, which takes all the phlegm that the firit of wine may contain, provided it be done with a very flow fire, and according to the rules of art: there is even an excellent balm againft cheumatifms compofed after that manner.
ASS, a domeftic animal, which is flow, lazy, and dull, but patient, proper to work hard, and to carry or drag heavy weights. The largeft and ftrongeft of thofe animals are chofen for flalIions, to leap mares, which are defigned in ftuds for the breeding mules : and fome of thofe mules are fo highly valued, that they are fold even dearer than the fineft horfes.
ASSA, or ASA-FCETIDA, a gum extracted from a plant called in Latin laferpitium, whofe leaves are like thofe of fmallage, and whofe falk refembles that of the ferulaceous plant: it bears a broad feed.
This gum, which the French apothecaries for Chortnefs fake call only afer, is feldom to be met with pure, and without adulteration.
Pliny, Theophraftus, and the other ancient writers, unanimounly affert, that it was in high efteem in their time, and fold for its weight in filver, and that the emperors themfelves reckoned it among the moft precious things which they kept in their clofets. But it does not appear that this defcription, which Monfieur Furetiere has borrowed from Pliny, chap. iii. of the xixth book of his Natural Hiftory, and which he has very much embellifhed, belongs, or can be applied, to the alla-foetida fold at prefent by our druggifts; or fome of its virtues at leaft muft be now unknown.
The prefent affa-foetida is a gum, which, during the greateft heat of the fummer, runs from a little thrub, whofe leaves are like thofe of rue; it comes from the Eaft-Indies, Perfia, Metia, Afyria, and Arabia. Some authors affert, that that which is brought from. Perfia runs from a tree, the leaves of which refemble thofe of radihes.
This gum is of a whitif colour, inclining firft to yellow, then to red, and finally to purple. Its fmell is fo ftrong and fo offenfive, that the Germans have given it the name of flercus diaboli, or the devil's dung: the French druggifts give it the fame name, and call it alfo Syriac juice, liquor of Syria, and juice of Media.
Molt of the affa-foetida they have in France is fent thither from London. The Englifh fend it in large barrels with iron hoops, which diftinguifhes the affa-foetida that comes from England from that of Marfeilles, which is in bafkets, made of palm-tree leaves.
This gum is either in lumps, or in drops; but there is little of the latter fold; the merchants, being ufed to buy it in Jumps, hardly know it again, when it is in drops.
It has already been obferved that it is eafy to adulterate it ; and there have been people bold enough to fell the gum that comes from the pine-tree, or common incenfe, inftead of affafuetida.
The goodnefs of the affa-fortida is known by its colour and fimell: a tolerable fcent and a clear colour are the figns of its good quality; a black colour and a great ftench are proofs of the contrary. The ffrong fcent of this gum is much like that of garlic. The Englifh and Dutch import it from Surat.

Alfa-foetida is. of ufe in medicine, it being a fovereign remedy for the cure of hyfteric fits and diforders in women; but its bad or rather naufeous fmell, is the reafon why it is not fo often prefcribed as it otherwife would be.
ASSAY, ESSAY, or SAY, in metallurgical operations, is the proof, or trial, by fmall quantities, of the goodnefs and value of metals, ores, and metalline fubftances; a matter' no one fhould be unacquainted with who deals in bullion, gold, and filver, or in foreign coins, or the fmelting and refining of auy of the metals from their native ores.
The frelting of metals from their native ores being the firft operation that takes place in obtaining the quantity of metal therein contained, we thall frift treat of the methods of making aflays upon various forts of ores.

## Of the manner of affaying gold ore.

In order to which it muft be obferved, that the method varies according to the nature and difpofition of the mineral matters along with which the metal happens to be mixed, whether it be ftony, earthy, fulphureous, arfenical, \&c. for fometimes gold is found-in fmall fragments,' either fquare or round, black or fhining, among the fands of fome rivers; probably as being wafhed down by the torrents, or courfe of the river, from fome mine. Sometimes it is found in large grains, or a mere powdery fubftance, amidft a greafy clay, or foapy earth ; and, in thofe cafes, it generally contans a volatile part, or a part that will not fufe in the fire; but turn to an obftinate, dry, powdery calx; or elfe it is found interfeerfed among other metals, and their ores: whence little fparks of it frequently adhere to irony fints, and little blood-ftones: or, laftly, it is found, fometimes more, fometimes lefs, intimately mixed along with other minerals in the mines; and the golden ores of fulphur and yellow marcafites, by fome called yellow, and by others golden zink, \&c. are found to afford gold by extraction in aqua regia, and this fometimes to profit. Gold is chiefly found in three different manners, or forms, (1). In pure glebes, or clods, confifting of gold alone;' in which form it is fometimes faid to be met with in Hungary: accordingly, in the emperor's colleation are preferved feveral lumps of pure gold, fo found in the mines. (2.) It is found in a powdery form, and then called gold duft, or fand gold, in the fands of fome rivers, brooks, \&c. particularly in Guinea.
(3.) It is alfo fornd, and that ufisally, in whitifh clods, dug out of mines 150 , or 160 fathoms deep, intermixed with other foffils, as antimiony, vitriol, fulphur, earths; flones and other metals,
It is rare that gold is found otherwife than under this 'laft form : few places in the habitable globe afford it tolerably pure, except the coalt of Guinea; though the greateft part brougbt from thence contains fome impure heterogeneous parts, the Negroes being apt clandeftinely to mix filings of brafs, or copper therewith.
Laz. Ercker, affay-mafter to three emperors of Germany, under whofe directions were all the mines of Germany, Hungary, Tranfilvania, and Bohemias aflures us, $c^{\prime}$ That it is rare ' any earth produces pure gold, but one mictal or other fitill - grows with it ; and, even where it appears fineft of all, it ' has its ihare of filver.' He adds, as an univerfal rule, - That, where gold appears the pureft, there is tilver mixed c along with it; and, where it is the hirdeft, there is both copper and filver.'
The mountains of Chili fometimes afford pure gold. In the clefts, or drains, betwee the ridges; is found a fine, ruddy earth,' beneath which is a lay of blue fony matter, freaked here and there with yellow; and under this there are pure grains of gold, frequently of a confiderable fize.
To procure the gold, they direct the current of fome rivulet bither, to earry off the incumbent earth, and lay the bed of gold bare. This done, they dig up the precious earth, and carry it to the lavadero's, where, by repeated lotions, the earthy lighter part is feparated, and the gold left alone.
There is alfo a place in Scotland, where, over a lead mine, near the furface of the ground, they often find large grains of native gold, free from fapr.

- I have, fays Mr Boyle*, fill a piece of native metal by me, - which came from the fame place, in weight above 40 grains, - wherein gold is the predominant netal.'
* See Boyle*s Abridg. vol. II. p. 322.
- They have worked in the gold mine at Cremnitz, fays Dr - Brown, now duwards of 900 years. The mine is feveral
- Englifh miles in lengch, and about 960 fathoms deep.-Of * the ore, fome is white, fome black, ; red, and yellow. . It ' is not rich enough to admit of any proof, or affay, in a - fmall parcel, to find the proportion of metal it contains; - but they pound a very large quantity of it, and wafh it in a - little river running nigh the place. The whote river, being - divided into feveral cuts, runs over the ore continually, and - fo wafhes the earthy parts from the metalline. The com-- mon yellow earth of the country all about, though not ef-- teemed ore, affords fome gold : and in one place I faw the - fide of a bill dug away, which had been caft into the works,
wafhed, and wrought in the fame manner as pounded ore, ' with confiderable profit *.'
* Philofophical Tranfactions, no. $5^{8}$.

It may be added, that gold is fometimes alfo obtained from copper ore, from tin ore, from common marcafites, from a red earth, from fand, from German talc $t$, and many other bodies, wherein it may not be fufpected by perfons who have no knowledge in matters of this nature.
$\dagger$ Boyle's Abridg. vol. i. p. 59, 157, 158; and vol, ii. p. $3^{22}$, $3^{25}$.

## Remarks.

My reafon for dwelling a little upon the nature and afpect of the various forts of gold ore, is with a view to put the reader on judging what kind of procefs is neceffary to be made ufe of, in order to prove, or alfay, the true value of thofe ores; for, if fuch a procefs be tried as is not adapted to throw off thofe heterogeneous mixtures, without lofs of the pure metal, with which the ore may be clothed by nature, the true value thereof can never be juflly afcertained: This, therefore, will be thought ah effential confideration with thofe who would glad!y obtain more than a fuperficial knowledge of matters of this kind.
The art of making affays with difpatch upon gold and filver ores, in fmall quantities, depends upon the fconfication, or vitrification, of thofe heterogeneous foffile fubstances, which may be incorporated therewith.
Lead, and the glafs of lead, and antimony and its glafs, being great fcorificators, or vitrifiers, they become the natural agents upon fuch occafion.
The method of affaying gold and filver ores, therefore, with ftony and fandy mixtures, in fmall quantities, is commonly thus:

1. Take an ounce of gold or filver ore, and pulverize it finely; and having put 8 ounces of lead, cleared firft of its filver, into an affay crucible, under a muffle, in the tefting furnace, continue to ufe á gentle heat, till the lead has imbibed the powdered ore, and feparated the more ftony, earthy, or fandy matter, in the form of a glafly fcoria, at the furface. (2.) Take out the lump of lead, impregnated with the gold, or fiver, of the ore, and place it upon a teft, well nealed for the purpofe, and work with a proper degree of heat; till all the lead is either evaporated or vitrified, or imbibed by the bone-alh teft; and what gold or filver the ore contains will remain upon the teft in a bead, or grain, according to the yield of the ore; which being exactly weighed, and compared with the original weight of the ore, fhews the proportion of gold or filver contained in the ore, and determines its richnefs.
If the metal produced be vifible gold; and if what Ercker fays be true, that there is no gold without fome degree of filver therein; it may be neceffary to go a ftep further, to make your aflay accurate.
In order to feparate the filver as effectually as may be, they melt, for the affay, three or four times its own weight of pure filver with the gold; then with a fmall hammer and anvil bring it into a little thin plate, and put it into fuch a quantity of purified aqua fortis as may ferve to diffolve it. See the article Agua Fortis.
Upon this the menftruúm takes up only the filver, but lets the gold fink to the bottom, in the form of a black powder; which being edulcorated, and gently ignited in a little veffel, or 'ay-cup, made for this purpofe, is afterwards weighed: and from the proportion hereof is learnt what quantity of pure gold, and confequently what quantity of filver, is contained in the quantity produced by the firft operation.
The reafon of adding three or four parts of filver is, that all the gold contained in the firit production may be every-where mixed, diffufed, and fpread abroad in the little mafs to be diffolved, left it fhould otherwife, as it were, wrap up fome particles of the filver, and fo defend them from the action of the aqua fortis : whence che proof would be rendered fallacious, and the weight of the gold powder prove too large upon the ballance: for that gold added to its own, or a greater weight of filver, may keep a large part of it from being touched by aqua torts, appears from daily experience.
Ercker, from confidering that AQUA REGIA [fee that article] does not diffolve filver, is of opinion that gold may be refined to the greateft perfection by being diffolved in this menftruum. What led him to this opinion was doubtlefs the common perfuafion, that all the kinds of aqua fortis, however prepared, did ftill leave fome filver along with the gold ; as antimony, on the other hand, when ufed in the refining of gold, commonly feals away, as they fuppofe, a fimall quantity thereof. As fomething of moment feems to be concealed in this affair, it delerves to be carefully examined.
The fundamental queftions of the inquiry are thefe, (I.) Does the aqua fortis in reality leave any filver yet mixed with the gold? (2.) Would it not prove too expenfive thus to refine gold with aqua regia? (3.) In what fenfe can antimony be laid to teal away gold?

The firf queftion is refolved in the affirmative by Fafchius*, in treating of the fediments of depart-waters; where he fays, That if gold, by quartation, be mixed with filver, as before faid, and again feparated from it by aqua fortis, it will conftantly be found to have increafed it's weight; which increafe he attributes to the filver adhering to the gold: but it ftill remains for experiment to decide whether this additional weight be truly owing to the filver, or whether it be an increale of real gold $\dagger$.

* Probier-Buchlein, pag. 64. ed. 1578.
$\dagger$ Beecher maintains, that the earth of fulphur, which conftitutes the tinging principle thereof, with regard to metals, lies concealed, and is to be found in nitre. For, though it be an old tradition that the red colour, which fpirit of nitre manifefts in tradition that the red colour, which firit of nitre manifefts in
its diftillation, proceeds from the fulphur of the nitre; yet in its diftillation, proceeds from the fulphur of the nitre; yet in
reality, this favours of no more, ca one fide, than a bare verreality, this aavours of no more, cnone fide, than a bare ver-
bal prefumption; and, on the other, of a general fuppofition that all colours arife from fulphur: which taken abfolurely is falle, fince we have no inftance of any fuch actual feparation of fulphur from nitre; though Beecher endeavours to exhibit this fubfance to the eye ( $a$ ), where he trears of the foul of nitre.
This fubftance-Beecher fill further attempts to render profitable, and demonftrates its metallic increment: where be recommends the digeftion of a folution of filver, made with fpirit of nitre, from whence a fmall portion of the contained filver will daily be depofited, in the form of a black calx, or almoft golden fubftance (b). But, as a particular prepared fpirit of nitre is required for this purpofe, and alfo a particular purification thereof, it is proper to confult the feveral places of the author, where thefe things are mentioned (c): places of the author, where thefe things are mentioned (c):
and to them may likewife be added what Facchius, in his and to them may likewile be added what fachius, in his
little treatife of Aflaying, has under the head of the fediments litule treatife of A
of depart-waters.
(a) Phyfic. fubterran. feet. 5. cap. 2. feed. r18, r19, \&c. ${ }^{\text {(b) See }}$
Miner. Arenar. pag. 877. (c) See Concord. Chym. P. 418, 723 , $726,736,737,739,742$.
With regard to the fecond queftion, 'tis to be obferved, that fuch a method of refining gold by aqua regia is not practicab'e in the large works, by reafon of the unneceflary expence which would attend it; nor is fo rigorous a proof of gold, perhaps, at any time required, as not to admit of the leaft particle of filver. But, in the bufinefs of affaying, it cannot be admitted, for two reafons, viz. (I) Becaufe fo much of the gold is eafily diffipated by the aqua regia, or fo much of the fubftance of this menftruum remains fixed to the calx, even after ignition, as may caufe errors in both cafes. (2.) Becaufe aqua regia, on account of the great fharpnefs and vioIence wherewith it grofsly diffolves the gold, at the fame time tears away more particles of the filver, than the aqua fortis leaves among the gold. A proper experiment or proof might however, after this manner, be made with care, in order to determine whether the above-mentioned increafe of weight proceeds from the aqua fortis, or not.
The folution of the third queftion is principally to be derived from an examination of the fufed antimony, upon its cooling; becaufe it is eafy. for antimony, in its ebullition, to tear away, a few grains of the fubftance of the gold, whilft detained in thin fufion, and lodge them in the form of bubbles. The ultimate refinement of gold is thought to be that procured by fufing it thin, along with thrice its own weight of antimony; wherein the antimony tears away and imbibes the fubflance of all the other metals, buit leaves the gold untouched; which, therefore, as the heavier body, falls like' a regulus to the bottom of the melting-cone.
In cafe you have a finatl or fine gold-fand to affay, or a very rich and delicate flud [fee the articles Golo and Silvex for their Tmelting in the large works] both the proof, by a fmall affay and the extraction in the large way; are fometimes affected by amalgamation*. Thus a certain parcel of it being weighed out, 'tis mixed with a determinate proportion of mercury, eight or ten times its quantity, and a quantity either of fimple or falt water, poured warm to them in a fone mortar: let them be ground together for fome time with a wooden peftle; then the fand is diluted by the addition of a little more water, that the mercurial particles may firt fubfide, which being now concreted into one mafs; the fand, in a little bafon, is eafily wafhed off: then the mercury being fqueezed through leather, the particles of gold that were collected and imbibed by it remain behind; mixed with about one third part of the mercury, in the form of a foft mafs, or amalgam; which when expofed in a little glazed difh to a gentle fire, the mercury is thus evaporated, and leaves the gold in powder, which may now be weighed, to ihew in what proportion the fandy or Cluddy ore contains it.
*, Amalgamation, in chymiftry, is the diffolution, or mixture, of any meral, efpecially gold, with common mercury, or quickfilver. All mecals, except iron and copper, cafily unite and incorporate with mercury, but gold with the greateft facility ; filver the next ; then lead and tin's copper with fome difficulty,
and iron fcarce it ail.

The like method of management will ferve for the affaying of filver ores.
The method of feparating gold and filver was unknown to the ancients; who therefore feparated filver from gold by calcina-
tion, and fo loft all the filver that was mixed with the gold. And, indeed, the before-mentioned method, by adding of filver, which is called the method by quartation, is expenfive and laborious, fo as not to be very beneficially prả̉tifed in the large way of bufinefs; but for an affay it may do very well. Indeed; when the whole has been divided into fuch a number of hands as to make thie feveral parts come cheap, it may be practifed to fome advantage a as fome operators being wholly employed in the making aqua fortis; others in purifying it, or bringing it to proof; others in laminating the filver, and diffolving it; others in feparating and reducing the calx of the gold; others in precipitating the filver with copper ; and others again in feparating the copper from the aqua fortis; which, at prefent, turns to better accoant by being fold for verd, as they call it, to the painters, or for more delicate purpofes, perhaps; large quantities thereof being continually exported from England to France, for fome ufes not generally known. Hence the whole operation has been found to anfwer the trouble, fo long as they can fecover about a drachm of gold from a pound of filver.
There are certain workmen who have, or pretend to have, the method of feparating gold from filver to much greater profit, without the ufe of aqua fortis or aqua regia, and barely by a dexterous application of the fire; at leaft without any coftly addition.-This method is kept as a fecret; but may be no other, perliaps, than that of Homberg ${ }^{*}$; which confifts in fluxing the mixed mafs of gold and filver with equal parts of rough nitre and decrepitated falt, placed at the bottom of the melting-pbt; the gold thus falling to the bottom, and leaving the filver fufperided, or detained, in the falts. Another way of effecting this may depend upon a dexterous ufe of fulphu:, which has the power of making filver melt away from a metalline mixture, almoft as ealy as lead.

- See the French Memoits.

Although the refining of gold by melting, and tefting it with antimony, or the glafs of antimony, as before obferved, is generalily by the metallurgical chymifts thought a perfect way; yet M. Homberg thas fhewn, that even this criterion, as alfo quartation, cupelling with lead, fluxing with borax, \&cc. may fail, in cafe the gold be mixed with emery, or polfibly fome other things.
$\dagger$ See the French Memoirs.
When the gold is eager, as the workmen call it, that iss, brittle, they hold it a fecret to melt it with mercury fublimate. But, after all, no gold, perhaps, can be proved to be perfectly pure, till it has gone through all the trials hitherto known, or eveñ tome of a more curious nature, particularly melting with crude antimony and afterwards cupelling the regulus with lead; and, at laft, fufing it with borax: which procefs is recommended to thofe who require gold in abfolute purity for any ftandard, or curious operations.
The methods of obtaining filver in purity are various, and differ according to the metal wherewith the filver is mixed, or allayed. If copper be the allay, the beft and cheapeft way to purify the filver is, to calcine it with half its weight of common fulphur ; then melt the whole together, and throw into the pot, at feveral times; a due quantity of clean iron filings, which will immediately make the fulphur quit the filver, and form a foria a-top, leaving the filver, free from copper, iron, or fulphur, at the bottom.

## The method of aflaying the ores of the inferior metals, as lead, tin, copper, and iron.

Accurate affays upon thefe ores require proper furnaces, the due application of fire, and fuitable fluxes, adapted to the refpective ores; and, indeed, ores of the fame kind frequently require different methods of affaying, as well as fmelting, in the large works.
The moft general flux made ufe of upon thofe occafions is what the metallurgifts call the black fux, which is thus prepared, viz.
Take one part of nitre, and two parts of common tartar, and reduce each to powder, and then mix them well together, and defagrate the whole in a crucible, by lighting the mixture a top, which will turn to a kind of alkaline coal : pulverize the fame, and keep it in a clofe glafs, to prevent its diffolving, as it would do in a moift air.
This flux is of general ufe; and, to have it ready at hand, fhortens the bufnefs of making aflays, and renders the operation more exact than when crude tartar and nitre are employed, becatife the deflagration might thus carry off fome part of the ore, and defraud the account. For that reafon the mixture is here directed to be fired at the top; otherwife a confiderable part might be loft in the deflagration, which would prove rinuch more tumultuous and violent, if the matter was thrown into a red-hot crucible.
In affaying of lead ore, take four ounces, and reduce it to powder, and mix the fame with one ounce of the clean filings of pure iron, and half an oúnce of the faid black flux: melt them altogether in a clean crucible, fet in a proper wind-fur ${ }_{7}$ nace; and you will find the lead clearly feparated in a lumpt
at the bottom of the crucible, which will theve you what quantity of pure lead fuch ore will yield, and confequently will enable you to judge of the true value of fuch ore.
Affays upon tin ore may be made in much the fame manner, after due calcination, but without the iron filingi, and only intermixing with the black flux a quantity of common char-coal-duft, by way of precipitator of the pure metal.
Copper ore is affayed in this manner, viz. frift calcine or roaf it wefl, then take two ounces thereof and reduce it to a pretty fine powder, and mix it in a mortar with twice its quantity of the black flux, intermixed with charcoal-duft; after which, fufe it brikly in a wind-furnace, that it may flow thin for about half an hour or more, and the quantity of pure copper will be precipitated at the bottom of the cracible.
The caufe of the effect depends upon a feparation of the terreftrial, fulphureous, or other heterogeneous parts of the ore, which are either bere vitrified, or otherwife detained by the flux, at the fame time that it does not alter the metal; whence, by its fuperior gravity, it finks pure to the bottom of the crucible, as being fet free, by thin fufion, from its terreftrial and fulphureous parts.
The procefs for the affaying of iron ore is far more difficult and tedious than for any of the other.
r. Roaft, burn, or calcine the ore with charcoal in the open air, in order to diffipate, by that means, as much of the fulphureous and arfenic quality as you can, and to render the fony and terreftrial matters, incorporated therewith, the more eafily vitrifiable. When grown cold, pulverize it pretty fine, and roaft it a fecond time in contact with charcoal fuel, but in a much ftronger fire than you did the firft time, till it no longer emits any fulphureous fmell.
2. Compofe a flux of three parts of the black flux, with one part of fufible -pulverized glafs, or of the like ftetile unfulphureous fcoria's; and add glafs-gall and coal-duft, of each one half-part. Add to this flux three times the quantity of your calcined ore, and mix the whole well together. Then chufe a very good crucible, well luted within with winds or loam finely' prepared for adhefion, to prevent the melting of the crucible; put into it your ore mixed with the flux ; 'covect it over with common falt, and fhut it clofe with a tile that will ftand the fire, and with good luting applied to the joints.
3. Elevate your pot upon a proper ftand, four or five' inches above the bars of your wind-furnace, to prevent-a cold bottom. Surround the whole with ftrong charcoal, not very large, and light them at top. Bring up your fire gradually, keeping it well fupplied with fuel, that the veffel may never be naked at top. Having thus continued your fire to its full ftrengeth *, - for about three 'quarters of an hour, or an hour, then take out your veflel and ftrike feveral times the paverrent, upor which it is fet, that the fmall grains of iron which happen' to be difperfed, may be collected into a regulus, which you will find, after häving broken the veffel.

- Your wind-firnace mult be well built, have an high chimney, and a large cave, to increafe the blaft of, air to fucha degree, if needful, that the flame fhall come out of the top of a chimney three flories high. The beft form of a wind. furnace, for this purpofe, is that refermbling the form of a jar, to cover with a tile.

4. When the regulus is weighed, try its degree of malleability; to which end make it red-hot, and, when fo, Arike it with a hammer, if it bears the frokes of the hammer, t bath when cold and when red-hot, and extends a alittle, you may pronounce your iron very good : but if, when either cold or hot, or in both ftates, it proves brittle; you may judge it not to be quite pure, but fill in a femi-mineral conditions. The worfe the characterifics of your iron are, the greater, the furrows will be found in it, when broken, which is called by the workmen, coarfe-grained, or coarre-fibred, By this procefs, however, you may judge nearly of the quantity and quality of the iron, which fuch ore will produce. 5. To reftore malleability to iron, the bodies which render it brittle mult be feparated, and the particles more juxapofited, that all heterogeneous matter concealed, in its interfices, riay be expelled. This may be conveniently done on a hearth, like that of a frith's forge, having a bed made with charcoal cult ; put into this bed the coals and the iron to be melted, heaped up in good quantity in ftrata; then with the bellows blow the fire pretty frongly, and the iron may be brought to a fufion ; and, if it does not melt foon of ittelf, and emit fooria, it is neceffary to help on the melting with fufible footia's. During this operation, a great many fiery fparkles will be thrown out from the iron, which dimining, as the iron approximates more and more to purity. Then let the burning coals. be removed, and the fcoria's be conveyed out of the fire, through a channel made for that purpofe; but, when the iron grows folid, let it be taken red-hot out of the fire, and tried, by friking it with a hammer, fuitable to its bulk: if it proves crude tall, Jet the operation be repeated: and, when at laft fufficiently purified, let it be hammered, and extended feveral ways, by making it red-hot feveral times over: this done, it will no longer be brittle, even when cold.

## Of aflaying mercurial ores.

Mercury, or quickfilver, is either found under an actual running form in the mines, and thence called virgin mercury; or elfe 'tis forced out from mineral bodies, by means of diftillation.
The greateft part of thefe mineral bodies are of the nature of cinnabar, though mixed along with a deal of grofs earthy matter: others again are merely flony.
When the former, 'tis ufual to mix fuch fubftances as will imbibe fulphur, viz. quick-lime, filings or fcales of iron, and fometimes falt of tartar; and throw the mixture into an iron cucurbit, the mouth whereof is covered with an iron-plate, ftruck full of little holes; and thus inverted into the mouth of another flrong one, made either of earth, or iron, that is above half full of common water, and lies buried in the ground. Then the fire being gradually applied, the fulphur that hitberto tied up the mercury, and therewith formed a concrete like that of cinnabar, finks into the lime, or ironfilings, and forfakes the quick-filver; which therefore by the fire acting ahove, is now forced down through the reft of the mafs, and collected in the water below.
But the flony mineral is firf reduced to powder, then wafhed and feparated from its fuperfluous earthy flud; and laftly, with a more fparing addition of lime, diftilled in the fame manner as that above-mentioned.
This diftillation of the mercury may likewife be performed with an oblique fituation of the veffels, or even in a retort; but in larger quantities, the perpendicular defcent is the moft facile and commodious.

## Of affaying mundics.

If of a fulphureous nature, they may be generally fluxed with about half their weight of clean iron filings, which will precipitate the quantity of metallic matter; if of a ftony nature they fhould be treated as ores, to difcover their value. For, perhaps, all the pyrites, brafs lumps, marcafites, and mundics are but cruder kinds of ore; and, if they could be brought to full maturity, they would prove real ores.

## Of aflaying marcafites.

Thefe being a fpecies of metallic minerals, that may fometimes be worth affaying, in order to know whether they are valuable, either for their metal or otherwife.
Many fkilful metallifts have been impofed upon, by the fpecious external appearance of thefe marcafites; for they ufually have a great fpecific gravity, and fome of them a greater than real ores; whence they may poffibly contain the matter of metals, though in a crude, imperfect, and unfixed ftate. But, whether they contain any valuable metal, the preceding experiment, given in regard to mundics, will generally determine. They fhould, however, be treated in all refpects as ores; for fmall proportions of filver have been frequently obtained, as well from marcafites as mundics after fluxing them with iron-flings, and thereby bringing them to a regulus, and after dealing properly therewith by cupellation.
But, if they fhould be of no real value, in regard to metal, they poffilly may be fo, in regard to other ufes. For 'tis obfervable, that thefe marcafites, upon lying in the open air, attract the humidity thereof; and hence grow hot, and go into a kind of fermentation, and in fome meafure diffolve, and by degrees turn into a vitriol, of the fame kind with the metal they contain. Thus, if that metal were iron, the vitriol becomes green or martial ; if copper, blue, or cupereous. And on this is founded the artificial method of making vitriol, now practifed in feveral parts of England.
In regard to the methods of extraction of metals of every kind from their refpective ore, in the great works, to the beft advantage, we fhall refer to the names of thefe feveral metals; as to the articles Goid, Silver, Copper, Tin, Lead, \&c. \&c.

REMARKs.
The ufefulnefs of the knowlege of affaying to the landed gentleman.
The bowels of the earth often affording as great treafures as the furface, it is for the intereft of thofe who have eftates in land, not only to cultivate the fludy of Natural Hiftory, in regard to the mineral kingdom, and, indeed, the knowledge of foffils in general, but alfo the arts of philofophical chymifry. For the one will enable them to pafs a good judgment, at firft fight, on whatever their eftates may produce in its fubterranean parts : and the other will qualify them to judge, at an inconfiderable expence, of the value of any mineral production.
For want of a little tafte this way, it is not to be doubted but many a good eftate under-ground has been loft, by not being difcovered by the poffeffor. Whence we may judge, both of the private and public utility of thole fudies, which tend to the improvement of our knowledge in natural things, and in thofe arts which enable us to make a right judgment of their qualities and worth.
lol. I.

Although the art of affaying is generally reftrained to minerals and metals, and thefe methods of trying their value with fluxes, and firits of falts, \&ic. yet there are other fi,file fubftanes which may be eftimable on perfnn's eftates, and which may require quite diferent methods of treatment, in order to difcover their ufes and values. And theie methods may, with no lefs propriety, be deemed a part of the art of affaying. Such are alluminous bodies, boles, mineral waters for bathing or drinking, minerals for dyeing, ftones of various kinds, bituminous matters for the melioration of mortare, \&c. fands for glafs-making, clays and loams for pottery, marles for the improvement of land, talcs and farrs for fluccoe, and other works, and vitriolic fubftances, \&c. Thefe things may fometimes turn to as good account as mines. But thefe fubjects require methods different from thofe of ores, and other minerals, in order to difcover their qualities and worth.-We have only hinted things here, but fhall fpeak more to them under their refpective heads.

## REMARKs,

The ufe of affaying metals with accuracy, to merchants as well as to refiners, plate-workers, goldfmiths, \&c.
Though this art more particularly concerns thofe tradefmen and artificers, who purchafe thofe metals for fale, and refine them to the proper ftandard, for their working up into uicnfils; yet, as our filver and gold is imported by merchants from foreign countries, it is requifite that they hould know tomething of the nature of affaying; for in their dealings in bullion gold or filver, or in foreign coins, they may not always have juftice done them, unlefs they deal with our refiners in Fofter-lane; whom, I will prefume to fay, are gentlemen behind none in the kingdom, for diftinguifhed honour at $d$ integrity in their way of bufnefs.
Nor is this matter of affaying any way troublefome, expenfive, or myfterious: a fmall apparatus will perform the whule; and for its curiofity, might prove an agreeable amufement, was there no private advantage likely to attend it.
Though I have not only perufed mott of the beft books in efteem upon this fubject, and feen the whole bufinefs of affaying often performed by fome of the moft dextrous artilis in their way, I cannot think that the art is yet brou, ht to its laft perfection, any more than thofe of fmelting and refining in the great way.
The reafons for this my opinion are grounded on the following obfervation, which I have made upon the fentiments of thofe, who have been reck:ned the moft Rilful experimenters in the art of metallurgy; which may not be difagreeable to fuch, who are interefted in a fubject of this nature.
In refpect to the methods of aflaying gold and filver ores:
There are two difficulties, at leaft one or other of them, always found in this affair. For (1.) Howfoever fluxible the mineral earths and fulphurs may be, which are conjoined with the ores of gold and filver, yet it fcarce comes up to the fufibility of the pure metal itfelf; but rather flows thick and fluggifh, unlefs the fire be very intenfe indeed: but it is plain, that, if this fubftance remains vifcous, the molecule of the metal cannot fink through it, in order to precipitate the metalline mafs at the bottom. (2.) Sometimes only a very fmall quantity of pure metal lies concealed in a vaft body of its adhering earth, or wrapped up with the matters of other metals; whence one of thefe two inconveniencies mult arife, viz. either that the fmall quantity of metal cannot well, under fo great a load of recrement, come into a little mafs; or elfe, if it could, it muft of neceffity be fo violently agitated about by the ftrong fire required to keep fo large a bulk of flag in fufion, as in the ebullition to be again involved, as it were, in little drops or bubbles, among the pappy mals of the fcoria.
Thefe two inconveniences, indeed, have their tolerable remedies. (I.) The firft is to add fuch fubflances as promote vitrification, and, at the fame time, caufe a thin flux of the vitrified body. Such fubftances for the affay are glafs of lead, a little borax, or any compound flux falt; the bafis whereof are commonly tartar and nitre. (2.) The fecond is to add metal itfelf: and this way feems greatly improveable. In this cafe, as a larger quantity of metal cannot, by the fame fire, be agitated fo much as a lefs, or, if it could be fo, yet all its particles would cohere more firmly in a large than a fmall quantity; hence, by fuch an addition of metal, the little mafs that otherwife would be with dificulty collected, is artificially enlarged, fo as to cover the whole bottom of the melting-pot: in confequence whereof, all the fingle metallic particles that fall afterwards, are eafily catched and detained below, by the large metalline mafs, which there lies ready to receive them.
The metal, ufually employed to increafe the mafs in this manner, is lead: but Becher, with great probability of much greater fuccefs, recommends the ufe of filver in its fead, where the perfect metals are expected. For filver, in this cafe, does not only remain unaltered by the fire and fux; but allo. by a fpecific efficacy, collects together and fixes the featered
potentia:
potential atoms of the metal, and afually reduces them to perfict metal.
Upen which property of filver it is, that Becher has built his minera a: enaria, fand-mine, or inexhauftible method of extracting the perfect metals out of fand; where, by ufing fill ver inftead of lead, he undertakes to produce a ten times greater increafe: which is to rational and philofophical, as to merit attoos.
But, as this latter method can principally be ufed to profit in the feparation of gold from its ore by fufion, fo lead remains a very convenient addition for the reception of filver, as performing a double ule in the operation, viz. by imbibing the metal purc, and at the fame time promoting the vitrifica tion of the earth mixed along with the gold.
Copper, being of itfelf of difficult fufion, requires fuch a fire as is able to melt its glafly fcoric fufficiently thin, at the fame time that it is melted itfelf; and this it does, unlefs the fints fhould prove very obftinate indeed. Hence, bare fufion fometimes, without any other affiftance, will bring out this metal from its ore, and precipitate it in a mafs; the fcoria here flowing to thin, as ready to fuffer the metaline particles to fink through it. But, when the ore is more ftubborn, its feparation may be promoted by metalline, or other additions, as above-mentioned.
In flort, the dificulty of thus feparating the metal from is proper earth is principally found in the ores of filver, gold, and copper ; but lead and tin, being very fufible bodies, are much eafier melted from their adhering mineral matter.
In order to the due feparation of metals from metals, or of a confufed mixture of metals, fuch as are commonly called electrums, or fuch as the Corinthian brafs of old was fuppored to be; we muft obferve, that experience has'taught us a certain effect of lead, which could not be well conceived à priori*: viz. that by fufion upon the cupel, it refolves all the imperfect metals, withour exception, into their fmalleft atoms, and partly throws them up to its furface in the form of a half vitrified powdery fubftance, in part finks along with them into the cunel, and in part converts them into glafs, fo as to leave nothing behind but pure gold and filver.

* This is more effectually and fooner done by a proper glafs of antimony.

Great care muft be taken, both in the fmaller and larger work, with refpect to the aflay by cupellation. It is incumbent on the affay-mafter follicitoufly to prevent the leaft diffipation or lofs of his powdered ore upon the teft and cupel; heedfully to pricure a total incoction thereof into the lead, and a fufficient degree of fuidity to the fcoria.
The greater accuracy is required in all thefe refpects, becaufe, in the Imelting of ores, the matter is examined by the proportion it bears to aflay-weights, which being exceeding fmall, the greatef caution fhould be ufed to prevent a lofs upon the aflay in the produce of the pure metal; for thus the proprietors, efpecially in the cafe of gold, might come to be greatly injured in the large weight, if the fmelter, mifguided by the report of the affay-mafter, either neglects to procure the full yield of the ore, or fecretes the overplus. And thus likewife the dealers in filver ore might come to be great fufferers.
The methods employed for the purpores of affaying are now all over Europe pretty much the fame; but fhould never be truited, unlefs, at leaft, two or three experiments, made at the fame time, by the fame, or different perfons, agree in the fame report.
And, perhaps, in all natural philofophy, chymiftry, and metallurgy, there is not an experiment which requires greater fkill and accuracy than thefe experiments, in the art of affaying, fo as to be depended upon: nor, indeed, can fuch precifion as is here required, be well expected, but from thofe who are acguainted with the rapacious nature of many volatile mineral fumes; and the methods of fo retaining them, to prevent their carrying off the nobler metals upon the teft.
To alfay in perfection requires alfo a knowledge of the relations and differences of all the metals with regard to each other, and particularly to lead and antimony. As this art therefore requires fo much judgment and delicacy, in order to practife it with fuccefs; hence doubtlefs proceeds the difficulty we find, in procuring a true affay to be made upon any uncommon ore, or mineral fubftance: for the art of affaying is extremely backward in admitting of improvements, as if it were to defcend unaltered from one generation to another.
Was the due ufe and importance of this art more generally attended to, the proprietors of all kinds of mines and mineral matters, and all who are any way concerned in metals, would affuredly reap their advantage by it. For this is certain; that if, by the repeated aflay, the ore promifcuouny taken yitlds fuch a quantity of metal, the fame quantity in proportion may be got out of the fame ore, in the large way of working: fo that the accurate affay is a criterion to the private gentleman, to know whether his workmen are fkilful in their operation, or whether they defraud him in the produce of his meial.

It is however true, that if the fame method of eperation is not thade ufe of in the large way of fmelting ores, as is practifed in making of the fmall affy, the yield of the ore in the large way may not come up in quantity in the proportion to what the affay indicated: this is a known maxim to thofe who have been concerned in large works. But, if the fame method of working is practifed in the large way as is done in the affay, the produce of metal in the one will be equal to that in the other. Nay, where there is a great body of ore as a ton fmelted together, it is rather realonable to think, from what has been intimated before, that a greater quantity of metal, efpecially of gold or filver, will be produced in the larger way, than in proportion to the fmall aflay: for, if the identical method of operation is pitctifed in the one way as in the other; that is to fay, if the fame degree of Arength in the application of fuel be duly adminiftered, in proportion to the quantity of matter, \&c. the fame fluxes ufed, and the fame art exerted in all refpecis in the great way as in the affay, the yield of metal in the large way cannot be lefs than what the affay, made in the fame way, exhibited.
To judge otherwife, feems to fubvert one of the fundamental and immutable principles of nature: for that is faying, that the fame caufe will not eternally produce the fame effect.
It is rare, indeed, that the fame way of working is practifed in the great way as is done in the allay, it being too expenfive; and, therefore, from the effect being different, fome are led into an egregious miftake, in regard to thofe operations. It is an advantage to the fellers of ore to difpofe of them according to the moft accurate aflay that can be made, but it is the reverfe to the purchaler, if he buys them by fuch affays, and works tiem in great works by a different procefs, winch will not sield him near the like quantity of metal.
When gr ld and filver are in their full purity, they are rather too foft and flexible either to be wrought into utenfils or coin, without being hardened with an alloy of fome bafer metal.
To prevent the abufes which fome might commit in the making of fuch alloys, the government, in moft countries, have ordained that there fhall be -0 more than a certain proportion of bafer metal added to a certain quantity of pure gold or pure filver, to make them of the finenefs of what is called their repective ftandards.
In England a pound weight of fandard filver is Ir ounces 2 penny-weights of fine filver, and 18 penny-weights of fine copper, which together make 12 ounces, or one pound troy weight.

Of the troy weights.
${ }_{14}$ ounces 8 penny-weights $\dot{=} \mathrm{i} \mathrm{lb}$. avoirdupoize weight 12 ounces - - $-=1 \mathrm{lb}$. troy weight, 20 dwts , or penny-weights $=\mathrm{r}$ ounce,
24 grains - $\quad$ - 1 penny-weight,
20 mites - - $=1$ grain,
24 droits - - $-=1$ mite,
20 periots - - - $\quad$ Idroit,
24 blanks - - $=$ I periot.

## Of the gold ftandard.

One pound, or one ounce of gold, muft contain 22 carats of fine gold, one carat of fine dilver, and one carat of fine copper, which together make 24 carats, or one pound, or one ounce of troy weight.
The carat is a term ufed by refiners, whereby thev certify a certain compofition of weights ufed in affaying and computing of ftandard gold; and this carat contains either the twentyfourth part of a pound, or the twenty-fourth part of an ounce, troy.

A pound carat is thus divided:

An ounce carat is thus divided:
1 ounce troy - $=24$ carats,
4 grains - - 1 carat,
4 quarters $=1$ grain,
20 grains troy - $=1$ carat,
5 grains troy - $=1$ carat grain.
And, according to the laws of England, all forts of wrought plate in general ought to be made to the faid ftandards of gold and filver: and the current price of fuch ftandard gold and filver is the common rule whereby to value bullion, whether it be in mafs, bars, duft, or in foreign coin: but the true value of bullion gold, or filver, cannot be known without being aflayed; for the ufe of an affay is to difcover how much alloy there is in any bullion, more or lefs than there is in the ftandard. If there be lefs alloy in it than there is in the ftandard, fo much as there is lefs, makes the bullion fo much finer, better, aud more valuable than ftandard. If,
on the other hand, there be more alloy in the bullion than there is in the ftandard, fuch bullion will be coarfer, or worfe; and, confequently, will be fo much lefs valuable than ftandard.
The method of getting bullion affayed is thus: You take a Slip of paper, about 5 or fix inches long, and about 4 or 5 inches oroad, and put into it a few grains (the ufual quantity) cut off the bullion which is to be affayed, "and fold it up, turning in the fides and corners, to prevent its dropping out, and underneath you write down the owner's name.
This paper is carried to his majefty's affay-office in the Tower ${ }^{*}$, or to the company's office in Goldfmiths-hall, or to fome noted experienced affay-mafter. After the fame is affayed, if you afk for it in the owner's name, it will be returned to you again, with the gold or filver in it; for which you pay the cuftomary fee.

* Though I am not acquainted either with the perfon or the name of the affay-mafter at the Tower, yet I have been well informed, by thofe who are judges, that there is not a more capable gentleman in all Europe for his bufinefs; which is a great advantage to our dealers in bullion gold and filver, \&c.

When you come to open the paper, you will find the affaymafter's name and report, wrote by him, much after the following form, viz.

$$
\begin{aligned}
& \text { Silver for an affay, January } \frac{\mathrm{A} \text { th, } 175 \mathrm{I} \text {, }}{\text {, }} \\
& \text { W. } 12 \mathrm{dwts} \text {. ob. } \\
& \begin{array}{c}
\text { Gold for an aflay, March } \\
\text { B. } 2 \text { gra. } \ddagger+1
\end{array}
\end{aligned}
$$

The aflay-mafter always makes his reports of filver in ounces, penny-weights, and half penny-weights; and of gold in carats, carat-grains, and the fractions of a carat-yrain; and they commonly write down the quantities, with the numerical leters of the fecretary hand-writing. It muft be obferved, allo, that

## B flands for better than ftandard, <br> W - for worfe, <br> Ob. - for half penny-weight, <br> Sta. $\quad$ for ftandard.

When the report of the affay-mafter is made, and the price of flandard gold and filver is known, it will be eafy to judge of the price of that which is better or worie than ftandard, and to calt up any quant ty accordingly. See the articles Gold and SILVER, where I thall give the concife practical methods of doing this.
ASSELANL. The true name by which the Turks call the Dutch dollar is Aslani. See that word.
ASSIENTO, a Spanifh' word, whith properly fignifies a farm. In France, where that viord was fift introduced in the beginning of the war about the fucceffion to the crown of Spain, they underfood by the word affiento a trading company, eftablifhed for importing negroes into the dominions of the king of Spain in America, and particularly to Buenos-Ayres. It was the old French Guinea company, which, after having made a tr aty with the Spanifh minifters for that importation of negroes, took the name of the company of the affientifts, becaufe of the duty they bound themfelves to pay to the king of Spain's farms, for every negro between 15 and 25, or 30 years old, found, well-fhaped, and without any blemifh, they fhould import into Spanifh America.
That treaty of the French company, which contained 34 articles, was figned the firf of September $1_{7} 02$, to continue in force 10 years, and determine the ift of September, 1712 ; granting, however, to the company, two years longer to import the remainder of the negroes they had left, if they were not all imported at the expiration of the treaty.
The two chief articles among thefe 34 related, the one to the number of negroes the company was to furnith the Spaniards with yearly, and the other to the duty that was to be paid for them to the king of Spain, during the time of the farm or affiento.
As to the number of negroes, it was fixed at 38,000 , as 100 g as the war, which was begun the year before, fhould continue; and at 48,000 in cafe a peace was concluded. And, with regard to the duty that was to he paid to the king of Spain, it was fettled at 33 piafters and $\frac{1}{3}$ for every negro between 15 and 25 , or 30 years old; the greateft part of which duty the company paid before-hand.
The peace of Utrecht, by which Philip V. was acknowledged king of Spain by queen Anne, and by all her allies, except the emperor, having put an end to the war, and one of the articles of the treaty between England and France being, that the latter thould give up the affiento, or farm of negroes, in favour of the former, the Spaniards entered into a treaty with the Englifh, for the importation of negroes into Spanifh America.
This treaty, which, in feveral articles, is like that which was made with the-Fiench company, kut, in many others, much
more to the advantage of the Englifh, was to commence the ift of May, 1713 , and to continue for 30 years; fo that it was to end the ift of May, 1743.
The South-Sea company, which was eftablifhed in England in the beginning of the abovementioned war, but had much difficulty to keep their head above water, undertook to furnifh Spanifh America with negroes. The company was obliged to import 4,800 negroes a year, for which they were to pay per head at the rate fettled with the French company; but was obliged to pay only half that dutv, during the 25 firft years, for every negro they fould import above the number 4,800 ftipulated by the treaty.
The 42 d article of that treaty, which is the laft, and, perhaps, the moft confiderable of all, was not in the creafy made with the French. By that article leave is given to the Englifh affientifts, or contractors, to fend ycariy into Spanifh A merica, during the whole time the treaty was to continue, a fhip of 500 tons, laden with the fame forts of merchandizes which the Spaniards ufed to carry thither, with liberty to fel and difpofe of them, with the concurrence of the Spaniards, at the fairs of Porto Bello and Vera-Cruz.
One may fafely affert, that neither the furnilning the Spaniards with negroes, which is the main fubject of that treaty, nor the feveral other articles, by which many pritileges were granted to the South-Sea company, did not all together prove fo profitable to it, as that liberty alone granted to the Englifh, againft the ancient policy, and the ufual jealoury, of the Spaniaros, with regard to their American trade. See Regrs-TER-SHIP.
There have been five more articles added fince to that treaty of affiento with the Englifh, in order to explain fome of the old ones.
By the firf it is agreed that the treaty fhall be reckoned to commence bui in the year $1 ; r_{4}$. By the fecond, that the tnglifh thall be fuffered to fend their merchant hip, though the Spanifh fleet, or alleons, fhould not fail so America. By the third, that, during the firft 10 years, that fhip might be of 650 tons. Finally, by the two laft articles it is agreed, that the merchandizes which. fhould remain, after the fale' of the negroes, fhould be fent back into Europe, after the negroes had been landed at Buenos-Ayres; and that, if the negroes were defigned for Porto-Bello, Vera-Cruz, Carthagena, or fome other part of Spanifh-America, they fhould be carried into fome of the Antilles illands belonging to the Englifh, and that it fould not be lawful to fend any into the South-Sea.
The method of rating and paying the affiento-duty for every negro, when the thip arrives in the American dominions of the king of apain, is the fame with regard to the Englinh, as was practifed with the French; that is to fay, that, when the negroes are ianied, the Spanifh officers, in concert with the company's factor, feparate them into four claffes as follow: In the firf place, they put together all thofe negroes, of both fexes, who are in perfect health, and from 15 to 30 years old. Afterwards they feparate the old men, the old women, and the fick, and make a fecond lot of them. Next follow the children of both fexes, from 10 to 15 years old : and finally, thofe from 5 to 10.
The feparation being thus made, they proceed to the valuation of the negroes; that is to fay, they reckon every negro of the firft clals, being in perfect health, as a head, for which the full duty of 33 piafters and $\frac{1}{3}$ mutt be paid. The old and fick, who make up the fecond clafs, are rated at $\frac{3}{4}$ of a head, and the duty mult be paid accordingly. The children of the third clafs are reckoned at 3 for 2 heads, and thofe of the fourth at 2 for one bead; and, according to that eftimation, the king's duty is paid.
So that of a cargo of 610 beads of negrdes, among whom there are 250 in health, and of the proper age, 60 fick or old, I 50 children from 10 to 15 years old, and 150 from 5 to 10 , the king receives duty but for $47^{\circ}$.

250 healthy ones pay duty for as many heads, viz. 250 heads. 60 old or fick, at $\frac{3}{4}$ a head, pay duty for - 45 150 children, from ro to 15 years, at $\frac{2}{3}$, pay duty for 100 150 ———from 5 to 10 years, at $\frac{x}{2}$, pay duty for 75

The affiento adjufted between their Britannic and Catholic majefties, for the Englith company's onli ing itfelf to fupply the Spanifh Weft-Indies with black flaves, for the term of thirty years, to commence on the firf day of May, 1713, and to end the fame day in the year 1743.
I. Her Britifh majefty does offer and undertake, for the perfons whom fhe fhall name and appoint, that they fhall oblige and charge themfelves with the bringing into the Weft-Indies of America, belonging to his Catholic majefty, in the face of the faid 30 years, to crmmence on the rft day of May, 1713, and determines on the like day, which will be in the year 1743 , viz. 144,000 negroes, pieza de India, of both fexes, and of all ages, at the rate of 4,800 negroes, piezas de India, in each of the faid 30 years; with this condition, that the perfons who fhall go to the Weft-Indies to take care of the concerns of the affiento, flall avoid giving
any offence'; for, in fuch cafe, they fhall be profecuted and punithed in the fame manner as they would have been in Spain, if the like mifdemeanors had been committed there.
II. That for each negroe, piezas de India, of the regular ftandard of feven quarter, not being old or defective, according to what has been practifed and elfablifhed hitherto in the Indies, the affientiffs thall pay 33 pieces of eight (efcudos) and one third of a piece of eight; in which fam thall be accounted, and thall be comprehended, all and all manner of duties of alcavala, fize, amin de armes, boqueron, or any other duty whatfoever, of importation or regalia, that now are, or hereafter fhall be impofed, belonging to his Catholic majefty, fo that nothing more fhall be demanded: and, if any fhould be taken by the governurs, royal officers, or other minitters, they thall be made good to the affientills, on account of the duties which they are to pay his Catholic majefty of $33 \frac{1}{3}$ pieces of eight, as aforefaid, the farne being made appear by an authentic certificate, which thall not be denied by any public notary, thereunto requited on the part of the affientifts: for which purpofe a general order (cedula) fhall be iflued, in the moft ample form.
III. That the faid affientifts fhall advance to bis Catholic majefty, to fupply the urgent occations of the crown, 200,000 pieces of eight (efcudos) in two even payments of 100,000 pieces of eight each; the firft to be made two months after his majefty fhall have approved and figned this affiento, and the fecond at the end of two other months next after the firft payment: which fum, fo advanced, is not to be reimburfed before the firft end of the 20 years of th.s affiento, and then it may be deducted, by equal portions, in the 10 laft remaining years, after the rate of 20,000 pieces of eight yearly, out of the produce of the duty upon negroes which they are to pay in thofe years.
IV. That the affientifts thall be obliged to pay the aforefaid advance of 200,000 pieces of eight in this court; as alfo, from fix months to fix months, the half of the amount of the duties payable for the piezas of flaves, which they have agreed to import yearly.
V. That the affentilts fhall not be obliged to pay the duties for more than 4000 negroes (piezas de India) yearly, and not for the remaining 800 , in confideration of the rifques and intereft that ought to be made good to the affientifts, for the money advanced, and payment in this court of the duties for the faid 4000 piezas.
VI. That the faid affientifts, after they thall have imported the 4,800 negroes yearly, according to their contract, if they find it neceffary for his Catholic majefty's fervice, and that of his fubjects, to import a greater number, they fhall have liberty to do it, during the firf 25 years of this contract (as in the five laft years they fhall import no more than the 4,800 agreed upon;) with condition, that they thall pay no more than 16 pieces of eight, and two thirds of a piece of eight, for all duties on each negro (pieza de India) which they hhall import over and above the faid 4,800 ; and this payment alfo fhall be made in this court.
VII. That the faid affientifts fhall be at liberty to employ in this commerce, for the carrying of their cargoes, her majefty of Great-Britain's own fhips, or thofe of her fubjecis, or any belonging to his Catholic majefty's fubjects (paying them their freight, and with the confent of their owners) navigated with Englifh or'Spanifh mariners, at their choice; care being taken that neither the commanders of thofe fips employed by the affientifts, nor the mariners, do give any offence, or caufe any fcandal to the exercife of the Roman catholic religion, under the penalties, and purfuant to the regulations, eftablifhed by the filf article of this affiento. And alfo it fhall be lawful for the faid affientifts, and they fhall have power to incroduce their black flaves contracled for into all the ports of the North Sea, and of Buenos-Ayres, in any of the aforementioned fhips, in like manner as has been granted to any former affientifts.
VIII. And it is provided, at the fame time, that the negroes which are carried to the ports of the windward coaft, Sancta Martha, Cumana, and Maracaybo, fhall not be fold by the Said affientifts for more than after the rate of 300 pieces of eight each; but as to the other ports of New Spain, its illands, and Terra Firma, it fhall be lawful for the faid affentifts to fell them at the beft prices they fhall be able to get. IX. That the faid affientiffs being allowed, for the reafons mentioned in the foregoing article, to import their negroes into all the ports of the North Sea, it is alfo agreed that they flail have power to do it in the river of Plata, his Catholic majefty allowing them out of the 4,800 negroes, which, purfuant to this affento, they are to import yearly, to bring into the fald river of Plata or Buenos-Ayres, in each of the faid 30 years of this affiento, to the number of 1200 of thefe piezas de India of both fexes, to fell them there at fuch prices as they hall be able, fhipping the fame in four yeffels, large enough to carry them; 800 of them to be difpofed of at Buenos-Ayres, and the remaining 400 may be carried into, and ferve for the provinces above, and kingdom of Chili; felling them to the inhabitants, if they will come to buy them, in the faid port of Buenos-Ayres. It being hereby declared, that her Britannic majefty, and the affientifts, in her name,
may hold in the faid river of Plata fome parcels of land, which his Catholic majefly thall appoint, or affign, purfuant to what is ftipulated in the preliminaries of peace, from the time of the commencing of this affiento, fufficient to plant, to cultivate, and breed cattle thersin, for the fublitence of the perfons belonging to the affiento, and their negroes; and they fhall be allowed to build houfes there of timber, and not of any other materials; and they fhall not throw up the earth, nor make any the leaft (or flighteft) fortification. And his Catholic mojelty thall alfo appoint an officer to his fatisfaction, one of his own fubjects, who thall refide upon the aforementioned lands, under whole command are to be all fuch things as relate to the faid land: and all other matters that concern the affiento, fhall be under that of the governor and royal officers of Buenos-Ayres: and the affientifts hall nor, on account of the faid lands, be obliged to pay any duties during the time of the faid affiento.
X. In order to the carrying and introducing of black flaves into the provinces of the South-Sea, liberty is to be granted, as it is hereby granted, to the affientifts, to freight either at Panama, or in any other dock or port of the South-Sea, fhips, or frigates of about 400 tons, little more or lefs, on board which they may fhip them at Panama, and carry them to all the other ports of Peru, and no others on that fide; and to man thofe fhips with fuch feamen, and appoint fuch offcers, both military and for fea, as they fhall think fit; ard may bring back the produce of the fale thereof to the faid port of Panama, as well in fruits of the country, as in money, bars of filver, or ingots of gold, and fo as they may not be obliged to pay any duties for the filver or gold which they thall brug, either upon importation or exporration, it being ftamped, and without fraud, and appearing to be the produce of the negroes. And likewife leave is granted to the faid affientifts to fend from Europe to Porto-Bello, and from Porto-Bello to Panama, by the river Chagre, or by land-carriage, cables, fails, iron, timber, and likewife all other ftores and provifions, neceffary for the faid Mips, frigates, or barcolongo's, and for the maintaining the fame; provided that they thall not be allowed to fell or trade in the faid ftores, in the whole nor in part, under any pretence whatfoever; unlefs it thall appear that they had obtained leave for the fale thereof from his $\mathrm{Ca}-$ tholic majefly. And it is farther provided, that, when the term of this afliento is ended, the faid affentifts shall not be allowed to make ufe of the faid fhips, frigates; or barks, to carry them to Europe, becaufe of the inconveniences that might enfue.
XI. The faid affientifts may make ufe of Englifh or Spaniards, at their choice, for the management and direction of this affiento as well in the ports of America as in the inland places; declaring and commanding, that the Englifh, during the whole time of this affiento, Shall be regarded and treated as if they were fubjects of the crown of Spain: with this reftriction, that there fhall not refide in any one of the faid ports of the Indies more than 4 or 6 Eniglifhmen; out of which number the faid affientifts may chufe fuch as they fha! think fit and fhall have occafion to fend up into the country, where negroes are allowed to be carried, for the management and recovery of their effects; which they fhall perform in the molt convenient manner, and that which they fhall think beft, under the regulation mentioned in the firf article, without any hindrance from any minifters, civil or military, under any pretence, unlefs they can be charged with acting contrary to the eftablifhed laws, or to the contents of this affiento.
XII. That, for the better management of this affiento, his Catholic majefty will be pleafed to grant, that, as foon as the peace is proclaimed, her Britannic majefty may fend two fhips of war with the fiid factors, officers, and others, who are to be employed in this fervice, giving firf a lift of the names both of the one and the others, that are to go athore in all the ports, where they fhall be allowed to fettle and regulate their factories, as well that they may go with the greater conveniency and fecurity, as that they may provide all things neceffary for the receiving the veffels that fhall go with negroes; which being obliged to go to take the blacks in upon the coaft of Africa, and thence tranfport them to the port of the Spanifh America, it would be very incommodious, as well as unprofitable, for the factors and others employed, to go on board the thips made ufe of in thofe voyages; and yet it is indifpenfibly neceflary that houfes be prepared before hand for them to dwell in, and all other provifions made which they fhall want; and for the tranfporting of the factors, and others, belonging to the compsny, to Buenos-Ayres, a veffel of a middling burden thall be allowed. And it is hereby declared, that as well this veffel, as the two Mhips of war, are to be vifited and fearched in the feveral ports by the royal officers, who may feize their merchandize, if they carry any. And farther, the faid hips fhall be furnifhed with neceffary provifions for their return, at a reafonable rate.
XIII. The faid affientifts may nominate, in all the ports and chief places of America, judges confervators of this affiento, whom they may remove and difplace, and appoint others at pleafure, in the manner allowed to the Portugueze in the eighth article of their affiento.
XIV. It fhall not be lawful for the viceroys; \&ec. or other tribunal or minifter whatever, of his Catholic majefty, to lay an embargo on, or detain the fhips belonging to chis affiento, nor to hinder them in their voyages, under any pretence whatever; but, on the contrary, they thall be obliged to afford them all the favour, affiftance, and fuccour, that the faid affientifts, or their factors, fhall defire, for the more fpeedy fitting out, difpatching, and lading of their faid lhips; and likewife the victuals, and all other things they fhall ftand in need of for forwarding their voyages, at the current prices; with this warning and under this penalty, that thofe who do otherwife fhall be obliged, at their own proper coits; to make good and fatisfy all the damages and loffes which the affientifts may fuftain by fuch impediment or detention.
XV. Neither thall the viceroys, \& c . or any other tribunal or office wharfoever, take, feize, detain, or lay an embargo by violence, or in any other manner, under any pretence, or for any caufe or motive whatfoever, on any of the ftock, goods, and effects, that are the produce of this affiento, or belonging to the affientifts: nor fhall the faid minifters fearch the houfes or warchoufes of the factors, or others belonging to this affiento; unlefs in cafe it fhall have been proved that there has been fome fraudulent and probibited importation.
XVI. That the faid affientifts, their factors, \&c. may employ in their fervice fuch mariners, carriers, and workmen, as they thall have occafion'for, to load and unload their thips and vefiels, upon a voluntary agreement made with them, and paying them fuch falaries and ftipends as they fhall have agreed for.
XVII. That the faid affientifts thall have liberty to load, at their choice, the effects they may have in the Indies, upon the Thips of the flota or the galleons, to bring them into Europe, agreeing for the freight with the captains and owners of the faid fhips, or upon the veffels belonging to the affiento; which, if they think it convenient, may come under convoy with the faid flotas and galleons, or other hhips of war belong ing to his Catholic majefty; and that the effects which fhall come in them, and Chall appear, by an authentic writing, to belong to the affientifts, fhatl be free of all duties whatfoever, on their importation in Spain, but they are not to bring on board them any Spanilh paffenger, or any effects of any fubject of his Catholic majefty.
XVIII. That from the firft day of May of this prefent year 1713 , till they fhall have taken poffeffion of this affiento, nor after their taking fuch poffeffion, it fhall not be lawful for the French Guinea company, or any other perfon whatfoever, to introduce any negro flave into India; it is agreed, that when the faid affientifts hall have notice that any thip with negroes (not belonging to them) is come upon the coaft, or entered into any port, they may fit out, arm, and fend out immediately fuch veffels as they fhall have of their own, or any others belonging to his Catholic majefty, or his fubjects, with whom they fhall agree, to take, feize, and confifcate fuch mips and their negroes, of whatever nation they be, or to whomfoever the fame fhall belong; firft having leave from the governors, to whom they fhall communicate what occurs, and defire them to interpofe their authority.
XIX. That the faid affientiits, their factors and agents, thall have power to navigate and import their negro flaves, according to their contract, to all the fouthern ports of his Catholic majefty's Weft-Indies, including the river of Plata, with prohibition to all others, whether fubjects of the crown or ftrangers, to carry and introduce thither any negroes, under the peinalties eftablifhed by the laws that relate to this contract of trade.
$\mathbf{X X}$. That in cafe the faid affientifts be molefted in the execution and performance of this affiento, and that their proceedings and rights be difturbed by way of fuits at law, or in any other manner whatfoever, his Catholic majefty declares, that he will referve to himfelf alone the cognizance thereof, and of all caufes that may be moved thereupon, with an inhibition to all judges and juftices, to take to themfelves the examination and cognizance of the faid caufes, or of the fuits, omiffions, or defects, that may happen in the performance of this affiento.
XXI. That, whenever the thips of the faid affientifts fhall arrive in the ports of the Indies with their cargoes of negroes, the captains thereof fhall be obliged to certify, that there is not any contagious diftemper amongit them, that the governor and royal officers may permit them to enter into the faid ports; without which certificates they fhall not be admitted.
XXII. When the faid thips thall have entered into any of the ports, they are fo be vifited by the governor and royal officers, and fearched to the bottom, even to the ballaft; and, having landed their negroes in whole or in part, they may at the fame time land the provifions, which they thall bring for their fubfiftence, laying them up in particular houfes or magazines. But they fhall not land, import, or vend any goods or merchandize, under any pretence or motive whatfoever: and, if there fhould be any on board the fhips, they fhall be feized, as if they were found on thore; excepting only the faid negro llaves, and the magazines of provifions for their fubfiftence, under the penalty, that thofe who are guilty

Vol.I.

Thall be feverely punifhed, and their merchandize and cfens confifcated or burned, and they thall be declared for cver in capable of having any employment in the faid afficnto. And it is declared, that the fhips on board which the negroes fhal be, or any of the provifions brought for their fubfittence, thall not be liable to the faid forfeiture and confifation, they being declared to remain free, as not being in fault; and the perion or perfons, who have charge of them, may go on with their traffic ; and, if the merchandize' or goods feized do not exceed the value of 100 pieces of eight (elcuidos) they fhall be burned without any remiffon (bein,r firft appraifed) and the oaptain thall be condemned to pay $\mathrm{t}_{1}$ - fum at which they were appraifed, as a punifhment for $t$ is neglect and omiffion; and, if he does not pay down the value of what hall have been fo feized, he fhall be fufpended and imprifoned till pay ment made; but, if it be proved that he was not an accom plice, he fhall be obliged to deliver up the perfon guilty, and in that cafe he fhall be free.
XXIII. That the victuals and other provifinns which fhall be put on fhore for the fubfiftence of the negroes, fhall not pay any duties of importation or exportation; but, if the affientiffs buy or export them from the ports, then fhall they be obliged to pay the duties eftablifhed, in the fame manner as his Catholic majefty's fubjects ought to do.
XXIV. That the duties upon the negroes imported are to be due from the day of their landing in any of the ports of the Indies, after the fearch made, and ail matters regulated by the royal officers; that, if any of the faid negroes die within the face of fifteen days, from the time of their being put on fhore, the affientifs fhall not be obliged to pay any duties, in regard they were not landed for fale; which being expired, if they fhall be yet alive, then they fhall become indebted for the duties for them, purfuant to what is agreed in the fifth article.
XXV. That after the affientifts; of their factors, fhall have fettled the duties, and fold part of their loading of blacks, which they had brought to that port, they flall be allowed to carry the remainder to any other port, carrying cerificates from the royal officers, of having there accounted for the duties, that fo the fame may not be demanded of them again in any other port; and they may receive, in payment for thofe they fhall fell, money, bars of filver, and ingots of gold, which thall have paid the king's quinto without fraud, as alfo the produce of the country; which they may carry away, and embark freely, as heing the produce of the fale of the faid negroes, without being obliged to pay any duties; except only thofe that fhall be eftablified in the plates from whence thofe fruits and effects are brought.
XXVI. That the fips which hall be employed by this affiento, may fail from the p.rts of Great-britain or Spain, at the choice of the afientifts, who hall give an account í his Catholic majefty of what Bips they fhall dipatch ycarly for the negro trade, and the ports for which they are defigned, and may return to either, with the money, \&rc. being the produce of the fale of the negroes; and they fhall be under this obligation, that, if the returns come into the ports of Spain, the captains and commanders itall give to his Catholic majefty's minifters an authentic regifter, by which it may appear what they have on board; and, if they come back to Great-Britain, they fhall fend over an exact account of their lading, that his majefty may be fully informed thereof.
XXVII. If it thould happen that the hips of this afliento fhould be fitted out as fhips of war, and chould take any prizes from enemies of either crown, or from the pirates that ufually cruize and plunder in the feas of America, they may bring them into any port belonging to his Catholic majefty, where they are to be admitted; and, the faid prizes being declared good and lawful, the captors fhall not be obliged to pay greater duties upon the entry of their prizes, than what are eftablifhed and payable by the natural fubjects of his majefty; deducting a fourth part of the produce of the fale thereof, which is to belong to his Catholic majefty.
And, for the preventing all manner of doubt and cavil, his majefty declares, that the fhips, ketches, and other veffels (thus made prize of) of whatever fort they be, with their arms, guns, ammunition, and all the furniture and tackle on board them, fall belong to the captors.
XXVIII. It is agreed, that both their majefties thall be concerned for one half of this trade, each of them a quatter part, which is to belong to them, purfuant to this agreement. And whereas it is neceffary that his Catholic majefty (in order to have and enjoy the benefit and gain that may be obtained by this trade) fhould advance to the faid affentifts $1,000,000$ of pieces of eight (efcudos) or a quarter of the fum, which they thall judge neceffary for the putting of this commerce into a good order and method, it is agreed, that, if his Catholic majefty fhall not think it convenient to advance the faid fum, the aforementioned affientifts do offer to do it out of their own money, upon condition, that his Catholic majefty fhall make good the intereft out of what they thall be accountable for to him, after the rate of eight per cent. yearly. And his Catholic majefty is to name two directors or factors, who are to refide at London, two more in the Indies, and one at Cadiz, that they may be concerned on his part (together
with thofe of her Bitannic majefty and thofe that Mall be in terefled) in all she directions, purchafes, and accounts of this affiento, to whom his catholic majcfly is to give proper inftrutions by which to govern themfelves.
XXIX. That the faid affientifts are to give an account of their profits and gain at the end of the firtt five years of this affiento; which accounts, as well of the charge as the produce, are firlt to be examined and fetted by her Britannic majefty's minifters employed in this fervice, in regard to the thare the is to have in this afiento, and then to be examined in like manner in this court: and his catholic majefty's fhare of the profis may be adjufted and recovered from the affientifts, who are to be obliged to pay the fame moft regularly and punctually, in purfuance of this article, which is to be of the fame force and vigour, as if it were a public inflrument, and under the regulation mentioned in the twenty-eighth article, concerning the factors whom his catholic inajefty is to appoint.
XXX. That if the amount of the gain made, during the firft five years, does exceed the fum which the affientifts are to advance, and fhall advance, for his catholic majefty, together with the intereft of eight per cent. which is to be included and made good in the manner above-mentioned, the affientifts are to reimburfe themfelves in the firlt place what they fhall have advanced, with all the intereft, and then to pay to his catholic majefly the remainder of the profit that thall come to his fhare, together with the duties upon negroes annually imported, without any delay or impediment; which praclice is likewife to be obferved and continued every five years fucceffively, during the term of this affiento.
XXXI. That whercas the faid affientifts have offered, by the third article of this contraCt, to advance 200,000 pieces of eight in the manner therein expreffed, they fhall not be reimburfed the fame, till the end of the firlt 20 years of this affiento, as is mentioned in the faid third article.
XXXII. That, from and after the determination and fulfilling of this affiento, his catholic majefty does grant to the affientifts the fpace of three years to adjuft their accounts, and gather in all their effedts in the Indies, and make up a balance of the whole; during which term*of three years, the faid affientifts, their faclors, agents, and others employed by them, Thall enjoy the fame privileges and immunities, as are granted to them for the term of this contract.
XXXIII. That all the debtors to the affientiffs fhall be compelled and forced to pay their debts, by taking them and their goods in execution, thefe debts being conlidered upon the fame foot as thofe due to his catholic majelty himelef; who declares them as fuch, that they may be the more effectually recovered.
XXXIV. That it being requifite for the fupport and fubfiftence of the negro flaves, who fhall be fet on hore in the ports of the Well-Indies, as likewife of all the perfons employed in this commerce, to keep conftantly magazines filled with cloathing, medicines, provifions, and other neceffaries', in all the factories that fhall be eftablifhed, for the more eafy and better management of this affiento; as alfo with all naval ftores, for the repairing of, and furnifhing the thips and verfels employed in its fervice; his catholic majefty will pleafe to allow them, from time to time, to bring from Europe, or her Britannic majefty's colonies in North America, directly to the ports and coafts of the northern fea of the Spanilh Weit-Indies, where there thall be royal officers, or their deputies, and likewife to the river of Plata or Buenos-Ayres, cloathing, medicines, provifions, and naval ftores, for the ufe only of the affientifts, their negroes, factors, fervants, mariners, and fhips; and that they may import the fame in fmall veffels, of about 150 tons.
XXXV. For the refrefling and preferving in health the negro flaves, which they fhall import into the Well-Indies, after fo long and painful a voyage, and to prevent any contagious illnefs or diftemper amongit them, the factors of this affiento fhall be allowed to hire fuch parcels of land as they thall think fit, in the neighbourhood of the places where the factories thall be eftablifhed, in order to cultivate the faid lands and make plantations, in which they may raife freft provifions for their relief and fubffitence; which cultivating and improvement is to be performed by the inhabitants of the country and the negro flaves, and not by any others; nor may any minifters of his catholic majefty hinder them, provided they keep to this rule.
XXXVI. That leave fhall be granted to the affientifts to fend a flip of 300 tons to the Canary illands, and to carry from thence fuch fruits as are cuftomarily taken on board there for America, purfuant to what was allowed to Don Bernardo Francifo Marin, by the 26th article of his affiento, and by the 2 Ift article of the affento of the Guinea company of Portugal, for one time only, during the continuance of this affiento.
XXXVH. That orders fhall be difpatched for the publication, in all the ports of America, of an indulto for the negroes unduly igported, from the day that this affiento is to take place; with free liberty to the factors to fay an indulto on them, at what itme and price they fhall think fit; and that the produce
of this.indulto ihall be applied to the benefit of the affientifts,
who fhall be obliged to pay to his catholic majefty the regulat duties of 33 pieces of eight, and one third of a piece of eight, for each regro, at the time that the indulto is laid.
XXXVIII. That for the more expeditious difpatch of this affair his m-jelty will eftablifh a junta of three minifters, fuch as he thall think moft proper, who, with the affiftance of the fifcal and fecretary of the council of the Indies, fhall hear and take cognizance (exclufive of all others) of all matters and caufes relating thereunto, and that the faid junta fhall lay before his majefty what fhall occur to them, in the fame man. ner as was practifed for the French company.
XXXIX. That all the concefions in former affientos, to Don Domingo Grillo, the confulado of Seville, Don Nicolas Porcio, Don Bernardo Marin y Gufman, the companies of Portugal and France, not being contrary to the contract, hall be underftood and declared to be in its favour, as if they were herein literally inferted; and that all the orders that have, at any time, been difpatched in favour of thofe fore-mentioned affientifts fhall be granted to thefe, whenever they fhall afk them, without any doubt or difficulty.
XL. That, in cafe of a declaration of war (which God forbid) of the crown of Great-Britain againft that of Spain, of of Spain againft Great-Britain, this affiento is to be fufpended; however, the affientifts are to be fuffered to remove with all fecurity (during the fpace of one year and an half, from the time of the declaration of fuch rupture) all their effects, and to bring them home frecly, in fuch of their hips as that then happen to be in the ports of the Indies, or in thofe belonging to Spaniards; with this condition, that, if they fhould bring them to the ports of Spain, they may freely carry them away again, as if the affiento was yet in force; it being firft made to appear, that they are the produce of the negro trade. And it is farther declared, that if it Mould happen that the crowns of Spain and England, or either of them, jointly or feparately, fhall enter upon a war with other nations, in fuch cafe the fhips employed in this affiento are to have paffes, and carry flags with different arms from what are ufually borne by the Englifh or Spaniards, fuch as his catholic majefty fhall pleafe to make choice of; in order to the fecuring of which, her Britannic majefty will take upon her to follicit and obtain, that in the enfuing general treaty of peace an exprefs article may be inferted, that all the princes may take notice of it.
XLI. That all the contents of this prefent contract thall be fully, and fincerely, and punctually execured, for the term of 30 years, during which this affiento is to continue, and the three years farther, which are allowed to the affientifts for the getting in their effects, and balancing their accounts, as has been already mentioned.
XLII. And finally, his majefty grants to the faid aflientifls, their agents, factors, minifters, officers civil and military, as well at fea as at land, all the favours, freedoms, privileges, and exemptions, that have ever been granted to any former affientifts, without any reftriction or limitation, fo far as they are not contrary to what is agreed and expreffed in the foregoing articles; which the affientifts do likewife oblige themfelves to accomplifh, and execute entirely and punc. tually.
Befides the foregoing articles, ftipulated on behalf of the Englifh company, his catholic majefty confidering the lofles which former affientifts have fuftained, and upon this exprefs condition, that the faid company fhall not carry on nor attempt any unlawful trade, directly nor indirectly, under any pretence whatfoever; and to manifeft to her Britannic majefty how much he defires to pleafe her, and to confirm more and more a ftriet and good correfpondence, he has been pleafed, by his royal decree of the 12 th of March, in this prefent year, to allow, to the company of this affiente, a hip of 500 tons yearly, during the 30 years of its continuance, to trade therewith to the Indies; in which his catholic majefty is to partake a fourth part of the gain, as in the affiento; befides which fourth, his catholic majeity is to receive 5 per cent. out of the neat gain of the other three parts which belong to England; upon this exprefs condition, that they may not fell the goods and merchandizes, which each of thefe hips thall carry, but only at the time of the fair. And, if any of thefe hips fhail arrive in the Indies before the flota's and galleons, the factors of the affiento fhall be obliged to land the goods and merchandize (with which they fhall be laden) and put them into warehoufes that hall be locked with two keys; one of which ta remain with the royal officers, and the other with the factors of the company; to the end the faid goads and merchandiza may be fold, during the continuance of the faid fair only; and they are to be free of all duties in the Indies.

Given at Madrid, the 26 th of March, 1713 .
I, The Kinge
Remanks.
We having promifed to incorporate throughouf this work our treaties of commerce, we judged that it might be expected this of the affiento fhould not be omitted, notwithfanding its ceffation with Spain, according to the tenour of the treaty
of Aix-la-Chapelle. For, as this contrad has thifted hands from time to time, it may one day be brought about in the like manner again ; and, therefore, the treaty, and the nature of it, flould be recorded, we apprehend, in a work of this kind, in order to have recourfe to upon any future occafion.

A fhort hiftory of the affiento, with remarks on its nature and tendency.

Although I have already declared my difapprobation of the flave trade in general, yet, from the nature of this work, I am under the neceffity of defcribing the flate of this trade, as well as of others, and to thew what was, as well as what is, its prefent fituation and circumftances, in regard both to the Spaniards and ourfelves.
The Spaniards having in a manner deftroyed the natural inhabitants of Spanifh America, they bave been many years, and ftill are, obliged to perform the work of their mines, and other laborious bufinefs, by negroes, of which they could farce ever obtain the number thiey have wanted; and it is certain, if they were fully fupplied, they would get yearly above twice the filver, perhaps, they now do, or have done, for many years paft.
It mult be confefled they have ufed variety of meafures to obtain them. The Genoefe undertook to fupply them at a concerted price between them; for which end they formed a company called the affiento, who had their factors at Jamaica, Curafoa, and Brazil.
By carrying on the negro trade in this tnanner with Spain, it was a prodigious tour before the negroes got to the Spanifh mines; as firft from Guinea to Jamaica; from thence to Porto-Bello, and then to Panama, where they were re-fhipped on board the fleet, when returning to Callao; which was a voyage of four months at leaft, for they have the wind in their teeth every league of this voyage. After ftaying fome Jittle time at this laft-mentioned port, the negroes were put on fhip-board again, and fent to Arica, which is a voyage of about a month more; and, when landed there, they could not have lefs than 150 miles to the mines: fo that there was not above one negro in three that arrived at Potozi, or the adjacent mines, of thofe that were originally bought by the Genoefe factors for that end. Whereas the negroes that might be fent from Buenos-Ayres, would be liable to none of the inconveniencies that thefe poor wretches fuffered; as paffing through fo many different unhealthy climates, and fo many tedious voyages by fea, enough to wear out bodies of fteel, efpecially confidering how the miferable creatures are accommodated all the time, both with lodging and diet. But the natural way to carry on this trade with the Spaniards, to the moft advantage of the affientifts, is certainly directly from the coalt of Guinea to Buenos-Ayres, from whence they fail four parts in five before the wind; and, when the negroes are landed, pafs through one of the moft plentiful and bealthieft countries in the world, even in a manner to the mines mouth: fo that one may yenture to affirm, that, with careful management, they would not lofe one in 10 .

- Although, according to the foregoing affiento, the aflientifts, had the liberty to fend 1,200 negroes annually to Buenos Ayres, out of the 4,800 wherewith they were allowed to fupPly the Spaniards; yet, if they had been tolerated to have fold double or treble that number there, it might have proved not only more to the benefit of the negro, but of the other pafts of the contract.

The Genoefe, by their ill method of management, made nothing of this contract; nor did their fucceffors, the Portugueze. After them, it fell into the hands of the French, who made fo much of it, that they were enabled, by a computation made from the regifters in Spain, to import into the French dominions no lefs than 204,000,000 of pieces of eight. Yet they at length overglutted the market, and became fufferers, towards the conclufion thereof.
Upon the affiento's falling into Englifh hands, we have not Geen able to make any great advantage by it, on aecount of the unfettled affairs of Europe for many years paft, and our mifunderflanding with the court of Spain, during the long Walpolian adminiftration. See the article South-SEA ComPANY, in regard to the affiento, \&c.
Buenos-Ayres is fituated upon the river of Plata, the mouth of which lies in $35^{\circ}$ fouth laritude; and the town of Buenos-Ayres is fituated on the fouth fide of the river, upon an angle of land, formed by a fmall rivulet called Rio Chuelco.
The fertility of this country exceeds belief, fays Monfieur Acarete du Bifcay, for their plains, which are the largeft in the world, as being 50 , and fome 80 leagues in circumference, are fo covered with all forts of cattle, that 'tis credible co none but thofe who fee them. To give an idea of this matter, I will only mention a deyice the Spaniards have there to hinder the landing of an enemy; which is, to drive fo prodigious a number of bulls, cows, and horfes, to the thore-fide, that they fuppofe it would be an impoffible matter to force a way through them. This Monlieur Acarete
du Bifcay affirms the inhabitants told him, when he was there.
The foil affords all that France and Italy can boaft of, as ta fruit or garden-ware; and for grains, wheat, barley, millet, \&c. thrives no where better, Partridges, the fame author fays ${ }_{2}$ are a penty a-plece ; and beef, veal, mutton, venifon, hares, rabbets, pullets, wild-fowl, \&c, proportionably: and for health, which crowns all the other bleffings, 'tis exceeded by no place upon the fice of the earth, and for that reafon was called Buenos-Ayres, or good air.
That this is the beft way for Great-Britain to carry on the negro and any other trade to the Spanifh Weft-Indies, may he made appear by the plaineft obfervations. For
There runs a noble highway from Buenos-Agres to the pron vince of Los Charcos, in which Potozi and the moft confiderable mines are found ; and, as this province is the fouthermolt of the whole kingdom of Peru, fo confequently all South America may be fupplied with goods or merchandizes of all kind they want this way, infinitely cheaper than any other now in ufe.

## Further Remaris s.

Some have thought that the affiento for negroes being earried on by an exclufive company, either by a confiderable corporation, or by any united company of merchants, who fhould obtain that privilege from the court of $S_{\text {pain, }}$, is injurious to the other trading parts of the kingdom. But this frems be a miftaken opinion; and, therefore, it may be ufeful to fet people right upon this occafion.
All nations have a natural right to regulate the trade and na* vigation of their diftant colonies, by enacting fuch laws within themfelves, and by making fuch treaties with foreign na* tions, as they fhall judge the moft conducive to the general intereft of their mother-countries,
From this principle it is that Great-Britain does not admig either of its own, or the fubjects of any foreign nation, to carry on trade with the Britifl colonies, but under the peculiar reftriction and limitation of Britifh law, and national treas ties. The Spaniards, alfo, having an equal right to regulate the trade of their colonies in America, the fubjects of no nation whatever can carry on a trade with thofe colonies, but under the peculiar reftriction and limitation of Spanifh laws, and national treaties. To do otherwife is violating thofe laws, or treaties ; carrying on contraband commerce, and breaking friendfhip with that kingdom.
The Spaniards, as before obferved, flanding in need of a cenftant fupply of negroes to work their gold and filver mines in Peru and Mexico, and for other fervile and laborious purpofes, have been under the neceffity of contracting with fuch nations who were circumftanced to fupply their wants; they having no fettiements of their own ypon the eoaft of Africa.
The Englih having forts and fettlements in Africa, which give them a right to carry on that trade, the South-Sea company, at the peace of Utrecht, obtained of the court of Spain an exclufive privilege to fupply the Spanifh colonies in America with negroes.
But, according to that contract, not only all the other fubjects of Great-Britain were excluded from that trade, but the fubjechs of all other nations; no other traders being admitted efther to carry negroes, or any other feecies of merchandize, to Spanifh America, except in a way confiftent with treaties which fubfift between Epain and other powers for that purpofe : and thofe other treaties oblige all, except the affientifts for negroes, to carry their merchandize by the way of Old Spain to New, and there pay confiderable duties on their outfet, and on their return; from which the reader may obferve ${ }_{8}$ by the affiento treaty, that the affientifts were exempted. From this fate of the cafe, we cannot be at a lofs to make a right judgment of the nature of the late Britifh affiento, or of any fucure one that Spain may grant to the fubjects of any particular nation, who are able to fupply them; it being a peculiar contract made between Spain and fuch affientifts, to furnifh them with negroes, under certain terms and conditions: and, at the fame time, to exclude all others whatfoever, as well all other the fubjects of the fame nation, who may obtain that contract, as the fubjects of any other nation.
It is extraordinary that any one fhould treat fuch contract in the light of a monopoly, and injurious to the other traders of that nation who have no fhare therein: for a monopory implies nothing lefs than that the general interefts of trade are thereby facrificed to the particular intereft of a few. But this was neither the cafe of the late, nor is it that of the prefent, Britifh affientifts; becaufe the trading intereft of Great-Britain in general never did, nor ever will, legally enjoy the privilege of fupplying the Spanifh Weft-Indies with negroes. For, in the grant of fuch a contract, Spain will never allow it but to certain particulars, exclufive of all other the fubjects of that, or any other, nation; by reafon that would prove the means of depriying the court of Spain of its royal revenues, which arife from the duties paid by other nations in carrying on their trade to the Spanifh Indies, according to thofe treaties, which are different in their nature from that of the affiento.
Sunce then, from the nature and circumfances of this con.

## A S S

tract, none but the particular contractors can enjoy it, and no uation in general ever did, or will; it is weak and abfurd to confider it as monopolizing from others of the fame nation what they have no right to: it is, indeed, taking fuch a proportion of trade out of the fcale of France, who poffeffed it before us, and throwing it into our own. That the affiento is a monopoly in this fenfe is true: but fuch a one that excludes foreign nations from trade, can never be judged detrimental to Britifh fubjects in general.
The Dutch enjoy a very lucrative monopoly of the fice trade of the Eat-Indies; a monopoly that excludes all other nations, as well as Dutchmen in general, from that valuable branch of trade. Let it be fuppofed this trade was to change hands, and to fall into thofe of the Englifh, on condition of being united to the trade of our Eaft-India company, with their exclufive privileges and immunities: was this the cafe, I would afk, Whether fuch Britifh monopoly would be detrimental to the Britifh trading intereft in general, by reafon that a particular Britifi company only pofleffed that trade? W ould not this be a new acquifition of trade to the kingdom, by taking fuch a proportion out of the hands of the Dutch, and throwing it into our own? Could the trading intereft of GreatBritain in general complain of the India company, as being any way prejudicial to their common intereft, in depriving them of what they never before enjoyed? And, if the exclufive right in the fpice trade was in the power of the Mogul, or any other prince, to grant to our India company, and it could not, conffitent with his intereft, be granted to the fubjects of Great-Britain in general, there could be no reafon to complain that particulars hould poffefs it, exclufive of the whole.
To make this point more unexceptionably apparent. Our American plantations, at prefent, depend upon the labour of negroes for their various producions. If ever Great-Britain, by the wiles and machinations of her rivals, be rendered incapable of fupplying her own plantations with negroes; fhould we not be under the neceffity of contracting with fome other nation, who could fupply them? Suppofe a contract for this purpofe was made either with the French or the Dutch, who, having fettements in Africa, might be capable of it; would not this be throwing fuch an additional proportion of trade into the fcale of the Dutch or the French, and taking the fame out of our own, we having hitherto fupplied ourfelves with negroes? If our neceflity for negroes was ever fo great, and our whole dependance for them was upon another nation; fhould we not avoid, if poffible, the granting fuch contract to the fubjects in general of fuch nation, left, while they were exercifing that contract, they thould ruin the whole trade of EngJand to her own plantations?
Was this the cafe, can we fuppofe that fuch nation would not be thoroughly fenfible of this new acquifition of commerce to their country, and that it was leffening that of Great-Britain in the like proportion? Can we fuppofe that the trading fubjects in general of fuch nation would be fo unwife as to grudge, or endeavour to deprive their country of, fo valuable an addition of trade, becaufe fuch were the peculiar circumftances thereof, that they could not in general reap the benefit of it? England's giving fuch a power to any other nation would be as ruinous and deftructive of her trade, navigation, and revenues arifing from her plantations, as it would be to the Spaniards, was that nation to leave the negro-contract free and open to the fubjects in general of any nation who fupplied it.
ASSIENTIST: thus the French call a perfon who is concerned, or has ftock, in an affiento company. See the foregoing article
ASSURANCE, or INSURANCE, a term in commerce, particularly foreign. It fignifies a fecurity, or affurance, given, in confideration of a fum of morey paid, in hand, of fo much per cent. to an infurer, or affurer, to indemnify the infured from fuch loffes as thall be feecified in the policy of affurance, fubfcribed by the infurer, or infurers, for that purpofe.
The rate given for fuch infurance is called the premio, or premium.
The policy is commonly printed, and mult be upon famped paper.
The form thereof is generally as follows:
In the name of God, Amen, A. B. of London,
as well in his own name, as for and in the name and names of all and every other perfon or perfons, to whom the fame doth, may, or fhall appertain, in part or in all, doth make affurance, and caufeth himilif, and them, and every of them, to be infured, loft or not loft, from St Peteriburg in Ruffa, to London,
upon any kind of goods and merchandizes what foever, Joaden, or to be loaden, aboard the gaod fhip called the William and Mary
tons, or thereabouts, whereof is mafter, under God, for this prefent voyage, C. D, or whoever elfe fhall go for mafter in the faid thip, or by whatfoever other name, or names, the fame thip, or the mafter thereof is, or thall be, named, or called ; beginning the adventure upon the faid goods and mer-
chandizes; from immediately following the loading thereof aboard the faid fhip at St Peterburg *.
and fo thall
continue and endure, until the faid thip, with thie faid gooda and merchandizes whatfoever, thall be arrived at London,
and the
fame there fafely landed. Aad it thall be lawful for the faid Ship, in this voyage, to ftop and fay at any ports or places whatfoever
without prejudice to this infurance. The faid goods and merchandizes by agreement are, and thall be valued at
without further account to be given by the affurers for the fame. Touching the adventures and perils which we the affurers are contented to bear, and do take upon us in this voyage: they are of the feas, men of war, fire, enemies, pirates, rovers, thieves, jettifons $t$, letters of mart and counter-mart, furprifals, taking at fea, arrefts, reftraints and detainments of all kings, princes, and people of what nation, condition, or quality foever, barratry $\$$ of the mafter and mariners, and of all other perils, loffes, and miffortunes that have, or lball, come to the hurt, detriment, or damage of the faid goods and merchandizes, \&c. or any part thereof. And, in cafe of any lofs or misfortune, it thall be lawful to the affurers, their factors, fervants, and affigns, to fue, labour, and travel for, in and about the defence, fafeguard and recovery of the faid goods and merchandizes, \& c. or any part thereof, without prejudice to this infurance; to the charges whereof we the affurers will contribute each one according to the rate and quantity of his fum herein affured. And it is agreed by us the infurers, that this writing, or policy, of aflurance, thall be of as much force and effect as the fureft writing, or policy of affurance, heretofore made in Lombardftreet, or elfewhere, in London. And fo we the affurers are contented, and do hereby promife and bind ourfelves, each one for his own part, our heirs, executors, and goods, for the true performance of the premiffes, confeffing ourfelves paid the confideration due unto us for this affurance, by A. B. of London, at and after the rate of
per cent.
In care of lofs, to abate
per cent. [and, in time of war, they add, warranted to depart with convoy.]

In witnefs whereof we the affurers have fubfribed our names and fums. Affured in London the

1, roo I G. H, for one hundred pounds per me received.

1. 200 E. $K$, for two hundred pounds, ditto.

To which is added to the policies for merchandize at prefent the following:
N. B. Corn and fifh are warranted free from all average, unlefs general, or the fhip be ftranded. Sugar, tobacco, hemp, flax, hides, and kins , are warranted free from all average under five pounds per cent. all other goods, the fhip and freight free from all average under three pounds per cent. unlefs general, or the fhip be franded.

- If the infurance be made on a fhip, the words in the policy are-Upon the body, tackle, apparel, ordnance, munition, artillery, boat, and other furniture in the good hip or veffel, cailed, $\& \mathrm{cc}$. And N. B. is added-The fhip and freight are warranted free from average under three pounds per cent. unlers general, or the fhip be franded.
$\dagger$ Jettifon, jetfon, or jetfan (from the French jetter, i, e ejicere, to caft away) a term fignifying any thing thrown out of a hip, being in, danger of a wreck, and by the waves drove on hore.
§ Barratry, cr barretry, in a marine fenfe, is when the mafter of a thip defrauds the owners or infurers, whether by carrying the fhip a different courfe to their orders, or by finking her, deferting her, or embezzling the cargo.-The fame is applicable to the mariners alfo, when they breed diffenfions, and are guilty of any thing injurious to the fhip or cirgo, \&c. Some derive it from the Latin baratro, a rogue, a gallows; others from the Italian barrataria, coth ruprion, or bribery; and others from the old French word barat, a trick.

This is the form when the affurance is made by a number of private or unincorporated underwriters, who refort to private offices for that purpofe; and thefe policies are duly entered, or regiftered, in thefe offices, as remaining teftimonies and vouchers of fuch tranfaction.
There are, befides thefe private offices, two corporations eftablifhed by act of parliament in the city of London, for this pur-pofe.-The one cailed the Royal Exchange Affurance, and the other the London Affurance; the nature and caufe of whofe inftitution I thall give an account of prefently.
In the $43^{\mathrm{d}}$ of Elizabeth it was lawful for the lord chancellor to award under the great feal one ftanding commiffion, to be renewed yearly at leaft, for the decifion of differences arifing upon policies of affurance in London; which commifion was direfted to the judge of the admiralty, the recorder of London, two doctors of the civil law, two common lawyers, and
eight
eight merchants; which commifioners were to mieet weekly, and to have power to fummon and examine witneffes, and hear and determine all caufes in a fummary way, fubject to appeal to the lord Chancellor, \&c. And, in the $13^{\text {th }}$ and $144^{\text {th }}$ of Charles II, foveral additional privileges'were granted to this Charles II, feveral additional privileges were granted to this
courr, which was a court of equity as well as of law ; but, at prefent, there is no fuch court in being, and caufes of this nature are tried in the ordinary courts of law.

The Origin of the London and the Royal Exchange Aflurance Companies, for Shipping and Merchandizes.

In the year 1720, the two companies of affurance, that of the Royal Affurance, headed by the Lord Onllow, and that of the London Affurance by the Lord Chetwynd, firft had their eftablifhmen.
Thofe who projected them, had been very induftrious to befpeak the countenance of the Houfe of Commons, for which they had caufed two.leters to be printed and given to the members. But, thefe and all other follicitations having proved ineffectual, the managers for the two companies had recourfe to other expedients; and, underflanding that the civil lift was confiderably in arrears (for which no provifion had been, or could conveniently be made by the parliament, becaufe the grand committee of fupply had been inadvertently difmiffed) they offered to the miniftry 600,0001 . towards the difcharge of that debt, in cafe they might obtain the king's charter, with the parliamentary fanction for the eftablifhment of their refpective companies.
The miniftry, being at a lofs for means to pay the civil lift debt, readily embraced the offer, and, Mr Craggs having the day before prepared the leading members of the Houfe of Commons, Mr Aiflabie prefented, May the 4 th, to the houfe, the following meffage :

- His majefly having received reveral petitions from great - numbers of the moft eminent merchants of the city of - London, humbly praying that he would be gracioully - pleafed to grant them letters patent, for erecting corpora-- tions to aflure fhips and merchandize ; and the faid mer-- chants having offered to advance and pay a confiderable - fum of money for his majefty's ufe, in cafe they may ob-- tain letters patents accordingly : his majefty being of opi-- nien, that erecting two fuch corporations, exclufive only - of all other corporations and focieties for affuring of fhips - and merchandizes, under proper reftrictions and regula© tions, may be of great advantage and fecurity to the trade - and commerce of the kingdom, is willing and defirous to - be ftrengthened by the advice and affiftance of this houfe, - in matters of this nature and importance. He therefore - hopes for their ready concurrence, to fecure and confirm - the privileges his majefty fhall grant to fuch corporations, - and to enable him to difcharge the debts of his civil go-- vernment, without burdening his people with any new aid ' or fupply.'
Purfuant to the meflage, a bill was brought in to enable his majefty to grant letters of incorporation to the two companies, which paffed both houfes, and received the royal affent.

## The Ónigin of the two Assurances Companies,

 established in the City. of London.By 6 Geo. I. c. 18. His majefty was impowered to grant two charters for affurance of fhips and merchandize, $\& \mathrm{cc}$. and to incorporate the adventurers, in confideration of the beforementioned fum of money, by them to be advanted. The ftatute runs:
Sect. i. It fhall be lawful for his majefty, by two charters, to grant fuch perfons, who thall be named therein, and admitted as members into the faid corporations, fhall be each a feparate body politic and corporate, for the affurance of lhips and merchandizes at fea, or going to fea, or for lending money upon bottomry. And the faid corporation fhall have power to chufe their governors, direftors, and other officers ; and the governors and directors thall continue in their office for three years; and, in cafe of death or removal, be fupplied as hall be prefcribed in the charters; and each of the faid corporations hall be capable by law to purchafe lands, not exceeding 10001 . per ann.
Sect. A. Each of the two corporations fhall be obliged to caufe luch fock of ready money to be provided, as thall be fufficient to anfwer all juft demands for lofies, and fhall fatisfy all fuch demands; and, in cafe of refufal or neglect, the parties alfired may bring action of debt, \&c. in any of his majefty's courts of record at Wellminfter, in which the plaintifts $\mathrm{m} y \mathrm{y}$ declare, that the fame corporation is indebted to them in the romies demanded, and have not paid the fame acco:ding to this at.
Sect. 6. The cerporations, in genera: courts, may raife fuch capital flocis, cither by taking fubfcriptions of particular perfis, or by culls of money from their members, or by fuch wirm wis, as to fuch general courts fhall feem expedient; and all fubleribers flall bave a hare in the capital

Voz. 1.
frock, and thall be admitted members, but no perfori thatit be intitled to any greater fhare in the flock, than the money which they thall have paid.
Sect. 7. The corporations fhall have power, in their general courts, to call in from their members any farther fums as Shall be adjudged neceflary; and, in cale any member fhall refufe to pay his hare at the times appointed, by notice in the Gazette, and upon the Royal Exchange, the corporation may not only fop the dividends payable to fuch member, but alfo ftop the transfers of the flares of fuch defaulter, and charge , him with intereft at 8 per eent. per ann. and; if the principal and intereft fhall be unpaid three months, the corporations, or their courts of directors, may authorize perfons to fell fo much of the fock of fuch defaulter, as will fatisfy the fame; and the money fo called in fhall be deemed capital ftock. Neverthelefs, the corporations in a general court may caufe any fums called in to be divided amongft the then members, and the fhares in the capital fall be proportionably abated.
Sect. 8. For enabling the corporation to lend money on parliamentary fecurities, they fhall have power to borrow money upon bonds, under their common feal, at fuch intereft, for any time not lefs than fix months, as they hiall think fit, fo as the principal fhall not exceed the principal monies then owing to them on fuch parliamentary fecurities; and fuch bonds fhall not be chargeable with ftamp duties.
Sect. 9. The Chares in the capital flock fhall be transferrable and devifable; and their bonds fhall be affignable and recoverable, as his majefty by the chatters fhall prefcribe; and the capital ftock fhall be adjudged a perfonal, and not a real eftate, and thall go to the executors, and not to the heir.
Sect. io. The flock fhall be exempted from taxes, and no go vernor, director, or other officer of the corporations, hall for that caule be difabled from being a member, of parliament, nor in refpect of fuch thare be liable to be a bankrupt; and no ftock in the corporations fhall be fubject to foreign attachment by the cuftom of London, or otherwife.
Sect. in. His majefty, by the faid charters, may grant to each of the corporations power to make by-laws, and fuch farther powers relating to the affurance of fhips, \&c. or lending money upon bottomry, as to him thall feem meet.
Sect. 12. All other corporations, and all partnerhips for affuring thips or merchandizes at fea, or for lending money upon bottomry, fhall be reftrained from underwriting any policies, or making any contracts for affurance of thips or merchandizes at fea, or going to fea, and from lending money by way of bottomry; and if any corporation, or perfons acting in fuch partnerfhip (other than one of the two corporations to be eftablifhed) hall underwrite any fuch policy, or make fuch contract for affurance of fhips, \&c. or agree to take any premium for fuch policies, every fuch policy flall be void, and every fum fo underwritten fhall be forfeited, and may be recovered; one moiety to the ufe of the crown, the other to the perfon who fhall fue for the fame in any court of record at Weftminfter. And if any corporation; or perfons acting in fuch partnerfhip, agree to lend money by way of bottomry contrary to this'act, the fecurity fhall be void, and fuch agreement fhall be adjudged an ufurious contract: neverthelefs, any particular perfon fhall be at liberty to underwrite policies, or may lend money by way of bottomry, fo as the fame be not on the account or rifque of a corporation, or of perfons acting in partnerthip.
Sect. 13. If any perfon hall forge the common feal of either of the corporations, or counterfeit or alter any policy or obligation under the common feal, or fhall offer to difpofe of, or pay away, any fuch counterfeited or altered policy, \&c. knowing the fame to be fuch, or thall demand the money therein contained of either of the corporations, knowing fuch policy, \&c. to be counterfeited, \&c. with intent to defraud the corporation, or any other perfon, fuch offender being convicted, hall be guilty of felony without beneft of clerg'. Sect. 14. No perfon fhall be capable of being elected governor, fub-governor, deputy-governor, or direchor, of either of the faid corporations, during the time he fhall be governor, \&c. of the other corporation; and, if any governor, \&c. or member of either of the faid corporations, having any fhare in the capital ftock of that corporation, fhall in his own name, or in the name of any other, purchafe any thare in the ftock of the other corporation, the fhare fo purchafed fhall be forfeited; one moiety to the ufe of his majcity, the other to the profecutor, to be recovered as before-mentioned. Sect. 15 . Upon three years notice to be printed in the Gazette, and afixed upon the Royal Exchange, by authority of parliament, at any time within $3^{1}$ years, to be reckoned from the dates of the two charters, and upon payment by parliament to the corporations of the fums of 300,0001 . which the corporations were to pay to his majefly without intereft, the corporations fhall ceare; and any vote of the Houfe of Commons, fignifid by the Speaker in writing, to be inferted in the Gazette, and affixed on the Royal Exchange, fhall be deemed fufficient notice.
Sect. 16. If, after the cxpiration of 31 years, bis majefty fhail judge the farther continuance of the faid corperations

## A S S

to be hurtful to the public, it fhall be lawful, by letters patents under the great feal, to make void the fame corporations; that the fame fhall become void accordingly without any inquifition, fcire facias, \&zc.
Sect. 17. In cafe the corporations fhall be redeemed within 3 I years, or be revoked by letters patents after 3I years, the fame corporations, or any corporation with like powers, \&cc. fhall nor be grantable again.
Sect. 16. It fhall be lawful for the South-Sea company, and for the Eaft-India company, to lend on the bottom of any fhip, and on the goods on board any hip, in the fervice of the faid companies refpedively, to any captains, or other perfons employed in the fervice of the companies, any money by way of bottomry, this aft notwithftanding.
Sect. 29. If any governor, or member of either of the corporations, fhall, on account of the faid corporations, lend to his majefty money by way of loan, or anticipation on any part of the revenues, other than fuch funds on which a credit of loan fhall be granted by parliament, the faid governor, \&c. or other members confenting to fuch loan, being convitted thereof, fhall forfeit treble the value of the fums fo lent ; one fifith part to the informer, to be recovered in any court of record at Weftminfter, by action of debt, \&c. and the refidue to be difpofed of to public ufes, as fhall be directed by parliament.
Stat. 7 Geo. I. cap. 27. fect. 26. The corporation, called the London Affurance, having paid into the Exchequer 111,2501. in part of $300,000 \mathrm{l}$. and having covenanted to pay 38,7501 . the farther part thereof in three months, and the corporation, called the Royal Exchange Aflurance, having done the like, the refidue of the faid fums, amounting together to $300,000 \mathrm{I}$. thall be releafed.
By fat. 8 Geo. x. cap. 15 . fect. 25. Where the Royal Exchange Affurance and the London Affurance are fubjected to pay double damages befides cofts, the plaintiffs thall recover againft them only fingle damages and cofts.
By ftat. 11 Geo. I. cap. 30. fect. 43. On all actions of debt againft either of the corporations, called the Royal Exchange Affurance and the London Affurance, upon any policies under the common feal, for the affuring of any fhip or merchandizes at fea, or going to fea, it hall be lawful for the faid corporations to plead generally, that they owe nothing to the plaintiff; and in all actions of covenant againft either of the faid corporations upon any policy under the common feal, for the affuring any fhip or merchandizes at fea, or going to fea, it fhall be lawful for each of the corporations to plead generally, that they have not broke the covenant in fuch policy contained; and, if thereupon iffue be joined, it thall be lawful for the jury to give fuch part only of the fum demanded, if it be an action of debt, or fo much in damage, if it be an action of covenant, as it fliall appear upon the evidence, that the plaintiff ought in juftice to have.
Sect. 44. When any veffel or merchandizes fhall be infured, a policy duly famped fhall be iffued or made out, within three days at lartheft ; and the infurer, neglecting to make out fuch policy, fhall forfeit 1001 . to be recovered and divided as other penalties may be, by the laws relating to the ftamp duties; and all promiflary notes for affurances of thips or merchandizes at fea, or going to fea, are declared void.
The policies of affurance are now a-days fo general, that almoft all thofe curious queftions that former ages, and the civilians according to the marine law, and the common lawyers too, have controverted, are now out of debate ; fcarce any misfortune that can happen, or provifion to be made, but the fame is takencare for in the policies that are ufed at prefent; for they infure againft heaven and earth, florms, enemies, pirates, rovers, \&c. or whatfoever detriment fhall happen, or come to the thing infured, is provided for.
Affurances are of various forts, fome being to places certain, others general: thofe that are made to places certain, are commonty upon goods laden, or to be laden aboard outward, and until the fame adventure fhall be laid alhore at fuch a port.
Or upon goods laden, or to be laden, homeward, in fuch a fhip, till the adventure fhall likewife be landed.
Or elfe upon goods out and in, with liberty to touch at all ports as are mentioned in the policy.
So likewife on thips that go trading voyages, as round to Cadiz, and that it hall be lawful, after the fhip's delivery of the goods there, to take in at the fame purt another cargo, and with that proceed to the Weft-Indies, or other ports and back again to Cadiz, and from thence to London ; this policy, being general and dangerous, feldom procures fubfrriptions, or at leaft very chargeable ones.
As goods and merchandizes are commonly infured, fo likewife are the fhips, their tackle and furniture: but, in regard there feldom happens a voyage but fomewhat is milfing or loft, the premium commonly runs higher than for merchandize.
Affurances may be made on goods fent by land, fo likewife on hoys and the like, and may be made on the heads of men; as if a man is going for the Streights, and perbaps is in fome fear that he may be taken by the Moors or Turkih pirates, and fo made a flave, for the refe aption of whom a
ranfom muft be paid, he may advance a premium aceordingly upon a policy of affurance; and, if there be a caption, the alfurer mult anfwer the ranfom, that is fecured to be paid on the policy.

## Remarks.

Here follow fome obfervations in regard to affurances on fhipping and merchandizes, and fome of the principal cafes relating thereto, as they have been adjudged in our courts of law.
If the perfon whofe name is ufed in the affurance, be in time of war taken to be no friend to the ftate, there is danger to pay the affutance, if, after the fubfcription of the affurer, the goods fhould be arrefted and made forfeited, to anfwer the fame to the prince, as it often happens *. Lex. Mercat. by Malines, and Molloy de jure marit.

- If this be law, how does it confilt with the infurance of the
fhipping and merchandize of enemies in times of war?
If goods are tolen or embezzled on thipboard, the mafter, not the affurer, is refponfible. So if the goods be loft in default of the pilot $\dagger$. Lex Mercat. Malines.
+ Here we fee, that an indemnification from theff, in the poIicy, is liable to exception.
Thofe alfurances are moft dangerous, when there are thefe words inferted, loft or not loft; which is commonly done, when a thip hath been long miffing, and no tidings can be had; the premio (efpecially in time of war) will run very high, fometimes 30 or 40 per cent. and though it happens, at the time that the fubfription is made, the fhip is caft away, yet the affurers mult anfwer.
But, if the party that caufed the aflurance to be made, faw the fhip wrecked, or had certain intelligence thereof, fuch fubfcription will not oblige, the fame being accounted a mere fraud $\ddagger$. Locinius, lib. 2. cap. $5 . \$ 9$, 10 .
$\ddagger$ This fhews, that infurers ought to call about for the beft intelligence.
So likewife if the affured, having a rotten veffel, thall affure upon the fame more than the is worth, and afterwards give order that, going out of the port, fhe fhould be funk or wrecked, this will be fraudulent, and not oblige the aflurers to anfwer. Arthur Stockden's cafe. Mich. 26. Car. II. in B. R. Afterwards convicted by information for the fraud. One having a doubtful account of his hip that was at fea, viz. that a Chip, defcribed like his, was taken, infured her, without giving any information to the infurers of what he had heard, cither as to the hazard, or circumftances, which might induce him to believe that his thip was in great danger, if not actually loff.
The infurers bring a bill for an injunction, and to be relieved againft the infurance as fraudulent.
Lord chancellor declared, That the infured had not dealt fairly with the infurers in this cafe; he ought to have difclofed to them what inteligence he had of the Mup's being in danger, and which might induce him, at leaft, to fear that it was loft, though he had no certain account of it, for, if this had been difcovered, it is impoffible to think, that the infurers would have infured the fhip at fo fmall a premium, fo that the concealing of this intelligence is a fraud.
Wherefore decreed the policy be delivered up with cofts, but the premium to be paid back, and allowed out of the cofts. This was in the cafe of Da Cofta verfus Scandret. I he fame point was determined by Lord Macclesfield in the following term, in the cafe of Weaver verfus Fowler. 2 P. Williams, 170.

In the year 1678 , one Newnham, Perkins, and Stoakes were owners of a veffel called the May-flower-ketch, the veffel coming laden with wines, on the account of Fierbrafle and Stone, to the Ifle of Wight; Perkins, being then in the fame place, contrives with one Ivy, the mafter, to fell the freighters goods privately; and, that being effected, to go out to fea fome frmall diftance from the ilie, and there privately fink the veffel, and pretend fhe ftruck, and then foundered by the extremity of weather. The plot being laid, Perkins haftens up to London, and makes a policy of affurance on the veffel; which being done, he remits his orders to Ivy, to put in execution his contrivance, who accordingly did; and, the goods, or the beft of them, being difpoled of, ftands out to fea, and then with his own hands, by the force of an iron crow, makes a hole in the hold, and then in his long boat, (the crew perceiving the veffel to be finking) conveys himfelf and mariners afhore ; Ivy remits up advice of the lofs, and Perkins, (as if he had never known any thing of the matter) demands the monies affured, and thereupon brings an action for the fame; but, before- the caufe came to a trial, Fierbraffe and Stone bring trover againtl Perkins, and thereupon the whole practice came out, and a verdict was had againft the defendant, with this further, That, if Perkins would proceed on his action on the affurance, he muft expect that this practice and fraud of his would totally poifon his af-
furance ; and thereupon, being well advifed, never proceeded. Hill. $3_{2}$ Car. II. B. R.

## Thomas Knight, Efq; againft Richard Cambridge.

Cambridge, à infurer, brought a writ of error upon a judgment given againft him in the Common Pleas, in an action ment given by the plaintiff upon a policy of infurance of the fhip Riga Merchant, at and from Port Mahon to London. And ferjeant Brandthwaite for the plaintiff in error infifted, that the judgment was erroneous, becaufe the breach was ill affigned : becaufe the policy was, that the defendant Cambridge fhould infure the faid Thip, among other things, againft the barretry of the mafter, and all other dangers, damages. and misfortunes, which chould happen to the prejudice and damage of the laid thip; and the breach affigned was, that the fhip in the faid voyage, per fraudem et negligentiam magiftri navis prædidte depreffa et fubmerfa fuit, et totaliter perdita et amiffa fuit, et nullius valoris devenit.
This he infifted was not within the word, the meaning of the word barretry; but the breach fhould have been expreffed, that that the fhip was loft by the barretry of the mafter. Befides, the owner of the goods has a remedy againft the owners of the fhip, for any prejudice he receives by the fraud, or negleEt of the mafter; and therefore there is the lefs reafon the infurer thould be liable. Befides, if the word barretry fhould import fraud, yet it does not import neglest; and the fact here alledged is, that the hhip was loft by the fraud and neglect of the mafter. But the court was unanimoully of opinion, that there was no occafion to aver the fact in the very words of the policy, but, if the fact alledged came within the meaning of the words in the policy, it is fufficient. Now barretry imports fraud, Du Frefne Gloffar. verbo baratria, fraus, dolus. And be that commits a fraud, may properly be faid to be guilty of a neglect, viz. of his duty. Barretry of a mafter is not to be confined to the mafter's running away with the Thip; and the general words in the policy ought to be conftrued to extend to loffes of the like nature as thofe mentioned before: now loffes arifing from the fraud of the mafter are of the fame nature, as if he had run away with the hip, fuppofing barretry was to be confined to that, which it is not, becaufe it imports any fraud. And judgment was affirmed, April 27, 1724. Lord Raymond 1349 . So that, if the affurance is againft the barretry of the mafter, and the breach affigned is, that the fhip was loft by the fraud and neglect of the mafter, this is proper; it is the meaning of the words of the policy, and it is not neceflary to ufe the very words. See the article Barretry.

## Green verfus Young.

In evidence upon the trial in an ation upon a policy of infurance, the cafe appeared to be, That the infurers agreed to infure the fhip from her arrival at
in Jamaica, during her voyage to London; and an embargo was laid upon the 0hip by the government; and afterwards they feized the thip, and converted it into a fire-/hip, and offered to pay the owners. And the queftion was, if this would excufe the infurers? and Holt, chief juftice, feemed to incline, that it would not, and that it was within the words, detention of princes, \&c. but he gave no abfolute opinion, becaufe the caufe was referred to three foremen of the jury. In the fame cafe he faid, that if a policy of affurance be made to begin from the departure of the Chip from England, until, \&c. and after the departure damage happens, \&c. and then the fhip deviates; though the policy is difcharged from the time of the deviation, yet, for the damages fuftained before the deviation, the infurers thall make fatisfaction to the infured. Lord Raymond 840 . So that, if the government lay an embargo upon a fhip, and afterwards feize her, and convert her into a fire-fhip, the infurers are liable.
A policy againft reftraint of princes will not extend to practices againft the laws of countries, to a feizure for not paying cuftom, and the like. 2 Vern. 176.

## Goddard verfus Garrett.

The defendant had lent money on a bottomry bond, but had no intereft in the fhip or cargo; the money lent was 300 l . and he infured 4501 . on the fhip; the plaintiff's bill was to have the policy delivered up, by reafon the defendant was not concerned in point of intereft, as to the fhip or cargo. Cur. rake it that the law is fetted, that, if a man has no intereft, and infures, the infurance is void, although it be expreffed in the policy, interefted or not interefted; and the reafon the haw goes upon is, that thefe infurances are made for the encouragement of trade, and not that perfons unconcerned in trade, nor interelled in the fhip, fhould profit by it; and, where one would have benefit of the infurance, be muft renounce all intereft in the fhip. And the reafon why the law allows that a man, having fome intereft in the fhip or cargo, may infure more, or five times as much, is, that a merchant cannot tell how much, or how little, his factor may have in readinets to lade on board his fhip. And it was faid, that the ulual insereat allowed on bottonry was 3 l. per cent. per men-
fem, and you may infure at 6 or 7 per cent. for the voyage: fo, if this practice might be allowed, a man might be fare to gain 30, or more, per cent. Per cur. Decree the policy of infurance to be delivered up, to be cancelled.
Note, that, in this cafe, notice was taken in the policy, that it was to infure money on bottomry.
Note alfo, that in this cafe, the fhip furvived the time limited in the bottomry bond, and wa, loft withia the time limited in the policy. So, if infurance good, the defendant might be intitled to the money on the bond, and alfo of the policy. 2 Vern. 269, 270.

The cafe of Le Pypre againft Farr, ori a policy of infurance on goods by agreement valued at 6001 . and the infured not to be obliged to prove any interef.
Lord chancellor ordered the defendant to difcover what goods he put on board; for; although the defendant offered to renounce all intereft to the infurers, yet he referred it to a mafter to examine the value of the goods faved, and to deduci it out of the value, or fum, of 600 l . at which the goods were valued by the agreement. 2 Vern. 716.

## Harman againft Vanhatton.

The defendant lent the plaintiff 2501 , on a bottomty bond, and afterwards infured on the fame fhip; but the infurance was larger, as to the voyage, there being liberty to go to other ports and places, than what were contained in the condition of the bottomry bond. The fhip being loft, the defendant recovered the money on the policy of infurance, and alfo put the bottomry bond in fuit: the hip, though loff, had deviated from the voyage mentioned in the bond, in going to Virgin Gardo to buy falt.
The plaintiff brought his bill, pretending the defendant ought not to have a double fatisfaction to recover both on the infurance, and alfo on the bond, he having infured only in refpect of the money he had lent on bottomry, and had no other intereft in the fhip or cargo; and therefore the p'aintiff would have had the benefit of the infurance, paying the premium. Sed non allocatur. So that, if one lends money on a bottomry bond, and afterwards infures on the fame fhip, and the fhip is loft, he thall have both the benefit of the infurance, and the money due on the bond too.
The defendant having paid the premium, was intitled to the benefit of the policy, and run the rifque, whether the fhip was loft or not ; and the infurers might as well pretend to have aid of the bottomry bond, and to difcount the money recovered thereon, as the plaintiff to have the moncy recovered on the policy, to eafe the bottomry bond. So that paying the premium intitles the party to the benefit of the infurance.
The plaintiff alfo charged, that the defendant had promifed and agreed to deliver up the bond, on the plaintiff's making up the money recovered on the policy, as much as he lent on the bond, with intereft and cofts, and proved fuch offer and promife. Sed non allocatur. It was but nudum pactum, a voluntary offer, and on condition that the money was then paid, and it was not complied with. So that an offer to deliver up a bond upon terms not complied with is not binding; and, if made without confideration, is nudum pactum. 2 Vern. 717, 718.
If a merchant infures fuch a hip generally; and in the policy it is expreffed of fuch a burthen, the thip happens then to be laden, and after mifcarries, the infurer fhall not anfwer for the goods, but only for the fhip. Locinius, lib. ii. cap. 5 . §. $7,9,10$.
It matters not in the policy, whether the particular wares and goods are named, but generally the principal wares, and all other commodities laden or to be laden, for the infured, or for his account, or for any other.
If a hip be infured from the port of London to Cadiz, and, before the fhip breaks ground, takes fire, and is burned, the affurers in fuch cafe fhall not anfwer, for the adventure begins not till the lhip is gone from the port of London ; but, if, the words had been, At, and from the port of London, there they would upon fuch a misfortune have been made liable. Mol. de Jure Marit.
If fuch an affurance had been from London to Cadiz, and the thip had broke ground, and afterwards been driven by florm to the port * of London, and there had took fire, the infurers mufl have anfwered; for the very breaking of ground from the port of London was an exception of the' voyage. Mol. de port of Lond.
Jure Marit.

- The port of London extends from the North Foreland in the ifle of Thanet, over in a line to the Nafe in Effex, and from thence to London Bridge.

On the other hand, if a man at Cadiz infures a thip from thence to London, if a lofs happens, the affurer, if he comes into England, fhall anfwer by the common law; for though the place where the fubfription was made, and the premium given, was in a foreign country, yet that is not material; for the action that is brought, is grounded on the promife, which is tranfitory, and not local; and fo it was adjudjed, where
the defendant, in confideration of rol. hid infured, that, if the plaintiff's flip and grood did not come fafe to London, he would pay 100 l . afterwards the fhip was robbed on the fea; and in an agion brought for the 1001 . the plaintiff had judgment, notwith fanding the rolbery, or lofs, was on the main fea, and the fubfeription out of the realm. Mol.
If, after a policy of affurance, a damage happens, and afterwards in the fame voyage a deviation, yet the infured fhall recover for what happened before the deviation, for the policy is difcharged from the time of the deviation only. Salk. $444 \cdot$ -Straaclie cited in Shower, 325 .
If goods are infured in fuch a hip, and afterwards in the voyage it happens the becomes leaky and crazy, and the fupercargo and mafter, by conient, become freighters of another veflel for the lafe delivery of the goods; and then, after her relading, the fecond veffel mifcarries *; the affurers are difcharged: but, if there be thefe words, The goods laden to be tranfported and delivered at fuch a place by the faid fhip, or by any other fhip, or veffel, until they be fafely landed, then the infurers muft anfwer the misfortune.

* This has much been doubted, and opinions of the court have generally inclined againt the infurers. Leg. ult. ad Rhod. Digeft. Paulus, lib. xiv, tit. 2. §. 10.
If a man infure's 50001 , worth of goods, and he hath but 20001. remitted; now, he having infured a real adventure, by the law marine all the affurers muft anfwer pro rata, if a lofs. But, by the opinion of fome only, thofe firft fubfcribers, who underwrit fo much as the real adventure amounted to, are to be made liable, and the reft remitting their premium (10s. per cent. deducted out of the fame for their fubfriptions) are to be dilcharged *. Vide Grot. Introd. Jur. Holl. 212, 213.
*This is more the cuftom of merchants than law.
Debts upon obligation with condition to pay fo much money, if a thip returned within fix months from Oftend in Flanders to London, (which was more by a third part than the legal intereft of the money) and, if fhe do not return, then the obligation to be void. The defendant pleaded that there was a corrupt agreement between him and the plaintiff, 'and that, ' at the time of making of the obligation, that he fhould have no more for intereft than the law permits, in cale the fhip fhould ever return; and avers that the bond was entered into by covin, to avoid the ftatute of ufury. Per Hale, Clearly this bond is not within the fatute, for this is the common way of affurance; and, 'if this were void by the flatute of ufury, trade would be deftroyed, for it is a cafualty whether ever fuch a thip fhall return or not; but he agreed the averment was well taken, becaufe it difclofed the manner of the agreement. Hardres, 418 . Joy againf Kent. Action upon the cafe, upon a policy of affurance of goods from London to Naples; the adventure was to begin in time of the lading at London (dangers of the fea only excepted) with this claufe, Warranted to depart with convoy; the fhip departed with convoy, but was feparated from the convoy by ftrefs of weather, and put into Torbay, and was there detained by contrary winds; afterwards the mater of the fhip, expecting to meet with convoy, departed out of the harbour, but could not mect the convoy, being hindered by ftrefs of weather, and was taken by the French. I Show. 320. 4 Mod. 58. 3 Lev. 320. Salk. 443.-Judgment pro Quer. Cafe upon a policy, which was to infure the William galley, in a voyage from Bremen to the port of London, warranted to depart with convoy. The galley fet fail from Bremen, under convoy of a Dutch man of war, to the E15, where they were joined with two other Dutch men of war, and feveral Dutch and Englith merchant-fhips, whence they failed to the Texel, where they found a fquadron of Englifh men of war, and an admiral. After a flay of nine weeks, they fet out from the Texel, and the galley was feparated in a ftorm, and taken by a French privateer, taken again by a Dutch privateer, and paid 801 . falvage. And it was ruled by Holt, chief juftice, that the voyage ought to be according to ufage, and that their going to the Elb, though in fact out of the way, was no deviation; for, till after the year 1703, there was no convoy for Chips directly from Bremen to London. And the plaintiff had a verdict. Bond verf. Gonfale, February 14, 1704 , coram Holt, chief jultice, at nifi prius at Guildhall. Salk. 445 .
Warranted to depart with convoy, has been refolved to import, by the ufage of merchants, a continuance with that convoy as long as may be. Lucas's Reports, 287.
A merchant infures his goods from London to Sallee, and there to be landed. The factor, after arrival, having opportunity, fells the cargo aboard the fame thip, without ever unlading her; and the buyer agrees for the freight of thofe gools to the port of Venice. Before the breaks ground, the this takes fire: the affured and buyer are abfolutely without remedy *; for the property of the goods becoming changed, and freight being contracted de novo, the fame was as much as if the goods had been landed. Locin. I. ii. 2. 5. §.9.
* By the laws of Antwerp there is a time allotted, after the flup arrives at her pore, how long the advencure is to be borne by the infurers, which is about $1_{5}$ days. Art. $I_{3}$.

And to it is if the factor, after her arrival, had contraced foe freight to another port, and the frip had happence to take fire, the affurers are hereby abfolutely difcharged for ever.
If a thip be inlured from London to
and blank being left by the lader, to prevent her furprize by the enemy, in her voyage the happens to be caft away; though there be private inflructions for her port, yet the infured fir down by the lofs, by realon of the uncertainty. 'So if a blank is Isft in the policy for the value of the fhip, or lading, if a lors, and there be not words that may fupply, the infured may indanger the policy.
The taking of a fhip, that is infured, by pirates, is to be underftood the perils of the fea. Stiles, 132 2. 2 Roll's Abr, 248 Where goods are redeemed from a pirate, contribution muft be paid by all, becaufe the redemption is made for the fafery of all; but, if the pirate be once mafter of all, and yet take but fome fecial goods, whether from flip or merchant, and noe as a confideration for fparing the reft, in this cafe, becaufe the remainder is not affured thereby, but freely fpared, no contribution is to be made for the taken'goods to charge any affurer with any part thereof. So contribution fhall be made for goo's fpoiled by wet, or other accident: or, if it be needful to lighten a hip for her eafier entry into harbour or channel, two parts of the lofs fall upon the goods, and the third upon the fhip; unlefs the fhip is more worth than the lading, and the charge of the goods be not the caufe of her inability to enter, but fome bad quality proceeding from the fhip itfelf; or that otherwife it be provided in the charter-party. Lex Mercat. by Ma lines, p. iog. See the article Average.

* Indebitat. aflumplit pro præmio ; upon a policy of affurance upon fuch a fhip, the defendant demurred fpecially, becaufé he did not hhew the confideration certainly what the premium was, or how it became due, fed non allocat', for it is as good as indebitat. pro quodam falario, which hath been adjudged good, 2 Levinz, 153 . Fowlk v. Pinfacho.
* Indebitatus affumpfit is ufed in declarations and law proceedings, where one is indebted unto another in any certain fum and the law creates it: it is alfo an aktion thereupon.

Policy of affurance to warrant a thip for 12 months; the fhip did not perifh within the time of 12 months, being accounted according to the months of January, February, \&c. but within 12 months, reckoning 28 days to the month; refolved that the policy was not forfeiced. Cited in Sir Woollafton Dixey's cafe, I Leon. 96.
After notice of lofs, the infured, if he thinks fit, for that he hath infured the moft of his adventure, or that he would have the affiftance of the infurers, when there is hope of recovery of the adventure, he may then make a renunciation of the lading to the infurers, and come in bimfelf, in the nature of an infurer, for fo much as fhall appear he bath borne of the adventure beyond the value infured. Locinius, 1. 2. c. 5. §.8. But, if the merchant fhall not renounce, yet there is a power given in the policy for him to travel, purfue, and endeavour a recovery, if poffible, of the adventure, after a misfortune, to which the aflurers are to contribute; the fame being but a trouble to give eafe to the affurers.
If prohibited goods are laden aboard, and the merchant infures upon the general policy, which always contains thefe words: Of the feas, men of war, fire, enemief, pirates, rovers, thieves, jettifons, letters of mart and counter-mart, arrefts, reftrainments, and detainments of kings and princes, and all other perfons, barretry of the mafter and mariners, and of all other perils, loffes, and misfortunes whatfoever they be, and howfoever they fhall happen to come, to the hurt and detriment of the goods and merchandize, or any part or parcel thereof; whether, if fuch goods be lawfully feized as prohibited goods, the infurers ought to anfwer? It is conceived they ought not, and the difference hath been taken, where the goods are lawful, at the time of lading, to be imported into that country for which they are configned; but by matter ex poff facto, after the lading, they become unlawful, and after arrival are feized, there the affurers muft antwer, by virtue of the claufe, And all other perils, \&c. But if the goods were, at the time of lading, unlawful, and the lader knew of the fame, fuch affurance will not oblige the aflurers to anfwer the lofs; for the fame is not fuch an affurance as the law fupports, but is a fraudulent one. Molloy de Jure Maritim.
A policy was made from Cadiz to Vera-Cruz in New Spain, upon monies lent upon bottomry, and upon any kind of goods and merchandize whatfoever, laden aboard the good fbip called the Noftra Signora del Carmen and Mary Magdalen, the adventure beginning immediately from the lading before a day to corse, and the monies from the time they were to be Jent, and fo to continue fiom Cadiz to Vera-Cruz, and after delivery, with provifo to flay at any port or place in her voyage, and likewife to touch at Purto-Rico, and there to lac'e and unlade, without any prejudice to the affurance, the cargo being valued at $1 ; 001$. ferling, without account, \&cc. againt feas, men of war, fires, enemies, pirates, rovers, thieves, jettifons, letters of mart and counter-mart, furprizals at fea, arrefts, reftraints, and detainments of all kings, princes, and people, of what nature, condition, or quality whatoever. The
fhiy,

Ghip, being lden at Cadiz, did depart towards Vera-Cruz; and, before arrival there, touching at Porto-Rico, the goods were there feized and arrefted. In an action brought upon the policy, the defendant came in and pleaded, That the fhip, at her arrival in her voyage to the port of Rico, was laden with goods and merchandizes prohibited, and the fame, and afo the fhip, did there become forfeited, by default of the proprietors, and was there feized and taken. The queftion was, If the owners fhould infure, and then order prohibited goods to be laden, whether that an arreft upon the fame fhould intitle them to a recovery? The fecond objection was, If (as the defendant had pleaded his plea) the fame was good! As to the firft, the court did all incline, That the infurance ought to be bona fide, i. e. the reffraint ought to be of fuch goods as by law were not reftrainable; but furely that cannot be, for the intention of policies are to warrant the perils of 11 manner of goods, in all manner of cafes: fo that, if there be a lading bona fide, be it prohibited, or not, the fame, in cafe of lofs, ought to be anfwered, unlefs it were a fraudulent contrivance : but to the fecond it was refolved, that the plea was infufficient; for, admitting the fame fhould not oblige the infurer, yet, becaufe the defendant did not fhew that the goods were laden either by the infured, or by their factor, or order, otherwife the fame fhould not conclude them; for, perhaps, the mafter, or his mariners, or a ftranger, might load them on board, without order; fo that, upon the mere infufficiency of the manner of plcading, and not of the matter, the court gave judgment for the plaintiff. Houband verf. Harrifon. Hill. 31, $3^{2}$ Car. II. B. R. Judg. in Pafch. feq. Like judgment was given againft Lethieullier adverf, Houbland, Trin. $3_{2}$ Car. II. in B. R. Rot. 168, in the fecond cafe.
But if a merchant will freight out wool, leather *, and the like, or fend out goods in a foreign bottom $t$, and then make a policy, the fhip happens afterwards to be taken, by reafon of which there becomes a forfeiture of thip and lading, the infurers are not made fubjeft to anfwer the damage; for the very foundation was illegal and fraudulent, and the law fupports only thofe affurances that are made bona fide; for, if otherwife, and men could be infured againft fuch actions, they would deftroy trade, which is directly to thwart the infittution and true intent of all policies.

* 12 Car. II. cap, 32. 14 Car. II. cap. 7.
+12 Car. II. cap. 18.
But, if goods thould happen to be lawfully infured, and afterwards the veffel becomes difabled, by reafon of which they relade, by confent of the fupercargo, or merchant, into another veffel, and that veffe!, after arrival, proves the fhip of an enemy, by reafon of which the thip becomes fubject to feizure; yet, in this cafe, infurers fhall anfwer, for that this is fuch an accident as is within the intention of the policy: Ritterhuf. ad Leg. Contract. 23. de Reg. Jur. cap. 18. p. 236, 237. Stypman difto loco num. 335.
Several men lade aboard falt, without diftinction, not putting them in facks, and the like. The thip arrives, the mafter delivers to their principals according to their bills of lading, as they come one by one. It falls out that fome of the falt is walhed, or loft, by reafon of the dampnefs of the fhip, and that the two laft men cannot receive their proportion. There are in this cafe thefe things to be confidered:
I. Whether the mafter is bound to deliver the exact quantity? 2. Whether thofe that have received this lofs can charge the affurers?

3. Whether the aflurers can bring in the firft men for a contribution, they having their falt delivered to them completely? Certainly the mafter is not bound to deliver the exact quantity, nor is he obliged to redeliver the very fpecifical falt, but only as men are to repay money, or corn, by diftinction, in a bag, or fack, and out of them; but, if the fault was in not pumping, keeping dry his deck, and the like, then è contra: though, perhaps, there may be a fpecial agreement. Hill. it Jac. in C. B. Lafthow and Tomlinfon's cafe, Hobatt, fol. 88.
Befides, this is a peril of the fea, which the mafter could not prevent, and of neceflity he muft deliver to one firf before another.
As to the fecond, it is no queftion but the affurers fhall anfwer; but whether they fhall bring in the firft men for cqntribution may be fome doubt.
It has been conceived by fome, that they ought not ; for they
delivered their falt to the mafter tanquam in creditum, and were not to expect the redelivery of the fame fecifical falt. But, by others, it has been conceived they ought to contribute pro ratione; for, as goods of necellity, fome mult be flowed in the hod, and that fuch groos feldom efcape the peill of the fea; fo the reft muft of neceffity cont. bute to tha moffortune, and fo make no diftincuon. See the article AverAges
The bills of lading are very ufeful to fettle the differences between the aflurer and the affured, of which ihere are thrse parts; one fent over fea, the other left with the mafter, and the laft remaining with the lader. See the article B.lls of Lrding.

## REMARKs.

For a more comprehenfive view of this fubject, the nature of other points, which have affinity therewith, mult alfo be well underftood: fuch as barratries, bottonries, averages, bills of lading, charter-parties, \&c. and, indeed, the lenie of the marine law, as well as the eftablifhed cuftoms and ufages of traders, as they concern owners, fregghters, mafters of. Ihips, and mariners, \&ic. For there being frequently fo neceffary a dependency and connection between thefe points, and fuch an involution of circumftances, that the evidence, in regard to cafes of infurancing, cannot be come at, nor a ri, ht judgment made, without taking many, and fometimes, perhaps, all of thefe things into due conlideration.
Infurancing is a great encouragement to foreign commerce, feeing it takes the weight of the hazard off from individu Is, and lays it upon numbers: yet thefe numbers are, upon the whoie, gainers by undertaking the hazard, although affecuratonis lucrum \& damnum dependant à mera forte \&o fortuna, as Roccus fays, de allecurationibus.
In cafe of a lofe, 'tis cuftomary for the infurer to pay but 981. for every 1001 infured, or to have 2 per cent. abated, when he fettles with the infured, accordng to agreement in the policy.
As the infurer has a right to the premium, when the agreement is made, that premium, whatever it is, makes a part of the money paid, in cafe of lofs: therefore,

At 10 per cent. premium, the infured receives but 881 .

And fo in proportion in the cafe of any other premium.
In order to thew the fum neceflary to be infured, if the adventurer would cover, or make good hi, outlet, or firft adventure, in cafe of a lofs, let io per cent. be the fuppofed premium on an 1001 . adventure. Then,
As 881 , is to 1001 . io is 1001 . to $1.113: 12: 8$, the fum neceffary to be,infured to make good iool.
As 881 . is to 100 l. fo is rol. to 1 . $1: 7: 3$, the amount of infurance.
All which is proved by the following example, viz.
The fum to be infured - $\quad$ 1. 113: 12: 8 Deduct 2 per cent. or reckon 981 . for 1001 . $2: 5: 5$ The infurer pays, in cafe of a lofs, - - 1. 11I: 7:3 Deduct infurancé on $1.113: 12: 8$, at 10 per cent. in: $7: 3$ Remains the firlt coft of the adventure $\rightarrow$ 1. 100:, 0:0 And fo as to the reft of the articles, or any other adventure, or premium, on a fingle voyage.
According to this example, the fix articles of premium beforementioned, will be fhewn by the following table *.

* In thefe tables there is no regard had to commifions, officecharges, intereft of money, or rifque of infurers, as they ofren vary according to circumitances: for fome people infure themfelves, and pay no commiffion; others employ their factors, and pay them $\frac{1}{2}$ per cent. on the fum infured, and 1 or 2 per cent. on recovering loffes.-The office receives 4 s .6 d . for the policy, and $\frac{x}{3}$ per cent. from the infured upon fettling loffes; intereft is feldom chargeable bur in the cafe of long voyages.-Whatever thefe charges fhall happen to be, they may be deducted, upon any computations, together with the 2 per cent. abated by the infurer. The office-keeper keeps an account with the infured and infurcr, and, with the confent of the infurer, retains in his hands one fhilling in the pound, or five per cent. on fuch premiums an he receives from the infured.

| Premiums. | sums to be infured to make good rool. on a fingle voyage. | Abate 2 per cent. | Remains. | Deduct the infurance, or premium, on the fum infured. | Remains. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| At 101. per cent | 1.113:12:8 | 1. $2: 5: 5$ | 1.111: 7 : 3 | 1. $11: 703$ | 1. 100 |

## A S S

The foregoing computation thews the amount of infurance on one fingle voyage; in the next place will be fhewn how it will ftand with a voyage out and home, or a double voyage \&c. The voyage out is confidered as one fingle voyage, which is already explained in the article of io per cent. premium : and, as to the voyage home, deduct the premium from 98 , as aforefaid: then fay, As the remainder is to the premium, fo is the amount of the firft infurance together with 1001 . to the infurance on the voyage home. -This infurance home added to the infurance out, makes up the total infurance. As for inftance:-The premium of 10 per cent. on 100 l. outfet makes the infurance out 1. II: 7:3; that added to 100 1. makes 1. in : 7 3-Then, to find the infurance home at 10 per cent. premium, fay,
As 88 1. is to 10 , fo is 1 . $111: 7: 3$ tol. $12: 13: 1$.-Then add the $1.12: 13: 1$ infurance home, to the $1.11: 7: 3$ infurance out, it makes 1. 24:0:4* total infurance, to make good iool. out and home; and the fum neceffary to be infured home will, according to the foregoing example, amount to l. 126 : 10: 11 .

* See the following table.

The premium of 40 per cent: which is the higheft premium mentioned, makes the infurance out $1.68: 19: 3$ on 1001 . outret, and the like premium of 40 per cent. home makes the infurance home l. 116:10:6, and is demonitrable from the fame principles: for,
As 58 l. is to 40 l: fo is $1.168:$ 19: 3 to l. 116: $10: 6$ :Then add the infurance out and home, it will make 1. $185: 9: 9^{*}$ total infurance, to make good 100 l . in cafe of a lofs, which is proved from the following example.

* See the following table.

As 581 . is to rcol. fo is 1 . $168: 19: 3$ to
the fum neceflary to be infured home to $\}$ 1.291: 6:4 make good 100 l. firft outfet - - S Deduct 2 per cent. abatement $5: 16: 7$
The infurer pays in cafe of a lofs, - - $\quad 285: 9: 9$ Deduct infurance home on 1.291:6:4, 116: 10.6 at 40 per cent.

168:19:3
Deduct alo infurance out
$68: 19: 3$

## Remains the coft of the firf outfet - - - 100 : - :

And fo as to any other adventure, or premitum, on a double voyage, as may be feen from the following table, viz.

The amount of infurance to make good 1001 . out and home.

| $\begin{aligned} & \text { Premiums out } \\ & \text { and the fame } \\ & \text { home. } \end{aligned}$ | Out. | Home. | Total. |
| :---: | :---: | :---: | :---: |
| $\underset{\substack{\text { Atro per cent. } \\ \text { 20 }}}{ }$ | $1.11: 7: 3$ $18: 7$ | 1. $12: 13: 1$ | 24: 39: 8: 7 2 |
| 20 | 25:12:10 | 32: $4: 4$ | 57:17: |
| 25 | 34: 4: 11 | 45:19:5 | 80: 4: 4 |
| 30 | 44: 2: 4 | 63:11:7 | 107:13:11 |
| 40 | 68:19: 3 | 116: 10:6 | 185:9:9 |

By this table, the difference between high and low infurance will plainly appear, and confequently the advantage the Britifh nation may reap from the fuperiority of her naval force, in time of war, by a prudent regulation of convoys and cruizers, in order to protect our own trade in the firft place, and then to annoy the trade of the enemy; as the one will lower the infurance on our trade, in proportion to the care that fhall be taken of it ; and the other will raife the infurance on our enemy's trade, in proportion to the force that fhall be properly ffationed to annoy it.
As'for inftance, fuppofe our premiums fhould fall from 20 to ro per cent. out, and the fame home, by means of regular and fufficient convoys and cruizers on our part, the difference in our favour would be $1.33: 16: 10$ per cent. out and home, which is a difference of no lefs than $1,015,2001$. on $3,000,0001$. only out and home.
On the other hand, fuppofe fach premiums fhould advance upon the enemy from Io to 15 per cent. on a voyage out, and the fame home, the difference would be $1.15: 7: 10$ per cent. out and home: and, fuppofe fuch premiums thould advance from 30 to 40 per cent. the difference would be $77: 15: 10$ to make good 1001 . thus infured out and home.
As the infurance paid to make good 1001 . outfet, at 40 per cent. premium out, and 40 per cent. home, is $1.185: 9: 9$; and, at 30 per cent. 1. $107: 15 \% 11$.

So the infurance at s o per cent. as above, to make good, or cover, $2,000,000$ out and home, amounts to
And, at 30 per cent. to - . - .

- 1. $3,709,700$

2,153,900
Difference on $2,000,000$ only, out and home 1. 1,555,800

* Infurance at 3 per cent. out, and 5 per cent, horne, amounts to $1.8: 14$ : 1 to cover 100 l . out and home, and to 174,0781 . to cover $2,000,000$ l. out and home.

And, in like manner, the difference of any other premiums, or any other outfet, on a double voyage, may be computed; and, if the computation is made on the greater part of our trade, and that of our enemies, at various premiums, it will amount to an immenfe fum; and thofe nations that pay the loweft premiums of infurance, can afford their merchandize cheapeft at foreign markets, which will naturally extend their trade, by giving a larger vent.
From hence it plainly appears of what prodigious confequence the proper or improper direction of our naval force is in the article of infurance only,-not to mention the national gain by captures, the property, lives, and liberties of multitudes of his majefty's fubjects that may be thereby iaved, as well as a great Chare of the revenues, befides putting our enemies at the fame time to the greateft diftrefs.
Here follows the difference between convoys and no convoys, in an inftance of a treble voyage, the rotation being from England to Africa, from thence to America, and then home.
Infurance from England to Africa may be done, in time of war, at about 7 per cent. with good convoy, and not under 15 per cent. without convoy; and the voyage may be performed in 40 or 50 days. - Infurance from Africa to America will be about 6 per cent. with fuch convoy, and 18 per cent. without convoy; and this voyage may be performed in 40 or 50 days.-The infurance from America to Great-Britain, with good convoy, will be at about 10 per cent. and, without convoy, at about 25 per cent. and this voyage may be performed in 40 or 60 days.
To fhew the amount of infurance at the abovementioned rates, to make good 1001 . outfet throughout the whole rotation, deduct the feveral premiums from 98 , as aforefaid; then add the premium, or premiums, on the firf and fecond voyages, to 100 l.-Then,

For the firft voyage, fay,
As 911 . is to 7 l. To is 100l. tol. $7: 13:$ no
83 l . is to 151 . fo is 100 l . to $1.18: 1: 5$
For the fecond voyage.
As 921 . is to 61. fo is $1.107: 13: 10$ to 1. 7: $0: 6$ 801. is to 18 l . fo is I. 118: I: 5 to $1.26: 1 \mathrm{I}: 4$

## For the third voyage.

As 881. is to 10l. fo is $1.114: 14: 4$ to l. $13: 0: 8$ 73 . is to 25 1. fo is $1.144: 12: 9$ to l. $49: 10: 8$
The amount of the whole, and the difference between good convoys and no convoys, will appear from the following table, viz.

| The amount of infurance with good convoy per cent. | The amount of infurance without convoy per cent. | Difference in the infurance per cent. |
| :---: | :---: | :---: |
| $\left.\left\{\begin{array}{c} \text { From England to Af. } \\ \text { rica } \end{array}\right\} .7: 13: 10\right\}$ | 1. 18: 1:5 | 1.10: 7: 7 |
| $\left.\begin{array}{c} \text { From Africa to A- } \\ \text { merica }-1:-6\} \end{array}\right\} \quad 7:-2$ | 26: 11: 4 | 19:10:10 |
| $\begin{array}{r} \text { From Anmerica to } \\ \text { Great-Briain } \end{array} 1_{3}:-8$ | 49:10:8 | 36:10:- |
| Total 1.27:15:- | 94: 3:5 | 66:8:.5 |

To find the fum neceffary to be infured to make good, or cover Ioo l. outfet, on a treble voyage, in the cafe of 25 per cent. premium, from America to Great-Britain, and the other premiums without convoy, as abovementioned, fay,
As 25 1. is to 100 l. fo is 1. $49:$ 10: 8 to $1.198: 2: 8$-Or, As 73 l , is to 100 l . fo is $1 . \mathrm{J} 44: 12: 9$ to $1.198: 2: 8$.
The fum neceffary to beinfured without convoy; and, by the fame rule, 1. I30:7:2 will be fufficient with convog.
This will appear from the following example:
The fum to be infured

1. 198: $2: 8$

Deduct 2 per cent. abatement
3:19:3
The infured receives, in cafe of a lofs, - - $194: 3: 5$
Deduct infurance on l. $198: 2: 8$, at 25 per cent. $49: 10: 8$
144-12:9.
Deduct infurance on the cutfet 1. 18: $1: 5$
on the fecond voyage $26: 11: 4-44: 12: 9$
Remains the colt of the firf outfet . . 1. $100:$ - :-

And to as to any other adventure, or premiums, or any other treble voyage.
Suppofe the outfet to Africa from Great-Britain to be 320,000 1 . per ann. to go this treble voyage, or that it may be fo much upon proper encouragement being given to that trade, the abovementioned difference of infurance of $1.66: 8: 5$ per cent. on that fum a mounts to upwards of $1.212,500$ per annum, which may be faved by proper convoys in this fingle article of infurance on this particular branch of trade, befides what may be thereby faved in other branches.
The fecurity of our trade, and, in confequence thereof, leffening our own infurancing, and raifing that of our enemies, are of fuch important concernment to the nation, that it may not be unacceptable to obferve how, in time of war with France, a few fhips of war may be employed to anfwer thofe purpofes.
Suppofe a convoy thould go from England every four or fix months, for Africa, America, and then home to Great-Britain, befides the convoys that fhall go at proper times directly to America.
Such convoy may fee all the trade that are ready to fail to the fouth weft at a proper diffance, and particulariy the trade to Portugal, as far as their refpective ports; the Streights trade as far as Gibraltar, or Cape St Vincent; and then to proceed to Africa, and relieve fuch thips of war as hall be before ftarioned there; which relieved fhips may proceed with the trade from Africa to America, and relieve fuch fhips of war as thall be before ftationed there; which relieved Mips may convoy the trade that fhall be ready to fail from their refpective colonies for Europe and North America, as far as their refpective tracts, or latitudes.
The fhips of war that may be thus appointed convoys, will fail in fuch tracts, as will give them frequent opportunities to annoy the enemy, and gain great advantages to themfelves, as they may be from four to fix months cruizing on the coalt of Africa, and as long, or longer, in America.
'The flips bound from Africa to our weftern ports may rendezvous at Plymouth, Falmouth, Cork, or Kingfale.
The advantage of fuch a rotation of convoys will be very great, with regard to eafing freights and infurance, two fenfible articles in trade in time of war; and the markets on all fides will be more regularly fupplied.
Freights, by means of frequent and certain convoys, and quick voyages, will be lower at leaft one quarter, as there will be great favings in feamen's wages, victualling, demurrage, and the prefervation of the fhips, by means of quick difpatch. Since this rotation may, by means of thus exchanging flations, be performed in five or fix months, it is apprehended a few flips of war, over-and-above what are neceffary to be flationed in Ahica and America, will anfwer all thefe advantages : and, moreover, this will, in a great meafure, prevent the decay of his majefty's chips, by keeping them too long in $\checkmark$ Africa and America.
The practice in queen Anne's war was to let the convoys to the trade to America go out one year, and return home the next, after being relieved by other convoys, whereby they ufually remained in America about 14 months; but, of late years, moft of our hips of war have remained in America, and particularly in the Weft-Indies, about three or four years: wherefore it is fubmitted, whether the firt method, abovementioned, is not to be preferred to the laft? fince his majefty's fhips will then crofs the weftern ocean oftener, which will afford much ftronger, and more frequent, certain, and regular convoys, and our trade would be mùch better proteched, than it was in the late war with France, and that with the fame number of fhips as was then employed in that fervice, and the hips would be fitted for the fea with more expedition, and at lefs expence, after their arrival in England.

- The firf defign of infurance, fays the ingenious Mr - Cary $\dagger$, was to encourage the merchants to export more c of our produce and manufactures, when they knew how - to eafe themlelves in their adventures, and to bear only - fuch a proportion thereof as they were willing and able to ' do: but, by the irregular practices of fome men, this firft - intention has been wholiy defeated, who, without any in-- tereff, have put in early policies, and gotten Jarge fubfcrip-- tions on flips, only to make advantage by felling them - to others; and, therefore, have induftrioully promotes' falfe - report, and fpread rumours, to the prejudice of the Chips - and mafters, filling men's minds with doubts, whereby the - fair trading merchant, when he comes to infure his intereft, * either can get no one to underwrite, or at fuch rates, that - he finds it better to buy the other policies at advance: by - which means thefe ftock-jebbers of affurance have frequent-- ly, as it were, surned it into a wager, to the great prejudice - of trade.
$\dagger$ Vide A Difcourfe on Trade, by John Cary, Efq; mèrchant of Brifol.
- Likewife many ill defigning men, their policies being over-- valued, have (to the abhorrence of honeft traders, and to - the (candal of trade itfelf) contrived the lofs of their own - flips. On the other fide, the underwriters, when a lofs is
© ever fo fairly proved, boggle in their payments, and force - the infured to be content with lefs than their agreement: ; for fear, of engasing themfelves in long and chargeable - fuits.
" Now, if the parliament would pleafe to take thefe things
' into confideration, they may reduce infurance to it's
- firf intention, by obliging the infured to bear fuch a pro-
' portionable part of his adventure (the premium ineluded) ' as to them fhall feem fit; and alio the infurers, when a lofs
c is fully made out, to pay their fubficriptions without abate-
' ment, which will prevent both; and, if any differences fhould arife, to direct eafy ways for adjuffing them, with' out attending long iffues at law, or being bound up to fuck ance rules in their proof, as the affairs of foreign trade will 6 not admit.
- I know, that by a claufe in a flatute, made primo Annæ, - the wilful cafting away, burning, or otherwife deftroy' ing a thip, by any captain, mafter, mariner, or other of-- ficer belonging to it, is made felony, without benefit of - clergy; but that fatute is fo qualified, that it is difficult to - convict the offender, becaufe the fact mutt be done, to the
' prejudice of the owner, or owners, or of any merchant ' or merchants, that fhall load goods thereon, elfe he doth ' not come within it's penalty; fo it doth not reach the evil - I here mention, viz. the abominable contrivance of the - owners to have their own fhips deftroyed, in order to make - an advantage by their infurances; a crime fo black in it-- felf, that it cannot be mentioned without horror.
' Thefe men, when they frame their dark defigns, will take - care, for the fecurity of thofe they employ, that none, be' fides themfelves, fiall load goods on the fhips they intend - Bhall be thus deftroyed; and it cannot be fuppofed that - they receive prejudice thereby themfelves, fo the profecu-- tion on that flatute is evaded: but, if the infured were - bound to make out their interefls, and to bear a propor' tionable part of the lofs themfelves, this would, as it were, ' naturally prevent fuch fcandalous pracices.'-Thefe are the fentiments of Mr Cary, who was efteemed a very judicious and worthy merchant.

## Further Remarks.

In France, the infured are always obliged to run the rifk of one tenth part of the value of the effects infured, unlefs there is an exprefs ftipulation in the policy, that he means to infure the whole. And, when the inlured goes in the veffel, or is the owner thereof, he is obliged to run the rifk of one tenth part, notwithfanding he has infured the whole. Neither owners of Thips, nor captains, can infure the freight to be made by their veffels; nor can merchants infure the profit they expect to make by their merchandizing. Ordonnance of the marine in France, of $168{ }^{2}$.

* Quere, Whether thefe regulations are not more for the fecurity of the infurer, and more to the advantage of a trading nation in general, both in time of peace and war, than the cuftom which has been of infuring intereft or no interelt.
Nor in Holland do they infure intereft or no intereft.
In 1741, a bill was brought into parliament, to prevent fome inconveniencies arifing from infurances of fhips, which was as follows:
*Whereas it has been found by experience, that the makinx affurances, intereft or no intereft, bath been productive of many pernicious practices, whereby great numbers of hips, with their cargoes, have been fraudulently loft and deftroyed; and a great encouragement to the exportation of wool, and the carrying many other prohibited and clandeftine trades, which are thereby fecreted, and the parties concerned fecured from lofs, as well to the diminution of the public revenue, as to the great detriment and lofs of the fair trader; and by introducing an illegal and mifchievous kind of gaming or wagering, under the pretence of affuring the rifk on Ohipping and fair trade, the inftitution and laudable defign of making affurances hath been perverted; and that which was intended for the encouragement of trade and navigation, become hurtful of, and deftructive to, the fame.
For remedy whereof, and for effectually putting a flop to, and for preventing the like unwarrantable practices for the future : Be it enacted, \&c. That all policies, inftruments, contracts, or promifes of affurance, made from and after ———— intereft or no intereft, and policies valued at the fum affured, or without further proof of intereft, than the policy, or in any other words or manner, to that or the fame effect; or upon flips, or other veffels or goods, loaden or to be loaden thereon, not made bonâ fíde upon intereft ; hhall be, and are hereby declared (void) - -- - any law, fatute, or cultom to the contrary; in any wife, notwithltanding.
Provided always, that nothing in this act contained thall extend, or be conftrued to extend, to vacate, or avoid any affurances made without fraud, upon intereft of the whole, or any part, of the fum for which the affured fhall appear to be concerned in the veffel, or goods, fo aflured.
Provided always, that nothing in this aet contained fiall vacaie or make void any affurance made upon account of

## A S S

money lent upon refpondentia, or boctomry bonds, in which the benefit of falvage is allowed the lender; nor any aflurance made bonâ fide, to re-affure any fum before affured, or any fhips or veffels, or their cargoes; provided the fame be mentioned in the policy to be re-affurance, or on money fo lent on refpondentia, or bottomry bonds.
And whereas, by feveral acts of parliament, the fubjects of this kingdom in general are reftrained from trading to the Eaft-Indies, and the fole right to trading thereto is by law vefted in the united company of merchants of England tradeing to the Eaft-Indies; notwithftanding which, affurances are often made in Great-Britain, upen thips and effects belonging to the fubjects of foreign nations or powers trading to the Eaft-Indies: Be it further enacted, by the authority aforefaid, That all affurances, made after the
day of - - - upon any hbips or effects belonging to any foreign kingdom, nation, or power, or to the fubjects thereof, trading to and from the Eaft-Indies, or from any part thereof to another, fhall be deemed and taken to be (void) to all intents, conflructions, and purpofes whatoever And whereas aflurances on the fhips or effects of perfons, alien enemies to this kingdom, are greatly prejudicial to the true intereft thereof, and, upon the capture of fuch hips or effects, the real lofs fuftained often falls upon the fubjects of Great-Britain, who have made fuch affurances: Be it further enacted by the authority aforefaid, that no affurance --- to be made directly or indirealy, on any the fhips or effects of the fubjects of any prince or ftate, not in amity with the crown of Great-Britain, at the time fuch affurance is made, fhall be of any force or validity in law, but fhall be (void) to all intents, conftructions, and purpofes whatfocver. Piovided always, that if his majeffy thall at any time, during the prefent war, thing fit, in purfuance of a provifo contained in an act made in the laft feffion of paritament, intitled, An act for prohibiting commerce with Spain, to take off the prohibitions and reffrictions of commerce, or any part thereof; then, and in fuch cafe, it thall and may be lawful to make aflurance on fuch commerce, or any part thereof, any thing herein contained to the contrary notwithftanding.'

As the fentiments of men of bulinefs, well acquainted with the rature and confequence of this important point, may contritute to give the reader ftill a more comprehenfive view thereof, we judge, that the fubftance of their arguments pro and con upon this bill, as near as we could collect them from converfation, will be acceptable. This I was induced to at that time, as having a work of this kind then in view
It was urged by thofe who oppofed this bill, that the fundamental error of it's patrons feemed to be an opinion, that the practice of infuring is not known to other nations, nor can be carried on in any other places; and from this principle they deduce confequences, which, if they were inevitably certain, might eafily influence us to an immediate approbation of the bill, as neceffary to fecure our commerce, and diffrefs our enermies.-That few merchants would hazard their fortunes in long voyages, or expofe themfelves to the dangers of war, without the fecurity which infurance affords them, and perfuading themfelves that fuch fecurity is to be obtained from no other nation, they imagine that we might, by prohibiting it, confine all the foreign veffels in their ports, and deftroy by one refolution the trade both of our rivals, and our enemies.
That our Eaft-India company may defire the paffing of this bill, is, becaufe they might receive fome temporary advantage, by the fhort inconvenience which thofe whom they confider as the enemies of their commerce, would feel from it.That, if the experiment failed, it cannot injute them; if it fucceeded, it may produce great advantages to them.- Several other nations can plead a claim to the Eaft-India trade, of equal validity with our own.- That the Danes have their fettiements there, and the Portugueze difcovered the way to thefe regions of wealth, from which fome, perhaps, are inclined to exclude them. - That nothing is more vain than to attempt this, by refufing to infure their 0hips, the opinion that they can be infured by no other nation being groundlefs. -That there are, at this time, offices of infurance along the whole coaft of the Mediterranean fea, among the Dutch, and even among the French.-That nothing can debar any nation from the trade of infurance, but the want of money; that money is not wanted by foreigners for this purpofe, is manifeft, from the millions they have in our funds.-That this trade is now carried on chiefly by Great-Britain, and that we ought not to obftruct our own gain, by making a law to deprive ourtives of that advantage, of which either accident, or our own fagacity, have put us in poffeffion.-That debaning us from infuring the fhips, even of thofe with whom we are at war, would nct contribute to the wealth of the puilic, but only oblige them to transfer to other nations, the profis which we receive from them.- That the trade of infurance is realy advantageous to the nation, it being diligencly followed after many years experience, and a law was never neceflary to prohibit the purfuit of a bufinefs, by which nothing was to be gained. - That, could the gain of the in-
furers be a doubtful point, there is a certain advantage to the nation, by the moncy paid for commiffions, brokerages, ftamp, and the credit of the premium depofited here. - I hat the poft-office revenue is thereby increafed. - That the lofs of thefe profits, and the gain of infuring, muft enfue upon the paffing of this bill; nor will this lofs be counterbalanced by any advantage, that will be obtained over our rivals or our enemies.
With regard to the practice of infuring, intcreft or no intereft, when an imaginary value is put on a llip or cargo, often much above it's real worth, it gives opportunitics for wicked praclices.-There will always be circumftances, in which there can be no fecurity againft frauds, but common faith; nor is there poffibility to fecure the infurers againft being defrauded, nor can the value of a cargo be eftimated, which is to be collected in a long voyage, at different ports, and where the fuccefs of the adventurers often depends upon lucky accidents, which are always hoped for, though they feldom happen. An imaginary value therefore muft always be fixed upon, when the thip leaves the port, the fuccefs of the voyage not being foreknown; and the contracting parties may be fafely trufted to fet that value, without any law to direct or reftrain them.- If the merchants are oppreffed by any peculiar inconveniencies, and can find means to redrefs them without injury to the public commerce, any propofil for that purpofe ought to be favourably received; but, as the bill propofes general reftraints, and propofes to remove grievances, which are not felt, by remedies, which thole upon whom they are to operate do not approve, the bill ought to be rejected.
In aniwer to this it was faid, That the grievance the bill propofed to remedy is fo generally known, and fo univerfally lamented, that there is not any thing more worthy of the attention of the iegillature, than an enquiry into the caufe of it, and the proper method of redreffing it. In our enquiry into the caufes of this obftruction of trade, I am of opinion, that the practice of infuring, intereft, or no intereft, will appear to be the foundation of this general uneafinefs; it will be found a practice of fo natural a tendency to fraud, and fo eafily fufceptible of difhonef artifices, that, I believe, every friend to the trading intereft will defire it's fuppreffion. To confirm my affertion, and illuftrate the queftion before us , I thall mention fome particular inftances of fraud, to which this cuftom has given occafion, of fraud fo evident and fo deteftable, that it cannot be related without indignation.
The Royal George was a large fhip belonging to the South Sea company, which, having been a voyage to Vera Cruz, put in at Jamaica in her return; and, being there refitted to proceed on her voyage homewards, fet fail, and came within a week's failing of the port, when, upon a fudden, the officers entered into a confultation, and determined to go back a month's voyage to Antigua, for what reafons may be eafily gueffed; when it was told, that the fhip was infured upon a fuppofed value of fixty thoufand pounds. This refolution was no fooner formed, than orders were given to change the courfe, and fteer to Antigua, in oppofition to all the remonftrances of the carpenter, who is the proper judge of the condition of a vefiel, and who declared with honefly and refolution againft their whole procedure. But they purfued their new fcheme, without any regard to his murmurs or affertions and, when they arrived at Antigua, found fome method of infuencing the officers of that ifland, to declare the thip unfit for the profecution of the voyage. Their defign was now happily compleated. To confirm the determination which had been pronounced in their favour, they ftranded the fhip upon a bank of fand, forced out the iron that grapples the timbers together, and, having firf taken away the mafts and rigging, and whatever elfe could be ufed or fold, threw the ballaft to each end, and fo broke the veffel in the middie.
By this well contrived fhipwreck, having, as they imagined raifed their fortunes, they came home triumphantly from their profperous voyage, and claimed the money for which the fhip was infured. The infurers, fartled at a demand fo unexpected, enquired into the affair with all the indultry which it's importance naturally excited, and, after fome confultation, determined to try whether the fhip might not be refitted and brought to England. In purfuance of this refolution, they fent workmen and materials, and without much expence, or any difficulty, brought her hither.
This relation is fufficient at once to prove the practice, and explain the nature of the frauds to which this method of infurance gives occafion; but, as the frequency of them is fuch, that many inftances may be produced, I fhall offer another fhort narrative of the fame kind: a thip that belonged to the Eaft-India company, infured after this method, was run afhore by the captain in fuch a manner, that he imagined none but himfelf able to recover it; and therefore, though it coft 5000 l. fold it for 500 l . but the purchafer, no lefs expert than the captain, found means very fpeedily to dilengage it, to reffore it to a proper condition with little expence, and was enriched by his fortunate bargain.

This kind of fraud is the more formidable, as it may be practifed without a poffibility of detection. Had the captain, inftead of ftranding, deftroyed his veffel, how could his wickednefs ever have been difcovered, or how could the South Sea company's fhip have been brought home, had it been funk in fome diftant corner of the world? This practice, and the frauds which it.has occafioned *, and the fuficicions which the eafy practice of frauds always creates, have produced fo many trials, and filled the courts of juftice with fuch intricate contentions, that the judges, who knew perhaps nothing of this practice, but from it's effects, have often declared it to be fo pregnant with contefts and cheats, that it ought not to be fuffered, and that a law for fuppreffing it would much contribute to the eftablifhment of peace, and the fecurity of property. The affertion of the impoffibility of eftimating the real value of a thip, or of foreknowing the fuccefs of a voyage, is inconteftable: but, perhaps, it will follow from thence, not that an imaginary value ought to be admitted, but that no infurance ought to be allowed, where there is no rational method of afcertaining it ; or, at leaft, that all fuch infurance ought to be rather below the probable value, than above it.

- That this practice occafioned great frands, is apparent from thofe cales before enumcrated, which have been detected in our courts of judicature.

That great frauds are the natural confequence of eftimating Ships at an imaginary value in the offices of infurance, is to the higheft degree evident. For, when a fhip is eftimated above it's real value, how will the commander fuffer by a wreck, or what thall reftrain him from deffroying his veffel, when it may be done with fecurity to himfelf, except that integrity, which ought to be generally diffufed, but which is not always to be found, and to which few men care to truft upon occafions of far lefs importance. That I do not magnify the poffibility of fraud into reality, or propofe laws againt wickednefs that has not yet exifted, it may be proper to mention fome, in which I have been informed by my correfpondent at Leghorn, of the ftate of the Ohips which have arrived there, fhips fo weakly manned, and fo penurioully and negligently ftored; fo much decayed in the bottoms, and fo ill fitted with rigging; that he declares his aftonifhment at their arrival.
It may deferve confideration, whether the fuccefs of the Spanifh privateers may not be in great part attributed to this pernicious practice; whether captains, when their veffels are infured for more than their value, do not rafhly venture into known danger? Whether they do not wilfully mifs the fecurity of convoys? Whether they do not direct their courfes, where privateers may moft fecurely cruize to intercept them? Whether they do not furrender with lefs refiftance than interef would excite? And whether they do not raife clamours againt the government for their ill fuccefs, to avoid the fufpicion of negligence or fraud.
That other kind of frauds are committed in the practice of infuring, is well known: it is a common practice to take money upon bottomry, by way of pledge for the captain's fidelity, and to deftroy this fecurity by infuring above the real value, fo that the captain may gain by negleating the care of his velfel, or at leaft fecure himfelf from lofs, and indulge his eafe or his rileafure, without apprehenfion of diminifhing his fortune. The whole practice of infurance, in it's prefent ftate, is fo perplexed with frauds, and of fuch manifeft tendency to the obflruction of fair commerce, that it abfolutely requires fome legal regulations.
To what was faid in favour of the bill it was replied, That, with regard to fingle acts of fraud, committed by particular men, it is not to be fuppofed but that they have been detected in this, as in all other branches of traffic, nor do I conceive that any argument can be drawn from them againft the practice; for, if every part of commerce is to be prohibited, which has furnithed villains with opportunities of deceit, we fhall contract trade into a narrow compafs.- With regard to the inftance of the Royal George, though the proceedings of the officers are not wholly to be vindicated, yet part of their conduct is lefs exceptionable than it has been reprefented. Their return to Antigua, when they were bound for England, and were within a week's failing of their port, is eafily to be defended, if the wind was contrary to their intended courfe; for it is not difficult to conceive, that they might reach a diftant port with a favourable wind, much fooner than one much nearer, with the wind againft them.
To this it was anfwered-That, in the difcuffion of this queftion, it was to be confidered, that we are engaged in a war againft a nation, from which infults, depredations, oppreflions, and cruelties, have been long complained of, and againtt which we are therefore to act with a refolution proportioned to the injuries which we have fuffered, and to our defire of vengeance.-We are to pradife every method of diflreffing them, and to promote the fuccefs of our arms, at the expence of prefent giin, and the intereft of private men. 'Tis well known, that the Spaniards are a people who live in careleffiners and indolense, neglect the natural advantages of

Vol. I.
their own country, defplfe the gain of foreign commerce $-:$ and depend wholly on their American fettlements, for all the conveniencies of life. This is the pàrticular circumftance; that makes a war with England fo much to be dreaded by them. A nation fuperior to them by fea holds them befieged, like a garrifon furrounded by an army; precludes them from fupplies, intercepts their fuccours, and, if it cannot force their walls by attack, can at leaft by a blockade ftarve them to a capitulation.
$\dagger$ The cafe with the Spaniards feems now to be altered ; they being not only follicitous to eftablih new manufactures in Old Spain, but having began to export their own product in their own hipping; for we have an inflance in the foreign papers of a Spanifh thip being arrived even at Copenhagen, with the product of Spain.

Thus, by a naval war with an enemy of fuperior ftrength; they muft at length be fubdued, and fubdued, perhaps, without a battle, and without the poiffibility of refiffance; againft fuch an enemy, their courage or their difcipline is of no ufe; they may form armies indeed, but which can only ftand upon the fhore, to defend what their enemies have no intention of invading, and fee thofe fhips feized in which their pay is treafured, or their provifions are ftored.-Such is our natural fuperiority over the Spaniards, a fpecies of fuperiority that muft inevitably prevail, if it be not defeated by our own folly; and furely a more effectual method of defeating it the Spaniards themfelves could not have difcovered, than that of infuring their fhips among our merchants. When a bhip thus infured is taken, we examine the cargo, find it extreamly valuable, and triumph in our fuccess; we not only count the gain to ourfelves, but the lofs to our enemies, and determine that a fmall number of fuch captures will reduce them to offer us peace upon our own terms.
Such are the conclufions which are made, and made with reafon, by men unacquainted with the fecret practices amongt ourfelves, and who do not fufpect us to be ftupid enough to fecure our enemies againft ourfelves; but it is often found, upon a more clofe examination, that our fhips of war have on ly plundered our own merchants, and that our privateers may indeed have enriched themfelves, but impoverifhed their country: it is difcovered, that the lols of the Spaniards is to be repaid, and perhaps fometimes with intereft, by our Britifh in-furers.-If it be urged, that we ought not to enact any laws which may obftruct the gain of our fellow-fubjects, may it not be afked, why all trade with Spain in time of war with them is prohibited? May not the trade be equally gainful with the infurance, and may not the gain be more generally diftributed, and therefore be more properly national? But the trade with Spain at fuch times is prohibited, becaufe it was more neceffary to our enemies than to ourfelves; becaufe the laws of war require, that a lefs evil fhould be fuffered to in flict a greater: it is upon this principle that every battle is fought, and that we fire our own fhips to confume the navies of our enemy. For this reafon it appears to be evident beyond contradiction, that the infurance of Spanifh fhips ought to be prohibited in time of war with that nation; we fhall indeed lofe the profit of the infurance, but we thall be reimburfed by the captures, which is an argument that cannot be produced for the prohibition of commerce.
It is urged, that our enemies may infure their thips in other countries *, an affertion of which, whether it be true or not, I am not able to decide; but this would lay them under the neceffity of eftablifhing a new correfpendence, and this would prove at leaft a temporary obftruction of their trade, which, though of ihort continuance, may lay them at our mercy. But let us reflect upon the weaknefs of this argument-1' They ' muft be allowed to infure here, becaufe they may infure in ' other places.'-Will it not be equally juft to urge, that they muft trade with us, becaufe they may trade with other nations? And may it not be anfwered, that, though we cannot wholly fufpend their commerce, it is yet our interef to obftruct it, as far as we are able? May it not be farther affirmed, that, by infuring in other nations, they may injure their allies by falling into our hands, but do not the lefs benefit us? That, if they do not grow weaker, we at leaft are ftrengthened; bus that, by infuring among us, whatever fteps are taken to put a fpeedy end to the war, the equilibrium of it is fill preferved the fame?
*This was never made to appear fatisfactorily; and 'tis much to be doubted, whether it will ever be experienced, notwithflanding it was roundly afferted, and taken for granted, throughcut this debate.

It is afferted, that we infure at a lower * rate than other nations do; and it will therefore follow, that the Spaniards, whenever their Chips fhall efcape us, will fuffer more by having infured amongtt foreigners, than if they had contracted with

* Quere, Is this matter of fact in time of war? Where the interefl of money is lower, it feems more natural to believe, the price of infurance alfo may be fo in the general.
our merchants. Thus it appears, that there are fronger reafons for prohibiting *the infurance of Spanifh fhips, than for putting a ftop to our commerce with them; and that, whepuer their fhips are taken by us, or efcape us, it is the general ther their fhips are takn that they fhall be infured by foreign merchants, and not by our own.
With refpect to the Eaft-India company it was faid, that, as they have the grant of an exclufive trade to the Eaft-Indies, to infure the fhips that are fent thither, without their permifion, is to invade their rights, and to infiinge their charter; and that pracice, if the validity of their charter be admitted, is illegal, and ought to be difcountenanced.
The practice of infuring, intereft or no intereft, or of affigning to fhips an imaginary value, is nothing more than a particular game, a more folemn fpecies of hazard, and ought therefore to be prohibited, for every reafon that can be urged againft games at chance.
In reply hereunto it was faid, That there is no abfurdity by enriching ourfelves at the expence of other nations, whether enemies or allies.-If our infurers gain by fecuring the fhips of our enemies, the nation is benefited; for all national gain muft circulate through the hands of individuals. - No man will affert, that we ought to affift our enemies; nor will any man imagine, that we affift them by impoverifhing them; and, if our infurers gain by their practice, the Spaniards muft undoubtedly be lofers.
The practice of infuring an imaginary value may give opportunity for greater frauds than can be practifed in common dealings; but fuch frauds do not require the interpofition of the legiliature. If they are practifed only by thofe of our own nation, the public does not fuffer; for property is only transferred from one fubject to another; the fraud ought to be feverely punifhed in the courts of criminal juftice, but the cuftom which gave the opportunity of practifing it, ought not to be reftrained, any more than any other profefion not criminal in itfelf, but liable to accidental abufes.
If our infurers are defrauded by foreigners, the nation is then, indeed, more nearly affected; but, even in that cale, it is to be remembered, that the private intereft of the infurers, who muft be immediately ruined *, is a fufficient fecurity for the public. For it cannot be conceived, that any man will obflinately carry on a bufinefs, by which he becomes every day poorer; or that, when he defifts, he will be fucceeded by another, who cannot but know that he engages in that traffic to his certain ruin.
- Although our infurers may be gainers upon the whole, by the credit fide of their premiums exceeding the debit fide of their lofles; yet the queftion is, out of whofe pockets do fuch prelofles; yet the queftion is, out of whole pockets do fach pre-
miums arife, in time of war? If they wholly arofe from our miums arife, in time of war? Ir they wholly arole from our
enemies who infured, then our enemies would pay more for enemies who infured, then our enemies whould pay more for
the price of infurance than they loff; which cannot be the the price of infurance than they loft; which cannot be the
cafe. From whom then does this furplufage of premiums cafe. - From whom then does this durpluage or premiums
arife, which makes our infurers gainers, but from our own arife, which makes our infurers ganers,
Britifh merchants? And, if fo, when an enemy's fhip is taken that has been infured by our infurers, the lofs does not fall either upon the infurers (if they are gainers on the whole) or upon the enemy, but it falls upon our own Britif merchants, whofe premiums mut pay it.
Befides, as our enemies do not feel the lofs, are they not enabled the better to fic out more fhips of war and privateers to annoy our own merchants? Does not this neceffarily, tend to raife the price of infurance ftll higher and higher upon them; and does not this fill the better enable our infurers to infure the thips of our enemies, and to be infrumental to the prolongation of the war? Does not thefe hirh mental to the prolongation of tre war? Does, nof there hitgh infurances clog our whole trade at fuch times, leffen the pub-
lic revenue, and add to the evil of war? I cannot but think, lic revenue, and add to the evil of war? I cannot but think,
therefore, this practice of infuring the fhipping and merchantherefore, this practice of infuring the fhipping and merchan-
dize of our enemies was highly deftructive to the nation, and dize of our enemies was highly deftructive to the nation,
ought never to have been fuffered in thefe kingdoms.

The ftate of this affair is, that frauds are, indeed, often committed, and are for that reafon always fufpected; and that the infurers, when they infure the thip and cargo againft accidente, reckon, among other chances, the probability of being cheated, and proportion their demands not only to the length and danger of the voyage, but to the character likewife of the man with whom they contract.
This is always the pratice of thofe whom experience hath made acquainted with the danger of implicit confidence, and unfufpecting credulity; nor do any but the young and unlkilful fuffer themfelves to be fo expofed to frauds, as that their fortunes thould be injured, or the general gain of their bufinefs coverballanced, by a few deceits. Thus it appears, that, notwithftanding the eafe and fafety with which the prefent methods of infurance admit fraud to be practifed, the infurers, by a proportionate degree of caution, fecure themfelves from being injured, and by confequence the nation.
We infure, as has been obferved, at lower rates than other nations, becaufe we have more bufinefs of this kind, and the fmallinels of our profit is compenfated by the frequency; the cheapnefs of infurances, and eagernef of foreigners to infure here, reciprocally contribute to each other ; we are often applied to, becaule we infure at an ealy rate; and we can infure at an eafy rate, becaufe we are ofien applied to.

Nor is the cheapnefs of infurance in England the only motive to the preference which it preferves among foreigners, who ate induced to apply to this nation, by the reputation which our merchants have defervedly gained, fur probity and punctuality, fuperior to that of any other traders. Our merchants batgain without artifice, pay without fubterfuges, and are ready, on all occafions, to preferve their character at the hazard of their profit. If foreigners are once difappointed in their applications to us, our bufiners will in a great part ceare; and, as we fhall not then be able to infure at lower rates than other nations, we fhall never recover that branch of our trade.-And, as the character of the Englifh merchants exempts them from from any fufpicion of practices pernicious to the public, why fhould they be reftrained? Why fhould they appear to be fufpected by their own country, whom foreigners truft without hefitation?
It has been objected to them, that they affift the enemies of their country, that they prolong the war, and defeat thofe advantages which our fituation and commeice have given us. Imputations fufficiently attrocious, if they were founded upon truth. Let us examine the arguments by which this accufation is fupported. It is urged, that we have already prohibited commerce with the Spaniards, and that therefore we ought likewife to prohibit the infurance of their Mips. In oppotition to which it may be urged, that this kind of commerce is of a peculiar nature, that it fubfilts upon opinion, and is preferved by the reputation of our infurers. Other commodities are the peculiar product of different countries, and that there is no danger of lofing our trade by fufpending it, becaufe it depends upon the excellence of our manufactures; but infurance may be the commodity of any country, where money and common honefty are to be found. This argument may be the more effectually invalidated, by denying the expediency of that prohibition, which is produced as a precedent for another reftraint. Nor indeed does it appear, why we fhould preclude ourfelves from a gainful trade, becaute the money is drawn by it out of the hands of our enemies; or why the product of our lands hould lie unconfumed, or our manufacturers ftand uniemployed, rather than we fhould fell to our enemies what they will purchafe at another place, or by the intervention of a neutral power.
To fell to an enemy that which may enable him to injure us, that which he muft neceffarily obtain, and which be could buy from no other, would indeed be, to the laft degree, abfurd; but that may furely be fold them without any breach of morality or policy, which they can want with lefs inconvenience than we can keep. If we were befieging a town, I fhould not advife our foldiers to fell to the inhabitants ammunition or provifions, but cannot difcover the folly of admitting them to purchafe ornaments for their houfes, or brocades for their ladies.
I am never willing to load trade with reftraints; it is in it's own nature fo fugitive and variable, that no conftant courfe can be prefribed to it; and thofe regulations which were proper when they were made, may, in a few months, become difficulties and obftructions. We well know, that many of the meafures which our anceftors purfued for the encouragement of commerce, have been found of pernicious coniequence; and even in this age, which experience, perhaps, more than wifdom, has enlightened, I have known few attempts of that kind which have not defested the end for which they were made.-It is more prudent to leave the merchants at liberty to purfue thofe meafures which experience thall dictate upon every occafion, and fuffer them to fnatch the prefent opportunity of honeft gain, whenever it fhall happen.They will never injure their own intereft by the ufe of this. Iiberty, and, by preferving themfelves, they will preferve the nation from detriment.
To this it was anfwered-That the intereft of our country very evidently requires that we fhould give no affiffance whatever to our enemies-that our merchants fhould zealoully conoperate with our navies, and that we fhould endeavour to with-hold every thing that may make the war lefs burdenfome to them, and confequently of longer continuance.
It has been faid, through the courfe of this debate, that infurance was practifed by many nations; but the gentleman did not inform us whether they allowed the method of infuring, intereft or no intereft, and rating hips at an imaginary value. This is, I know, abfolutely prohibited by the Dutch, a nation whofe authority on commercial queftions will not be difputed, nor do they allow their Eait-India fhips to be infured at all.
The difficulty of eftimating the value of any cargo has been urged in defence of this practice; nor is the defence wholly without weight, becaufe the cargo in many voyages cannot be ifcertained. Yet it is neceflary that fome of our exported cargoes fhould be exactly fuecified. I have been informed, that fix fhips laden with Britifh wool have entered at one time into a port of France; nor do I know how this practice, which is juftly complained of as pernicious to our trade, and threatening the ruin of our country, can be prevented, but by a conflant and regular particularization of every cargo carried to France. I admit, that fome cargoes which are imported cannot he particularly regifered; fuch is the gold with which we are daily
iupplied
fupplied by our commerce with the Portugueze, itr oppolition to their laws, and which our merchants are therefore under the neceffity of concealing.
The intereft of the merchants ought always to be duly confidered in this nation; but then it ought to be regarded only in fubordination to that of the whole community, a fubordination which feems to have been quite forgotten throughout this argument.
Thus have we given a fuccinct detail of this controverfy; which being compared with the nature of affurances, as they have been moft infamoully practifed, as appears by thofe various cafes which have come before our courts of judicature, any man that reads with attention, may cafily difcover the reafonablenefs and neceffity of the following act of parliament (and, perhaps, of fome more effecual meafures requifite to be taken in furure) made in 19 Geo. Il. which is entitled, An act to regulate the infurance on fhips belonging to Great-Britain, and on merchandizes or effects laden thereon.
The preamble to which obferves, That the making affurances, intereft or no intereft, or without further proof of intereft than the policy, hath been productive of many pernicious practices, whereby great numbers of ihips, with their cargoes, have either been fraudulently loft and deftroyed, or taken by the enemy, in time of war; and fuch affurances have encouraged the exportation of wool, and the carrying on many other prohibited and clandeftine trades, which, by means of fuch aflurances, have been concealed, and the parties concerned fecured from lofs, as well to the diminution of the public revenue, as to the great detriment of fair traders; and, by introducing a mifchievous kind of gaming or wagering, under the pretence of affuring the rifque on fhipping and fair trade, the inftitution and laudable defign of making affurances hath been perverted ; and that which was intended for the encouragement of trade and navigation has, in many inftances, become hurtful of, and deftructive to, the fame: for remedy whereof, it is enacted, That, from and after the firft day of Augult $174^{6}$, no affurance or affurances fhall be made, by any perfon or perfons, bodies corporate or politic, on any thip or thips belonging to his majefty, or any of his fubjects, or on any goods, merchandizes, or effects, laden or to be laden, on board of any fuch thip or hhips, intereft or no intereft, or without further proof of intereft than the policy, or by way of gaming or wagering, or without benefit of falvage to the affurer; and that every fuch affurance fhall be null and void to all intents and purpofes.
Aflurances on private fhips of war, fitted out by any of his majefty's fubjects, folely to cruize againt his majefty's enemics, may be made by or for the owners thereof, intereft or no intereft, free of average, and without benefit of falvage to the allurer
Merchandizes or effects from any ports or places in Europe or America, in the poffeffion of the crown of Spain, or Portugal, may be affured in fuch way and manner, as if this act had not been made.
It fhall not be lawful to make re-affurance, unlefs the affurer fball be infolvent, become a bankrupt, or die; in either of which cafes, fuch aflurer, his executors, adminiftrators, or affigns, may make re-allurance, to the amount of the fum before affured, provided it thall be expreffed in the policy to be a reaffurance.
After the faid firft day of Auguft, all and every fum and fums of money to be lent on bottomry, or at refpondentia, upon any fhip or fhips belonging to any of his majefty's fubjects, bound to or from the Eaft-Indies, fhall be lent only on the fhip, or on the merchandize or effects laden, or to be laden on board of fuch thip, and thall be fo exprefled in the condition of the bond; and the benefit of falvage fhall be allowed to the lender, his agents, or affigns, who alone fhall have a right to make affurance on the money fo lent; and no borrower of money on bottomry, or at refpondentia, as aforefaid, fhall recover more on any affurance than the value of his intereft on his fhip, or in the merchandizes or effects laden on board of fuch fhip, exclufive of the money fo borrowed; and in cafe it fhall appear that the value of his flare in the fhip, or in the merchandizes or effects laden on board, doth not amount to the full fum or fums he hath borrowed, as aforefaid, fuch borrower thall be refponlible to the lender for fo much of the money borrowed, as he hath not laid out on the fhip or merchandizes laden thercon, with lawful intereft for the fame, together with the affiurance, and all other charges thereon, to the proportion the money not laid out fhall bear to the whole money lent, notwithftanding the fhip and merchandize be totally loft.
In all actions or fuits brought or commenced after the faid firft of Augult by the aflured, upon any policy of aflurance, the plaintiff in fuch action or fut, or his attorney, \&ec. fhall, wishin fifteen days after be or they fhall be required fo to do in writing by the defendant, or his attorney, \&c. declare in writing the fums he haih alfured in the whole, and what fums he hath borrowed at refpondencia, or bottomry, for the voyage, or any part of the voyage in queftion, in fuch fuit or action.
After the faid firft of Auguft, any perfon, \&cc. fued in any action of debt or covenant, \&c. on any palicy of affurance,
may bring into court any fums of money; and if the plaintiff Shall refufe fuch fum of money, with coffs to be taxed, in full difcharge of fuch action, and fhall afterwards proceed to trial, and the jury fhall not affefs damage to fuch plainuff, exceeding the fum fo brought into court, fuch plaintiff fhall pay to fuch defendant cofts to be taxed.
This act hall not extend to, or be in force againf, any perfons refiding in any parts in Europe out of his majefty's domintons, for whofe account affurance fhall be made befare the 29th of September 1746 ; nor againft perfons refiding in any parts of Turky, Afia, Africa, or America, from whom affurances hall be made before the 2gth of March 1 147.
By the 21 Geo. II. infurance on fhips or goods appertaining to the crown and fubjects of France, or lending them money on bottomry, is prohibited. though, as the duration of this act was refrained to the time of the late war, it is now become void.

Further Remarks.
Since the paffing of this act of parliament, there bave been various peculiar cafes adjudged in our courts of judicature; which as yet have not been formally reported. However, we have endeavoured to obtain divers of thofe cales, together with the pleadings thereon, which may contribute to render this work fill the more complete.

## Lewen verfus Swaffo. Hil. 16 Geo. II. 1742.

The plaintiff, being fued at law upon a policy of infurance of a hip, and againft the barrerry of the mafter, which was affigned in the declaration, brought his bill in Cbancery to be relieved, and for an injunction; charging that one Matthews the mafter, and alfo owner of the fhip, had, before the voyage, entered into a bottomry bond to the defendant for 2001 . and that after, by bill of fale, he affigned over his intereft in the fhip to the defendant, as a fecurity for this 2001 . and infifted that Matthews was, neverthelefs, in equity to be confidered as owner of the fhip, though, in law, the ownerhip and property would be looked upon to be in the deiendant; and infifted, that the owner of a fhip could not, either in law or equity, be guilty of a barretry concerning the fhip, and therefore prayed an injunction, and that the policy might be delivered up.
The voyage infured was from London to Marfeilles, and from thence to fome port in Holland. The cafe was, that the marter failed with the fhip to Marfeilles, and then, inttead of purfuing the voyage, failed to the Weft-Indies, and there fold the thip, and died infolvent. Thefe matters being confefied by the anfwer, an injunction was moved for on the principle, that a mortgagor is to be confidered in equity as owner of the thing mortgaged, and that Matthews the mafter, being owner, could not be guilty of a barretry. To fhew which, a cafe was cited of Stamma and Brown, where it was determined the preceding term in King's-Bench.
Lord Hardwicke chancellor. Barretry is an act of wrong done by the mafter againf the thip and goods; and, this being in the cafe of a fhip, the queftion will be, who is to be confidered as the owner? There are feverd cafes that might be put, where barretry may be affigned as the breach of an affurance, and barretry, or not, is a queftion properly determinable at law; but here it is not fo , for the courts of law will not confider a mortgagor as having any right or intereft in the thing mortgaged; and there are many cafes where a man may come into a court of equity for relief, in refpect of a part only of his cafe. It might indeed be confidered at law, whether what the mafter hath done, fuppofing owner or not, was not a breach of the contract, as mafter of the thip, and fo a barretry, and this may be confidered likewife in this court. But, at law, a defendant cannot read part of the plaintiff's anfwer to a bill brought againft him here; the whole anfwer muft be read, which hath been often a reafon for this court interpofing by injunction upon a plaint at law ; and, confidering the mixt nature of this cafe, I think an injunction ought to be granted. Ordered accordingly.

Curling verfus Brand, at Nifi Prius at Guildhall, in B. R. before Lee chief juftice.
In an action upon a policy of infurance by feveral perfons, as part owners of the fhip infured, it was held, that the plaintiffs are obliged to prove their refpective interefts in the fhip, and that a proof of intereft in fome of the plaintiffs is not fufficient as a ground to recover upon, though the intereft proved be more in value than the amount of the infur-ance-And a nonfuit recorded. But it feemed agreed in this cafe, that the plaintiffs are not to be put upon the producing of their refpective bills of fale of their feveral interefts in the fluip, for that fuch fale may be by parole: but it was held, that they muf produce fome evidence of property, as acts of ownerfhip, which the plaintiffs could not make out ; and it was held that the reputation of being the owners, without fhewing their title, or proving afts of ownerfhip, is not fufficient.

Sadlers
padlers company verfus Badcock. In Chancery, Eafter, 16 Gep II.
One Mary Stroad, having an intereft in fome houfes in London, for the remainder of a term of which about five years was to come, infured the fame from fre, by a policy of infurance entered into by the Hand-in-Hand company for infurance of houfes from fire; which infurance was made for a term of feven years, and a premium paid accordingly. It happened, that after the end of the five years, and before the end of the feven years, the houfes were burnt down. After which, Mary Stroad affigned the policy to the Sadiers company, who were entitled to the houfes after the determination of the term of Mary Stroad. This bill was brought by the plaintiffs againft the infurance company, to have this infurance made good, infifting thereon, by reafon that a premium was paid to the company for the whole feven years, within which face of time this accident hath happened.And, as this infurance is exprefsly to Mary Stroad, her executors, adminiftrators, and affigns, that the plaintiffs, as ber affigns, are well entitled to have the policy made good.
It was urged, that this infurance company being an amicable fociety, who infure each other with a joint fock, and the plaintiffs, being as affignees of Mary Stroad, members of the fociety, was the reafon for feeking relief by bill in equity, and not purfuing a remedy at law, in regard that no action would lie; for that the plaintiffs, by ftanding in the place of Mary Stroad, might be faid to be part of the fociety, and therefore could not profecute an action againft themfelves. For the defendant it was infifted, that the intent of thefe policies is only to infure fome certain intereft in the party infured from lofs or damages, and that, when fuch intereft ceafes, the infurance is at an end. It was alfo infinted to be an ancient rule of the fociety, that no perfon fhould be permitted to infure for a lefs term than feven years; and that, fubfequent to the plaintiffs infurance, an order of the company was made, reciting, that whereas all infurances, by the rules of the company, were to ceafe with the interelt of the affured, yet that the affurers might affign their policies: this order was infifted upon as evidence, to thew that, by the rules of the company, they are anfwerable for no lofs or damage happening by fire to the houfes infured, after the intereft of the aflured is determined.
In this company, as in all other infurance companies, there is a rule, that the policy fhould be of no effect, if affigned, unlefs brought to be allowed by the company, within fuch a time; but it was admitted, that the plaintiffs had tendered the affignment to the company, within the time for fuch allowance, but they had refufed it.
In regard to the order made, that all affurances were to ceafe with the intereft of the affured, lord chancellor Hardwicke faid, The affured were to be confidered in a double capacity, as members of the company, and as perfons contracting with them; and that, if the cafe depended upon this order, he fhould not think the company, in their general capacity, could vary or alter any contract made by them to their individual members; but that he was of opinion, from the nature of all infurances, that the infurance muft ceafe with the intereft of the affured, for it is only to 'fave from damage in the thing infured; and, where it is to infure damages from fire, how can the infurers enter upon the premifies to rebuild or repair, when the eftate of the affured is determined ?- An infurance implies an intereft in the affured, in the thing infured: if it were otherwife, many ill confequences might follow; men might infure houfes of ftrangers, and, in hopes of getting the money infured, fet the houles on fire.
And though, in cafes of commerce, policies of infurance are allowed to be made, intereft or no intereft; yet it was long before this could prevail, and was allowed only in refpect that goods might be infured, in a commerce which is prohibited in a foreign country, and to prevent, (in regard to the advantage of the trade to this kingdom) a difcovery of the nature of the goods, and thereby laying open the owners, in fuch foreign country, to the penalty for trading in fuch goods.- That, although fuch policies are now allowed, yet he remembers them much queftioned, and called fraudulent. But no fuch reafon holds in the cafes of infurances of houfes from fire; and in which infurances all fuppofe an intereft in the affured.
In the cafe of Lynch and Dalzel, which was before the houfe of lords, in March 1729, one Ireland, being entitled to the remainder of a long term of years in a houfe at Gravefend, caufed the fame to be infured from fire in the Sun-fire-office, and the infurance was to him, his heirs, executors, adminiftrators, and affigns. Ireland dying, his fon and executor agreed with the appellant to fell, and affign to him, this houfe, together with the benefit of the policy for the infurance of the houfe. The leafe of the houfe was accordingly affigned, but, there being no affignment of the policy prepared, that was only delivered up, and, in fact, not affigned, but Ireland promifed to execute an affignment of it to the appellant at any time after.

But, before the policy was affigned, the houfe was burnt down, and a bill was brought in this court by the appellant to compel the company to pay the money infured by the policy, and the bill was difmiffed by lord chancellor King, and his order affirmed by the lords.- Lord chancellor faid, that he was counfel in the caufe, and that the reafons, upon which lord chancellor King difmiffed the bill, appear in the reafons mentioned in the refpondent's cafe. That thefe' policies are not infurances of the things themfelves mentioned to be infured, for no body can warrant againft accidents, -Nor do fuch infurances attach on the thing, or in any manner go with it as incident thereto, by any conveyance or affignment of the thing infured.-But the infurances are only fpecial agreements with the perfons infuring againtt fuch lofs and damage as they fall fuftain, and the party infuring muft have a property at the time of the lofs, or he can fuftain no lofs, and confequently be entitled to no fatisfaction.-Lord chancellor obferved, that this cale was rather flronger than the prefent, but difmiffed the bill only without cofts.

## Rooke verfus Thurmond. At the fittings at Guildhall, for

 B. R. 16 December 1743 .This was an action upon the cafe brought upon a policy of infurance, in which the plaintiff declared as follows:London, Giles Rooke complains of John Thurmond, being in the cuftody of the marfhal of the Marihalfea of our lord the king, before the king himfelf, for that, whereas the faid Giles Rooke, on the 5th day of OCtober, in the year of our lord 1741, at London aforefaid, to wit, in the parifh of St Mary le Bow, \&c. according to the cuftom of merchants, from time immemorial, ufed and approved of, caufed to be made a certain writing or policy of affurance, purporting thereby, and containing therein, that one Caleb Smith, as well in his own name; as for and in the name and names of all, and every other perfon and perfons, to whom the fame did, might, or thould appertain in part or in all, did make affurance, and caufed himfelf and them, and every of them, to be infured, loft or not loft, at and from South Carolina to Cowes, upon the body, tackle, apparel, ordnance, munition, artillery, boat, and other furniture of and in the good thip or veffel called the Polly, whereof was mafter under God, for that then prefent voyage, Capt. William Henry, or whofoever elfe fhould go for mafter in the faid thip, or by whatfoever other name or names the fame hip, or the mafter thereof, was or hould be named or called, beginning the adventure upon the faid fhip, \&c. from and immediately following her firft arrival there, and fo fhould continue and endure until the faid fhip, with the faid tackle, apparel, \&c. fhould be arrived at Cowes, and there had moored at anchor 24 hours in good fafety; and it fhould be lawful for the faid fhip in the voyage to proceed and fail to, and touch and flay at, any port or places whatfoever, without prejudice to that infurance.-The faid thip, \&c. for fo much as concerned the affureds, was and hould be valued, at intereft or no intereft, free from average, and without benefit of falvage, without further account to be given for the aflureds for the fame, touching the adventures and perils which the affurers were contented to bear, and did take upon them in that voyage, were of the feas, men of war, fire, enemies, pirates, rovers, thieves, jettezons, letters of mart and countermart, furprizals, takings at fea, arrefts, reftraints and detainments of all kings, princes and people, of what nation, condition, or quality foever, barretry of the mafter and mariners, and of all other perils, loffes, and misfortunes, that had, or fhould come to the hurt, detriment, or damage of the faid fhip, \&c. or any part thereof; and in cafe of lofs or misfortune it fhould be lawful to the affureds, their fervants, factors; and afligns, to fue, labour, and travel for, in and about the defence, fafeguard, and recovery of the faid fhip, \&c. or any part thereof, without prejudice to that infurance, to the charges whereof they the affurers would contribute each one, according to the rate and quantity of his fum therein affured. - And it was agreed by them the affurers, that the faid witing, or policy of aflurance; fhould be of as much force and effect, as the fureft writing or policy of affurance heretofore made in Lombard-ffreet, or on the Royal Exchange, or elfewhere in London.--And fo they the affurers were contented, and did thereby promife and bind themfelves each for his own part, their heirs, executors, and goods'to the affured, their executors, adminiftrators, and affigns, for the true performance of the premiffes, confeffing themfelves paid the confideration due unto them for that affurance by the affured, at and after the rate of 51.15 s. per cent. and in cafe of lofs, which God forbid, the affured to abate 21 , per cent.-And the faid Giles avers, that the faid policy of affurance was fo made as aforefaid, in the name of the faid Caleb Smith, on the account and rifque of the faid Giles, and that the faid Giles, at the time of making thereof, was folely interefted therein.-OI all which premiffes, the faid John afterwards, to wit, on the day and year aforefaid, at London, \&c. had notice, and thereupon afterwards, to wit, on the day and year aforefaid, at London aforefaid, and in
the parifh and ward aforefaid, in confideration that the faid Giles, at the fpecial inftance and requeft of the faid John, had, then and there, paid to the faid John the fum of 51 . 15 s . as a premium and reward for the infurance of 100 l . of and upon the premiffes in the faid policy mentioned, and had undertaken and faithfully promifed to perform and fulfil every thing in the faid policy of affurance contained, on the part and behalf of the affured, to be performed and fulfilled, he the faid John undertook, and, then and there, faithfully promifed the faid Giles, that be would become an affurer to the faid Giles, for the faid rool. of and upon the premiffes in the faid policy mentioned. And that he would perform and fulfil every thing in the faid policy contained on his part and beloalf, as fuch affurer, as to the faid 100 l . to be performed and fulfilled, and then and there fubfcribed to the faid policy as fuch affurer for the faid 1001 .- And the faid Giles in fact faith, that, before the making of the faid policy, to wit, on the firlt day of May, in the year of our Lord 1741, the faid thip or veffel, with all her apparel and other furniture, firt arrived at South Carolina aforefaid, and afterwards, to wit, on the 12th day of July, in the year of our Lord 1741 aforefaid, the faid fhip or veffel, with all her apparel, and other furniture, departed and failed from South Carolina aforefaid, towards Cuwes aforefaid, and proceeded on her faid voyage to the port of Cowes aforefaid, and afterwards, to wit, on the 18 th day of July, in the year laft aforefaid, the faid fhip or veffel, with all her tackle, boat, and other furniture, fo proceeding in her faid voyage, towards the port of Cowes aforefaid, before her arrival at the port of Cowes aforefaid, on the high feas was, with force and arms, in an hottile manner, attacked, conquered, and taken as a prize by certain enemies of our lord the king, and his crown of England, to wit, by certain Spaniards, and fubjects of the king of Spain.And the faid hip or veffel, with all her tackle, and other her furniture, were thereby, then and there, wholly loft, and never did arrive at the port of Cowes aforefaid.__Of all which faid premiffes, the faid John afterwards, to wit, on the firft day of December, in the year of our Lord 1741 aforefaid, at London aforefaid, in the parifh and ward aforefaid, had notice, and was, then and there, requefted by the faid Giles to pay him 981 . parcel, of the faid 1001. 21. refidue of the faid rool. being to be abated to the faid John, on account of the lofs aforefaid; which 981 . the faid John ought to have paid to the faid Giles, according to the faid prumife and undertaking. - Yet the faid John, not regarding his faid promife and undertaking, but contriving, and fraudulently intending, craftily and fubtily to deceive and defraud the faid Giles in this particular, hath not yet paid the faid fum of money, or any part thereof, to the faid Giles (although fo to do the faid John by the faid Giles was requefted afterwards, on the day and year laft aforefaid, at London aforefaid, in the parilh and ward aforefaid) but he to pay the fame to him bath bitherto wholly refufed, and ftill refufes. There was another count for 5 I .15 s . for money had and received by the defendant, for the ufe of the plaintiff-Damages laid 1001 .
The defendant pleaded the general iffue, non affumpfit, and iflue was thereon joined.
Upon this cafe, it was clearly taken at the trial before Lee, chief juftice, without any objection or queftion made upon it, that the plaintiff was well entitled to maintain this action, upon the policy of infurance made in the name of $\mathrm{Ca}-$ leb Smith, who was the policy-broker employed to procure the infurance, he having, by endorfement upon the policy, acknowledged and declared, that the policy was made in his name upon the account and for the fole rifque and benefit of the plaintiff; and Smith was allowed, without any objection, to prove the underwriting by the defendant, and his own endorfement.

In this cafe, the defence, infifted on for the defendant underwriting this policy, had been informed by a letter wrote from Carolina, by a thip called the Collet, to one Mr Crokatt, that the Polly, the fhip infured, had failed ten days or a fortnight from Carolina, before the fhip Collet, and that the fhip Collet had arrived in England about feven days before the infurance made, and that the plaintiff had not informed the defendant of this, which was infifted on to be a fraud in the plaintiff, fufficient to difcharge the defendant of this infurance; it being, as was infifted, a fettled and eftablifhed rule, that, on making an infurance, all material circumftances, relating to the adventure, ought to be difclofed to the infurer, for him to judge upon ; and the chief jullice allowed this rule, and declared his opinion, that the concealment infifted on was a fufficient circumftance to difcharge the defendant from the policy; for he faid, that there contracts are made upon a mutual faith and credit; and that to conceal fuch circumftances which may make any difference in the adventure is fraudulent ; for the infurer ought to have the advantage of judgment upon them, and that, where there is fuch concealment, the infurance ought not to bind.-But, the defendant not being able to make out this fact to the fatisfaction of the jury, the plaintiff had a verdict.
N. B. In this cafe, the infurance was a re-infurance, and it was faid by feveral policy-brokers, that where policies are Vol. I.
made, intereft or no intereft, it is generally in fuch cafés of re-infurances.

## Prendle verfus Hartley. Mich. 18 Geo. II.

A bill in Chancery was brought for relief againft a verdict and judgment given in the court of Common Pleas, upon a policy of infurance, and to have an injunction to ftay exemption upon the judgment. The cafe appeared to be, that the fhip infured was taken by a Spanifh privateer; and that, after it had been carried infra hoftium prafidia, it was retaken by an Englith privateer.-It was aigued for the now plaintiff, who was the defendant at law, that although, by the law of nations, the firft capture of the fhip, and it's being infra hoftium prafidia, had abfolutely diverted the right of the original proprietors; yet that now by the flatute made in the year 1740 it is otherwife, being thereby provided, That if the hips of our Englifh merchants Thould be taken by the enemy, and afterwards re-taken by any of his majefty's fubjects, that the right of the original proprietors in fuch lhips fhould be referved, on their paying one moiety of the value of fuch fhips to the re-captors for re-falvage.——Upon this it was argued, that the verdict and judgment are unjut, in regard that the whole infurance money is given in damages, when it appears, that the plaintiff at law, upon payment of one half of the value of the hip, might recover it back, and therefore that one half of the infurance money ought only to have been given in damages; upon which the injunction prayed by the bill was moved for.
On the other fide it was infifted, that this was a right verdict, and that the infured were nor to be put to the delay, expence, and trouble of afcertaining the value of the fhip, in order to recover it back, upon payment of one moiety of the value to the captors.- That for recovery thereof, the infurers might fland in the place of the infured, and make ufe of their names, which had been offered.-That, they did not pretend to oppofe fo much of the bill as fought this, but infiffed, that this could be no ground for granting the injunetion prayed.-That this point had been debated before lord chief juftice Willes, upon trial of the iffue at Nifi Prius, who had declared his opinion, that this right of falvage ought not to preclude the infured from their recovery upon the infurance, till the falvage fould be fetcled. That the defendants, the infurers, would be entitled to ftand in the place of the infured, to make what advantage they could of the falvage.
Lord Hardwicke chancellor, being of the fame opinion, refufed to grant the injunction; and faid, that the damage, in recovering the falvage, is as much a part of the infurance as the fhip itfelf.

Sparrow verfus Caruthers, at Guildhall, 19 July, at the fittings for B. R. before Lee chief juftice.

Action on a policy of infurance of goods, on board a chip called the Three brothers, at and from Peterfburg in Ruffia to London, and till the goods fhould be fafely landed. -It appeared, in evidence, that the thip arrived fafe at London, and came as nigh to the wharf as the could, and then the merchant infured fent a lighter for the goods, and they were Cunk in the lighter.-The court held the infurer not liable.Verdict for the plaintiff for 40 s . for return of the fhip with convoy, fuch deduction being agreed to by the policy, and the 40 s. not being returned or brought into court.- This verdict was on a count for the 40 s . as money had and received to the plaintiff's ufe.

## Pond verfus King. Hil. 21 Geo. II.

Upon a fpecial verdiet in an action brought on a policy of infurance, and the general iffue of non affumplit pleaded, it appeared, that the defendant had underwrote the policy in queftion, as an infurer upon a flip called the Salamander, being a privateer fhip for a coafling voyage for three months. It appeared that this fhip was taken by a French man of war, but was afterwards re-taken; and, upon payment of the proper falvage, was reftored to the owners. - The breach affigned in the declaration was on the capture within the three months, and the general queftion appeared to be, whether the plaintiff could be entitied to judgment upan fuch a cafe? Lee, chief juftice, faid, that though this fpecial verdict was found with a view to determine, whether there was any change or alteration in the property of the lbip ; yet the court were all of opinion, that they ought not to determine the merits of this cafe by that queftion, but upon the policy itfelf, as the contract of the parties, and upon the intention of the parties appearing therein. For though, by the civil law, there mult be a lofs of property; to entitle a perfon infured to recover againft the infurer; yet, that it is not fo in our law, which judges upon the contract itfelf, and the intention of the parties appearing therein. He cited a cale of De Paiba and Ludlow, Comyns 360 . a, one in point, bue faid, he had a manuleript note of the cafe, and tbe judgment of the court, by which it appears, that that cafe is but im-

N n perfeatly
perfectly reported in Comyns:-That the court were all of upinion, the plaintiff had affigned a breach, upon which he is entitled to recover. For, though the lofs in this cafe is fuch as does not entirely deprive the infured of the chip, yet he has fuftained a lofs by the capture and detention of the fhip; which is within that part of the policy, which infures againft all captures and detentions.-And, to thew that it is not neceffary there fhould be an entire lofs to intitle the plaintiff to recover, he cited the cafe of Bond and Gonfales. 2 Salk, 445 . and another cafe in Salk. 444. Judgment for the plaintiff.
N. B. The infurance was intereft or no intereft, but no weight was laid upon this, in giving the judgment of the court.
Though the following cafe is prior in time to the preceding; yet, as it has occurred, while drawing up this matter, we judged it better to be placed here than omitted, feeing it gives great light into this ufeful fubject.

## In Domo Procerum. February i, ifzo.

## De Ghettoff \& al, verfus London Affurance company.

This cafe came before the houfe of lords upon an appeal from an order made by lord chancellor King. - The cafe appeared to be, that the appellant Ghettoff and others, having fitted out a fhip for a voyage from Oftend to China, fent a commiffion to one Deconick, their agent in London, to procure an infurance made by the refpondents, the London Affurance company, upon the faid fhip, for the voyage aforefaid, for 5000 l . which infurance was accordingly made and entered into by the refpondents in the common form.-The fhip being loft in her voyage, the appellants brought their bill in the court of Chancery againft the refpondents, and alfo againt the faid Deconick, fetting out the infurance, and fuggefting, that the fhip was loft; which lofs amounted in value to the whole of the faid 5000 l. and that the plaintiffs were, in fhares, entitled to recover the fame. And having fet forth, that the faid Deconick was only their truftee, they further charged, that he refufed to let them make ufe of his name at law, and that they lived abroad in feveral diftant and remote places, whereby, and by reafon of the great difficulty of producing witneffes viva voce, they were difabled from bringing an action at law, and therefore prayed a decree for the 5000 l . according to their feveral proportions. The refpondents put in an anfwer to fo much of the bill as related to a difcovery; but as to the demand of the 5000 l . or any lefs money, they demurred. For caule of which demurrer fhewed, that, if the policy was forfeited, a proper action at law lay to recover the money fo loft, and that the appellants, if they had any juft demand, might have their complete and adequate remedy, by fuch action at law, where matters of this nature are properly cognizable, and where the appellants ought to prove their intereft, and lofs, and not in a court of equity.
This demurrer was argued before lord chancellor King, upon the 15 th of June 1728 , and the appellants couniel infifting very much on the allegation in the bill, of Deconick the truftee's refufing to permit his name to be made ufe of in an action at law, his lordfip was pleafed to refpite the confideration of the demurrer, till the coming in of the defendant Deconick's anfwer - But, if the appellants did not procure his anfwer within two months, it was ordered, that the demurrer fhould be allowed.
Deconick put in his anfwer within the two months, and thereby admitted, that he made the affurance in his own name, in trult, and for the benefit of the appellants; but faid, he did not care to permit the appellants to bring any action againft the company, on the faid policy in his name, he being advifed, that if he did, and they failed therein, he fhould be perfonally liable to pay the cofts.
Upon which, on the 2 Ift of November 1729, the demurrer came on to be further argued, when it was ordered, that it fhould ftand, and be allowed.- From which order an appeal was preferred to the houfe of lords, upon the two following reafons:
Firft, For that the Appellants cannot maintain an action at law upon the faid policy in their own names, and it is in the power of their truftee, whether he will permit his name to be made ufe of or not.- And that, in cafe the appellants were able to bring an action in their own names, it would he to no purpofe, in regard that all their witneffes, who can prove the lofs of the thip, and the refpective intereft of the appellants therein, live at diftant places beyond the feas, and are not in the power of the appellants; nor can the appellants compel them to come over here to be examined, on any trial at law.
Second'y, for that the appellants can have no manner of remedy againft the refpondents upon the faid policy, but in a court of equity, where they may have an opportunity, by virtue of a conmiffion, to examine their witnefles beyond the feas, and thereby be enabled to prove the lofs of the faid fhip. - And that, in eafe the appellants are deprived of this remedy, they will not only lofe the faid 50001 . but alfo the fum of 6001 . which they paid, as a premium to the refpon-
dents, upon making the infurance. And the refpondents, though they are debtors to the appellants in 5000 l. and intereft, will, inftead of paying fuch debt, go away with 6001 . of the appellants money.
On behalf of the refpondents it was infifted, that the order for allowing this demurrer was agreeable to equity.
Firft, that the appellants demand is plainly a demand at law, they having nothing to prove, but their intereft and the lofs of the fhip, which are facts proper to be tried by a jury.
Secondly, That there is no equity fuggefted in the bill, but a pretended difficulty to produce witneffes, and that their truftee refufed them to bring an action in his name:- The former of which may, with equal reafon, be fuggefted, in almoft every cafe of a policy of infurance; and the latter appears manifeftly to be thrown into the bill, merely to change the jurifdiction, and is in a great meafure falfified, by their truftee's anfwer. For he does not fay he ever refufed, but that (at the time of fwearing his anfwer) he did not care to let his name be made ufe of.
Thirdly, That, if bills of this kind are encouraged, it will be very ealy to bring all kinds of property to be tried in a court of equity.
The lords were pleafed to affirm the order.
This being a point of very great importance to our trading interefts, is the seafon of dwelling fo long upon it; for which we hope rather to have the approbation than cenfure of our readers.
We have alfo various offices of aflurance from fire, fome for houles, others for goods, and fome for both, which are very ufeful inftitutions; but the nature of them, in that refpect, is fo generally underftood, that it will be thought needlefs to dwell thereon.
We have likewife affurances for life, in virtue whereof, when the perfon affured dies, a fum of money becomes payable to the perfon in whofe behalf the policy of affurance was granted.

Life Policy. By the Governor and Company of the London Affurance of Houfes and Goods from Fire.

In the name of, God, Amen.
Do
make affurance, and caufe
to be affured upon
natural life
aged
for and du-
ring the term and face of to commence this day of year of our Lord one thoufand feven hundred and and fully to be complete and ended. And it is declared, that this affurance is made to and for the ufe, benefit, and fecurity of the faid
executors, ad-
miniftrators, and affigns, in cafe of the death of the faid within the time aforefaid, which the above governor and company do allow to be a good and fufficient ground and inducement for the making this affurance, and do agree that the life of $h$ the faid
is and fhall be rated and valued at the fum affured, without any farther account to be given to them for the fame: the faid governor and company therefore, for and in confideration of
per cent. to them
paid, do affure, affume, and promife, that $h$ the faid
fhall, by the permiffion of almighty God,
live, and continue in this natural life, for and during the faid term and fpace of calendar months, to commence a aforefaid; or in default thereof, that is to fay, in cale $h$
the faid
fhall, in or during
the faid time, and before the full end and expiration thereof, happen to die or deceafe out of this world by any ways or means whatfoever, That then the abovefaid governor and company will well and truly fatisfy, content, and pay unto the faid
$h$ executors,
adminiftrators, or affigns, the fum or fums of money by them aflured, and here underwritten, abating two pounds per cent. Hereby promifing and binding themfelves and their fuccefiors to the affured, $h$ executors, adminiftrators, and afligns, for the true performance of the premiffes, confeffing themfelves paid the confideration due unto them for this affurance by the affured.
Provided always, And it is hereby declared to be the true intent and meaning of this affurance, and this policy is accepted by the faid
upon
effect, condition that the fame fhall be utterly void and of no effect, in cafe the faid fhall exceed the age of or thall voluntarily go to fea, or into the wars, by fea or land, without licence in writing firt had or obtained for $h$ fo doing, any thing in thefe prefents, to the contrary hereof, in any wife notwithftanding. In witnéfs whereof, the faid governor and company have caufed their common feal to be hereunto affixed, and the fum or furns by, them affured to be here under-written, at their office in London, this
day of
in the
year of the reign of our fovereign lord
by the grace of God, of Great-Britain,
France, and Ircland, king, defender of the faich, \&ic, and in

## A S S

the year of our Lord one thoufand feven hundred and
The faid governor and company are content with this aflurance for
There is Iikewife an office for the infurance of lives at Ser-jeants-Inn, in Fleet-Atreet, London, the nature of which is as follows:

Terms, methods, and advantages of infuring lives, in the office of The Amicable Society for a perpstual Affurance, kept in Serjeants-Imn Fleet-Street, London.
On the $25^{\text {th }}$ of July, $17^{\circ 6 \text {, the then lord bifhop of Oxford, }}$ Sir Thomas Aleyn, Bt. and others, obtained from the late queen Anne a charter for incorporating them and their fucceffors, by the name of The Amicable Society for a perpetual Aflurance-Office, whereby they might provide for their wives, children, and other relations, after an eafy, certain, and ad. vantageous manner; with power to purchafe lands, fue and be fued, and to have a common feal, \&c. The number of perfons to be incorporated not to exceed 2000, but may be lefs; each perfon to rece.ve a policy, under the feal of the corporation, intitling his nominee to a dividend, on his or her deceafe, in the manner mentioned in the charter. After paying the charges of the policy, and ios. entrance money, each perfon was to pay 6I. 4 s. per ann. which payments have fince, by the raifing a joint-flock, been reduced to 5 l , payable quarterly. From thefe payments the dividends to claimants are to arife: for which reafon, if the fame thall be at any time a year and a quatter in arrear, fuch defaulters are excluded from all benefit of their policies. The affairs of the corporation are managed by a court of directors, according to the powers granted by the charter, and the directions of the by-laws. The directors are 12, chofen yearly, within 40 days after every $25^{\text {th }}$ day of March. The majority of members, affembled at a general court (which is never to confift of Jefs than 20) are impowered to make by-laws and ordinances, for the good government of the corporation. The chatter dirchts one of the members of the fociety to be elected their regifter, who is alfo their receiver and accomptant, and therefore the by-laws require him to give good fecurity, in the fum of 20001 . at leaft. All perfons to be admitted are to be between the ages of 12 and 45 , and appearing in a good flate of health. Perfons living in the country may be admitted by certificates and affidavits, forms of which may be had at the office. Every claimant is impowered to put in a new life, in the room of the decealed, within 12 kalendar months next after the end of the current year, for which his or her claim fhall be allowed, as often as the fame thall happen, upon payment of ios. entrance; any perfon is allowed to have two or three feveral infurances (or numbers) on one and the fame life, whereby fuch perfon will be intitled to a claim on each number fo infured. Five members of the fociety are annually elected auditors, who are by their office to infpect every tranfaction of the fociety, to examine all vouchers for receipts and payments; and upon oath to lay before the quarterly and annual general courts the quarterly and annual accounts of the fociety: and, on the day before the holding each court of directors, to ftate and enter, in the directors minute-book, a ballance of the cafh of the fociety. That the good end intended by the chatter has been purfued, and the fociety found to be a common benefit to mankind, will evidently appear from a ftate of their yearly dividends, from Lady-Day 1710 , to Lady-Day 1749 (the preceding years having been particularly provided for by the charter) being 39 dividends fucceffively, amounting to the fum of 277,104 l. and upwards, on 2,967 claims, fo that upon an average, the amount of each clairm has not been lefs than 93 l. $3^{\text {s. }} 7^{\text {d. . But they have been confiderably more for thefe }}$ 15 years laft paft, a general court having, in 1734 , appropriated a part of their yearly income for augmenting the claims, whenever they fhall happen to be under 100 l . the quantum of fuch claims being as follows, viz.

which, one year with another, makes the amount of each claim 1061.5 s. 7 d .
The advantages propofed from becoming members of this fociety are principally as follow:
To clergymen, phyficians, furgeons, lawyers, tradefmen, and particularly perions poffefed of places or employments for life; to mafters of families, and others whofe income is fubject to be determined, or leffened, at their refpective deaths, who, by infuring their lives, may, in all probability, leave to their families a claim not lefs than 100 l. for every 5 l. annually paid in.

To married perfons, where a jointure, penfion, or arltuity, depends on both or either of their lives, by infuring the life of the perfons intitled to fuch annuity, pention, or jointure. To dependents upoin any other perfon, and thereby inticled to falary or benefaction during the life of fuch perfon, whofe life being infured in this fociety, either by thenifelves or by their dependents refpectively; in either cafe, fuch dependents may become entilld to a claim, or claims, upon the death of the perfons on whom they are dependent, in proportion to the numbers infured
To perfons wanting to borrow money, who; by infuring their lives, are enabled to give a fecurity for the money borrowed.
To creditors intitled to demands larger than their debtors are able to difcharge; fuch debrors may, by a like infurance, fecure to their creditors the principal fums at their deaths.
The abovementioned advantages are offered chiefy with refpect to infurances for life; but "temporary infurers may find no lefs advantage from this fuciety, as may plainly appear from the following inftances, viz. A. B. has agreed for the purchafe of an office, or employment, but wants 300 l . to make up the purchafe-money: he is willing to affign a thare of the profits, or income, of his office, as a fecurity or pledge, for the repayment of the principal, with intereft; but cannot obtain a loan of that fum without infuring his life, till the whole be cleared; which he is enab'ed to do, by the help of this fociety: e. g. be purchafes three blank (or vacant) numbers on each of which he infures his life, and thereby his affigns become intitled to three feveral chaims at his death; which claims, by the abovementioned provifion, will not probably be lefs than rool. each, and may amount to more. He affgns and depofits his policies with the lender: he pays to the fociety, for the yearly contributions on the three numbers, no more than 15 l , which is 5 l . per cent. under which rate no other office will infure, and that for one year only at the end of which, fuch offices are at liberty to refufe any further infurance: whereas in this fociety the infurance continues till exclufion for non-payment of the quarterly contributions. And as to the money laid out in the purchafe of the blank (or vacant numbers) the infurer may, at the end of his infurance, difpofe of them at a market-price.
To ASSURE, or INSURE, is to give a premium of fo much per cent. to an underwriter, or infurer, to indemnify fuch who infure from loffes by fea or by fire, \&ic.
ASSURER, or INSURER, one who infures, or underwrites policies of affurance. See Assurance
ASTRABAD, or ESTARABAD, in Perfia, together with Khcemus, or Coumas, are feated in the north-weft part of Perfia, having Corafan on the eaft; part of Tartary on the north; the Cafpian Sea on the weft, and alfo a little on the north; Tabriftan on the weft; and a branch of mount Taurus, with the defert of Segeftan, on the fouch. It is a mountainous country; and, except near the banks of the two rivers, Margab and Arias, which run through it, the foil is fandy and barren; but, in that part, it is champaign land, pleafant and fruititul, producing grapes of wonderful bignefs, The inhabitants are a mixture of Perfians and Tartars. The chiff city here is that which gives name to the province; namely,
Astrabad. Here they make a great many brown druggets, and other light ftuffs, which is the chief of their trade within themfelyes.
ASTRACAN, a kingdom in the empire of Mufcovy, is bounded on the north by Bulgaria and Barkiria; on the fouth by the Cafpian Sea; on the weft by the Wolga, which parts it from the Nagayan Tartars and Don Coffacks; and, on the eaft, by a chain of hills; which divide it from Great Tartary. On a vaft heath, on the weft fide of the Wolga, are produced immenfe quantities of fine tranfparent falt, which the fun bakes, and incruftates about an inch thick, and looks like fine rock-cryftal on the furface of the water. Thofe pirs efpecially called Cainkowa, Gwoftolfski, and Mozanofschi, which are at 30,25 , and 10 miles from Aftracan, yield fuch quantities of it, that, fur the value of a half-penny for every pood, or 40 pound weight, any body may carry off as much as he pleafes. It hath a fine perfune, like that of a vioter; and the Ruffians, who make a confiderable traffick of it, have it carried and laid in great heaps on the banks of the Wolga, where it lies ready to be fhipped off.
Along the banks of the Wolga grow great quantities of liquorice.
The city of Astracan is fo conveniently fituated for commerce, that it is greatly reforted to by Perfians, Armenians; and other merchants, infomuch that the cuftoms for the imports and exports of it, though they are reckoned very low and moderate, were computed to bring in to the late Czar; Peter the Great, 250,00 crowns per ann. befides the convenience of vending ali the native commodities of Rulfa, and receiving in exchange the filks, cotton, and other valuable merchandizes of Perfia, India, \&ce. Here grows the animal plant called bonnaretz, in great quantities, and is fold to very great advantage. Here is likewife a fih called biloeg', which is caught in the Wolga, nearer tie Cdfpian Sea, 11 great abundance; of the roes of which they mate what w
call caveer, in which the Ruffians drive a very advantageous traffic.
AS' $\quad$ RINGENT, a term of medicine and dyeing. The phyficians give the name of aftringent drugs, and the dyers that of aftringent materials, or ingredients, to the bark of alder, of the pomegranate, crab, and walnut-tree, when the fap rifes, as alfo to the faw-dult of oaks, walnut-fhells and roors, gall-nuts, and fumach. See DyEing.
ASTURIAS, a principality in Spain, lies on the north fide, along the bay of Bifcay, borders on the weft on Galicia; on the fouth it is divided by Caftile and Leon, by a ridge of mountains, which is namelefs. On the coaft it reaches to the port Llanes, now Santillana, where it joins a narrow flip of land belonging to Old Caftile, which runs into the fea between Afturias and Bifcay.
Places of molt note in this principality are, Oviedo, Santillana, Gijon, and the little province of Liebana.

1. Oviedo is about 20 miles diftant from the bay of Bifcay. The country about it is very mountainous, abounds in cattle, Indian wheat, chefnuts, corn, and all forts of grain. The mountains, efpecially thofe which divide this principality from Leon and Caftile, befides their natural fertility, were formerly rich in mines of all forts of metals and minerals.
2. I.iebana, is about 27 miles long, and 12 broad. It is one of the moft craggy and mountainous parts of Spain, exceffive high, and almoft inacceffible. Thefe mountains are called Europæ, and in full front of the fea; and produce plenty of corn, wine, fruit, cattle, and game.
ATCHE, the fmalleft coin that is ftruck and current in the Grand Seignior's dominions. It is of filver, and worth about 4 deniers French, or $\frac{2}{3}$ of a Farthing Englith money. As there is no copper coin in the whole Ottoman empire, except in the province of Babylon, where there are liards, or farthings of Lyons and Dombes, the poor are well pleafed when one gives them an atche for alms, which is the fmalleft piece you can give them. The atches, or fmall afpers, as fome call them, are pretty much like thofe fangles of tinfel with which they ufed formerly to fet off gold and filver embroidery, except that they are fomething ftronger and longer. They are marked, like the para, with Arabian characters: you give commonly three or four atches for one para.
ATIBAR. Thus the inhabitants of the kingdom of Gago in Africa call gold-duft; and from that word the Europeans, and efpecially the French, have compofed the word Tibir, which alfo lignifies gold-duft among thofe who trade in that commodity.
ATLAS, a filk-fattin, manufactured in the Eaft-Indies. There are fome plain, fome ftriped, fome flowered, the flowers of which are either gold, or only filk. There are Atlaffes of all colours, but moit of them falfe, efpecially the red and the crimfon.
It muft be owned that the manufacture of them is wonderful and fingular ; and that, efpecially in the flowered atlaffes, the gold and filk are worked together after fuch a manner as no workmen in Europe can imitate; but yet they are very far from having that fine glofs and luftre which the French know how to give to their filk ftuffs *.

* In the Chinefe manufactures of this fort, they gild paper on one fide with leaf-gold, then cut it in long flips, and weave it into their filks, which makes them, with very little coft, look very rich and fine. ,The fame long ilips are twited or turned about filk threads, fo artificially, as to look finer than gold thread, though it be of no great value. This may afford a good hint to our Britifh weavers, for the like kind of improvements.

Among the feveral forts of atlaffes, the mof confiderable are, the cotonis, the caucanias, the cotonis-bouilles, and the bouilles-chafmay, or charmay. The atlaffes cotonis are thus called, becaufe the ground of them is cotton, and the reft filk. The caucanias are ftriped fattins, and thofe of them which feem moft filky are filed quenkas. The calquiers are fattins made after the Turkifh manner, or like Hungary point. The bouilles-cottonis and bouilles-charmay are thick filks, like thofe ftrong taffeties made at Tours in France. There are atlaffes from 4 French ells and $\frac{1}{8}$ in length, by $\frac{2}{3}$ in breadth, to 14 ells in length, by ${ }^{9} 8$ in breadth. Thofe that come near to half the ufital length are called balf-pieces. ATTACHMENT, a cuftom in fome places, particularly in the city of London, whereby a creditor may attach the goods of his debtor, in any hands where he findeth them, privileged perfons and places only excepted. For example: if A owes B rool. and C owes A rool. B may attach the fum in the hands of C. By the cuftom of London, one may attach money or goods of the defendant, either in the plaintiff's own hands, or in the cuftody of a third perfon, and that either in the mayor's court or heriff's court. And the cuftom is, that, if any plaint be affirmed in London, in thofe courts, againft any man, and he is returned nihil ; if the plaintiff will furmife any other man within the city who is debtor to the defendant in any fum, he fhall have his garnifhment againft him to come and anfwer, if he be indebted in the form the other hath alledged; and, if he comes
and does not deny it, then his debt thall be attached in his hands.
But debts upon record, ftatute, or recognizance; debt recovered, or which is in fuit in the King's-Bench or Common Pleas, after iffue joined, imparlance to the action, or writ purchafed returnable in banco; and if money be in the theriff's hands by execution, \&c. thefe are not attachable in London; nor hball attachment lie for rent. I Roll. Abr. 552. A legacy may not be attached in the hands of an executor, for it is uncertain whether the executor thall have effects to pay debts; but, for the debt of an inteftate, if a debt be due only upon fimple contract, a foreign attachment may be made; for the executor, or adminill rator, is chargeable for a debt due by the teftator, or inteftate, upon a fimple contract as well as upon a fpecialty. If a fuit be commenced againft the executur of any perfon, any debt which was due to the teftator, at the time of his death, may be attached by the executor; but not where the executor himielf takes bond for a debt due to the teftator; and, if he fells the goods, the money for which they were fold, $\& \mathrm{cc}$. cannot be attached. A debt due may be attached by the adminiftrator, an adminifrator being within the cuftom. I Ventr, ini.
Debt may be attached in the hands of an attorney of the King's-Bench, and he fhall not be privileged ; becaufe, if fuch privilege were allowed, the defendant might put his eftate into his attorney's hands, and the creditor will be barred of his remedy. If a man be indebted to another by bills, note, or verbal agreement, in any fum payable at a time to come, an attachment may be made for the money before the time agreed for payment thercof, even immediately, and judgement thall be prefently had; but the execution fhall not be awarded for this money, until it becomes due according to the time mentioned in the agreement. Goods or money at any time coming to the garnither's hands (viz. the third perfon) after the attachment, though it be fix months after, fhall be liable to the attachment. I Roll. Abr. 553. Sid. 362. Part of a debt may be attached, by the cuftom of London. Money due upon account, after promife to pay it, and the day of payment paft, may be attached; but no action may be afterwards maintained for the breach of promife. Where an account is made upon debts by firple contract, or where executors give time for payment of a bond due to the teftator, thefe fhall be ftill attached. If a man dies inteftate, an attachment may be made of money or goods, in a third perfon's hands, before adminiftration, 8 cc . being entered againft the bilhop of London : but, when there is a will proved, or letters of adminiftration granted, the attachment dies, and muft be again made by the executor, or adminiffrator, againft the party, unlefs it be condemned fully in the mean time. If a third perfon be condemned on attactiment, and judgment is given; if no execution be fued againft him, the plantiff in the action may bave judgment and execution againft his principal debtor; and fuch debtor may fue the third perfon for his debts, notwithftanding the judgment. 1 Roll. 55 I. Dy. 822. Merchants thould be well advifed, before they make attachments, becaufe both the civil law and cuftoms of merchants do impofe great damages upon the party, if he hath made his attachment without juft caufe, to the overthrow of the other party's credit.
There fhould be great eaution not to admit any attachment to be made in London, or any other city or town corporate, according to the cuftom of London, unlefs it be upon fpecial inftances, and alfo with putting in good fureties for the cofts. For it is a very dangerous thing for merchants living beyond the feas, or in remote places of the kingdom, to be liable to have their goods fecretly attached by their own factors, upon pretence of debt, and fo have judgment paffed thereon, before they can be prefent to remove the attachment; which fraud has been often practifed.
ATTORNEY at law, is an employment worthy of a fcholar and a gentleman, their time being wholly taken up in officiating in that learned and laudable profeffion; to difcharge the duty of which with reputation requires knowledge and experience, obtained through a good deal of practice, integrity, and the hand $\mathrm{o}^{\mathrm{f}}$ a ready writer.
Their buffnefs, in general, confifts not only in drawing, ingroffing, feeing executed, and regiftered, when required, all inftruments, or deeds, in writing, of what kind foever, selating to the fecurity of private property; but alfo preparing all proceedings in law and equity, and attending them through the feveral offices, while before the different manters, rrothonotaries, \&c. when in the refpective courts, or before the chancellor, judges, or mafter of the Rolls; and, laftly, the happy conclufion, and, fometimes, reconciliation of the paries that have been in fuit.
Thofe who chiefly attend affairs in Chancery are commonly called follicitors in Chancery; and others are diftinguifhed according to the courts they are fworn into; and of courfe are admitted attornies of the court of King's-Bench, Common. Pleas, or Exchequer; and, if any one tranfacts matters in a different court from his own, he muft do it in the name of an attorney in that court, each court taking paricular cognizance of the conduct of it's own attomics. Some primci-
cipally follow conveyancing, a very advantageous, as well as moft ufeful, branch of the law, but requires much reading, practice, and judgment.
There are two other denominations that feem to belong to this profeffion, a fcrivener and a notary-public: but of thefe in their proper place.

## Remarks.

The gentlemen of this profeffion are very numerous, and they employ a great number of hands; yet there is room enough ftill for fome thorough proficients, both in the courts and at the defk.
Therefore a youth defigned for a clerkfhip (for fo it is termed, and is articled but for five years) in this profeffion, ought not to be too young, 16 at leaft; Chould underfand Latin, and fome French; efpecially the old; write a good hand, and be a thorough-paced accountant, in order to adjuft, unravel, and liquidate fuch accounts as may come before bim.
He thould alfo know fo much of the old court hands as to be able to read them; and, with this, the old law French, and law Latin abbreviations; if he is diligent, with thefe he may make himfelf familiar during his clerkfhip. And thefe improvements, though the prefent ufe of them feems to be laid afide, the young clerks will find of great fervice to them, in cafe they fould have occafion to fearch court-rolls, or examine ancient deeds, \&c.
I have heard it remarked by fome very ingenious gentlemen of this profeffion, that, if a young man officiated for three or four years as clerk, after the expiration of the ufual time, of his clerkfhip, he would not only find himfelf better qualified in bufinefs for his own account, but would more effectually recommend himfelf to the world, people being diffident of thulting the care of their properties in unexperienced, juvenile hands. As the trader, from the multiplicity and variety of his tranfactions, is more liable than any other perfon to be drawn into broils and law-fuits; fo nothing is more advifeable, when that is unavoidable, than to make choice of an able and experienced, as well as an honeft, attorney; ignorance in his profeffion proving no lels injurious than knavery; and integrity, without fuitable abilities, may be equally detrimental to a client.
Let the trader's gaufe, however, be ever fo good, and the fkill as well as the juftice of his attorney unexceptionable, yet, if he does not keep the fate of his accounts in a regular and methodical manner, and preferve all his vouchers, to verify the truth of his books, the beft lawyer can be of little fervice to him; fo that it may be truly faid, it depends in a great meafure upon every trader to be his own lawyer, by being capable, at all times, to furnifh bis attorney or follicitor with proper evidence, in juftification of his conduct.
An Attorney, alfo, is any private perfon legally authorized by another to pay or receive monies, fue, or tranfact any other kind of bufinefs, in the name of fuch perion who fhall appoint him or her their lawful attorney.
This power or authority is transferred to another by virtue of what is called a letter of attorney; which muft always be drawnup in a legal manner, fuitable to the peculiar nature and circumftances of the cafe. It is neceflary, therefore, that a fkilful perfon fhould be made choice of, efpecially in cafes of confequence, to draw up fuch like inftruments with judgment and legality; for, by trufting to common general forms, which any blockhead may collect, when fuitable variations therefrom are required, is too often the caufe of involving traders in great perplexities and expenfive law-fuits. In regard to merchants conftituting or appointing other perfons to tranfact bufinefs in foreign countries, by the way of attorney or procurator, fuch influments of authority fhould always be drawn up by notary-publics, and not by thofe of as little knowledge as credit, but by Exchange notarics, who are prefumed to be perfons of judgment, as well as reputation in their profeflion, and whofe names and fignatures are well known in foreign nations.

The form of a general letter of attorney from $A B$ to $C D$.
Know all men by thefe prefents, that I, A B, of London, merchant, have named and conftituted, and by thefe prefents do name, appoint, and make my trufty friend C D, of Liverpool, merchant, my true and lawful attorney, for me, and in my name, and to my ufe, to demand, fue for, recover, and receive of J. W, of Liverpool, merchant, the fum of
to me due and owing, by and from the faid J. W ; giving and hereby granting unto my faid attorney my full power and authority to ufe and exercife all fuch arts, things, and devices in the law, as fhall be neceffary for recovering of the faid debt; and acquittances, or other difcharges, in my name to make and give; and generally to do and execute in the premilfes as fully as I myfelf might, or could do, being perlonally prefent; rectifying, confirming, and allowing all, and whatever my faid attorney fhall lawfully do, or caufe to be done therein, by thefe prefents.

Vol. I.

In witnefs whereof, I have hereunto fet my hand and feal, this day of in the 25th year of the reign of our fovereign lord George II, of Great-Britain, France, and Ireland, king, defender of the faith, $8 \times \mathrm{c}$.
Sealed and delivered (being firt duly
ftamped) in the prefence of AB.
An attorney at law being a perfon who is invefted with the care of people's property, the law has made good provifion to prevent their impofing on their clients; which, being a matter of confequence to the man of bufinefs, it may be neceffary for him to be briefly informed of in his Commercial Difionary.
An attorney, follicitor, or fervant to any, fhall not be allowed any fees given to counfel, or for copies, unlefs he have tickets thereof, fignied by the hands of them that receive fuch fees; and he fhall alfo give unto his client true bills of all the charges of fuit under his own hand, before he can charge his client with the payment thereof: and, if he delay bis client's fuit for gain, or demand by his bill allowance for money which he hath not difburfed, the client fhall recover a ainft him his coffs and treble damages, and he fhall be for ever after difabled from being an attorney or follicitor. Stat. 3. Jac. I. cap. 7. Sect. is.
By fect. 2. or the fame flatute, none fhall be admitted attornies in courts of record, but fuch as have been brought up in the fame courts, or otherwife well practifed in folliciting of caufes, and found fkilful, and of honeft difpoftion; and none but fuch fhall be hereafter fuffered to follicit caufes in the courts aforefaid. And an attorney fhall not admit any other to follow a fuit in his name, on pain that each of them fhall forfeit 201, to be divided between the king and party grieved, and the attorney fhall be excluded.
If any perfon convicted of forgery, or of wifful and corrupt perjury, fhall pradife as an attorney, follicitor, or agent, in any fuit or action, in any court of law or equity within England, the judges of the courts, where fuch fuit or action is brought, fhall, on complaint, or information thereof, examine the matter in a fummary way, in open court; and, if it thall appear to their fatisfaction that the perfon complained of hath offended contrary to this act, the judges fhall caufe fuch offender to be tranfported for feven yearrs. Stat. 12 Geo . I. cap. 29. fect. 4.
No perfon thall be permitted to aft as an attomey, or to fue out procefs, \&c. in the name of any other perfon, unlefs he thall have taken the following oath, and fhall have been duly admitted and inrolled, in fuch of the faid courts where he fhall act as an attorney. Stat. 2. Geo. II. cap. 23. fect. I.

The oath is as followeth
I A B do fwear, that I will truly and honefly demean myfelf in the practice of an attorney, according to the beft of my knowledge and ability.

So help me God.
The fame oath alfo muft be taken by a follicitor.
Before any perfon is admitted to take the faid oath, the mafter of the Rolls, two of the mafters in Chancery, the barons of the Exchequer, the chancellor of the duchy, and the judges of the other courts of equity, fhall examine touching his capacity. Sect. 4. of the faid ftat.
No attorney or follicitor fhall commence an altion for fees; till the expiration of one month after he fhall have delivered to the party a bill of fuch fees, 8 cc . written in plain Englifh (except law-terms and names of writs) and, upon applitation of the party, chargeable by fuch bill, to the chancellor or the mafter of the Rolls, or to any of the courts wherein the bufinefs contained in the faid bill, or the greateft part thereof in value, fhall have been tranfacted; and, upon fubmiffion of the faid party to pay the fum that, upon taxation, thall appear to be due, it fhall be lawful for the lord chancellor, \&c. to refer the faid bill to be taxed by the proper officer, without any money being brought into court; and, if the attorncy or follicitor, or client, neglect to attend fuch taxation, the of ficer may proceed to tax the bill; which fum fo taxed, being paid, fhall be a difcharge of the bill; and, in default of nonpayment, the party fhall be liable to an attachment, or procefs of contempt, or fuch other proceeding, at the election of the attorney or follicitor, as fuch party was liable to; and if, on fuch taxation, it fhall be found that the attorney or follicitor fhall have been overpaid, he fhall refund to the party intited, or to any perfon by him authorized, if prefent at the fettling thereof, or otherwife as the court fhall direct, all the money that the officer fhall certify to have been overpaid; and, in default thereof, the attorney or follicitor fhall in like manner be liable to an attachiment, or procefs of contempt, or fuch other proceeding, at the election of the party; and the courts are required to award the colts of fuch taxation, to be paid by the parties according to the event of the taxation, viz. if the bill taxed be leffs by a fuxth pait than the bill

delivered, then the attorney or follicitor is to pay the cofts; but, if it be not lefs, then the court, in their diferetion, fhall charge the attorney, or client, in regard to the reafonablenefs, or unreafonablenefs, of fuch a bill.
AVA. The empire of Ava, including the kingdom of Pegu, lies between independent Tartary on the north; the Indian Sea on the fouth; Siam on the fouth-eaft; part of Bengal and it's'gulph, on the weft; and part of China, Tonquin, and the kingdom of Laos, on the eaft. The moft fouthern country, that ufed to be cailed the kingdom of Pegu, is very fruitful in corn, fruits, roots, and excellent pulfe of feveral forts, and produces timber for building, elephants-teeth, bees-wax, ftick-lack, iron, faid to be of fo hard a quality that it is almoft a natural fteel; tin, oill of earth, wood-oil, the beft rubies in the world, fmall diamonds, fapphires, amethyfts, and other precious flones. They have abundance of falt-petre, but 'tis death to export it ; and plenty of lead, which paffes here for money. About 20 fail of thips find their account in trade for the limited commodities, but the Armenians have got the monopoly of the rubies, which turns to a good account in their trade.
The people wear none of our European manufactures but hats and ribbands; fo that the gentry will give extravagant prices for fine beaver hats, and rich ribbands, flowered with filyer and gold. Cotton-cloths from Bengal and Coromandel, , ith fome ftriped filks, are beft for their market; and filver of any fort is welcome to them. It pays the king $8 \frac{1}{2}$ per cent. cuftom; but, in lieu thereof, he indulges the merchants to melt it down, and put what alloy they pleafe in it, and then to pafs it off in payment as high as they can. Rupeé filver, without alloy, will bear 20 per cent. of copper alloy, and keeps the Pegu touch, which they call flowered filver; and, if it flowers, it paffes current. They make flowered filver thus: when the filver and copper are mixed and melted together, they put it, while liquid, into a fhallow mould, and blow on it through a fmall wooden pipe, which makes the part blown up appear with the figures of flowers, or ftars; but, if there is too great a mixture of alloy, no figures will appear. The king generally adds 10 per cent. on all filver that comes into his treafury, befides what was put on at firft ; and, though it be not flowered, it muft go off in all his payments; but, from any body elfe, it may be refufed, if it is not flowered. The chief towns are,

1. Syriam, which is the only port now open for trado in all the Pegu dominions, and is capable of receiving a fhip of 600 tons. The Portugueze, who had this port given them by the king of Arracan, to reward their fervices to him in his wars, held it many years; but, through their pride and infolence, were obliged, in 1614 , to quit it, and the trade was reftored to the Moors. It drives a good trade with Armenians, Portugueze, Moors, Gentaws, and fome Englifh. Their import is feveral forts of Indian goods, as betellas, mulmuls, tanjebs, and European hats, and filver ; and the cuftoms here, which are about $8 \frac{1}{2}$ per cent. amount, with other charges, to about 12 in the hundred. As foon as foreign thips arrive here, the number of people on board, with their age and fex, is fent to the king, to acquaint him, that fo ma-ny-cf his laves are arrived, to partake of the glory and happinefs of his reign and favour.
2. PegU, according to Moll, is divided by the river of the fame name into two towns, the old and the new. The latter was the feat of it's kings; the former is ftill the refidence of it's merchants and artificers, and it lies 20 miles up the river; according to others, it lies 80 miles up the river.
3. The city of Ava is faid to be a place of trade for jewels and muik.
The country of Ava Proper abounds with mines of filver, copper, and lead, and has flore of elephants and horfes. The places of chief note on the coaft, which, from Syriam to Cape Negrais, is in the Pegu dominions, are,
4. Dola, or Dela, which Moll reprefents to be an ifland. Tytch' fays it has a good harbour, from whence fhips trade to Malacca, the Red Sea, \&cc.
5. Cosmin, or Cosmi, whofe neighbourhood produces great figs, oranges, cocoas, and other fruit. The inhabitants go from hence to Pegu in their boats, wherein they live all the year with their families.
6. MEDEN, is another pretty town, where there is abundance of boats, in which they keep their markets upon the water, and fhade their conmodities from the fun by large umbrellas.
7. Negrais, is a cape and town on the coaft, which has a good harbour, but there is a bar, which makes it's entrance difficult.
The next kingdom in the empire of Ava is Tipra, or Tipoura, in the moft northern part of it, between the rivers Cofmin and Caypoumo, having Independent Tartary on the north ; part of China and Ava on the eaft and fouth; the Mogul's country on the weft; and Arracan on the fouth-weft. Here they have boarfe gold and filk, which all belongs to the king, who requires nothing elfe of his fubjects', but that all, who are not of the prime nobility, fhould give him one week's work in a year in his mines, or filk-woiks. He fends
his gold and filk into China; from whence he has filver in return, which he coins into pieces of 20 d . and 22 d . valu: as he does gold into afpers of two forts, four of the one, and 12 of the other, amounting to a crown.
Boutan, or Lassa, is a kingdom in this peninfula, which fome think rather belongs to 'lartary. It has Tartary on the north, China on the eaft, Afem on the fouth; and Great Tibet, and part of the Mogul's dominions, on the weft. The country abounds with rice, corn, pulfe, and wine; and it's other commodities are coral, the beft rhubarb, mufk, furs, and martens. It is not doubted but there are filver mines here, becaule there are pieces of money coined here by the king's order, to the value of half a crown, which have eight angles, with certain characers, but they are neither lndian nor Chinefe. As for what little gold they have, 'tis brought hither by merchants from the Eaft.
AUDITOR of Accounts, is an officer of the king, or fome other great perfon, who examines yearly the accounts of all under officers, and makes up a general book, which Shews the difference between their receipts and charge, and their feveral allowances, commonly called allocations: as the Auditors of the Exchequer take the accounts of thofereceivers who collect the revenues, 4 Inft. 106. receivers general of fee-farms rents, \&c. are alfo termed Auditors, and hold their audits for adjufting the accounts of the faid rents at certain times and places appointed. And there are auditors affigned by the court, to audit and fettle accounts in actions of accounts, and other cafes, who are proper judges of the caufe, and pleas are made before them, \&ic. Brownl. 24.

Aubitors of the Exchequer, are officers appointed in England, under the crown, to take the accounts from other public officers, who collect the national revenue.
Auditors of the impreft, are fuch officers under the crown, in the Exchequer, who receive and make up the great accounts of Ireland, Berwick, the mint, wardrobe, firf-fruits, and of all monies impreffed to any perfon for the king's fervice.
AUditor of the receipts, is an officer of the Exchequer, who files the tellers bills, and duly enters them, and gives the lords of the treafury a certificate of the money received from the feveral branches of the revenue the week before; and who gives in the ftate of thole accounts from year to ycar to the parliament. He alfo makes out debentures to the refpective tellers of the Exchequer, before they receive any money, and takes their accounts, and fees the tellers money locked up in the royal treafury.
AVERAGE, or AVERIDGE, a term of commerce by fea, which fignifies the accidents and misfortunes which happen to fhips and their cargoes, from the time of their loading and failing to their return and unloading.
There are three forts of averages, the fimple, or particular, averages, the large, or common, and the fmall ones.
The fimple averages confift in the extraordinary expences incurred for the fhip alone, or for the merchandizes alone; in which cafe, the damages that happen to them in particular, ought to be borne and paid by the thing which fuffered the damage, or occafioned the expence.
Amiong the fimple averages is reckoned the lofs of cables, anchors, fails, mafts, and rigging, occafioned by ftorms or fome other accidents, common at fea; as alfo the damages which happen to the merchandizes, either by the mafter or the crew's fault, or through neglect in thutting the batches clofe, or in well anchoring the fhip, or for want of good cosdage, for hoifting up the merchandizes, \&zc. All thefe averages mult be borne by the mafter, the fhip, and the freight.
The damages which happen to merchandizes, through fome defects in them, or by ftorm, prize, or hhipwreck, or running a-ground; the expences incurred for the faving of them, and the duties, taxes, and cuftoms, ought to be placed to the account of the proprietors. By fome defect in the merchandizes muft be underffood their decay, or growing worfe, rotting, being wet, running, \&c.
The provifions and bire of the feamen, when the fhip happens to be ftopped in her voyage, by the order of fome fovereign, are alfo reckoned among the fimple averuges, and muft be borne by the flip alone, provided the was hired for the whole voyage, and not by the month.
The large or common averages are thole expences incurred, and damages fuftained, for the common good and fecurity both of the merchandizes and the velfels, Of that number are,
The things or money given to pirates for the ranfom of the fhip and cargo; things thrown overboard, cables and mafts, broke or cut anchors, and other things left behind, in order to fave the veffel and merchandizes.
